If the first binding factor is present — that is, the person doesn't regard the action as negative or even if they do, they don't care — and the other three factors are missing, a medium fault is committed. If the first factor is absent — that is, the person is aware that what they are doing is negative — and the other three factors are present, they commit a lesser misdeed.<sup>54</sup> If all four binding factors are not present, the bodhisattva vow is not lost. Nevertheless, the transgression inhibits the possibility of generating a great store of merit for awakening.

To prevent experiencing the results of transgressing a precept, it is important to purify by employing the four opponent powers — regret, making a determination to restrain from such actions in the future, taking refuge and generating bodhicitta, and engaging in remedial actions.<sup>55</sup> Prostrations to the thirty-five buddhas and the Vajrasattva meditation and recitation are excellent methods to purify the destructive karma created by transgressing precepts.

Only three conditions can make someone lose their bodhisattva vow: holding wrong views that are contrary to the teachings of the Buddha, abandoning aspiring bodhicitta, or committing a root downfall with all four binding factors complete. If none of these is present, the bodhisattva vow is not lost at death and is still present in our mindstream regardless of where we are reborn. Although we may forget the vow in our future life, we can retake it from a spiritual mentor to refresh our memory and our commitment to attaining full awakening in order to benefit all sentient beings.

### ***The Forty-Six Auxiliary Bodhisattva Precepts***

The first thirty-four auxiliary precepts that constitute the ethical conduct of gathering virtue are classified according to the six perfections. The seventh group is included in the ethical conduct of helping others.

The bodhisattva auxiliary precepts may be transgressed in three ways: (1) by being under the influence of manifest afflictions, in which case an afflictive fault will be incurred; (2) by being subject to conditions such as laziness or forgetfulness, in which case a nonafflictive fault is incurred; or (3) as a result of legitimate reasons such as sickness or attending to more important activities, in which case no fault is incurred.

Attachment and miserliness are the chief obstacles to practicing generosity. To eliminate obstacles to the perfection of generosity and obstacles to the ethical conduct of gathering virtuous actions, abandon these actions:

1. Not making offerings to the Three Jewels every day with your body, speech, and mind. These could be physical offerings (bowing, circumambulating), verbal offerings (reciting texts or prayers), or mental offerings (contemplating the teachings, having faith in the Three Jewels, remembering their good qualities). The transgression is heavier if it is done with a lack of respect or faith in the Three Jewels or delight in worldly activities.
2. Following thoughts of desire, dissatisfaction, attachment to material possessions, and attachment to signs of respect without trying to oppose them. This mental action is a transgression; if we don't oppose it, we'll soon find ourselves acting out these thoughts.
3. Disrespecting your elders (those who have taken the bodhisattva vow before you). Paying respect to those who have received the bodhisattva vow prior to you helps you to better abide in the vow.
4. Not answering sincerely asked questions that you are capable of answering. When people ask sincere questions — Dharma questions or ordinary questions — you should sincerely answer them. If you don't know the answer, don't humiliate the other person; simply tell them you don't know and refer them to someone who does.

5. Not accepting invitations from others out of anger, pride, or other negative thoughts. Not accepting their invitations denies them the opportunity to practice generosity. If you're busy or the invitation is to a place you'd better not go, it's fine to decline. Abandon declining invitations because you think you're too good to associate with those people or you're angry or spiteful.
6. Not accepting gifts of money, gold, or other precious substances that others offer to you. With anger or ill will, refusing a gift. If you're concerned that accepting an object will create hardship for the giver, that you may become attached to it, or that it was stolen from others, it's fine to decline. Normally, it's good to accept the gift so that the other person can create merit; you can then give it away to someone else.
7. Not giving the Dharma to those who desire it. Refusing to share the Dharma out of miserliness, anger, ill will, or jealousy is counter to cherishing others. Exceptions are if we don't know the teachings or if the person who requests is not a suitable vessel, has a bad motivation, or is disrespectful.

To eliminate obstacles to the perfection of ethical conduct, abandon these actions:

1. Forsaking or scorning a person who has engaged in many destructive actions or who has broken their precepts. If such a person sincerely apologizes or requests help to improve, you should accept. Refusing out of anger, vengefulness, or malice is a lack of compassion on your part.
2. Not acting according to your trainings as it would generate or sustain faith in others. We should keep well whatever prātimokṣa ethical restraints we have taken as well as all the bodhisattva precepts. Our behavior influences others and misbehavior or flagrant neglect of our prātimokṣa precepts could ruin someone's faith in the Dharma.
3. Doing only limited actions to benefit sentient beings, such as strictly keeping the Vinaya rules in situations when not doing so

would be of greater benefit to others. For example, not helping someone of the opposite sex who is injured if you're the only person there because it would involve touching them.

4. Not doing the seven nonvirtuous actions of body and speech with loving-compassion when circumstances deem it necessary to benefit others. This is for the spiritually advanced, people whose compassion is so great that they are willing to accept the karmic result of their action. However, spiritually advanced monastics should not transgress their root prātimokṣa precepts; if they truly feel it is necessary to do so, they should disrobe first. Do not misconstrue this bodhisattva precept to rationalize or justify doing negative actions.<sup>56</sup>
5. Acquiring requisites — food, shelter, clothing, or medicine — and other goods by any of the wrong livelihoods of hypocrisy, hinting, flattery, coercion, or bribery. Be honest and appreciative without selfishly exploiting others' generosity.
6. With attachment and excitement, engaging in amusement, entertainment, parties, talking and laughing loudly, and so forth without any beneficial purpose, or leading others to join in these distracting activities. If there is a useful purpose that benefits others without harming your practice, this is not a transgression.
7. Believing and saying that followers of the Mahāyāna should remain in cyclic existence and not try to attain liberation from afflictions. When it is said that bodhisattvas remain in saṃsāra to benefit sentient beings, it does not mean that they do not strive with effort to eradicate all obscurations and attain awakening. Bodhisattvas know that their attaining full awakening is more useful to sentient beings so they work diligently to do that. Ārya bodhisattvas may make emanations that work for the benefit of others in saṃsāric realms.
8. Not trying to overcome disrepute by either admitting our mistake or clarifying the situation if we did not err, or not avoiding actions that would cause us to have a bad reputation. If we have bad habits that provoke others' scorn or aversion, we must work to change them.

The motivation for having a good reputation is so that others will trust us and we can help them; it is not attachment to our reputation.

9. Not helping others to correct their destructive behavior when doing so would be helpful. If we can influence someone positively, we should try to. If we don't get involved and let others create negativity because we don't want to lose face or because it is inconvenient for us or we simply don't care, it is a transgression.

To eliminate obstacles to the perfection of fortitude, abandon these actions:

1. Returning insults, anger, beating, or criticism with insults and the like. Practicing fortitude by overcoming anger is crucial at these times. Learn the antidotes to anger;<sup>57</sup> practice them in meditation so that you are familiar with these new perspectives and can apply them when you encounter difficulties.
2. Neglecting those who are angry with us by not trying to pacify their anger. If we have acted in a way that provoked others' anger, even unintentionally, we should do what we can to assuage their anger and upset.
3. Not accepting someone's apology and remaining angry at them. The difference between this and the third root transgression presence is that the four binding factors are present for the root transgression.
4. Following thoughts of anger and not counteracting them by applying antidotes. If you are angry but don't try to calm yourself and instead let the anger increase or harbor resentment, it constitutes a transgression.

To eliminate obstacles to the perfection of joyous effort, abandon these actions:

1. Gathering a circle of friends or disciples because you desire respect or profit. We should not attempt to attract people if our motivation is bad — for example, wanting to impress them in order to receive offerings, become famous, or be respected. Rather, we should give

teachings, build monasteries, or work in Dharma centers with a sincere motivation to share the Dharma.

2. Not dispelling the three types of laziness: (1) sleeping excessively and lounging around, (2) being very busy doing worldly activities or harmful actions, and (3) indulging in self-pity or self-criticism that results in discouragement.
3. With attachment, indulging in idle talk and joking. Exceptions are chatting or joking for a good purpose — for example, to connect with someone who feels left out or depressed. Otherwise we should not waste time gossiping or engaging in meaningless conversations just to amuse ourselves.

To eliminate obstacles to the perfection of meditative stability, abandon these actions:

1. Not seeking proper instructions on how to develop concentration. Avoid doing so with pride, thinking you know everything about this subject.
2. Not abandoning the five hindrances: sensual desire, malice, lethargy and sleepiness, restlessness and regret, and doubt. Not learning how to overcome these or not trying to overcome them are transgressions.<sup>58</sup>
3. Becoming attached to the good qualities of meditative absorption after experiencing them. Attachment to the bliss or equanimity of meditative absorption can impede our cultivation of wisdom and attainment of awakening.

To eliminate obstacles to the perfection of wisdom, abandon these activities:

1. Abandoning the scriptures or paths of the Fundamental Vehicle as unnecessary for one following the Mahāyāna. Thinking or saying these teachings are not important or necessary for someone following the Bodhisattva Vehicle is a transgression. In fact, Mahāyāna practice is based on the practice of the Fundamental

- Vehicle. In addition, bodhisattvas must know and practice these teachings in order to teach Fundamental Vehicle practitioners.
2. Exerting effort principally in the Fundamental Vehicle while neglecting your own tradition, the Mahāyāna. Although we should study and practice the Fundamental Vehicle, beginning to favor it over the Mahāyāna is unwise; this slows our practice in the Mahāyāna and could eventually lead to abandoning bodhicitta.
  3. Exerting effort to learn or practice the treatises of non-Buddhists that are not proper objects of your endeavor, or studying them without good reason. Becoming so interested in non-Buddhist practices that we neglect studying, thinking, and meditating on the Mahāyāna is a transgression. However, we can study non-Buddhist philosophies to understand and help practitioners of these religions.
  4. Beginning to favor and take delight in the treatises of non-Buddhists while studying them for a good reason. We can study non-Buddhist treatises in order to refute wrong views, but we should not begin to favor these views or become attracted to them because doing so will impede our development of wisdom.
  5. Abandoning any part of the Mahāyāna because you don't understand it or think it is uninteresting. This includes criticizing or rejecting essential Mahāyāna teachings — such as the teachings on emptiness and bodhicitta — or thinking it's not possible to develop the wisdom realizing selflessness as taught by the Mahāyāna. This differs from the fourth root transgression, which entails saying a particular Mahāyāna teaching was not taught by the Buddha.
  6. Praising oneself or belittling others because of arrogance, anger, and so on. This differs from the first root transgression, which is done with the desire to receive gifts or respect.
  7. Not going to Dharma gatherings or teachings due to arrogance or anger. Exceptions are being sick, not knowing the teaching is occurring, suspecting the person teaching doesn't know the topic well, knowing our teacher would not want us to attend, being very learned on that topic already, or if it would interrupt our meditation.

8. Scorning, disrespecting, or being rude to our spiritual mentor, or not paying attention to the meaning of the teachings but picking at faults in the presentation. We need guidance from a living spiritual mentor. If we prefer books and neglect listening to or thinking about our spiritual mentors' teachings, we lose much benefit.

To eliminate obstacles to the ethical conduct of benefiting others, abandon these actions:

1. Motivated by anger or spite, not helping those who are in need — for example, those needing help in making a decision, settling a question, traveling, doing a task, protecting possessions, reconciling with a friend, planning events, and organizing celebrations. Exceptions are if we are ill, have another appointment, are busy doing something more important, lack the knowledge or ability to help or if the activity contradicts the Dharma, the person can complete the task themselves, others are already helping, it is better for the person's spiritual development not to receive help, our help would upset many other people, or the task is counter to our prātimokṣa precepts.
2. Avoiding taking care of the sick due to anger, arrogance, or other afflictions. Exceptions include if we are ill, are already helping another sick person, need to focus on our studies and practice or if the sick person is already receiving help or can do things themselves, we have helped for a long time and the person is getting better, or helping would create negative karma.
3. Not alleviating the sufferings of others out of anger, spite, pride, and so forth. This includes not helping travelers, the distressed, the blind, the deaf, the abused, those who are being trafficked, or those who have lost their job or social position. As people committed to compassion, when we are able to help others or alleviate their suffering, we should.
4. Not explaining what is proper conduct to those who are reckless. People who are careless and not conscientious can't discriminate the wholesome from the harmful. They make bad decisions or

engage in actions that are harmful to themselves or others. We should advise them skillfully and make them aware of the possible painful results of their actions. Exceptions are when helping would lead to difficulties, we lack the knowledge to help, a qualified person is already helping, or the person doesn't like us or isn't receptive to help.

5. Not repaying the kindness others have shown to us because of ill will or lack of conscientiousness. When people have helped us in some way or contributed to our welfare, we should have a kind attitude toward them and reciprocate when possible. Exceptions are when we lack the capacity to help, they don't want help, we try to help but aren't successful, and so forth.
6. Not relieving the sorrow of others, not consoling the distressed who are separated from loved ones or have lost their wealth or property as a result of theft or natural disasters. Exceptions are similar to those in previous precepts in this category.
7. Not giving material possessions to those in need — such as food, clothing, and other necessities to the poor and needy who ask for help — out of miserliness, anger, or other afflictions. Exceptions: we don't have what they need, they may misuse the gift, the substances they want are dangerous to them, or others would be harmed.
8. Not working for the welfare of your circle of friends, disciples, relatives, or employees by teaching them the Dharma and helping them materially if needed.
9. Not acting in accordance with the wishes of others if doing so does not bring harm to you or others. We should try to be pleasant, polite, and considerate of others' wishes and feelings and have genuine care for them.
10. Not praising those with good qualities. When others have good qualities, knowledge, or Dharma realizations, we should rejoice and praise them. Similarly, let's rejoice and praise them if they have specific practical skills or artistic or athletic talents and so forth.

11. Not taking corrective action when the situation demands it — for example, when someone is acting harmfully or behaving in a way detrimental to the Dharma or a Dharma community. When peaceful means do not help, this may entail using strong measures, such as criticizing the person in public or even having him arrested. If we allow them to continue their harmful actions when it is within our ability to stop them, we commit a transgression.
12. Not using psychic powers if you possess them, in order to stop others from doing destructive actions.

## REFLECTION

---

1. Contemplate each precept of engaging bodhicitta. In what way does each one help guide your life as well as your thoughts, words, and actions in a good direction?
2. Would it help you in your Dharma practice to follow these bodhisattva precepts? You can try to do so without formally taking them. For example, pay special attention to live according to the first nine of the root precepts for a week, then do the same for the second nine.
3. Following that, focus on the precepts to eliminate obstacles to the perfection of generosity for a week. Do the same for each subsequent group of auxiliary bodhisattva precepts.

---

### *A Kind Heart*

In short, developing a kind heart is most important for sustaining life on our planet and improving the quality of life. Needless to say, a kind heart is crucial for our individual spiritual progress. Without affection we will not be fulfilled personally, and without cooperation born from respecting others our communities will not be happy. Affection and compassion are part of our human nature; they go beyond religious precepts. When we are born, our parents' or caregiver's compassion nurtures us. When we die, we feel

comforted if a trusted, compassionate person is nearby. Any person, no matter what their religious or political beliefs, responds to kindness and compassion and shares their own affection and compassion with others.

We must increase this feeling in society, and doing that begins with ourselves. Then as individuals we come together to work for the welfare of all. Just as isolated fingers are not very powerful without the central palm, we human beings cannot function well without affection and compassion binding us together. People in every country and walk of life must generate and increase their feelings of kindness and interconnectedness with all others.

Compassion must be deliberately cultivated. It will not arise simply by stilling the mind and developing concentration. Nor will it arise by realizing emptiness, although understanding emptiness will deepen our compassion. We know that sentient beings suffer by the power of their ignorance, and this ignorance can be removed through realizing emptiness. However, we must still practice the causes of compassion as explained in this book, in order to generate it fully and maintain its strength within ourselves.

Some people understand emptiness first and then generate great compassion; others develop great compassion first and then realize emptiness. This is due to differences in their aptitudes. Although understanding compassion is easier than understanding emptiness, actually generating compassion in our mindstream is more difficult than realizing emptiness. These virtuous emotions and attitudes won't appear in us magically by praying to the Buddha. How worthwhile it is to put in effort to cultivate them!

## 8 | Love, Compassion, and Bodhicitta in Chinese Buddhism

**B**UDDHISTS OF MANY countries — China, Tibet, Vietnam, Korea, Japan, and so forth — share the Mahāyāna scriptures, teachings, and practices from India. Each tradition has its distinct teachings and interpretations as well. In this chapter, we’ll look at some of the ways that love, compassion, and bodhicitta are cultivated in Chinese Buddhism.

### *Love and Compassion — Prerequisites to Bodhicitta*

Chan (Zen) Buddhism says that all sentient beings possess buddha nature, which is by nature pure — “pure” meaning it transcends the duality of purity and impurity. When the buddha nature is fully manifested, that is buddha. However, being obscured by afflictions and defilements, the buddha nature is not presently manifest in sentient beings. Similarly, all sentient beings possess compassion, but our compassion is weak because it is obscured by grasping at self.

Love and compassion are prerequisites for actualizing bodhicitta, the “pure nature.” Without having love and compassion for all beings, the aspiration for buddhahood cannot arise, and generating this aspiration is necessary to enter the first of the five bodhisattva paths. Overcoming grudges and forgiving others is very difficult for ordinary people. Someone mired in resentment, spite, and anger has no wish to help the enemy who destroys their happiness. Love and compassion are the antidotes we must cultivate to dispel this hatred.

In Chinese Buddhism, several methods are used to cultivate love and compassion. One is meditation on the four immeasurables. Another is the

seven-round compassion meditation, which has its source in Vasubandhu's autocommentary on the *Treasury of Knowledge* (*Abhidharmakośa-bhāṣyam*) in the Chinese canon.<sup>59</sup> This meditation is so called because there are seven rounds and each round consists of seven steps. The seven steps involve contemplating our relationship with seven groups of people:

1. Our elders — parents, grandparents, aunts and uncles, teachers, bosses, people of higher rank, and those who were our elders in previous lives.
2. Our peers — siblings, classmates, friends, associates, coworkers, helpers, and those who were our peers in previous lives.
3. Our juniors — employees, students, children, and people whom we take care of.
4. Enemies of our elders in this and previous lives.
5. Our own enemies in this and previous lives.
6. Enemies of our juniors in this and previous lives.
7. Neutral people with whom we do not have a close relationship in this life.

*First step:* Recollect with fondness all the elders that you have known during this life. Recall each person who has taken care of you, raised you, taught you, guided you, protected you, and was a good role model. Take your time in doing this. Contemplate the many ways they influenced your life in a positive way. Then think: My elders have done so much for me. They have raised and taught me. They have risked their life for me. They have selflessly helped me, so it would seem natural that I would try to repay their kindness. However, I don't do that. Instead, I often argue with them, make them angry, and cause them to worry. I don't listen to them and I treat them rudely, without appreciating all they have done to help me during my life. I confess and regret this.

Feel this in your heart. Now think of all the merit you have accumulated and dedicate it to all of your elders: I dedicate my merit to these elders. I share with them all the merit I have created in my Dharma practice and all the merit from all virtuous deeds I have done. May my elders' suffering cease and may they attain full awakening.

Then think about all the elders you had in past lives: Just as I have parents and teachers in this life, I had parents and teachers in previous lives. I don't know who they are now because all of us have been reborn. Still, they were kind to me, so I dedicate my merit to return kindness to them whenever and however I meet them in this and all future lives.

*Second step:* Think in the same way regarding your peers — all the friends and companions you have had during your life. Remember your siblings and childhood friends as well as colleagues, team members, and associates. Reflect: My friends, siblings, and helpers have kept me company. They have befriended me and assisted me when I needed help. My colleagues have worked with me on projects; I worked and played together with fellow team members. It would only be natural for me to help them when they need help, to care about them and comfort them; but instead I have argued with them, competed with them, fought with them, called them names, been inconsiderate, and sometimes even jealous of their successes. On projects we did together, I claimed the success and ignored their contributions. I confess and regret this. Now I dedicate my merit to them. May their suffering be eliminated and may they attain full awakening.

Then contemplate the friends and peers you had in previous lives and think in the same way.

*Third step:* Recall your juniors. These people look to me for help, education, and guidance. They trust and respect me. I should help them and be patient with them, but instead I lose my temper or get frustrated. Neglecting to treat them fairly, I shout at them and use my authority to humiliate them or to force them to do things. I don't encourage and help them in the best way possible but make sure they are always subordinate to me. I confess and regret this. I dedicate all my merit to them. May they be free from all suffering and attain awakening.

After that, think in the same way with regard to your juniors or subordinates in previous lives.

*Fourth step:* Think about all the enemies of your elders — all the people who have created nonvirtuous karma with your elders and interrupted their happiness. Reflect: I should be compassionate toward these people, but instead I hold rancor toward them because they harmed the people I care about. I must release my negative feelings and wish them to be happy. May

they purify their harmful karma and act constructively. No matter who they are, whether they hurt or cheated my parents, may they be free from suffering and have happiness.

Similarly, if your elders mistreated people, think: May these people toward whom my elders felt malice be free from suffering and have happiness. I dedicate my merit to the enemies of my elders. May they be happy and attain awakening.

Then think in the same way toward those who were enemies of your elders in previous lives.

*Fifth step:* Consider your own enemies — people who have hurt you, interfered with your happiness, cheated you, lied to you, betrayed your trust, or taken advantage of you. This is the hardest group to generate love and compassion for because it concerns sentient beings who have hurt us directly. Recall all of these beings. Reflect on the suffering they experienced that made them think that hurting you would relieve their misery. Recall that they are saṃsāric beings who are controlled by ignorance, craving, and hatred.

In addition, think of all the people whom you have hurt. Reflect that your bad relationships with others are not just because they have hurt you but also because you have harmed them. Think: I forgive all those who have hurt me. I let go of all hostility toward them. I will not retaliate or do anything to further antagonize them. I regret any harmful words and actions I have inflicted on them. Feel this in your heart. Then think: I dedicate my merit to them, with the wish that they will practice the path and become buddhas. May I help them on the path. Sincerely dedicate your merit to them.

Then think of those who were your enemies in previous lives — whether they harmed you or you harmed them — regret the harm and dedicate your merit for their welfare.

*Sixth step:* Think similarly toward those who are the enemies of your children, employees, students, and so forth — people who have hurt your juniors or whom your juniors have hurt by bullying them, taking advantage of them, ridiculing them, and so forth. Think: I regret and relinquish any hard feelings I hold toward them. I dedicate my merit to them. May they be free of misery and have happiness.

Then do the same for the people who were enemies of your juniors in previous lives.

*Seventh step:* Contemplate neutral people — those who have neither helped nor harmed you, those you don't know, whom you pass in the street, or clerks in the store — all those with whom you don't have strong karmic relationships at this moment. Think: I dedicate my merit to them too. May they be happy and free from suffering. May they take refuge in the Three Jewels and become awakened. Think this as well for all those who were neutral in previous lives. In this step there is no confession or regret, because you have not interacted with them. Of course those who are strangers and neutral now could have been friends or enemies in previous lives, and vice versa.

Contemplating the seven steps in this way constitutes one round. The second round is thinking in the same way toward these seven groups, this time in reverse order beginning with neutral people and ending with your elders. The third round is done by going through the seven steps again, this time from your elders to neutral people. The meditation is done, back and forth, in this way seven times, making it the seven-round compassion meditation.

At the conclusion, meditate on emptiness. During the seven-round compassion meditation you think a lot, so at the end make sure to turn the mind to emptiness. Empty your mind of all thoughts, ideas, and grasping at true existence, and keep pure awareness.

Take your time contemplating each step. Really feel others' kindness toward you and your responsibility toward them. Regret the mistakes, misunderstandings, and bad decisions made in these relationships. Cultivate love and compassion for these people and dedicate your merit for their well-being in this and all future lives as well as for their awakening. As you become more familiar with the steps, you will sometimes be able to do them more quickly but with the same depth of feeling. Anyone who practices this compassion contemplation for some months will definitely see a change in their life and relationships with sentient beings.

The four immeasurables and the seven-round compassion meditation are the two standard meditations used to develop love and compassion for sentient beings. The seven-round compassion meditation principally deals

with human beings, whereas the four immeasurables concern all sentient beings from all six realms. The four immeasurables covers not only this world system but also all world systems in all directions throughout infinite space. For this reason, the seven-round compassion meditation is usually taught first, followed by the four immeasurables.

## REFLECTION

---

1. Do the seven-round compassion meditation as explained above by contemplating with affection your relationships with your elders, peers, and juniors. Think of their kindness and love for you.
  2. Regret when you have treated them poorly.
  3. Express the loving and compassionate wishes and aspirations you have for them.
  4. Reflect on your relationships with the enemies of your elders, your own enemies, and the enemies of your juniors. Release any anger you may have toward them and wish them well.
  5. Reflect on your relationship with neutral people and wish them well.
  6. You may want to do purification practice to clear any destructive karma you created with these seven groups of people. This removes obstacles to having sincere positive aspirations for their well-being.
  7. Rest your mind in feelings of love and compassion for sentient beings.
- 

### *Causes and Conditions to Generate Bodhicitta*

In “On Generating the Resolve to Become a Buddha,” the sixth chapter in Nāgārjuna’s *Treatise on the Ten Grounds (Daśabhūmikavibhāṣā)*, he speaks of seven causes and conditions that facilitate generating bodhicitta: the

influence of a tathāgata, observing that the Dharma is on the verge of destruction in our world and wanting to protect it, feeling compassion for sentient beings, receiving instructions from a bodhisattva on how to generate bodhicitta, observing the conduct of a bodhisattva and wanting to emulate it, being inspired after being generous, and being delighted by seeing the signs and marks of a buddha.<sup>60</sup> These are different ways through which a person may generate bodhicitta, depending on his or her disposition and tendencies.

### ***1. The Influence of a Tathāgata***

Through his supernatural powers, a buddha is able to see that a person's roots of virtue are sufficiently mature that they are capable of taking on the commitment to become a fully awakened buddha. That buddha then instructs them, "Child of a good family, come forth. You are now capable of bringing forth the resolve to liberate beings from duḥkha and afflictions." In this way the person generates bodhicitta.

### ***2. Observing that the Dharma Is on the Verge of Destruction in Our World and Wanting to Protect It***

Thinking about the vast and profound qualities that the Buddha practiced and the hardships he endured as a bodhisattva in order to attain awakening for our benefit, feel grateful and indebted to the Buddha. Be aware that as a result of the degeneration of sentient beings' minds, these precious teachings are on the verge of vanishing in the world. Resolve to plant firm roots of virtue and to generate bodhicitta in order to cause the Dharma to be preserved for countless eons in the future.

### ***3. Feeling Compassion for the Duḥkha of Sentient Beings***

Observe sentient beings beset by afflictions, drowning in cyclic existence, experiencing terror and adversity as they cycle in the six realms, separating from their loved ones, encountering happiness infrequently, taking one rebirth after another without any foreseeable end, and having no protector. Find this unbearable and, spurred by compassion, proclaim, "I shall become a protector for those who have no protector. I shall become a refuge for those who have no refuge. I will become one on whom those with no one to

rely on may depend. Once I have succeeded in making my way across saṃsāra, I shall endeavor to bring beings across as well. Once I have gained liberation, I shall liberate these beings as well. Once I have succeeded in gaining peace, I shall see that all beings are established in peace as well.”

#### ***4. A Bodhisattva Instructs Us in Generating Bodhicitta***

There are those who, simply by hearing others talk about bodhicitta and full awakening, generate bodhicitta. Sometimes it could happen that they later lack instructions on bodhicitta and the perfections and adopt the path to arhatship instead. But before they attain the stage of the fortitude of the nonarising of phenomena (*anutpattika-dharma-kṣānti*) of the śrāvaka path, they meet an ārya bodhisattva on the seventh to tenth grounds, who knows their faculties and disposition. The Buddha or bodhisattva will then instruct these people again on bodhicitta and the bodhisattva path and, due to the ripening of their roots of virtue, they will again abide in the bodhisattva path upon realizing the stage of the fortitude of the nonarising of phenomena, which is attained with the eighth bhūmi.

#### ***5. Observing the Conduct of a Bodhisattva and Wanting to Emulate It***

Some people observe how bodhisattvas practice and want to emulate it. They see that bodhisattvas proceed on the path with the protection of compassion, engage in countless beneficial deeds without self-centeredness toward their own body and life, have vast and profound learning and meditation experience, are sources of protection for those afflicted with the misery of cyclic existence, and possess pure minds. Being inspired by the example of these great bodhisattvas, these people think: I, too, want to generate bodhicitta and attain unsurpassed awakening for the welfare of all sentient beings.

#### ***6. Inspiration after Being Generous***

Some people, when making offerings to the Buddha or the Saṅgha, call to mind the great bodhisattvas of the past who excelled in the perfection of generosity. Being inspired by their example, they immediately generate bodhicitta and then dedicate the merit from their generous action to full awakening.

### ***7. Delight upon Seeing the Signs and Marks of a Buddha***

Some people hear about those who have directly seen the thirty-two signs or eighty marks of a buddha. These are physical signs, such as the imprint of the Dharma wheel on a buddha's palms and the soles of his feet, the crown protrusion on his head, and the golden color of his body. They become delighted and inspired by seeing these, and think: I, too, wish to possess these exquisite physical signs and marks so I will practice what these buddhas have practiced and generate the same realizations as they have. In this way, they generate bodhicitta.

People may generate bodhicitta as a result of any of these seven causes and conditions. However, only those who have generated bodhicitta by means of the first three ways — (1) instruction by a buddha who understands their faculties, (2) respecting the Dharma and wishing to protect it in the world, or (3) having strong compassion for sentient beings experiencing duḥkha — will certainly be successful in attaining full awakening. This is because the roots of virtue created by generating bodhicitta in these three ways are very deep.

Those who generate bodhicitta in any one of the other four ways — (1) instruction by a bodhisattva who influences them to generate bodhicitta, (2) having observed the practice of bodhisattvas and been inspired by them, (3) having performed an action of generosity that made them recall bodhisattvas' virtues, or (4) having seen or heard about the physical signs on a buddha's body — are not certain to be successful because their roots of virtue are not firmly established. However, those who practice well will be successful.

### ***Ten Factors to Spur the Generation of Bodhicitta***

Sheng'an Shixian (1686–1734), a meditation master and pure-land patriarch, wrote *Exhortation to Resolve on Buddhahood*, in which he expressed the importance of generating bodhicitta, urged the reader to generate it, and gave ten points for reflection to spur the generation of bodhicitta. But first, to encourage us to cultivate bodhicitta purely and perfectly, he discussed eight distinctions in the characteristics of

practitioners' aspirations: deviant or correct, genuine or false, great or small, and one-sided or perfect.

Some practitioners do not examine their mind and are very concerned with external matters. Seeking wealth, fame, or sense pleasures, their aspiration is *deviant*. On the other hand, some practitioners are not attached to personal profit, reputation, and pleasure either in this life or the next. Their generation of bodhicitta is *correct*.

We should constantly direct our mind to the Buddha's path and try to benefit sentient beings in every thought by teaching and guiding them. Hearing of all the perfections that need to be practiced for countless eons, we should not become intimidated and retreat but should go forward with courage and confidence. Observing the depth of sentient beings' defilements and the difficulty in teaching and guiding them, we must abandon discouragement and not give in to exhaustion. Like someone climbing a high mountain or building a huge stūpa, we must complete the path to its end. Such bodhicitta is *genuine*.

On the other hand, not purifying our destructive karma or the downfalls from transgressing precepts, being internally confused while acting as if we were clear, undertaking projects with excitement but not completing them, having virtuous thoughts that are mixed with attachment to wealth and reputation, following the virtuous path but remaining defiled with destructive karma — generating bodhicitta on such a basis is called *false*.

When we resolve to maintain our bodhicitta motivation, to keep the bodhisattva vow until all sentient beings are awakened, and to practice until we attain awakening, this is a *great* resolve. On the other hand, if we see cyclic existence like a prison and aspire only for our own liberation without caring for the situation of others, this resolve is *small*.

Thinking that the Buddha's path is separate from and outside of our own mind, we may aspire to become awakened and lead others to awakening but remain attached to our own merit, knowledge, and views. Such resolve is *one-sided*. On the other hand, when we realize that others want happiness and not suffering, just as we do, and that all of us are empty of inherent existence; when we realize that our nature is in line with the Buddha's path and thus aspire to actualize it; and when we see that no phenomenon exists independent of and unrelated to the mind, we are going in the correct

direction. When we then generate bodhicitta and take the bodhisattva vow with a mind supported by the wisdom realizing emptiness, when we engage in the perfections with a mind grounded in the understanding of emptiness and do not view emptiness itself as existing by its own characteristics, then our generation of bodhicitta is *perfect*.

By understanding these eight distinctions, we know what constitutes bodhisattva practice and what does not. We must then continuously examine our mind to see if our bodhicitta is deviant or correct, genuine or false, great or small, one-sided or perfect. With mindfulness of this we should then proceed to rid ourselves of the deviant, false, small, and one-sided and cultivate the correct, genuine, great, and perfect. A bodhisattva practice done in this way will certainly be successful.

The ten points for reflection follow. The first five concern mindfulness of the kindness that we have received from the Buddha, our parents, teachers, benefactors, and all sentient beings. Recognizing that we have been the recipient of tremendous kindness inspires in us the wish to repay that kindness, and the most effective way to do that is to generate bodhicitta and practice the bodhisattva path. The remaining five points support and direct our bodhicitta.

### ***1. Mindfulness of the Extreme Kindness of the Buddha***

Many eons ago, the person who was to become Śākyamuni Buddha with great compassion generated bodhicitta and practiced the path until he attained buddhahood. Where would we be had he not done this for our sake? How would we learn the Dharma and practice the path in this degenerate age, had the Buddha not vowed to lead us on the sacred path?

When we created destructive karma, the Buddha experienced agony because we were creating the cause for our own suffering. He tried to lead us to virtue with his skillful means, but we were often too obtuse, skeptical, and cynical to accept the teachings or to have confidence in them. When we floundered in unfortunate rebirths, the Buddha was overwhelmed with compassion and wanted to take on our destructive karma and suffering so that we would not have to experience them. However, our karma was so heavy that he could not free us from this torment. When we finally gained a

human rebirth, he tried to lead us in the virtuous path and his loving attention never strayed from its focus on us.

When the Buddha was alive, we were sunken in unfortunate rebirths. Now that we have a precious human life, he is in parinirvāṇa. Due to our previously created destructive actions, we have been born in this degenerate time. Yet, due to constructive karma, we have become the Buddha's followers and have the opportunity to practice the Dharma. Due to mental obscurations, we cannot see Śākyamuni Buddha now, but due to virtuous karma and open-mindedness, we can hear the teachings. Understanding the Buddha's kindness and the rare opportunity we have at present, let's generate bodhicitta, accomplish the bodhisattva path, attain buddhahood, and liberate sentient beings from cyclic existence. If we don't do this to repay the kindness of the Buddha, then how else can we repay it?

## ***2. Mindfulness of the Kindness of Our Parents***

Our parents gave us this body, which is the support for us to practice the Dharma. They spent years caring for us when we were unable to take care of ourselves. They taught us basic living skills: how to speak, eat, and clean ourselves. They taught us social skills: how to get along with others, deal with the frustration of not getting what we want, and work as a member of a team. If our parents were not in a position to do these things for us because of poverty, illness, or their own confusion and limitations, they made sure that others cared for and guided us. They had great hopes and wishes for us to be happy and successful. Yet we often repaid their kindness with self-centeredness, not caring how our actions affected them, not appreciating what they had done for us but just expecting more.

If we do not put energy into generating bodhicitta, all their sacrifice and efforts for our sake would be wasted. But if we study and practice the Mahāyāna, we will be able to liberate our present parents, all those who have been our parents in previous lives, and everyone's parents. To guide them over the abyss of cyclic existence to the security and peace of awakening — what a wonderful thing to be able to do!

## ***3. Mindfulness of the Kindness of Our Teachers and Senior Practitioners***

Those who teach us skills useful in the secular world and especially those who teach us the Dharma have been and continue to be immeasurably kind to us. Everything we know has come from the kindness of our teachers. Without them we would not know how to read and write, nor would we have basic ethical values. Our behavior would be like that of an animal.

Our opportunity to learn the Buddha's teachings is due to the effort of our spiritual mentors and senior practitioners. They guide us on the path, encouraging us when we feel tired, steering us in the right direction when wrong views or bad behavior threaten our practice, and practicing patience when we are stubborn, rebellious, or ungrateful. The fact that we have been able to take refuge and the five lay precepts, to become monastics, to take the bodhisattva precepts — all this is due to the kindness of our Dharma teachers. Whatever transformation in our thoughts and behavior has occurred since we started to practice the Dharma can be traced to their instructions and guidance. What better way to repay their kindness than to tame our mind and train in bodhicitta so that we will be able to humbly share the Dharma with others just as they have shared it with us?

#### ***4. Mindfulness of the Kindness of Benefactors***

Those who support us so that we can learn and practice the Dharma are very generous indeed. Monastics do not earn wages. We are completely dependent on kind benefactors who provide us with the four requisites of life: food, clothing, shelter, and medicine. We should live simply as part of our practice of developing contentment and counteracting attachment in order not to inconvenience those who so kindly support us.

Our benefactors work hard all day, often laboring overtime and becoming stressed as a result of their job. Yet, out of the kindness of their hearts, they share what they have earned with us. We do not live in poverty as many people in the world do. We are in a position to choose to moderate our consumption and care for the planet. Taking benefactors' support for granted is certainly not appropriate. Having a nicer living situation with better food and clothes than our supporters would be repugnant to the wise; it is the path to an unfortunate rebirth for us and deprives the kind benefactors of benefiting from our Dharma practice. The only appropriate

way to repay their kindness is to keep our precepts well, generate bodhicitta, and fulfill the collections of merit and wisdom for their sake.

### ***5. Mindfulness of the Kindness of Sentient Beings***

All sentient beings have been our loved ones in so many previous lives. How do we know that the crawling and flying insects we see were not once our parents? Or that the meat we eat or leather we wear is not the flesh and skin of our friends? Our dear ones have changed form since we knew them as friends and relatives in previous lives, so we may not instantly recognize them. If a child was separated from her parents, she may not recognize them when she encounters them as an adult. But once someone has pointed out to her, “Those people are your parents who cared for you with so much love many years ago,” her feeling of familiarity will return and she will be overjoyed to be reunited with them. Similarly, when the Buddha points out to us that all sentient beings have been our loved ones many times in previous lives, we lose our sense of distance and hesitation and come to cherish them again.

Some of our dear ones may now be screaming in torment in the hell realms, starving as hungry ghosts, or befuddled and used as beasts of burden in the animal realm. Surely they would appreciate our help. Were it not for the Buddha informing us about this, we would be oblivious to their situation. Thus, we must remain ever-mindful that the sentient beings around us — enemies included — have been our dear ones and have the potential to become buddhas in the future. We must continuously contemplate how to benefit them and be aware of our responsibility to do so. Thinking of all the past benefits we have received from sentient beings stimulates us to care for them in return by giving rise to the bodhi mind.

### ***6. Mindfulness of the Suffering of Repeated Birth and Death in Cyclic Existence***

Under the influence of afflictions and karma, we go up and down in saṃsāra — sometimes born amidst the delights of the celestial realms, other times trapped in the pain and agony of the hell realms. Once a seed of destructive karma has ripened, we cannot purify it; we are left with experiencing its result. At this time, we may realize that our misery is

brought about from our own harmful actions and regret them, but there is no possibility to go back and undo them. Later, when our immediate suffering has ceased, we forget about the law of karma and its effects, going back to our old ways of seeking pleasure in the present moment, lacking conscientiousness regarding the effects of our actions on others or on our own future experiences. With this mindset, we will undoubtedly create more nonvirtuous karma, leading to more misery. Seeking happiness, we slaughter animals to fulfill our desire for meat, yet these beings have been our kind mothers and friends in previous lives. Although we seek security and safety, there is none to be found as long as ignorance, afflictions, and karma rule our lives.

If we truly understood our relationships with others and the law of karma, we would feel horrified by our many destructive actions. If we actually understood what being in saṃsāra meant, we would laugh at the tiny problems our afflictive mind makes into catastrophes on a daily basis. Our ignorance causes us to believe we are happy, or if we are not, to believe that simply improving our situation in saṃsāra will bring the relief we long for. How wrong we are! People who don't know the Buddha's teachings have difficulty grasping this, as do people who are obsessed with the happiness of only this life; they live and die in confusion. Their wealth and reputation cannot protect them at the time of death, when their agony can be immense. For a tortoise to have its shell ripped off is less anguish than for those whose minds are immersed in ignorance and craving to separate from their bodies at death.

Having a precious human life at this moment, we are unbelievably fortunate. Yet this life goes by so quickly. As youngsters, we just want to play; any talk of karma or future lives seems irrelevant to us. As young adults, desire takes over the body and mind, and we work hard to procure and protect the pleasures of this life. But in the blink of an eye, we are old, our skin dried out, our muscles withering, our mind forgetful. While we think we can control things, we actually have little control over our own body and mind, let alone the people and environment around us. If the tears we have shed in previous lives were amassed, they would be greater than the ocean. If the bodies we have taken in saṃsāra were piled up, they would fill the universe.

Thinking about this, we see that cyclic existence is a desperate situation. Without the Buddha's teachings, where would we be? We would have no knowledge of how to liberate ourselves, let alone liberate others, from this wretched situation. It is in this life — and with our precious human life — that we have the opportunity to attain buddhahood. If we do not make use of this rare and precious chance, when will it come again? Using this special situation wisely is of utmost, long-lasting importance. We must aspire to liberate ourselves and all sentient beings from the broad and deep ocean of cyclic existence through practicing bodhicitta.

### ***7. Respect Your Own Buddha Nature***

The nature of our mind is no different from the nature of the Buddha's mind. Yet we are still struggling for pleasure amidst confusion while Śākyamuni Buddha enjoys unending bliss. Why is it that the Buddha has compassion, wisdom, and superknowledges, and is adorned with the ten perfections, while we are confused by wrong views and have a storehouse of afflictions and destructive karma? This occurred because even though the person who is now the Buddha was once drowning in saṃsāra, he took hold of the life raft of the Dharma, practiced it, and attained full awakening. Meanwhile we neglected the precious jewel of our beautiful buddha nature, opting to wallow in the mud of saṃsāra. Considering that the nature of the Buddha's mind and the nature of our mind is the same, what a pitiful situation we have allowed ourselves to remain in!

Meanwhile, the jewel of our buddha nature has been lying unnoticed in the mud too long. We must appreciate and respect this jewel, clean it, and put it on top of the canopy of awakening where its radiance will shine everywhere. Let's gather together the force of our joyous effort and do it! In the process, may we never denigrate or ignore our buddha nature and may we never be ungrateful for the Buddha's teachings. Unfolding the true beauty of our buddha nature involves aspiring for full awakening for the benefit of all sentient beings, so may we quickly give rise to this illustrious mind that is the cause of all happiness in saṃsāra and nirvāṇa.

### ***8. Think of the Disadvantages of Nonvirtuous Karma, Confess, and Purify It***

We boldly take monastic ethical restraints and the bodhisattva vow in our spiritual mentors' presence but are cowardly when it comes to keeping them. We much prefer seeking what we want when we want it to practicing the path to awakening, and in doing so, we blithely transgress our precepts and commit other nonvirtues without a second thought. But when it comes to confessing and purifying these transgressions, laziness sets in and we lack the time and energy to do it. If we take the time to consider it, we will see that the accumulation of destructive karma in each day is enormous and the accumulation of virtuous karma rather feeble. Faced with this distressing state of affairs and the suffering it will bring us and others, let's generate bodhicitta as the supreme method of confessing and purifying this mountain of destructive karma created by our self-centered mind and self-grasping ignorance.

### ***9. Aspire to Be Born in the Pure Land***

While practice in our polluted world is difficult — we are constantly buffeted here and there due to afflictions and karma — in a pure land all conditions are in place to be able to practice the Dharma with ease and to become a buddha. While many buddhas have pure lands, Amitābha Buddha's pure land is especially suited for us because we can be reborn there without having realized emptiness. Merit and virtue are needed to be born in Sukhāvātī, Amitābha Buddha's pure land, and there are no better methods to accumulate them than concentrating on Amitābha, his name, and his excellent qualities, and by generating bodhicitta. The root of gaining mindfulness and concentration on Amitābha is the aspiration to become a buddha. Without this indispensable ingredient of bodhicitta, we could practice mindfulness of Amitābha but it will not be successful. But once we have generated bodhicitta, mindfulness of Amitābha will prevent it from declining. Bodhicitta establishes the foundation for further realizations of the path. For those who have generated bodhicitta, dying will not be fearful and birth in the pure land will occur. However, if we aspire to be born in the pure land, but let the mind wander throughout the universe and do not cultivate bodhicitta even the slightest, even reciting Amitābha Buddha's name eon after eon will not bring about our desired goal.

If we generate bodhicitta, then even if we are not born in Amitābha's pure land, our future lives will be spent meaningfully aiding sentient beings in this world. In addition, completing the collections of merit and wisdom will occur without stress or obstacles.

### ***10. Pray for the Buddha's Teachings to Remain in Our World Purely and Forever***

The Buddha attained awakening for our benefit, yet we lacked the good fortune to be born while he was alive. Fortunately, the Buddha's liberating teachings still exist in our world. But despite this, the minds of human beings cling to wrong views and are addicted to the eight worldly concerns, even using the Dharma itself to bolster our prestige or bring us wealth. Nowadays, people are so enamored of worldly success that it is difficult to even hear the words *Buddha*, *Dharma*, and *Saṅgha* — our supreme refuge. Sheng'an Shixian writes (ERB 67):

If, as a child of the Buddha, I am unable to repay such kindness — inwardly there shall be no benefit for myself and outwardly there shall be no benefit for others. It shall then be the case that, while alive, I provide no benefit to anyone, and after I die, I afford no benefit to those who come along afterward. In such a case, though the heavens may extend high above, still they remain unable to give me cover. Though the earth may be massive, it remains unable to support me. Then, if the phrase “a person possessed of the most extremely grave karmic crimes” does not apply to me, to whom could it even be applied at all?

On account of this, I feel unbearable pain and discern that there is no way to escape [from this indictment]. Suddenly, I forget my inferior qualities and immediately generate the great resolve [for buddhahood]. Although I remain unable to turn back the Dharma-ending process dominating this era, I nonetheless will remain determined to strive to guard and maintain right Dharma throughout [this and all] my future lifetimes.

He then describes going to a bodhimaṇḍa — here referring to a temple or monastery — repenting and taking the forty-eight precepts,<sup>61</sup> “wherein each and every precept is devoted to bringing beings across to liberation.” He calls on each of us to give rise to bodhicitta so that, thought after thought, our mind is focused on buddhahood. He urges us to practice the bodhisattva path and be reborn in Sukhāvātī, Amitābha’s pure land. Having attained awakening there, we must return to this suffering world to spread the light of the Buddha’s teachings, to purify the Saṅgha, and to liberate all beings. Pointing out that we have a precious human life with the eight freedoms and ten fortunes that provides the excellent conditions for generating bodhicitta, Sheng’an Shixian challenges us, “If you do not now on this very day proceed to generate this great resolve, then for which more suitable day [could you possibly] be waiting?” He encourages us to unite with like-minded people in generating bodhicitta (ERB 71):

Those who have not generated it may now generate it. Those who have already generated it may now cause it to develop more fully. Those who have already caused it to develop more fully may now cause it to remain perpetually manifest.

Sheng’an Shixian continues by counseling us:

Do not, fearing difficulty, shrink back in timidity. Do not, regarding this matter as easy, take it but lightly. Do not, seeking a swift conclusion, fail to make a long-enduring commitment. Do not, through indolence, remain bereft of heroic bravery. Do not, on account of being shiftless and spiritless, fail to incite yourself to bold action. Do not, drifting along in customary fashion, continue to put it off for another time. Do not, judging yourself to be foolish and dull-witted, continue depriving yourself of resolve. Do not, possessing only shallow roots [of virtue], judge yourself to be an inferior person with no share in this . . .

Do not claim that a single thought is insignificant. Do not hold the opinion that “empty vows” are devoid of any

benefit. If your mind abides in truths, then your endeavors will be genuine. If your vows are vast in their scope, then your practice will be profound . . .

As for what we have vowed to achieve, it is for all of us together to gain rebirth in the Pureland, for all of us together to see Amitābha Buddha, for all of us together to engage in the teaching of beings, and for all of us together to perfect the right awakening.

Developing bodhicitta is not easy, but it is the most worthwhile thing we can do. We must be persistent and patient, practicing with enthusiasm and fortitude without allowing our mind to descend into despondency. Worrying about difficulties saps energy; remaining stuck in the past has no purpose. But if we have found a qualified Mahāyāna spiritual mentor, correct teachings, and virtuous Dharma friends, we must make use of this rare chance and do what will lead to the highest happiness for ourselves and all others. Having planted the seed of bodhicitta in our mind, it will sprout and its roots will grow deeper day by day. When we realize the nonarising (unborn, unproduced — emptiness) and attain the fortitude of the nonarising of phenomena, all concerns about the path being difficult will vanish.

The bodhicitta is so precious that we must do our utmost to generate, enhance, and protect it. The *Flower Ornament Sūtra* advises:

Even if a wheel of fire about your head  
is wildly whirling and flaming,  
just do not abandon your bodhi mind,  
even amidst such strong suffering.

When we suffer, we give up what is not essential for our well-being in order to focus on what is important. The bodhicitta is tremendously important for the well-being of ourselves and all others; we must never relinquish it. To the contrary, if we reflect on bodhicitta at times of suffering, our mental suffering will decrease, and by generating compassion our physical

suffering will be transformed so that it becomes meaningful on the path to awakening.

## REFLECTION

---

Contemplating the ten factors will spur our generation of bodhicitta.

1. The first five concern mindfulness of the kindness that we have received from the Buddha, our parents, teachers, benefactors, and all sentient beings. Reflect on these until you recognize that you've been the recipient of tremendous kindness in this and previous lives.
2. Reflect on sentient beings' suffering of repeated birth and death in cyclic existence.
3. Generate respect for your own buddha nature.
4. Think of the disadvantages of nonvirtuous karma, confess, and purify it.
5. Aspire to be born in the pure land.
6. Pray for the Buddha's teachings to remain in our world purely and forever.
7. Generate bodhicitta and feel its importance for the happiness of sentient beings and for the continued existence of the Dharma in our world.

---

### *Vasubandhu on Cultivating Bodhicitta and the Bodhisattva Vow*

Vasubandhu (c. 300), who is highly regarded in China, wrote the *Treatise on the "Generating the Bodhi Resolve Sūtra,"* in which he discusses the benefits of bodhicitta, the way to generate it in our mind, and the establishment of the bodhisattva vow. This is followed by chapters on each

of the six perfections, two chapters on the view of reality — emptiness and signlessness — and dedication of merit.

Vasubandhu clarifies that bodhicitta is not for the faint-hearted (VTBV 23):

Because empty space is endless, beings too are endless. Because beings are endless, the bodhisattva's generation of the resolve [to attain buddhahood] is equivalent in its vastness to the realms of [all] beings. As for the realms of beings, they are limitless.

Bodhisattvas who have generated bodhicitta but whose wisdom of contemplation is not yet moistened by deep samādhi in the dhyānas must set forth correct vows. Doing this will enable them to draw in followers and deepen their practice of bodhicitta and the perfections. This practitioner should proclaim, “I seek to realize the unsurpassed awakening and to rescue and liberate everyone without exception so that every one of them is caused to reach all the way to nirvāṇa without remainder.” Vasubandhu continues (VTBV 39–43):

“Therefore, in the initial generation of bodhicitta, it is the great compassion which is foremost. It is on account of the mind of compassion that one becomes able to generate ten ever more superior great right vows. What are those ten? They are:

1. Regarding those roots of virtue I have planted in previous lives and in this present body, I pray that all of these roots of virtue may be bestowed upon all of the boundlessly many beings and dedicated to the unsurpassed bodhi (full awakening). May it be that these vows of mine shall grow in each succeeding thought-moment, shall be produced again in each successive lifetime, shall always be bound to my mind, shall never

be forgotten, and shall be guarded and retained by *dhāraṇīs*.<sup>62</sup>

2. Having already dedicated these roots of virtue to bodhi, I pray that on account of these roots of goodness, no matter where I may be reborn, I shall always be able to make offerings to all buddhas and shall definitely never be reborn in a land where there is no buddha.
3. Having already succeeded in being reborn in the lands of the buddhas, I pray that I shall always be able to draw personally close to them, shall follow along and serve them in every way, shall remain as close to them as a shadow to a body, and shall never become distantly separated from the buddhas even for the briefest of moments.
4. Having already succeeded in drawing personally close to the buddhas, I pray that they will then speak Dharma for my sake in accordance with whatsoever is appropriate for me. May I then straightaway perfect the bodhisattva's five superknowledges.<sup>63</sup>
5. Having already perfected the bodhisattva's five superknowledges, I pray that I shall thereupon be able to reach a penetrating understanding of conventional truth together with its widespread artificial designations; that I shall also then completely comprehend, in accordance with its genuine nature, the foremost ultimate truth; and that I will gain right Dharma wisdom.
6. Having already realized the right Dharma wisdom, I pray that, free of any thoughts of aversion, I shall then explain it for the sake of beings, instructing them in the teachings, benefiting them, delighting them, and causing them all to develop an understanding of it.
7. Having already become able to create an understanding [of right Dharma] in beings, I pray that, availing myself of the spiritual power of the buddhas, I shall be able to go to all worlds without exception everywhere

throughout the ten directions, making offerings to the buddhas, listening to and accepting right Dharma, and extensively drawing in beings [to the Dharma].

8. Having already received right Dharma in the abodes of the buddhas, I pray that I shall thereupon be able to turn the wheel of the pure Dharma in accordance with it. May it then be that all beings of the worlds in the ten directions who hear me proclaim the Dharma or who merely hear my name shall then straightaway succeed in abandoning all afflictions and in generating bodhicitta.
9. Having already become able to cause all beings to generate bodhicitta, I pray that I may constantly follow along with them, protecting them, ridding them of whatever is unbeneficial, bestowing on them countless sorts of happiness, relinquishing my life and wealth for their sakes, drawing in beings, and taking on the burden of right Dharma.
10. Having already become able to take on the burden of right Dharma, I pray that, even though I shall then practice in accordance with right Dharma, my mind shall nonetheless have nothing whatsoever that it practices. May it be that, in this, I shall conform with the way that the bodhisattvas themselves practice right Dharma and yet have nothing whatsoever that they either practice or do not practice.

For the sake of carrying on the transformative teaching of beings, one never relinquishes right vows. This is what is meant by the ten great right vows of the bodhisattva who has brought forth the resolve [to realize unsurpassed bodhi].

These ten great vows extend everywhere to all realms of beings and subsume all vows as numerous as the Ganges' sands. [Hence one reflects thus:] If beings were to come to an end, then and only then would my vows come to an end.

However, beings are truly endless. Therefore these great vows of mine shall also never come to an end.”

Vasubandhu then describes how each perfection acts as a cause of full awakening and comments that the four immeasurables, the thirty-seven harmonies with awakening, and all the many other excellent practices work together to bring perfect realization of full awakening.

## REFLECTION

---

1. Slowly read and contemplate the ten superior great right vows that Vasubandhu articulated.
  2. Be aware of how each vow builds on the power of the preceding one and empowers the subsequent one.
  3. Take these vows into your heart and aspire to fulfill them.
- 

### *Exhortation to Resolve on Buddhahood*

Peixiu (797–870), a district magistrate at the time of writing *Exhortation to Resolve on Buddhahood*, later became the Chinese prime minister during the Tang dynasty. A layman, he was a devoted Buddhist and an educated literatus. His text on generating bodhicitta was so highly regarded that the Huayan and Chan patriarch Guifeng Zongmi (780–840) wrote a foreword to it, saying Peixiu was an emissary of the Buddha who carried out the Buddha’s work in writing this essay.

In the foreword, Zongmi says that generating bodhicitta involves great virtue, vast merit, an understanding of emptiness, and the determination to treat our body as the vehicle for Dharma practice without being attached to it. Generating bodhicitta also entails a vast view, great empathy and compassion for others, and supremely strong determination. He cautions us against deviation, one-sided biases, laziness, and haste.

*Deviation*, for example, is seeking the Dharma outside of the mind and grasping at a self within this body. Comprehending the nature of our own mind and attaining excellent qualities equal to the Buddha's counteract the deviant view that awakening is somewhere apart from our own mind; understanding that form and consciousness are empty and like illusions counteracts the erroneous notion of self.

Looking only at the ultimate nature or only at cause and effect are examples of *biases*. Understanding the four truths and engaging in the six perfections counteract unbalanced focus on the ultimate nature and the wisdom aspect of the path; understanding true suchness (emptiness) and original awakening (buddha nature) remedy a disproportionate focus on conventional truth and the method aspect of the path.

*Laziness* is keeping the Dharma at an intellectual level only, without putting it into practice; laziness is also becoming so involved in emptiness and serenity that we forget sentient beings. Accumulating merit, generating wisdom and compassion, and making strong vows are the antidote to being too immersed in emptiness and serenity.

Making the body exhausted by pushing ourselves or depriving ourselves of a peaceful mind in an attempt to gain realizations according to a certain self-created schedule are examples of *haste*. Haste is remedied by making prostrations and offerings, praising the Three Jewels, reciting scriptures, and leading by being a good example when teaching others. It is important to keep our body and mind in balance when responding to life's circumstances. Resting when the time is right and practicing without impatiently waiting for results counteracts craving swift results. Following Zongmi's sage advice will enable our practice to flow more smoothly and consistently.

Peixiu begins by explaining the term "highest, perfect, and complete awakening" (*anuttara-samyaksambodhi*). "Highest" refers to the unsurpassed or ultimate awakening, "perfect" means that it accords with the wisdom realizing emptiness, and "complete" indicates immeasurable wisdom that fully knows both the ultimate and conventional truths. This awakening is the magnificent path realized by all the buddhas, and it is what sentient beings are most obscured and deluded about. The initial resolve to attain highest, perfect, and complete awakening comes from

admiring the Tathāgata’s cessation of all duḥkha and obscurations, and feeling sad that so far we have neglected this opportunity ourselves.

Bodhicitta or bodhi mind must be generated from our “true mind” — from the pure aspect of our mind that is part of our buddha nature. It does not arise from identifying with our flesh-and-bones body composed of the four elements, which arises and disintegrates in each moment. It also does not arise from identifying with the false, obscured mind obsessed with sense pleasure and worldly success. Like the body, this mind is impermanent and unstable.

Our genuine body is “perfect and complete, empty and quiescent”; our genuine mind is vast in its scope and imbued with intelligence and awareness. The perfect and complete Dharma body is replete with countless virtuous qualities; it is empty and quiescent in that it goes beyond all forms and characteristics and is forever free of disturbance. The genuine mind is vast in that it coincides with the dharmadhātu — the sphere of reality (Dharma realm). It is imbued with intelligence and awareness in that it is a focused, penetrating, clear, investigating illumination. Encompassing great virtuous qualities, the genuine mind cuts through the fallacious thinking of the tetralemma — such as the distorted view that things arise from self, other, both, or causelessly — and the convoluted conceptual mind.

Like a full moon obscured by the clouds of afflictions so that we are unaware of it, the original purity of the genuine mind will manifest when the afflictions have been abandoned. As said in the *Flower Ornament Sūtra*, “The mind, the Buddha, and beings as well — in these three, there are no distinctions.” This genuine mind is the same as the essence of bodhi mind. When we do not see this, we become entwined with our false conceptualizations and engage in actions that bind us in continual rebirth. Having generated the resolve for the highest path, we should cultivate the three types of mind, establish the five vows (explained below), and engage in all the practices that lead to awakening. In addition, we should take the buddhas as our spiritual mentors and the bodhisattvas as our spiritual companions, regard sentient beings in the six realms as our followers, see cyclic existence with its afflictions as the field of practice, and vow in all future times to liberate sentient beings. This is the mind that has resolved to realize the highest, perfect, complete awakening.

## *Cultivating the Three Types of Mind and the Five Great Vows*

The three types of mind are an essential support for bodhicitta. These are great compassion, great wisdom, and the mind established in great vows. Based on seeing that our mind is originally unborn and unceasing, we feel *great compassion* for sentient beings who are drowning in the *duḥkha* of cyclic existence. Although we have not yet attained awakening ourselves, we still want to liberate sentient beings by placing their liberation before our own. With such compassion, we engage in the four ways of gathering disciples, establishing them in refuge in the Three Jewels and in correct views so that they will practice the path to awakening.

*Great wisdom* is necessary to fulfill the aspiration of great compassion. Sentient beings have so many diverse faculties, dispositions, tendencies, and aspirations that wisdom and skill are needed to guide them. To gain such wisdom we must serve the Buddha and study the Dharma extensively. In this way we will know and will have practiced all the teachings and paths the Buddha taught. This will enable us to benefit others by teaching them the Dharma that is appropriate for their disposition and stage of the path at that particular time.

Although the fundamental nature of the mind is pure, it is obscured by afflictions and habitual tendencies that do not vanish quickly. To make ourselves suitable vessels for the Dharma, we contemplate the prospect of continual rebirth in *samsāra* without encountering the Buddhadharma. This frightful prospect inspires us to establish *great vows* and to wholeheartedly engage in the bodhisattva practices. The vows and practices mutually complement each other, and in this way we progress to awakening. As the *Flower Ornament Sūtra* says:

The lamp of the bodhi mind takes great compassion as its oil, great vows as its wick, and great wisdom as its illumination.

Of these three — great compassion, great wisdom, and great vows — great vows is chief because it supports the compassion and wisdom that will enable us to liberate sentient beings. For this reason, the initial generation

of bodhicitta entails making great vows. When we die, our body and wealth are abandoned, our relatives and friends cannot come with us, and all our power is lost. It is only these precious bodhisattva vows that will continue to lead and guide us until awakening. Therefore, we should not doubt their efficacy and importance but eagerly make them. The five vows are these:<sup>64</sup>

1. Sentient beings are countless, I vow to liberate them all.
2. Merit and wisdom are boundless, I vow to accumulate them.
3. The Buddhadharma is vast, I vow to study it.
4. The tathāgatas are countless, I vow to serve them.
5. Mahāyāna is unsurpassed and perfect, I vow to realize it.

Making these five great vows and maintaining them in our mind thought after thought, so that there is no time in which they are not present, is the meaning of implementing the great mind of awakening and upholding the precepts of the bodhi mind. This is the path that all the buddhas of the three times follow. The three types of mind and the five vows support each other.

A series of exhortations follows. If you are able to follow them and always maintain your bodhicitta, you will continually approach buddhahood until you succeed in attaining it.

Whether you are a monastic or lay follower, announce your vows to the buddhas, engage in attracting sentient beings to the Dharma, and constantly uphold the five vows whether you are sitting, standing, walking, or lying down. Never cheat or deceive sentient beings or neglect to uphold the trust of the Tathāgata. Maintaining the transmitted Dharma — the words and meanings of the Buddha's teachings in the scriptures — endeavor to gain the realized Dharma — the realizations of the teachings in the mind — especially the fortitude of the nonarising of phenomena. By serving as bright lights along the dark shore and as the rafts that carry sentient beings across the ocean of cyclic existence, cause sentient beings to realize the knowledge and vision of the buddhas. In this way, when the thousand buddhas of this fortunate eon appear, you will be a leader among the disciples and will attain full awakening.

Accumulate merit with sentient beings (the field of compassion) and with the buddhas and bodhisattva (the field of reverence). This is done by

giving your external wealth — your possessions and body — and your internal wealth — your time, energy, and merit. When doing this, guard against the self-centered thought seeking reward in this life or even in future lives that would sabotage your generosity.

Make a strong determination to learn and master all the Buddha's teachings from now until attaining full awakening. To instruct others, endeavor to realize the four immeasurables, the six perfections, the provisional and definitive meanings of the Dharma, the law of cause and effect, the two teachings of sudden and gradual awakening, and the two doctrinal lineages that focus on the nature and on the dharmic characteristics. Schools focusing on the nature were the Madhyamaka, Tathāgatagarbha, Chan, and Perfect Teaching (Avatamsaka), which emphasized the realization of emptiness. The school focusing on dharmic characteristics was primarily the Yogācāra.

Vow to encounter a wise and compassionate spiritual mentor, to serve him or her without fatigue or laziness, and to listen with eager interest to Dharma teachings. Happily accept instructions and guidance, and then put them into practice, as did Sudhana, the youth whose spiritual journey took him to fifty-three spiritual mentors, as related in the *Flower Ornament Sūtra*.

Furthermore, vow to always maintain the aspiration for full awakening, never letting it degenerate into a wish to become a śrāvaka or solitary-realizer arhat. Seeing yourself as interrelated with all sentient beings, dedicate all merit for full awakening and encourage others to do so as well.

In addition, never abandon monastics and lay followers who have the same resolve for awakening and the same great vows that you have. Rather, practice together with them, cultivating the meditative absorptions and wisdom. Toward some members of your “Dharma family” you serve as younger siblings and toward others you serve as older siblings. In this way, support and encourage one another, enabling everyone to succeed in their spiritual journey. If someone loses the path, everyone must come together to free him from his problems and bring him back to his purpose. When someone gains realizations of the path, take refuge with them. Having a good relationship with your fellow aspirants enables each person to benefit and the Dharma to remain long in the world.

Although you may have the resolve for awakening, until you fathom the nature of the mind, you will be stuck in the provisional perspective and not realize the ultimate nature. So strive to develop the correct cause of awakening by understanding (ERB 107):

The perfect, bright, and pure awakening is originally devoid of any delusive ignorance. The illusional obscurations and “flowers floating in space” do not constitute the substance of reality. [This awakened mind] is distantly separate from any sort of attachment-based grasping and is as uniform in nature as empty space itself. Expansively great compassion and wisdom constantly flow forth from this quiescent and radiant mind.

The fundamental nature of the mind is pure. “Flowers floating in space” refers to floaters in the eyes — the vision of falling hairs that in fact do not exist. The appearance of inherent existence that ignorance projects on phenomena is not reality. The pure mind that realizes emptiness is unimpeded like space. In this still and luminous mind, great compassion can manifest to benefit sentient beings. Sūtras that speak of the means to cultivate this radiant mind are the Perfection of Wisdom sūtras, the *Perfect Mahāyāna Sūtra*, the *Flower Ornament Sūtra*, and the *Nirvāṇa Sūtra*.

The *Flower of Compassion Sūtra* (C. *Beihua jing*) instructs bodhisattvas to cultivate four inexhaustible treasuries: the treasuries of inexhaustible merit, inexhaustible knowledge, inexhaustible wisdom, and inexhaustible unified Dharma of the Buddha. To do this it is necessary to practice many factors that assist in the attainment of awakening:

- generosity, to attract others in order to teach them the Dharma
- ethical conduct, which is a support for accomplishing virtuous aspirations
- fortitude, through which the thirty-two signs and eighty marks of a buddha are perfected
- joyous effort, which leads to success in our endeavors
- meditative stability, to skillfully subdue and train the mind

- wisdom, to recognize and excise afflictions
- extensive study and learning, to gain unimpeded eloquence in teaching the Dharma
- the collection of merit, which is a necessity for progress
- thoughtful reflection, to destroy doubts
- love, to perfect a mind free from obstruction
- compassion, to teach and guide sentient beings without fatigue
- empathic joy, to increase affectionate happiness based on right Dharma
- equanimity, to eliminate attachment and animosity
- listening to the Dharma, to subdue the five hindrances (sensual desire, malice, lethargy and sleepiness, restlessness and regret, and doubt)
- transcending the world, to go beyond worldly existence
- dwelling in a solitary place, to abandon destructive karma
- joyfully according with the virtuous actions of others, to increase the roots of virtue
- the four establishments of mindfulness, to firmly comprehend the body as foul, the feelings as duḥkha in nature, the mind as impermanent, and all phenomena as selfless
- the four supreme strivings, to abandon nonvirtue and cultivate virtue
- the four bases of spiritual power, to perfect physical and mental pliancy
- the five faculties, to enhance and strengthen these five factors so that they can become the five powers
- the five powers, to demolish all afflictions
- the seven awakening factors, to gain an awareness of phenomena that accords with ultimate truth<sup>65</sup>
- the six harmonies of the monastic community (physical, verbal, and mental harmony, harmony in views, the sharing of resources, and the way to keep precepts), to restrain and train sentient beings while steering them toward purification

Cultivating these constitute the “accumulation of pure Dharma gateways through which we bring about liberation from cyclic existence.” Thus motivated by bodhicitta, engage in these practices enthusiastically and with mindfulness. Then we should adorn and establish a pure land in accordance with our aspirations.

Four factors can make you lazy in Dharma practice and thereby create suffering. Avoid them.<sup>66</sup>

1. Inferior conduct is transgressing the prātimokṣa precepts that regulate your physical and verbal actions.
2. Inferior companions are śrāvakas and solitary realizers who could influence you to relinquish bodhicitta.
3. Inferior generosity is the inability to give everything, to choose certain recipients due to prejudice, or to give with the motivation to take rebirth in a celestial realm.
4. Inferior vows are the inability to single-pointedly vow to go to a buddha land. These are weak vows that render you unable to subdue and train sentient beings.

These are counteracted by the four swift factors of bodhisattvas:

1. Upholding your precepts and purifying your body, speech, and mind enable you to protect and maintain the Dharma teachings.
2. Becoming close to people who study and practice the Mahāyāna will naturally lead you to become involved in virtuous endeavors.
3. Releasing all miserliness and activating compassion leads to being able to give to everyone.
4. Single-pointedly vowing to go to and adorn Buddha lands aids you in training and taming sentient beings.

## REFLECTION

---

1. Reflect on the four factors that can make you lazy in Dharma practice and create suffering. Which ones hinder you the most?

2. Reflect on the four swift factors of bodhisattvas that counteract them.
  3. As you do this repeatedly, be aware of the positive changes in your mind.
- 

The merit created by a bodhisattva when she first generates bodhicitta is beyond imagination. It dwarfs a trillionfold the merit of making huge and magnificent offerings to innumerable buddhas, the merit of encouraging a huge number of sentient beings to keep precepts and abide in the ten pathways of virtuous karma for eons, the merit of causing others to attain the various meditative absorptions of the upper realms and remain in them for eons, and the merit of instructing and guiding others to attain the stages of a stream-enterer, once-returner, nonreturner, or arhat. These virtuous deeds, while indisputably wonderful, are not the purpose for which buddhas first generated bodhicitta. Rather, their purpose was to continue the lineage of the Tathāgata and to prevent it from being cut off, to fill all world systems with the Dharma, to liberate the beings in all worlds, to know the creation and ceasing of all worlds, to know the defilement and purity of all worlds, to know the purity of the fundamental nature of all worlds, to know the happiness, afflictions, and latencies in sentient beings' minds, to know sentient beings' death in one life and birth in another, to know sentient beings' faculties and the skillful means to guide them, to know their thoughts and mental activity, to know the past, present, and future of all beings, and to know the uniformity in the minds of all buddhas.

Due to such intentions, these bodhisattvas are held in the minds of all the buddhas, who then bestow the magnificent Dharma on them. It is as if they had already actualized the entire path and attained the four fearlessnesses and the ten powers, and the merit, wisdom, and mind state of the buddhas, because they are bound to attain buddhahood. At this time of initially generating strong bodhicitta (that is, the time of attaining the first bodhisattva ground) they are praised by all the buddhas and become able to teach and subdue sentient beings in the various worlds. They can cause worlds to shake, illuminate all worlds, stop the anguish of unfortunate rebirths in all worlds, adorn and purify all worlds, manifest the attainment of buddhahood in all worlds, cause happiness in the minds of all beings,

enter into the very nature of the entire dharmadhātu, maintain the lineage of all buddhas, and gain the wisdom light of all buddhas.

At the same time, bodhisattvas who have initially generated strong bodhicitta — first-ground bodhisattvas — find that there is nothing to attain in the past, present, or future. They seek only omniscience, and the mind is free from attachment to any aspect of the dharmadhātu.<sup>67</sup> Although these first-ground bodhisattvas are said to have initially generated bodhicitta, it is actually the perfection of the generation of the bodhi resolve. It is called “initial” because it is the first time they have perfected it by the direct realization of emptiness, thus becoming an ārya.

Should you wonder if it’s actually possible to possess such incomparable faculties and qualities, recall that the ultimate nature of the mind of an ordinary person and of an ārya are the same. It is simply a matter of your thoughts — allowing afflictions and wrong views to take over the mind is the impediment. But if you awaken to the ultimate nature of the mind and its brilliance, you will be able to generate bodhicitta within the uniformly empty nature that is shared with all the buddhas.

In the meantime, as ordinary beings we can lessen the afflictions that interfere with our bodhicitta. Practicing generosity will lessen attachment and covetousness, whereas practicing the four ways of gathering disciples will decrease animosity. Cultivating serenity and insight will reduce our afflictions. This is true even if we are not able to cultivate these practices perfectly at this moment. In addition, we must continue to cultivate compassion. Generating both bodhicitta and the direct realization of emptiness is critically important; everything else is related to cyclic existence. It was in this manner that the Buddha himself progressed.

Peixiu concludes his *Exhortation* with final words of advice (ERB 127–29):

It is essential to liberate all beings. It is essential to strive to gain the knowledge of all modes and plant roots of virtue throughout the auspicious eon during the reigns of the Thousand Buddhas. Thus one’s merit and wisdom will naturally become vast and deep such that in the world, one

will always be among the leaders of those who serve as guides [on the path] . . .

After communicating one's generation [of bodhicitta], one should invoke that resolve in each and every thought. This will then constitute a correct cause for the realization of buddhahood. It is only appropriate that one should then feel profound sentiments of joyful felicitation. Neither monastics nor laity should allow themselves to become estranged from Dharma friends. How could even mountains and rivers [be allowed to] present an obstacle to [the realization of] genuine wisdom?

### *The Four Great Vows*

The Mahāyāna Buddhist traditions throughout East Asia recite the Four Great Vows daily, making them the centerpiece of their Dharma practice. Containing the condensed meaning of all the bodhisattva precepts, the Four Great Vows are found in sūtras and commentaries such as *The Sixth Patriarch Platform Sūtra*, *Sūtra on the Practice of Prajñāpāramitā*, the *Lotus Sūtra*, the *Medallion Sūtra on the Bodhisattva Path*, and others.<sup>68</sup>

The Four Great Vows are as follows:

Countless are sentient beings; I vow to liberate them.

Endless are defilements; I vow to eradicate them.

Measureless are Dharma doors; I vow to cultivate them.

Supreme is the Buddha's Way; I vow to attain it.

The last of the four vows is the generation of bodhicitta; “the Buddha's Way” refers to bodhi, the awakening of the Buddha, and bodhicitta is the vow to complete the path to full awakening. To actualize this aspiration for full awakening, the support of the first three great vows is needed. The first great vow is to liberate each and every one of the countless sentient beings because we feel their suffering in saṃsāra as our own. This great compassion leads to the second great vow, to eradicate the numberless defilements of ourselves and all others. This shows that great compassion is

neither sentimental pity nor a romantic idea of spirituality; it spurs the generation of wisdom that will eliminate the defilements completely. This leads to the third great vow, to cultivate the countless approaches that remove these defilements. Just as there are numberless defilements, there are measureless realizations and measureless skillful means to master to overcome them.

Although someone could protest that these four vows are too vast and may be impossible to actualize, such concerns do not plague a genuine Mahāyāna practitioner. Instead, her mind is focused on the awakening of all sentient beings, and thus she is willing to do everything possible to bring it about, such as eradicate the endless defilements that pollute her own and others' mindstreams, cultivate all the diverse remedies the Buddha has taught for overcoming defilements, actualize all awakened qualities, and attain the supreme awakening of a buddha.

## REFLECTION

---

1. Compare the Four Great Vows with the Five Great Vows mentioned before.
2. Ponder each great vow and feel it in your heart. While doing this, let your mind and heart open. Don't let doubt interrupt your contemplation.

---

In his *Treatise on the Ten Grounds* (TTG 266), Nāgārjuna counsels us never to be lax in benefiting others:

No matter where the bodhisattva abides,  
if he fails to initiate the transformative teaching of beings,  
thus allowing them to fall into the three wretched destinies,  
he then thereby richly deserves the censure of the buddhas.

And so it is that the bodhisattva, no matter in what country he abides, and no matter whether he is in the city or village, in the mountains, or beneath a tree — wherever he has the power by which he is able to benefit and teach beings — if he instead withdraws from them in disgust, begrudging them their covetous attachment to the pleasures of the world and thus becomes unable to initiate their transformative teaching, thereby allowing them to fall into the wretched destinies — this bodhisattva thereby becomes richly deserving of the censure of all buddhas now abiding throughout the ten directions and thereby becomes worthy of feeling shame and disgrace in their eyes, [worthy, too, of being rebuked by their asking], “Oh, how could you let such petty reasons occasion the abandonment of such a great endeavor?!”

Consequently, if the bodhisattva does not wish to become deserving of being rebuked by the buddhas, even when faced with all sorts of flattering, devious, and severely evil beings, he should not let his resolve degenerate. Rather he should benefit them in whatever way befits his powers to help them. He should resort to all manner of expedients and diligent resolve to initiate their transformative teaching.

### *The Bodhisattva Ethical Code in Chinese Buddhism*

Two renditions of the bodhisattva ethical code exist in Chinese Buddhism. One is presented in the *Brahmā's Net Sūtra (Brahmajāla Sūtra)*.<sup>69</sup> For monastics the bodhisattva ethical code comprises ten root precepts and forty-eight auxiliary precepts. The second version is presented in the *Treatise on the Grounds of Yogic Practice (Yogācārabhūmi Śāstra)* by Maitreya,<sup>70</sup> with four root precepts and forty-one auxiliary precepts. There is much overlap in the listing of the bodhisattva precepts in these two scriptures, and there is also much overlap with the bodhisattva precepts as found in Tibetan Buddhism.

In general, the bodhisattva precepts according to the *Brahmā's Net Sūtra* are considered more suitable for bodhisattvas who have attained some

realization of emptiness, whereas those from the *Yogācārabhūmi Śāstra* are said to be more fitting for less experienced bodhisattvas. In the past, the set of precepts from the *Brahmā's Net Sūtra* (*Brahmajāla Sūtra*) was more popular in Taiwan, but in recent years many preceptors are following the version in the *Yogācārabhūmi Śāstra*. The *Brahmā's Net Sūtra* lists the bodhisattva precepts in a way similar to the *Prātimokṣa Sūtra*, in which the ten root precepts are referred to as defeats (*pārājika*). Here “pārājika” refers to a major transgression; it does not mean that a person who transgresses it will be expelled from the Saṅgha. The bodhisattva precepts are taken from now until full awakening, and all transgressions, no matter how serious, can be purified through confession and repentance. The bodhisattva precepts for lay followers have six major and twenty-eight auxiliary precepts. In many Chinese temples, monastics recite the bodhisattva precepts together twice a month. Chinese Buddhist monasteries also regularly hold day-long repentance ceremonies that lay followers may also participate in.

### ***Bodhisattva Precepts according to the Yogācārabhūmi Śāstra***

The four root bodhisattva precepts from the *Yogācārabhūmi Śāstra* are to abandon these activities:

1. Praising oneself and deprecating others — relinquishing great compassion, one is miserly and concerned with one's own name and fame and with receiving offerings.
2. Refusing to help those in need — losing one's great compassion, one makes no effort to share the Dharma or material goods with those who are in dire need.
3. Refusing to accept someone's sincere apology and not helping those who repent and wish to follow the correct path — giving in to anger, one forsakes one's great compassion and is not willing to teach or guide those who are repentant.
4. Deceiving others by teaching what appears to be the Buddhadharma but is not, teaching wrong views to others while telling them this is the pure Dharma.

The forty-one auxiliary precepts in the *Yogācārabhūmi Śāstra* are to abandon (unless extenuating circumstances are present) these activities:

1. Not making offerings such as bowing, chanting, or thinking of the excellent qualities of the Three Jewels and praising them.
2. Being greedy and discontent, and longing for material possessions.
3. Failing to greet or pay proper respect to elder or fellow bodhisattvas (those who have taken the bodhisattva vow before you).
4. Refusing to accept offerings (thereby depriving people of the opportunity to create merit by being generous).
5. Refusing to accept gold, silver, jewels, and so forth offered by the faithful (thereby denying the donor the opportunity to create merit).
6. Not teaching the faithful when requested.
7. Abandoning, making others abandon, or refusing to guide those who are evil and wrong.
8. Being restricted by the rules of the Fundamental Vehicle instead of working to benefit many beings.
9. Engaging in insincere deeds or speech for profit; engaging in unwholesome livelihood without integrity or regret.
10. Acting in an undisciplined manner, joking, and partying.
11. Thinking or saying that bodhisattvas should dislike and turn away from nirvāṇa or that bodhisattvas should not reject and dislike worldliness.
12. Not preventing or correcting slander.
13. Not teaching with sincerity and serious words because of seeking profit, fear of reprisal, or displeasure.
14. Returning insult for insult, anger for anger, beating for beating, or criticism for criticism.
15. Not apologizing; even if you are innocent, you should apologize to calm suspicions.
16. Refusing to confess and repent one's misdeeds or bad behavior.
17. Being motivated by hatred, unwilling to forgive someone.
18. Being attached to comfort, keeping pets and servants.

19. Being lazy, sloppy, and sleeping excessively or at improper times.
20. Engaging in idle talk about worldly matters.
21. Rejecting the guidance or advice of your teacher.
22. Failing to oppose the five hindrances to serenity: attachment to sensual pleasure, malice, lethargy and sleep, restlessness and regret, and doubt.
23. Being attached to states of meditative absorption.
24. Slandering the Fundamental Vehicle, not studying its teachings.
25. Refusing to learn the skillful means of the bodhisattva path and learning only the Fundamental Vehicle teachings.
26. Not learning the Buddha's teachings and only studying non-Buddhist teachings or worldly subjects.
27. Refusing to accept teachings on the profundity of the bodhisattva way, its ultimate meanings, and the immeasurable power of the buddhas and bodhisattvas, and slandering those teachings by saying they lack benefit, are not the Buddha's words, and cannot bring relief to sentient beings.
28. Motivated by greed or unhappiness, praising your own merits and virtues and slandering others.
29. Not attending a Dharma talk or discussion out of arrogance or displeasure.
30. Disrespecting or slighting a Buddhist teacher, laughing at or slandering them, and picking at a teacher's words without examining their meaning.
31. Not being supportive and benevolent by refusing to participate in road works, farming, arbitrating, and other beneficial public affairs.
32. Not visiting or caring for the sick.
33. Not correcting someone who is about to or who has created a misdeed.
34. Not repaying the kindness of those who have helped you.
35. Knowing someone has family or financial problems but not comforting him or attempting to alleviate his distress.
36. Refusing to help the poor who ask for food and clothing.

37. Accepting disciples but not giving them proper guidance and not providing sufficient food, clothing, shelter, or medicine.
38. Being disagreeable or uncooperative.
39. Not praising others who are worthy of praise.
40. Not scolding, correcting, or restraining someone who is acting harmfully.
41. Not using supernormal powers to teach or help sentient beings if you have them.

Here we see that the bodhisattva precepts in Chinese Buddhism and Tibetan Buddhism rely on similar textual sources and have much in common. By studying the bodhisattva precepts of all the Buddhist traditions we gain more knowledge about how bodhisattvas conduct themselves in daily life. This gives us much help when we encounter difficult situations and need guidance on how to act in beneficial ways. It also gives us a detailed map of how to steer our thoughts, words, and deeds so that they accord with bodhicitta. The benefit for self and others of doing this is immeasurable.

### ***Bodhisattva Precepts according to the Brahmā's Net Sūtra***

The ten root bodhisattva precepts according to the *Brahmā's Net Sūtra* are to abandon these activities:

1. Killing.
2. Stealing.
3. Sexual misconduct (for monastics, this means celibacy).
4. Lying.
5. Dealing in intoxicants.
6. Discussing offenses of members of the four assemblies.<sup>71</sup>
7. Praising oneself and disparaging others, and concealing others' good work so that they are blamed.
8. Being stingy regarding material possessions or the Dharma, humiliating and scolding a person who asks for something.
9. Holding a grudge, refusing to accept another's apology.

## 10. Slandering the Three Jewels.

The forty-eight auxiliary precepts in the *Brahmā's Net Sūtra* are these:<sup>72</sup>

1. Do not disrespect senior teachers.
2. Do not consume alcohol.
3. Do not eat meat.
4. Do not eat the five pungent roots (garlic, scallions, leeks, onions, and asafetida).
5. Do not fail to encourage others to repent.
6. Do not fail to request instruction in the Dharma from visiting teachers.
7. Do not miss the chance to attend Dharma lectures.
8. Do not turn your back on the Mahāyāna and adopt the Fundamental Vehicle.
9. Do not fail to care for the sick.
10. Do not amass weapons.
11. Do not serve as a negotiator for the military.
12. Do not get involved in trading that causes trouble for others — for example, selling human beings, slaves, or certain kinds of animals.
13. Do not make groundless accusations.
14. Do not harm the living by setting fires.
15. Do not teach non-Buddhist doctrines.
16. Do not be stingy with material wealth or the Dharma.
17. Do not seek to gain political influence.
18. Do not pretend to be an accomplished teacher.
19. Do not get involved in treachery.
20. Do not fail to help the living or the deceased.
21. Do not be intolerant of wrongs done.
22. Do not arrogantly despise your Dharma teacher.
23. Do not despise beginning practitioners.

24. Do not fear the superior [scriptures and views] and follow inferior ones.
25. Do not fail to properly fulfill administrative duties.
26. Do not receive guests improperly.
27. Do not accept personal invitations.
28. Do not offer personal invitations to monastics.
29. Do not earn your livelihood improperly.
30. Do not hurt people while feigning intimacy.
31. Do not be lax in rescuing holy articles or images and important persons (spiritual mentors, parents, and so forth) from danger.
32. Do not deviously confiscate the property of others.
33. Do not pass your time idly.
34. Do not retreat from bodhicitta.
35. Do not fail to make unshakable resolves.
36. Do not fail to initiate unshakable resolves on your own.
37. Do not intentionally go to dangerous places.
38. Do not sit out of ordination order.
39. Do not pursue personal gain.
40. Do not err in terms of who can be taught. Give teachings and precepts equally to those who request to receive them.
41. Do not seek disciples for the wrong reasons — for example, to receive respect, fame, or offerings.
42. Do not teach the precepts to the wrong persons — for example, those without fame or those with wrong views.
43. Do not intentionally break the precepts.
44. Do not fail to revere the sūtras and the Vinaya.
45. Do not fail to teach sentient beings.
46. Do not teach the Dharma using improper protocol.
47. Do not establish systems that undermine the Dharma.
48. Do not undermine the Dharma from within.

Whether or not we have formally received the root and auxiliary precepts, we can see that they contain good guidance for living a virtuous life that does not harm self or others and that benefits both self and others.

The bodhisattva precepts are called the “threefold pure precepts” because they are composed of (1) precepts of restraint, which include the basic prātimokṣa and Mahāyāna precepts to abandon destructive actions; (2) precepts to engage in virtuous actions; and (3) precepts to benefit sentient beings. In Tibetan Buddhism, these three constitute the perfection of ethical conduct.

Both monastics and lay followers can receive bodhisattva ordination. Laypeople who take the bodhisattva precepts according to the *Brahmā’s Net Sūtra* do not need to already have the basis of the five lay precepts, whereas those who take the bodhisattva precepts from the *Treatise on the Grounds of Yogic Practice* must have received the five precepts first.<sup>73</sup>

Monastics who receive the bodhisattva precepts must do so on the basis of the bhikṣu or bhikṣuṇī ordination. The bodhisattva precepts are given as the final phase of the Three Platform Ordination, a retreat of at least a month, during which monastic candidates first receive the śrāmaṇera/śrāmaṇerī ordination, the śikṣamāṇā (for women only) ordination, the bhikṣu/bhikṣuṇī ordination, and the bodhisattva ordination. The preceptor and the temple where the ordination platform is held agree on which version of the bodhisattva precepts to give.

Preceding the ceremony to receive the bodhisattva precepts is a voluntary ceremony in which people offer their body to the Buddha. For lay practitioners, this is done by making three small burns on the inside of their arm, near the elbow joint. In the case of monastics, they kneel and a senior Saṅgha member places three cones of incense on their freshly shaven head. While the hall resonates with everyone chanting “Homage to our Fundamental Teacher, Śākyamuni Buddha,” the incense is lit. It burns down, later forming three small circular scars on the head. This moving ceremony is performed with three purposes in mind. It symbolizes offering our body to the buddhas and bodhisattvas, being willing to endure suffering when working for the benefit of sentient beings and striving for full awakening, and being a validly ordained monastic “bodhisattva.” In ancient China, monastics were exempt from arrest by civil officials and punishment

by civil law because they were governed by the Vinaya precepts. To avoid arrest by the police, some criminals would don monastic robes. To discern who was a genuine monastic from imposters, the custom was instituted to burn three, six, nine, or even twelve incense cones on a monastic's head. The incense marks also serve as an important daily reminder of monastics' precepts. Every morning, monastics touch their heads where the burns are and remind themselves: as I have this minor burn, sentient beings are immersed in the burning sea of saṃsāra. I will never forget my vow to cultivate bodhicitta diligently and to liberate all beings. When lay followers take the bodhisattva vow, they may also participate in an incense-burning ceremony, in which case the incense cones are placed on their forearm.

## REFLECTION

---

1. Contemplate each of the ten root precepts. In what way does each one help guide your life as well as your thoughts, words, and actions in a good direction?
2. Contemplate each of the forty-eight auxiliary precepts in the same way.
3. Think of the benefit you could derive by trying to live your life according to them.
4. Without formally taking them, divide them into groups and try paying special attention to one group for a week until you have practiced all the precepts.
5. How has doing this helped you and those around you?

---

### *The Bodhisattva Ethical Code in Japanese Buddhism*

The lineage of the prātimokṣa ordination does not exist in Japan at present, although Zen priests and lay followers may take the bodhisattva precepts. This entails keeping sixteen precepts:

1. Do not kill, but cherish all life.
2. Do not take what is not freely given, but respect all things.
3. Do not lie, but speak the truth.
4. Do not engage in improper sexuality, but live a life of purity and self-restraint. (How this precept is kept depends on one's life circumstances.)
5. Do not take substances that confuse the mind, but keep the mind clear at all times.
6. Do not speak of the misdeeds of others, but be understanding and sympathetic.
7. Do not praise oneself and disparage others, but work on one's own shortcomings.
8. Do not withhold spiritual or material aid, but give them freely where needed.
9. Do not indulge in anger, but exercise restraint.
10. Do not revile the Three Treasures of the Buddha, Dharma, and Saṅgha, but cherish and uphold them.
11. Avoid evil.
12. Do good.
13. Liberate all sentient beings.
14. Take refuge in the Buddha and resolve that, together with all beings, I will understand the Great Way whereby the seed of buddhahood may forever thrive.
15. Take refuge in the Dharma and resolve that, together with all beings, I will enter deeply into the sūtra treasury, whereby my wisdom may grow as vast as the ocean.
16. Take refuge in the Saṅgha and in their wisdom, example, and never-failing help, and resolve to live in harmony with all beings.

While there are differences in the delineation of the bodhisattva precepts in the various Mahāyāna traditions, their essence and purpose are the same. Taking and living in the bodhisattva precepts brings only benefit.

## *Bodhicitta, True Suchness, and Buddha Nature*

Pure mind and buddha nature refer to the same thing but approach it from different angles. “Pure mind” indicates that the nature of the mind is not and cannot be polluted by defilements. “Buddha nature” refers to the aspect of that mind that guarantees our potential and capability to become buddhas. When fully purified, this is called the “awakened mind” or actual bodhicitta, indicating that while ignorance was initially present and we did not know our pure nature, now with the removal of ignorance we see and understand it. From the perspective that unawakened beings do not yet recognize the pure nature of their mind, it is said that they do not have the bodhi mind, but from the perspective of the fundamental nature of the mind being pure of adventitious defilements, it is said that they have the bodhi mind.

In this latter sense, “bodhicitta” or “bodhi mind” refers to the pure mind that can never be tarnished. It is like a pearl that has been covered with mud for thousands of years. Even though it is hidden in mud and its luster cannot be seen, none of its shining beauty has been lost; it is just temporarily obscured. It can be removed from the mud and cleaned so that its beauty is visible to all. Its luster did not decrease even though it was covered in mud for millennia, and its luster did not increase once it was extracted from the mud. Similarly, our buddha nature is always pure. Its qualities do not decrease when it is covered with the mud of defilements and they do not increase when the defilements are eradicated.

Bodhicitta is buddha nature. In the Chan tradition the terms “true suchness,” “buddha nature,” “original nature,” “ultimate reality,” “pure nature,” and so on have similar meanings. They are different terms that refer to what is indescribable. To realize the buddha nature or bodhicitta is to realize that it is uncreated; it does not disappear and it is originally pure. When it is covered by defilements, we experience saṃsāra; grasping saṃsāra as real is an affliction that must be overcome to attain buddhahood.

### *The Five Stages of Cultivating Bodhicitta*

As taught in scriptures, the Chan and Tiantai traditions say bodhicitta is cultivated and expanded in five stages. The first is making the vow to

become a buddha and liberate all the countless sentient beings. This aspiration for buddhahood is called “bringing forth the bodhi mind (bodhicitta).” Although it is necessary to attain the bodhi mind, it is not the fully developed bodhi mind. Rather it is an aspiration to attain genuine bodhicitta, the bodhi mind, the One Mind.

The second is to engage in many practices and meditations to overcome attachment, anger, and other afflictions and to work toward awakening.

The third stage is called “awakening of the bodhicitta.” At this time practitioners have a taste of actual bodhicitta because for the first time they directly realize the ultimate nature. In Chan this realization is called “awakening,” and it occurs when one realizes the pure mind, which is the actual bodhicitta. In other words, a practitioner deeply understands and has direct experience of his or her own bodhi mind. At the same time he realizes the emptiness of this pure mind. Here “bodhicitta” does not mean the aspiration to attain awakening in order to benefit all sentient beings; it refers to the direct realization of one’s own buddha nature. When people say a Chan master is awakened, it means he or she has attained at least the third stage. This awakening, however, is not complete, perfect awakening in that not all the obscurations have been forever eradicated.

The fourth stage is continuing to cultivate the bodhisattva practice in order to become fully and perfectly awakened. It is like the new moon gradually growing until it becomes full. This involves completing and perfecting the six perfections, which may take eons. But bodhisattvas are not discouraged by the length of time it takes. Like the bodhisattva Sudhana in the *Flower Ornament Sūtra*, they are willing to do whatever is necessary for whatever length of time is required in order to become a buddha so that they have the qualities and abilities that enable them to be of the greatest benefit to sentient beings.

The final stage is called the “supreme, ultimate bodhicitta”; this is buddhahood.

These five stages are very similar to the five paths of a bodhisattva as explained in the Tibetan tradition: the paths of accumulation, preparation, seeing, meditation, and no-more-learning. Nevertheless the meaning of the word “bodhicitta” and the manner in which it is used in Chinese and Tibetan Buddhism are slightly different. In the Tibetan tradition,

“bodhicitta” usually refers to the aspiration to become a buddha for the benefit of sentient beings, although “ultimate bodhicitta” refers to the realization of emptiness. This is the ultimate reality that is directly realized on the third stage above, the awakening of the bodhicitta, or what in the Tibetan tradition is called the “path of seeing.” Is this a realization of the emptiness of the mind, or is it a realization of the mind that is empty? Buddhist traditions have different assertions regarding this issue.

Here too, “awakening” has different meanings. From the Tibetan perspective, for bodhisattvas it refers only to the last stage, buddhahood, the path of no-more-learning. Chinese Buddhism also uses “awakening” to refer to any direct, nonconceptual realization of selflessness, which occurs before buddhahood. Neither tradition says that this first experience of the ultimate nature is final awakening; they agree that this realization needs to be cultivated and developed over time to attain the final goal of buddhahood. In addition, bodhisattvas must continue to create vast merit to support that wisdom so that it becomes powerful enough to eradicate all defilements. “Awakening” can also refer to the arhatship attained by following the Śrāvaka and Solitary Realizer Vehicles; however, for Mahāyāna practitioners, this is not the full awakening of a buddha.

## 9 | Bodhicitta and Bodhisattvas in the Pāli Tradition

**M**ANY PEOPLE associate the Śrāvaka Vehicle with Theravāda Buddhism and the Bodhisattva Vehicle with the Mahāyāna. They then think that Theravāda and Mahāyāna as well as the vehicles and practices they teach do not coincide. Historically, these misconceptions have manifested in Theravāda practitioners alleging that the Mahāyāna teachings are not the word of the Buddha, and Mahāyāna practitioners claiming that Theravādins are selfish and lack compassion. Such rigid concepts are erroneous, and the ill will they create among the Buddha's disciples would surely displease the Buddha.

If we were to learn more about one another's traditions, many of these misconceptions would evaporate. Please see chapters 4 and 5 in *Approaching the Buddhist Path* and chapter 1 in *Buddhism: One Teacher, Many Traditions*. As discussed in these chapters, there are reasons to believe that the Mahāyāna sūtras were the Buddha's word. In this and future chapters we will see that not only are love and compassion taught and practiced in Theravāda Buddhism but so is the bodhisattva path. While the majority of practitioners in one or the other tradition may favor the aim of arhatship or buddhahood, that does not mean that the other option, together with its teachings and practitioners, is not found in that tradition.

### *Compassion*

The Pāli suttas emphasize compassion time and again as the motivating force for the Buddha's attainment of awakening (AN 1.170):

There is one person who arises in the world for the welfare of many people, for the happiness of many people, out of

compassion for the world, for the benefit, welfare, and happiness of devas and humans. Who is that one person? The Tathāgata, the Arahant, the Perfectly Awakened One.

Here the word translated as compassion is *anukampā*, which etymologically means to be moved in response to others.<sup>74</sup> We sentient beings are the beneficiaries of the Buddha’s compassion. The commentary explains the passage above: “for the welfare of the multitude” indicates that the Buddha is endowed with wisdom and thus instructs sentient beings on how to obtain benefit now and in the future; “for the happiness of the multitude” means that with an open hand, he demonstrates the joy of serving others; “out of compassion for the world” indicates that the Buddha protects the world with love and compassion like those of a parent for their beloved child; “for the benefit, welfare, and happiness of devas and humans” shows that his primary audience consists of those suitable to realize the paths and fruits in this lifetime because they have the optimum rebirth and conditions to do so as gods and humans. Of course, the Buddha aims to benefit the beings born in unfortunate realms as well, first by helping them to attain rebirth as gods and humans. He works for the “benefit” or the ultimate aim of nirvāṇa, for the “welfare” of the path that leads to it, and for the “happiness” of the fruition-attainment (P. *phala samāpatti*) — the reexperiencing of nirvāṇa after initially attaining it — which is the supreme happiness.

The Buddha describes his compassion, which is totally unbiased and unlike our ordinary notion of compassion (SN 10.806–7):

If, O Sakka, for some reason  
intimacy with anyone should arise,  
the wise person ought not to stir his mind  
with compassion (that is, attachment) toward such a person.

But if, with a mind clear and pure,  
he gives instructions to others,  
he does not become fettered  
by his compassion and tender care.

These verses explain that a wise person does not instruct others or become close to them if there is danger that attachment (called “compassion” in the first verse) will arise between them. However, a wise person whose mind is clear and free from attachment teaches others for their benefit with compassion and tender care that are free from the stickiness of attachment.

Whereas ordinary people are compassionate toward relatives and friends because those people help them, the Buddha is compassionate simply because others are suffering, regardless of whether or not they benefit him. Whereas the compassion of ordinary beings is often mixed with attachment and expectations, which pull them into unhealthy relationships, the Buddha’s mind is clear and his compassion and tender care are free from attachment, the need for approval, and other self-centered emotions. The Pāli Abhidharma explains that attachment is a mental state that sticks to its object as meat sticks to a hot frying pan. It is always accompanied by confusion, agitation, lack of integrity, and lack of consideration for others. Attachment is shrouded in unclarity, whereas true compassion is bright, clear, and without limits.

The Buddha’s compassion is evident in the sūtras. Compassion was the force enabling him to speak to so many different kinds of people — the rich and the poor, the educated and the uneducated, those who respected him and those who scorned him. Motivated by compassion for others who are ensnared in cyclic existence by their ignorance and craving, he shared the teachings that brought temporal and ultimate happiness with whomever was interested. He did not ask for anything in return; there was no charge to attend his discourses.

Compassion also fueled the Buddha’s choice of lifestyle. Because he was free from attachment, he could have lived in a comfortable setting without incurring any faults. However, out of compassion for future generations of practitioners, he continued to live a simple lifestyle as a monastic. He usually dwelled in the forest, wore patched robes, and went on alms round to receive food. In this way, he set an example for future practitioners to also live a simple lifestyle and practice sense restraint, and in this way to quickly attain nirvāṇa.

*The Compassion of Arhats and Śrāvaka Learners*

Accounts in the Pāli sūtras clearly show that arhats, as well as śrāvaka learners — practitioners who are on the path — have compassion. In fact, the Buddha encourages them to practice with the motivation of compassion (DN 16.3.50):

Monastics, for this reason those matters which I have discovered and proclaimed should be thoroughly learnt by you, practiced, developed and cultivated, so that this holy life may endure for a long time, for the welfare of the multitude, for the happiness of the multitude, out of compassion for the world; for the benefit, welfare, and happiness of devas and humans.

That is, monastics engage in the path to liberation not only for their own benefit but also in order to preserve the Dharma so that future generations will have access to these liberating teachings. They practice to become exemplars who inspire others to practice the path and attain liberation, or full awakening. The Buddha stressed that out of concern and compassion for others, monastics must remain in harmony with regard to his teachings, without quarreling or dividing into factitious groups.

Speaking of Anuruddha, Nandiya, and Kimbila, three arhat monks, the Buddha commented that if people, devas, and even Brahmās thought of them with a confident heart, that would bring about their welfare and happiness for a long time. This would occur because rejoicing at others' virtue uplifts our mind and creates merit. The Buddha says (MN 31.22):

See how those three clansmen are practicing for the welfare of the multitude, for the happiness of the multitude, out of compassion for the world, for the benefit, welfare, and happiness of gods and humans.

The Buddha also praises Mahākāśyapa for teaching the Dharma to others with compassion, and Mahākāśyapa himself says that he became a monastic and cultivated contentment with simple food, plain clothing, and rudimentary shelter in order to benefit others. His hope was that others

would see value in this lifestyle, adopt it for themselves, and obtain liberation.

The Vinaya (monastic discipline) explains that monastics are to admonish one another with kindness. In this way, they will avoid negativity, correct bad behavior, and overcome complacency and laziness. They should admonish one another with compassion even if it temporarily brings aggravation, as long as there is the possibility of leading someone on the wholesome path.

Although we see a difference in the expression of compassion in the Pāli and Sanskrit traditions, all of the Buddha's disciples try to be of benefit to others. In the Sanskrit sūtras, bodhisattvas not only teach the Dharma but also actively engage with suffering people in society. They sacrifice their own comfort to directly relieve the misery of others. In the Pāli sūtras, śrāvaka learners and arhats teach the Dharma and live the simple lifestyle of a monastic out of compassion for others, wishing to set an example for others to follow on how to practice in order to attain liberation.

### *Compassion in Daily Life*

Nowadays many people feel that they have to decide between benefiting themselves and benefiting others because doing both is either impossible or impractical. They see this as a black-and-white choice: because there is only a finite amount of various material resources and a limited amount of time, they must choose whom to benefit — self or others. Then, pushed by the self-centered attitude, they choose to benefit themselves.

Holding the view that benefiting self and benefiting others are mutually exclusive is restrictive. Seen from a broader perspective, intelligently benefiting others also aids us. When we help others, we immediately witness others experiencing the good results of our actions. Our actions cause the environment in which we live to be more pleasant. Similarly, wisely benefiting ourselves aids others. Maintaining good health and keeping ourselves well-balanced physically and mentally creates a better atmosphere for all those we encounter. It also gives us more energy to share with others and enables us to practice the Dharma more consistently for the benefit of all. Thus in the Pāli canon, the Buddha praises those who work

for both their own welfare and the welfare of others. The two are mutually beneficial (AN 4.95).

There are these four kinds of persons found existing in the world. What four? (1) One who practices neither for his own welfare nor for the welfare of others; (2) one who practices for the welfare of others but not for his own welfare; (3) one who practices for his own welfare but not for the welfare of others; and (4) one who practices for both his own welfare and the welfare of others . . .

The person practicing both for his own welfare and for the welfare of others is the foremost, the best, the preeminent, the supreme, and the finest of these four persons. Just as from a cow comes milk, from milk curd, from curd butter, from butter ghee, and from ghee cream-of-ghee — which is reckoned the foremost of all these — so the person practicing for both his own welfare and the welfare of others is the foremost, the best, the preeminent, the supreme, and the finest of these four persons.<sup>75</sup>

The Buddha encouraged both his lay and monastic disciples to be kindhearted and compassionate and to express these emotions verbally and physically. In the *Advice to Sigāla* (*Sigālaka Sutta*, DN 31), the Buddha taught the householder Sigāla how to behave in a caring manner to people in a variety of relationships, such as friends, spouses, parent and child, employer and employee (master and servant), teacher and student, and monastic and lay follower. For example, friends should help one another, share one another's fortune and misfortune as if it were their own, and advance one another's prosperity and good qualities. Employers should assign tasks according to the employees' capabilities, pay them fairly, care for them when they are sick, and give them sufficient leisure time after they have worked diligently. Employees should respect their employers, carry out assignments with a pleasant attitude, complete their jobs, and be honest. Lay followers care for monastics with physical, verbal, and mental affection, supply the four requisites to facilitate their practice, and respect them for keeping precepts. Monastics reciprocate by living in pure ethical

conduct, counseling lay followers to restrain from destructive actions and to be compassionate and engage in constructive actions, and showing them the path to fortunate rebirth and liberation. To the Buddha, kindness and compassion weren't simply to be developed on the meditation cushion; they were to be put into practice in daily life encounters in the various relationships we have with others.

In the Pāli canon monastics are separate from society in that they do not have a householder's lifestyle, but they are part of society in that they interact with all people. They are to be receptive to, accept offerings from, and counsel those from all socioeconomic, racial, ethnic, and educational classes. The monastics' duty is to show people how to live ethically and earn their livelihood in a nonharmful manner, to encourage them to practice mindfulness, to teach them the Dharma, and to be grateful recipients of their gifts so that the laity can accumulate merit from making offerings. Since there are always many people whom monastics can potentially benefit, it is recommended that they first serve those who have confidence in the Dharma and have a generous heart. The Buddha sent the monastics out to share and spread the Dharma, saying (SN 4.5):

Monastics, go and travel around for the welfare of the multitude, for the happiness of the multitude, out of compassion for the world, for the benefit, welfare, and happiness of devas and humans. Let not two go the same way. Teach the Dharma that is good in the beginning, good in the middle, and good in the end with the right meaning and phrasing.

In traditional Theravāda societies and within some groups in the West, monastics' way of demonstrating compassion accords with the above description. However, in Asia and in the West there is also a call for monastics to become more involved in social welfare projects and for lay followers to become Dharma teachers. The ways in which monastics and lay followers live their compassion is changing as society changes.

Compassion may involve interceding when harm is occurring or when someone is behaving in an inappropriate manner. It is important to ensure

our motivation is one of compassion, however, and not an urge to control others or to angrily correct them. In *What Do You Think about Me?* (*Kinti Sutta*, MN 103) the Buddha recommends not to rush to reprove someone who is behaving improperly. First, we should evaluate the situation. If our mind will not be disturbed, and if the other person is not prone to anger and is not attached to his views, speaking to him is suitable. If our mind won't be disturbed, and if the other person is prone to anger, but it appears in this situation that he is not firmly attached to his views, we should speak. Although he may be irritated, it will be a trifle and the benefit of helping him avoid nonvirtue is great. In a third situation, we may be troubled, but the other person will not be provoked because he is not easily angered even though he is attached to his view. Here, too, if we can help turn the person away from bad behavior, we should do so.

In the fourth situation, we will be disturbed and the other person provoked because they are prone to anger and attached to their opinion, yet we think we can still turn them away from committing a wrongdoing. Here, our discomfort and the other's sensitivity and hurt are seen as minor compared to the value of preventing them from engaging in a great misdeed. In this case, we should intervene.

However, equanimity and nonintervention are called for when we will be disturbed and the other will be provoked because they are easily angered and are strongly attached to their idea, and we don't think we can change their mind. If they are impolite, equanimity on our part is called for. If we correct someone over every small, bad-mannered action they do, both of us will get irritable and no good will result.

## REFLECTION

---

Make examples of the following situations you have faced, heard about, or seen in the media. How did you or other people respond and what was the result of that response? If the result was not positive, what would have been a more appropriate course of action?

1. If our mind will not be disturbed, and if the other person is not prone to anger and is not attached to his views, speaking to him is suitable.

2. If our mind won't be disturbed, and if the other person is prone to anger, but it appears in this situation that he is not firmly attached to his views, we should speak.
  3. If we may be troubled, but the other person will not be provoked because he is not easily angered although he is attached to his view, and if we can help turn the person away from bad behavior, we should do so.
  4. If we will be disturbed and the other person provoked because they are prone to anger and attached to their opinion, yet we think we can still turn them away from committing a wrongdoing, we should intervene.
  5. If we will be disturbed and the other will be provoked because they are easily angered and are strongly attached to their idea, and we don't think we can change their mind, we should not intervene but should practice equanimity.
- 

A loving mind is needed when others criticize or strike us, our friends, or our relatives. It is also needed when we are tempted to criticize others. A loving mind, especially at the level of access concentration or actual dhyāna, dispels fear. Fear arises easily in a mind that is angry and self-absorbed, whereas a mind filled with love for all beings is not suspicious of others' behavior and does not dwell on their faults. By treating them kindly, someone with a loving mind does not become the object of others' hostility, jealousy, or resentment.

Love manifests in your physical, verbal, and mental activities. Physically refrain from harming others, protect them, be considerate of them when living and working together, give them gifts, and offer your help and service when they need it. Keeping your precepts, showing respect to those worthy of respect, and being considerate of others' property and possessions are also loving physical activities.

Verbally speak truthfully, kindly, at appropriate times, and with meaningful words. If you know the Dharma well, explain good conduct and

meditation practices to others. Help to organize Dharma events and other activities that benefit others. These are expressions of loving speech because much communication is needed when planning events. Also point out others' good qualities, their talents, and specific actions that they have done well. Encouraging others to be generous and to refrain from harming others and explaining to them how to subdue their anger or overcome hurt are also loving physical activities.

By abandoning a judgmental, critical attitude, mentally focus your attention on others' good qualities and worthy accomplishments. Leaving aside arrogance, competition, and jealousy, wish them well. Cultivate loving actions of body, speech, and mind openly when you are in the presence of others and also privately in your own mind in their absence. Thinking and acting in this way requires practice and mental training, but it brings about better relationships and fosters a more peaceful, joyful mind in us. Cultivating single-pointed concentration on such love brings the spiritual benefits of higher stages of concentration and insight.

The monk Anuruddha spoke eloquently of loving actions when the Buddha questioned him about how the peaceful accord with his fellow companions came about (MN 31.7):

I think thus: "It is a gain for me, it is a great gain for me that I am living with such companions in the holy life." I maintain physical acts of loving-kindness toward those venerable ones both openly and privately. I maintain verbal acts of loving-kindness toward them both openly and privately. I maintain mental acts of loving-kindness toward them both openly and privately. I consider, "Why shouldn't I set aside what I wish to do and do what these venerable ones wish to do?" Then I set aside what I wish to do and do what these venerable ones wish to do. We are different in body, but one in mind.

## REFLECTION

---

1. Anuruddha’s words above are wise advice. Think of times in your life when you could practice them.
  2. Imagine maintaining acts of physical, verbal, and mental kindness in these situations. How would you feel acting in that way? What effects would your actions have on the situation and the other people in it?
- 

### *Levels of Love and Compassion*

The Buddha talked to all his disciples about the importance of love and compassion for others in daily life, and to those involved in cultivating states of samādhi, he recommended them as “objects” of meditation. Here love — and by implication compassion,<sup>76</sup> empathic joy, and equanimity as well — are deliberately cultivated through special meditation techniques and are spoken of in three levels, according to the level of samādhi attained: (1) Love cultivated at the level of *full concentration* (P. *appanā samādhi*) is a mental state of full meditative absorption at the level of at least the first dhyāna; this is the immeasurable love of the four immeasurables. (2) Love at the level of *access concentration* (P. *upacāra samādhi*) is in a mental state of the preparations for a dhyāna, just before full absorption. (3) The *preliminary level of love* (P. *mettāya pubbabhāga*) is love in a mind that is not in a state of concentration.

Love and compassion also lead to the liberation of mind (P. *cetovimutti*) when concentration is at the level of the first, second, or third dhyānas. They are called “liberation of mind” because the mind is free from the five hindrances, especially anger. This state of concentration is an excellent basis for cultivating the insight that leads to liberation by wisdom and the four states of āryas.

But even the rudimentary level of love is valuable. The Buddha said that a monastic who has this love — love that relates to sentient beings with the wish for their well-being — for even the length of a fingersnap can “breathe easy” and accept offerings without worry of not deserving them. However, this love isn’t simply an ordinary positive feeling toward a few people. It is universal and extended to all beings.

## *The Bodhisattva Path*

Bodhicitta and the bodhisattva path are presented in the Pāli tradition. The oldest sūtras in the Pāli canon talk of three types of beings who attain awakening or arhatship: (1) The śrāvaka (P. *sāvaka*) hears teachings from a fully awakened buddha, practices them, and teaches others according to his ability after attaining awakening. (2) The solitary realizer (P. *paccekabuddha*) arhat attains awakening without the aid of a teacher in her last life, but does not establish a dispensation (P. *sāsana*) — that is, she does not turn the Dharma wheel. (3) A fully awakened buddha (P. *sammāsambuddha*) first becomes a bodhisattva, attains awakening without the aid of a teacher in his last life, and begins a dispensation, turning the Dharma wheel so that the Buddhadharmā exists in the world. This is the awakening attained by Śākyamuni, and it is extolled as superior to the awakening of either the śrāvaka or the solitary realizer.

The *Nidhikaṇḍa Sutta* (in the Khuddaka Nikāya)<sup>77</sup> says that by practicing generosity, ethical conduct, self-restraint, and other virtues, a practitioner may attain the perfection of a śrāvaka (P. *sāvaka-pāramī*), the awakening of a solitary realizer (P. *paccekabodhi*), or the ground of the Buddha (P. *buddhabhūmi*).

The *Upāsaka-janālakāra*, a twelfth-century Pāli treatise written by Thera Ānanda in the Theravāda tradition of the Mahāvihāra, speaks of three types of awakening: the awakening of the śrāvaka, the awakening of the solitary realizer, and the complete and perfect awakening (P. *sammāsambodhi*) of a buddha.<sup>78</sup>

While śrāvaka arhats, solitary-realizer arhats, and buddha arhats are equal in having realized nirvāṇa, there are some differences in their qualities, as noted above. All the paths leading to the goals of the three vehicles are presented in the Pāli canon, and the option of which one to follow is an individual choice. Nevertheless, the vast majority of people following the Theravāda tradition have chosen the path of the śrāvaka arhat because it is the prominent ideal presented in the Pāli scriptures. Even though the path of the bodhisattva is present, most Theravāda sages of ancient as well as modern times see that as a path for exceptional individuals. They thus encourage their disciples to follow the eightfold path

of the āryas and attain nirvāṇa, as the overwhelming number of sūtras propound.

However, at present and in the past, some Theravādins practice the bodhisattva path.<sup>79</sup> It is incorrect to think that bodhisattvas exist only in countries with Mahāyāna practitioners. Some Theravāda students learn and practice the bodhisattva path, and ārya bodhisattvas may manifest among Theravāda practitioners.

Although the path of a bodhisattva is not the prominent path explained in the Pāli sūtras, many Theravāda practitioners throughout the centuries have found it appealing and have followed it. Many of the early kings of Ceylon were spoken of as having bodhisattva-like qualities of compassion and generosity similar to those of the Buddha in his penultimate worldly life as King Vessantara. These rulers included King Duṭṭagāmaṇī and King Sirisaṃghabodhi, as recorded in the Ceylonese historical text the *Mahāvamsa*, and King Buddhadāsa, as recorded in the Ceylonese history text the *Cūlavamsa*. By the eighth century some kings in what are now Sri Lanka, Myanmar, and Thailand were either referred to as bodhisattvas by others or declared themselves to be bodhisattvas or practitioners of the bodhisattva path.<sup>80</sup> In tenth-century Sri Lanka, King Mahinda IV (956–972) declared in an inscription that “none but the bodhisattvas would be kings of Ceylon.”<sup>81</sup> The Thai King Lu T’ai of Sukhothai reputedly “wished to become a buddha to help all beings . . . leave behind the sufferings of transmigration.” The twelfth-century King Alaungsithu of Pagan in present-day Myanmar had a Pāli inscription written after he sponsored the building of the Shwegugyi Temple. In this verse he declared his intention to become a fully awakened buddha, not a śrāvaka. Many other kings of ancient Myanmar also aspired for buddhahood.

While this connection between royal rule and the bodhisattva ideal may have been influenced by Mahāyāna ideas present in those countries at that time, Theravāda Buddhism was the prominent tradition in those areas. Clearly the kings as well as the populace found the bodhisattva ideal not only acceptable but also exemplary, and saw their leader as embodying bodhisattva aspirations and deeds.

Some Theravāda learned adepts and practitioners were also attracted to the Bodhisattva Vehicle. For example, at the end of the commentary to the

*Jātaka*, its author vows to fulfill the ten bodhisattva perfections (*pāramīs*) in order to become a buddha and liberate all beings from saṃsāra and lead them to nirvāṇa. In addition, the twelfth-century author of the *Milinda-ṭīkā*, Thera Mahā-Tipitaka Cūlabhava of the Mahāvihāra tradition in Sri Lanka, wrote of his bodhicitta motivation in the colophon of this book. Here he stated, “*Buddho Bhaveyyam*” — May I become a Buddha — implying he was a bodhisattva aspiring to become a buddha.<sup>82</sup> Furthermore, some of the scribes of Buddhist texts on palm leaves in Sri Lanka stated their aspiration to become buddhas and are consequently regarded as bodhisattvas.

In the Mahāvihāra Monastery in Anuradhapura, Buddhaghosa was seen as the incarnation of Metteyya (Maitreya) Buddha, although it is not said that Buddhaghosa took the bodhisattva precepts or practiced the bodhisattva perfections.

Some Theravāda monks have also sought full awakening. The Sri Lankan Bhikkhu Doratiyāveye (ca. 1900) was accepted by his teacher to receive special instructions. However, he did not practice them because, by doing so, he believed he would become a stream-enterer and he had previously made the bodhisattva vow to become a buddha. Nowadays, also, there are Theravāda monastics and lay followers in Myanmar, Thailand, Sri Lanka, Cambodia, and so forth who make the resolve to become buddhas for the benefit of all sentient beings.<sup>83</sup>

In short, while we usually think of bodhisattvas in connection with the Mahāyāna tradition, they are not unknown in Theravādin countries. Two Thai masters are regarded as incarnations of Maitreya Bodhisattva, and statues of Kuan Yin (Avalokiteśvara) have been unearthed in Thailand, especially in the south. In some areas, there is a festival in the autumn in honor of Kuan Yin and people maintain a vegetarian diet during that time. While this practice probably originated with Chinese immigrants to Thailand, it has been adopted by many Thais in those areas.

### *The Bodhisattva in Pāli Literature*

The concept of the bodhisattva has been present in Pāli literature from the beginning. In the sūtras, the Buddha often referred to himself as a bodhisattva. For example, in the *Shorter Discourse on the Mass of*

*Suffering*, the Buddha says (MN 14.5), “Before my awakening, while I was still only an unawakened bodhisattva . . .” In the *Wonderful and Marvelous Sutta* (*Acchariya-abbhūta Sutta*, MN 123), Ānanda recalls the Buddha calling himself “the bodhisattva” when he spoke of his previous time in Tuṣita and his early life before attaining awakening under the bodhi tree. In the *Great Discourse on the Lineage* (*Mahāpadāna Sutta*, DN 14), the Buddha speaks about previous buddhas and their lives as bodhisattvas.

Well before the Mahāyāna was spread publicly, bodhisattvas began to appear more often in Pāli literature and practice. Since the Buddha said he was a bodhisattva before he attained awakening under the bodhi tree, naturally people were interested in how he practiced and what motivated him. In addition, scriptures talked of other wheel-turning Buddhas — buddhas who teach the Buddhadharma in a place and at a time when it had not previously been taught. In doing so, these buddhas liberate many beings from saṃsāra and initiate the Buddhadharma in the world, where it will benefit countless beings. Metteyya (Maitreya) is said to be the next wheel-turning Buddha and six preceding buddhas were also mentioned.

The Buddha spoke the *Chronicle of Buddhas* (*Buddhavaṃsa*) at the request of Śāriputra. This comparatively late text in the Khuddaka Nikāya, tells the story of twenty-five buddhas, including Buddha Gotama (Śākyamuni Buddha) in a previous life, who generated bodhicitta and made the vow to become a fully awakened buddha.

It is said that many eons ago, in one of his previous lives, Śākyamuni Buddha was a young man who cared for his blind mother after his father’s death. He thought to become a merchant in order to support her well. As she had no one to care for her otherwise, she came along on the boat for one of his trading expeditions. Encountering bad weather, the ship wrecked and the mother and son were set afloat in the sea. The other passengers had drowned, and when the young man saw his mother struggling to keep her head above water, he felt her suffering was unbearable and swam to rescue her. In the process he realized that all sentient beings were drowning in the ocean of saṃsāra. Filled with compassion, he thought to cross the ocean of misery that was saṃsāric existence in order to take others across. To do that, he aspired to become a fully awakened buddha. In this way he awakened the thought of awakening, becoming a bodhisattva.<sup>84</sup>

Some lifetimes after that, Śākyamuni was born as Sumedha, a matted-hair ascetic practicing the path to arhatship. Hearing that Dīpaṅkara Buddha<sup>85</sup> was in a nearby town and eager to meet a fully awakened one, he went there. Upon seeing the Buddha, Sumedha was deeply moved. Realizing that becoming a fully awakened buddha would be of much greater benefit to the world, Sumedha knelt down and, in the presence of Dīpaṅkara Buddha, made the aspiration-vow (P. *abhinīhāra*) to become a fully awakened buddha.

His faith and exuberance for full awakening were apparent that same day, when he learned that the Buddha Dīpaṅkara and his disciples were soon to come along the path. He began to clear the path for them to pass, but when he was unable to finish before they arrived, Sumedha prostrated to Dīpaṅkara Buddha and then laid down in the mud. Sumedha relates this moving event (BVA II A.52–54):

Loosening my hair, spreading my bark-garments and piece of hide there in the mire, I lay down prone. “Let the Buddha tread on me with his disciples. Do not let him tread in the mire — it will be for my welfare.” While I was lying on the earth it was thus in my mind: If I so wished I could burn up my defilements today.

When he initially invited the Buddha and his disciples to use him as a bridge to cross the mud, Sumedha was focused on his own welfare. He knew that if he wished, he could eradicate all defilements and become an arhat that very day. Nevertheless, he questioned this self-centered intention and made the following determination to become an omniscient buddha and to lead all other beings out of cyclic existence (BVA II A.55–58):

What is the use while I [remain] ignorant of realizing Dharma here? Having reached omniscience, I will become a buddha in the world with the devas. What is the use of my crossing over alone, being a person aware of my strength? Having reached omniscience, I will cause the world together with the devas to cross over.

By this act of merit of mine toward the supreme amongst human beings, I will reach omniscience; I will cause many people to cross over. Cutting through the stream of saṃsāra, shattering the three renewed existences (the desire, form, and formless realms), embarking in the ship of Dhamma (the eightfold path of the āryas), I will cause the world with the devas to cross over.

At that time, Dīpaṅkara Buddha gave Sumedha the prediction of his awakening: he would actualize his vow to attain full awakening, becoming a buddha with the name Gotama after four countless and a hundred thousand eons.<sup>86</sup> Had Sumedha not made that aspiration and vow to attain buddhahood, he would have realized an arhat's awakening that very day by listening to a discourse by Dīpaṅkara Buddha. Sumedha had no regret, however; he was joyfully determined to become a buddha no matter how long it took.

Sumedha then went into seclusion and contemplated how to fulfill his aim of full awakening. He saw that the main virtuous qualities he would have to develop were the ten perfections. The *Buddhavaṃsa* then briefly sets out the ten perfections (BVA 116–66), making known a full-fledged bodhisattva path to supreme awakening. It is complete with a firm aspiration to attain buddhahood, the bodhisattva vow, the path of practicing the ten perfections and fulfilling them to the highest degree, the view of selflessness, and so forth. The *Chronicle of Buddhas* also names the ten perfections and records the names of each buddha's chief male and female disciples, attendants, life span, parinirvāṇa, and other details.<sup>87</sup>

The *Basket of Conduct (Cariyāpiṭaka)* in the Khuddaka Nikāya contains thirty-five stories of the bodhisattva Gotama's dedicated efforts to complete the perfections during the times of previous buddhas. For example, the ten perfections can be practiced to a normal, higher, and ultimate degree. This is illustrated in the practice of generosity, the first perfection. Giving such things as food, drink, bedding, and sandals is normal generosity; giving his eyes and other body parts is higher generosity; and giving his own life is generosity at the ultimate level. The *Jātaka* contains about 550 stories of the bodhisattva in his previous lives while he was practicing the bodhisattva

path and perfecting the perfections that would enable him to become a fully awakened buddha in our age.

In the *Great Discourse on the Lineage*, the Buddha spoke of six previous buddhas — Vipassin, Sikhī, Vessabhū, Kakusandha, Koṇāgamana, and Kassapa — after whom he arose as the seventh buddha. Each of these previous buddhas had also been a bodhisattva. He then describes Vipassin’s bodhisattva activities from descending from Tuṣita to his awakening and teaching the Dharma and Vinaya. In the *Apadāna*,<sup>88</sup> thirty-five precious buddhas are mentioned, implying that all of them had generated bodhicitta and practiced the bodhisattva path.

In the *Lion’s Roar on the Turning of the Wheel (Cakkavatti Sīhanāda Sutta, DN 26)*, the Buddha predicted the future Buddha Metteyya, who also would follow the bodhisattva path prior to becoming a buddha. However the Buddha did not present the bodhisattva path and the full awakening of buddhahood as being limited to the previous six buddhas and to the future Metteyya Buddha. In the *Sutta on Serene Faith*, Sāriputta says (*Sampasādanīya Sutta, DN 28.19*):

I have heard and received it from the Blessed One’s own lips, “There have been in the past, and there will be in the future, Arahant Buddhas equal in awakening to myself.”

In other words, the bodhisattva path and the attainment of full awakening through it are open to many others. As mentioned above, the *Nidhikaṇḍa Sutta* presents full awakening as one of three possible results that a spiritual seeker may aim for.<sup>89</sup>

Discriminating knowledge, release of mind, the perfections of an ariya disciple (a śrāvaka ārya), the awakening of a solitary buddha (solitary realizer), and the requisites for (supreme) buddhahood — all these [qualities] can be obtained by this [treasure] . . . Therefore wise and educated men praise the acquisition of meritorious actions.

Here we see that buddhahood is not limited to people the Buddha specifically mentioned in other sutras but is open to all who may choose it.

The *Birth Stories of the Ten Bodhisattvas* (*Dasabodhisattuppattikathā*), a post-canonical Pāli composition, extolls the qualities of bodhisattvas and relates the stories of ten bodhisattvas, including Metteya, who in the future will generate bodhicitta, practice the perfections, and attain awakening. This work begins with Sāriputta asking the Buddha if there will be perfect buddhas in future eons, to which the Buddha responds (BD 1.1–2):

Sāriputta, there have been limitless and countless ariya people in the world who have successively fulfilled the pāramīs, attained buddhahood, and, having completed a buddha’s duty, passed away at the end of their life span. In the future, too, there will be limitless and countless ariya people who, having enjoyed the pleasures of the sensual world and the bliss of the Brahmā worlds, having successively fulfilled the pāramīs with courage and determination, will attain buddhahood and pass away having completed a buddha’s duty.

Dhammapāla, a sixth-century commentator, composed the *Treatise on the Pāramīs*, which is included in his commentary on the *Basket of Conduct*. He draws on the *Jātaka*, *Chronicle of Buddhas*, and *Basket of Conduct*, which are Pāli canonical texts, as well as on the *Bodhisattva Grounds* (*Bodhisattvabhūmi*) by Asaṅga.

## REFLECTION

---

1. Imagine and let your mind be inspired by the story of the Buddha in a previous life when he was a young man caring for his blind widowed mother, his insight into the nature of saṃsāra, and the awakening of his bodhicitta.
2. Contemplate Sumedha’s encounter with Dīpaṅkara Buddha, his offering to Dīpaṅkara Buddha, and the way his mind transformed into

bodhicitta. Imagine Dīpaṅkara Buddha prophesizing Sumedha becoming Śākyamuni Buddha. Recognize that you too have the potential to generate bodhicitta and attain full awakening.

---

### *For the Success of Bodhicitta*

All twenty-four buddhas whose life stories are found in the *Buddhavaṃsa* traversed a similar path in becoming buddhas. First, they made an unshakable resolve (*praṇidhāna*, *praṇidhāna*) to become a bodhisattva and then a buddha. This mental resolve is expressed repeatedly by making an aspiration-vow (P. *abhinīhāra*) to attain full awakening for the benefit of all sentient beings in the presence of many buddhas. This aspiration is concerned with both the short-term and long-term welfare of all beings, wanting them to have temporal happiness in saṃsāra and especially wanting to help them tame and purify their minds so that they can attain nirvāṇa and full awakening. Then bodhisattvas perform an act of merit (P. *adhikāra*) to demonstrate to each buddha their sincerity and dedication to fulfilling their aspiration. This is followed by each buddha making a prediction (*vyākaraṇa*, *veyyākaraṇa*) of when that bodhisattva will become a buddha and what that buddha's name will be.

For the aspiration to attain awakening to be successful and for buddhahood to be attained, it should be supported by eight conditions (BVA II A.59): The person who makes this altruistic aspiration (1) is a human being (*manussa*, or *manussatta*); (2) is a male (P. *liṅgasampatti*); (3) has the necessary supportive causes and conditions (P. *hetu*) — for example, a firm Dharma practice; (4) has generated the bodhicitta aspiration (P. *sattthāradassana*) in the presence of a living buddha (not a spiritual mentor, statue, stūpa, bodhi tree, or śrāvaka or solitary-realizer arhat); (5) has gone forth as a monk (P. *pabbajjā*); (6) has achieved special qualities (P. *guṇasampatti*), such as the direct knowledges (P. *abhiñña*) and the higher states of meditative absorption; (7) has such deep dedication and devotion (P. *adhikāra*) for the Buddha that he is willing to give up his life and perform great acts of merit for the Three Jewels; and (8) has strong virtuous

desire and determination to cultivate the qualities that bring about buddhahood (P. *chandatā*).

A bodhisattva's desire for full awakening should be so intense that "if he were to hear, 'buddhahood can only be attained after experiencing torture in hell for four countless and a hundred thousand eons,' he would not deem that difficult to do, but would be filled with desire for the task and would not shrink away" (TP 6).

At the time of generating bodhicitta when a person becomes a bodhisattva, his mind becomes completely fixed on and devoted to awakening; thereafter he investigates the perfections, trains in them, and fulfills them as Sumedha did.

In addition to generating the aspiration for awakening, great compassion (P. *mahākaruṇā*) and skillful means (P. *upāyakosalla*) are also conditions needed to practice the perfections. Skillful means is the wisdom that transforms the ten perfections into the collections necessary to attain awakening. Dhammapāla says (TP 6):

These Great Beings devote themselves to working uninterruptedly for the welfare of others without any concern for their own happiness and without any fear . . . they are able to promote the welfare [of all sentient beings] and even on occasions when they are merely seen, heard of, or recollected inspire confidence [in others]. Through his wisdom a bodhisattva perfects within himself the character of a buddha; through his compassion, the ability to perform the work of a buddha. Through wisdom he brings himself across [the ocean of saṃsāra]; through compassion he leads others across. Through wisdom he understands the suffering of others, through compassion he strives to alleviate their suffering. Through wisdom he becomes disenchanted with suffering, through compassion he accepts suffering. Through wisdom he aspires for nirvāṇa, through compassion he remains in saṃsāra. Through compassion he enters saṃsāra, through wisdom he does not delight in it. Through wisdom he destroys all attachments, but because his wisdom is

accompanied by compassion he never desists from activities that benefit others. Through compassion he trembles with sympathy for all, but because his compassion is accompanied by wisdom, his mind is unattached. Through wisdom he is free from “I-making” and “mine-making,”<sup>90</sup> through compassion he is free from lethargy and depression.

So, too, through wisdom and compassion respectively, he becomes his own protector and the protector of others, a sage and a hero, one who does not torment himself or torment others, one who promotes his own welfare and the welfare of others, fearless and a giver of fearlessness, dominated by consideration for the Dhamma and by consideration for the world, grateful for favors done and active in doing favors for others, devoid of ignorance and craving, accomplished in knowledge and in conduct, possessed of the powers and of the grounds for self-confidence. Thus wisdom and compassion, as the means for attaining each of the specific fruits of the pāramīs, is the condition for the pāramīs. The same pair is a condition for the resolution as well.

Other qualities are also conditions to practice the perfections. These are zeal, competence, stability, and beneficent conduct. *Zeal* is energy in completing the collections, *competence* is wisdom in skillfully practicing the collections, *stability* is firm determination, and *beneficent conduct* is cultivating love and compassion. A bodhisattva also cultivates six inclinations — renunciation, solitude, nonattachment, nonhatred, nonconfusion, and release from saṃsāra — based on seeing the faults of their opposites. For example, seeing the disadvantages of lay life with its sense pleasures, he inclines toward renunciation, and seeing the disadvantages of a distracting social life, he inclines toward solitude. When the opposites of these six inclinations flourish in the mind, cultivating the bodhisattva practices becomes extremely difficult, if not impossible. Seeing the faults of the opposites of the perfections helps to create good conditions for us to train in them. For example, seeing the disadvantages of miserliness inclines us to practice generosity, and seeing the disadvantages of deceptive speech inclines us to practice truthfulness. Therefore, to actualize our deep

admiration for the bodhisattva path and its results, it is wise to cultivate the conditions that enable us to practice the perfections and to abandon their interfering opposites.

In conclusion, although many people believe that the bodhisattva path as found in the Pāli scriptures is for only those who are destined to become wheel-turning buddhas, when we explore the Pāli literature more deeply, we find that Dhammapāla described a complete bodhisattva path that is open to all, should they aspire to follow it. In addition, we find that some Theravāda practitioners have followed that path and that historical texts in Theravāda areas refer to bodhisattvas subsequent to Śākyamuni Buddha.

## 10 | Mind Training

**A**LTHOUGH THE PURPOSE of all the Buddha’s teachings is to train the mind, there arose in Tibet a special set of teachings called “mind training” or “thought training” (T. *blo sbyong*). It was developed by the Kadampa geshe, disciples of Atiśa and Dromtonpa, beginning around the twelfth century, but has its textual roots in Nāgārjuna’s *Precious Garland* and Śāntideva’s *Engaging in the Bodhisattvas’ Deeds*, as well as in the *Ākāśagarbha Sūtra*, *Vimalakīrti Sūtra*, and *Akṣayamati Sūtra*, among others.

Taken up by all Tibetan Buddhist traditions, the mind-training texts center on the development of the two bodhicittas — conventional bodhicitta, which is the altruistic intention, and ultimate bodhicitta, the wisdom realizing emptiness. They especially emphasize cultivating bodhicitta by means of equalizing and exchanging self and others, and most are written in a pithy, straightforward style that aims directly at the self-centered attitude and self-grasping, the two principal enemies of bodhisattvas. The mind-training teachings eviscerate these hindrances and call out their ridiculous “logic” that leads to misery, replacing it with more realistic perspectives. The advice the mind-training texts give us is the opposite of what the self-centered attitude and self-grasping demand, and their recommended actions are the opposite of what our afflictive mind wants to do at that moment. Of course, that is what makes them so effective at quelling afflictions and protecting us from negativity.

The mind-training practices challenge us to reorient the framework through which we view the world, releasing the self-centered attitude and focusing instead on cherishing others more than self, and dedicating our lives to benefiting others temporally in saṃsāra and ultimately by showing them the way to full awakening. The practice of mind training helps us to

remain balanced when we experience either happiness or suffering, without becoming giddy and overly optimistic when we are happy or discouraged and depressed when we face suffering. Whatever we encounter in life — wealth or poverty, success or failure, a multitude of friends or loneliness — we are steadfast in our pursuit of full awakening. In short, mind training shows us how to make all circumstances favorable to the path.

*The Seven-Point Mind Training* by Geshe Chekawa is perhaps the most well-known of the mind-training texts. I received the transmission and teachings on this text from my senior tutor, Ling Rinpoche, and have applied them throughout my life; this has brought great benefit to my mind and thus to all the beings I come in contact with. The seven points are (1) practicing the preliminaries, (2) training in the two types of bodhicitta, (3) taking adversity into the path to full awakening, (4) a summary of a lifetime's practice, (5) the measure of having trained the mind, (6) the commitment of mind training, and (7) the precepts of mind training.

The first point — the preliminaries of contemplating our precious human life, death and impermanence, karma and its effects, and the disadvantages of saṃsāra — were explained in previous volumes of the *Library of Wisdom and Compassion*. Regarding the second point on how to develop the two bodhicittas, the cultivation of conventional bodhicitta — what we commonly call simply “bodhicitta” or the altruistic intention — is the topic of the preceding chapters of this volume.

The third point comes below as we explore taking adversity into the path, referring to verses from several mind-training texts. The fourth point is a concise explanation of how to practice mind training throughout one's life and at death. This will be followed by the commitments and precepts of mind training — points six and seven — that give direction to our practice. To complete the chapter we'll look at some *gāthās* — short sentences or verses that apply to everyday actions, imbuing them with spiritual meaning and transforming them into the path.

Some mind-training texts dwell on how to transform adverse circumstances into the path. Such advice is applicable every day since, as we have all experienced, unwanted problems easily find their way into our lives. It's best to become familiar with this advice in our daily meditation when a strong affliction is not manifest in the mind. Recall a disturbing

situation from the past and rerun it in your mind, but now think and imagine acting according to the mind-training instructions. At first this may seem unnatural, but as we become more familiar with a new, beneficial way of thinking, the easier it becomes. And when our perspective regarding difficulties begins to shift when we meditate, it will also change when we are in the midst of an actual situation.

### *Taking Adversity into the Path*

Verses explaining how to take adversity into the path are dear to my heart. They have given me courage, compassion, and fortitude in difficult situations, such as when I fled Tibet and became a refugee, as well as in exile when I have done my best to help hundreds of thousands of Tibetans adapt to a new life without giving up hope of returning to our homeland.

In *The Seven-Point Mind Training*, the third point reads:

When the vessel and its contents are filled with negativities, transform these unfavorable conditions into the path to awakening. Immediately apply whatever you encounter to meditation.

The “vessel” is our environment and “its contents” are the sentient beings who live in it. The degeneration of both is obvious: corruption, war, disharmony, and dispute are rampant between groups and nations and within them as well. Our environment is adversely affected by climate change, which will bring additional hardships to the sentient beings on planet Earth. In confronting this, we have four choices. The first is to hope it will go away and ignore it, which will only allow it to increase. The second is to become paranoid and aggressive, to yell and scream, and to accuse and threaten others, which only inflames a bad situation. The third is to despair and become depressed, which brings everyone down. The fourth is to get involved and try to help. Needless to say, this is the course we should choose. But it is important to maintain the proper mental attitude when doing so and to accept that our efforts may or may not produce the changes we seek. At the end, we are left with the state of our mind. How

can we navigate living in these times and transform our experience into something valuable for what is most important for us as Dharma practitioners: attaining awakening so we can most effectively help in the long term?

Doing this begins with accepting the situation. Instead of becoming attached to hope, which here means magical thinking of success, or to fear that is based on imagining worst-case scenarios and living in dread of them, we ask ourselves how we can use these situations in our Dharma practice.

The answer depends on having a deep understanding of karma and its effects, knowing that whatever we experience is a result of our past actions. Try thinking: I'm experiencing difficulties now because of harmful actions done either earlier in this life or in previous lives. These actions were created under the influence of self-centeredness and ignorance. It's no use blaming others for my misery, and it's foolish to think that I deserve to suffer because I erred in the past. Rather, I will learn from my misdeeds. Since I don't like the result I'm experiencing, in the future I will avoid creating its cause.

If we're unsure what kind of causes we may have created in the past that bring this result, we can read about karma and its results. A mind-training text called *The Wheel of Sharp Weapons* discusses this, bringing in specific examples. In it are verses such as (WSW 9) this:<sup>91</sup>

When my body falls prey to unbearable illnesses,  
it is the weapon of destructive karma returning on me  
for injuring the bodies of others;  
from now on I will take all sickness upon myself.

Accepting the reality of being ill eliminates the mental suffering — especially anxiety, worry, and fear — and makes being sick much more manageable. Think: This is a result of my physically injuring others in the past. What motivated such behavior? My self-centered attitude. Seeing the faults of self-preoccupation, I will now do my best to shun this attitude when it manifests in my mind; that will prevent my harming others in the future. In addition, I will do the taking and giving meditation, imagining taking all the illness of others on myself and giving them my happiness.

DEEP SECTION

## REFLECTION

---

1. In your meditation, think of a situation in which you experienced great mental suffering and contemplate this verse from *The Wheel of Sharp Weapons* (WSW 10):

When my mind falls prey to suffering,  
it is the weapon of destructive karma turning upon me  
for definitely causing turbulence in the hearts of others;  
from now on I will take all suffering upon myself.

2. Accept your mental discomfort by linking it to the self-centered attitude and make a strong determination to not deliberately cause turmoil in others' minds and hearts.
3. Do the taking and giving meditation regarding this. At the conclusion, rest your mind in a peaceful state.

---

A similar approach is to meditate: "May my suffering suffice for all the suffering of others." Contemplate the various problems sentient beings are undergoing at this very moment: health problems, relationship problems, oppression, environmental hazards, and so forth. With a mind of compassion that cherishes all these beings and wants them to be free of suffering, think, "May the suffering I'm experiencing now be sufficient to eliminate all of their suffering." Imagine others being free of their pain. In doing this meditation, one surprising result is that we often realize that compared to what others are going through, our problem is not that bad. We can endure it. This gives us a lot of confidence and courage and alleviates our pain. However, we have to do this meditation with genuine compassion; if we do it just to get our own suffering to decrease, it won't work!

Another mind-training technique to use in difficult situations is to give all your suffering to the self-centered attitude, which is the real enemy responsible for this predicament. Here it is important to remember that the self-centeredness is not you; it is something apart from you, something that

disturbs you and causes you problems. Feel that, having given the misery to the self-centered attitude, you are free of suffering.

The sincere practitioners of mind-training practice in a remarkable way, one that we have to build up to gradually. One prayer they make is this:

If it's better for me to be sick, may I be sick;  
if it is better for me to get well, may I be well;  
if it is better for me to die, may I die.

Their minds have shifted out of the self-centered perspective of ordinary beings that is anchored to “my happiness now” and they now look at life through the lens of “what will be best for all sentient beings in the long term?” With this new perspective, they feel completely comfortable in making the above wishes. Try thinking like this.

With this long-term perspective that not only understands karma but also knows what mental states are conducive to spiritual progress, a Kadampa master would think:

If people despise me, I like it;  
if they praise me, my pride will grow.  
If they criticize me, I will clearly see my faults  
and have the opportunity to correct them.  
Suffering is fine. If I enjoy too much, I will exhaust my good karma.  
If I suffer, I exhaust my bad karma, and that is good.

When we are sincerely intent on generating bodhicitta and practicing the bodhisattvas' deeds, thoughts such as these make perfect sense. This way of thinking is not masochistic; in fact, it is beneficial. Self-centeredness brings us only pain. By relinquishing it and training the mind to cherish others even more than ourselves, our minds and hearts will be peaceful and content.

Maitrīyogi, one of Atiśa's principal teachers of mind training, thought in a similar way when he chanted “Melodies of an Adamantine Song”:<sup>92</sup>

Alas! To guide all beings who have been my parents,

I'll extract without exception the five poisons of each being  
by means of the five poisonous afflictions present in me.  
Whatever virtue I may possess, such as an absence of attachment,  
I will distribute equally to all beings of the six classes [of sentient  
beings].

Using the painful fruits [of my karma], such as sickness and so on,  
I will extract all similar sufferings of sentient beings.  
Whatever joy and benefit I may possess, such as absence of illness,  
I will distribute equally to all beings of the six classes.

If I do this, what occasion is there for me, even for a single instant,  
to wander aimlessly in this ocean of cyclic existence?  
Yet until I have attained [full] awakening,  
whatever class of the five poisons and their fruits may lie in store,  
I will exhaust entirely in this very lifetime.

I will extract them this very year and this very month;  
I will exhaust them this very day and this very instant;  
I will seek the means to cut even the thread of minor sufferings.  
O Maitrīyogi, make sure that your mind becomes trained!

In the colophon Maitrīyogi says that he “regularly recites this song, wherein loving-kindness, compassion, and bodhicitta are sung as a diamond song,” and that one time near the Ganges River, Maitreya Buddha, the future buddha who is the embodiment of great compassion, appeared to him in the form of a king.

Maitrīyogi brings up another important point in mind training: when experiencing happiness due to the ripening of virtuous karma created in the past, share the satisfaction with other sentient beings. Sometimes the happiness is such that we can give an object or share some kind words with others. Other times we mentally share our joy by dedicating it to others, as Maitrīyogi does when he mentally gives his joy and benefit to all the six classes of samsāric beings.

There is no reason to feel guilty when experiencing happiness, joy, or pleasure. We should be happy when we practice the Dharma! Rather, understand that it is a product of our own virtuous actions and make a strong determination to continue engaging in such actions. Rejoicing at our merit and virtuous actions is important. That increases the karma of doing them. Likewise, rejoicing in the merit and virtue of others makes our mind happy and we create karma similar to that of the person who did the action.

### *Specific Advice for Difficult Situations*

Another mind-training text is *The Thirty-Seven Practices of Bodhisattvas* by the Tibetan sage Togmay Sangpo (1295–1369). This text is one of my favorites and I have taught it frequently at large Dharma gatherings both in India and in the West. Like other writings in this genre, it is in the form of short, pithy verses or sentences and covers all the major topics on the stages of the path. Its verses on transforming adversity into the path are especially pointed, often giving advice that is hard to listen to when our mind is afflictive, because the advice is the opposite of our usual, worldly way of thinking, feeling, and behaving. But of course, that’s why the advice is the remedy! One good way to approach this is to “play” with the advice — that is, to imagine following it. Investigate for yourself if the new perspective is more reasonable than following your habitual emotional patterns. Examine if the new strategies for dealing with difficulties work better than blindly doing what you have always done. Below are a few verses from *The Thirty-Seven Practices of Bodhisattvas* that will give you not only a taste of the entire text but also some practical advice you can apply immediately (12, 15, 16, 19, 36).

Even if someone out of strong desire  
steals all your wealth or has it stolen,  
dedicate to him your body, possessions,  
and your virtue, past, present, and future —  
this is the practice of bodhisattvas.

Ordinary beings who do not know the Dharma usually become very angry when their possessions are stolen. They feel violated and want their things to be returned and the thief punished. But when we practice with awakening as our goal, we have already mentally given our possessions to others. In that case, this supposed thief already owns our former belongings and has now come to collect them. Not only is there no reason to be angry at him, but in addition we should dedicate to him our body, possessions, and merit of the past, present, and future. May he be free of suffering and have all the external riches he desires as well as the internal riches of nonattachment and generosity.

Though someone may deride and speak bad words  
about you in a public gathering,  
looking on her as a spiritual teacher,  
bow to her with respect —  
this is the practice of bodhisattvas.

We don't at all like when people ruin our reputation or put us down in front of others. Our usual way of dealing with public criticism is to insult the person in return, embellishing his faults and humiliating him. In fact, those who point out our faults are our teachers. Just as we have to see the dirt in a room to clean it, only by seeing our misdeeds and character faults can we have the opportunity to correct them. If we are sincerely interested in transforming our minds rather than enhancing our egos, we will respectfully thank this person.

Have you ever seen a speaker criticized during a public talk? If the speaker thanks the other person, the issue is quickly settled and the talk can continue. Thanking the other person doesn't mean we necessarily agree with what he said; it means we appreciate his comment and will think about it.

Even if a person for whom you've cared  
like your own child regards you as an enemy,  
cherish him specially, like a mother  
does her child who is stricken by sickness —

this is the practice of bodhisattvas.

When someone we trust and care about deeply returns our kindness by treating us as an enemy, ordinary beings feel hurt and angry. This situation may be likened to that of a mother who cares for her child with love and even sacrifices her happiness for the benefit of the child, but then the child is delirious with fever and, not knowing what he is doing, attacks his mother. Here the mother understands that the illness is the source of the child's behavior; likewise, those practicing the bodhisattva path understand that their dear one is overcome by afflictions and karma, which are the actual source of their bad behavior. In short, rather than taking someone's bad behavior toward you personally, reflect that they are stricken with the sickness of afflictions and karma and have compassion for them.

Having a compassionate attitude doesn't mean we allow the person to continue with their poor behavior. We do what we can to protect ourselves and to help that person stop, but our actions are motivated by compassion, not antipathy. This is a difficult but essential practice.

Though you become famous and many bow to you,  
and you gain riches to equal Vaiśravaṇa,  
see that worldly fortune is without essence,  
and be unconceited —  
this is the practice of bodhisattvas.

This verse is the opposite of the previous three. Here we are well-known, respected, and even well-to-do financially. Many people know about our good qualities or Dharma knowledge, and we are widely admired. The self-centered tendency in this situation is to become smug and conceited, thinking that we are someone great and looking down on others. We could even start to think that we are above the law or that our negative karma will not ripen.

But in such situations, well-trained practitioners think that whenever others treat them like a guest of honor, it is in the nature of suffering. They see its impermanence and know that being attached to praise, reputation, or wealth is meaningless because with a small change in conditions they could

lose everything. As Dromtonpa said, “Though others may rate us very highly, the most expedient course is to see ourselves in the lowest rank.” I try to practice this, and do my best to put myself at the lowest level. This is in fact the most practical thing to do; otherwise considerations of hierarchy cause trouble and agitation.

I know some people who have little knowledge but act with great pretentiousness. I find their behavior so futile that inwardly I cannot help laughing. To be without pride is the practice of a bodhisattva. It makes our life much easier; otherwise our mind is continuously tormented by comparing ourselves with others, feeling jealous of those who are better and arrogant toward those whom we consider inferior.

In brief, whatever you are doing,  
ask yourself, “What’s the state of my mind?”  
With constant mindfulness and introspective awareness  
accomplish others’ good —  
this is the practice of bodhisattvas.

This verse sums up the bodhisattva practice. Though we may look like a great practitioner who is very holy and benevolent, we may harbor resentment, revenge, and envy in our hearts. This is not Dharma practice, even if others are fooled by it. For our own sake and for the sake of others, we must be mindful in all circumstances so that nothing in us is secret, pretentious, or deceptive. We must be straightforward and honest. Should we notice corrupt motivations or bad behavior of our body, speech, or mind, we must think, “I am a follower of the bodhisattva path, of the Mahāyāna Dharma. I have the opportunity to be guided by many precious spiritual mentors and to hear their teachings. With all these opportunities, if I still act badly I’m deceiving my spiritual mentors, the bodhisattvas, and the sentient beings who trust me and count on my help. This would be a horrible thing for me to do.”

As Śāntideva says (BCA 2.27), “I beseech you with clasped hands to be mindful in all your activities.” Therefore, we must practice for the benefit of others, dedicate all our qualities, happiness, and abilities of body, speech, and mind to the service of sentient beings. We should constantly see

ourselves as the servant of others and do nothing else except work for their benefit. This means maintaining a sincere and compassionate attitude in all we do, even small daily activities. The gāthās presented below will show you how to do this.

## REFLECTION

---

1. Remember a time when your wealth or possessions were stolen or someone deprived you of what was rightfully yours. How did you feel? What did you want to do?
  2. To free yourself from the pain of anger and to meet the emotional or physical need of the other person, give up ownership of those items and mentally give them to the other person.
  3. Think of a time when someone derided and criticized you in front of a group of people.
  4. Watching your reaction to this event, what do you learn about yourself? Is there anger, attachment to reputation, self-righteousness, or self-pity? See this person as being like a spiritual teacher: because they pointed out your weaknesses, you can now see them clearly and go about remedying them.
  5. Recall a time when someone you trusted turned on you and acted in ways that caused you pain.
  6. See that the person was overwhelmed by the power of their afflictions, like your child who is stricken with delirium as a result of fever. Have compassion for them, just as you would for your sick child.
  7. Make a determination to have mindfulness and introspective awareness and to be aware of the state of your mind as much as possible. With compassion, work to benefit others.
-

## *A Lifetime's Practice*

Geshe Chekawa (1102–76), the Kadampa geshe who wrote the *Seven-Point Mind Training*, condenses a lifetime's Dharma practice into five forces: the motivation, seed of merit, destruction, prayers of aspiration, and familiarity.

The force of the *morning motivation* starts the day off well. Before getting out of bed we set our intention: “Today I will not harm others and will benefit them in whatever way I can. To make my life meaningful, I will cherish others and use my body, speech, and mind to cultivate bodhicitta. With mindfulness and introspective awareness I will be vigilant and notice afflictions and the self-centered attitude as soon as they arise and immediately apply the appropriate counterforce.”

Establishing a positive and optimistic motivation at the beginning of the day affects everything we do. Even if we engage in one of the ten nonvirtues, due to the power of our initial intention in the morning, it won't be so strong. It's helpful throughout the day to recall your motivation and center yourself so you stay on course.

The force of the *seed of merit* involves purification and collection of merit. To generate and continually grow bodhicitta, purifying negativities — those created long ago and those created recently — and creating merit are very important. They are like the water and fertilizer that prepare the field of the mind so that when the seeds of the Dharma teachings are planted, a large harvest of realization will grow. The preliminary practices, such as the seven-limb prayer, taking refuge, reciting the names of the buddhas and prostrating to them, making offerings, reciting the mantra of Vajrasattva, and so on are excellent ways to purify and create merit. Do these practices when you feel blocked in your practice or your mind is dull and unreceptive. They will help to clear obstacles.

The force of *destruction* involves destroying the self-centered attitude and the self-grasping ignorance. To do this, begin by contemplating their disadvantages: self-centeredness is the source of all suffering; it prevents our generating bodhicitta, entering the Mahāyāna path, and attaining full awakening. Self-grasping ignorance is the root of saṃsāra; it gives rise to attachment, anger, and all other afflictions and is the source of all

nonvirtuous actions. It prevents us from realizing the ultimate nature of phenomena, becoming an ārya, and attaining full awakening.

Understanding their faults, whenever they arise counteract them. Cherishing others as well as love and compassion banish self-centeredness, and the wisdom realizing emptiness overcomes self-grasping ignorance. Put on the armor of joyous effort and oppose these enemies and enhance their opposites.

The force of *prayers of aspiration* can be done throughout the day, but especially at the end of the day it's helpful to review your attitudes and actions. Rejoice at all virtuous actions you and others did. Regret whatever nonvirtues you were involved in and purify them with the four opponent powers. Then dedicate all the past, present, and future merit of yourself and others to your own and all beings' full awakening. Dedicate so that you will never be separated from the practice of bodhicitta in this and all future lives, that the bodhicitta you have generated will never decrease but always increase, and that the bodhicitta you have not yet generated will arise and grow. Recalling all the goodness in the world and the merit of sentient beings and holy beings delights and uplifts the mind. Be sure to do this every day.

The final force is that of *familiarity*. By continually being aware of the higher aims that are the purpose of your life, bring everything you encounter into the path to awakening. Through study and contemplation, familiarize yourself with all aspects of the path, especially the determination to be free from saṃsāra, bodhicitta, and the wisdom realizing emptiness. When you are well acquainted with those, enter the Vajrayāna and learn and meditate on deity yoga. As Śāntideva reminds us, there's nothing that doesn't become easier through familiarity.

Setting our motivation sets the foundation for the practice of mind training and the two bodhicittas. The seed of merit strengthens these and the force of destruction overcomes obstacles to them. Prayers of aspiration strengthen them even more, so that we will not stray from making the generation of the two bodhicittas the most important activity of our lives. Familiarity enables us to be successful in the cultivation of love, compassion, bodhicitta, and the six perfections, especially the wisdom that will free us from saṃsāra.

Practicing these five forces every day ensures that we have covered the most important factors of mind training. There are many levels in which these five are done — some briefer, others more extensive; some emphasizing one force, others emphasizing another — but however we do them, the result will definitely be beneficial for yourself and others.

The five forces are also practiced at the time of dying and were explained in *The Foundation of Buddhist Practice*, 226–27. Since the time of our death is uncertain, it behooves us to learn and become familiar with these. Then, like the great masters, our death will be peaceful and free from fear and regret.

### *The Commitments and Precepts of Mind Training*

The sixth and seventh points of the Seven-Point Mind Training consist of short statements with great meanings. Learning and following these will prevent us from getting distracted by the allures of saṃsāra and prevent self-centeredness from sabotaging our Dharma practice. In this way, our Dharma practice will remain on track.

### *The Eighteen Commitments of Mind Training*

The following commitments keep our mind rooted in the mind-training practice.

#### **1–3. Always practice the three general points.**

(1) Don't go against the mind-training instructions or transgress any of the ethical restraints you have taken. Don't think that because you practice mind training that you are above abandoning the ten nonvirtues. (2) Don't use mind training as a reason for taking unnecessary risks — for example, pridefully thinking that because you practice mind training, you are special and won't get sick or injured. (3) Don't be partial — for example, practicing mind training with people you like but not with those you dislike, being generous with friends but miserly with enemies, being courteous to important people but not to those you consider inferior.

#### **4. Change your attitude while remaining natural.**

Don't be conspicuous or show off your Dharma training practice so that others will think you are an advanced practitioner. Externally act like other people, although internally you transform situations by practicing mind training.

### **5. Speak not of the shortcomings of others.**

Don't belittle or disparage others or exaggerate others' faults and spread nasty stories about them. Avoid separating people who are harmonious by talking behind their backs. With a kind heart, offer advice to help others; your motivation is key.

### **6. Think not about whatever is seen in others.**

Your mindfulness needs to be on your own actions, not on what others do or don't do. If you walk near a cliff, watch your own feet, not those of others. If you look critically at others, you will find faults, and once you are in the habit of judging others, eventually you will find fault with the Buddha. It's better to place our attention on others' good qualities, and if we do see faults, to recall that they are adventitious and are not in the nature of that person's mind.

### **7. Purify first whichever affliction is heaviest.**

Whichever affliction is strongest in you, work on subduing that one first. If you have a problem with anger and often speak harshly, don't ignore that and instead focus on lessening your attachment to peanut butter. Learn the appropriate antidote for each affliction. For example, for anger, practice fortitude, forgiveness, and love. For lust, contemplate the unclean aspects of the body. For jealousy, practice rejoicing.

### **8. Give up all hope of reward.**

Don't harbor corrupt motivations of getting something for yourself from practicing the Dharma. Instead, dedicate all the merit of your practice for the welfare of others and recognize that whatever personal benefit you receive from your practice is a side effect. Abandon the expectation to receive thanks, appreciation, acknowledgement, or status — for example, people commenting that you are for sure a bodhisattva.

### **9. Abandon poisonous food.**

Self-centered attitude and self-grasping ignorance are poisonous food. Don't keep them close to you but throw them far away.

### **10. Do not serve the central object leniently.**

Don't be lenient with your afflictions, thinking, for example: it's only a little belligerence and anyway it's justified because those other people really are domineering. Instead, see the disadvantages of the afflictions and apply the counterforces to them.

### **11. Be indifferent toward malicious comments.**

If someone ridicules you, don't respond with sarcasm or slander on the one hand or hurt and self-pity on the other. Understand that others' comments tell you about their feelings and moods, and therefore don't take everything personally. In a month you won't remember it and in a year it will be far from your mind. So there's no sense in reifying it now and being miserable.

### **12. Do not lie in ambush.**

Don't wait for an opportunity to take revenge on people for perceived attacks or inconsiderate behavior. Holding grudges and waiting for the perfect time to get back at someone only makes you miserable.

### **13. Never strike at the heart.**

Don't hit others' sensitive points and abandon uttering spiteful words that you know will hurt someone. If you know someone's weakness, don't deliberately embarrass them in front of others in an attempt to make yourself look better.

### **14. Do not load an ox with the load of a dzo.**

In Tibet a dzo, which is a hybrid of a cow and a yak, is a very large and strong animal, much larger than an ox. That is, don't give your responsibilities to others who aren't capable of bearing them. Don't try to get others to do your disagreeable tasks. This may happen in families where one of the parents is an alcoholic and the child takes on this parent's role. It

may also happen in a school where the teacher gives a child an assignment that the child doesn't yet have the knowledge or skill to fulfill.

**15. Do not compete by a last-minute sprint.**

Don't stand back when others work hard on a project and then at the end step in and claim the credit for yourself. Don't try to get the biggest piece of pie, but share resources, knowledge, and prosperity. Practice putting down your self-importance.

**16. Do not be treacherous.**

This one is also called "Don't fill your belly in the wrong way." That is, don't deceive others, making them think you're doing one thing when you're actually doing another. Don't use people for self-gain under the pretense of benefiting them.

**17. Do not bring a god down to a devil.**

If we're supposedly generating bodhicitta but instead nourish our afflictions, then Dharma practice, which is like a god, has been brought down to the level of a devil.

**18. Do not inflict misery for possession of happiness.**

Don't wish your enemies suffering and feel good about it when they have problems. Don't harm others to get what you want. Such behavior is completely counter to the purpose of bodhicitta mind training.

***The Twenty-Two Precepts of Mind Training***

The following instructions are to strengthen our mind-training practice.

**1. Perform all activities by one.**

The "one" is bodhicitta. Whether you are meditating or engaged in daily activities, make sure that your motivation is bodhicitta. As the gāthās explained below illustrate, you can apply Dharma and train your mind in bodhicitta no matter what you are doing. Take advantage of every opportunity to practice bodhicitta — even when you are eating, dressing, sleeping, or walking — and to abandon the eight worldly concerns. For

example, before eating offer your food to the Three Jewels, and at the conclusion of your meal dedicate the merit to all the people who made your meal possible.<sup>93</sup>

## **2. Deal with all wrong and oppression in one way.**

The “one way” is mind training. As you practice, external hindrances such as difficulties with other human beings or with animals may arise. Instead of succumbing to anger and revenge, generate love and compassion for them and do the taking and giving meditation, thinking: “May their suffering and negativity ripen on me and may I give them my happiness so that their lives can be peaceful and tranquil.” When internal hindrances arise — such as strong attachment, self-pity, rage, and so forth — recall that these emotions have been following us since beginningless time. Since you care about other sentient beings and don’t want to subject them to your foul moods and harmful actions, make a strong determination to apply the antidotes to these afflictions.

Remember that cherishing others and working for their welfare is the path to purify your mind and develop your excellent qualities and that nurturing resentment and refusing to forgive bring suffering to yourself. Nāgārjuna reminds us (SCP 26, 27, 30):

Through relying on those [sentient beings] I attain the very great;  
through harming them I fall into distressing states.  
Even if I have to completely give up my life,  
it is fitting to be fond of them.

By interacting with sentient beings with a mind of love and compassion, we will attain the great awakening, whereas harming them leads to unfortunate rebirth and distressing events in our life. Although we may think we’re getting even for a perceived wrong, harming others is actually an act of self-sabotage and in the long term the suffering results we experience are far greater than what we inflict on others. Understanding this, the wise see the great benefits that arise from sincerely cherishing others.

It is those sentient beings that many  
relied on to attain siddhis.

Among migrators there is no [merit] field for siddhis  
other than the great field of sentient beings.

“Siddhis” are spiritual accomplishments. Mundane siddhis are the first five superknowledges; the ultimate siddhi is the sixth — full awakening.

For someone who has firm confidence in karma and its effects, the greatest danger they face is that of creating nonvirtue, and there are many opportunities for this in our world. On the other hand, there are also many opportunities to create virtue and purify nonvirtuous actions by generating love and compassion, because we’re continually encountering various living beings.

This is the conduct of the great Sage;  
one should not be indecisive about its rationale,  
for as long as one does not actualize [such conduct]  
that long accomplishment is impossible.

The great Sage, our Teacher, the Buddha practiced in this way. The suitability of cherishing others and influencing them in a constructive manner in any way possible has been established by scripture and reasoning. After putting energy into understanding this, any doubt in its truth will vanish. However, spending our time in the eight worldly concerns and neglecting to transform our mind precludes all spiritual accomplishments. What we choose to do is up to us.

### **3. There are two duties: at the beginning and the end.**

Every day we wake up and go to bed. When awaking in the morning, immediately generate a motivation of bodhicitta for the day: “As much as possible today I will not harm others. As much as possible today I will benefit them in whatever big or small way I can. Today I will be mindful of bodhicitta and enhance it.” In the evening, review the day and rejoice at your virtuous actions and merit. Confess any negativities and purify any transgressions of precepts. Dedicate the merit from practicing like this all

day: “May I never be separated from bodhicitta in all my lives. May all sentient beings quickly attain full awakening. May the pure Dharma exist in our world forever, and may all sincere spiritual mentors and practitioners have long lives.”

#### **4. Whichever of the two comes, accept it.**

Whether you feel happy or sad, well or ill, whether you are successful or fail, are wealthy or impoverished, accept the situation. Don’t get carried away emotionally by any impermanent situation. The economy goes up, it goes down. The politicians you favor are elected, they lose the election. You get married, your partner dies or you divorce. Whenever there is a change in your life, remain constant in your Dharma practice. Welcome difficulties or situations when your buttons are pushed; see them as challenges to cultivate good qualities and take them all into the path to awakening.

#### **5. Hold both as dear as life.**

Steadfastly adhere to general advice and commitments, such as to abandon the ten nonvirtuous paths of actions and practice the ten virtuous ones, and to keep your prātimokṣa, bodhisattva, and tantric precepts (if you have taken them). With dedication, follow the specific commitments of mind training to cherish others and abandon self-centeredness.

#### **6. Train in three difficult things.**

These three are as follows: (1) Prevent afflictions from arising. This entails recognizing them quickly by employing mindfulness and introspective awareness. (2) When afflictions arise, turn them away by employing the antidotes and returning your mind to a neutral or virtuous state. (3) Sever the continuity of the afflictions by realizing the emptiness of inherent existence. This is the ultimate antidote and will take some time to develop.

#### **7. Adopt three main prerequisites.**

These three are as follows: (1) Find a qualified Mahāyāna spiritual mentor who holds the pure lineage of the Buddha and make a strong connection with him or her. If you are new to the Dharma, this may take time; pray to meet a suitable spiritual mentor.<sup>94</sup> (2) Improve the state of your mind by

receiving teachings, remembering them, and reflecting on them to gain a correct conceptual understanding. Then meditate on them to integrate them into your mind and your life. (3) Gather the physical and mental circumstances that are conducive to practice, such as confidence in the law of cause and effect, joy in practicing bodhicitta, and good Dharma friends who encourage and support your practice, as well as basic requisites such as food, clothing, and shelter. If you have all of these, rejoice and pray that others may enjoy these conducive circumstances. If you don't have them, consider the lives of others who don't enjoy the conditions to practice; generate compassion and imagine taking on the negativity that prevents them from having conducive circumstances and praying for them to have wonderful conditions for Dharma practice.

### **8. Meditate on the three undeclining attitudes.**

These three are as follows: (1) Your relationship with your spiritual mentors should be without any disrespect. Be aware of the benefit you receive from your mentors and appreciate your relationships with them. It would be nearly impossible to progress on the path without their teachings and instructions. (2) Don't let your joy in cultivating bodhicitta or your faith in mind training decline. Rejoice at having encountered the mind-training teachings — especially those on bodhicitta and emptiness — which are the heart of the Buddha's teachings. (3) Don't let your mindfulness and introspective awareness of these points decline. Hold them firmly in your mind.

### **9. Never be separated from three things.**

Don't allow your body, speech, and mind to be separated from virtue. Physical virtue is created by making prostrations, circumambulating holy objects, serving your spiritual mentors, and helping others with physical tasks. Verbal virtue is created by reciting prayers and mantras and using your speech to create harmony and encourage others in virtue. Mental virtue is created by cultivating the strong wish to properly practice the two bodhicittas and then making effort to practice them. The two bodhicittas are the conventional bodhicitta, which is the altruistic intention to become a

buddha to benefit all sentient beings, and the ultimate bodhicitta, which is the wisdom realizing emptiness.

**10. Always practice with pure impartiality to all objects.**

Avoid bias with respect to people, places, and things. Bring them all into the scope of mind training.

**11. Cherish the in-depth and broad application of all skills.**

Apply your skill in mind training to all events. Reading or listening to the news becomes a teaching on karma and its effects; watching movies is an exercise in contemplating the illusory appearance of all phenomena; and documentaries are lessons on impermanence.

**12. Always meditate on those closely related to you.**

Although we practice equanimity toward all beings, it is important to care for those whom we encounter on a daily basis and with whom we have close connections — for example, our spiritual mentors, parents, colleagues, competitors, companions, roommates, and people who dislike us or whom we have aversion for on first sight. It's easy for afflictions to arise regarding these groups of people, so be especially alert when speaking or interacting with them.

**13. Don't rely on other conditions.**

Don't wait for perfect conditions before starting to practice: "Once I find a new job, I'll start attending teachings again." "When my children are older or my roommate's schedule changes so that it's silent in the house, I'll begin a daily meditation practice." Remember that your future life may come before perfect conditions, so make hay while the sun is out, as my American friends say. In addition, don't behave like a practitioner only when the sun is shining and your stomach is full, and then when problems arise get upset and blame others, like ordinary people do. Whenever problems arise — and they will, as this is the nature of saṃsāra — think of the situations of others who suffer from the same conditions and do the taking and giving meditation for them.

#### **14. Exert yourself, especially at this time.**

Many previous lives have been wasted in distraction, so don't let the rare opportunity of your precious human life slip by. The most important practice is not observing what others do and don't do, but to work on yourself. Value the Dharma, not worldly possessions and reputation. When you die your wealth, your friends and family, and your body will remain here. The karmic seeds on your mindstream and mental habits will go with you into future lives.

#### **15. Do not follow inverted deeds.**

There are six types of inverted deeds. (1) Inverted patience is being very patient and able to put up with many difficulties so that education, career, and worldly activities are done well, but having little fortitude when it comes to practicing the Dharma. (2) Inverted aspiration is having a strong aspiration and great determination to make money, get promoted, or win an argument, but a weak aspiration to subdue afflictions and counteract self-centeredness. (3) Inverted taste is taking pleasure in objects of the six senses, despite their being like "honey on a razorblade," but not seeking to taste the flavor of nirvāṇa by learning, thinking, and meditating on the Dharma. (4) Inverted compassion is feeling sorry for great practitioners who endure suffering while doing intense purification, who refrain from certain pleasures in order to follow their precepts, or who live simply without worldly clutter. On the other hand, we don't feel much compassion for people who engage in negative behavior in order to be famous, powerful, and envied by the public. Great practitioners don't need our pity because they have internal strength, but the people who continually create the causes for suffering are worthy of compassion. (5) Inverted loyalty is coaching our students, friends, and relatives to relax and have a good time engaging in worldly activities but neglecting to guide them in the Dharma. (6) Inverted rejoicing is rejoicing when our friends and relatives win the lottery, make some money under the table, or have an affair, but neglecting to rejoice at our own and others' virtue and diligence in subduing afflictions.

#### **16. Don't be erratic.**

Instead of meditating and doing some spiritual reading every day, you do it sporadically only when you need it to calm yourself. Or you practice diligently for many hours one or two days but after not having a spiritual experience, you get fed up and stop practicing. It's important to remember that all meditations that don't yield bliss or an "ah ha" moment are creating the cause for experiencing the beautiful results of practice later on.

### **17. Don't underestimate your ability.**

Don't shirk responsibility, but with confidence enhance your abilities and then, without biting off more than you can chew, take on beneficial tasks. Focus with firm resolve on accomplishing your goal and continue to create the causes for it until it comes to fruition.

### **18. Be liberated by two: investigation and analysis.**

Investigation is a coarse examination of the object, whereas analysis is a deeper, more extensive examination. Investigation identifies the disturbing emotions that are stronger and more frequent; analysis identifies the distorted conceptualizations that lie behind their arising. With knowledge provided by both, prevent afflictions from arising by stopping the distorted conceptualization before it spins a false story about your being a victim, someone who is taken advantage of or not given a fair chance, and so forth. Allowing the mind to go around and around with these stories stifles our ability to grow. Instead, as Śāntideva recommended, if there is something you can do to remedy the situation, there's no need to be upset — do what needs to be done. If there is nothing you can do to change the situation, there's no need to be upset, so relax the mind and direct your energy where it can have a positive effect.

### **19. Don't boast.**

Boasting is an activity sported by those who lack self-confidence. Working to benefit others and transforming your mind with the Dharma are simply the right things to do. There is no need to make a big deal about them in others' presence. Furthermore, if you boast, it makes others feel less important, and that is contrary to your aim of cherishing others.

## **20. Do not retaliate.**

Don't keep track of harms you've experienced, waiting for the right time to seek revenge. Your human life is short, why spend it on holding grudges? What happened in the past is not happening now. Ruminating on past situations serves only to make you upset and angry. Why become aggravated and aggrieved over events that are not happening now? Open your eyes and see that at this moment you are in a safe environment and have the protection of the Dharma.

If someone says something nasty about you in front of many people, don't respond in kind. Remember that you created the principal cause to receive public rebuke because in the past you inflicted such behavior on others. After many years of practicing the Dharma, if you are easily provoked to anger, that indicates that your practice is not very deep and the purpose of Dharma practice — to subdue the mind — has evaded you. Make a strong determination to renew your relationship with the Three Jewels.

One time when Geshe Langri Tangpa (1054–1123), a monk and the author of the “Eight Verses of Mind Training,” was teaching, a woman holding an infant entered the hall. In front of the assembly she falsely accused him of fathering the child and gave him the child to raise. The monk didn't respond, but took the infant and raised him as if he were his own. Years later, the woman returned and demanded to have the child back. Again Geshe Langri Tangpa acquiesced without dispute.

In our time, there would have been a paternity test to quickly settle the matter and clear the monk from wrongdoing. But this story is told as an example of how a monk, having his purity challenged in front of an assembly, responded without anger or retaliation.

## **21. Do not be mercurial.**

If things are going well, you get excited and tell many people about your success, but when your activities aren't going so well, you become very depressed and withdrawn. When people conform with your wishes, you think they are the greatest and become close to them, but as soon as they do something that doesn't accord with what you want, you dump them. When you hear a new teaching, you become excited and want to immediately do a

long retreat, but after a week or so, you get tired of it. When your spiritual mentor praises you, you have deep faith in him or her, but when they point out your faults, you leave and look for another spiritual mentor who will tell you what you want to hear. Since such impulsiveness irritates others and prevents you from being consistent and accomplishing what you set out to do, make a conscious effort to be more stable and considerate.

## **22. Don't wish for gratitude.**

When you help others, don't expect praise or thanks; this feeds the ego. Make the calm that arises from your heartfelt intention the reward. We cannot control how others respond to our kindness — sometimes they even reject it or become angry at us — so it's important to take pleasure in doing the action, not in receiving their gratitude or gifts afterward.

## **REFLECTION**

---

1. One by one reflect on each of the commitments and precepts of mind training.
  2. Think of specific situations in your life that each one applies to.
  3. In your mind, imagine applying that commitment or precept to that situation and thinking in a different way.
  4. Imagine the difference in outcome there would be from doing that.
- 

### *Gāthās to Train the Mind*

All countries in which the Mahāyāna is widespread share the special practice of enhancing bodhicitta through transforming common activities that are usually done with a neutral motivation — one that is neither virtuous nor nonvirtuous — into a bodhisattva's practice. *Gāthās* — short lines or verses extracted from sūtras or written by great masters — guide us to steer our mind to a virtuous state. When doing everyday activities, such

as getting dressed, washing, brushing our teeth, or going up stairs, we recite a corresponding verse to broaden our perspective and imbue these ordinary actions with a compassionate motivation. Engaging in this mind-training practice is an excellent method for transforming neutral actions that we usually do without any particular motivation into virtuous activities done with love, compassion, and bodhicitta. Practicing bodhicitta in this way helps us to increase our collection of merit while continually familiarizing our mind with wholesome thoughts and aspirations. Washing the dishes is no longer a chore but a short meditation on cleansing defilements from the minds of sentient beings.

In some Chinese, Vietnamese, and Japanese monasteries, gāthās are written and placed near the area where a particular activity occurs. Other times monastics and lay devotees will memorize gāthās and bring them to mind when doing the corresponding activity. Sometimes mantras accompany these verses; if it is difficult to memorize the mantras, that's fine; reciting the verses and transforming your attitude is the purpose. Some of the gāthās are from the “Pure Conduct” chapter in the *Flower Ornament Sūtra*.

*Waking up*

Upon waking from slumber,  
may each and every sentient being  
awaken to omniscient wisdom  
and regard sentient beings in the ten directions with compassion.

*Getting out of bed*

Unceasingly from dawn till dusk,  
may all sentient beings protect themselves.  
If they should lose their lives beneath my feet,  
may they instantly be reborn in a pure land.

*Om iddhiruni svaha (3x)*

*Using the toilet*

As I relieve myself,

may each and every sentient being  
abandon attachment, anger, and ignorance  
and abandon all negative deeds.

*Om laludaya svaha (3x)*

*Removing filth with toilet paper*

As I cleanse filth from my body,  
may each and every sentient being  
be pure and gentle,  
constantly in a state free from defilements.

*Om garamirti svaha (3x)*

*Washing hands*

As I wash my palms with water,  
may each and every sentient being  
have hands clean and pure  
to receive and uphold the Buddhadharmā.

*Om shukalaya svaha (3x)*

*Washing the face*

As I wash my face with water,  
may each and every sentient being  
access the doors to the pure Dharma  
and be free from defilements at all times.

*Om ram svaha (21x)*

*Holding toothbrush in hand*

May each and every sentient being  
attain the sublime Dharma  
and be completely purified.

*Om sarvashudda sarjbadalima sarvavashudali om ram svaha*

*Brushing teeth*

When I brush my teeth,  
may each and every sentient being  
have harmonious and pure minds,  
eating away all afflictions.

*Om amoghamimali nivakala soyudani padmakumara nivasayudaya  
daradarasu nimalisha svaha (3x)*

*Rinsing the mouth*

When I rinse my mouth as well as my mind,  
the water's touch brings the fragrance of hundreds of flowers.  
With three doors of karma — body, speech, and mind — constantly  
clear and pure,  
may I proceed to the pure land with the Buddha.

*Om kam om gan svaha (3x)*

*Dressing (lay followers)*

As I put on upper garments,  
may each and every sentient being  
reap excellent roots of virtue  
and reach the other shore of nirvāṇa.

As I put on lower garments,  
may each and every sentient being  
gird their roots of virtue  
by having integrity and consideration for others.

Smoothing my clothes and fastening my belt,  
may each and every sentient being  
examine and dedicate their roots of virtue  
lest they get lost.

*Dressing (monastics putting on antarvāsas)*

How wonderful is this garment of liberation,

robe of an unsurpassable field of merit.  
I now respectfully receive it above the crown of my head.  
May I never be separated from it for life after life.

*Dressing (monastics putting on uttarāsaṃga)*

How wonderful is this garment of liberation,  
robe of an unsurpassable field of merit.  
I now respectfully receive it above the crown of my head.  
May I wear it often for life after life.

*Om dhupadhupa svaha (3x)*

*Dressing (monastics putting on saṃghāṭī)<sup>95</sup>*

How wonderful is this garment of liberation,  
robe of an unsurpassable field of merit.  
Respectfully upholding the Tathāgata's instructions,  
may I extensively liberate all sentient beings.

*Om maha kapapata siddhi svaha (3x)*

*Joining Saṅgha assemblies*

Hearing the sound of the bell reduces my afflictions;  
wisdom grows and the awakening mind is born.  
Leaving the hell realms and escaping the pits of fire,  
may I attain buddhahood to liberate all sentient beings.

*Om karatiye svaha (3x)*

*Ascending to the Dharma hall*

When I have the opportunity to see the Buddha,  
may each and every sentient being  
attain unobstructed vision<sup>96</sup>  
and behold all the buddhas.

*Om amrte hum phat tat (3x)*

*Arranging the seat and sitting in meditation*

When I arrange my seat,  
may each and every sentient being  
expand their practice of virtue  
And see the ultimate nature of reality.

When I straighten my body and sit upright,  
may each and every sentient being  
sit on the seat of awakening  
with minds free from attachment.

*Om vasora anipanrani yutaya svaha (3x)*

*Leaving the room*

When I leave my dwelling,  
may each and every sentient being  
gain deep insight into the Buddha's wisdom  
and leave behind the three realms (desire, form, and formless)  
forever.

*Walking without harming insects*

As I lift my feet,  
may each and every sentient being  
emerge from the ocean of birth and death  
equipped with a multitude of virtuous deeds.

*Om tilivili svaha (3x)*

*Holding the (alms) bowl, before receiving food*

When I see an empty alms bowl,  
may each and every sentient being  
attain the final state of purity  
abiding in emptiness without afflictions.

*Seeing an (alms) bowl filled with food*

When I see a full alms bowl,

may each and every sentient being  
be replete and abundantly filled  
with all virtuous deeds

*Concluding the meal*

Those who practice making offerings  
will certainly receive its benefits.  
Those who take delight in giving  
will certainly have peace and happiness later.

*The meal is finished*

May each and every sentient being  
accomplish all their endeavors  
and be fully endowed with the Buddhadharmā.

*Shaving hair*

When I shave my hair and beard,  
May each and every sentient being  
Leave their afflictions far behind  
And attain final cessation.

*Om sidhanta mantara bhādaya svāha (3x)*

*Bathing*

When I bathe my body,  
may each and every sentient being  
have bodies and minds free from defilements,  
internally and externally brilliant and pure.

*Om bājeraṇa jāca svāha (3x)*

*Washing feet*

When I wash my feet,  
may each and every sentient being  
be endowed with supernormal powers,

free from obstructions wherever we go.

*Om ram svaha (3x)*

*Sleeping*

When it is time to sleep and rest,  
may each and every sentient being  
have physical peace and security,  
with minds free from disturbance.

*Ah*

*Visiting someone who is ill*

When I see a sick person,  
may each and every sentient being  
realize that their bodies are empty in reality  
and abandon wrong and conflicting views.

*Om srita srita kundali svaha (3x)*

The gāthās below are from another source and are equally suitable to use.

*Using the toilet*

May all sentient beings discard their greed, hatred, and confusion  
and eliminate destructive conduct.

*Washing the hands*

May all sentient beings attain purified hands to uphold the  
Buddhadharma.

*Bathing*

May all sentient beings be pure and harmonious and ultimately  
without defilement.

*Sitting cross-legged*

May all sentient beings have firm and strong roots of goodness, and  
attain the state of immovability.

*Sitting up straight*

May all sentient beings sit on the seat of awakening, free from attachment.

*Practicing contemplation*

May all sentient beings see truth as it is and be forever free of opposition and contention.

*Giving something*

May all sentient beings be able to relinquish everything with hearts free from clinging.

*In gatherings*

May all sentient beings let go of conditioned things and attain total knowledge.

*In danger and difficulty*

May all sentient beings be free and unhindered wherever they go.

*Traveling on a road*

May all sentient beings tread the pure realm of reality, their minds free of obstructions.

*Seeing a road uphill*

May all sentient beings forever transcend saṃsāra, their minds free from doubt and confusion.

*Seeing a road downhill*

May all sentient beings be humble in mind and develop a strong base of awakened virtue.

*Seeing a winding road*

May all sentient beings abandon false paths and forever purge distorted views.

*Seeing a straight road*

May all sentient beings be straight and true in mind, without pretention or deceit.

*Seeing blossoms on trees*

May all sentient beings' features be like flowers with all marks of distinction.

*Seeing fruit*

May all sentient beings attain the supreme teaching and realize the way of awakening.

*Seeing people attached to pleasure*

May all sentient beings delight in truth and not abandon love for it.

*Seeing people suffer*

May all sentient beings attain fundamental knowledge and eliminate all misery.

*Seeing or caring for a sick person*

May all sentient beings, realizing that the body is but an empty shell, forsake opposition and conflict.

*Seeing a monastic*

May all sentient beings be harmonious and tranquil and ultimately conquer themselves.

*Seeing handsome people*

May all sentient beings aspire for all beings to have pure faith in the awakened ones.

*Seeing ugly people*

May all sentient beings not become attached to any nonvirtuous activities.

*Seeing ungrateful people*

May all sentient beings not increase the punishment of those who act harmfully.

*Seeing grateful people*

May all sentient beings know the blessings of the buddhas and bodhisattvas.

*Washing dishes, clothes, etc.*

I will cleanse the defilement from the minds of all sentient beings.

*Walking down stairs*

I will go to the lowest hell realm to rescue sentient beings there.

*Walking up stairs*

I will lead all sentient beings up through the bodhisattva grounds to the highest awakening.

The beauty about practicing the gāthās on a daily basis is that our mind is constantly steered toward love, compassion, and bodhicitta. With a wholesome motivation, doing even small tasks makes our life meaningful, so we experience happiness now and in the future.

## REFLECTION

---

1. Memorize a few of the gāthās and practice thinking according to them as you go about your life.
  2. For situations that you frequently experience that aren't mentioned above, make up your own gāthās and apply them. For example, every time you hear your child whine "Mommy" or "Daddy," think, "I will have patience and compassion for all sentient beings."

4. Chapters 6–11 in *Following in the Buddha's Footsteps* discuss the cultivation of serenity, the dhyānas, and other meditative absorptions.
5. The first dhyāna of the form realm contains three Brahmā worlds: Retinue of Brahmā, Ministers of Brahmā, and Great Brahmā. See chapter 2 of *Saṃsāra, Nirvāṇa, and Buddha Nature*.
6. See AN 4:125, 4:126, 3:66.
7. A bodhisattva with unfabricated bodhicitta would be willing to sacrifice his or her life. However, only bodhisattvas who have attained the path of seeing are allowed to do so. Better yet, a bodhisattva would try to find a way to avoid such an atrocity occurring at all.
8. The five synonyms for “all beings” and the seven specific categories of beings mentioned above.
9. These are explained in Vism 9.60–76.
10. Invariable karma is an action that is the cause for rebirth in a specific meditative absorption and no other.
11. “Suppression” does not refer to psychological suppression, but to afflictions not appearing in manifest form due to the force of concentration.
12. These are qualities and practices that śrāvakas, solitary realizers, and bodhisattvas cultivate. See chapters 12–14 in *Following in the Buddha's Footsteps*.
13. Harvey Aronson, *Love and Sympathy in Theravāda Buddhism*, 85.
14. There are various types of liberation of mind; not all of them are merely states of serenity. For example, there is the “unshakable liberation of mind,” which is the liberation of the fruit of arhatship, also called “the taintless liberation of mind, liberation by wisdom,” in which concentration and wisdom are merged and the mind is completely released from all defilements.
15. According to Paramārtha, a sixth-century monk from central India, the *Avatamsaka Sūtra* is also called the *Bodhisattva Piṭaka*.
16. Although Buddhaghosa says that meditation on each of the four divine abodes should be expanded to include all sentient beings, for some reason unknown to me (Chodron) Tibetan scholars say śrāvakas and solitary realizers cultivate them toward immeasurable sentient beings, but not all sentient beings.
17. See chapter 8 of *The Foundation of Buddhist Practice* for more on the eight worldly concerns.

18. See chapter 3 of *The Foundation of Buddhist Practice* to learn about primary consciousnesses and mental factors.
19. See chapters 12–14 in *Samsāra, Nirvāṇa, and Buddha Nature*.
20. To learn more about the qualities of the fully awakened ones, see chapters 1–2 in *Following in the Buddha's Footsteps*.
21. Patrul Rinpoche, *Advice to Kunzang Chogyal* (Brussels: Wisdom Treasury Publishing House, 2005).
22. Mañjuśrī embodies wisdom, Avalokiteśvara compassion, Vajrapāṇi power, and Kṣitigarbha increases the richness and fertility of the land. In Chinese Buddhism he is said to aid those born as hell beings. Sarvanivāraṇa-viṣkambhin purifies wrongdoings and obstacles, Maitreya embodies love, Samantabhadra is expert in making offerings, unshakable resolves, and aspirational prayers, and Ākāśagarbha purifies ethical transgressions. Drawing on stories in sūtras and tantras, Jamgon Ju Mipham Gyatso has written *Garland of Jewels: The Eight Great Bodhisattvas*.
23. Hopkins, *Compassion in Tibetan Buddhism*, 124.
24. This applies to bodhisattvas who are freshly entering the bodhisattva path; this wisdom is inferential and they generate direct insight into emptiness later, on the path of seeing. Bodhisattvas who first attained arhatship by following the Fundamental Vehicle and later enter the Bodhisattva Vehicle already have the wisdom that directly realizes emptiness.
25. The twelve links of dependent origination (*dvādaśāṅga-pratītyasamutpāda*) is a system of twelve factors that explains how we take rebirth in saṃsāra and how we can be liberated from it. See chapters 7 and 8 in *Samsāra, Nirvāṇa, and Buddha Nature*.
26. See Jeneen Interlandi, “The Brain’s Empathy Gap,” *New York Times Magazine*, March 19, 2015, <http://www.nytimes.com/2015/03/22/magazine/the-brains-empathy-gap.html>.
27. Dr. Sam Parnia at New York University discusses the possibility from a medical point of view: <https://www.youtube.com/watch?v=WnoIf2NwaRY>. This video speaks about the rebirth of Kyabje Ling Rinpoche, His Holiness’s senior tutor: <https://www.youtube.com/watch?v=tPNcwXVOQFM>. Here is the account of the young Indian girl Shantidevi who remembered her previous life: <https://www.youtube.com/watch?v=J7IK6OoU6SI>. His Holiness has often spoken about her case. James Linegar is a young American boy who remembers being James Houston, a pilot shot down by the Japanese in World War II: <https://www.youtube.com/watch?v=VnXxC-nVsJY&feature=youtu.be>.
28. In the Pāli canon, the Buddha spoke of eight benefits of love. While there is overlap between the two lists, they are not exactly the same.
29. See chapter 2 of *Following in the Buddha's Footsteps*. The ten powers are knowing (1) what is possible and impossible, (2) the ripening result of all actions, (3) the paths leading to all destinations, (4) the world with its many different elements, (5) inclinations of sentient beings, (6) the dispositions of sentient beings, (7) meditative absorptions, (8) past lives, (9) sentient beings passing away and being reborn, and (10) liberation and full awakening.
30. See chapter 2 of *Following in the Buddha's Footsteps*. The Tathāgata is completely confident and lacks all fear in declaring that (1) he is fully awakened regarding all phenomena, (2) he has destroyed all pollutants, (3) he has correctly identified all obstructions to be eliminated on the path, and (4) when practiced, his teachings lead to the complete destruction of duḥkha.
31. See Marshall Rosenberg’s work on nonviolent communication in Rosenberg, *Nonviolent Communication: A Language of Life*, 3d ed. (Encinatas, CA: PuddleDancer Press, 2015).

32. For more about developing concentration, see chapters 6–8 in *Following in the Buddha's Footsteps*.
33. See chapter 2 of *Samsāra, Nirvāṇa, and Buddha Nature* for more on these aspects of true duḥkha.
34. See chapter 3 of *Samsāra, Nirvāṇa, and Buddha Nature* for more on the true origins of duḥkha.
35. In his *Autocommentary to the Treasury of Knowledge*, Vasubandhu presents great compassion in another way, saying that it is possessed only by a buddha, not by bodhisattvas. He says the Buddha's compassion is great because it is produced by a great collection of merit and wisdom, it wishes sentient beings to be free from all three types of duḥkha, it focuses on all beings in the three realms of saṃsāra, it is concerned with the welfare of all these beings equally, and there is no other type of compassion that surpasses it. He goes on to differentiate it from ordinary compassion in eight ways: (1) ordinary compassion lacks hatred, whereas great compassion is free of ignorance; (2) ordinary compassion wishes to free beings from the duḥkha of pain, whereas great compassion wishes to free them from all three types of duḥkha; (3) ordinary compassion is concerned with beings in the desire realm, whereas great compassion focuses on beings of all three realms; (4) ordinary compassion is supported by the four dhyānas, whereas great compassion is supported by the fourth dhyāna; (5) ordinary compassion exists in the mindstreams of śrāvakas and solitary realizers, but great compassion is present in the mindstream of buddhas; (6) ordinary compassion is acquired through detaching from the desire realm, whereas great compassion is obtained by separating from attachment to the peak of existence; (7) ordinary compassion does not completely protect the welfare of beings, whereas great compassion completely protects their welfare; and (8) ordinary compassion is unequal because it feels only for suffering beings, whereas great compassion extends to all beings equally. See the *Abhidharmakośabhāṣyam of Vasubandhu*, vol. 4, English translation by Leo M. Pruden, from the French translation by Louis de La Vallée Poussin (Berkeley, CA: Asian Humanities Press, 1991), 1143–44.
36. Hopkins, *Compassion in Tibetan Buddhism*, 111.
37. Four points to purify destructive karma. These are regret, generating bodhicitta and taking refuge, engaging in a remedial action, and making a determination not to do the harmful action again.
38. Goodman, *The Training Anthology of Śāntideva*, 25.
39. Goodman, *The Training Anthology of Śāntideva*, 126.
40. In Tibetan the practice is known as giving-and-taking. We changed the order of the words to correspond to the order in which they are practiced.
41. See Geshe Jampa Tegchok. *Transforming Adversity into Joy and Courage*, chapter 11, for an excellent and expansive explanation of the taking-and-giving meditation.
42. Jamyang Shepa (1648–1721) was a learned and well-respected scholar and practitioner from Labrang Tashikhyil Monastery. His textbooks are followed in Drepung Gomang Monastery. *Tulku* indicates his reincarnation.
43. Since there are no solitary realizers in our world at present, in the *Library of Wisdom and Compassion* they have often been included with the śrāvakas, unless the two diverge on a major point.
44. Some scholars say the fortitude of the nonarising of phenomena is attained on the bodhisattva path of seeing or the eighth ground, not on the bodhisattva path of preparation. Others say it is attained only on the eighth ground. Because this fortitude involves realization of emptiness, it is

sometimes applied to those Fundamental Vehicle practitioners who have realized emptiness directly.

45. Some scholars assert that śrāvakas and solitary realizers have ordinary great compassion in the sense that they think, “How wonderful it would be if sentient beings were free from duḥkha and its causes” and “May they be free of them.” However, they lack special great compassion that is the great compassion Candrakīrti says is one of the causes of a bodhisattva. That compassion is willing to shoulder the responsibility to protect all sentient beings from saṃsāric duḥkha.
46. Candrakīrti’s verse makes clear that the inferential understanding of emptiness is essential for sharp-faculty practitioners to generate bodhicitta and enter the Mahāyāna path of accumulation. But what about modest-faculty disciples who accept the emptiness of inherent existence and the existence of nirvāṇa because of their faith in the Buddha or in their spiritual mentor? Some scholars say they generate bodhicitta, become bodhisattvas by entering the Mahāyāna path, and then gain the inferential understanding of emptiness. Other scholars say that although such people are called “bodhisattvas,” they are not full-fledged bodhisattvas and have not yet entered the Mahāyāna path because they lack the conviction that liberation is possible, which comes from realizing emptiness. Only when they gain this inferential realization do they become actual bodhisattvas. Similarly, there may be practitioners who hold the Yogācāra view, meditate on great compassion, and want to become buddhas. Although they may be called “bodhisattvas,” they too are not actual bodhisattvas because they lack the correct nondual understanding.

These scholars say having the correct conceptual view of emptiness according to the Prāsaṅgika system is also necessary for practitioners to enter the path of accumulation of the Śrāvaka and Solitary Realizer Vehicles. That is, feeling disgust with saṃsāra leads to renunciation, but they must also know that another state — nirvāṇa — exists and can be attained. They obtain that confidence in the existence of nirvāṇa by gaining the inferential realization of the emptiness of inherent existence. For example, to find safety, someone on a sinking ship must not only want to exit the ship, they must also see land in the distance and know that they can reach it.

47. For more on the view of a personal identity, see chapters 3 and 7 in *Saṃsāra, Nirvāṇa, and Buddha Nature*.
48. Some translations say it is a waterwheel in motion. The idea is the same.
49. “And the like” includes the sources and constituents.
50. As cited in Gyaltsap (on Āryadeva’s *Four Hundred*), in *Yogic Deeds of Bodhisattvas*, 200.
51. See *Pearl of Wisdom, Book 1*, 58–64, for the text of this practice. Instructions on how to do it can be found at <https://thubtenchodron.org/2000/01/purification-visualization-prostration-thirty-five-buddhas/>.
52. This line is not in the root Tantra but is added when reciting the verse to take the bodhisattva vow.
53. In English, see Dagpo Lama Rinpoche, *The Bodhisattva Vows*; Geshe Sonam Rinchen and Ruth Sonam, *The Bodhisattva Vow*; and Sakya Drakpa Gyaltzen, *Chandragomin’s Twenty Verses on the Bodhisattva Vow* in the Recommended Reading section. In Tibetan, see Ngulchu Dharmabhadra’s (1772–1851) brief but detailed text *The Essence of “The Main Path of Bodhisattvas’ Training”*: *Notes on the Bodhisattva’s Precepts (Byang-sems kyi bslab-bya’i zin-bris byang-chub gzhung-lam snying-po)*. “The Main Path of Bodhisattvas’ Training” is Tsongkhapa’s commentary on the “Ethical Conduct” chapter of Asaṅga’s *Bodhisattva Ground*.
54. We may wonder why it is not as negative to know that the action is negative but to go ahead and do it anyway. Knowledge that the action is destructive will inspire a sincere practitioner to do

purification, thus lessening the heaviness of the negative karma.

55. For more on the four opponent powers, see chapter 12 in *The Foundation of Buddhist Practice*.
56. If bodhisattvas engage in actions that appear unethical, although as ordinary beings we don't know their motivation, their compassion is so strong that they are willing to accept the criticism, legal action, and ostracism that results from their actions.
57. See Thubten Chodron, *Working with Anger*, and His Holiness the Dalai Lama, *Healing Anger*, in the Recommended Reading.
58. These hindrances and the methods to overcome them are described extensively in chapter 7 of *Following in the Buddha's Footsteps*.
59. The source is chapter 8, "Analysis/Elaboration on Samādhi," verses 29–31, of the *Abhidharmakośa-bhāṣyam of Vasubandhu*, vol. 4. In Chinese, this text was divided into thirty scrolls, and this chapter is in scroll 29.
60. Some, but not all, of these seven are mentioned in Tsongkhapa's *Great Treatise* (LC 2:22–24), but they are found in more than one list. Some of them are also mentioned in Gyaltsab's commentary to the *Ornament of Clear Realizations*, and Śāntideva's *Compendium of Trainings* (*Śikṣāsamuccaya*) explains the four modes of generating bodhicitta: (1) having seen the exalted body of a buddha, one wonders, "What if I were to attain such [a body]?" (2) seeing and hearing about the inconceivable strength of buddhas and bodhisattvas, and so forth; (3) not being able to bear the decline of the Mahāyāna teachings; and (4) not being able to bear that sentient beings are tormented by suffering.
61. These could refer to the forty-eight auxiliary bodhisattva precepts in the *Brahmā's Net Sūtra* or the forty-eight unshakable resolves of Amitābha.
62. Dhāraṇīs are verbal formulas that encapsulate the meaning of a lengthy text and serve as mnemonic devices. Dhāraṇīs are also similar to mantras that provide protection and overcome adversity.
63. For more on the superknowledges, see chapter 8 of *Following in the Buddha's Footsteps*.
64. The import of these five great vows is the same as that of the four great vows that are traditionally explained below.
65. The English text did not include the eightfold path of the āryas. I don't know if this was an accidental omission or if it was absent in the Chinese text.
66. These four factors and their antidotes, the four swift factors of bodhisattvas, are from the *Flower Ornament Sūtra*.
67. See chapter 17, "The Merit Associated with Generating the (Bodhi) Resolve," in the *Flower Ornament Sūtra* for more details.
68. See Master Hsing Yun, *From the Four Noble Truths to the Four Universal Vows*, trans. Ching Tay and Mu-Tzen Hsu (Hacienda Heights, CA: Buddha's Light Publishing, 2002), 58–62.
69. Traditionally this text is said to have been translated from Sanskrit into Chinese by Kumarajiva in 406. However, some modern scholars believe it was composed in China in the mid-fifth century. See Ann Heirman, "Vinaya from India to China," in *The Spread of Buddhism*, ed. Ann Heirman and Stephan Peter Bumbacher (Leiden, Netherlands: Brill, 2007), 175.
70. Tibetans ascribe this treatise to Asaṅga, Maitreya's student.
71. The four assemblies are bhikṣus, bhikṣuṇīs, upāsakas, and upāsikās. The last two are lay followers who have taken refuge in the Three Jewels and the five lay precepts.
72. For an explanation about the meaning of the auxiliary precepts, see *Exposition of the Sutra of Brahma's Net*, trans. A. Charles Muller (Seoul: Jogye Order of Korean Buddhism, 2012), 318–

73. This paragraph is from private correspondence with Bhikṣuṇī Tzushin (Kind Star), July 22, 2009.
74. The word is the same in Sanskrit and Pāli. It is formed from the prefix *anu*, meaning alongside or along with, and the verb *kamp*, to tremble. We tremble along with or alongside another and feel their pain. In the *Bodhisattvabhūmi*, *anukampā* is translated into Tibetan as *rjes su snying rtse ba*.
75. Perhaps this sūtra is a precursor to the Mahāyāna idea of the Buddha's truth body and form body fulfilling the purposes of self and others, respectively.
76. Above, *anukampā* was the Pāli term translated as "compassion." *Anukampā* is a more general type of compassion that is described in the commentaries as "the state of having a tender mind." It is a sense of goodwill toward others that everyone has to some extent. When speaking of compassion as one of the four immeasurables that can be cultivated to a state of dhyāna, the Pāli term is *karuṇā*.
77. The Khuddaka Nikāya (Minor Collection) is the last of the five nikāyas, or collections, in the Sūtra Basket of the canon.
78. Ven. Dr. W. Rahula, "Theravāda–Mahāyāna Buddhism," in *Gems of Buddhist Wisdom* (Kuala Lumpur, Malaysia: Buddhist Missionary Society, 1996), <http://www.budsas.org/ebud/ebdha125.htm>.
79. Guy Armstrong, "The Pāramīs: A Historical Background," [https://www.crab.rutgers.edu/~adelson/Paramis\\_intro.pdf](https://www.crab.rutgers.edu/~adelson/Paramis_intro.pdf). I [Chodron] also heard this from Theravāda monks during my stay at a Thai wat in 2007. In addition, when I described meditation on a buddha as it is done in Mahāyāna traditions to the abbot of a Theravāda monastery in Thailand, he commented that visualizing a bodhisattva above your head and holding that visualization in mind with faith and reciting that bodhisattva's mantra are ways to cultivate certain types of samādhi.
80. See Jeffrey Samuels, "The Bodhisattva Ideal in Theravāda Theory and Practice," *Philosophy East and West* 47, no. 3 (1997): 399–415. This article may also be found at [https://info-buddhism.com/Bodhisattva-Ideal-Theravada\\_JeffreySamuels.html](https://info-buddhism.com/Bodhisattva-Ideal-Theravada_JeffreySamuels.html). Samuels gives more detailed examples as well as historical references for many of these kings.
81. Ven. Dr. W. Rahula, "Bodhisattva Ideal in Buddhism," in *Gems of Buddhist Wisdom*, <http://www.budsas.org/ebud/ebdha126.htm>.
82. Ven. Rahula, "Bodhisattva Ideal in Buddhism."
83. Ven. Rahula, "Theravāda–Mahāyāna Buddhism."
84. Some say that this was the first time the bodhisattva who was to become Śākyamuni Buddha generated bodhicitta. I (Chodron) don't know the origin of this account but have read it more than once. See <https://dharma.net.org/DellaBodhisattva.htm>.
85. Dīpaṅkara is the fourth buddha whose story is told in the *Buddhavaṃsa*. He is said to have lived four incalculable world-periods and a hundred thousand eons ago. It is said that countless other buddhas had appeared in the world before him.
86. "Four countless and a hundred thousand eons" means four countless eons plus a hundred thousand regular eons.
87. These twenty-five buddhas are Dīpaṅkara, Kakusandha (Kondañña), Maṅgala, Sumana, Revata, Sobhita, Anomadassin, Paduma, Nārada, Padumuttara, Sumedha, Sujāta, Piyadassin,

Atthadassin, Dhammadassin, Siddhattha, Tissa, Phussa, Vipassin, Sikhī, Vessabhū, Kakusandha, Koṇāgamana, Kassapa, and Gotama.

88. The *Apadāna* is a collection of autobiographical accounts and poems of Buddhist sages and senior monks and nuns. It is located in the Khuddaka Nikāya.
89. *Khuddakapāṭha* 8:15–16.
90. This is the view of a personal identity that grasps an independent I and mine.
91. For commentaries on *The Wheel of Sharp Weapons*, see Thubten Chodron, *Good Karma*, and Geshe Lhundub Sopa, *Peacock in the Poison Grove*, in the Recommended Reading section.
92. Thupten Jinpa, trans., *Mind Training: The Great Collection* (Boston: Wisdom Publications, 2006), 171.
93. The verses and an explanation of how to offer your meal and dedicate the merit can be found in Thubten Chodron, *The Compassionate Kitchen: Buddhist Practices for Eating with Mindfulness and Gratitude* (Boulder, CO: Shambhala Publications, 2018).
94. See chapters 4 and 5 in *The Foundation of Buddhist Practice* for the qualifications of a good spiritual mentor and how to rely on them in a way that furthers your spiritual development.
95. The antarvāsas is the *shamdup*, or lower robe; the uttarāsamga is the *chogu*, or seven-strip robe; the samghāṭī is the *namjar* made of many patches.
96. This refers to the five sublime eyes: (1) the physical eye limited to the range of sight of the being that possesses it, (2) the divine eye that sees the death and rebirth of all beings, (3) the wisdom eye that knows all conditioned and unconditioned phenomena, (4) the Dharma eye that knows the attainments of all āryas, and (5) the Buddha eye that views all phenomena from the state of full awakening.

## Glossary

*Abhidharma.* A field of study and its texts that contain detailed reworkings of material in the Buddhist sūtras according to schematic classifications.

*access.* See *preparatory stages for a dhyāna.*

*access concentration* (P. *upacāra samādhi*). A level of concentration that prepares the mind to enter the next actual dhyāna.

*actual dhyāna* (T. *bsam gten gyi dngos gzhi*). A more refined dhyānic concentration attained upon completing its preparatory stages.

*afflictions* (*kleśa*). Mental factors that disturb the tranquility of the mind. These include disturbing emotions and wrong views.

*afflictive obscurations* (*kleśāvaraṇa*). Obscurations that mainly prevent liberation; afflictions and their seeds.

*aggregates* (*skandha*). The four or five components that make up a living being: form (except for beings born in the formless realm), feelings, discriminations, miscellaneous factors, and consciousnesses.

*arhat.* Someone who has eliminated all afflictive obscurations and attained liberation.

*ārya* (P. *ariya*). Someone who has directly and nonconceptually realized the emptiness of inherent existence; someone who is on the path of seeing, meditation, or no-more-learning.

*basis of designation.* The collection of parts or factors in dependence on which an object is designated.

*bodhicitta*. A main mental consciousness induced by an aspiration to bring about others' welfare and accompanied by an aspiration to attain full awakening oneself. It marks entry into the Mahāyāna.

*bodhisattva*. Someone who has genuine bodhicitta.

*bodhisattva ground*. A consciousness in the continuum of an ārya bodhisattva characterized by wisdom and compassion. It is the basis for the development of good qualities and the basis for the eradication of ignorance and mistaken appearances.

*buddha*. All aspects of a buddha. It includes the four buddha bodies.

*Buddhadharma*. The teachings of the Buddha.

*cognitive obscurations (jñeyāvaraṇa)*. Obscurations that mainly prevent full awakening; the latencies of ignorance and the subtle dualistic view that they give rise to.

*collection of merit (puṇyasambhāra)*. A bodhisattva's practice of the method aspect of the path that accumulates merit and is the main cause for a buddha's form body.

*collection of wisdom (jñānasambhāra)*. In the wisdom aspect of the path, a Mahāyāna exalted knower that focuses on the ultimate truth, emptiness, and is the main cause for a buddha's truth body.

*collections (requisites, sambhāra, T. tshogs)*. A bodhisattva's practice of method and wisdom that leads to full awakening.

*concentration (samādhi)*. A mental factor that dwells single-pointedly for a sustained period of time on one object; a state of deep meditative absorption; single-pointed concentration that is free from discursive thought.

*concomitant (T. mtshungs ldan)*. Accompanying or occurring together in the same mental state.

*consciousness (jñāna)*. That which is clear and cognizant.

*conventional existence (samvṛtisat)*. Existence.

*conventional truths (saṃvṛtisaṭya)*. That which is true only from the perspective of grasping true existence. It includes all phenomena except ultimate truths. Syn. *veiled truths*.

*counterpart sign (P. paṭibhāga-nimitta)*. The meditation object of a dhyāna consciousness; a conceptual object that arises on the basis of a visible object.

*cyclic existence (saṃsāra)*. The cycle of rebirth that occurs under the control of afflictions and karma.

*death (maraṇabhava)*. The last moment of a lifetime when the subtlest clear-light mind manifests.

*defilement (mala, T. dri ma)*. Either an afflictive obscuration or a cognitive obscuration.

*deity (iṣṭadevatā, T. yi dam)*. A manifestation of the awakened mind that is meditated on in Tantra.

*deity yoga*. A meditation practice that involves uniting one's mind with the realizations of a meditation deity.

*dependent arising (pratītyasamutpāda)*. This is of three types: (1) causal dependence — things arising due to causes and conditions, (2) mutual dependence — phenomena existing in relation to other phenomena, and (3) dependent designation — phenomena existing by being merely designated by terms and concepts.

*desire realm (kāmadhātu)*. One of the three realms of cyclic existence; the realm where sentient beings are overwhelmed by attraction to and desire for sense objects.

*deva*. A being born as a heavenly being in the desire realm or a being born in the form or formless realm.

*dhyāna (P. jhāna)*. A meditative absorption of the form realm.

*dualistic appearance*. The appearance of subject and object as separate, the appearance of inherent existence, the appearance of conventional phenomena (to a sentient being).

*duḥkha* (P. *dukkha*). Unsatisfactory experiences of cyclic existence.

*duḥkha of change*. The unsatisfactory situation of the instability and changing nature of what is pleasant.

*duḥkha of pain*. Evident physical and mental pain.

*Dzogchen*. A tantric practice emphasizing meditation on the nature of mind, practiced primarily in the Nyingma tradition.

*eight worldly concerns* (*aṣṭalokadharmā*). Attachment or aversion regarding material gain and loss, fame and disrepute, praise and blame, pleasure and pain.

*emanation body* (*nirmāṇakāya*). The buddha body that appears to ordinary sentient beings in order to benefit others.

*emptiness* (*śūnyatā*). The lack of inherent existence, lack of independent existence.

*enjoyment body* (*saṃbhogakāya*). The buddha body that appears in the highest pure lands to teach ārya bodhisattvas.

*establishments of mindfulness* (*smṛtyupasthāna*, *satipaṭṭhāna*, T. *dran pa nyer bzhaḡ*). One of the seven sets of practices comprising the thirty-seven harmonies with awakening. It focuses mindfulness on the body, feelings, mind, and phenomena.

*exalted knower* (*jñāna*, T. *mkhyen pa*). A realization of someone who has entered a path. It exists from the path of accumulation to the buddha ground. Exalted knower, path, ground, and clear realization are mutually inclusive terms.

*extreme of absolutism* (eternalism or permanence, *śāśvatānta*). The belief that phenomena inherently exist.

*extreme of nihilism* (*ucchedānta*). The belief that our actions have no ethical dimension; the belief that nothing exists.

*fetters* (*saṃyojana*). Factors that keep us bound to cyclic existence and impede the attainment of liberation. The five lower fetters — view of a

personal identity, deluded doubt, view of rules and practices, sensual desire, and malice — bind us to rebirth in the desire realm. The five higher fetters — desire for existence in the form realm, desire for existence in the formless realm, arrogance, restlessness, and ignorance — prevent a nonreturner from becoming an arhat.

*five dhyānic factors.* Investigation (*vitarka*, *vitakka*), analysis (*vicāra*), joy (*prīti*, *pīti*), bliss (*sukha*), and one-pointedness of mind (*ekāgratā*, *ekaggatā*).

*five heinous crimes (ānantārya).* Killing one's mother, father, or an arhat, wounding a buddha, and causing schism in the saṅgha.

*five hindrances (āvaraṇa, T. sgrib pa lnga).* Hindrances that interfere with attaining serenity: sensual desire (*kāmacchanda*), malice (*vyāpāda*, *byāpāda*), lethargy and sleepiness (*styāna-middha*, *thīna-middha*), restlessness and regret (*auddhatya-kaukr̥tya*, *uddhacca-kukkucca*), and deluded doubt (*vicikitsā*, *vicikicchā*).

*form body (rūpakāya).* The buddha body in which a buddha appears to sentient beings; it includes the emanation and enjoyment bodies.

*form realm (rūpadhātu).* A realm in saṃsāra in which the beings have subtle bodies; they are born there by having attained various states of concentration.

*formless realm (ārūpyadhātu).* The realm in saṃsāra in which sentient beings do not have a material body and abide in deep states of concentration.

*fortitude of the nonarising of phenomena (anutpattika-dharma-kṣānti, T. mi skye ba'i chos la bzod pa).* A special realization of emptiness and nonduality by bodhisattvas that makes them irreversible on the path to full awakening.

*four fearlessnesses.* The Tathāgata is completely confident and lacks all fear in declaring that (1) he is fully awakened regarding all phenomena, (2) he has destroyed all pollutants, (3) he has correctly identified all

obstructions to be eliminated on the path, and (4) when practiced, his teachings lead to the complete destruction of duḥkha.

*four opponent powers.* Four points to purify destructive karma. These are regret, generating bodhicitta and taking refuge, engaging in a remedial action, and making a determination not to do the harmful action again. See chapter 10 of *The Foundation of Buddhist Practice*.

*four truths of the āryas (catvāry āryasatyāni).* The truth of duḥkha, its origin, its cessation, and the path to that cessation.

*four ways of gathering or assembling (saṃgrahavastu, saṅgahavatthu,* T. *bsdu ba'i dngos po bzhi).* (1) being generous and giving material aid, (2) speaking pleasantly, (3) encouraging disciples to practice, and (4) acting congruently and living the teachings through example.

*full awakening (samyaksambodhi).* Buddhahood; the state where all obscurations have been abandoned and all good qualities developed limitlessly.

*fundamental innate mind of clear light (T. gnyug ma lhan cig skyes pa'i 'od gsal gyi sems).* The subtlest level of mind.

*Fundamental Vehicle.* The vehicle leading to the liberation of śrāvakas and solitary realizers.

*gāthās.* Short verses or lines extracted from sūtras or written by great masters that steer our mind to a virtuous state.

*god (deva).* A being born as a heavenly being in the desire realm or in the form or formless realms.

*grasping inherent existence (svabhāvagraha).* Grasping persons and phenomena to exist truly or inherently; syn. *grasping true existence*.

*grasping true existence (satyagrāha).* See *grasping inherent existence*.

*ground (bhūmi).* A path. Ten bodhisattva grounds span the bodhisattva paths of seeing and meditation.

*harmonies with awakening (bodhipākṣya-dharma, bodhipakkhiya-dhamma)*. Thirty-seven practices condensed into seven sets that lead to liberation and awakening.

*hell being (nāraka)*. A being born in an unfortunate realm of intense physical pain due to strong destructive karma.

*highest yoga tantra (anuttarayogatantra)*. The most advanced of the four classes of tantra.

*hungry ghost (preta)*. A being born in one of the unfortunate realms who suffers from intense hunger and thirst.

*ignorance (avidyā)*. A mental factor that is obscured and grasps the opposite of what exists. There are two types: ignorance regarding ultimate truth and ignorance regarding karma and its effects.

*impermanent (anitya, anicca)*. Momentary; not remaining unchanged in the next moment.

*inferential cognizer (anumāna)*. A mind that ascertains its object by means of a correct reason.

*inherent existence (svabhāva)*. Existence without depending on any other factors; independent existence.

*insight (vipaśyanā, vipassanā, T. lhag mthong)*. A wisdom of thorough discrimination of phenomena conjoined with special pliancy induced by the power of analysis.

*introspective awareness (samprajanya, sampajañña)*. An intelligence that causes one to engage in activities of body, speech, or mind heedfully.

*invariable karma*. Propelling karma that is the cause for rebirth in a specific level in the form or formless realm and no other.

*karma*. Intentional (volitional) action; it includes intention karma (mental action) and intended karma (physical and verbal actions motivated by intention).

*karmic seeds*. The potencies from previously created actions that will bring their results.

*latencies (vāsanā)*. Predispositions, imprints, or tendencies.

*liberation (mokṣa, T. thar pa)*. A true cessation that is the abandonment of afflictive obscurations; nirvāṇa, the state of freedom from cyclic existence.

*liberation (vimukti, vimutti, T. rnam grol)*. Sanskrit tradition: complete freedom from saṃsāra; Pāli tradition: a conditioned event that brings nirvāṇa.

*liberation of mind by love (P. mettā cetovimutti)*. A mind genuinely wishing all beings to be happy that has temporarily abandoned the five hindrances, especially anger and malice, through the force of concentration.

*Madhyamaka*. A Mahāyāna tenet system that refutes true existence.

*Mahāmudrā*. A type of meditation that focuses on the conventional and ultimate natures of the mind.

*meditative equipoise on emptiness*. An ārya's mind focused directly and single-pointedly on the emptiness of inherent existence.

*mental consciousness (mano-vijñāna, mano-viññāṇa)*. A primary consciousness that knows mental phenomena in contradistinction to sense primary consciousnesses that know physical objects.

*mental contemplation (manaskāra, manasikāra, T. yid la byed pa)*. A mind that meditates on either grossness and subtleness or on the four truths in order to attain either the dhyānas or the union of serenity and insight on emptiness.

*mental factor (caitta, cetasika)*. An aspect of mind that accompanies a primary consciousness and fills out the cognition, apprehending particular attributes of the object or performing a specific function.

*mind (citta, T. sems)*. That which is clear and cognizant; the part of living beings that cognizes, experiences, thinks, feels, and so on. In some

contexts it is equivalent to primary consciousness.

*mindfulness (smṛti, sati)*. A mental factor that brings to mind a phenomenon of previous acquaintance without forgetting it and prevents distraction to other objects.

*mindstream (cittasaṃtāna, cittasantāna)*. The continuity of mind.

*momentary (kṣaṇika)*. Not enduring to the next moment.

*monastic*. Someone who has received monastic ordination; a monk or nun.

*nature truth body (svabhāvika dharmakāya)*. The buddha body that is the emptiness of a buddha's mind and that buddha's true cessations.

*nimitta*. The sign or mental image that is the object for cultivating serenity. It is of three types: the preliminary, learning, and counterpart nimittas.

*nine stages of sustained attention (navākārā cittasthiti, T. sems gnas dgu)*. Stages of concentration on the way to attaining serenity.

*nirvāṇa*. The state of liberation of an arhat; the purified aspect of a mind that is free from afflictions.

*nirvāṇa without remainder (anupadhiśeṣa-nirvāṇa, anupādisesa-nibbāna)*. (1) The state of liberation when an arhat has passed away and no longer has the remainder of the polluted aggregates. (2) An ārya's meditative equipoise on emptiness when there is no appearance of true existence.

*nonabiding nirvāṇa (apraṭiṣṭha-nirvāṇa)*. The nirvāṇa of a buddha that does not abide in either the extreme of saṃsāra or the extreme of personal peace of a śrāvaka's nirvāṇa.

*nondeceptive (avisamvādi)*. Incontrovertible, correct.

*nonexistent (asat)*. That which is not perceivable by mind.

*object (viśaya, visaya, T. yul)*. That which is known by an awareness.

*object of negation (pratiśedhya, T. dgag bya)*. Something that appears to our mind, which in fact is nonexistent and is to be negated or refuted.

*observed object* (*ālambana, ārammaṇa, T. dmigs pa*). The basic object that the mind refers to or focuses on while apprehending certain aspects of that object.

*one final vehicle*. The belief that all beings — even śrāvakas who have become arhats — will eventually enter the Mahāyāna and become buddhas.

*ordinary being* (*pṛthagjana, puthujjana, T. so so skye bo*). Someone who is not an ārya.

*path* (*mārga, magga, T. lam*). An exalted knower that is conjoined with uncontrived renunciation.

*path of accumulation* (*sambhāramārga, T. tshogs lam*). First of the five paths. It begins when one aspires for liberation day and night for a śrāvaka path, or when one has spontaneous bodhicitta for the Mahāyāna path.

*path of meditation* (*bhāvanāmārga, T. sgom lam*). Fourth of the five paths. It begins when a meditator begins to eradicate innate afflictions from the root.

*path of no-more-learning* (*aśaikṣamārga, T. mi slob lam*). The last of the five paths; arhatship or buddhahood.

*path of preparation* (*prayogamārga, T. sbyor lam*). Second of the five paths. It begins when a meditator attains the union of serenity and insight on emptiness.

*path of seeing* (*darśanamārga, T. mthong lam*). Third of the five paths. It begins when a meditator first has direct, nonconceptual realization of the emptiness of inherent existence.

*permanent* (*nitya, nicca, T. rtag pa*). Unchanging, static in nature. It does not mean eternal.

*permanent, unitary, independent self*. A soul or self (*ātman*) asserted by non-Buddhists.

*permission* (T. *jenang*). A meditative ceremony in which the recipient receives the inspiration of an awakened deity's body, speech, and mind.

*person* (*pudgala*, *puggala*, T. *gang zag*). A being designated in dependence on the four or five aggregates.

*pervasive duḥkha of conditioning*. Taking the five aggregates under the influence of afflictions and polluted karma. This is the basis of the duḥkha of pain and the duḥkha of change.

*pliancy* (tranquility, *praśrabdhi*, *passaddhi*). A mental factor that enables the mind to apply itself to a constructive object in whatever manner it wishes and dissipates mental or physical rigidity.

*polluted* (contaminated, *āsrava*, *āsava*, T. *zag pa*). Under the influence of ignorance or its latencies.

*Prāsaṅgika*. The Buddhist philosophical tenet system that asserts that all phenomena lack inherent existence both conventionally and ultimately.

*prātimokṣa*. The different sets of ethical precepts for monastics and lay followers that assist in attaining liberation.

*preliminary practices*. (1) Meditating on important initial stages of the path, such as precious human life, death and impermanence, karma and its effects, and the defects of saṃsāra. (2) In the context of tantra, practices that purify negativities and collect merit, such as taking refuge, reciting the names of the buddhas and prostrating to them, making offerings, reciting the mantra of Vajrasattva, guru yoga, and so on.

*preparatory stages for a dhyāna* (access, preparations, *sāmantaka*, T. *bsam gtan gyi nyer bsdogs*). Stages of meditation that prepare the mind to enter an actual dhyāna.

*primary consciousness* (*vijñāna*). A consciousness that apprehends the presence or basic entity of an object. There are six types of primary consciousness: visual, auditory, olfactory, gustatory, tactile, and mental.

*probing awareness* (reasoning consciousness, *yuktijñāna*, T. *rigs shes*). A consciousness using or having used reasoning to analyze the ultimate

nature of an object. It can be either conceptual or nonconceptual.

*pure lands*. Places created by the unshakable resolve and merit of buddhas where all external conditions are conducive for Dharma practice.

*realized Dharma*. The realizations in a person's mindstream.

*sādhana*. The means of achievement expressed in a tantric text or manual that details the steps of visualization and meditation in the practice of a deity.

*samādhi*. See *concentration*.

*saṃsāra*. (1) Constantly recurring rebirth under the control of afflictions and polluted karma. (2) The five aggregates of a person who has taken rebirth in this way.

*Sautrāntika*. A Fundamental Vehicle tenet system that asserts that functional things are ultimate truths and phenomena that exist by being imputed by thought are conventional truths.

*self* (*ātman*, *attan*, T. *bdag*). (1) Conventional I, the person, (2) independent I that does not exist, (3) inherent existence.

*self-grasping* (*ātmagrāha*, *attagaha*, T. *bdag 'dzin*). Grasping inherent existence.

*self-sufficient substantially existent person* (T. *gang zag rang rkya thub pa'i rdzas yod*). A person that can be identified independent of the aggregates. Such a self does not exist.

*sentient being* (*sattva*, *satta*, T. *sems can*). Any being that has a mind and is not a buddha.

*serenity* (*śamatha*, *śamatha*, T. *zhi gnas*). Sanskrit tradition: concentration arisen from meditation that is accompanied by the bliss of mental and physical pliancy in which the mind abides effortlessly without fluctuation for as long as we wish on whatever virtuous or neutral object it has been placed. Pāli tradition: one-pointedness of mind; the eight attainments (meditative absorptions) that are the basis for insight.

*six perfections* (*ṣaḍpāramitā*, T. *phar phyin drug*). The practices of generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom that are motivated by bodhicitta.

*solitary realizer* (*pratyekabuddha*, *paccekabuddha*, T. *rang sangs rgyas*). A person following the Fundamental Vehicle who seeks liberation, emphasizes understanding the twelve links of dependent arising, and pursues their practice without teachings from a master in their last lifetime before becoming an arhat.

*sphere of three*. The agent, object, and action.

*śrāvaka* (hearer, P. *sāvaka*, T. *nyan thos*). Someone practicing the Fundamental Vehicle path leading to arhatship who emphasizes meditation on the four truths.

*stabilizing meditation* (*sthāpyabhāvanā*, T. *'jog sgom*). Meditation to focus and concentrate the mind on an object.

*stages of the path to awakening* (T. *lam rim*). A systematic presentation or sequential practice of the steps of the path to awakening found in Tibetan Buddhism.

*subjective aspect* (*ākāra*, T. *rnam pa*). The way that a mind engages with its object.

*substantial cause* (*upādāna-kāraṇa*, T. *nyer len gyi rgyu*). The cause that becomes the result, as opposed to cooperative causes that aid the substantial cause in becoming the result.

*subtle latencies*. Latencies of ignorance and other afflictions that are cognitive obscurations that prevent simultaneous cognition of the two truths.

*superknowledge* (*abhijñā*, *abhiññā*, T. *mngon shes*). Direct, experiential knowledge, of six types: (1) supernormal powers, (2) divine ear, (3) knowledge of others' minds, (4) recollection of past lives, (5) divine eye (includes knowledge of the passing away and re-arising of beings and knowledge of the future), and (6) the destruction of the pollutants. The sixth is attained only by liberated beings.

*supernormal powers* (*rddhi, iddhi*, T. *rdzu 'phrul*). The first of the six superknowledges, gained in deep samādhi: to replicate one's body, appear and disappear, pass through solid objects, go under the earth, walk on water, fly, touch the sun and moon with one's hand, go to the Brahmā world, and so forth.

*supramundane* (transcendental, *lokottara, lokottara*, T. *'jig rten las 'das pa*). Pertaining to the elimination of fetters and afflictions; pertaining to āryas.

*taking and giving* (literally giving and taking, T. *gtong len*). A meditation practice for cultivating compassion and love that involves visualizing taking others' suffering, using it to destroy our self-centered attitude, and giving our body, possessions, and merit to others.

*tathāgata*. A buddha.

*ten powers*. Qualities found only in a buddha. The ten powers are knowing (1) what is possible and impossible, (2) the ripening result of all actions, (3) the paths leading to all destinations, (4) the world with its many different elements, (5) the inclinations of sentient beings, (6) the faculties of sentient beings, (7) the meditative stabilizations and absorptions, (8) past lives, (9) sentient beings passing away and being reborn, and (10) liberation and full awakening.

*tenet* (*siddhānta*, T. *grub mtha'*). A philosophical principle or belief.

*thirty-seven harmonies with awakening*. Thirty-seven qualities and practices that śrāvakas, solitary realizers, and bodhisattvas cultivate. See chapters 12–14 in *Following in the Buddha's Footsteps*.

*thought* (*kalpanā*, T. *rtog pa*). Conceptual consciousness.

*three characteristics*. Impermanence, duḥkha, and no-self.

*three realms* (*tridhātuka, tedhātuka*, T. *kham s gsum*). Desire, form, and formless realms.

*transmitted (scriptural) Dharma*. The words and meanings of the Buddha's teachings in the form of speech and scriptures.

*true cessation (nirodhasatya)*. The cessation of a portion of afflictions or a portion of cognitive obscurations.

*true existence (satyasat)*. Existence having its own mode of being; existence having its own reality.

*truth body (dharmakāya, T. chos sku)*. The buddha body that includes the nature truth body and the wisdom truth body.

*twelve links of dependent origination (dvādaśāṅga-pratītyasamutpāda)*. A system of twelve factors that explains how we take rebirth in saṃsāra and how we can be liberated from it.

*two truths (satyadvaya)*. Ultimate truths and veiled (conventional) truths.

*ultimate nature*. The ultimate or deepest mode of existence of persons and phenomena; emptiness.

*ultimate truth (paramārthasatya)*. The ultimate mode of existence of all persons and phenomena; emptiness.

*unfortunate realm (apāya)*. Unfortunate state of rebirth as a hell being, hungry ghost, or animal.

*union of serenity and insight*. Absorption in which the bliss of mental and physical pliancy has been induced by analysis.

*unpolluted (anāsrava)*. Not under the influence of ignorance.

*Vajrasattva*. A meditation deity whose practice is especially powerful to purify destructive karmic seeds and other defilements.

*veiled truths (saṃvṛtīsatya)*. Objects that appear true to ignorance, which is a veiling consciousness; objects that appear to exist inherently to their main cognizer, although they do not; syn. *conventional truths*.

*view of a personal identity* (view of a [distorted] personal identity based on the transitory collection, *satkāyadr̥ṣṭi*, *sakkāyadit̥ṭh*, T. 'jig lta). Grasping an inherently existent I or mine (according to the Prāsaṅgika system).

*Vinaya*. Monastic discipline; a body of texts about monastic life, discipline, and conduct.

*wind* (*prāṇa*, T. *rlung*). One of the four elements; energy in the body that influences bodily functions; subtle energy on which levels of consciousness ride.

*wisdom truth body* (*jñāna dharmakāya*). The buddha body that is a buddha's omniscient mind.

*Yogācāra* (*Cittamātra*). A Buddhist philosophical tenet system asserting that objects and the consciousnesses perceiving them arise from the same substantial cause, a seed on the foundation consciousness, and that the mind is truly existent.

## About the Authors

THE DALAI LAMA is the spiritual leader of the Tibetan people, a Nobel Peace Prize recipient, and an advocate for compassion and peace throughout the world. He promotes harmony among the world's religions and engages in dialogue with leading scientists. Ordained as a Buddhist monk when he was a child, he completed the traditional monastic studies and earned his geshe degree (equivalent to a PhD). Renowned for his erudite and open-minded scholarship, his meditative attainments, and his humility, Bhikṣu Tenzin Gyatso says, "I am a simple Buddhist monk."

BHIKṢUṆĪ THUBTEN CHODRON has been a Buddhist nun since 1977. Growing up in Los Angeles, she graduated with honors in history from the University of California at Los Angeles and did graduate work in education at the University of Southern California. After years studying and teaching Buddhism in Asia, Europe, and the United States, she became the founder and abbess of Sravasti Abbey in Washington State. A popular speaker for her practical explanations of how to apply Buddhist teachings in daily life,

she is the author of several books on Buddhism, including *Buddhism for Beginners*. She is the editor of Khensur Jampa Tegchok's *Insight into Emptiness*. For more information, visit [sravastiabbey.org](http://sravastiabbey.org) and [thubtenchodron.org](http://thubtenchodron.org).

# COURAGEOUS COMPASSION

---

The Dalai Lama with Thubten Chodron

THE LIBRARY OF WISDOM AND COMPASSION : VOLUME 6

COURAGEOUS  
COMPASSION

The Dalai Lama with Thubten Chodron

THE LIBRARY OF WISDOM AND COMPASSION | VOLUME 6

Advance Praise for  
COURAGEOUS COMPASSION

“In the sixth installment of their extraordinary *Library of Wisdom and Compassion* series, H. H. the Dalai Lama and Ven. Thubten Chodron transport us through the higher reaches of the Buddhist path, as envisioned by the Theravāda, Sūtrayāna, and Mahāyāna traditions. Led by two expert guides, we come to appreciate the perfections we must practice, the stages of spiritual ascent we must traverse, and the sublime awakened states awaiting at journey’s end. At once informative and deeply inspiring, *Courageous Compassion* should have a place on the bookshelf of every Buddhist, along with the other volumes in this masterful collection.”

—Roger Jackson, author of *Mind Seeing Mind: Mahāmudrā and the Geluk Tradition of Tibetan Buddhism*

“In this volume H. H. the Dalai Lama and Ven. Thubten Chodron address how to develop and sustain compassion in the ordinary life we have today all the way up to the completion of our spiritual path. The turn to applying compassion requires not only profound knowledge of the Buddhist textual tradition but also great sensitivity to the circumstances of people’s ordinary lives and to twenty-first-century societies. This book brings both to bear as it asks, What would our lives look like if we lived and acted purely out of compassion?”

—Damchö Diana Finnegan, PhD

“In this sixth volume of their extraordinary series mapping the Buddhist path to awakening, H. H. the Dalai Lama and the Ven. Thubten Chodron, in conversation both with the Pāli and the Indo-Tibetan Mahāyāna traditions, show how to build on the insight, the understanding, and the cultivation achieved through study and practice in order to become a powerful agent for the welfare of oneself and others, and to ascend to the advanced stages of the path to awakening. Their account is rich in scholarship, deeply humane, and powerfully inspirational.”

—Jay L. Garfield, Doris Silbert Professor in the Humanities, Smith College  
and the Harvard Divinity School

## THE LIBRARY OF WISDOM AND COMPASSION

*The Library of Wisdom and Compassion* is a special multivolume series in which His Holiness the Dalai Lama shares the Buddha's teachings on the complete path to full awakening that he himself has practiced his entire life. The topics are arranged especially for people not born in Buddhist cultures and are peppered with the Dalai Lama's unique outlook. Assisted by his long-term disciple, the American nun Thubten Chodron, the Dalai Lama sets the context for practicing the Buddha's teachings in modern times and then unveils the path of wisdom and compassion that leads to a meaningful life, a sense of personal fulfillment, and full awakening. This series is an important bridge from introductory to profound topics for those seeking an in-depth explanation from a contemporary perspective.

### *Volumes:*

1. *Approaching the Buddhist Path*
2. *The Foundation of Buddhist Practice*
3. *Saṃsāra, Nirvāṇa, and Buddha Nature*
4. *Following in the Buddha's Footsteps*

Bhikṣu Tenzin Gyatso,  
the Fourteenth Dalai Lama

*and*

Bhikṣuṇī Thubten Chodron

“At this critical time the world is in need of guides who embody both wisdom and genuine compassion, such as His Holiness the Dalai Lama and Venerable Thubten Chodron, who serve as living examples of courageous action in upholding the bodhisattva ideal both in word and in deed. Now they have collaborated to give us a volume on the practical application of fearless compassion. May this serve as an inspiration to Buddhist practitioners, now and in the future, to bravely embody compassion for the benefit of all. We welcome this addition to the series, which deals with the central relevance of courageous compassion as we walk the path.”

—JESUNMA TENZIN PALMO

---

**C***ourageous Compassion*, the sixth volume of the *Library of Wisdom and Compassion*, continues the Dalai Lama’s teachings on the path to awakening. The previous volume, *In Praise of Great Compassion*, focused on opening our hearts with love and compassion for all living beings, and the present volume explains how to embody compassion and wisdom in our daily lives. Here we enter a fascinating exploration of bodhisattvas’ activities across multiple Buddhist traditions—Tibetan, Theravāda, and Chinese Buddhism.

After explaining the ten perfections according to the Pāli and Sanskrit traditions, the Dalai Lama presents the sophisticated schema of the four paths and fruits for śrāvakas and solitary realizers and the five paths for bodhisattvas. Learning about the practices mastered by these exalted practitioners inspires us with knowledge of our minds’ potential. His Holiness also describes buddha bodies, what buddhas perceive, and buddhas’ awakening activities.

*Courageous Compassion* offers an in-depth look at bodhicitta, arhatship, and buddhahood that you can continuously refer to as you progress on the path to full awakening.

*Publisher's Acknowledgment*

The publisher gratefully acknowledges the generous help of the Hershey Foundation in sponsoring the production of this book.

INTRODUCTION BY HIS HOLINESS THE DALAI LAMA

PART I. HOW TO LIVE WITH COMPASSION: THE BODHISATTVA PERFECTIONS

1. INTRODUCTION TO THE BODHISATTVA PERFECTIONS

The Two Collections of Merit and Wisdom

The Six Perfections

The Basis, Nature, Necessity, and Function of the Six Perfections

How the Six Perfections Relate to Other Practices

2. LIVING AS A BODHISATTVA: THE PERFECTIONS OF GENEROSITY, ETHICAL CONDUCT, AND FORTITUDE

The Perfection of Generosity

The Perfection of Ethical Conduct

The Perfection of Fortitude

Distinguishing Factors of the First Three Perfections

3. LIVING AS A BODHISATTVA: THE REMAINING SEVEN PERFECTIONS

The Perfection of Joyous Effort

The Perfection of Meditative Stability

The Perfection of Wisdom

The Three Understandings

Space-Like and Illusion-Like Meditation on Emptiness  
Serenity and Insight  
The Importance of Insight  
The Perfection of Skillful Means  
The Perfection of Unshakable Resolve  
The Perfection of Power  
The Perfection of Pristine Wisdom  
Ultimate Bodhicitta  
Conclusion

#### 4. SHARING THE DHARMA

Four Ways of Gathering Disciples in Tibetan Buddhism  
Four Ways of Sustaining Favorable Relationships in the Pāli Tradition  
Four All-Embracing Bodhisattva Virtues in Chinese Buddhism  
Suggestions for Western Dharma Teachers  
The Essence of the Dharma and Its Cultural Forms  
Propagating the Dharma  
What to Teach in the West  
Teaching according to the Audience  
Translations and Rituals  
Many Ways to Benefit Sentient Beings  
Areas of Caution  
Respect for the Dharma  
Buddhadharma in Asia  
Dharma Centers

#### 5. THE TEN PERFECTIONS IN THE PĀLI TRADITION

The Pāramīs  
Generosity  
Ethical Conduct  
Renunciation  
Wisdom  
Joyous Effort

Fortitude  
Truthfulness  
Determination  
Love  
Equanimity  
The Sequence of the Perfections  
How to Accomplish the Perfections  
Benefits and Results of Practicing the Perfections

## PART II. THE THREE VEHICLES AND THEIR FRUITS

### 6. BREAKTHROUGH TO NIRVĀṆA: THE PĀLI TRADITION

The Three Vehicles  
Dhyānas and the Destruction of Pollutants  
Direct Knowledge, Full Understanding, and Realization  
The Four Pairs of Āryas  
Those Who Have Work to Do with Diligence and Those Who Do Not  
Purification and Knowledge  
Occasions for Attaining Liberation  
Four Kinds of Persons Who Attain Arhatship  
Liberation of Mind, Liberation by Wisdom  
Nirvāṇa and the Arhat  
Tathāgatas and Arhats

### 7. FUNDAMENTAL VEHICLE PATHS AND FRUITS: THE SANSKRIT TRADITION

Realization of the Four Truths  
Three Vehicles: The Paths of Method and Wisdom  
Path, Ground, and Clear Realization  
Approachers and Abiders  
Eight Grounds of the Fundamental Vehicle  
Five Paths of the Fundamental Vehicle  
Solitary Realizers  
The Variety of Dispositions and Faculties

8. THE PATHS OF THE BODHISATTVA
  - Five Mahāyāna Paths
  - Bodhisattva Path of Accumulation
  - Bodhisattva Path of Preparation
  - Bodhisattva Path of Seeing
  - Bodhisattva Path of Meditation
  - Three Special Times
  
9. BODHISATTVA GROUNDS
  - Special Qualities of Each Ground
  - First Ground, the Joyous
  - Second Ground, the Stainless
  - Third Ground, the Luminous
  - Fourth Ground, the Radiant
  - Fifth Ground, the Indomitable
  - Sixth Ground, the Approaching
  - Seventh Ground, the Far Advanced
  
10. THREE PURE BODHISATTVA GROUNDS
  - Eighth Ground, the Immovable
  - Ninth Ground, Excellent Intelligence
  - Tenth Ground, the Cloud of Dharma
  - Summary of the Ten Grounds
  - Do Bodhisattvas Take Birth in Cyclic Existence?
  - How Bodhisattvas Practice
  - Essential Points
  - Tantric Paths and Grounds
  - Gradual Path versus Sudden Awakening
  
11. BUDDHAHOOD: THE PATH OF NO-MORE-LEARNING
  - The Buddha Bodies
  - Wisdom Dharmakāya
  - Nature Dharmakāya

Form Bodies  
Buddha, Ārya Buddha, and Sentient Being  
What Buddhas Perceive

## 12. BUDDHAHOOD: THE BUDDHAS' AWAKENING ACTIVITIES

Nine Similes for Awakening Activity  
Twenty-Seven Awakening Activities  
Ānanda Settles His Doubts  
Individuals Acting in Unison  
Questions about the Buddha  
The Buddhas' Three Mysteries  
Seeing the Buddha

About the Authors

## Preface

**H**IS HOLINESS and I are pleased to offer you *Courageous Compassion*, the sixth volume of *The Library of Wisdom and Compassion*. The present volume details the activities of bodhisattvas, compassionate beings who seek full awakening in order to benefit others most effectively. This volume follows volume 5, *In Praise of Great Compassion*, which explains the methods to develop great compassion and the altruistic intention of bodhicitta. Both of these practical and inspiring volumes present us with another vision of how to live besides the habitual patterns that many people fall into these days—patterns that lead to boredom, anxiety, and a sense of meaninglessness on the one hand, or being too busy trying to fulfill our own or others’ unrealistic notions of success on the other.

As we saw in volume 5, generating bodhicitta depends on taking refuge in reliable spiritual guides—the Three Jewels of the Buddha, Dharma, and Saṅgha. This, as well as the core Buddhist practices of the higher trainings in ethical conduct, concentration, and wisdom, are explained in volume 4, *Following in the Buddha’s Footsteps*.

To follow in the Buddha’s footsteps we must be familiar with our current situation in saṃsāra—the unsatisfactory cycle of existence fueled by ignorance, afflictions, and polluted karma—as well as its alternatives, liberation and full awakening. This centers on understanding the four truths of the *āryas* as presented in volume 3, *Saṃsāra, Nirvāṇa, and Buddha Nature*. Awareness of our buddha nature, the fundamental purity of our minds, enhances our confidence in being able to attain the spiritual freedom of nirvāṇa.

An essential element in comprehending duḥkha—our unsatisfactory experiences in saṃsāra—and its causes is understanding the law of karma

and its effects, how our actions have an ethical dimension that influences the conditions of our birth and what we experience while alive. This, in turn, is based on valuing the preciousness of a human life that has the opportunity to encounter, learn, and practice the Buddha's liberating teachings. However, this opportunity is short-lived; we are mortal beings, so it is essential to set our priorities wisely and make our lives meaningful. As beginners or advanced students of the path, knowing how to select excellent spiritual mentors to guide us on the path is important, as is knowing how to develop healthy relationships with them that enable us to be receptive to their teachings. These topics are elaborated in volume 2, *The Foundation of Buddhist Practice*, which also explains the importance of relying on reasoning to examine the teachings and how to establish a daily meditation practice and structure meditation sessions.

Since the *Library of Wisdom and Compassion* is designed for people who have not necessarily grown up knowing Buddhism, volume 1, *Approaching the Buddhist Path*, explores the Buddhist view of life, mind, and emotions, provides historical background to the origins and spread of the Buddha's teachings, and introduces us to a systematic approach to the spiritual path. Tools on the path, how to evaluate our progress, working with emotions, and the way to apply Buddhist ideas to contemporary issues are also discussed in this volume.

More volumes are to come. They will go in depth concerning the nature of reality, the emptiness of inherent existence, and the profound practice of tantra. Now let's turn to the present volume, *Courageous Compassion*.

### *Overview of Courageous Compassion*

The story of how the *Library of Wisdom and Compassion* came to be written is found in the prefaces to previous volumes. Here, I'd like to share a little about preparing the present volume, which depended in part on conferring with His Holiness regarding particular topics. It is said that highly realized yogīs see our world as a pure land. My asking about this during one interview sparked a long, very dynamic discussion in Tibetan, with His Holiness conferring with the four geshés and rinpochés who were present. After a while they broke out into laughter. Smiling and chuckling,

His Holiness turned to me and said, “We don’t know. Maybe this, maybe that.” Later, I brought up the topic of what buddhas perceive, and again there was a long, animated debate in Tibetan that ended with laughter and the conclusion that all of us must become buddhas in order to know this. Out of compassion, His Holiness and Samdhong Rinpoche then explained what some of the great treatises say about what the Buddha perceived. As you’ll see in chapter 11, His Holiness’s treasured teacher Gen Nyima-la agreed that only buddhas can answer this question!

When he came up with the idea for the *Library of Wisdom and Compassion*, His Holiness emphasized that it must be unique and not focus only on Buddhism as practiced in Tibetan communities. He wants people, especially his students, to have broad knowledge and educated appreciation of the Buddha’s teachings by being familiar with both the Pāli and Sanskrit traditions, and within the Sanskrit tradition, Buddhism as practiced in both Tibetan and Chinese communities. He aims for increased cooperation among Buddhists of all traditions based on knowledge of one another’s tenets and practices. In reading this series, you’ll see the fundamental premises that are shared in all Buddhist traditions, as well as interpretations unique to each one.

The present volume contains two parts: the first concerns the bodhisattva practices and activities, the second concerns the three vehicles—the paths of śrāvakas, solitary realizers, and bodhisattvas—and their resulting fruits of arhatship and supreme awakening. Part I begins with an introduction to the practices of the bodhisattvas, compassionate beings who have bodhicitta and practice the bodhisattva deeds. Although we may not yet be bodhisattvas, we can still practice as they do and in that way gain familiarity with compassionate and wise actions. Bodhisattvas’ activities are spoken of in terms of six perfections: the perfections of generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom. These six practices in turn can be spoken of as ten, with the last four subsumed in the sixth, the perfection of wisdom. The additional four perfections are skillful means, unshakable resolve, power, and pristine wisdom. The Sanskrit tradition’s explanation of the ten bodhisattva perfections is found in chapters 2 and 3.

Chapter 4 encourages us to share the Dharma with others with skill and compassion. The contents of this chapter come predominantly from a conference with His Holiness and a group of Western Buddhist teachers in Dharamsala in 1993. Western Buddhist teachers shared with His Holiness their activities in Western Dharma centers and the way that Dharma was spreading in the West. Since Buddhism is new to Western countries, challenges and problems naturally arise, as well as confusion about how to teach, the role of rituals, Western students' relationships with Asian teachers, and Western teachers' relationships with Dharma students. During this conference, as well as in other venues and in the interviews for this series, His Holiness shared his thoughts, making it clear that he was not establishing policies. The position of the Dalai Lama is not like that of the Pope, and he does not have institutional control over Tibetan Buddhist organizations or teachers. Rather, he was sharing thoughts and suggestions that people were free to accept or reject. Some of his advice relating to spiritual mentors' behavior was explained in chapters 4 and 5 of *The Foundation of Buddhist Practice*.

Many people are unaware that the Pāli tradition describes a bodhisattva path. Bodhicitta and bodhisattvas in the Pāli tradition were explained in chapter 8 of *In Praise of Great Compassion*, and chapter 5 in the present volume explains the bodhisattva practices as presented in the Pāli sage Dhammapāla's *Treatise on the Pāramīs*, written in the sixth century. His treatise complements the Sanskrit tradition's explanation, and both open our minds to a new way of being in the world.

Part II delves into the topic of the three vehicles and their fruits and describes the stages of the paths and grounds that Fundamental Vehicle and Mahāyāna practitioners accomplish as they progress toward their respective spiritual aims of arhatship and buddhahood. The paths and grounds of the Fundamental Vehicle practitioners—śrāvakas and solitary realizers—as set forth in the Pāli tradition is found in chapter 6, and as set forth in the Sanskrit tradition in chapter 7. The remaining chapters are from the perspective of the Sanskrit tradition. Chapter 8 speaks of the five bodhisattva paths, and chapter 9 and 10 explain the bodhisattva grounds that occur during the bodhisattva paths of seeing and meditation. The attainments of these practitioners are truly magnificent and admirable.

Chapters 11 and 12 speak of the final goal: supreme awakening, buddhahood.

The paths and grounds are not usually included in the stages of the path (T. *lam rim*) material but are taught separately. However, His Holiness wants students to learn important aspects of the philosophical studies found in the monastic curriculum, and for that reason the paths and grounds as well as many other topics have been included in the *Library of Wisdom and Compassion*. His Holiness often reminds us that we should meditate on everything we study, and not think that some texts are for study and smaller manuals are for meditation.

Each chapter contains reflections that you are encouraged to contemplate. The reflections not only review some of the major points but also provide the opportunity to put these teachings into practice and transform your mind.

### *Please Note*

Although this series is coauthored, the vast majority of the material is His Holiness's teachings. I researched and wrote the parts about the Pāli tradition, wrote some other passages, and composed the reflections. For ease of reading, most honorifics have been omitted, but that does not diminish the great respect we have for the most excellent sages, learned adepts, scholars, and practitioners. Foreign terms are given in italics parenthetically at their first usage. Unless otherwise noted with “P” or “T,” indicating Pāli or Tibetan, respectively, italicized terms are Sanskrit. When two italicized terms are listed, the first is Sanskrit, the second Pāli. For consistency, Sanskrit spelling is given for Sanskrit and Pāli terms in common usage (nirvāṇa, Dharma, arhat, ārya, and so forth), except in citations from Pāli scriptures. To maintain the flow of a passage, it is not always possible to gloss all new terms on their first usage, so a glossary is provided at the end of the book. “Sūtra” often refers to Sūtrayāna, and “Tantra” to Tantrayāna—the Sūtra Vehicle and Tantra Vehicle, respectively. When these two words are not capitalized, they refer to two types of scriptures: sūtras and tantras. “Mahāyāna” here refers principally to the bodhisattva path as explained in the Sanskrit tradition. In general, the

meaning of all philosophical terms accords with the presentation of the Prāsaṅgika Madhyamaka tenet system. Unless otherwise noted, the personal pronoun “I” refers to His Holiness.

### *Appreciation*

My deepest respect goes to Śākyamuni Buddha and all the buddhas, bodhisattvas, and arhats who embody the Dharma and with compassion teach us unawakened beings. I also bow to all the realized lineage masters of all Buddhist traditions through whose kindness the Dharma still exists in our world.

This series appears in many volumes, so I will express appreciation to those involved in each individual volume. This volume, the sixth in the *Library of Wisdom and Compassion*, has depended on the abilities and efforts of His Holiness’s translators—Geshe Lhakdor, Geshe Dorji Damdul, and Mr. Tenzin Tsepak. I am grateful to Geshe Dorji Damdul, Geshe Dadul Namgyal, and Bhikṣuṇī Sangye Khadro for checking the manuscript, and to Samdhong Rinpoche for clarifying important points and his encouraging presence. I also thank Bhikkhu Bodhi for his clear teachings on the Pāli tradition and for generously answering my many questions. He also kindly looked over the sections of the book on the Pāli tradition before publication. The staff at the Private Office of His Holiness kindly facilitated the interviews, and Sravasti Abbey supported me while I worked on this volume. Mary Petruszewicz skillfully edited the manuscript. I thank everyone at Wisdom Publications who contributed to the successful production of this series. All errors are my own.

## Introduction

**D**EAR READERS, it's a privilege for me to share the Buddha's teachings as well as a few of my ideas and experiences with you. Wherever I go I emphasize that all seven billion human beings on our planet are physically, mentally, and emotionally the same. Everybody wants to live a happy life free of problems. Even insects, birds, and other animals want to be happy and not suffer. What distinguishes us human beings is our intelligence, although there are occasions when we use it improperly—for example, when we design weapons to kill one another. Animals like lions and tigers that stay alive by attacking and eating other animals have sharp teeth and claws, but human beings' nails and teeth are more like those of deer. We use our intelligence to fulfill our desires, but compared to other animals our desires seem to have no limit. We have one thing and want two; we have something good and we want something better. Satisfaction eludes us.

Right here and now I'm sitting in a peaceful place and imagine that you are too. But at this very moment, in other parts of the world people are killing each other. Devising ever better military strategies and ever more lethal arms is a poor use of human intelligence. Developing new nuclear weapons that are more effective in destroying people is the worst. I've been to both Hiroshima and Nagasaki. On my first visit to Hiroshima I met a woman who had been there when the nuclear bomb was dropped; somehow she survived. In the museum I saw a watch that had stopped at the exact instant of the explosion; it was half melted by the heat of the blast. Instead of using our human intelligence to create joy, the result has sometimes been fear and misery.

Now in the twenty-first century we must make an effort not to repeat the errors of the last century with its endless series of wars. Historians estimate that 200 million people died by violent means during that century. It's time

to say, enough. Let's make the twenty-first century a time of peace and compassion by recognizing the sameness of all eight billion human beings alive today. Strongly emphasizing differences in nationality, religion, ethnicity, or race culminates in feelings of us and them; we feel divided and we act divided. It is important to remind ourselves that at a deeper level all human beings are the same. We all want to live a happy life. Being happy is our right. To create a peaceful society we must heed the ways to achieve inner peace. This involves creating the circumstances for freedom, being concerned with human rights, and protecting the environment.

There are no natural boundaries between human beings on this earth; we are one family. At a time of increasing natural disasters, climate change and global warming affect all of us. We must learn to live together, to work together, and to share what we have together. Making problems for one another is senseless. We will achieve genuine peace in the world if we pursue demilitarization, but before countries can demilitarize, as individuals we must disarm ourselves internally. To begin, we must reduce our hostility and anger toward one another. That entails each of us looking inside ourselves and releasing our self-centered attitude and painful feelings rather than blaming others for things we don't like. As long as we don't accept responsibility for our own actions and thoughts, we will experience the same results as before. But when we realize that our actions affect others and care about their experience, we will stop harming them. When we change our behavior, others will also change theirs. Then real change is possible.

A mother gave birth to each of us and cared for us with love. I am sad that our educational system fails to nurture this sense of loving-kindness and aims instead to fulfill material goals. We need to reintroduce such inner values as warm-heartedness to our educational system. If we could be kinder, we'd be happier as individuals, and this would contribute to happier families and more harmonious communities. Human beings are social animals. What brings us together is love and affection—anger drives us apart. Just as we employ physical hygiene to protect our health, we must use “emotional hygiene” to tackle our destructive emotions and achieve peace of mind.

I belong to the twentieth century, an era that is past. I want to share with those of you who are young: if you start to collect the causes now, you'll live to see a happier, more peaceful world. Don't be content with the present circumstances; take a more far-sighted view. When the heart is closed, it leads to fear, stress, and anger. Nurturing the idea of the oneness of humanity has the effect of opening the heart. When you think of all other human beings as your brothers and sisters it's easy to communicate with them all. It makes it easier to smile, to be warm and friendly. This is what I try to do. Beggars or leaders—all human beings are the same. If I think "I am a Buddhist, I am Tibetan, I am the Dalai Lama," it just increases my sense of isolation. If I think of myself as a human being who is like everyone else, I feel at ease: I belong, I can contribute to others' well-being, I can communicate and share with others. We have to take the initiative to connect with one another.

All religions convey a message of love, compassion, and self-discipline. Their philosophical differences arose to suit people of different dispositions, at different times, and in different places and conditions. The fundamental message of love remains the same. Buddhism, especially the Nālandā tradition, with its emphasis on reasoned investigation, takes a realistic stance that accords with the scientific method. To become a twenty-first century Buddhist, simply having faith and reciting the sūtras is not enough; far more important is understanding and implementing what the Buddha taught.

Bhikṣu Tenzin Gyatso, the Fourteenth Dalai Lama

Thekchen Chöling

## Part I. How to Live with Compassion: The Bodhisattva Perfections

**A**LL OF US APPRECIATE others' kindness and compassion. Even before we came out of our mother's womb, we have been the recipients of others' kindness. Although being on the receiving end of compassion mollifies our anxiety and suffering, being compassionate toward others brings even more joy and feelings of well-being. This is what the eighth-century Indian sage Śāntideva meant when he said (BCA 8:129–30):

Whatever joy there is in this world  
all comes from desiring others to be happy,  
and whatever suffering there is in this world  
all comes from desiring myself to be happy.

What need is there to say much more?  
The childish work for their own benefit,  
the buddhas work for the benefit of others.  
Just look at the difference between them!

We need to learn methods to release our self-centeredness and cultivate genuine love and compassion for others. This does not entail feeling guilty when we are happy or sacrificing our own well-being, but simply recognizing that our self-centeredness is the cause of our suffering and cherishing others is the cause of the happiness of both self and others. *In Praise of Great Compassion* explains the two methods for doing so: the seven cause-and-effect instructions and equalizing and exchanging self and others. Now we'll look at the activities that bodhisattvas engage in with compassion and wisdom to benefit the world.

# 1 | Introduction to the Bodhisattva Perfections

**W**E MAY NOT YET BE bodhisattvas, but we can certainly engage in the same activities they do. In the process, we can continually expand and boost the intensity of our love and compassion.

Bodhisattvas train in bodhicitta for eons, so do not think that having one intense feeling of bodhicitta or reciting the words of aspiring bodhicitta is all there is to it. In *Engaging in the Bodhisattvas' Deeds*, the first two chapters lead us in cultivating bodhicitta, and the third chapter contains the method for taking the bodhisattva vow. The other seven chapters describe the practices of bodhisattvas, training in the six perfections. Although these bear the names of familiar activities—generosity, ethical conduct, and so forth—now they are called “perfections” because they are done with the motivation of bodhicitta that aims at buddhahood, the state of complete and perfect wisdom and compassion.

As you progress through the bodhisattva paths and grounds, you will deepen and expand your bodhicitta continuously, as indicated in the twenty-two types of bodhicitta mentioned in the *Ornament of Clear Realizations*.<sup>2</sup> With joy make effort to understand bodhicitta and the bodhisattva path, and endeavor to transform your mind into these. Avoid conceit and cutting corners; in spiritual practice there is no way to ignore important points and still gain realizations. Cultivate fortitude, courage, and the determination to be willing to fulfill the two collections of merit and wisdom over many years, lifetimes, and eons. The result of buddhahood will be more than you can conceive of at this moment.

*The Two Collections of Merit and Wisdom*

Bodhicitta is a primary mind conjoined with two aspirations. The first is to work for the well-being of all sentient beings, the second is to attain full awakening in order to do so most effectively. Once you have generated bodhicitta and are determined to attain buddhahood, you'll want to accumulate all the appropriate causes and conditions that will bring it about. These are subsumed in the collection of merit (*puṇyasam̐bhāra*) and the collection of wisdom (*jñānasam̐bhāra*). The collection of merit is the method or skillful means aspect of the bodhisattva path that concerns conventional truths such as other living beings; the collection of wisdom is the wisdom aspect of the bodhisattva path that focuses on the ultimate truth, emptiness. When completed, the two collections lead to the form body and truth body of a buddha. In *Sixty Stanzas (Yuktiṣaṣṭikā)* Nāgārjuna summarizes these two principal causes:

Through this virtue, may all beings complete  
the collections of merit and wisdom.  
May they attain the two sublime buddha bodies  
resulting from merit and wisdom.

**TWO ASPECTS, TWO COLLECTIONS, TWO TRUTHS, PERFECTIONS, AND RESULTS**

ASPECT OF THE PATH	COLLECTION	TRUTH (BASIS)	PERFECTIONS (PATH)	RESULT
Method	Merit	Conventional	Generosity, ethical conduct, fortitude, joyous effort	Form bodies of a buddha
Wisdom	Wisdom	Ultimate	Meditative stability, wisdom, joyous effort	Truth bodies (nature truth body and wisdom truth body)

Note: There are various ways of categorizing the six perfections by way of method and wisdom. In another way, the first five perfections are included

in method.

The collection of merit consists of virtuous actions motivated by bodhicitta. The collection of merit includes mental states, mental factors, and karmic seeds related to these virtuous actions. It deals with conventional truths, such as sentient beings, gifts, precepts, and so forth. To fulfill it, bodhisattvas practice the perfections of generosity, ethical conduct, and fortitude, as well as all other virtuous actions such as those done with love and compassion, prostrating, making offerings, and meditating on the defects of saṃsāra.

The collection of wisdom is a Mahāyāna pristine knower that realizes emptiness. It consists of learning, contemplating, and meditating on the ultimate nature of persons and phenomena that is supported by bodhicitta, and includes both inferential reliable cognizers of emptiness that are free from the two extremes of absolutism and nihilism and āryas' meditative equipoise on emptiness. The collection of wisdom is not necessarily a union of serenity and insight, but being a Mahāyāna exalted knower, it must be conjoined with actual bodhicitta and bear the result of buddhahood.

The collection of merit is primarily responsible for bringing about a buddha's form bodies (*rūpakāya*), and the collection of wisdom is primarily responsible for bringing about a buddha's truth bodies (*dharmakāya*). The word "primarily" is significant because each collection alone cannot bring about either of the buddha bodies. Both collections are necessary to attain both the form bodies and the truth bodies. (Here "body" means a corpus of qualities, not a physical body.) Bodhisattvas fulfill their own purpose by gaining the buddhas' truth bodies and omniscient minds. They fulfill others' purpose by manifesting in buddhas' countless form bodies through which they benefit, teach, and guide sentient beings.

With bodhicitta as their motivation, bodhisattvas delight in creating the cause for buddhahood by practicing the perfections. Practices and activities that comprise the collections of merit and wisdom become perfections because they are conjoined with actual bodhicitta, which differentiates them from the practices of merit and wisdom cultivated by śrāvakas and solitary realizers. Although śrāvakas and solitary realizers collect merit and wisdom, they are not the fully qualified collections of merit and wisdom and are thus considered secondary collections. Because solitary realizers'

progress in merit and wisdom is superior to that of śrāvakas, some solitary realizers are able to become arhats without depending on hearing a master’s teaching during their last lifetime in saṃsāra.

Likewise, bodhisattva-aspirants who have not yet generated actual bodhicitta and entered the Mahāyāna path of accumulation create merit and enhance their wisdom, but their practices are called “similitudes” of the two collections and are not fully qualified collections. However, people who aspire to enter the bodhisattva path plant the seeds to be able to do the actual collections later.

Our virtuous actions accompanied by a strong wish for a good rebirth act as a cause for the places, bodies, and possessions associated with fortunate rebirths. Those accompanied by the determination to be free from cyclic existence are similitudes of the collections and lead to liberation. Only when our virtuous actions are accompanied by bodhicitta do they constitute the actual collections. Practitioners of the Perfection Vehicle build up the actual collections over three countless great eons on the bodhisattva path. The first eon of collecting merit and wisdom is done on the path of accumulation and the path of preparation; the second eon is fulfilled on the first seven of the ten bodhisattva grounds that span the path of seeing and part of the path of meditation; the third eon is done on the last three of the ten bodhisattva grounds called the “three pure bodhisattva grounds”—the eighth, ninth, and tenth. Bodhisattvas who follow the Vajrayāna fulfill the two collections more quickly due to the special practice of deity yoga that combines method and wisdom into one consciousness.

The method side entails cultivating an aspiring attitude—that is, we enhance our intentions to give, to not harm others, to remain calm in the face of suffering, and so on. With the practice of wisdom, we learn and contemplate the teachings on emptiness, bringing conviction and ascertainment that all persons and phenomena lack inherent existence. This wisdom complements and completes the practices on the method side of the path. Similarly, our virtuous actions of the method aspect of the path enhance wisdom by purifying the mind and enriching it with merit, which increases the power of wisdom. Method practices help the understanding of emptiness to arise when it hasn’t occurred, and when it has, merit enables wisdom to increase, deepen, and become a more powerful antidote to the

afflictive and cognitive obscurations. Ultimately, however, it is wisdom that determines progress on the path because advancing from one bodhisattva ground to the next occurs during meditative equipoise on emptiness.

### *The Six Perfections*

Cultivating contrived bodhicitta through effort is virtuous and auspicious; it paves the way to generate uncontrived bodhicitta, which entails engaging in the bodhisattvas' deeds. These deeds can be subsumed in the six perfections—generosity (*dāna, dāna*), ethical conduct (*śīla, sīla*), fortitude (*kṣānti, khanti*), joyous effort (*vīrya, viriya*), concentration (*dhyāna, jhāna*), and wisdom (*prajñā, paññā*). The sixth perfection, wisdom, can be further expanded into four, making ten perfections—the first six, plus skillful means (*upāya*), unshakable resolve (*praṇidhāna, paṇidhāna*), power (*bala*), and pristine wisdom (*jñāna, ñāṇa*). To ripen others' minds, we train in the four ways of gathering disciples—generosity, teaching the Dharma according to the capacity of the disciples, encouraging them to practice, and embodying the Dharma in our life. These four can be included in the six perfections, so the six are said to be the main bodhisattva practices to ripen both our own mind and the minds of others.

You may wonder: From the beginning, the lamrim teachings encourage us to be generous and ethical, to have fortitude and practice with joyous effort, and to develop meditative stability and wisdom. Why, then, are these six practices explained only now? Also, practitioners of all three vehicles cultivate these qualities. Why are they explained now as unique Mahāyāna practices?

Let's use generosity as an example. It is practiced not only in all Buddhist traditions but also in all religions. People who are not interested in any religion but value kindness and compassion also practice generosity. A difference exists, however, between the mere practice of generosity and the perfection of generosity. The perfection of generosity is not simply an absence of miserliness when giving or a casual wish to share things. Nor is it being generous with the motivation to be rich in future lives. Rather, it is giving done with the aspiration to become a buddha in order to benefit all beings most effectively.

In addition to being motivated by bodhicitta, the perfection of generosity is sealed by the wisdom of emptiness. That is, when giving, we reflect on the ultimate nature of the giver, the gift, the recipient, and the action of giving. All of them are empty of inherent existence but exist dependent on one another. Through this reflection, any attachment or misconceptions that could arise from generosity are purified. Based on bodhicitta and assisted by the wisdom of emptiness, the perfection of generosity encompasses both the method and wisdom sides of the path and is enriched by them.

The term perfection—*pāramitā* in Sanskrit and *pāramī* in Pāli—has the meaning of going beyond the end and reaching perfection or fulfillment. The Tibetan term *pha rol tu phyin pa* means to go beyond to the other shore. These practices take us beyond saṃsāra to the freedom of full awakening where both obscurations have been eliminated and all good qualities have been developed limitlessly. “Go beyond” connotes the goal—full awakening, or the Mahāyāna path of no-more-learning—as well as the method for arriving at that goal—the six perfections done by those on the learning paths. Motivated by bodhicitta and refined with meditation on emptiness, these practices take us beyond both saṃsāra and the pacification of saṃsāra that is an arhat’s nirvāṇa. For example, bodhisattvas who conjoin their actions of giving with unpolluted wisdom see the giver, the object given, the recipient, and the action of giving as empty of inherent existence. Because their wisdom is supramundane, the generous actions conjoined with it lead them beyond saṃsāra. Ārya bodhisattvas, who have achieved an extraordinary level of training in the six perfections, are objects of veneration and respect, for they both perceive ultimate truth directly and seek to benefit all beings.

Generosity and other perfections that are not conjoined with such wisdom are considered mundane because the agent, object, and action are seen as truly existent. To integrate the wisdoms of emptiness and dependent arising into your practice of generosity, reflect that you as the giver (agent), the gift that is given (object), the recipient, and the action of giving do not exist from their own side; they exist dependent on one another. A person does not become a giver unless there is a gift, recipient, and action of giving. Flowers do not become a gift unless there is a person giving them

and one receiving them. Seeing all the elements of generosity as appearing but empty makes our generosity extremely powerful, transforming it into the supramundane practice of the perfection of generosity.

Similarly, when purifying nonvirtue during your practice of ethical conduct, contemplate that prostrations and mantra recitation, for example, do not have inherent power to purify destructive karma. Their ability to do so arises dependent on the strength of your regret, your motivation, the depth of your concentration, and faith in the Three Jewels. Both prostrations and the seeds of destructive karma they destroy are dependent arisings; they exist nominally, by being merely imputed by term and concept.

How can purification occur if both the seeds of destructive actions and the purification practices lack inherent nature and exist like illusions? It is analogous to soldiers in a hologram destroying an arsenal in a hologram. The scene and its figures appear, but none of them exists in the way they appear. If seeds of destructive karmas had their own intrinsic nature, independent of all other things, nothing could affect them and they would be unchangeable. But because they do not exist under their own power, they can be altered and removed by purification practices that alter the factors upon which they depend. This contemplation differentiates the perfection of generosity and so forth from the same actions done by others. The presence of the bodhicitta motivation differentiates the perfection of generosity from the giving done by śrāvakas and solitary realizers.

Each of the perfections is a state of mind, not a set of external behaviors. When certain mental qualities are cultivated, they undoubtedly affect a person's behavior. However, external behavior may or may not be indicative of particular mental qualities. For example, a person may outwardly appear generous while her internal motivation is to manipulate the recipient. Likewise, we shouldn't think that bodhisattvas always give extravagantly. A practitioner may have deep bodhicitta and a strong aspiration to give but, due to lack of resources, only give a small amount. Practitioners of the six perfections are extremely humble. They hide their realizations and do not seek fame or recognition.

## REFLECTION

---

1. Activities such as generosity, ethical conduct, and so forth are valued by all religions and by people who have no religion as well. What makes them perfections?
  2. In addition, what makes them become supramundane practices of the perfections?
  3. Examine the dependent nature of each perfection. For example, someone can't be a giver without there being a gift and the action of giving; the action of fortitude can't exist without a person who practices it and a person who is problematic or harmful.
  4. Contemplate how engaging in the practice of the perfections with the awareness of emptiness entails seeing the agent who does the action, the action itself, and the object acted upon as empty of inherent existence but existing dependently.
- 

### *The Basis, Nature, Necessity, and Function of the Six Perfections*

Maitreya's *Ornament of the Mahāyāna Sūtras* (*Mahāyānasūtrālaṅkāra*) describes the six perfections in detail. The following explanation is taken predominantly from that text.

#### *The Basis: Who Engages in the Perfections?*

Those who are a suitable basis for these practices have awakened their Mahāyāna disposition—that is, they have great compassion, deep appreciation, and fortitude for the Mahāyāna Dharma. They rely on a qualified Mahāyāna spiritual mentor and receive extensive teachings on the Mahāyāna texts that teach the six perfections. In that way, they learn what the bodhisattva practices are and how to do them correctly. These practitioners are not satisfied with intellectual knowledge: they reflect and meditate on these teachings to collect both merit and wisdom and they engage in the practice of the perfections at every opportunity. The Mahāyāna disposition is awakened before a practitioner generates bodhicitta. When this disposition is nourished and developed, it will lead a

practitioner to generate uncontrived bodhicitta and enter the bodhisattva path.

*Nature: What Constitutes Each Practice?*

Knowing what constitutes each perfection gives us the ability to practice it more carefully.

- Generosity is physical, verbal, and mental actions based on a kind thought and the willingness to give.
- Ethical conduct is restraining from nonvirtue, such as the seven nonvirtues of body and speech and the three nonvirtues of mind that motivate them, as well as other negativities.<sup>3</sup>
- Fortitude is the ability to remain calm and undisturbed in the face of harm from others, physical or mental suffering, and difficulties in developing certitude about the Dharma.
- Joyous effort is delight in virtues such as accomplishing the purposes of self and others by creating the causes to attain the truth bodies and form bodies of a buddha.
- Meditative stability is the ability to remain fixed on a constructive focal object without distraction.
- Wisdom is the ability to distinguish conventional and ultimate truths as well as to discern what to practice and what to abandon on the path.

In the *Precious Garland*, Nāgārjuna speaks of the six perfections and their corresponding results. He adds a seventh factor, compassion, because it underlies the motivation to engage in the six perfections (RA 435–37).

In short, the good qualities that a bodhisattva should develop are generosity, ethical conduct, fortitude, joyous effort, meditative stability, wisdom, compassion, and so on.

Giving is to give away one's wealth;

ethical conduct is to endeavor to help others;  
fortitude is the abandonment of anger;  
joyous effort is enthusiasm for virtue.

Meditative stability is unafflicted one-pointedness;  
wisdom is ascertainment of the meaning of the truths;  
compassion is a state of mind that savors  
only loving-kindness for all sentient beings.

## REFLECTION

---

Read the above verses again while contemplating their meaning.

1. How can you generate these various practices and apply them in your life?
2. What emotions or attitudes make you hesitate to engage in these practices even though you hold them in high regard?
3. How can you remove these mental impediments so that you can joyfully enrich your life and the lives of others through engaging in these practices?

---

### *The Necessity and Function of the Perfections*

The six perfections are necessary (1) to accomplish the welfare of other sentient beings, (2) to fulfill the aims of ourselves and others, and (3) to receive a precious human life in future rebirths so that we can continue to practice. These are explained below.

### **Accomplishing the Welfare of Other Sentient Beings**

Our practice of each perfection functions to benefit sentient beings:

- By giving generously, we alleviate poverty and provide others with the basic necessities of life and other practical items as well as with

things they enjoy.

- By living ethically, we refrain from harming them, thus easing their fear and pain.
- By being patient with others' inconsiderate or harmful behavior, we avoid causing them either physical pain or the mental pain of guilt, remorse, and humiliation.
- With joyous effort, we continue to help others without laziness, resentment, or fatigue.
- With meditative stability, we gain the superknowledges, such as clairvoyance (the divine eye), and use them to benefit sentient beings.
- With wisdom, we are able to teach others so that they can actualize the wisdoms understanding conventional truths, ultimate truths, and how to benefit others. Through this we eliminate their doubts and lead them to awakening.

### **Fulfilling Our Own Aims**

The last three perfections—joyous effort, meditative stability, and wisdom—are cultivated primarily to fulfill our own aims—that is, to spur us on the path to buddhahood. Wisdom realizing the ultimate truth directly eliminates our ignorance, afflictions, and polluted karma so that our mind can be transformed into a buddha's omniscient mind. To develop this wisdom that is a union of serenity and insight, we need deep meditative stability that makes the mind pliant and able to meditate on a virtuous object for as long as desired. To develop meditative stability, joyous effort is important to overcome laziness and resistance to Dharma practice.

### **Fulfilling the Aims of Others**

The first three perfections primarily help to fulfill others' aims. These center around ethical conduct. If we are attached to our possessions, body, and friends and relatives, we will harm others to procure and protect them. By cultivating generosity, our attachment will decrease and we will not harm others to get what we want. If our anger is strong, it will move us to cause others pain and misery. By cultivating fortitude, we will abandon harming others. Not only will they not feel pain from our harm but they will

also not create more destructive karma by retaliating. Furthermore, they could be inspired by our fortitude and become more interested in learning how to subdue their own anger.

The first three perfections benefit others in another way as well. Through our being generous, they receive what they need and desire. Generosity also attracts others to us, so that we can teach them the Dharma and guide them on the path to awakening.

Even though we may practice generosity, harming others will damage our virtuous actions and diminish any benefit we could provide others. By living ethically, we stop injuring others physically and mentally. In addition, our ethical conduct draws others to us because they know we are trustworthy. This enables us to benefit them even more.

To practice generosity and ethical conduct well, fortitude is indispensable. If others are not grateful after we give them something, we might become angry and retaliate. That would harm them and violate our own ethical conduct. By practicing the fortitude of not retaliating, our ethical conduct will be stable and we will not become discouraged by others' lack of gratitude when we are generous and kind to them. Fortitude with students, benefactors, and others we encounter in society is necessary because if we are irascible, they will avoid us—depriving us of the opportunity to benefit them.

### **Ensuring a Precious Human Life in the Future**

Fulfilling the collections of merit and wisdom will take a long time. Thus it is essential to ensure that we obtain fortunate rebirths in which all the conducive circumstances for Dharma practice are present. If we are careless and fall to an unfortunate birth, we will not be able to help ourselves or practice the Dharma, let alone benefit others. To fulfill the purposes of self and others, a precious human life with excellent conditions is needed. Practicing the six perfections creates the causes to obtain this.

- Poverty creates difficulties in practicing the Dharma. Thus we need resources in future lives, and generosity creates the cause to obtain them.

- To make use of the resources, a human life is essential; ethical conduct is the principal cause of attaining an upper rebirth.
- Someone who ruminates with anger or loses their temper is not pleasant to be with and will lack good friends in the Dharma. Practicing fortitude creates the cause to have a pleasing appearance, good personality, and kind companions who encourage our Dharma practice and practice together with us.
- Being unable to follow through and complete projects is a hindrance to benefiting others. To be able to complete our virtuous projects in future lives and to be successful in all constructive activities we undertake, practicing joyous effort in this life is important. It creates the cause to have these abilities and to attract others to practice together with us in future lives.
- If our mind is filled with many afflictions in future lives, we will create great destructive karma. Having a stable and peaceful mind is important to maintain focus on what is important and not be distracted by uncontrolled thoughts and emotions. Practicing meditative stability in this life creates the cause for this.
- The ability to clearly discriminate between misleading teachers and those imparting the correct path is essential, as is the ability to discern what to practice and what to abandon on the path. Cultivating the wisdom that correctly understands the law of karma and its effects creates the cause to have such wisdom in future lives.

Engaging in all six perfections and reaping their results facilitates our Dharma practice in future lives. If the practice of even one perfection is weak or absent, our opportunity to progress on the bodhisattva path in future lives will be limited. For example, without the meditative stability that subdues the gross afflictions, our meditations on bodhicitta and emptiness will be weak; without wisdom, even if we have a good rebirth in the next life, we won't have one after that because our ignorance will prevent us from creating the causes.

In short, Nāgārjuna sums up the temporal results of engaging in the six perfections that will facilitate our Dharma practice in future lives (RA 438–39):

From generosity comes wealth; from ethics happiness;  
from fortitude comes a good appearance; from [effort in] virtue  
brilliance;  
from meditative stability peace; from wisdom liberation;  
compassion accomplishes all aims.

From the simultaneous  
perfection of all seven,  
one attains the sphere of inconceivable wisdom—  
protector of the world.

Thinking about these teachings in relationship to our own lives will deepen our understanding and invigorate our Dharma practice. It is easy to be blasé about having the conditions to continue Dharma practice in future lives. However, imagining being born in circumstances that lack all the conducive conditions wakes us up to the need to create the causes to have them in future lives. Since those causes must be created now, our mind returns to the present with renewed vigor and interest in practice.

### *How the Six Perfections Relate to Other Practices*

Although monastics and lay followers alike practice all six perfections, the first three—generosity, ethical conduct, and fortitude—are said to be easier for lay practitioners. In that context, generosity is giving material wealth and protection, ethical conduct is living in the five lay precepts and the bodhisattva precepts, and fortitude is the fortitude of gaining certitude about the Dharma, especially about the teachings on emptiness. The last three perfections—joyous effort, meditative stability, and wisdom—are likewise practiced by everyone but are said to be more pertinent to monastics.

Although we are encouraged to practice all six perfections as best as we can from the beginning, it is easier to cultivate and perfect them in their given order. Generosity precedes ethical conduct because attachment to possessions and greed to have more and better are obstacles to abandoning nonvirtuous actions. Ethical conduct is needed for fortitude because by practicing ethical conduct, it is easier to control afflictions and remain calm

in the face of harm or suffering. Fortitude is needed to gain joyous effort because the internal calm that fortitude brings sustains joyous effort. Joyous effort is needed to develop meditative stability because meditative concentration does not come quickly and requires continuous effort over time. Meditative stability is essential for developing sharp, clear wisdom that penetrates the meaning of any topic, especially ultimate reality.

The six perfections comprise the two collections, as discussed above. They can also be included in the three higher trainings of bodhisattvas. Here generosity, ethical conduct, and fortitude are included in the higher training of ethical conduct; meditative stability pertains to the higher training of concentration; and wisdom is incorporated in the higher training of wisdom. Joyous effort is needed for all of them.

#### THE THREE HIGHER TRAININGS AND THEIR CORRESPONDING PERFECTIONS

HIGHER TRAINING	PERFECTIONS INCLUDED IN IT
Ethical conduct	Generosity, ethical conduct, fortitude
Concentration	Meditative stability
Wisdom	Wisdom

The six perfections also make up the two purposes of a practitioner: to obtain a higher rebirth and to actualize the highest good—liberation and full awakening. The first four perfections assist in attaining a higher rebirth. Meditative stability and wisdom are the keys to the highest good.

#### THE CAUSES FOR HIGHER REBIRTH AND THE HIGHEST GOOD

CAUSES FOR HIGHER REBIRTH	CAUSES FOR THE HIGHEST GOOD
Generosity, ethical conduct, fortitude, joyous effort	Meditative stability, wisdom

From another perspective the six perfections can be included in the three types of generosity. The perfection of generosity is the generosity of giving material possessions. Ethical conduct and fortitude are the generosity of fearlessness because by acting ethically we protect others from the fear of our harming them and by having fortitude we do not cause others pain by losing our temper. The perfections of meditative stability and wisdom are

the generosity of Dharma because instructions on serenity and insight are the principal teachings to give to sentient beings when they are receptive vessels. Joyous effort is needed to complete all three types of generosity.

#### THE THREE TYPES OF GENEROSITY AND THEIR CORRESPONDING PERFECTIONS

TYPE OF GENEROSITY	PERFECTIONS INCLUDED IN IT
Generosity of giving material possessions	Generosity
Generosity of fearlessness	Ethical conduct, fortitude
Generosity of Dharma	Meditative stability, wisdom

The six perfections are necessary to keep us on the path and to enable us to accomplish our heartfelt spiritual aims. Two factors inhibit us from embarking on the path: attachment to wealth and attachment to family and home. By sharing our resources, generosity lessens the first. By keeping monastic precepts, ethical conduct alleviates the second.

We may go beyond these two attachments but still abandon the spiritual journey as a result of two hindrances: the first is resentment for others' bad behavior and their lack of appreciation and respect, the second is discouragement regarding the length of time needed and the depth of practice required to accomplish our aims. Fortitude counteracts the first by strengthening our ability to handle hardship. Joyous effort remedies the second by increasing our delight and enthusiasm for creating virtue. These two together soothe the mind and give us great confidence and perseverance to continue on the path no matter what.

We may continue to practice, but our virtue may go to waste and our efforts may bring negligible results due to two causes: distraction and mistaken intelligence. Distraction scatters the mind to sense objects, useless thoughts, and disturbing emotions, diminishing the force of our virtue. Meditative stability remedies this by keeping our attention focused on a virtuous object and enables us to penetrate the Buddha's teachings and integrate their meaning in our mind. Mistaken intelligence inhibits comprehending and practicing the Buddha's teachings correctly and could actively misunderstand the teachings and lead to activities that cause unfortunate rebirths. Wisdom prevents this by correctly ascertaining what is

and is not the path, and in this way guides our body, speech, and mind in the right direction.

#### FACTORS INHIBITING THE ACCOMPLISHMENT OF SPIRITUAL GOALS AND THEIR ANTIDOTES

INHIBITING FACTORS	HOW THEY INTERFERE	PERFECTIONS THAT ARE THEIR ANTIDOTE
Attachment to wealth	Inhibits embarking on the path	Generosity
Attachment to family	Inhibits embarking on the path	Ethical conduct
Resenting others' bad behavior and lack of respect	Abandon the spiritual journey	Fortitude
Discouragement	Abandon the spiritual journey	Joyous effort
Distraction that scatters the mind	Virtue going to waste and efforts bringing negligible results	Meditative stability
Mistaken intelligence that inhibits correct understanding of the Buddhadharma	Virtue going to waste and efforts bringing negligible results	Wisdom

All six perfections can be included in the practice of each one. For example, giving even a glass of water—a small act of generosity—can be done with bodhicitta. The mental state is most important, and in this case it is the wish to give in order to accumulate merit to attain awakening for the sake of all sentient beings as well as to directly benefit the recipient.

Not harming others physically or verbally when getting the water and when giving it is ethical conduct. Refraining from a condescending attitude or rude behavior and eschewing harsh speech when offering also constitute ethical conduct. If the recipient harms us physically or verbally in return, remaining calm and not retaliating in response to their ingratitude is the practice of fortitude. Giving the water is done with joyous effort that takes delight in being generous. Stability of mind is necessary so that the mind does not get distracted while giving. Stability also maintains the bodhicitta motivation and prevents the mind from becoming polluted by afflictions while giving.

Prior to giving, wisdom is needed to know what, when, and how to give. While giving, contemplating the emptiness of the giver, gift, recipient, and action of giving cultivates wisdom. An early Mahāyāna sūtra, the *Inquiry of Ugra (Ugrapariṣcchā)*, describes how this is done (IU 244):

When the householder bodhisattva sees someone in need, he will fulfill the cultivation of the six perfections:

1. If as soon as the householder bodhisattva is asked for any object whatsoever, his mind no longer grasps at the object, in that way his cultivation of the perfection of generosity will be fulfilled.
2. If he gives while relying on bodhicitta, in that way his cultivation of the perfection of ethical conduct will be fulfilled.
3. If he gives while bringing to mind love toward those in need and not producing anger or animosity toward them, in that way his cultivation of the perfection of fortitude will be fulfilled.
4. If he is not depressed due to a wavering mind that thinks “If I give this away, what will become of me?” in that way the perfection of joyous effort will be fulfilled.
5. If one gives to someone in need and, after having given, is free from sorrow and regret, and moreover gives [these things] from the standpoint of bodhicitta and is delighted and joyful, happy, and pleased, in that way his cultivation of the perfection of meditative stability will be fulfilled.
6. And if, when he has given, he does not imagine the phenomena [produced by his generosity] and does not hope for their maturation, and just as the wise do not settle down in [their belief in] any phenomena, just so he does not settle down [in them], and so he transforms them into supreme, full awakening—in that way his cultivation of the perfection of wisdom will be fulfilled.

---

## REFLECTION

1. Review the example above that illustrates how the other perfections are also practiced while engaging in the perfection of generosity.
2. Using ethical conduct as the chief perfection being practiced, reflect on how the other five perfections are practiced in tandem.
3. Do the same for the perfections of fortitude, joyous effort, meditative stability, and wisdom—showing how the other perfections can be practiced together with it. This exercise will expand your awareness of how to make even small actions very worthwhile.

---

While learning about the perfections, you may become discouraged, thinking that the practices are so difficult and you will never be able to do them. If this happens, instead of expecting yourself to be an expert when you are a beginner, accept your present level of abilities and continue to increase them in the future. The Buddha did not start off fully awakened and there was a time when he too found practicing the bodhisattva deeds very challenging. However, because causes bring their corresponding results, through steady practice you will be able to begin, continue, and complete the bodhisattvas' practices. Ratnadasa said in *Praise of Endless Qualities* (*Guṇapāryantastotra*, CTB 201):

Those deeds which, when heard of, scare worldly [people],  
and which you could not practice for a long time,  
will in time become spontaneous for all familiar with them.  
Those not so familiar find it hard to increase attainments.

Śāntideva agrees (BCA 6.14ab):

There is nothing whatsoever  
that is not made easier through acquaintance.

Seeing that this is the case, let's recall our buddha nature and transform our mind!

## 2 | Living as a Bodhisattva: The Perfections of Generosity, Ethical Conduct, and Fortitude

HAVING GENERATED BODHICITTA and taken the bodhisattva precepts, now do your best to live like a bodhisattva, imbuing all your actions with great compassion, wisdom, and bodhicitta. Pay special attention to the foremost bodhisattva actions, the ten perfections: generosity, ethical conduct, fortitude, joyous effort, meditative stability, wisdom, skillful means, unshakable resolve, power, and pristine wisdom. As you do this, be unassuming and don't flaunt your spiritual practice. As my spiritual mentor Tsenshap Serkong Rinpoche once told Chodron, who is also his student, "If I am a good cook, I don't need to advertise it. If I cook a meal, people will know for themselves."

### *The Perfection of Generosity*

Generosity is the mind with a kind thought that wants to give. It not only directly helps others but also releases the pain of miserliness and fills our mind with joy. In the *Heap of Jewels Sūtra*, the Bodhisattva Surata says (R 244–45):

One who accumulates billions  
and is greedily attached [to this wealth],  
unable to give it away,  
is said by the wise  
to be a person ever poor in the world.

A penniless person

who will readily give whatever he has  
is said by the wise  
to be the noblest and richest on earth.

Giving is the first perfection because it is the easiest for us to do. Generosity acts as the cause to receive resources—food, shelter, clothing, medicine, and other pleasurable objects—in this and future lives. Candrakīrti in the *Supplement to “Treatise on the Middle Way”* says (MMA 10):

All these beings want happiness,  
but human happiness does not occur without resources.  
Knowing that resources arise from generosity,  
the Subduer first discoursed on that.

Generosity can take many forms, and four types of generosity are commonly discussed: (1) giving material possessions or money, (2) giving protection, (3) giving love, and (4) giving the Dharma.

### *Giving Material Possessions and Money*

Giving material goods is a wonderful opportunity to connect with others, especially when we give with a pleasant expression and use both hands. It’s important to give at an appropriate time, without harming or inconveniencing anyone. We can also encourage others to be generous by inviting them to join us in making a gift or an offering.

Once you have decided to give something, give it soon, not letting the gift decay or get damaged. Avoid giving a little at a time when you could make the offering all at once, and definitely don’t belittle the recipient or give harmful objects such as weapons, poisons, and so on. Make sure that your gift was obtained with right livelihood.

Some people fear that if they give they will be impoverished because they won’t have that object later when they need it. Karmically, the opposite occurs: according to what we give, generosity is the cause to receive wealth, protection, love, and Dharma teachings. Even people who selfishly seek wealth will reap good results in future lives by being generous now.

Although they are motivated to receive the karmic “reward” of giving, their generosity will still bring them abundance and the comfort of their material needs being met. Candrakīrti tells us (MMA 11):

Even for beings with little compassion,  
brutal and intent on their own aims,  
desired resources arise from generosity,  
causing extinguishment of suffering.

In addition, those who are generous will come in contact with holy beings who will guide them on the path in this or future lives. The karmic connection from making offerings to Dharma practitioners, especially to bodhisattvas who are motivated by pure compassion, enables the giver to receive teachings in future lives and thus to progress on the path to liberation.

In the *Inquiry of Ugra Sūtra*, the Buddha encourages us by speaking of the benefits we receive by practicing generosity (IU 240–41):

The bodhisattva...should reflect as follows: “What I give away is mine; what I keep at home is not mine.<sup>4</sup> What I give away has essence; what I keep at home has no essence. What I give away will bring pleasure at another [i.e., future] time; what I keep at home will [only] bring pleasure right now. What I give away does not need to be protected; what I keep at home must be protected. [My] desire for what I give away will be exhausted; [my] desire for what I keep at home increases. What I give away I do not think of as mine; what I keep at home I think of as mine. What I give away is no longer an object of grasping; what I keep at home is an object of grasping. What I give away is not a source of fear; what I keep at home causes fear. What I give away supports the path to awakening; what I keep at home supports the party of Māra.”

## REFLECTION

---

1. Think of something that you hesitate to part with, even though someone else could derive happiness from receiving it.
2. Contemplate as the Buddha said above: “What I give is not mine. I will not need to protect it anymore and I will be free from the fear of it getting lost, broken, or stolen. My painful mental obsession for it will decrease, and I will feel the pleasure of giving instead. Furthermore, my greed, anger, and confusion about it will diminish and I will create merit that will support my future awakening.”
3. Contemplate: “With a miserly attitude, if I keep it, I will fret over it and my mind will be stressed, fearful, and trapped by clinging. I will eventually have to separate from it, and all that will remain then is the destructive karma I created through attachment to it.”
4. Compare the happy feeling in your mind when you think of the benefits of giving and the painful mental feelings when you imagine clinging to the object and keeping it for yourself. In this way, encourage yourself to be generous.

---

Bodhisattvas’ generosity differs from that of ordinary beings in many respects. Because ordinary beings do not immediately see the results of their generosity, many of them do not give. Bodhisattvas, on the other hand, are free from miserliness and do not seek their own benefit when they give. Having taken the bodhisattva precepts, they have pledged to lead all sentient beings to awakening and to help them temporarily as much as possible. Whenever bodhisattvas give, they experience the supreme joy that comes from seeing others benefit from their actions. There is not a touch of sadness, fear, or sense of loss after they give, only happiness. In fact, when bodhisattvas hear someone say, “Please give me...,” they feel overwhelming joy. Such joy is not experienced by śrāvaka and solitary-realizer arhats who abide in the peace of nirvāṇa, let alone by ordinary beings. Knowing these benefits, let’s try to practice generosity as bodhisattvas do.

In *Precious Garland*, Nāgārjuna counsels the king to use his wealth to benefit others and create merit now while he has the chance. The time of death is not certain, and while dying, he will be unable to practice generosity. Meanwhile, his ministers will be planning to divide up the treasury and still leave some for the new ruler (RA 316–17):

When dying, since you will lose your independence,  
you will be unable to give away [your possessions]  
through ministers who shamelessly cease to value you  
and seek the affection of the new king.

Therefore, while healthy, quickly use all your resources  
to build Dharma sites,  
for you stand in the midst of death's causes  
like a lamp in the midst of a storm.

You may not be a monarch, but Nāgārjuna's advice is still valuable. Give now and give with a bodhicitta motivation. Then while dying, rejoice at your merit and know that your wealth was distributed as you wish.

It may sometimes happen that you know the benefits of giving and the disadvantages of stinginess but still cannot bring yourself to give something to a person who has asked for it. The Buddha advises to humbly explain to the person (IU 258–59):

At this point my strength is meager and my roots of virtue  
are immature. I am only a beginner in the Mahāyāna. I am  
subject to thoughts of not giving. I still have the perspective  
of grasping, and am stuck in taking things as I and mine.  
And so, good person, I beg you to forgive me and not to be  
upset. [In the future] I will act, accomplish, and exert myself  
in order to fulfill your desires and those of all beings.

In other words, when giving a particular item is too much of a stretch for your present mental capacity, acknowledge your limitation without feeling ashamed or denigrating yourself. At the same time, resolve to put energy

into eliminating this hindrance so that you will be able to joyfully give in the future.

Be careful also about going to the other extreme of giving so much away that you leave yourself bereft. Be practical so that you do not become a burden to others by being unable to take care of yourself. Remember, it is the strength of your kind motivation that is the most important factor, not the size of the offering.

Misunderstanding the meaning of generosity, people sometimes think it entails giving whatever another person wants. This is not the case; we must give with wisdom. If a person with a drug or alcohol problem asks for money that we know will be used to feed their substance abuse, giving it to them is not an act of kindness and generosity. In this case, the most helpful action is to not give the money but to help the person enroll in a treatment program. We do this not with anger or stinginess but out of care and concern for the person.

Similarly, giving children whatever they want does not help them grow into responsible adults. In fact, it can impair their ability to function in society later on because they will take possessions for granted and expect all their wishes to be fulfilled. Teaching children how to deal with the frustration of not getting what they want will help them for the rest of their lives. Likewise, teaching them to be generous with their possessions is helping them more than catering to their every desire. Similarly, when children quarrel about a toy or device, teaching them methods to resolve conflicts nonviolently will help them much more than stepping in and fixing the external situation.

Each situation in which we are asked for help needs to be examined individually, in light of our motivation, capability, and the repercussions of our action. Not giving out of miserliness is self-centered, but if we have the wish to give but are unable to, there is no fault. Being generous does not mean that we have to cure all the poverty and need in the world. While sentient beings are still in cyclic existence, a perfect world is impossible. Nevertheless, do what you can with a caring attitude.

People often want to be generous but are confused when they receive requests for donations from a myriad of charities. Is not giving something to each a transgression of the bodhisattva precept to give whenever asked? No,

it isn't. The bodhisattva precept refers to giving in situations where the person is in desperate need, directly asks us for help, and has no one else to turn to. If you receive requests for help from too many charities, pick those whose causes touch you the most and contribute to them. In your mind have a supportive and compassionate attitude and make prayers for the welfare of the others.

Learning to be a kind recipient is also practicing generosity and ethical conduct, for we're giving someone the opportunity to take delight in giving. Sometimes we are too proud, afraid of feeling obliged, or immersed in feeling unworthy to accept others' generosity. Rebuffing their gifts—be they material possessions, loving support, or the offer of help—is stinginess on our part. As a result, the giver may feel hurt, rejected, or demoralized. Recalling that our aim is to benefit sentient beings, let's open our hearts and accept their kindness and generosity, neither exploiting it nor rejecting it. Admiring their kind actions and rejoicing in their merit can invigorate us to "pay it forward."

## REFLECTION

---

1. Contemplate your fortune in having the possessions you have—which is the result of being generous in previous lives. Think how wonderful others who are lacking in possessions would feel if they could enjoy such fortune.
2. Clean out a closet or dresser in your home, removing everything you haven't used in the last year.
3. Note if the thought "But if I give it away, I won't have it" arises, and remind yourself of the benefits of generosity.
4. Take those things to a charity, hospital, nursing home, school, and so forth, and with joy in your heart, donate them.

---

*Giving the Body*

Bodhisattvas may give their bodies to someone in need only when they have no clinging to their bodies. To such bodhisattvas, giving their body and life is like giving a carrot to someone; they have no attachment, fear, or hesitation. Some bodhisattvas attain the ability to give their body on the path of preparation. Bodhisattvas on the first ground, who excel in the perfection of generosity, do not experience any physical or mental suffering when giving their body or life. Because of their great merit, they do not experience physical pain, and because of their profound wisdom realizing emptiness, they experience no mental suffering. Nāgārjuna says (RA 221–23):

What is called immeasurable merit  
and also that called immeasurable wisdom  
quickly eradicate the suffering  
of both body and mind.

Hunger, thirst, and other such physical suffering  
occur in unfortunate rebirths due to one's misdeeds.  
[Bodhisattvas] do not engage in misdeeds;  
due to merit, they have no such suffering in other rebirths.

From confusion comes the mental suffering  
of attachment, anger, fear, lust, and such.  
[Bodhisattvas] quickly eliminate this  
by realizing that [all phenomena] are foundationless.

Furthermore, being free from the self-centered thought and having deep compassion, their attention is focused on the suffering of others (RA 226):

They have no physical suffering;  
how could they have mental suffering?  
Through their compassion they feel pain  
for the world and so stay in it long.

Ordinary bodhisattvas who have not yet attained the first ground feel physical suffering when giving parts of their body. However, the pain they experience serves only to intensify their compassion for other sentient beings, who experience far greater pain in the hells. It reinforces their commitment and increases their activities to lead sentient beings to awakening until all realms in cyclic existence are emptied of beings. Candrakīrti said (MMA 15):

Through his own suffering in cutting and giving away his body  
he sees with knowledge others' pain  
in hells and so forth, and strives quickly  
to eliminate their suffering.

However, many great masters say that bodhisattvas who have not yet reached the first ground (on the path of seeing) should not give their lives because they are not yet capable of controlling their rebirth. It is better for these bodhisattvas to remain alive in this body and practice the Dharma for the remainder of their life.

Similarly, it is wiser for ordinary beings, who still cling to their bodies, to maintain their precious human lives and use them to purify negativities, create merit, and to study, contemplate, and meditate on the Dharma. Nowadays people can safely donate a kidney or another part of the body, and if they wish they can donate various organs after they die.

Although we are not yet capable of giving away our body, it is helpful to imagine doing so, since one day we will have to relinquish this body. The inner maṇḍala offering, where we imagine the parts of our body becoming the various aspects of the universe in its purified form, is a good way to do this. Our trunk becomes Mount Meru, our hands and feet the four continents, the upper and lower parts of our arms and legs become the eight subcontinents, our intestines the rings of water, our two eyes the sun and moon, our two ears the umbrella and victory banner, and our inner organs transform into gorgeous offerings that fill the entire sky. To offer this to the holy beings, we recite:

The objects of attachment, aversion, and ignorance—friends, enemies, and strangers, my body, wealth, and enjoyments—I offer these without any sense of loss. Please accept them with pleasure, and inspire me and others to be free from the three poisonous attitudes. *Idam guru ratna maṇḍala kam nirya tayami.*

Visualizations such as those in the practice of Cutting the Ego (Chod) and the Kusali offering in the Vajrayoginī practice are also helpful in this regard.

In short, practice giving your possessions and making offerings as much as you can—for example, by offering water bowls to the Three Jewels each morning, offering your food before eating, and giving to those in need. Doing practices in which you imagine giving your possessions and virtues of the past, present, and future are also beneficial. With each actual or imagined action of giving, remember to contemplate that the agent, action, and object are empty of inherent existence but exist dependent on one another. If miserliness arises, counteract it by recalling that you will have to separate from your resources sooner or later in any case. Therefore it would be better to actually give them or at least to give them in your imagination in order to increase delight in giving and free your mind from the pain of miserliness. Śāntideva tells us (BCA 3.11–12):

Without any sense of loss,  
I shall give up my body and enjoyments  
as well as all my virtues of the three times  
for the sake of benefiting all.

By giving away all,  
my mind aspires to transcend sorrow (nirvāṇa).  
When I give away everything  
it is best to give to sentient beings [now].

*Giving Protection from Danger and Fear*

Helping travelers, providing medical services and medicine, teaching Dharma to the incarcerated, providing aid to refugees, and volunteering in a homeless shelter are examples of giving protection from danger and fear. Tutoring and acting as mentors for at-risk youth, helping single mothers apply for social services, running a no-kill animal shelter that facilitates animal adoptions, providing legal services for immigrants, migrants, and refugees—there are many ways to reach out and help living beings experiencing fear and danger in the world today. All actions to protect the environment—be it recycling, researching renewable energy sources, planting trees, helping endangered species, taking injured wild animals to a wildlife shelter or sanctuary, and so forth—are also included in the generosity of protecting others. Rescuing insects drowning in water is another form of giving protection.

All of us have experienced fear and danger in the past; we know the feeling of relief that fills us when someone—a friend, relative, stranger, and sometimes even a former enemy—gives us a helping hand.

### *Giving Love*

Giving love complements giving protection and is done in similar situations. It includes giving love to abused children, orphans, the grieving, the neglected, and all other beings. Many people need emotional support while going through difficult situations such as divorce, losing their job, and family problems. When we are able, let's help them. We must be sensitive to each individual situation, however, not pushing our solutions on others or embarrassing them. Giving love also includes volunteering in social welfare projects, using our education and creativity to help others, and consoling those who are grieving.

### *Giving the Dharma*

Giving the Dharma is said to be the supreme form of generosity because it enables others to create the causes for temporal and ultimate happiness. As with all forms of generosity, our motivation is important; when sharing the Dharma, the purity of motivation is of even greater importance, because sharing the Dharma with a corrupt motivation could cause widespread and long-term harm. For example, with a motivation that wants to use others to

obtain fame and wealth, someone gives incorrect teachings. Others believe these fallacious speculations and practice incorrectly, leading them to unfortunate rebirths. Such wrong teachings may remain in circulation even after the person who first spoke them has died. Nāgārjuna said (MPU 81):

The giving of Dharma consists of constantly employing a pure mind and wholesome thoughts in the offering of instruction to everyone. Just as it is with the giving of material gifts, wherein there is no measure of blessings or virtue associated with it if one fails to maintain a wholesome mind, so too it is with the giving of the Dharma: If one fails to maintain a pure mind and wholesome thoughts, then it is not the case that this actually qualifies as the generosity of Dharma.

But if the speaker of Dharma is able to maintain a pure mind and wholesome thoughts as he praises the Three Jewels, opens the door to understanding offenses and blessings, explains the four truths, and thus goes about teaching and transforming beings so that they are caused to enter the buddha path, this does qualify as true and pure Dharma generosity.

As Buddhist practitioners, share whatever knowledge you have of the Dharma when people ask for advice. When sharing the Dharma, do not expect special treatment, respect, or offerings, but simply give Dharma instructions or advice to others as one friend to another. Giving Dharma teachings for payment is doing business—the worst kind of business!

Not everyone wants to teach the Dharma and not everyone is qualified to be a Dharma teacher; but there are many other ways to give the Dharma to others such as chanting mantras to children and teaching them the melodies to chant them too. Doing our recitations out loud so that animals and insects around us hear them, reading texts and prayers to those recovering from an illness or those whose lives are coming to a conclusion, contributing funds to print Dharma books for free distribution, and donating books on Buddhism to college libraries as well as public libraries are also

acts of giving the Dharma. Volunteering at a Dharma center, monastery, or temple supports the sharing of the Dharma.

When friends ask for advice on how to deal with problems, describe Dharma methods without using any Buddhist words. This is easy to do because so many of the Buddha's teachings—especially those on working with emotions and building healthy relationships—are common-sense instructions that people of any or no religion can easily apply in their lives.

### *Bodhisattvas' Practice of Generosity*

Nāgārjuna describes bodhisattvas' perfection of generosity (MPU 99–100):

As for that giving performed by bodhisattvas, it is done with the realization that the act of giving is neither produced nor destroyed. It is conducted in a state that has gone beyond polluting impurities, is unconditioned, and is characterized by being like nirvāṇa. That giving is performed for the sake of all beings. This is what is referred to as the perfection of generosity.

There are those who say that when one gives everything of every sort, giving exhaustively of all inner and outer resources, and also gives without seeking any reward as a result, this kind of giving qualifies as the perfection of generosity...

One knows that the thing that is given is ultimately empty [of inherent existence] and characterized as being like nirvāṇa. Because one employs this kind of mind in giving to beings, the result accruing from it is inexhaustible and it is therefore referred to as the perfection of generosity...

[Bodhisattvas] employ a kind of giving that is coated with nirvāṇa-like reality-concordant wisdom through which [that giving] becomes inexhaustible. Moreover, bodhisattvas give for the sake of all beings. Because the number of beings is inexhaustible, that giving too is inexhaustible.

Bodhisattvas give for the sake of the Buddhadharma. The Buddhadharma is immeasurable and boundless. So too is

that giving also immeasurable and boundless.

For these reasons, bodhisattvas' generosity surpasses that of śrāvakas. Although we may not yet be capable of practicing generosity in that vast way, we can rejoice in the bodhisattvas' generosity and aspire to practice generosity as they do. This is done by familiarizing ourselves with the above elements of generosity that Nāgārjuna pointed out. In short, by practicing generosity whenever possible with the motivation of bodhicitta and the awareness of emptiness, our minds will be very joyful and we will progress on the path to buddhahood.

## REFLECTION

---

1. Think of examples of how you can practice the generosity of protection.
  2. Think of examples of how you can practice the generosity of love.
  3. Think of examples of how you can practice the generosity of the Dharma.
- 

Asaṅga in his *Mahāyāna Compendium* recommends practicing generosity with six supremacies: (1) the *supreme basis* is practicing generosity based on bodhicitta; (2) *supreme things* is that you give all that can be given, and when that is limited, maintain the aspiration to give away everything; (3) *supreme aim* is giving to all sentient beings for the sake of their temporal happiness and ultimate benefit; (4) *supreme skillful means* is when generosity is informed by nonconceptual wisdom, or in the case of beginning bodhisattvas, with wisdom that conceptually knows that all phenomena are empty; (5) *supreme dedication* is dedicating the merit from practicing generosity to the full awakening of self and others; and (6) *supreme purity* is stopping both afflictive and cognitive obscurations.

Contemplating these six one by one before, during, and after giving transforms our generosity from an ordinary, mundane act of giving to giving that is deeply meaningful for self and others. Try it!

Maitreya's *Ornament of the Mahāyāna Sūtras* contains a concise verse with deep meaning that explains how the Buddha engages with all six perfections. Here the example of generosity is used; the italicized word changes according to each perfection:

Buddha's *generosity* is  
not attached, unattached, never attached;  
it is not at all attached,  
not attached, unattached, never attached.

“Attachment” here means stickiness, an attitude that prevents our practice of that perfection from being in accord with the Dharma. Pointing out these seven discordant elements helps us to improve our practice, making it accord with bodhisattvas' deeds.

1. *Not attached*: Attachment indicates the opposite of that perfection, which in the case of generosity is miserliness regarding possessions. Turning away from miserliness is being not attached.
2. *Unattached*: Here attachment appears in the form of procrastination. By being unattached, we will seize the present opportunity.
3. *Never attached*: This attachment is to limits, such as limited objects, recipients, areas, or time. It prevents us from practicing wholeheartedly—for example, being easily satisfied with offering a little when we're capable of offering more. Without attachment, we will make effort to go beyond self-imposed limits and narrow ways of thinking. In regard to generosity, we will overcome our hesitation to give.
4. *Not at all attached*: Here attachment is to the hope for reward; this is giving with the expectation of receiving something in return in this life. Our generosity is done in the spirit of a transaction. We give in order to receive; the gift isn't free because expectations are attached. Afterward if our expectations are not met, we feel cheated and complain, when in fact our corrupt motivation is the problem. Being not at all attached, our motivation for practicing each perfection is free from seeking reward or acknowledgment here and now.

5. *Not attached*: The attachment is expecting a beneficial karmic return in future lives. This attitude is unbecoming for a bodhisattva who aims for awakening and wastes an opportunity to create virtue. Being not attached, bodhisattvas don't expect good results in future lives, even though these may come naturally as an effect of virtue.
6. *Unattached*: Here attachment is for the self-centered attitude that is a formidable obstacle because it seeks only our own liberation. This is countered by renewing our bodhicitta motivation. Being unattached is giving with the full force of a generous motivation.
7. *Never attached*: This attachment undermines the purity of our practice. It has two aspects. The first is being tinged by the latencies of stinginess that obscure the mind. The second is grasping true existence. When giving, try to be fully aware that the agent, object, and action of generosity are empty of true existence. See them as existing by mere designation.

Although these seven are not explicitly mentioned in the context of each perfection, contemplate them on your own. It will enhance your practice of the other perfections.

Train so that your generosity is like a snake shedding its skin: there is no regret. Be like a deer who doesn't have any sense of ownership. Giving without these seven impediments is a bodhisattva's generosity. Although our generosity may fall short of this, remember that we are *practicing* generosity; the expectation is not that we will be perfectly generous at the beginning. As the old adage goes, "practice makes perfect."

### *The Perfection of Ethical Conduct*

The second perfection, ethical conduct, is a mind that has abandoned all thoughts of harming others. In particular, the ethical conduct of a bodhisattva is a state of mind that has relinquished the self-centered attitude. There are three types of ethical conduct:

1. *Restraining from destructive actions* is to abandon the ten nonvirtues and to abide in whatever precepts and commitments we

have taken.

2. *Gathering virtue* involves taking every possible opportunity to enhance the collections of method and wisdom in order to progress on the path.
3. *Benefiting sentient beings* is to enact our love and compassion by helping those in need.

These three occur in a fixed sequence. Restraining from harm establishes the foundation for engaging in virtuous actions, which in turn enables us to work for the welfare of sentient beings.

### *The Ethical Conduct of Restraining from Destructive Actions*

Ethical conduct evolves from generosity, because if we are generous, not attached to possessions, and not greedy for more, then we will not harm others to get things. In the *Supplement*, Candrakīrti emphasizes the first type of ethical conduct, in which we abandon naturally negative actions—that is, actions that when done by ordinary beings are almost always motivated by afflictions. Of particular importance is abandoning the ten nonvirtuous paths of karma, the first seven being destructive actions (killing, stealing, unwise or unkind sexual behavior, lying, divisive speech, harsh speech, and idle talk) and the last three being the afflictions that motivate them (covetousness, malice, and wrong views). Furthermore, keeping whatever precepts we have taken is of crucial importance. These include the prātimokṣa precepts for monastics and lay followers, the bodhisattva precepts, and tantric precepts and commitments. If we have taken lay or monastic precepts, engaging in proscribed actions such that the four branches of the basis, attitude, performance, and completion are complete constitutes a full transgression of the precept.

There are four gates through which ethical misdeeds occur. By learning and remembering these we can avoid misdeeds and transgressions of precepts.

(1) By *not knowing what to abandon and what to practice*, we easily harm others. For example, being ignorant of the ten nonvirtues and not remembering the precepts we have taken set the stage for unethical actions that harm others.

(2) *Lacking respect for the precepts and not thinking that ethical conduct is important* facilitate misdeeds. Someone may know what to abandon and practice but not think that ethical conduct is important. Such a person easily interferes with the well-being of others because they don't care about the effects of their actions on themselves or others.

(3) *Carelessness and heedlessness*. Someone may know the ten nonvirtues and may know the precepts they promised to uphold, but not monitor their behavior. Lacking mindfulness and introspective awareness, they don't recognize when afflictions and harmful intentions arise in their minds and easily act on whatever impulsive thoughts enter their mind.

(4) *Strong afflictions*. When the mind is unsubdued, afflictions can arise strongly and overwhelm someone's ethical restraint. Before they know it, afflictions are in control, forcing them to get involved in harmful actions. Even if they intellectually know the antidote for that affliction, it is weak and they cannot call it up when it is most needed.

The more we are aware of the above four factors and seek to counteract them, the more peaceful our demeanor will be and the purer our ethical conduct will be. The tools to shut the four doors to transgressions are mental factors in our mind. We must learn to identify them in our own experience and then strengthen them through Dharma study and practice. The antidotes to the four gates for transgressions are:

(1) Learn the ten nonvirtues and the four branches for them to be complete.<sup>5</sup> Know the precepts and commitments you have taken and study them well.

(2) Develop faith and respect for the precepts. Understand the disadvantages of unethical behavior and the benefits of ethical conduct. Live near your preceptor, Dharma teachers, and virtuous friends so that you have support in your practice of ethical conduct and good examples to follow. Remembering that the precepts in your mindstream represent the Buddha, you won't be indifferent toward them.

(3) Be careful and conscientious in your actions. Cultivate mindfulness of your precepts and develop introspective awareness to monitor the thoughts and emotions in your mind.

(4) Learn the antidotes to the afflictions and apply them. Contemplate impermanence to counteract attachment, fortitude to subdue anger, and rejoicing to counter jealousy. Meditating on precious human life and buddha nature are excellent antidotes to depression and lack of self-confidence. Breathing meditation calms the mind when doubt, restlessness, or rumination arise. Also cultivate integrity, which abandons negativities because of holding to our own values, and consideration for others, which abandons negativities because of not wanting others to lose faith in us, in the Dharma, or in human beings in general.

As said in the “Eight Verses of Thought Transformation” (3):<sup>6</sup>

In all actions I will examine my mind,  
and the moment a disturbing attitude arises,  
endangering myself and others,  
I will firmly confront and avert it.

## REFLECTION

---

Contemplate the four gates through which ethical wrongdoings occur, making examples from your life or from the lives of people you see in the news. Then reflect on their antidotes and see how those would prevent the wrongdoing and save so many people from experiencing pain.

1. By not knowing what to abandon and what to practice, you easily harm others.
2. The remedy is to learn the ten nonvirtues and the four branches for them to be complete. Know the precepts and commitments you have taken and study them well.
3. Lacking respect for the precepts and not thinking that ethical conduct is important makes you apathetic toward the effects of your actions on yourself and on others.
4. Counteract this by developing faith and respect for the precepts. Understand the disadvantages of unethical behavior and the benefits of

ethical conduct. Live near your preceptor, Dharma teachers, and others who support your good conduct.

5. Carelessness and heedlessness lie behind not monitoring your behavior and not recognizing afflictions and harmful intentions when they arise.
6. The antidote to this is being conscientious in your actions. Cultivate mindfulness of your precepts and develop introspective awareness to monitor your thoughts and emotions.
7. Being overwhelmed by strong afflictions renders you unable to control your physical, verbal, and mental actions.
8. The counterforce is to learn the antidotes to the afflictions and practice them repeatedly in your meditation so that you are familiar with them when an actual situation arises.

---

Abandoning destructive actions brings coolness to the mind as the fire of guilt and remorse has been reduced. Practicing the ten virtuous pathways of action brings delight and peace to the mind. It is said that a special fragrance called the “scent of pure ethical conduct” naturally surrounds people who have pure ethical conduct.

Ethical conduct is like a dike; it holds us back from involvement in a harmful situation. It is like a lamp that illuminates dark corners of our mind so that we can clean them. It is like our goatee being on fire; we must focus on what is happening inside ourselves, not on others.

Bodhisattvas on the second ground excel in ethical conduct. Whether they are awake or asleep, standing, sitting, walking, or lying down, their body, speech, and mind are free from even subtle ethical misdeeds. Although our ethical conduct may not be of that caliber now, we should direct our intentions to that and cultivate pure ethical conduct as best as we can. Through the force of our sincere intention, gradually all our actions will become wholesome.

Practicing ethical conduct is extremely important for ordinary beings as well as for āryas. We may create much merit by practicing generosity, but if

we neglect ethical conduct—which is the primary cause of fortunate rebirths—we will enjoy the wonderful fruits of generosity in an unfortunate realm. For example, instead of having a precious human life with good resources and conducive conditions in which we can practice the Dharma easily, we will be reborn as a pampered dog in a wealthy family. I hear that some people in the West take their dogs to spas, have their claws manicured, and give them the most delicious and expensive dog food available. While the dog may enjoy the food—I'm not sure about the spa and the manicure—the dog's merit of generosity has been exhausted with no long-term benefit having accrued, because it was unable to create merit in a dog rebirth.

On the other hand, if someone practices ethical conduct as well as generosity, both will ripen as the conducive circumstances of a precious human life. On that basis they can continue practicing the Dharma, creating more and more causes for awakening. In the process of doing this, they will also create the causes for good rebirths in the future in which they will have all excellent conditions necessary for Dharma practice. This is like accruing compounded interest; Candrakīrti, on the other hand, likens practicing generosity without ethical conduct to frittering away both principal and interest.

It is extremely difficult to practice ethical conduct when born in an unfortunate realm, making the creation of the causes for another higher rebirth very problematic. Candrakīrti warns (MMA 22):

If when one has freedom and a favorable rebirth,  
he does not act to hold [himself back from falling],  
he will fall into an abyss and lose control;  
how will he raise himself from there in the future?

While we have a precious human life, it is crucial to engage in ethical conduct not only to prevent suffering in lower rebirths from which it is hard to escape but also to create the causes for fortunate rebirths that can be used to practice the Dharma again. Candrakīrti encourages us (MMA 23):

Thus the Conqueror, having discoursed on generosity,

spoke on the following [perfection], ethical conduct.

When virtues are nurtured in the field of ethical conduct, the enjoyment of effects is unceasing.

Because ethical conduct is the basis of all good qualities, it is called a “field.” When the virtues of generosity, fortitude, and so forth are cultivated in this field, the crop of fortunate rebirths and excellent resources ripens. With these conducive circumstances, we can continue to practice until attaining full awakening without being hindered by unfortunate rebirths or lack of resources. Although our long-term aim is buddhahood, a series of excellent rebirths is gained along the way.

For ordinary beings, ethical conduct is the cause for higher rebirths; for those on the śrāvaka, solitary realizer, and bodhisattva paths it is the cause of the highest goodness—liberation and awakening. Although other causes also factor into attaining these two, ethical conduct is the fundamental basis without which the other causes won’t ripen in the desired way.

Ethical conduct brings desired results in this life too. Our hearts are lighter and we have less regret and remorse. People trust us; being confident that we will not harm them, they are relaxed around us. Even animals feel the difference between people who have abandoned harming others and those who are angry and fearful.

### *The Ethical Conduct of Gathering Virtue*

Gathering virtue is using all opportunities to engage in virtuous actions. Refraining from nonvirtue is virtuous in itself, and doing the opposite of nonvirtuous actions—for example, saving life instead of killing—is virtuous too. Keeping whatever precepts we have taken creates great merit. The eight Mahāyāna precepts is a special one-day practice that creates great merit because it is done with the bodhicitta motivation. These precepts resemble the eight one-day prātimokṣa precepts to abandon killing; stealing; sexual behavior; lying; intoxicants; sitting on high or luxurious beds or seats; using scents, cosmetics, and jewelry; singing, dancing, and playing music; and eating after midday. Because these precepts are taken motivated by bodhicitta, monastics can also take them.<sup>7</sup> This practice is good to do on

special Buddhist holy days, on full and new moon days, or whenever you need a day of mindfulness and spiritual reflection.

We should also take care not to destroy virtue already created by succumbing to anger or wrong views and do our best to enhance virtue in the future. The latter can be done by ensuring our motivation is one of bodhicitta before beginning the action, sealing the action at its conclusion by contemplating the emptiness of the sphere of three, and dedicating the merit to full awakening.

### *The Ethical Conduct of Benefiting Sentient Beings*

The third type of ethical conduct—helping sentient beings—involves guiding others so they will aspire to and engage in constructive attitudes and actions. Benefiting sentient beings does not mean we fix all their problems, for it is far more valuable to teach them how to think, speak, and act clearly so that they are able to remedy their problems themselves. Our job is to give them the confidence and skills to create virtue and to handle situations skillfully without harming others, not to make them dependent on us because we seek to feel needed and valued by others.

There are eleven groups of people to be particularly diligent about benefiting:

1. *Aiding those who are suffering or ill* by giving them assistance—for example, helping someone who cannot walk well, preparing food for someone recovering from an injury or illness, visiting people in the hospital. The wonderful work done by hospice staff and volunteers is included here too.
2. *Guiding people who are obscured or ignorant of means to help themselves* is accomplished, for example, by explaining proper behavior to the reckless, counseling those preparing to be released from prison on what to say in job interviews, and instructing young adults on the way to manage finances.
3. *Those who need help to realize their desires* are aided by helping them to move homes, plan events, and think ahead to what they may need in the future.

4. Helping *sentient beings who are afraid, in danger, or about to be killed or injured* includes, for example, buying an animal that is about to be slaughtered, stepping in to redirect people's attention to prevent a dispute, guiding someone who is lost to their destination, and intervening when one person or group is bullying another.
5. Aiding *people who are grieving* the death of a dear one or the loss of their social position is, for example, consoling them, listening to their concerns, helping them with daily errands, and guiding them to reimagine their future.
6. Helping the *poor and needy* is accomplished by giving them material aid in a respectful and appropriate manner, encouraging them to get in touch with their good qualities, and helping them to see their value as human beings no matter what their outer circumstances may be.
7. Offering assistance to *those who need a place to stay*, such as the poor, Dharma practitioners, travelers, and stray animals involves thinking of appropriate places where they will be comfortable and safe.
8. Benefiting *people who want to be in harmony* is accomplished by teaching them good communication skills, encouraging them to forgive, speaking of the benefits of reconciliation, and so forth.
9. Assisting *those who want to follow the path* includes aiding those who want to make offerings, to study the Dharma, or to go on pilgrimage. It may also entail helping people who want to learn the Dharma to meet qualified spiritual mentors and attend teachings.
10. Helping *sentient beings who are acting negatively or are about to do so* may entail preventing them from doing that action or explaining the drawbacks of such actions. We may offer spiritual counsel to those who are on the verge of following a wrong path by steering them toward a virtuous path. Other times we have to take a firm stand to stop someone who is harming others. Taking special interest in a child who is bullying others can help that child see ways to connect with others—which is what they want to do—in a way that will bring happy results.

11. There are *those who can only be helped by a demonstration of supernormal powers*. If all else fails to stop someone's destructive actions or to prove the validity of the Dharma, supernormal powers can be used if one has them.

These eleven groups coincide with the groups of people in the last category of auxiliary precepts of engaged bodhicitta. The difference is that the precepts specify to abandon not helping them whereas the perfection of ethical conduct emphasizes paying special attention to helping them.

Other sentient beings to help are those who trust and are attracted to you, by showing them the Dharma; those who are praiseworthy, by pointing out their good qualities and actions; and those who want to learn the Dharma, by practicing the four ways of attraction (see chapter 4). As much as possible, try to act in accordance with others' wishes and needs as long as their wishes are not harmful to yourself or others. However, do not use others' wishes—"my friends asked me to go to the movies"—as a means to rationalize being distracted from Dharma practice or acting in detrimental ways.

### *Bodhisattvas' Practice of Ethical Conduct*

Motivation is most crucial when practicing ethical conduct. Seeking a good reputation, praise, power, or offerings corrupts virtuous actions. Even though you may look like the epitome of virtue, if your motivation is not virtuous your actions amount to nothing more than using others to fulfill your worldly desires. Remaining humble is essential. In the *Heap of Jewels*, Bodhisattva Surata advises (R 245):

The wise persuade others to do good;  
fools are always for evil.  
It is better to be scolded by the wise  
than to be praised by fools.

When practicing ethical conduct, avoid being arrogant because of the purity of your conduct. Some people become proud thinking that they are especially holy or that they are the only ones who purely keep the Vinaya.

Such arrogance increases self-grasping, whereas ethical conduct is meant to decrease it. We must be vigilant not to let pride sabotage our efforts to abandon harming others, accumulating virtue, and benefiting others. For this reason, *Ārya Maitreya's King of Unshakable Resolves* (*Āryamaitripraṇidhānarāja*) says:

By having the flawless ethics of the Dharma law,  
pure ethical conduct,  
and ethical conduct without conceit,  
may I complete the perfection of ethical conduct.

An excellent way to eliminate arrogance and purify our ethical conduct is to abandon all grasping of I and mine by meditating on emptiness. The *Heap of Jewels* states (CTB 195):

Kāśyapa, some monastics have proper ethics; they abide restrained by the prātimokṣa ethical code. Their rites and spheres of activity are perfect, and they view even coarse and subtle transgressions with concern. They thoroughly assume and train in the precepts and possess pure activities of body, speech, and mind. Hence their livelihood is thoroughly pure, but they propound a self. Kāśyapa, they are the first of those seeming to have proper ethical conduct which in fact is faulty... Furthermore, Kāśyapa, even though some monastics thoroughly assume the twelve qualities of training,<sup>8</sup> they view them with the apprehension [of inherent existence]. Abiding in grasping at I and mine, Kāśyapa, they are the fourth of those whose ethics appear to be proper but are faulty.

As with generosity and the other perfections, the perfection of ethical conduct is of two types: mundane and supramundane. Candrakīrti points out the difference between them (MMA 26):

If there is any apprehension of the three—

forsaken by whom, what, and with regard to whom—  
such ethical conduct is described as being a mundane perfection.  
That empty of attachment to the three is supramundane.

The unpolluted wisdom that does not grasp the inherent existence of the sphere of three makes a bodhisattva's practice of ethical conduct supramundane. The sphere of three is (1) *by whom*, the person or agent who abandons the destructive action, (2) *what*, the object that is abandoned—that is, the destructive action, and (3) *with regard to whom*, the person who was not harmed—that is, the field with regard to whom the destructive action is abandoned. This wisdom is sometimes called “objectless” wisdom or wisdom realizing the unapprehendable because it does not apprehend true existence and instead realizes the opposite, the emptiness of true existence of all persons and phenomena.

In conclusion, Nāgārjuna says (MPU 333):

Bodhisattvas' upholding of ethical precepts is not done on account of fear, nor is it done out of stupidity, or doubt, or confusion, or out of a private quest for their own nirvāṇa. The upholding of ethical precepts is carried out solely for the sake of all beings, for the sake of success in the Buddha's path, and for the sake of gaining all the excellent qualities of buddhahood... This is what is meant by the perfection of ethical conduct... [In addition] if bodhisattvas' practice is based on the unfindability of either misdeed or non-misdeed, it is at this time that it qualifies as the perfection of ethical conduct.

He continues by explaining that because sentient beings are not findable under ultimate analysis, misdeeds and precepts aren't findable either. “Findable under ultimate analysis” means that when we search for exactly what a sentient being, misdeed, precept, or any other phenomenon is, we cannot isolate an inherently existent essence that is it. Everything depends on other factors that compose it. When we scrutinize an action of lying to find out exactly what it is, we see that although it depends on the motivation

to deceive, the person who is lying, the false statement, the process of uttering the lie, and the other person understanding what was said, we cannot isolate one of these components and say, “This is the action of lying.” However, although the action of lying cannot be found with ultimate analysis, it does exist dependently. We can’t say that there was no misdeed on the conventional level.

In addition, Nāgārjuna explains (MPU 333): “It is on account of the existence of the misdeed of killing that the corresponding ethical precept exists. If there were no misdeed of killing, there would be no corresponding ethical precept either.” That is, the misdeed and the precept exist in mutual dependence. Because one exists, so does the other. Here, too, we find that things do not exist independently, but exist dependently on the conventional level.

## REFLECTION

---

Contemplate the proper way to live ethically and keep precepts.

1. Living ethically is the right thing to do, so refrain from being conceited; there’s nothing to be arrogant about for living this way.
2. Don’t cling to the idea of a self, an I who is living in a wholesome way. Such clinging could easily lead to arrogance, which brings complacency, from which your ethical conduct could degenerate.
3. Keep precepts with self-respect and love for sentient beings, not out of fear.
4. Live ethically motivated by the aspiration to attain buddhahood, not a desire for your own nirvāṇa.
5. Rejoice in your merit and wise decisions.

---

*The Perfection of Fortitude*

The Sanskrit term *kṣānti*, translated as fortitude, patience, or forbearance, refers to the ability to calmly endure discomfort, suffering, and pain. As the antidote to anger, fortitude is the ability to remain resolute and calm no matter what situation we encounter. Life is full of difficulties: people criticize or even beat us, we lose our job, our reputation suffers, we get sick or are injured, relationships change, those we love die, and we will too. Fortitude enables us to meet all these situations with a calm mind, free of upset and anger.

With fortitude difficulties become milestones in our practice. Rather than retreat, we face the challenge. And challenges there will be—this is *samsāra*. In difficult situations there are always choices. They may not include all the choices we prefer, but we have met the Buddha's teachings and know the methods to subdue the afflictions. As Śāntideva reminds us (BCA 4.28, 29, 36ab):

Although enemies such as hatred and craving  
have neither arms nor legs,  
and are neither courageous nor wise,  
how have I, like a slave, been used by them?

For while they dwell within my mind  
at their pleasure, they cause me harm.  
I patiently endure them without any anger,  
but this is an inappropriate and shameful time for patience.

Therefore as long as this enemy [the afflictions] is not slain with  
certainty before my very eyes,  
I shall never give up exerting myself toward that end.

Life presents us with many opportunities to practice fortitude. Worldly people abhor this, but for bodhisattvas who want to practice the perfection of fortitude, it is a cause of delight. Why? To become buddhas, bodhisattvas need to perfect their practice of fortitude, and to do that they need difficult people and problematic situations. Usually others are kind and there aren't many chances to practice fortitude. So when such opportunities come their

way, bodhisattvas greet them with delight and meet the challenge they present. In that way, misery has a hard time touching bodhisattvas because they don't allow anger, resentment, vengeance, and belligerence to inhabit their minds.

### *The Unsuitability and Disadvantages of Anger*

Anger, resentment, grudge-holding, spite, and so on are emotions that frequently arise in us when our desires are frustrated or when something interferes with our happiness. Although anger seems like a natural response to these situations, that doesn't mean it is a productive one. In fact, anger has many disadvantages, which Candrakīrti points out in his *Supplement* and Śāntideva notes in *Engaging in the Bodhisattvas' Deeds*. Getting angry at someone who has harmed us does not cure our pain or stop the harm. Anger may give us a false sense of power, but that provides little benefit and could lead to greater harm; if we retaliate, the other party will not lie still but will escalate the conflict.

In addition, anger makes us miserable in this life and motivates us to act in detrimental ways that bring suffering in future lives. It is contradictory to say that we do not want to suffer and then willingly create the causes for suffering. The harm someone does to us now is due to our previous destructive karma. If we react to this harm with violent words or actions, we create the karmic cause for more suffering in the future, which is exactly what we do not want.

While the disadvantages of anger toward an ordinary sentient being are many, those of being angry at a bodhisattva are far harsher: great destructive karma is accumulated, great virtue is destroyed, and one must wear the armor—that is, engage in the six perfections—from the beginning of the bodhisattva path.

Both Candrakīrti and Śāntideva speak of the detrimental effects of one bodhisattva becoming angry at another bodhisattva. This could be a case of projecting either real or imaginary faults; it could also be that the angry bodhisattva does not recognize the other person as a bodhisattva, or even if he does, his mind is overpowered due to being habituated with anger. The angry bodhisattva is one who is on the path of accumulation or preparation—that is, he is still an ordinary being who has not realized emptiness

directly. Ārya bodhisattvas no longer manifest anger, so this cannot apply to them.

If a higher bodhisattva becomes angry with a lower bodhisattva, it destroys the merit accumulated over one hundred eons through practicing generosity and ethical conduct, making offerings and paying homage to the buddhas, and so forth. In addition he must train in the six perfections for as many eons as he had moments of hatred, harm, and obstinacy toward the other bodhisattva.

If a lower bodhisattva who has not received a prophecy of her awakening becomes angry at a higher bodhisattva who has received a prophecy,<sup>9</sup> even though she does not express the anger physically or verbally, she must wear the armor from the beginning for as many eons as times she held an angry thought. This means, for example, if a bodhisattva who is almost ready to go from the great path of accumulation to the path of preparation becomes angry at a prophesied bodhisattva, she will not progress to that higher path for as many eons as there were moments of anger and she must train in the path from the beginning of the path of accumulation. In addition, she creates the cause to be born in the hells for as many eons as moments of hatred she felt. The *Compendium of All the Weaving (Sarvavaidalyasamgraha)* says that confessing these faults three times a day for seven years will prevent the ripening of this negative karma, but still ten eons must pass before the bodhisattva is able to progress to the next path.

If a bodhisattva becomes angry at a bodhisattva of equal spiritual attainment, he creates the cause to be born in the hells for as many eons as moments he held hatred for the other bodhisattva. Furthermore, many eons of virtue are destroyed.

If the results of anger toward a bodhisattva are so severe for bodhisattvas, they are much greater for us ordinary beings. When someone who is not a bodhisattva becomes angry at one who is, the virtue created over one thousand eons is undermined. Since we are not always able to identify who is a bodhisattva and who is not, it is to our advantage to restrain our anger toward all beings.

If a bodhisattva becomes angry at a non-bodhisattva, the disadvantages are not as great. For example, the *Lion's Roar of Maitreya Sūtra*

(*Maitreyamahāsinhanāda*) says that if a bodhisattva holds animosity toward the number of ordinary beings living in many world systems, and rebukes or strikes them, he does not have to wear the armor from the beginning of the path. Nevertheless, if an ordinary being becomes angry at another ordinary being, their virtue is undermined.

In the *Questions of Upāli Sūtra* (*Upāliparipṛcchā*) the Buddha said that he does not see the same detrimental effects from other nonvirtues as he does from anger. Anger inhibits the virtue included in the collection of merit. It seems that it does not destroy the virtue from cognizing selflessness, but Tsongkhapa says that this needs to be analyzed further.

The purpose of explaining the disadvantages of anger, especially when it is directed at a bodhisattva, is not to threaten us with suffering or to enforce a hierarchy in which we cannot disagree with a bodhisattva without being punished. The extremely harmful effects of anger described above are a natural result of being hostile toward someone who has dedicated their existence to attaining awakening for the benefit of all sentient beings. The law of karma and its effects is a natural law, like the laws of nature that indicate a barley sprout will grow from a barley seed when the right conditions are present. No one is punishing or threatening us. To the contrary, these teachings were given with compassion, to make us aware of potential harm so that we could avoid it.

With this knowledge, we should do our best to avoid animosity, resentment, belligerence, hatred, and all other forms of anger toward any sentient being and especially toward bodhisattvas. If we hold ill will toward any sentient being, we are the ones who will suffer. What has happened to our mind when we see those who are working to benefit all sentient beings—including us—as enemies? Clearly our mind is in a confused state; such a mental state cannot create the causes for happiness.

Candrakīrti summarized other defects of anger and benefits of fortitude (MMA 34–35):

It creates an ugly body, leads to the unholy,  
and robs discrimination that knows right and wrong.  
Through non-fortitude (anger), one is quickly cast into a bad  
migration.

Fortitude creates qualities opposite to those explained above.

Through fortitude comes beauty,  
dearness to the holy, skill in discriminating  
between the right and wrong, birth afterward as a human or god,  
and the extinguishment of nonvirtues.

Just as a person is unattractive when angry during this life, anger creates the cause to be ugly and repugnant to others in future lives. Let alone be able to benefit others, we will find it difficult to have friends. “The unholy” refers to nonvirtue; anger inclines us toward destructive actions. Anger also makes it difficult to listen to others and to think clearly, which, in turn, impedes our ability to discriminate what to practice and what to avoid. Many people find themselves in prison due to acting under the influence of malice: anger blurred their discrimination between wholesome and unwholesome actions and they engaged in actions that they wouldn’t have, had they been thinking clearly. Unfortunate rebirths follow from negative karma as well. Once born in such a rebirth, generating virtuous karma becomes difficult, and that presents many obstacles to taking a fortunate rebirth in the future.

Cultivating the ability to remain calm in the face of suffering and harm leads to the opposite effects. Others find us attractive, we will be close to holy beings, our discriminating wisdom will be keen, future rebirths will be fortunate, and nonvirtues will be eliminated. Understanding this, let’s practice the antidotes to anger by cultivating fortitude.

The perfection of fortitude is of three types: (1) fortitude that is undisturbed by harm from others, (2) fortitude of voluntarily accepting suffering, and (3) fortitude of certitude about the Dharma.

### *The Fortitude That Is Undisturbed by Harm from Others*

Anger makes us unhappy. No one is happy when they are angry. Given this, it’s quizzical that we tend to hold on to our anger and even bolster it by ruminating on the event that provoked it. It would be much better to release the anger and return to a balanced mental state. Śāntideva tells us (BCA 6.3, 5, 6):

My mind will not experience peace  
if it fosters painful thoughts of hatred.  
I shall find no joy or happiness;  
unable to sleep, I shall feel unsettled.

By it, friends and relatives are disheartened;  
though drawn by my generosity, they will not trust me.  
In brief, there is nobody  
who lives happily with anger.

Hence the enemy, anger,  
creates sufferings such as these;  
but whoever assiduously overcomes it  
finds happiness now and hereafter.

An American journalist once asked me, “Given the devastation in Tibet and the trauma to your life after 1959 when communist Chinese forces took control of Tibet, how come you aren’t angry?” I responded that if I were angry, I couldn’t eat or sleep well; I couldn’t think clearly, and my happiness would vanish. I think she was puzzled by my reply; many government leaders would have taken the opportunity to speak about the horror of their suffering and to harshly criticize the opposition. But I could not think of even one benefit of being angry at the communist Chinese.

The first type of fortitude involves not retaliating when others harm us, those dear to us, or our possessions. The *Prātimokṣa Sūtra* says:

Fortitude is the first and foremost path.  
The Buddha regarded this as supreme in his teachings.  
One who has left the household life  
yet annoys others is not called a renunciant.

To abandon retaliating, seeking vengeance, blaming, criticizing, and holding grudges is indeed an austerity for a mind that selfishly sees our own happiness as foremost. In fact, we are unhappy and miserable when anger

rules our mind, and in turn, our actions make others unhappy. For these reasons, cultivating fortitude brings peaceful liberation from the scourge of anger.

Practicing fortitude challenges us to avoid judging others, abandon becoming angry at whatever we do not like, and look at others' harmful actions in a new light. This does not mean ignoring or rationalizing others' harm, misdeeds, or mistakes. Rather, we look inside ourselves and investigate why anger arises. Instead of believing that anger is the only way to react to situations we don't like or speech we disagree with, we question our anger and research what button was pushed so we can begin to handle such circumstances. Dealing with the situation with a clear, calm mind is more effective.

Some people doubt, "Isn't it justified to become angry at someone who harms us or those we care about?" Distinguishing between an action and the person who does the action is essential. While we can say an action is harmful, wrong, or inappropriate, saying that the person who did it is evil and despicable is mistaken. That person has the potential to become a buddha. They wish to be happy and to overcome suffering. Their mistakes and destructive actions do not negate their good qualities. In fact, once their harmful behavior stops, they may later become our friend. The real troublemaker is the afflictions that make them act in harmful ways. Those afflictions harm them as much as, if not more than, they harm us.

We can censure an action without hating the person who did it. For example, we Tibetans fight the injustice of the Chinese communists, but I am not against them as human beings, even those who are ruthless. I cultivate genuine compassion for them, although I still oppose their actions. It is possible to point out a person's harmful behavior or negative qualities and at the same time respect them as a human being. By acting in this way, there is no danger of creating negative karma. As always, our motivation is key. Speaking out of hatred or desire for revenge is wrong. However, if we know that by not speaking out their destructive behavior will continue and we remain silent, that is also wrong. It is incumbent on us to release destructive thoughts and emotions and strive to communicate clearly with the other person.

The Buddha recommended that, because we cannot be sure who is a bodhisattva and who is not, avoiding criticizing anyone is the best policy. In that light, Mao Zedong can be seen as a bodhisattva; I view him in my own mind on a private level in that way and do not hate him. But in terms of Tibet and the well-being of the Tibetan people, I cannot say Mao's policies were good—they destroyed our religion and our country! There is no conflict between these two views. In fact, when I consider the karmic results he will experience as a result of the harm he caused us Tibetans as well as the Chinese people, I can only feel compassion.

Some people believe that practicing fortitude and being compassionate means our external actions must always be passive and pleasing. That is incorrect. In certain circumstances, passive behavior can be harmful—for example, not interceding to stop harm when it is possible to do so with a good motivation. Refraining from anger does not mean we don't protect ourselves or that we allow another person to do dreadful actions. The point is that it is not necessary to be angry in order to divert harm. We should use our creative abilities to think of solutions to problems rather than flying into a rage.

“Righteous anger,” as people usually think of it, doesn't mean that our anger has suddenly become virtuous. If it did, since we always believe our view is correct, then all our anger would become virtuous! The problem, however, is that everyone else in the situation thinks that their view is correct, which makes everyone's anger virtuous!

If we discern the difference between our internal emotions and external actions, we'll see that it's possible to internally feel compassion for someone who is harming us or others, yet externally act in an assertive manner to quell the harm. There is no malice in our mind. In certain situations, the skillful way to benefit others could involve acting aggressively, motivated by such “righteous anger.” It is extremely important, however, to ensure that no malevolence or spite pollutes our motivation, for if it did, we would have succumbed to actual anger, which is an affliction. “Righteous anger” is not biased toward our own side, and we should not use “righteous anger” as an excuse to mask a very real sense of hostility inside ourselves.

The fierce-looking tantric deities exemplify the possibility of forceful actions done with compassion. They also symbolize taking strong action against our own anger and negative emotions. That doesn't mean suppressing or repressing our anger or feeling guilty for having anger. Rather, they symbolize wisdom that recognizes the disadvantages and dangers of our own anger and wrath and wants to overcome them.

When any of the usual antidotes fail to quell our anger, a skillful method to deal with it is to generate ourselves as a fierce deity (if we have the proper empowerment) and be aggressive toward our own anger. When doing this, it's important to remember that our anger is not us; the force is directed toward the anger plaguing our mind, not toward us as a human being. Once the anger has been subdued, we can choose whatever is the best way to communicate with the other persons(s). We may choose to use forceful speech, but it is backed by compassion, not malice. Transforming the energy of anger in such a way is a technique unique to Vajrayāna.

In the Pāli canon, the Buddha advised Śakra, the lord of the gods, when he asked the Buddha, “Whose killing do you approve?” (SN 11.21):

Having slain anger, one sleeps soundly; having slain anger, one does not sorrow;  
the killing of anger with its poisoned root and honeyed tip:  
this is the killing the ariyas praise for having slain that, one does not sorrow.

In the same text (SN 11.22) the Buddha tells the story of a grotesque *yakṣa* (nature spirit) who sat on the seat of Śakra. Horrified by this audacity, the other gods threw malicious criticism at the *yakṣa*. But with each nasty word spoken, the *yakṣa* did not budge, but grew more and more handsome. Finally Śakra himself came, and kneeling before the *yakṣa*, he put his palms together reverentially and humbly introduced himself. As Śakra uttered each word of the introduction, the *yakṣa* became uglier and more grotesque until he disappeared on the spot. It's truly amazing what kindness can accomplish.

When someone harms us and then, realizing his error, sincerely apologizes, it is crucial that we forgive him and do not hold a grudge.

Continuing to remind the person of his error or secretly wishing for harm to befall him runs counter to the bodhisattva spirit. Nursing a grudge also may impair our physical health and our mental well-being, not to mention creating destructive karma. The Buddha says (SN 11.24):

There are two kinds of fools: one who does not see a transgression as a transgression; and one who, when another is confessing a transgression, does not pardon him in accordance with the Dhamma... There are two kinds of wise people: one who sees a transgression as a transgression; and one who, when another confesses a transgression, pardons him in accordance with the Dhamma.

Forgiveness—letting go of anger—is an important quality that leads to our own and others’ well-being. The more we practice fortitude, the easier it will become to release grudges and feel tranquil in our hearts about events that previously caused us pain.

As for other antidotes to counter anger, please refer to those that Buddhaghosa proposed in chapter 1 of *In Praise of Great Compassion*, which are almost identical to those Śāntideva spelled out in chapter 6 of *Engaging in the Bodhisattvas’ Deeds*. Also refer to the section on transforming adversity into the path in chapter 10 on mind training in *In Praise of Great Compassion*. Please read Śāntideva’s text as well as *Healing Anger* and *Working with Anger*, which are commentaries on it.

Reading will give you new ideas of how to look at situations, but change comes through applying those ideas in your meditation practice. Recalling previous situations in which your anger flared up and then applying these new perspectives familiarizes you with them. Slowly these new perspectives will become a natural way to view interactions with others, and you’ll find that you get angry less often and even when you do, you can resolve it in your mind more quickly. This requires practice—there are no shortcuts and you can’t hire someone else to change your mind—so with an awareness of the benefits, work with your mind.

## REFLECTION

---

Fortitude (patience) is the ability to remain undisturbed in the face of harm or suffering. It does not entail being passive. Rather, it gives the clarity of mind necessary to choose with wisdom whether to act or not to act.

1. If someone points out a fault you have or accuses you of doing something you didn't do, there's no reason to get angry. Acknowledge your faults and mistakes, just as you acknowledge having a nose if someone points that out. On the other hand, if someone blames you for something you didn't do, it's as if they said you have horns on your head. There's no reason to be angry over an accusation that is untrue; simply give them the correct information.
2. Bring to mind a recent situation where you and another were in conflict. Examine how you got involved in the situation. This has two parts:
  - What actions did you do recently to prompt the disagreement? Examining this helps to understand why the other person is upset.
  - Recognize that unpleasant situations are due to your having harmed others earlier this life or in previous lives. Seeing this as the principal cause, learn from past mistakes and resolve to act differently in the future.
3. Examine the disadvantages of anger and grudge holding.
4. Recognize that the other person's unhappiness and confusion is making him harm you. Since you know what it's like to be unhappy, empathize and have compassion for him.

---

*The Fortitude of Voluntarily Accepting Suffering*

Physical and mental pain will arise in our lives—it's a natural occurrence for beings like us in saṃsāra. There is no escaping it, but Dharma practitioners can take these experiences into the path by practicing the fortitude of voluntarily accepting suffering. This does not entail gritting our

teeth while repressing our anger and fear, but rather actively transforming the situation and using it to develop positive qualities.

For example, when experiencing the physical pain from illness or injury or the mental pain from injustice or betrayal, remember that this pain is the result of causes—the destructive karma you created. The bacteria, virus, car, weapon, or other person is the cooperative condition; if we hadn't created the principal cause—harming others motivated by the self-centered attitude—the painful result would not have occurred. This is not blaming the victim or saying that someone with a severe illness caused themselves to be ill; saying such things is certainly not compassionate! Rather, it means that actions done in a previous life can bear results in this life. The fact that you have good health care and skilled health care professionals who help you is a result of virtuous karma created in previous lives.

Our karma doesn't make others behave the way they do; it doesn't make them harm us. Their afflictions cause them to harm others, and they are responsible for those actions. We suffer in a certain situation because our previously-created karma ripens at that time, but that karma is not what made others harm us. Our karma causes our suffering in a situation, but others' afflictions cause their actions. Do not have a fatalistic attitude toward karma, thinking that events are predetermined. You can and should act to prevent harm or intervene while harm is occurring, but don't do that motivated by anger.

If we respond to suffering with anger, our actions create the causes to experience pain again in the future. If we refrain from anger, the previous destructive karma is exhausted and constructive karma from practicing fortitude is created. Understanding this helps us to accept our present experience and to be more conscientious and mindful of our actions in the future. In addition, considering that this destructive karma could have ripened in a series of horrible rebirths, undergoing a much smaller suffering in this life becomes acceptable.

It is possible to willingly and even happily bear suffering. For example, a woman in labor willingly bears the pain because she wants the baby. Someone who is ill voluntarily bears injections or even surgery, knowing that it will bring about healing. We have the capacity to bear suffering patiently without becoming angry or resentful because we know that doing

so will prevent future suffering and will enable us to progress on the path to awakening, a state free from all duḥkha whatsoever.

Usually we think that suffering has no benefit at all. However, although we definitely should not deliberately bring misery to ourselves, when it does arrive unasked, contemplating its benefits helps us to avoid increasing our suffering by falling into anger and despair. For example, suffering can strengthen our determination to be free from saṃsāra because we understand that as long as we're in saṃsāra, such suffering will occur. Suffering also can dispel conceit and make us a kinder and humbler person. While crushing our arrogance isn't necessarily pleasant, it is beneficial—as we're happier and have better relationships when we don't consider ourselves above others.

Undergoing misery also opens our hearts in compassion to others who are in similar situations. We understand them better, and sharing a common experience, we feel closer to them. We begin to care about their suffering as much as we care about our own, and in our heart we begin to understand that suffering is to be eliminated; it doesn't matter whose it is.

When practicing the Dharma, on occasion we may have to go through hardship while relinquishing habitual harsh speech or other bad habits and not acting according to our dysfunctional emotional habits. We may be very attached to certain things, thinking that we *must* have them. When we begin to let go of such craving, mental uneasiness may arise. At other times we may lack food, clothing, shelter, or companions. It is important to be able to face such hardship and strengthen our mind by continuing to practice the Dharma. With the fortitude of voluntarily accepting suffering, we accept the short-term difficulties of this life without despair because we have a higher aim and purpose. Our determination is strong, as Śāntideva counsels (BCA 6.9,10):

Whatever befalls me,  
I shall not disturb my mental joy;  
for having been made unhappy, I shall not accomplish what I wish,  
and my virtues will decline.

Why be unhappy about something

if it can be remedied?

And what is the use of being unhappy about something  
if it cannot be remedied?

The last verse makes so much sense, but we need to stop and reflect on it during times of stress, strife, and other problematic events. If we can do something about a painful situation, let's do it. There's no reason to complain, blame, or be upset and angry. On the other hand, if there's nothing we can do to remedy the situation, let's accept it, maintain a balanced mind, and turn our attention to something useful where we can contribute to the well-being of others.

## REFLECTION

---

1. Contemplate the benefit you can derive from voluntarily accepting suffering:
  - Your understanding of the disadvantages of saṃsāra will increase and, along with that, so will your renunciation of saṃsāra's suffering and your aspiration to be free from saṃsāra.
  - You will understand the experience of others who are suffering so your compassion will increase.
2. Ask yourself, "Can I do something about it?" If you can, anger is out of place because you can improve the situation. If you can't, anger is useless because nothing can be done.
3. Reflect that karma that could have brought long-lasting and intense suffering in an unfortunate rebirth is now ripening as something that you can easily accept and endure.

---

### *The Fortitude of Certitude about the Dharma*

Understanding the vast and profound meanings of the Dharma is not easy, but cultivating the fortitude of gaining certitude about the Dharma—also

called the fortitude of definitely thinking about the Dharma—makes it easier. This fortitude gives us the ability to happily continue to learn and practice for however long it takes in order to fathom the Dharma’s deep and detailed meanings.

Meditation on emptiness challenges the very root of our self-grasping ignorance, which puts up a fight when its sovereignty is challenged. It is said that when one first has a glimpse of the emptiness of true existence, fear arises in the mind and one wants to withdraw from that experience. It is important at this time not to capitulate to the fear and to continue meditating on emptiness.

The fortitude of practicing the Dharma brings appreciation for the bodhisattvas’ activities and strengthens the wish to become bodhisattvas ourselves. Fear and resistance may arise all along the path because the Dharma challenges our dearly held but afflictive assumptions, preconceptions, and prejudices. It takes fortitude not to retreat into habitual emotions and behavior that are the very source of our misery, and instead to arouse courage and continue to practice.

By cultivating the fortitude of practicing the Dharma, we will learn, reflect, and meditate on the teachings, and by doing so we gain certainty in the meaning of the teachings. This conviction is gained through reflecting on the qualities of the Three Jewels, of the path, and of the awakened state; by contemplating the selflessness of persons and of phenomena; and by delving into the meaning of the profound and vast scriptures. In this way, our confidence in the Dharma will grow, enabling us to integrate it in our lives.

While the fortitude of not being disturbed by others’ harm can only be practiced when someone harms us, the fortitude of practicing the Dharma can be practiced at other times—for example, when we don’t feel like doing the practices we have promised to do, when a teaching is going on for a long time, or when we are studying a difficult passage or concept in the scriptures. At such times, the fortitude of voluntarily accepting hardship and of practicing the Dharma is useful to get us over the bumps in the road.

In the *Bodhisattva Grounds*, Asaṅga specified eight objects to cultivate certitude on:

1. The *object of faith and confidence* is the excellent qualities of the Three Jewels.
2. The *object to be realized* is the emptiness of persons and phenomena.
3. The *object of aspiration* is the magnificent powers of the buddhas and bodhisattvas, such as the power of the superknowledges, the six perfections, and the innate power.
4. The *object to be adopted* is the causal virtuous actions and the resultant attainments.
5. The *object to be abandoned* is the causal misdeeds and their resultant obstacles and duḥkha.
6. The *object of meditation that is the goal to attain* is awakening.
7. The *object of meditation that is the means for attaining the goal* includes the training paths engaged in with bodhicitta.
8. The *object of further practice through learning and reflection* is the twelve branches of scriptures—all the teachings and meanings contained in them.

*Engaging in the Bodhisattvas' Deeds* explains the fortitude of definitely thinking about the Dharma as contemplating the impermanent nature and lack of self-power of the causes of duḥkha. For example, although we don't wish to fall ill, sickness arises as a result of causes and conditions. Similarly, although people don't think "I want to be angry" and anger doesn't think "I will arise," when the causes and conditions come together anger arises in our mind. All the destructive actions we and others do under the influence of afflictions likewise don't think "We will arise"; rather, they come into being because of causes and conditions. They have no self-power.

For example, someone rear ends our car at a stoplight. Did the car think "I will hit the vehicle in front of me"? Did the driver have that intention? When we become angry and shout at the other driver because our car is dented, do we think "I'm going to become as angry as possible"? When the other driver becomes angry because he was shouted at and blamed for something that was an accident, did he have the intention "I will get angry

too”? All of these components of the situation arose as a result of causes and conditions. None of them arise under their own power. All of them are transient; as soon as their causal energy is exhausted, they too will end.

Perhaps it’s easier contemplating this in terms of a toddler. Does a young child have the intention to cry and create a fuss? It happens due to causes and conditions—the external situation and the internal state of the child’s mind. When big children—whom we call “adults”—create their version of a fuss, it similarly arises due to causes and conditions. Like the fussy toddler, adults too are under the control of their afflictions, and afflictions arise due to other conditions.

As we gradually build up the fortitude born from reflecting on the Dharma—“Dharma” meaning either reality or the teachings—we become able to tolerate things that we could not tolerate before. Then when a situation occurs in our life, we remember what we have learned before and apply it. For example, our spiritual mentor instructed us on the impermanent nature of all conditioned things. Then, when a dear one dies, we remember that teaching and, applying it to this situation, we accept our friend’s death and calm our mind. In other words, this fortitude provides us with deeper resources to draw upon as we go through life, deepen our understanding of the Dharma, and work to benefit others.

The fortitude of the nonarising of phenomena (*anutpattika-dharma-kṣānti*) is the direct realization of emptiness and pertains to the fortitude of certitude about the Dharma. The *King of Concentration Sūtra* (*Samādhirāja Sūtra*) says (SR 6.8, 10):

But if a person maintains a fortitude that is great,  
even were they cut up, for ten million eons,  
into tiny pieces as numerous as the Ganges sands,  
their mind will never regress.

Their fortitude being for the selfless nature of phenomena,  
those who perceive selflessness have no afflictions.  
They know that all phenomena are like space.  
That, therefore, is what is termed “fortitude.”

This fortitude also becomes the perfection of wisdom.

### *Distinguishing Factors of the First Three Perfections*

Regarding the perfections of generosity, ethical conduct, and fortitude, Candrakīrti said (MMA 39):

The Sugata praised mainly the three practices of generosity, and so forth [ethical conduct and fortitude] for householders.

These are also the collection of merit, the cause of a buddha's form body.

To become a buddha, we need to create the causes for both a buddha's body and a buddha's mind. The first three perfections pertain principally to the collection of merit and are the predominant causes of a buddha's form body. Of course, bodhisattvas also accumulate the collection of wisdom on the first three grounds and integrate wisdom of the ultimate nature with these three perfections by contemplating that the agent engaging in the perfection, the action of that perfection, and the object or recipient of that action are empty of inherent existence. The buddha's form body is of two types: the enjoyment body in which a buddha teaches ārya bodhisattvas in the highest pure land and the emanation body in which a buddha appears in an ordinary form to us ordinary sentient beings.

The perfections of generosity, ethical conduct, and fortitude are easier than the later three perfections for householders to practice. Householder bodhisattvas live active lives in society, and since the first three perfections involve interacting with sentient beings, they are more suitable for householders. Monastic bodhisattvas tend to have a less active life in terms of directly relating to people, so the more introspective practices of meditative stability and wisdom, which are undertaken with joyous effort, are more compatible with their lifestyle. Of course all bodhisattvas—be they householders or monastics—practice all six or ten perfections and attain the same full awakening.

# 3

## Living as a Bodhisattva: The Remaining Seven Perfections

THE SIX PERFECTIONS can be expanded to become ten because the sixth perfection, wisdom, is said to also include the four perfections of skillful means, unshakable resolve, power, and pristine wisdom. Having spoken of generosity, ethical conduct, and fortitude in the previous chapter, we will now turn to the remaining seven perfections: joyous effort, meditative stability, wisdom, skillful means, unshakable resolve, power, and pristine wisdom.

### *The Perfection of Joyous Effort*

The perfection of joyous effort is a mind that takes delight in developing virtuous qualities. It does not refer to effort in general, because people may make great effort to accomplish nonvirtuous aims and that is definitely not included here!

Joyous effort is extremely important because it enables us to engage in difficult work or sustained Dharma practice and bring it to fruition. By assessing an activity well before committing to do it, and then once committed, carrying it through to completion, our confidence will increase and become stable. In addition, practices or tasks that were previously difficult will become easier because we are now familiar with them, and with sustained joyous effort, we will be able to accomplish them. Joyous effort enables our spiritual development to progress smoothly as we gradually gain realizations of the path. As Candrakīrti said (MMA 41ab):

All attainments follow after effort,

the cause of the two collections of merit and wisdom.

Once our goal of buddhahood is clearly understood, we have more energy to attain it. When it is not very clear, laziness easily sneaks in. To remedy this, think about the qualities of awakening and the possibility to attain it. This will inspire our effort to fulfill the two causes of full awakening, the collections of merit and wisdom.

The joyous effort that takes delight in mental transformation and the bodhisattvas' practices enables us to easily fulfill the two collections. Because these two are the essential causes to attain the truth body and form body of a buddha, joyous effort is said to be the source of all auspicious attainments.

At initial stages of practice, your ability to practice is naturally weak, but with repeated practice your capacity will increase. When it becomes strong, you will look back at your original state and see that what initially seemed almost impossible has now become possible and you have accomplished what you did not think you could. Your inner capabilities have grown through the passage of time because you made effort.

For example, at the beginning, engaging in just one practice on the method side of the path—let's say subduing your anger through the practice of fortitude—may seem almost inconceivable; let alone doing a practice in which method and wisdom are combined, by contemplating that you, your anger, the action of being angry, and the person you're angry at are empty of inherent existence but exist dependently. However, as you joyfully put energy into cultivating one good quality, then another, and another, you will eventually be able to do a practice of combined wisdom and method. Each new quality will increase your capacity, and because you remain steadfast and continue to practice, your progress will increase exponentially and realizations will automatically dawn.

A mind with joyous effort is very confident, and bodhisattvas cultivate three types of confidence:

(1) With *confidence in action*, they are prepared to act alone without others' help. This confidence enables bodhisattvas to do solitary retreat and to engage in vast actions to benefit sentient beings without feeling insecure.

This confidence additionally boosts them to complete whatever projects, studies, or retreats they begin.

(2) With *confidence in their capacity* to work for others, bodhisattvas engage in beneficial activities without self-doubt or hesitation. This confidence arises from understanding, “Other sentient beings are under the influence of afflictions and can’t accomplish their own welfare. I’ve seen the harm of afflictions and won’t let myself be influenced by them, so I am capable of working for the benefit of sentient beings.” With firm confidence in their abilities, bodhisattvas are mindful, and by monitoring their mind, they make sure they act in accord with the Dharma.

(3) With the *confidence to oppose afflictions*, bodhisattvas are determined not to allow themselves to fall under the sway of afflictions. Highly motivated to progress on the path, they combat afflictions whenever they arise.

The stages of the path literature speaks of three types of the perfection of joyous effort:

(1) *Armor-like joyous effort* is enthusiasm for learning, reflecting, and meditating on the Dharma that enables you to do these three without falling prey to the laziness of procrastination, the laziness of pursuing meaningless activities, and the laziness of discouragement. Armor-like joyous effort is bold so that bodhisattvas take a long-term viewpoint and make the determination to dedicate themselves for eons to benefit even one sentient being.

(2) With the *joyous effort of acting constructively*, we so deeply aspire to benefit sentient beings that our mind is energetic and delighted to engage in virtuous actions—both those done in meditation and those accomplished by directly relating to sentient beings.

(3) The *joyous effort of benefiting sentient beings* supports us to reach out and help others in need, in particular the eleven groups of sentient beings mentioned in the ethical conduct that benefits others.

The *Ornament of Clear Realizations* speaks of three types of joyous effort that counteract the three types of laziness spoken of in the above section on armor-like joyous effort:

(1) The *joyous effort of not becoming fatigued* opposes the *laziness of sleep, lethargy, and procrastination*. Contemplating death wakes us up to appreciate the opportunity afforded by our present precious human life and dispels the mind that thinks there's plenty of time to practice Dharma later and thus wants to sleep and lounge around now.

(2) The *joyous effort of not being attached to destructive or frivolous actions* counteracts the *laziness attached to worldly activities* that centers around the happiness of only this life. We are so busy nowadays and are easily distracted by the hustle and bustle of our lives. There's so much to do—career opportunities, exciting people to meet, beautiful places to visit, adventures to have, new digital devices to explore. But in terms of practicing the Dharma, laziness rules because we have no time. What are we busy doing? Thinking about how to get what we want, how to get even with the people who have harmed us, how to get our way, how to win an argument. There is plenty of time to ruminate and to worry, but we can't make time to learn their antidotes. Remembering the disadvantages of cyclic existence jolts us out of this complacent distraction.

(3) The *joyous effort of thoroughly upholding the path* is the counterforce to the *laziness of discouragement*. Discouragement arises by thinking, "I am incapable of practicing the Dharma and will never succeed," "The path is too difficult. It's impossible to accomplish," or "The goal of awakening is too high. I can't attain that." Although these discouraging thoughts seem so real and truthful, if we examine them, we discover that they are false. It's important to monitor this kind of self-talk and refute its nonsensical arguments. It's just another manifestation of the self-centered attitude that sabotages our confidence and abilities.

Discouragement destroys joyous effort. It may arise for several reasons. Sometimes we want to develop a certain skill or to help others, but our work does not turn out as we wished or planned. This happens to me too. But when I recall my motivation, my confidence returns. I began with a sincere desire to benefit. Regardless of what others may say, my motivation was genuine, and knowing that gives me courage and inner strength. If my motivation is pure, even though my activities may not succeed as I would have liked, I still feel satisfied. If I try my best and act with integrity and kindness, even if I fail, it doesn't matter. On the other hand, if my

motivation is not sincere and truthful, then even if others praise me and I become famous, inside me discomfort and self-doubt will still be present. If that happens, I have to back up and establish a genuinely compassionate motivation.

It's very important not to dwell in the laziness that is a sense of inferiority, thinking that we're incapable. To overcome this, reflect on the fact that you have the buddha nature—the potential to become a fully awakened, omniscient buddha. Your buddha nature can never be taken away. Also reflect on the marvelous situation of freedom and fortune that you have attained. Your precious human life provides enough time to practice as well as the proper conditions to do so. By reflecting on this, your despondency will lift.

## REFLECTION

---

1. Which of the three types of laziness do you fall prey to most often?
2. Which types of joyous effort are the antidotes to bolster your strength?
3. Imagine a situation where you apply one or more of the types of joyous effort to overcome that laziness.
4. By imagining this repeatedly, you'll develop the confidence to be able to do it. Make a strong determination to follow up on this.

---

In *Engaging in the Bodhisattvas' Deeds*, Śāntideva speaks of cultivating four powers to counteract the laziness that inhibits joyous effort. If you suffer from laziness, look into these:

(1) Generate *appreciation of and interest in virtue*. These come through comparing the results of nonvirtue and the results of the bodhisattva deeds. Understanding that the bodhisattva path is long and may entail formidable deeds such as giving away our body in charity, we appreciate and aspire to engage in these practices in the future. But we can approach these activities gradually and do them when we are mentally and physically ready. When we are fully prepared, we will not experience physical pain due to our merit

and will not experience mental distress due to our wisdom. Śāntideva shares the vision of what we will be able to do as high level bodhisattvas (BCA 7.28):

As their bodies are happy due to their merit and  
their minds are happy due to their wisdom,  
even if they remained in saṃsāra for the sake of others,  
why would the compassionate ones ever be upset?

(2) With *steadfastness* we are self-confident and continue whatever virtuous activities we have begun until they are completed. This self-confidence is not unrealistic, inflated arrogance, but comes from an inner awareness of our buddha nature and the opportunities provided by this precious human life. Śāntideva encourages us (BCA 7.59):

Whoever seizes self-confidence in order to conquer the enemy of  
arrogance—  
they are the self-confident ones, the victorious heroes [vanquishing  
afflictions].  
In addition, whoever definitely conquers the spread of this enemy,  
arrogance,  
completely [wins] the fruit of a buddha, fulfilling the wishes of the  
world.

When your mind is realistic and clear-sighted before starting a virtuous activity, you'll be able to restrain impulsivity and carefully assess if you possess the ability, time, knowledge, and other conditions necessary to complete the task. If you do not, then do not commit yourself at this time.

If you start a virtuous practice or project and discontinue it in the middle, neither you nor others will receive the beneficial results that come from completing it. In addition, you will feed the habit of leaving things undone, a habit that will have deleterious effects in this life as well as future lives. If you begin an activity and then see that continuing it would involve acting contrary to your precepts, then back away. Otherwise, carry through whatever you begin.

However, if an unexpected circumstance arises and you are unable to complete the task, notify everyone who is depending on you to finish it. Remembering that others will need to make other plans if you're unable to complete the project, inform them as soon as possible and help them find a replacement.

Steadfastness also includes being firm and counteracting afflictions as they arise, without giving up in despair. Śāntideva recommends (BCA 7.60–62):

If I find myself amidst a crowd of disturbing conceptions,  
I shall endure them in a thousand ways.  
Like a lion among foxes,  
I will not be affected by this disturbing host.

Just as people will guard their eyes  
when great danger and turmoil occur,  
Likewise, I shall never be swayed by the disturbances within my  
mind,  
even at times of great strife.

It would be better for me to be burned,  
to have my head cut off and to be killed,  
rather than ever bowing down  
to those ever-present disturbing conceptions.  
So likewise, in all situations, I should do nothing other than what is  
fit.

Sometimes our mind proliferates with distorted conceptions. Seeing their faults, we remain firm in applying the antidotes. If we cannot do that while in the situation, we excuse ourselves, calm our mind, and then return to work out the situation with those involved.

Being steadfast in the face of dangers, such as the afflictions that can send us to unfortunate rebirths if we give them leeway, we can subdue them. While it may seem easier to give in to the afflictions in order to stop

our internal discomfort, in the long-term this is not advisable. Knowing that the storm of afflictions will eventually subside, we avoid making any bad decisions while under their influence. We remain committed to following the correct path to happiness.

(3) With *joy* we consistently and continuously act according to bodhicitta. Just as an elephant scorched by the midday sun in India plunges into a cool pool, with the same joy bodhisattvas are filled with joyous energy when it comes to creating virtue. Rather than impatiently anticipating the goal, they enjoy the process of creating the causes for full awakening. Śāntideva says (BCA 7.64–65):

Although [worldly] people work in order to be happy,  
it is uncertain whether or not they will find it.  
But how can those whose work itself is joy  
find happiness unless they do it?

If I feel that I never have enough sensual objects,  
which are like honey smeared on a razor's edge,  
then why should I ever feel that I have enough  
merit which ripens in happiness and peace?

The image of honey on a razorblade is strong. Who would ever lick such honey, even if it were the most delicious in the world? But following attachment to sensual objects is like doing this; it simply brings problems in this life and creates nonvirtuous karma that ripens in future lives. Remembering our long-term cherished goal of buddhahood, we maintain a joyful mind that doesn't get distracted.

(4) *Rest* is important to maintain a balanced body and mind so that you will be able to benefit sentient beings over a long period of time. When you are tired after engaging in virtuous activities, take a break, rest, and begin again when you feel refreshed. By resting at appropriate times before your joy has dissipated, you'll be refreshed and have great joy and enthusiasm when it is time to begin again.

Some people push themselves to practice, doing this and that virtuous activity until they are so exhausted that they stop doing any Dharma

practice at all. This is not wise. We should practice joyfully because we see the benefits of the Dharma, not because we think we “should” or because we are trying to show what good disciples we are. With joyous effort, our capacity will gradually increase. Becoming wisely sensitive to what our body and mind need at any particular time, we will gratefully rest and relax when necessary.

However, if you push yourself to the point of exhaustion, the delight in virtuous activities will evaporate and your joyous effort will vanish. It is essential to be skillful and rest before becoming completely drained, so that you can continue practicing over a long period of time. Learning to become a balanced person by knowing when to take a break and when to continue will prevent the difficulties that come with burnout.

Having completed a virtuous activity or project, rejoice in the merit created and the benefit others have received, and then take a break and rest. In that way, you will be able to engage in subsequent activities with enthusiasm. Śāntideva counsels (BCA 7:67):

When my strength declines, I should leave whatever I am doing  
in order to be able to continue it later.

Having done something well, I should put it aside  
with the wish [to accomplish] what will follow.

## REFLECTION

---

Contemplate the four powers to counteract the laziness that inhibits joyous effort. Think of how to integrate these in your life.

1. Generate *appreciation of and interest in virtue*, which come from comparing the results of nonvirtue and the results of the bodhisattva deeds.
2. Cultivate *steadfastness* that gives you the self-confidence to continue whatever virtuous activities you have begun until they are completed. This self-confidence is not unrealistic arrogance but is practical. It

comes from an inner awareness of your buddha nature and the opportunities provided by this precious human life.

3. With *joy* consistently and continuously act with bodhicitta.
4. After you have completed a project or when you need a break, take time to *rest* and refresh yourself so you can engage in more virtuous actions and beneficial projects with renewed enthusiasm.

---

### *The Perfection of Meditative Stability*

In the perfection of meditative stability, concentration or one-pointedness of mind is developed through the nine stages of sustained attention that culminate in serenity (*śamatha, samatha*). One-pointedness is the ability to focus one-pointedly on a chosen object of meditation with mental stability and clarity. The ability to do this exists within us right now, but it is undeveloped. By learning the correct methods to cultivate one-pointedness and practicing them our concentration will increase. The benefits of doing this are great: By focusing more clearly and consistently on virtuous meditation objects without being disrupted by restlessness and laxity, the various meditations we do will more swiftly bring results. For example, by sustaining concentration on impermanence or emptiness, we will be able to break through the ignorance that grasps permanence and inherent existence. By strongly focusing the mind on the experience of compassion, it will become integrated in our mindstream and will arise more easily in the future.

The practice of serenity and the higher meditative absorptions of the form and formless realms are found among both Buddhists and non-Buddhists. However, in the perfection of meditative stability, it becomes a bodhisattva's practice because it is based on refuge in the Three Jewels, motivated by bodhicitta, and aimed at actualizing the wisdom realizing emptiness in order to attain full awakening.

In general, āryas' supramundane path consciousnesses resemble mundane dhyānas in that they contemplate their object with full, single-pointed absorption and their dhyānic factors (investigation, analysis, joy,

bliss, and one-pointedness) are as intense as those in the mundane dhyānas. However, they differ from the mundane dhyānas in several significant ways. First, the way they affect the defilements differs. Mundane dhyānas temporarily repress the coarse defilements but do not eliminate their seeds whereas supramundane path dhyānas forever uproot their respective level of defilements and their seeds. Second, their result in terms of rebirth differs. Mundane dhyānas lead to rebirth in the form realm, and the practitioner continues to cycle in saṃsāra; supramundane path dhyānas result in nirvāṇa, perfect freedom from saṃsāra. Third, they differ in terms of their balance of concentration and wisdom. In the mundane dhyānas, concentration is dominant and wisdom is used to analyze the faults of the lower levels of dhyāna and the benefits of the higher level, so that the practitioner will seek the higher level. In the supramundane path dhyānas, concentration and wisdom are balanced. Concentration focuses on emptiness and wisdom realizes it.

To attain serenity, a practitioner must observe ethical conduct, be pure in her habits and behavior, and have joyous effort to continue to cultivate serenity. Once serenity has been attained, a bodhisattva uses it to cultivate insight into emptiness. Through such training, the union of serenity and insight observing emptiness is attained, marking the beginning of the Mahāyāna path of preparation. From there she progresses through the remaining bodhisattva paths to buddhahood.

The higher training in concentration and the perfection of meditative stability were elaborately discussed in the previous volume, *Following in the Buddha's Footsteps*, chapters 6–10. Here is a summary of a few important points.

Residing in an isolated and peaceful place, living a simple lifestyle with few distractions, and being content with what you possess facilitate the development of concentration. While living in the city, you may like to do some serenity meditation every day—that will help your concentration—but do not expect to develop quick or complete results in that milieu. The Buddha described a wide variety of possible meditation objects, so consult your spiritual mentor regarding an appropriate object and then listen to teachings from your spiritual mentor on how to reduce the five hindrances of sensual desire, malice, lethargy and sleepiness, restlessness and regret,

and deluded doubt. Also learn the methods to overcome the five faults—laziness, forgetting the meditation object, restlessness and laxity, nonapplication of the antidote, and overapplication of the antidote—by employing the eight antidotes—faith, aspiration, effort, pliancy, mindfulness, introspective awareness, application of the antidotes, and equanimity.

Serenity involves cultivating a mind that can abide one-pointedly on an object. In addition, the mind perceiving that object must be fresh and clear. The two principal hindrances to concentration are mental restlessness, which impedes the stability of the mind—its capacity to remain one-pointedly on the object—and laxity, which impedes the clarity and freshness of the mind. Restlessness arises when the mind is distracted outward toward objects of attachment, and laxity occurs when the mind is withdrawn inside too much.

Detailed instructions describing how to counteract these and other hindrances and how to progress through the nine stages of sustained attention are found in the great treatises. After completing the nine stages of sustained attention, mental pliancy, physical pliancy, physical bliss, and mental bliss are attained, each depending on the preceding one. Based on those, serenity and a mind of the first dhyāna are attained. Practitioners can now choose whether to attain the higher meditative absorptions of the form and formless realms through the mundane path or to contemplate the sixteen aspects of the four truths and unite serenity and insight to attain the supramundane path. The mundane path leads to rebirth in those meditative states that are still within cyclic existence. The supramundane path leads to liberation and full awakening. Almost all Buddhist practitioners choose the supramundane path because they aim for liberation and awakening.

## REFLECTION

---

1. Set up a daily meditation practice. Begin with fifteen minutes and gradually increase the time when you are ready.
2. Instructions on how to set up sessions are in chapter 6 of *The Foundation of Buddhist Practice*. Do analytical meditation, for example

meditating on the reflections found in this and other volumes of *The Library of Wisdom and Compassion*. Alternatively, do stabilizing meditation using either the image of the Buddha or the breath as your meditation object, as described in chapters 6 and 7 of *Following in the Footsteps of the Buddha*.

---

### *The Perfection of Wisdom*

Buddhism emphasizes the development of wisdom, intelligence, and knowledge. This does not mean we must have a high IQ or a college degree to learn the Dharma or to be liberated from cyclic existence. Rather we must be open-minded, have the ability to learn and analyze clearly, be sincere in our spiritual aspirations, and have created sufficient merit. Some people who are neither brainy nor clever have the necessary focus, power, and effort for spiritual advancement. By following their teachers' instructions and practicing properly, they accomplish high levels of the path. Our intelligence and ability to understand can be increased in this life through learning, thinking, and meditating. It is not the case that we are born with a certain level of intelligence that cannot be improved, expanded, and deepened.

The value of developing wisdom is incalculable. In his *Hundred Verses of Wisdom (Prajñāśataka)*, Nāgārjuna says (LC 212):

Wisdom is the root of all good qualities  
seen and not yet seen.  
To achieve both of these,  
embrace wisdom.

Āryaśūra praises wisdom in the *Compendium of Perfections (Pāramitāsamāsa)*, LC 216):

The ten powers of the sugata, most excellent of strengths,  
all superior activities without parallel,  
and all other collections of virtues in their entirety

arise based on wisdom as their cause.

The arts and the best treasures in all worlds,  
the variety of sacred learning that is like an eye,  
protections, awarenences, mantras, and so on,  
the different attributes of the teachings that set these forth,

the multitude of enumerations and the doors to liberation,  
all such types of service to the world  
that display the great power of the bodhisattvas—  
all arise from the power of wisdom.

With compassion, Āryaśūra then points out what hinders us from cultivating wisdom so that with joyous effort we will work to free ourselves from these impediments (LC 218):

Laziness, indolence, and reliance on bad friends,  
being governed by sleep, no feeling for discernment,  
no interest in the Sage's most sublime wisdom,  
inquiring under the influence of false pride,

lacking the faith to rely on learned persons  
due to attachment to self from feelings of inadequacy,  
the great poison of false concepts that are wrong views—  
these are the causes of confusion.

It's clear why preferring to lie around and do nothing and oversleeping impede the development of wisdom. Contemplating death and impermanence remedies this. Relying on bad friends who encourage us to join them in worldly activities distracts us from what is important. Thinking about the disadvantages of saṃsāra overcomes this. Not having interest in cultivating wisdom, not seeking out qualified spiritual mentors, and the pride of thinking that we already know something when we actually do not—these three prevent us from attending teachings and studying. Contemplating the benefits derived from wisdom will overcome these.

Belittling ourselves and telling ourselves that we can't learn or cultivate wisdom stops us from even trying. To counteract this, remember your buddha nature and the opportunities afforded by your precious human life.

Use the above methods to chip away at and finally abolish these hindrances. Then engage in the three types of the perfection of wisdom:

(1) The *wisdom understanding the ultimate*, emptiness, abolishes all obscurations.

(2) The *wisdom understanding the conventional* involves learning five fields of traditional knowledge—logic, grammar and poetry, medicine, the arts, and self-knowledge. To communicate with and teach others, we must have knowledge of worldly topics so that we can teach the Dharma using contemporary language and examples. By understanding grammar and poetry we can express ourselves well; with knowledge of medicine we will be able to assuage sentient beings' physical suffering in this life; with knowledge of the arts and sciences we'll arouse others' interest in self-knowledge. Today bodhisattvas may also want to learn communication and mediation skills, computer science, neuroscience, psychology, cultural anthropology, sociology, physics, biology, and other topics. In short, bodhisattvas learn whatever is useful for benefiting sentient beings.

(3) The *wisdom understanding how best to work for the benefit of sentient beings* is skilled in the diverse ways to benefit sentient beings. With it, bodhisattvas reach out to all beings to help them with both worldly and spiritual concerns. This wisdom is effective in working with the eleven types of beings mentioned in the ethical conduct of benefiting sentient beings.

The wisdom understanding the ultimate is emphasized because it is the key to awakening and the only way to free ourselves and others from saṃsāra. This perfection of wisdom is an ārya bodhisattva's direct perceiver of emptiness that is supported by the method side of the path (bodhicitta). While those who have not entered the bodhisattva path may gain nondual wisdom and actualize the paths of śrāvakas or solitary realizers, theirs is not the perfection of wisdom, which arises only after generating bodhicitta. This wisdom will be the principal topic of future volumes of the *Library of Wisdom and Compassion*.

The Buddha explained sixteen aspects of the four truths. Of the four aspects of the truth of duḥkha, two are emptiness and selflessness. The meaning of these has different interpretations according to the four tenet systems—the Vaibhāṣika, Sautrāntika, Yogācāra (Cittamātra), and Madhyamaka. Here we will follow the Madhyamaka view, and among its two branches—Svātantrika and Prāsaṅgika—we will explain the latter. Through combining the method aspect of the path (exemplified but not limited to the aspiration to be free from saṃsāra, compassion, and bodhicitta) and the wisdom aspect of the path (the realization of emptiness and selflessness according to the Prāsaṅgika view), we will attain full awakening, which does not abide in either cyclic existence or the pacification of saṃsāra that is an arhat’s nirvāṇa. Maitreya says in the *Ornament of Clear Realizations* (LC 2.19):

Through wisdom you do not abide in cyclic existence.

Through compassion you do not abide in [an arhat’s] peace.

The Madhyamaka, or Middle Way, texts explain ultimate truth—the emptiness or lack of inherent existence—and describe how realizing emptiness acts as the main and final counterforce that eliminates grasping inherent existence.

Interestingly, scientists are now reaching similar conclusions about the ultimate nature of phenomena. For example, physicists studying quantum theory are sometimes hesitant to use the term “absolute reality” because it connotes that things exist independently, from their own side. Through investigation, scientists have been unable to find such independent or inherent existence, because everything exists in dependence on the observer and a multiplicity of other factors. Instead of saying “absolute reality,” they now say “probability.” It will be interesting to see in which ways Buddhist reasoning and meditative experience and scientific investigation will approach the same point. But whether scientists will meditate on the view of the emptiness of inherent existence and attain awakening remains to be seen!

*The Three Understandings*

The three understandings (three wisdoms) are those arisen from learning (studying or hearing), reflecting (thinking, contemplating), and meditating. They come into play with respect to all Dharma topics and are especially important when we seek to realize emptiness. These three are the mental factor of wisdom (*prajñā*) and are developed progressively, beginning with the understanding arisen from learning, progressing to the understanding arisen from reflection, and finally the understanding arisen from meditation. When advancing to the next one, however, we do not abandon the previous understandings but continue to develop them. The example of cultivating the understanding of emptiness clarifies how this works.

The *understanding arisen from learning* comes through hearing and/or studying teachings, for example on emptiness. In the case of someone who is newly cultivating the understanding of emptiness, the understanding arisen from hearing is essential to developing the later wisdoms; we must first learn about emptiness before we can think or meditate on it. Here we hear the reasonings that prove that all phenomena lack inherent existence. We learn the three criteria of a syllogism—the property of the subject, pervasion, and counter-pervasion—and begin to counteract doubts by gaining a general understanding of them. After some time, we will gain a correct assumption of the meaning of emptiness.<sup>10</sup> For example, we hear the syllogism “Consider the I, it is empty of inherent existence because it is a dependent arising.” The property of the subject is that the I is a dependent arising; the pervasion is that whatever is a dependent arising is necessarily empty of inherent existence; the counter-pervasion is that whatever is not empty is necessarily not dependent arising.

In the case of someone who has previously understood emptiness, hearing teachings on it can trigger the previous understanding or spark a new understanding to arise in her mind. In that latter case, the understanding arisen from learning can induce a reliable cognizer of emptiness as in the story of the monk who realized emptiness while listening to his spiritual mentor’s discourse on it.

The *understanding arisen from reflection* is present when an inferential reliable cognizer of emptiness is generated based on ascertainment of the three criteria of a correct syllogism. This understanding is very powerful. Practitioners continue to meditate on emptiness based on this inferential

understanding, and when they attain serenity focused on emptiness, the *understanding arisen from meditation* is present. This understanding comes from meditative experience and enables practitioners to develop deep familiarity with emptiness, such that the realization of emptiness arises easily in their minds. As they continue to practice, they reach a point when the analysis of the nature of existence induces special pliancy and serenity. At this time, the union of serenity and insight on emptiness is attained. According to the *Ornament of Clear Realizations*, a fully qualified insight observing emptiness and a union of serenity and insight observing emptiness are synonymous, and they mark the beginning of the path of preparation.

Depending on her level of spiritual development, one person may have these three understandings present in her mind at different times. For example, during and after listening to teachings, the understanding arisen from hearing is present. If the practitioner has already thought a great deal about emptiness, the understanding arisen from reflection may also be present at that time. Otherwise, it is developed when she debates and discusses the Dharma and gains a correct inference of emptiness. Based on that inference, she cultivates single-pointed meditation on emptiness and gains deep familiarity with it. This is the understanding arisen from meditation.

### *Space-Like and Illusion-Like Meditation on Emptiness*

Meditation on emptiness on the ārya paths is of two kinds. The first is *space-like meditation*, which is āryas' actual meditative equipoise on emptiness. This is preceded by gaining the correct view of the Middle Way, free from the extremes of absolutism and nihilism. Absolutism is the view that all phenomena exist inherently; nihilism is the view that phenomena are totally nonexistent or that the law of karma and its results is nonexistent. Space-like meditation on emptiness is the wisdom realizing the selflessness of persons and phenomena in nondual meditative equipoise.

The second type of ārya meditation on emptiness is *meditation on the illusory nature of phenomena*, which is cultivated subsequent to sessions of space-like meditation. Through it comes the wisdom understanding that

although things appear to exist inherently, they do not. Like illusions, phenomena do not exist in the way they appear.

The selflessness of persons and the selflessness of phenomena is usually explained in the context of space-like meditation. Since the selflessness of persons is easier to realize, it is explained first. Although the term “self” often refers to the person—the mere I that exists dependently—in the term “selflessness,” “self” means inherent existence, the object of negation, which does not exist at all. The object of negation in the context of the selflessness of persons is the independent or inherent existence of the person, that is, a person existing from its own side, without depending on its basis of designation—the body and mind—or on the mind designating it. Since no such inherently existent person exists, the object of negation is totally nonexistent, and the wisdom realizing emptiness knows the emptiness of the person.

Before refuting the existence of an inherently existent I, we must first have a sense of what the ignorance grasping an inherently existent I holds as existent. If such an I did exist, what would it be like? To our innate self-grasping ignorance, the I appears as inherently existent, existing under its own power. There seems to be a real ME, a person who is independent of all factors, such as parts and its causes and conditions. It seems to exist independent of the mind perceiving it. An inherently existent I stands alone, with an essence that is seemingly unchanging and indestructible.

But if we reflect using reasoning, we find that even though the I appears to exist inherently, it cannot exist in that way. It is dependent on other factors. I depend on my body and mind, on the causes and conditions that produced me; I do not exist under my own power as a self-enclosed entity. Thus, a discrepancy exists between the way the I appears and the way it exists. By using reasoning, this discrepancy is brought to light and the existence of an inherently existent I is refuted.

Realizing emptiness is not a matter of repeating to ourselves, “The I is empty of inherent existence.” We must examine how the I actually exists. If it existed inherently, it would not depend on anything, but we know the I depends on its causes and conditions and is constantly changing.

After gaining insight that the inherently existent I that ignorance apprehends is actually nonexistent, we focus our mind one-pointedly on the

mere absence of independent existence of the I. Concentrating on the absence of an independent I is not focusing on nothingness or blankness. We must know the difference between the emptiness of inherent existence and nothingness and keep the mind alert, with clear and strong focus on emptiness. If we are unable to maintain such mindfulness on the emptiness of inherent existence but let our mind slip into focusing on mere nothingness, we may think we are meditating on emptiness, although we are not. Such incorrect meditation on emptiness does not eradicate afflictions, and getting stuck in such a view is dangerous.

To do space-like meditation on emptiness, analyze to discover the emptiness of inherent existence and then focus one-pointedly on it. Atiśa says (LP 56):

Therefore the Subduer also has said  
that the great ignorance of conceptuality  
makes us fall into the ocean of cyclic existence.  
Resting in nonconceptual stabilization,  
space-like nonconceptuality manifests clearly.

In this context, “conceptuality” refers to inherent existence. Space-like nonconceptuality is free of both the grasping at inherent existence and the appearance of inherent existence. The emptiness of inherent existence is clear, open, and limitless like space. The mind meditating on emptiness is very spacious; it is not cluttered by the appearances of inherently existent objects and is free from discursive conceptualizations of “this and that.” There is a sense of tremendous expansiveness and the bliss of freedom from the constraints of self-grasping ignorance.

Meditating on the selflessness of phenomena is similar to meditating on the selflessness of persons—the object of negation (inherent existence) is the same—but the base now is all phenomena other than persons. Because all phenomena—be they impermanent or permanent—depend on the parts that compose them, they do not exist independently. Being dependent, they are empty of independent or inherent existence. For example, the mind is dependent on a continuity of tiny moments of consciousness. Atoms are composed of ever-smaller particles. Emptiness, too, is merely designated by

mind and depends on parts. It is not an independently existent absolute that either permeates all phenomena or exists in another dimension. Emptiness is here, right now. In dependence on the emptiness of the table, the emptiness of the chair, and so on, the generality “emptiness” is designated. In dependence on the person, the emptiness of the person exists.

When we do not examine and analyze, things appear to have an independent intrinsic nature from their own side. For example, when meditating on the Buddha, how does he appear? To the innate, non-analytical mind, the Buddha appears as something solid, independent, and objective. Similarly, when meditating on the suffering of sentient beings, sentient beings appear to exist from their own side without depending on anything else. It seems there are sentient beings “out there,” unrelated to our mind. This is how things appear to our normal, innate mind that operates in daily activities. This mind does not analyze how things exist. Rather, things appear inherently existent to it, and ignorance accepts this appearance as true.

However, if we investigate the real nature of the Buddha, no independently existent Buddha can be found. The Buddha exists dependently. He depends on causes and conditions, parts, and the mind that designates the term “Buddha” to his aggregates. As you repeatedly investigate how the Buddha or any other object exists, the object of negation will become clearer, and you will be able to refute it. Combining this insight with serenity, the mind then remains one-pointedly focused on the absence of inherent existence. Speaking of how bodhisattvas actually exist, the *King of Concentration Sūtra* says (SR 6.17–19):

Just as when a person has a child born to him  
and gives the child a name, saying, “This is his name!”  
but that name cannot be found anywhere,  
and that name did not come from anywhere,

in that way the name “bodhisattva” is given,  
but if one seeks for this bodhisattva,  
that name will not be found anywhere.  
One who knows that is a bodhisattva.

The bodhisattvas do not believe in the existence of a self any more than that a fire can burn in the middle of the ocean. Since they have developed the aspiration for awakening they do not have the view that there is a soul within.

In generating the correct view of emptiness, we investigate how persons and phenomena exist using ultimate analysis. That is, we search for the ultimate mode of existence of an object. What is this object really? Through such examination, the inherent existence of the object is not found. This non-finding of an inherently existent object by reasoning analyzing the ultimate does not contradict the conventional existence of the object, because we were investigating the object's ultimate mode of existence, not its conventional existence. In general, with inherent existence refuted, all that remains is a mere nominally existent object, a conventionality. Ultimate analysis does not refute existence; it only refutes inherent existence. It is obvious from our experience that things exist and have their various functions in the world. They exist through the power of imputation.

After meditators arise from space-like meditation on emptiness, the false appearance of inherent existence arises as a result of the latencies of ignorance. Meditators recognize this appearance is false and is like an illusion in that things appear one way but exist in another. This illusion-like meditation on emptiness is done while meditators go about their daily activities such as eating, walking, talking, and so forth. The Buddha says (SR 9.6):

Bodhisattva mahāsattvas should know that all phenomena are like illusions. They should know that all phenomena are like dreams, like mirages, like echoes, like optical illusions, like the [reflection of the] moon on water, like hallucinations, like reflections, and like space.

Illusion-like meditation helps to avoid getting carried away by all the seemingly attractive and repulsive things that bodhisattvas encounter, and in that way counteracts attachment and anger. Mindfulness of the illusion-like

nature reinforces their realization of emptiness and facilitates entering into meditative equipoise on emptiness in future formal meditation sessions.

Whether we practice Pāramitāyāna or Vajrayāna, whether we are on the śrāvaka, solitary realizer, or bodhisattva path, the realization of emptiness is necessary to complete that path. Since śrāvakas and solitary realizers meditate on emptiness to eliminate afflictions and attain liberation, they do not need to accumulate the vast amount of merit that bodhisattvas do. Bodhisattvas' vast accumulation of merit acts as a solid support for cultivating the wisdom realizing emptiness and enables that wisdom to eliminate even the subtle cognitive obscurations from the mind.

Various tenet systems have different views on the selflessness that has to be realized to eliminate the afflictive obscurations. Some systems do not assert a selflessness of phenomena, and claim that afflictive obscurations can be eliminated merely by realizing the selflessness of persons. In actuality, only by following the Madhyamaka view of the emptiness of inherent existence of both persons and phenomena can we generate the kind of wisdom that is capable of removing both the afflictive and cognitive obscurations.

Similarly, all four classes of tantra emphasize the need to generate the correct view of emptiness. In the practice of deity yoga, practitioners meditate on nondual profundity and clarity. Clarity refers to generating themselves as the deity and having a clear visualization of this. At the same time, they meditate on the profound nature of the deity—its emptiness of inherent existence. In this way they have the clear appearance of themselves as the deity and simultaneously reflect that the deity is empty. Based on this and other practices unique to Vajrayāna, it is possible to make manifest an extremely subtle mind that is then used to realize emptiness. The ensuing wisdom becomes a powerful counterforce that removes the afflictions and their latencies forever.

## REFLECTION

---

1. Think of your car (bicycle, subway car, or any other vehicle). Does it appear to be a car by nature—that is, is there something in the object that makes it a car and not a turkey?

2. If it indeed exists in that manner, you should be able to find and draw a line around what is the car. The car must be either identical with one of its parts or with the collection of parts, or completely separate from them. There is no third choice.
  3. Look at each part of the car and investigate if it is a car.
  4. It is tempting to think the collection of parts is the car, but that would be like having a collection of non-apples and thinking it is an apple.
  5. Conclude that the car cannot exist as an inherently existent thing. That absence of inherent existence is its empty, space-like nature.
  6. Nevertheless, when you don't analyze, a car appears and you can drive it. It appears but is empty of inherent existence. That is its illusion-like nature.
- 

### *Serenity and Insight*

The ability to concentrate and to discern and investigate things are innate qualities of our mind. We already have some ability to pay attention to and to focus on a chosen object. When we enhance this mental factor of concentration, it can lead to serenity and the deep states of meditative absorption of the form and formless realms. Similarly, we already have some ability to discern various characteristics. When increased and refined, this leads to insight and wisdom. Mindfulness, introspective awareness, and effort are needed to do this, and because these mental factors and the mental factors of concentration and wisdom are conditioned phenomena, it is possible to develop and enhance them through practice.

In general, serenity and insight are common to all ancient Indian traditions. What makes them unique in Buddhism is that they are cultivated following the teachings and guidance of the awakened Buddha, his teachings (the Dharma), and his disciples (the Saṅgha) who have realized the nature of reality. In addition, they are directed toward realizing

selflessness and eliminating both the afflictive and the cognitive obscurations.

Both serenity and insight are needed to generate meditative equipoise that realizes selflessness. Serenity brings stability and deep meditative concentration, while insight probes, investigates, and ascertains the ultimate nature of phenomena. Without serenity we are unable to focus single-pointedly on emptiness, and without insight we are unable to discern emptiness clearly. A union of the two is needed to realize emptiness directly and to empower that realization so that it can overcome our mental defilements.

Serenity (*śamatha, samatha*) is a concentration (*samādhi*) arising from meditation and accompanied by the bliss of mental and physical pliancy (*praśrabdhi, passaddhi*) in which the mind abides effortlessly and without fluctuation, for as long as we wish on whichever virtuous object it has been placed. Serenity is cultivated through the higher training in concentration, and for those following the bodhisattva vehicle by the practice of the perfection of meditative stability.

Serenity is necessarily the mental factor of concentration, but all concentrations are not necessarily serenity, because the mental factor of concentration is also found in the nine sustained attentions preceding the attainment of serenity. Of the two types of meditation—stabilizing (*sthāpyabhāvanā*) and analytical (*vicārabhāvanā*)—serenity is necessarily stabilizing meditation.

Insight (*vipaśyanā, vipassanā*) is a wisdom of discerning or analytical discrimination (*so sor rtog pa'i shes rab*) of phenomena conjoined with special pliancy induced by the power of analysis. It is an analytical wisdom that may be either conceptual or nonconceptual, and it may be either mundane or supramundane. The next several chapters speak specifically about how to cultivate supramundane insight that is focused on emptiness and leads to liberation and awakening.

Insight is a special “seeing.” It is a mental factor that thoroughly analyzes phenomena and clearly distinguishes their features. Developed by practitioners of all three vehicles—the Śrāvaka, Solitary Realizer, and Bodhisattva Vehicles—insight is necessarily a wisdom consciousness. Of the two types of meditation, it is analytical meditation.

In general, serenity and insight are mental factors that are mutually exclusive; that is, there is nothing that is both of them. Concentration and wisdom are also distinct mental factors. But the higher training of concentration does not refer to just the mental factor of concentration. That is, when “concentration” is used with other words or in other phrases it may refer to a specific meditative state. For example, the *Heart Sūtra* (*Prajñāpāramitāhṛdaya Sūtra*) recounts that the Buddha was meditating on the “concentration of the countless aspects of phenomena called Profound Illumination.”

While serenity and insight are lofty mental states that have specific attributes, various virtuous mental states may fall under the general category of one or the other. Tsongkhapa explains (LC 3:14):

However, concentrations that at least involve single-pointedness on a virtuous object are classified with serenity; virtuous cognitions that distinguish an ultimate or conventional object are classified with insight.

Although these mental states may not be full-fledged serenity or insight, by cultivating them over time they will become so.

A practitioner who seeks liberation and has generated the union of serenity and insight in his or her mind is called a “yogī” or “yoginī.” In some Dharma centers, anyone who attends a meditation retreat is called a “yogī.” Perhaps this is done to inspire people to become actual yogīs, but if misunderstood, it could be misleading. The realizations of actual yogīs greatly exceed our own understanding.

Serenity must be generated before insight, even though someone may have an inferential realization of emptiness before attaining serenity. Tsongkhapa says (LC 3:95–96):

If you do not first establish in your mindstream the concentration of serenity explained previously, it is not possible for the actual knowledge of insight, which is focused on either the ultimate nature or the diversity of all phenomena, to arise...

In summary, you must first develop serenity and then on this basis, you may proceed on a graduated path up the peak of cyclic existence by means of insight bearing the aspect of grossness and peacefulness; or you may proceed along the five paths to liberation or omniscience by means of insight bearing the aspect of the reality of selflessness. This constitutes the general seal of the Conqueror’s teachings, so no yogī can depart from it.

Without serenity, neither mundane nor supramundane insight can be attained. Mundane insight traverses the four dhyānas of the form realm and the four formless realm absorptions. Here a practitioner progresses by contemplating the peacefulness of the next level of meditative absorption and the grossness of their present level. This insight—which is common to Buddhists and non-Buddhists alike—leads to the peak of cyclic existence, the highest stage of saṃsāra, but not to liberation. While these meditative absorptions are very pleasing and it is tempting to rest in them without cultivating insight, all Buddhist teachers warn us against this. In his *Praise in Honor of One Worthy of Honor (Varṇāhavarṇastotra)*, Mātṛceṭa says (LC 3:95):

Those opposed to your (the Tathāgata’s) teachings  
are blinded by affliction.  
Even after venturing to the peak of cyclic existence,  
duḥkha occurs again, and cyclic existence is maintained.  
Those who follow your teachings—  
even if they do not achieve actual dhyāna—  
turn away from cyclic existence,  
while under the steady gaze of the eyes of Māra.

Even if the Buddha’s disciples do not immediately attain dhyāna, they bear in mind the disadvantages of cyclic existence and enrich the determination to be free from it in their minds. As they continue to practice, they will attain access concentration<sup>11</sup> to the first dhyāna as well as the other dhyānas

that they can then conjoin with insight. This supramundane insight is focused on emptiness and leads to liberation and awakening.

### *The Importance of Insight*

Direct realization of emptiness is necessary to remove both the afflictive and the cognitive obscurations and to attain liberation and full awakening. Although the aspiration to be free from saṃsāra, bodhicitta, and concentration are necessary qualities to gain awakening, they are not sufficient for its attainment. Only the wisdom gained from insight into emptiness has the power to cut ignorance, the root of saṃsāra. While learning about selflessness and cultivating the right view, we may use antidotes specific to each affliction to pacify it temporarily. However, these antidotes do not have the ability to remove an affliction from its root, nor does the antidote for one affliction necessarily overcome another. For example, meditating on love or patience can temporarily subdue anger, but it cannot completely eliminate the seed or potential for future anger from the mindstream. In addition, meditating on love or patience does not counteract attachment, just as meditating on the unpleasant aspects of the object—the antidote to attachment—does not lessen our anger.

Concentration and serenity are necessary to enhance all other Dharma practices. However, they are not uniquely Buddhist practices and may be gained by those of other faiths. Concentration and serenity alone cannot bring liberation because they are not combined with the wisdom realizing the emptiness of inherent existence and thus cannot cut the ignorance that grasps inherent existence. Our mind may be very peaceful and blissful while in a concentrated state because disturbing attitudes and negative emotions have been temporarily suppressed. However, because their seeds have not been removed from our mindstream, once our meditation ends, these afflictions can and will surface again.

We may gain many good qualities and even superknowledges as a result of concentration, but the danger exists of seeing these qualities as an end in themselves, which could possibly cause us to become arrogant. Such pride is a huge obstacle on the path. To avoid these pitfalls, before practicing serenity we must clearly understand that the purpose of doing so is to use it

as a basis for generating insight into emptiness, and that insight and wisdom are the qualities that will liberate us from the two obscurations.

In the past, and even today, some people believe that blank-minded meditation leads to liberation. They advocate clearing all thoughts—be they correct or incorrect, beneficial or harmful—from the mind and abiding in contentless state. Such a state, however peaceful it may be, is neither liberation nor realization of emptiness. Why? Nothingness is not the meaning of emptiness, and focusing the mind single-pointedly on it is not the realization of the lack of inherent existence. Although nonconceptual meditation on nothingness temporarily suppresses afflictions so that they are not manifest at that moment, it has not eliminated the seeds or the latencies of afflictions from the mindstream. The person is still exposed to the vagaries of saṃsāra.

A person may have extraordinary meditative experiences, such as seeing deities or knowing their previous rebirths, but still not be free from cyclic existence. Although such events are wonderful, we should not be overly impressed with them, for as long as we have not cleansed all afflictions and their seeds from our mindstream through consistent meditation on the correct view of reality, we are not beyond saṃsāra. Many a practitioner has cultivated the dhyānas and the absorptions of the formless realm only to have their afflictions reappear later because self-grasping ignorance still exists in their mindstream. One may have samādhi on the conventional nature of the mind—its clarity and cognizance—but lack direct perception of its ultimate nature and thus still be trapped in saṃsāra. These days, when many people claim spiritual realizations and advertise such in the media, the point cannot be emphasized enough: only insight on the emptiness of inherent existence can eliminate the cause of saṃsāra from its root.

## REFLECTION

---

1. Why is realizing emptiness directly important?
2. Why is blank-minded meditation or meditation on nothingness not meditation on emptiness?

3. What is serenity? What is insight?
  4. Why is it important to combine serenity and insight?
- 

### *The Perfection of Skillful Means*

Skillful means are essential for achieving our own purposes as well as for benefiting others, and for that reason they must be perfected. In some Mahāyāna sūtras, such as the *Lotus Sūtra (Saddharmapuṇḍarīka Sūtra)*, “skillful means” indicates the way in which, motivated by compassion, buddhas and bodhisattvas adapt their teaching method and their own behavior according to the needs and capacities of different sentient beings. In other Mahāyāna sūtras, such as the *Sūtra of the Perfection of Wisdom in 8,000 Lines (Aṣṭasāhasrikāprajñāpāramitā Sūtra)*, skillful means applies to bodhisattvas’ ability to attain deep states of concentration without getting waylaid by attachment to rebirth in the form and formless realms and to their ability to see all phenomena as empty without abandoning sentient beings.

In *Bodhisattva Grounds*, Asaṅga describes two groups of skillful means:

(1) To accomplish all the qualities of a buddha within themselves, bodhisattvas practice the skillful means of:

1. looking upon all sentient beings with compassion,
2. knowing the ultimate nature of all conditioned phenomena,
3. desiring the pristine wisdom of unsurpassed awakening,
4. not abandoning saṃsāra by looking upon all sentient beings with compassion,
5. taking rebirth in saṃsāra with an unafflicted mind that knows the reality of conditioned phenomena and is motivated by great compassion,
6. spurring their own enthusiasm to fulfill their desire to attain full awakening.

(2) To ripen all other living beings, bodhisattvas cultivate the skillful means to:

1. cause even the smallest virtuous roots in living beings to ripen into immeasurable results by teaching sentient beings how to transform small actions into great virtue,
2. cause living beings to accomplish great roots of virtue without undue hardship—for example, by teaching them to rejoice in the virtues of all beings,
3. eliminate anger in those who dislike the Buddha’s doctrine—for example, by encouraging them to be tolerant of people who practice the Dharma even if they themselves do not wish to practice it,
4. encourage those who have a neutral attitude toward the Buddha’s doctrine to enter into it,
5. ripen the mental continuums of those who have entered into the doctrine,
6. cause those whose minds and roots of virtue are ripened to attain liberation.

### *The Perfection of Unshakable Resolve*

The Sanskrit term *praṇidhāna* (T. *smoṅ lam*) is often translated as “prayer” by Tibetan translators and as “vow” by Chinese translators. This is an unshakable resolve—something more than a wish, an aspiration, or a prayer—to do particular great deeds for the benefit of sentient beings. In other words, this perfection is about making strong resolutions that we act on for the benefit of sentient beings. It is not about making prayers to the Buddha or taking ethical vows. The Medicine Buddha made twelve unshakable resolves, Amitābha Buddha made forty-eight, Samantabhadra made ten,<sup>12</sup> Mañjuśrī made 141 resolves,<sup>13</sup> and so on. Of the ten unshakable resolves of Samantabhadra, seven comprise the seven-limb prayer that is found in many practices. In the *Array of Stalks Sūtra*, another three are added to become ten resolves:

1. Pay homage and respect to all buddhas.

2. Praise all the buddhas.
3. Make abundant offerings.
4. Confess misdeeds and destructive actions.
5. Rejoice in one's own and others' merits and virtues.
6. Request the buddhas to turn the Dharma wheel.
7. Request the buddhas to remain in the world.
8. Follow the teachings of the buddhas at all times.
9. Accommodate, benefit, and live harmoniously with all living beings.
10. Dedicate all merits and virtues universally to all sentient beings.

Bodhisattvas make unshakable resolves to accomplish activities for sentient beings that cannot be actualized, at least not in the near future—for example, resolving to go to the hell realms to benefit even one sentient being or promising to lead all sentient beings from saṃsāra's duḥkha. Making such unshakable resolves is not a useless pursuit, nor is it fantasy. Rather, it strengthens bodhisattvas' determination to be of whatever benefit they possibly can to whichever sentient being is in need, regardless of the difficulties it may entail for them personally. As ordinary beings who have limited physical and mental abilities, we have to assess what we can actually do before acting. Nevertheless, making such wonderful unshakable resolves, even if they seem unrealistic, expands the scope and strength of our mind so that gradually and steadily we will be able to increase our capacity to be of benefit to others.

Bodhisattvas cultivate unshakable resolves and extraordinary aspirations to benefit all sentient beings. In his *Differentiation of the Three Vows*, Sakya Paṇḍita says that bodhisattvas have two types of aspirations: those that can be accomplished and those that cannot. For example, in *Engaging in the Bodhisattvas' Deeds*, Śāntideva aspires for many outcomes that cannot actually occur (BCA 10.2, 10.41):

May all beings everywhere  
plagued by sufferings of body and mind,  
obtain an ocean of happiness and joy  
by virtue of my merits.

May no living creature suffer,  
commit evil, or ever fall ill.  
May no one be afraid or belittled,  
with a mind weighed down by depression.

And Samantabhadra makes these unshakable resolves in the “King of Prayers” in the *Flower Ornament Sūtra* (*Avataṃsaka Sūtra*):

Purifying the power of all polluted actions,  
crushing the power of disturbing emotions at their root,  
defusing the power of interfering forces,  
I shall perfect the power of the bodhisattva practice...

Limitless is the end of space,  
likewise, limitless are living beings,  
thus, limitless are karma and afflictions.  
May my aspiration’s reach be limitless as well.

Generating such unshakable resolves and magnificent aspirations is valuable because it enhances our determination to transcend our present hindrances. Such resolve gives us great courage to overcome self-centeredness and integrate bodhicitta with our mind. In addition, when we are in the position to help someone directly, we won’t hesitate out of laziness or lack of confidence.

Aspirational prayers and unshakable resolves set our intention and clarify our aims. It’s important to dedicate the merit from working to actualize them for the same aims. By doing so, the merit won’t be exhausted until we attain full awakening. The Buddha said in the *Sūtra Requested by Sāgaramati* (*Sāgaramatipariṣcchā Sūtra*):

Just as a drop of water that falls into the great ocean  
will never disappear until the ocean itself runs dry,  
merit totally dedicated to supreme awakening  
will never disappear until supreme awakening is reached.

## *The Perfection of Power*

The ninth perfection is the perfection of power. This is the strength to not be overcome by afflictions and other obscurations. Abhayākaragupta's commentary on the *Ornament of Clear Realizations* (*Abhisamayālaṃkāra*) entitled *Ornament for the Subduer's Intention* (*Munimatālaṃkāra*) speaks of thirteen kinds of power that bodhisattvas perfect:

1. The power of thought is the power of no longer indulging in the afflictions, because they have been abandoned.
2. The power of superior thought is to train well in the pristine wisdom of the bodhisattva grounds.
3. The power of retention is to remember all the Dharma teachings they have heard or read.
4. The power of meditative stability is the ability to remain in deep concentration without being distracted, no matter what they are doing.
5. The power of perfect endowments is knowing distinctly the behavior of each sentient being in the countless realms.
6. The power of fulfillment is to be able to fulfill all their aims.
7. The power of self-confidence is being skilled in distinguishing and examining all the Buddha's qualities.
8. The power of unshakable resolve is not to give up engaging in the activities of all the buddhas.
9. The power of perfection is to completely ripen the Buddha's qualities within themselves and sentient beings by teaching them, and not to give up deeds to benefit sentient beings.
10. The power of great love is to not relinquish the supreme effort to protect all sentient beings without being biased.
11. The power of great compassion is to eliminate all suffering of all sentient beings without being biased.
12. The power of ultimate reality is to actualize within themselves the experience of the ultimate reality that is like an illusion.

13. The power of being blessed by all the tathāgatas refers to approaching the pristine wisdom of omniscience by all means.

As part of the “King of Prayers: The Extraordinary Aspiration of the Practice of Samantabhadra” in chapter 40 of the *Flower Ornament Sūtra*, the bodhisattva Samantabhadra spoke of actualizing ten powers and overcoming the power of adverse factors:

May I achieve the power of swift, magical emanation,  
the power to lead to the Great Vehicle through every approach,  
the power of always beneficial activity,  
the power of love pervading all realms,  
the power of all-surpassing merit,  
the power of supreme knowledge unobstructed by discrimination,  
and through the powers of wisdom, skillful means, and samādhi,  
may I achieve the perfect power of awakening.

Purifying the power of all contaminated actions,  
crushing the power of disturbing emotions at their root,  
defusing the power of interfering forces,  
I shall perfect the power of the bodhisattva practice.

Contemplating these powers of ārya bodhisattvas gives us a glimpse of the qualities we will gain by practicing the Mahāyāna path. Creating the causes for such powers and using them to benefit ourselves and others will bring us great satisfaction, confidence, and exuberance to practice.

## REFLECTION

---

1. Contemplate the various types of powers that bodhisattvas perfect. Imagine what it would be like to have each one.
  2. Aspire to create the causes to one day attain these powers and use them to work for the well-being of all sentient beings.
-

## *The Perfection of Pristine Wisdom*

In some cases the words “wisdom” (*prajñā*) and “pristine wisdom” (*jñāna*) are synonymous, while in other contexts their meanings differ.<sup>14</sup> In the context of the perfections, Asaṅga differentiates wisdom and pristine wisdom in *Bodhisattva Grounds*:

That knowing the presentation of all phenomena as they are is the perfection of pristine wisdom. The wisdom that engages in apprehending the ultimate is the perfection of wisdom. That engaged in apprehending the conventional is the perfection of pristine wisdom. These are the particularities of the two.

In the first sentence, “all phenomena” refers to the diversity of phenomena and connotes conventional truths. These are the objects of the perfection of pristine wisdom. In the second sentence, “ultimate” refers to emptiness, and the wisdom engaged in directly perceiving it is the wisdom of meditative equipoise on emptiness, also called the “perfection of wisdom.” The perfection of wisdom is defined as an exalted knower that is conjoined with a union of serenity and special insight that serves as the means for proceeding to or remaining in nonabiding nirvāṇa.<sup>15</sup> “The conventional” in the following sentence refers to the method or the vast aspect of the path.

In summary, reflect on the meaning and purpose of each of the ten perfections as presented by the *Ten Grounds Sūtra* (*Daśabhūmika Sūtra*, DBS 143):

In each successive moment, this bodhisattva carries on the complete implementation of the bodhisattva’s ten pāramitās and the ten grounds’ practices. And how is this the case? This is because this bodhisattva mahāsattva takes the great compassion as foremost in each successive moment and because, as he cultivates all of the excellent qualities of the Buddha, he dedicates it all to the realization of the Tathāgata’s wisdom.

As for his cultivation of the ten pāramitās:

The bodhisattva's bestowing on all beings all roots of virtue he cultivates in pursuit of the path to buddhahood constitutes the perfection of generosity.

His ability to extinguish all heat associated with the afflictions constitutes the perfection of ethical conduct.

His taking kindness and compassion as foremost and refraining from harming any being constitutes the perfection of fortitude.

His insatiable striving to acquire ever more supreme roots of virtue constitutes the perfection of joyous effort.

His maintaining an unscattered mind dedicated to cultivating the path even as he constantly progresses toward omniscience constitutes the perfection of meditative stability.

His realization of acquiescent fortitude of the eternal nonproduction of all phenomena constitutes the perfection of wisdom.

His bringing forth of countless expressions of wisdom constitutes the perfection of skillful means.

His aspiration to develop the supreme wisdom constitutes the perfection of unshakable resolve.

His ability to remain invulnerable to obstruction or ruination by any followers of non-Buddhist paths or by any demons constitutes the perfection of power.

His accomplishment of knowing the characteristic features of all phenomena in accordance with reality constitutes the perfection of pristine wisdom.

### *Ultimate Bodhicitta*

Many texts refer to the “two bodhicittas”—conventional bodhicitta and ultimate bodhicitta. The former is actual bodhicitta, the altruistic intention that is a primary mind held by two aspirations—the aspirations to work for the well-being of sentient beings and to attain full awakening in order to do so. This is the bodhicitta spoken about so far in this chapter.

Ultimate bodhicitta is the wisdom directly realizing emptiness. While it is called “bodhicitta,” it is not actually bodhicitta. Bodhi means “awakening” and citta means “mind,” so bodhicitta is the mind of awakening. Ultimate bodhicitta is the direct perceiver of the emptiness of awakening. Its observed object is awakening, and it realizes the emptiness of awakening. Conventional bodhicitta also focuses on awakening, but it aspires to actualize it for the benefit of all sentient beings. Nāgārjuna wrote a beautiful work entitled *Commentary on Bodhicitta*. Its main topic is ultimate bodhicitta, so there is much discussion of emptiness. As an aside, toward the end of the work, conventional bodhicitta is taught.

Ultimate bodhicitta can be understood in two ways, the way in common with the Sūtra Vehicle and the way unique to the Tantric Vehicle. In the Sūtra Vehicle, it is the mind that is a union of serenity and insight that directly perceives emptiness and is conjoined with conventional bodhicitta. In highest yoga tantra, the fundamental innate clear-light mind that is focused on emptiness is called “ultimate bodhicitta.”<sup>16</sup> Its object is the subtlest object, emptiness, and the mind is the subtlest subject, the fundamental innate clear-light mind. In both the Perfection Vehicle and the Tantric Vehicle, the object of ultimate bodhicitta—the emptiness of inherent existence—is the same; the difference is in the subject—the mind realizing it.

In the *Treatise on the Middle Way*, Nāgārjuna speaks of the pacification of elaborations. Bodhi is the state in which all elaborations have been pacified. In the Sūtra Vehicle, these elaborations are the appearance of inherent existence, whereas in highest yoga tantra, elaborations are not only the appearance of inherent existence but also the white appearance, the red increase, and the black near-attainment. These are three levels of mind that are subtler than our sense consciousnesses and waking mind but are coarser than the subtlest mind—the fundamental innate clear-light mind.

Subtler than these three appearances is the fundamental innate clear-light mind. This subtle innate clear-light mind exists in all beings and is the basis of all coarser levels of mind. The coarser minds such as our sense consciousnesses and everyday mental consciousness emerge from it and dissolve back into it. When coarser minds are active, the subtlest innate clear-light mind is dormant. In Tantra, advanced practitioners who

understand emptiness can activate this subtlest mind and use it to apprehend emptiness.

In Tantra, ultimate bodhicitta—the subtlest innate mind that is absorbed nondually in emptiness—is not only free from the appearance of subject and object, the appearance of conventional phenomena, and the appearance of inherent existence but is also free from the white, the red increase, and the black near-attainment appearances. Here ultimate bodhicitta is the fundamental innate clear-light mind that directly perceives emptiness.

Because the subtle innate clear-light mind pervades all coarser states of mind and because it is their basis, it is said to exist at all times. Still, according to Tantra, these coarser states of mind must dissolve and the subtle innate clear-light must manifest alone and realize emptiness for it to be called “ultimate bodhicitta,” the final cause of awakening.

A meditator is first able to make this mind manifest on the completion stage of highest yoga tantra, immediately before the arising of the impure illusory body. It is also manifest on the following levels, the meaning clear light and the union of clear light and illusory body. Although the Sūtra Vehicle does not speak of this subtle innate clear-light mind, the topic of buddha nature (*tathāgatagarbha*) in the Sūtra Vehicle hints at it and leads practitioners to then explore Tantra.

The *Guhyasamāja Root Tantra* says:

One’s mind is primordially unborn;  
it is in the nature of emptiness.

Interpreted from the viewpoint of the Sūtra Vehicle, this means that the mind has been empty of inherent existence from beginningless time. There has never been a time when it has inherently existed. Thus it is not the case that realizing emptiness changes the nature of the mind from inherently existent to non-inherently existent. Rather, the wisdom mind of ultimate bodhicitta realizes what has always been the ultimate nature of the mind.

In the unique Tantric interpretation of these lines, “primordially unborn” means that the mind—specifically the innate clear-light mind—is primordially devoid of all coarser states of mind. This subtlest mind

changes moment by moment, is pure from adventitious grosser minds, and travels to awakening.<sup>17</sup>

Regardless of whether ultimate bodhicitta is spoken of from a Sūtra or Tantra perspective, it is a wisdom that directly realizes emptiness. But not every wisdom directly realizing emptiness is ultimate bodhicitta, because for a wisdom to become ultimate bodhicitta, it must be complemented by conventional bodhicitta. Thus the wisdom nondually perceiving emptiness in the mindstream of a śrāvaka or solitary-realizer learner is not called “ultimate bodhicitta”—although it is a true path and the wisdom of an ārya—because it is not complemented by conventional bodhicitta.

### *Conclusion*

The Buddha said there is no second door to liberation—only the wisdom realizing emptiness can remove all obscurations. To have a deep understanding of emptiness, in addition to studying and meditating on the stages of the path (*lamrim*), we should study and reflect on the view as propounded in the four philosophical tenet systems. By practicing the stages of the path, we will develop a proper motivation for studying and meditating on emptiness and will accumulate the merit necessary to realize it. By studying the tenet schools, we will be challenged to think deeply about the nature of reality. The understanding of emptiness we gain from this will in turn help our meditation and practice of lamrim. Thus I recommend that lamrim and tenets be taught together in Dharma centers and monasteries.

A big difference exists between having an intellectual understanding of a Dharma topic and gaining realization or experience of it. Intellectual understanding is not sufficient. Whatever we understand we should put into practice and try to integrate into our daily life so that it transforms our mind and heart. That is the purpose of spiritual practice.

I suggest that you spend some time reflecting on the meaning of each of these perfections and then examine how to apply them in daily life. Reading about these wondrous thoughts and deeds is inspiring, but even better is embodying them in the way you live. Contemplate when and how you can

practice the ten perfections. Then resolve to do your best to put them into practice.

As ordinary beings, we select role models and fashion our goals and behavior by their example. Since we aim to cultivate compassion and make a positive contribution to society and to all sentient beings, I recommend taking ārya bodhisattvas as our role models. Maitreya describes bodhisattvas (RGV 1.70–71):

Though they are beyond all worldly matters,  
these [bodhisattvas] do not leave the world.  
They act for the sake of all worldly beings  
within the world, unblemished by its defects.

As a lotus will grow in the midst of water,  
not being polluted by the water's [faults],  
these [āryas] are born in the world,  
unpolluted by any worldly phenomenon.

Contemplating their attitudes and actions inspires and uplifts us. It will take time to become like them, but can we think of anything more valuable to do?

## 4 | Sharing the Dharma

THE BODHISATTVA PRACTICE IS based on benefiting others. As many scriptures in both the Pāli and the Sanskrit canons attest, “The gift of the Dharma is the highest gift.” The Dharma can be shared with others in a variety of ways. The way we live and conduct ourselves in everyday interactions is a subtle but powerful way to arouse people’s interest in the Buddha’s teachings. The behavior of a person who is humble, courteous, and loving touches the hearts of those who come in contact with them. Someone who speaks the truth without backing away is also a strong force for good in the world.

The most obvious way of sharing the Dharma is by giving teachings. However, teaching the Dharma is a great responsibility that must be approached gradually, with the correct motivation, and skillfully. In addition, not everyone is inclined to be a teacher. Some people prefer to lead meditations, counsel others using Dharma principles, or be socially engaged with projects that directly benefit others in this life. This can range from working in an animal shelter to aiding the elderly and infirm to volunteering in a homeless shelter. Each of us must discover our individual talents and inclinations and share the Dharma accordingly. The Buddhist community needs people to share the Dharma through a wide range of activities. No matter which way we choose, it is essential to respect others who show their love and compassion in different ways.

The Tibetan, Pāli, and Chinese scriptures all speak of four ways of attracting people in order to benefit them; these are also called the four all-embracing virtues.

*Four Ways of Gathering Disciples in Tibetan Buddhism*

Learning and practicing the Dharma for our own benefit alone is limited: we are only one person. Sharing what we have learned with others so that they will benefit is important, especially for those aspiring to become buddhas. To do this, in addition to working on our own practice, it is necessary to establish good relationships with others. In Tibetan Buddhism, the process of attracting people so that they will be interested in learning the Dharma is traditionally described by the four ways of gathering or assembling disciples (*samgrahavastu*, *saṅgahavatthu*). These four are directed toward building suitable conditions to be able to teach the Dharma and lead others on the path.

The six perfections are taught from the viewpoint of how to attain awakening ourselves, whereas the four ways of gathering disciples are given from the perspective of how to lead others on the path to awakening. The four are (1) being generous and giving material aid, (2) teaching the Dharma according to the capacity of the disciples, (3) encouraging them to practice, and (4) acting congruently and living the teachings through example.

The first, *being generous*, involves helping others materially by supplying them with what they need. Others will be attracted by our generosity and that opens the door for us to teach them the Dharma. Also, giving them things ensures that those who are impoverished have the material requisites—food, shelter, clothes, and medicine—necessary to learn the Dharma. Without these basic needs being fulfilled, sincere disciples will be unable to practice. The Vinaya speaks directly to this by saying that the preceptors who give monastic ordination are responsible for not only teaching the Dharma to their monastic students but also providing them with food and shelter.

But more broadly, being generous entails giving what others need. When there are natural disasters, endemic poverty, or outbreaks of diseases, Buddhist organizations such as temples, monasteries, and Dharma centers can step forward and assist as they are able. There are now some Buddhist charity organizations that do this, and I encourage their good work.<sup>18</sup> This indicates to the public that as Buddhists we don't just talk about generosity and kindness but we also act in that way.

Of course, generosity begins at the individual level. Whether we give to charity organizations or give a Dharma book to a friend who has questions about life, whether we give food to a beggar or small gifts to children, generosity opens our heart, benefits others, and, because we are Buddhist, attracts others to the Dharma.

Some religions have used material generosity as a way to convert people to their faith. As Buddhists, this should never be our motivation. If sentient beings have needs and we can fulfill them, we should do that, without any expectation that they become Buddhist. However, if they are then attracted to us and wish to learn what we practice, we should fulfill their wish and teach them the Dharma.

The second way to gather disciples is to *teach the Dharma in a way that appeals to them*. This may involve various ways of speaking and different topics, depending on the situation. For example, when talking with strangers in a public place, ask about what interests them in order to make their acquaintance. When a friend who has just undergone a breakup or someone who is grieving the death of a dear one approaches you, speak in a way that consoles them and broadens their perspective. When you encounter those in difficult circumstances, give advice pertinent to their problem and teach them Dharma methods that will help them in that situation.

When someone asks Dharma questions, respond as best you can; and when they request teachings, teach what you are capable of teaching. This is the gift of the Dharma. It is said that this excels all other gifts because through learning the Dharma, others become capable of creating the causes for fortunate rebirths, liberation, and full awakening. Without bias, teach anyone who is sincere—common people and intellectuals, the poor and the rich, female and male, ordained and lay. Teach only the Dharma that you know well and can explain without error. It's also important to teach when the other person's mind is ripe and the circumstances are suitable—that is, to discern their disposition and interest and teach them accordingly to lead them on the path to virtue.

There is nothing better than to speak about and listen to the Buddha's teachings. The scriptures speak of twenty benefits of teaching the Dharma. For example, when we teach with a pure heart and good motivation, then as

the students' intelligence and understanding increase, a corresponding increase in our understanding will occur as well. Natural sounds are neutral, and much of our ordinary speech triggers afflictions, whereas the Buddha's teachings lead us from all duḥkha. Instead of chatting to enhance our ego or for amusement, let's use language for beneficial purposes.

The third is to *encourage others* to practice the Dharma they have learned. This entails guiding and supporting others on the path. To do this requires great patience and diligence. Sometimes people will appreciate the help you give, other times they may turn their back even though you have guided them for a long time. Cultivate the ability to accept all responses patiently, knowing that sentient beings are under the influence of afflictions. With compassion, remain open should their mental states change, and with forgiveness, welcome them if they sincerely want to return.

Fourth, *act in ways congruent with what you teach*. Being a good example inspires others to practice and increases their faith in the Three Jewels. They feel inspired and want to learn and practice the Dharma more. If you are in the role of a meditation guide, a Dharma instructor, or a spiritual mentor, it is essential to embody the Dharma in your actions. Practicing what you preach and living your life according to the Buddha's teaching—that is, doing what you instruct others to do—is essential in order to be worthy of others' trust and to be able to continue to benefit them.

There have been a few scandals as a result of the improper behavior of Dharma teachers. This may occur because the teacher's practice lacks depth and their Dharma knowledge is only intellectual. It may occur because teachers become infatuated with the devotion of their students or don't apply antidotes to the afflictions. There are no "days off" when a Dharma teacher can forget about the Buddha's teachings and act like a worldly person. Whatever the reason, it is essential to act with conscientiousness, mindfulness, and introspective awareness. Then people will develop genuine appreciation and respect. If the teacher says one thing and does another, how can the student respect him or her? Without earning the students' respect, a spiritual mentor cannot lead others on the path and creates the cause for their own suffering and unfortunate rebirth.

## *Four Ways of Sustaining Favorable Relationships in the Pāli Tradition*

The four ways of sustaining favorable relationships (note the difference in translation of the same Pāli and Sanskrit term) appear several times in the Aṅguttara Nikāya of the Pāli canon. Here is one passage describing them (AN 9.5):

There are four ways of gathering disciples: (1) by giving, (2) by friendly and endearing speech, (3) by encouraging acts and beneficent conduct, and (4) by acting impartially, in a way equal [to one's words]. Among gifts, the best is the gift of the Dhamma. Among types of endearing speech, the best is repeatedly teaching the Dhamma to one who is interested in it and listens with eager ears. Among types of beneficent conduct, the best is when one encourages, settles, and establishes a person without faith in the accomplishment of faith, an unethical person in the accomplishment of virtuous behavior, a miserly person in the accomplishment of generosity, and an unwise person in the accomplishment of wisdom. Among types of impartiality or equality, the best is that a stream-enterer is equal to a stream-enterer, a once-returned is equal to a once-returned, a nonreturner is equal to a nonreturner, and an arahant is equal to an arahant. This is called the power of sustaining favorable relationships.

The above passage is oriented toward leading others to the Dharma. In the first two ways of gathering disciples we find the famous quotation, “The best gift is the gift of the Dharma.” Of all the things to give to others, the Dharma alone will lead them out of duḥkha and to joy. Giving the Dharma of course does not preclude giving other necessities of life, especially to support those who sincerely want to practice the Dharma. In the third way, to encourage others to practice, we arouse, instill, and strengthen their good qualities, helping their mental, verbal, and physical actions become virtuous. Finally, whatever our level of practice and realizations, we should act equal to that. Becoming complacent or arrogant so that our actions are

not equal to our words or our actions are not equal to our level of practice disillusions others and is the opposite of establishing and sustaining productive Dharma relationships. “Impartiality” also refers to treating others as we would like them to treat us—in other words, establishing a feeling of closeness that is free from all feelings of superiority or inferiority.

These four apply to whatever type of relationship we would like to establish and sustain with others. The *Commentary to the Aṅguttara Nikāya* says (AN n.687):

Some people are to be sustained by a gift, so a gift should be given to them. Others expect endearing speech, so they should be addressed with pleasant words. Beneficent conduct is talk on increasing goodness; these people should be told, “You should do this, you shouldn’t do that. You should associate with this person, not with that person.” Impartiality is being the same in happiness and suffering. This means sitting together with them, living together, and eating together.

One day Hatthaka of Āḷavī, one of the Buddha’s foremost lay disciples, together with over five hundred lay followers, went to meet the Buddha. The Buddha asked Hatthaka how he sustained such a large group of lay followers, to which Hatthaka cited the four ways of sustaining favorable relationships as taught by the Buddha (AN 24.24).

### *Four All-Embracing Bodhisattva Virtues in Chinese Buddhism*

In Chinese Buddhism the four ways of attracting are known as the four all-embracing (bodhisattva) virtues:

(1) To *be generous* necessitates counteracting selfishness and extending ourselves to others. Generosity takes three forms. The first is giving material and financial support. Even if we do not have many possessions or a lot of money ourselves, we can still share and give something. A generous heart is free and comfortable, whereas a miserly heart is tight and fearful. Second is giving sentient beings confidence and freedom from fear, worry,

and anxiety. This may take the form of reassuring a child afraid of the dark, a student worried about passing exams, or a person fearing for their life due to illness or assault. Giving them confidence can also be done by instructing them in a particular skill or field of knowledge. Third is teaching living beings the Dharma of the Three Baskets. Of course, to give this to others, we must know it well ourselves; otherwise we run the risk of teaching wrong views that can harm people for a long time to come. However, we can share what we do understand and also let people know how much we have benefited from studying and practicing the Buddha's teachings.

(2) *Affectionate speech* includes speaking politely to others, consoling them, and giving them wise advice, without forcing our ideas on them. Bodhisattvas respect others and listen carefully to what they say. They praise, encourage, and comfort others, and always think about how to influence others so that they will grow in virtue. As with practicing generosity, genuinely affectionate and friendly speech will attract people to us so that we will be able to teach and guide them in the Dharma, which will help them in the long term.

(3) *Conducting ourselves in a profitable way* entails keeping our body, speech, and mind in line with the Dharma. Such behavior inspires those around us, no matter what field we work in. For example, one bodhisattva spent most of his life repairing roads, building bridges, and carrying things for the elderly without ever losing heart in the face of difficulty. Social welfare projects run by Buddhist individuals or organizations show the public that we care and that our compassion is not merely at the level of words. Acting in ways that directly benefit others attracts them to us and thereby to the Dharma. Bodhisattvas extend help to others impartially and maintain an attitude of equal care and concern for all, no matter how someone acts in return. This opens the door for bodhisattvas to engage with people from all social classes, races, religions, ethnic groups, sexes, and so on. It also enables them to work continuously for others because they do not delight in praise and appreciation or become discouraged due to blame and criticism.

(4) *Cooperating with others* and adapting ourselves to what benefits them involves providing them with a good example of how to live ethically and with kindness. For example, while being employed in an office or

factory, we work together with others without straying from our ethical values. At parties we are friendly and have a good time without drinking or taking drugs. Living in accord with our precepts can occur naturally. We don't draw attention to it, but others observe and it makes them think. This can exert a powerful influence on others who usually go along with the crowd without first examining the effects of their actions. Seeing someone who is happy without being egocentric could attract them to the Buddha's teachings or inspire them to live in accordance with the values of their own religion. In either case, they will create virtue and avoid nonvirtue.

Practicing the four all-embracing virtues benefits us, the people we interact with, and society in general. These four are methods used by bodhisattvas to inspire others' interest in the Dharma and persuade them to learn and practice it.

## REFLECTION

---

Practicing the four ways of attracting others so that we can teach them the Dharma and inspire them in goodness is prudent advice for relating to others, no matter what the situation. Those who aspire to spread the Dharma to new regions and to sustain it where it already exists should take these four to heart.

1. Being generous opens the door to establishing good relationships.
2. Speaking pleasantly in a way that connects with others and being friendly and caring about them establishes a good relationship.
3. Encouraging others to conduct themselves in a wholesome way helps them take a good direction in life. One way to do this is by teaching the Buddhadharma and creating conditions in which others can practice. Another is by living an exemplary life yourself.
4. Behaving according to your words and living according to the Dharma shows others that you are trustworthy, consistent, and wise in your decisions. Cooperating with others and living in accord with your precepts and ethical values not only inspires them but also ensures that

you do not harm them by being hypocritical and uncontrolled in your behavior.

---

### *Suggestions for Western Dharma Teachers*

In addition to the four ways of attracting others that are found in the scriptures, I would like to offer some suggestions specifically for Westerners who teach the Dharma. Although what follows applies to Asian teachers as well, Westerners do not have centuries-long lineages of Buddhist teachers in their own culture to look to as examples.

I appreciate the enthusiasm of Western teachers and acknowledge how much they have done to spread the Buddhadharma, to benefit sentient beings, and to decrease suffering. As Buddhism spreads in your countries, more of you will become teachers. Nevertheless, Buddhism is new in the West, and you do not yet have a culturally suitable role model to follow for being a Dharma teacher or for a proper teacher-student relationship. You must proceed slowly and carefully. You are pioneers now, and over time such role models will naturally evolve.

Before instructing others, it is essential to cultivate your own understanding under the guidance of a qualified spiritual mentor. Listen to teachings, study hard, and relate what you learn to your life. In this way your level of understanding will grow from just gathering information to critical reflection that impacts your life and your choices. With a stable understanding derived from years of study and practice as well as humble awareness that there is much more to learn, you will be able to explain the Dharma well. Otherwise, as Dharmakīrti said, how can you explain something to others that is just words to yourself? If you can speak from experience and deep understanding, your words will make a difference to others.

Western teachers have asked me: What qualities must we cultivate to become a reliable spiritual mentor to others? Who and how should we teach? The Buddha gave a vast variety of teachings; which ones are most suitable for us to teach? How do we work with students without becoming emotionally entangled with them? How do we ensure that we remain

balanced so that our practice progresses? I will respond to these thoughtful questions below.

### *Qualities to Develop*

Chapter 4 of *The Foundation of Buddhist Practice* described the qualities students should look for in prospective Dharma teachers. These qualities remain the same, no matter the country, culture, or person. You must try to develop those same qualities in your practice and apply those same standards to yourself to become a qualified teacher. Skimping on the development of your good qualities while expecting to be treated as a spiritual master won't do.

Before beginning to teach, you must have mental stability derived through your Dharma practice, so that your life is calmer. Students see teachers as role models who have the possibility to help them. If the teacher is a happy and peaceful person, they will admire her and want to learn from her. If she is distracted and anxious, students will wonder whether Dharma practice actually subdues the mind. In addition, if the teacher is always preoccupied, disorganized, and stressed, she won't have time to pay attention to students' needs or to teach them in a serious, consistent manner.

If you wish to teach the Dharma, you must examine to what extent you possess the ten qualities of a Mahāyāna spiritual mentor: look closely at your ethical conduct, meditative experience, understanding of emptiness, and knowledge of the scriptures. To what extent do you care about the well-being, temporal and ultimate, of the students? Are you irascible, surly, and quick to anger, such that students are afraid to approach you? Are you content and patient, or do you constantly complain about one thing or another? It's important to be conscientious and with mindfulness and introspective awareness monitor our attitudes and behavior in order to benefit and not harm the people who sincerely turn to us for help.

Do not be satisfied with knowing only one meditation technique, one scripture, or one tantric practice, but for the benefit of others, strive to overcome your limitations and expand your knowledge. In his *Great Treatise*, Tsongkhapa says (LC 3:349–50):

Each Mahāyāna scripture—from summaries to [the most extensive texts]—gives a great many teachings on the profound meaning, but also leaves many things out. So you must draw points that are not taught [in certain texts] from [other] texts that do teach them, and you must draw points that are not [taught] extensively [in certain texts] from [other texts] where they are [taught] extensively. You should understand that this is true for the category of the vast [bodhisattva deeds] as well.<sup>19</sup> A partial [path], in which either the profound or the vast is missing cannot be considered [complete]. This is why it is often said that one [must be] skilled in all vehicles in order to be a spiritual mentor who is fully qualified to teach the path.

You must be able to discern the difference between an intellectual understanding of the teachings, which is comparatively easy to gain, and realization and experience of them, which is more difficult to cultivate and requires years of continuous practice. Do not be infatuated with a few blissful or unusual meditative experiences and think that you have become a great sage qualified to teach the masses. Rather, continue to see yourself as a student. After all, until you attain full awakening you are the Buddha's disciple. Once in a while you may temporarily be in the role of teaching the Dharma. Improving the state of your mind is your principal occupation, not becoming a famous teacher or building a big Buddhist organization with yourself at the head.

Social status, wealth, or charisma are not qualities that make a good Dharma teacher. Rather, it is the ability to show someone what to practice and what to abandon; a teacher must practice such instructions themselves.

### *Motivation*

Be aware of the audience's buddha nature and feel honored to share the Dharma. When you teach, you must embody the Dharma. You are not just relaying information. Recite the text clearly and explain it with compassion. Always cultivate a motivation of compassion, care, and concern for the students. The Buddha comments (SN 16.3):

A monastic teaches the Dhamma to others with the thought “Oh, may they listen to the Dhamma from me! Having listened, may they gain confidence in the Dhamma! Being confident, may they show their confidence to me!” Such a monastic’s teaching of the Dhamma is impure.

This person ostensibly wants others to gain confidence in the Dharma, but he is not necessarily wishing for the students to understand or practice and receive the benefit of doing so. This person lacks humility and does not respect the Buddha and Dharma. His principal wish is more to receive offerings, reputation, and status.

Some religious leaders, both Buddhist and non-Buddhist, use religion as a way to procure money or to earn a living. Doing this not only harms the teacher, it also damages the faith of others, causing them to turn away from spiritual teachings that could benefit them. For this reason, Dharma teachers and leaders must continuously check their motivation to make sure one of the eight worldly concerns has not crept in.

In the above passage, the Buddha was speaking to monastics, who were the principal teachers of the Dharma at the time. Nowadays many lay practitioners—who have families and children to support—also teach, making the issue of earning one’s livelihood through offerings from teaching the Dharma even more delicate. This requires a great deal of thought and care, so that one’s motivation remains pure while sharing the Dharma with others.

Someone with the correct motivation genuinely respects the Dharma and recognizes that she has the good fortune to share it with others. Her wish is for others to learn, understand, practice, and realize the Dharma. She teaches with compassion and sincere concern that wishes the students to be free from cyclic existence. The Buddha says (SN 16.3):

A monastic teaches the Dhamma to others with the thought “The Dhamma is well expounded by the Blessed One, directly visible, immediate, inviting one to come and see, applicable, to be personally experienced by the wise. Oh, may they listen to the Dhamma from me! Having listened,

may they understand the Dhamma. Having understood, may they practice accordingly!” Thus he teaches the Dhamma to others because of the intrinsic excellence of the Dhamma; he teaches the Dhamma to others from compassion and sympathy, out of tender concern. Such a monastic’s teaching of the Dhamma is pure.

Sincerity is an important quality to have when teaching the Dharma. The statue of the Buddha—emaciated when he was fasting for six years—illustrates his inner strength and determination. He was sincere and willing to undergo hardship to accomplish his spiritual aims. We are followers of this great master, but sometimes we do not listen to his advice. Some people use the Buddha’s name and his teachings for their own personal gain, without taking them seriously. This is sad. It is better to remain a nonbeliever than to distort the Buddha’s teachings or use them to become famous or wealthy. That would be more honest. Some so-called Buddhists are hypocrites. They present themselves as followers of Buddha Śākyamuni, but live and think differently than he did.

If we are sincere, what others say does not matter. For example, some people say I’m a living Buddha; others think I’m almost like a devil. I always remember that I’m a simple Buddhist monk. If I’m honest, even though others do things against me, gradually the truth of the situation will become clear. If we are cunning and manipulative, we may seem to be successful for a while, but when we die we will have to face what we have done. No one can help us at that time, even the Buddha. Our future is in our own hands, so we must check our motivation and our actions well.

To be a Dharma teacher you must not only know the Dharma well and teach with a compassionate motivation, you must also be humble. Generally speaking, people in the West who are educated, wealthy, or powerful tend to be proud. Although their knowledge may be limited, their confidence is often inflated. If a teacher knows a lot about Buddhism but practices little, pride may easily arise. Therefore do not become so busy teaching that you neglect your own practice. If your practice is successful, you will become more modest and thus more suitable to teach others.

Dharma teachers must also cultivate deep patience. Because students are under the influence of afflictions and karma, they will make mistakes. They will not always practice what you instruct or follow your advice. Sometimes they may act out their emotional needs. Be careful to act wisely in these situations and be patient with students when they do not meet your expectations. Do not give up on others; remember that this is an excellent opportunity to increase your compassion.

As teachers become more well-known and popular, they should become more humble. If you become arrogant, demanding, or controlling, it is a sure sign that you have neglected your Dharma practice. Śāriputra once described the awe-inspiring qualities of the Buddha while the Buddha sat humbly listening. Afterward, Venerable Udāyi, who witnessed this, marveled (DN 28.20):

It is marvelous how content the Blessed One is, how satisfied and restrained, when being endowed with such power and influence he does not make a display of himself! If the wanderers professing other doctrines were able to discern in themselves even one of such qualities, they would proclaim it with a banner!

However many people may gather around you to learn the Dharma, remember that your first job is that of a practitioner, a disciple. Maintain a good relationship with your teachers and practice as they instruct. For the purpose of instilling humility and of not being spoiled by praise or fame, bow to the Three Jewels and to the lineage of teachers as well as reflect on impermanence before sitting on the Dharma seat.

### *How to Teach*

Promoting Buddhism in a non-Buddhist society with the idea to convert people is not right. Religion should not be forced on anyone. However, when people want to learn about Buddhism, our responsibility is to teach them or refer them to teachers. Some people will find the Buddhist approach more suitable and will naturally grow in the Dharma. Others will find other religions or no religion at all more fitting for their minds.

When people are new to Buddhism, teach them the qualities to look for in a spiritual mentor. Encourage people to be responsible and wise when they select their teachers. Do not tell them that they should become your student.

When I teach, I first think about my own experience. For example, before teaching the four truths, I consider the fact that I am impermanent and then explain impermanence according to my own experience. I do not pretend to be Avalokiteśvara or drop hints that would lead people to believe that I have high realizations. Similarly, when teaching about the afflictions and the methods to combat them, I first think about the way I deal with anger or face attachment and give myself as an example when explaining afflictions and their antidotes. In that way, while teaching others, I do analytical meditation at the same time. This way of teaching is very useful. However, this is not the case when making presentations on the high levels of the path, because I cannot talk about those based on my own experience. We must be honest when we teach. If we pretend to have realizations that we do not have, teaching will not benefit us and at best will be of limited benefit for others.

When you do not know the answer to a student's question, clearly say so. Evading the question, humiliating the person who asked, or making up an answer to avoid losing face are damaging to both the teacher and the student. Later, ask your teachers to explain these unclear points, discuss them with Dharma friends, and research them in the scriptures.

When you encounter difficulty, seek the help and guidance of others, and do not think that simply because you have the name "teacher" you should know everything. In addition, seek the advice of your teachers and the support of Dharma friends to handle difficulties that arise when working with students.

Although Tibetan custom is to be humble and say one does not know something even when one does, in some cases this is not wise. It could discourage students because they would think the teachings are just stories and lack a living tradition of realized practitioners. If we have some knowledge or experience, we should tell others that we gained this through continuous practice. For example, if we used to have a very bad temper, but that has lessened through our Dharma practice, people will be encouraged

to hear that. My style is to express openly the little experience I have on a topic so students do not think Dharma is merely an academic pursuit. In that way, they will be inspired to practice and develop realizations themselves.

However, we should not publicly say that we have insight into emptiness or have generated bodhicitta. Nor is it advisable to state that we have attained single-pointed concentration or tantric realizations. For monastics, lying about one's Dharma realizations is a root downfall, which means one is no longer a monastic. Boasting about one's realizations even when it is true is also a transgression, but a lesser one.

In general, it is better to tell students of your own internal struggles—that confronting anger, attachment, doubt, and so on requires persistence. Describe how you use the Dharma to purify and transform your mind. This level of discussion of your personal practice is permitted and advantageous. However, when doing this, avoid going to an extreme and turning a teaching situation into a tale about your emotions.

I avoid giving prescriptions to others as if the same advice did not pertain to me. Rather, I include myself—for example, saying, “When we get angry...” This reminds students that I am sincere and honest and expect the same from them.

In the sūtras, we read many dialogues that occurred between the Buddha and his disciples. The Buddha didn't simply lecture while his disciples listened passively. This system of questions and answers is good for both the teacher and the students. Ask the students questions and encourage them to be broadminded and creative when exploring various topics. In Tibetan monasteries it is said the most learning occurs in the debate yard—that is, students must discuss with one another. Sometimes they must struggle to understand a difficult point; in the end this gives them confidence. Learning the Dharma is not about remembering facts and concepts; it is about learning how to think properly, how to assess the state of our mind and improve it.

Don't expect yourself to answer everyone's questions. A hundred students will produce a hundred questions and a hundred problems. Today you answer one question and tomorrow another one arises because of that answer. Although the Buddha lived for eighty years, he was not able to answer all his disciples' queries. Even all the sūtras, treatises, and

commentaries in the Kangyur (the Buddha's teachings) and the Tengyur (the major Indian commentaries) cannot quench all queries. But if you know the structure of Buddhadharma through having a deep understanding of the four truths, you will be able to investigate and find the answer. For this reason, encourage students to discuss and debate the teachings so that they learn to think for themselves and gain clarity on complex issues through using their own wisdom.

In this way, invigorate students so that they develop faith on the basis of reason, inquiry, and analysis. Dharma students in the West are educated and intelligent. They must use their analytic abilities to develop understanding, and consequently trust and confidence, in the Buddha's teachings. Blind faith is not our objective in teaching them. If such faith were sufficient to attain nirvāṇa, the Buddha and the great Indian sages would not have explained the Dharma and analyzed the nature of reality in such detail.

## REFLECTION

---

Cultivating certain virtuous qualities is essential for those who wish to share the Dharma. Reflect on these well and take them to heart.

1. You must study the Dharma and put it into practice under the guidance of qualified Buddhist spiritual mentors.
2. Cultivate the qualities that the Buddha set forth for the various types of spiritual mentors (see *The Foundation of Buddhist Practice* for these).
3. Keep good ethical conduct. Don't tell yourself that because you're in a teaching role you are exempt from ethical precepts.
4. Constantly check your motivation so that it doesn't degenerate into seeking reputation, offerings, and service from others. If your motivation degenerates, so will your behavior, and then everything good you have done will become moot in the face of the scandals you have brought on.

5. Remember that until attaining full awakening, you are always the student of the Buddha. Once in a while, according to conditions, you may perform the role of a teacher, but it is only a temporary role and is not who you are. Don't construct an identity around it.
6. Cultivate deep patience, fortitude, and compassion. Don't expect people to respect you. Remember you are the servant of others.
7. Teach only what you know and understand. If you don't know the answer to a student's question, say that. Then research the answer and reply to the student later.
8. Do not look to students to fulfill your emotional needs and do not try to fulfill theirs. You are not their therapist, the loving parent they never had, or their best friend. Your job is to teach and encourage them in the Dharma with kindness and compassion.
9. Be careful not to change the explanation of the path so that it corresponds to what you like or what feels comfortable to you.

---

### *The Essence of the Dharma and Its Cultural Forms*

The following sections were compiled from discussions His Holiness had with Western teachers. When I (Chodron) read them to His Holiness, he was concerned that people could mistakenly think he was setting a policy for the Buddhist world. This is not at all the case. Some people who are not familiar with Tibetan society incorrectly believe that the office of the Dalai Lama is similar to that of the Pope. They think that His Holiness can dictate policy to all Buddhists, or at least to all Tibetan Buddhists. This is far from the truth. Buddhism has never had the type of hierarchy found in the Catholic Church, and while there may be various national or international Buddhist organizations within each Buddhist tradition, they each have their own policies and internal rules. While some groups or organizations tend to rely more than others on the advice of a leader, the Buddha established the monastic saṅgha as a type of democracy where the voice of each fully

ordained monastic could be heard and where decisions were made by consensus.

Thus while His Holiness offers his ideas about cultural adaptation, Dharma centers, and teachers, he is not setting down rules or telling all Buddhists how to conduct their lives or the internal affairs of their temple, center, or monastery. If common policies are to be established, he insists it must be done by a gathering of representatives of the concerned parties.

Returning to His Holiness's words: The actual Dharma Jewel—the true cessations of *duḥkha* and its causes and the true paths that exist in the mindstreams of *āryas*—does not depend on culture and is the same for all realized beings, no matter when or where they lived. However, the teachings that we study and learn, as well as the rituals and customs in Buddhist communities, were taught in the cultural context of ancient India and passed down for centuries in Asian cultures. This Dharma does not and cannot exist independently of culture because it is shared by and influenced by many people in a particular place.

Distinguishing the Buddha's teachings from cultural overlays is not as easy as it may appear for either Asians or Westerners. Many Asian teachers are not aware of the extent to which their culture has mixed with Buddhism over the centuries, and vice versa. Few Western students are aware of their own cultural preconceptions and assumptions and how these influence their understanding of the Dharma and Buddhist practices. Buddhism is new in the West and many questions exist regarding how and what to adapt to Western cultures while maintaining the authenticity of the path. For these reasons, time, care, and education are needed rather than quick change.

People who accept a new idea or religion, such as Buddhism, should take the essence and adapt it to their own culture. Sometimes I visit places where Western Zen practitioners have Japanese furniture and Western Tibetan Buddhist practitioners have Tibetan furniture. This makes me uncomfortable. Of course, if they like that type of furniture in their homes, that is one thing, but they should not feel that adopting Asian culture or customs is necessary for practicing Buddhism. I often joke with my Western students that even if they wear Tibetan clothes, speak the Tibetan language, and eat *tsampa*, they are not Tibetan; they still have a big Western nose!

Reform and adaptation of Buddhist customs and rituals are possible and necessary, but we must understand the Dharma well in order to not discard the essence. Some people believe they understand the Buddha's teachings well when in fact they are following their own opinions and preferences. Making up your own brand of teachings and claiming that it is Buddhism is extremely dangerous for both the individual and those he teaches. This happens when people do not correctly understand the Buddhadharma and yet assert themselves to be authentic teachers. Therefore, studying the sūtras and the great treatises, as well as contemplating their meaning and putting them into practice, are essential. People who teach and guide others must be rooted in what the Buddha taught. This is extremely important. The Tibetan master Tsongkhapa always cited quotations from well-known Indian Buddhist texts and commentaries when making reforms. In this way he maintained the authenticity of what he taught.

We must differentiate between what is essential in the Buddhist traditions and what is not, and then be sure to preserve the former. Cultural aspects that arise as a product of society change with time and need not be maintained. The essence to preserve is that which directly leads to liberation and awakening and is useful in daily life.

The four truths, the two truths, the eightfold path of the āryas, rebirth, karma and its effects, and the nature of the mind are not concepts made up by the Buddha. They reflect the nature of reality and the process through which a person can be perfected. Whether people are from Asia or the West, whether they live in ancient times or the present, all people have the same basic human nature, human suffering, and human potential. Since Dharma teachings address these, there is no need to change them. If such teachings were omitted, one would no longer be teaching the basis, path, and result described by the Buddha.

Buddhism came from India, and by adapting to the circumstances and culture in Tibet, it came to be called "Tibetan Buddhism." Such a process will occur in the West as well, although since many Western cultures exist—Spanish, American, French, and so on—a uniform "Western Buddhism" will not exist. Even within one country, there will be many different Buddhist traditions. Although such adaptation is important, it needs to be well-thought-out and evolve over time. We cannot legislate, "This is

Western Buddhism and this is not.” Neither Asian teachers nor Western students alone can adapt the forms: a joint effort is needed. Qualified Asian teachers are the source of the tradition and sincere Western practitioners will adjust the expression of the teachings to a new culture. Then profound and reliable new forms of Buddhism will develop.

### *Propagating the Dharma*

I pray for the Buddhadharma to flourish in the ten directions; however, I do not aim to propagate the Dharma to everyone. If someone sincerely requests teachings, it is our duty to explain the Dharma to them. Billions of people, who have different dispositions and interests, live on this planet. For some, Buddhism is effective; for others, another religion is a better fit. This was true at the time of the Buddha as well.

The main aim of Buddhism is to benefit others, not to convert people to Buddhism. You should think about how to benefit others with the Dharma, not how to spread your tradition and gain the greatest number of followers. Dharma practice is more than building a Buddhist center, although some teachers seem to have the opposite priority. Great masters in the past did not have big institutions, big hats, or high titles, yet they had deep experience of the Dharma. Nowadays people look for great titles, high thrones, and big temples, and some gurus comport themselves in a pompous manner. This is a sad situation.

Sometimes we are a bit idealistic and think that if the Buddha himself were alive now, all seven billion people on this planet would become Buddhists. But even during the Buddha’s time, the entire population didn’t follow the Buddhadharma! If someone feels that Buddhism is not logical or suitable for them, trying to convince them is foolish. Instead, pray that they find a path that will benefit them.

Westerners tend to be very sensitive; sometimes a small incident or slight provocation causes great upset. You need to develop great patience to bring Dharma to the West and set up centers, temples, and monasteries. As long as we are in saṃsāra and haven’t attained liberation, there will be difficulties. Even if the Buddha were alive and gave teachings today, he would not be able to resolve all of these problems.

Buddhadharma must be preserved in terms of the individual and the society. As individuals we preserve the Dharma through our study and practice. Teachers and students engaging in Dharma discussions together also constitute preserving the Dharma on the level of the individual.

To preserve Buddhadharma on the societal level, we need to work together in groups. In the Buddha's time, as well as today, the preservation of the Dharma in society depends on the saṅgha, the monastic community that practices the Vinaya. The Vinaya lists over a hundred rites and activities of the saṅgha, from ordination to the manner of expelling someone from the community. These are based on a *saṅghakarman*, a group decision made by the consensus of a saṅgha. One individual alone does not have the power to make these decisions or do these practices. Therefore establishing and supporting Buddhist monasteries in the West is important.

Nowadays lay practitioners in the West go to Dharma centers to learn and practice. Decisions in these communities should be made only after discussion by the whole community. When conclusions regarding certain topics are reached through discussion, write them up as guidelines for the community. Of course, as a community changes and grows, some of these guidelines will need to be altered. This too can be done following discussions in the group.

At present, many Buddhist centers exist even in a single city in the West. Each tradition and even each teacher within a tradition has his own center. I would like to see some nonsectarian Buddhist centers with teachings from all traditions. Of course, the method to actualize this ideal in practical terms requires further thought. I can imagine a single Buddhist temple in a city, with statues of Buddha Śākyamuni for the Theravāda; Padmasambhava, Sakya Paṇḍita, Tsongkhapa, and either Gampopa or Milarepa for the four Tibetan traditions; Mañjuśrī for Zen practitioners; and Tārā as a balance for women. Familiarizing people with all these figures could reduce sectarianism. On the other hand, if you prefer simplicity, a temple with simply a Buddha statue will suffice, and various Buddhist groups in the area could meet there.

Some monasteries in India and some Dharma centers in the West have many beautiful Buddha images and religious objects. At times I wonder if they are in competition with one another to display their wealth. I also

wonder if the practitioners' understanding of the Dharma is as elaborate as their buildings. I prefer that the richness of the Dharma be in our heart, not outside ourselves in the environment, and therefore encourage simplicity in the décor of monasteries, Dharma centers, and retreat centers.

We should follow Milarepa's example: he had just an empty cave. Nearby lived a lama who gave teachings to large crowds. He sat on a large throne with ornate parasols all around. One day, Milarepa's sister came and said to Milarepa, "Your way of practicing is very strange and sad. You have nothing, just an empty cave; you live like a beggar. Other lamas have many disciples. They teach a lot and enjoy many luxurious items offered by their disciples. How stupid you are!" To this, Jetsun Mila responded, "I could do elaborate shows but have no time for them because the most important practice is to check our inner world, our mind."

If people wish to build elaborate monasteries and temples, that is fine. I don't oppose it. However, the donors should know that offering money to support the health and education of monastics within the monasteries will bring results that are equally as good as offering funds for statues or temple decorations. I encourage donors to make offerings to monasteries where genuine studies take place, not to monastics who do not study or meditate. Although donors still get a good result from making offerings to them because they hold precepts, the funds are better used to support those who are sincerely trying to improve their mind through study and practice.

The sūtras say that one who offers gold and jewels to the Buddha—or to a Buddha statue that represents the buddhas—accumulates great merit. But the Vinaya Sūtra says that if a monastic is sick and has no one to look after them and no money, then selling ornaments from a buddha statue to buy medicine is permissible. After the person recovers, the money should be repaid. Here the Buddha demonstrates his deep concern for practitioners. If someone has extra money and doesn't have any other way to use it, buying ornaments for Buddha statues is fine. However, if people are in need, preference should be given to them and the money offered to improve their situation.

Traditionally Tibet did not have many secular schools, and what schools there were prior to 1959 were owned by the government or by the wealthy.

So Tibetans did not have the custom of donating money to construct and operate schools and health clinics. Today we need to change this.

Although the Buddha's teachings are based on compassion, some people are more concerned about their own upper rebirth and liberation and less with others' welfare. Therefore they think chiefly of creating merit by offering to the Three Jewels. However, those who practice bodhicitta should be more concerned with benefiting sentient beings than with creating merit for themselves, and thus they should support schools, healthcare facilities, old-age homes, and other social services, as well as help genuine practitioners have the food, clothing, shelter, and medicine they need to continue their Dharma practice.

### *What to Teach in the West*

Teachers should teach people what is suitable according to their level, interest, and disposition. For example, although emptiness is the essence of the Dharma and understanding it is crucial for awakening, it should not be taught to everyone. People need a firm foundation in conventional truths—such as karma and its effects and the nature of saṃsāra—so that they do not misunderstand the teachings on emptiness and think that nothing exists or that “there's no good and no bad because everything is empty.” Nāgārjuna says in *Treatise on the Middle Way* (MMK 24.11):

By a misperception of emptiness  
a person of little intelligence is destroyed,  
like a snake incorrectly seized  
or a spell incorrectly cast.

For this reason, the bodhisattva ethical restraints warn against teaching emptiness to people who are not prepared. They need first to gain firm understanding of the conventional world by studying karma and its effects, the disadvantages of saṃsāra, and love and compassion.

Practical teachings, such as the stages of the path to awakening and mind training, are more effective for a general audience in the West than the sophisticated philosophical texts studied in monastic universities. Most non-

Buddhists come to the Dharma to seek help in calming their afflictions and creating better relationships with people in their life. What you teach should reflect this need.

As students grow in the Dharma, gradually introduce more topics, remembering to teach according to their level. They may initially have resistance to certain topics, so answer their questions and, if they have objections, encourage them to put those topics on the back burner for the time being and return to them later. Don't change the Dharma teachings by saying the Buddha didn't teach a particular topic simply because the students initially find it difficult to understand. When students are ready to hear more advanced topics, teach them, but explain them initially in an easy-to-understand manner without a lot of complicated language. The meaning of the Buddha's teachings should be accessible to everyone, not just to a learned minority.

Nevertheless, study of the philosophical texts can deepen students' understanding of the Dharma and help their meditation practice. This level of study should be available for Westerners who find it valuable, and I hope that Westerners will continue the tradition of this deep philosophical study that Indian and Tibetan sages have found beneficial for so many centuries. I also hope that Westerners can invigorate traditional debate by bringing Western concepts onto the debating courtyard. For example, practitioners could debate Buddhist versus scientific views of the nature of mind, Buddhist and Judeo-Christian views of creation and causality, and soul versus selflessness. This would be extremely valuable for Buddhists, scientists, and followers of other faiths.

The Buddhist approach must be based on fact and investigation. The Buddha himself and the Indian masters have made that clear. If we find anything in the Buddha's words that does not comply with reality, we should not accept it literally. In the Abhidharma, there are statements saying that the world is flat and Mount Meru is at the center of the universe. If it were necessary to accept this literally in order to be a Buddhist, then I would not be considered a Buddhist! These statements of the structure of the universe were incorporated from the prevailing worldview in society during the time of the Buddha. They are not the Buddha's unique teachings and liberation from saṃsāra does not depend on accepting them.

The sequence of the stages of the path to awakening as taught in Tibetan Buddhism needs to be reconsidered when Dharma is introduced to non-Buddhists. Teaching beginners about relying on a spiritual master confuses them. This topic comes at the beginning of Tibetan texts because the traditional Tibetan audience for those texts is Buddhist. Such an audience already has some knowledge and belief in topics such as rebirth, karma, and the Three Jewels. In some cases, the audience for this teaching consisted of practitioners who were about to receive tantric empowerment. Clearly, how the teachings are given to trained Tibetan monastics who grew up in a Buddhist culture is different from the presentation for Western spiritual seekers who are not Buddhist and simply want to learn the basic Buddhist approach and begin a meditation practice. To help the latter group, beginning with the four truths and the two truths (conventional and ultimate) is more skillful. In this way, newcomers will build a firm foundation in the Dharma and gradually come to understand more difficult subjects.

How extensive should a teaching be? On the one hand, simplicity and brevity keep students focused on the important points. Because they can understand and practice what they learn, they don't feel lost. On the other hand, if the teaching is too concise, the students may lose sight of the wider picture and be unable to understand certain points in their proper context.

Sentient beings have so many distorted thoughts and disturbing emotions that one teaching or one practice cannot address all of them. One day this thought is more active, so we need one practice. Another day another is stronger, and a different antidote is needed. Our mind is complicated, and transforming it requires practices that are sophisticated and complex. By understanding this, we will appreciate the various levels on which the Buddha taught and will be able to reconcile the diverse interpretations of his teachings.

The main factor for transforming our minds is reflection on the four truths, the two truths, loving kindness, and altruism. Without reflecting first on these points, the benefit of watching our breath or visualizing tantric deities is limited. Similarly, simply saying to ourselves that things are impermanent is not enough to change our entrenched misconceptions. We must analyze and use reason to convince ourselves. For this reason, I

recommend that newcomers as well as seasoned students continually engage in analytical meditation on these teachings.

Some Westerners have asked if skipping the preliminary practices such as prostrations, Vajrasattva mantra, refuge, maṇḍala offering, and guru yoga in order to proceed directly to the higher practices would be an acceptable adaptation in the West. The purpose of the preliminaries is to make the mind more receptive so that meditation will bring realizations. If our mind is obscured, doing the preliminaries will remove obstacles and create conducive conditions so that we can gain realizations of the path and integrate the Dharma in our mind and life. If someone has already done sufficient purification and accumulation of merit in the past and is able to attain realizations without doing the preliminaries, that is fine. But if they cannot, doing these practices is highly recommended.

### *Teaching according to the Audience*

A good teacher will be aware of the interests, dispositions, and Dharma background of the audience and will explain various points in a variety of ways in order to meet the audience's needs. For example, sometimes I speak to non-Buddhists who are curious about Tibet and the Dalai Lama. In this case, I emphasize secular ethics and the importance of compassion, forgiveness, and harmony. I describe patience, kindness, seeing the best qualities in others, and self-confidence that is directed in a positive way. Sometimes I bring in scientific findings to reinforce a point—for example, citing studies that have shown that a mother's compassion is critical for the proper development of the child's brain and that patients' trust in the doctor speeds their recovery. In the talks I include some antidotes for disturbing emotions. By applying these, they will see the positive effects of the Dharma on their lives and relationships. I also explain that basic human nature is gentle, kind, and compassionate. The reasons given to support these beliefs are based on common daily experiences, so I do not speak about rebirth, karma, nirvāṇa, or buddhahood. In this way, these people will hear ideas that will help them to live a good life now and receive a good rebirth in the future. Thinking about good values sets a foundation for them to become better people and better citizens of this world.

A second type of audience has keen interest in Buddhism but does not know about or understand some of the basic beliefs or assumptions on which the path to awakening is based, such as rebirth, countless sentient beings, and infinite eons. Most non-Buddhists did not grow up with these notions. Therefore a more academic approach is better for these people. Explain the two truths, the four truths, rebirth and karma, and the structure of the path. Talk about dependent arising and the way to apply it to many fields and disciplines. Then let them reflect. Time is needed to think about these topics and to gain some certainty. It does not happen quickly after hearing one explanation or reading one book. After hearing and reflecting upon teachings for a while, some people will begin to think that future lives are possible. They will accept this way of thinking, develop genuine interest, and continue studying. On this basis, then teach them how to practice the Buddhadharma.

A third audience consists of people who have some idea of rebirth, karma and its effects, and the four truths. They accept the existence of saṃsāra and nirvāṇa; they have heard a little about emptiness and dependent arising and are eager to learn more. The usual Buddhist approach is suitable for these people. We can teach a Dharma text or explain a topic from the perspective of the Buddhist worldview.

When teaching Buddhism to these people, teach the four truths, the three higher trainings, and the four immeasurables; do not explain the visualization of deities and maṇḍalas as found in Vajrayāna. Many people are exposed to Vajrayāna too soon. Some people are put off by it because they lack a proper foundation of the Buddhist worldview. Others started visualizing deities and reciting mantras, but because their understanding of the path is vague, they don't understand the purpose of such practices or the correct way to do them. The Buddha began by teaching his disciples the four establishments of mindfulness and the thirty-seven harmonies with awakening. He did not begin with guru yoga, which comes in a particular context and is only one part of the path.

Tantra is an advanced practice, and to do it people must receive empowerments. Since this cannot be received from a book, they must seek a living spiritual master with a valid lineage to give the empowerment. From this perspective, guru yoga becomes important. Tantric practice

comes later in a practitioner's development, after sufficient preparation. Empowerments and tantric teachings are not for everyone who attends a Dharma center. They should not be among the initial topics a newcomer is exposed to.

Many Westerners who want to explore Buddhism grew up with faith in God. It is not wise to teach them deity and protector practices at the beginning, for they easily project notions of God onto these Buddhist figures, seeing them as external, truly existent beings. They then may have blind faith in them or, conversely, may feel guilty or fearful if they act negatively, thinking the protectors will punish them. According to Buddhism, we are our own master, as the teaching on the twelve links of dependent origination shows. Only introduce devotional practices when the people have received sufficient preparation, and then explain them well so that people gain the proper understanding.

The Buddha as well as the great Indian masters taught according to the students' mental dispositions and interests, and we should do the same. For example, they presented diverse philosophical tenets according to the students' aptitude. What and how they taught was also influenced by the conditions in society at that time. For this reason, if we look carefully, we will discern differences in how the Indian and the Tibetan masters guided their disciples on the path, due to the differing circumstances in which they lived. In ancient India, non-Buddhist teachers and their teachings had a strong influence in society. Thus Indian sages such as Nāgārjuna, Āryadeva, Dignāga, Dharmakīrti, Candrakīrti, and Śāntideva emphasized reasoning as the way to distinguish correct beliefs from incorrect ones.

In Tibet, on the other hand, the situation was different. From the time Buddhism came to Tibet, there have been no strong rival philosophical systems. Although Bön, an indigenous spiritual tradition, pre-dates Buddhism in Tibet, Bön practitioners gradually adopted many elements from Buddhism. Points that were debated extensively in India were automatically accepted in Tibet. The Vajrayāna, which was not practiced publicly in India, became popular in Tibet, where it was taken for granted that almost everyone would participate in certain permissory rituals (T. *rjes snang*) qualifying them to do the practices of such deities as Avalokiteśvara or White Tārā. Also, in the latter centuries of Indian Buddhism, Buddhism

was largely confined to the monastic universities; the laypeople in the villages mostly followed Hinduism or Jainism. In Tibet, Buddhism spread throughout the country—with the exception of a small Muslim population—and was practiced in the home. Because of this difference in society, the approach Tibetan masters used in guiding their students differed from that of Indian masters. While monastics follow a rigorous program of study, reflection, and meditation, lay followers do devotional practices and daily recitations of prayers.

Since Buddhism is new in the West, and a multiplicity of philosophical, religious, scientific, and psychological views exist in Western countries, it is best for us Buddhists to return to the way of the Indian masters. According to these sages, first one studies, and on the basis of correct understanding, one comes to have faith. In other words, Western students should not be encouraged to have devotion for the teachings or the teacher from the very beginning. Instead, they should be encouraged to learn, investigate, and reflect upon the teachings. Through their own examination, they will see the validity of the teachings and the faith they subsequently generate will be based on knowledge, not blind belief.

I tell people who attend my Dharma talks not to think of me as their guru, but simply as a spiritual friend. Of course, later if someone takes monastic precepts, the bodhisattva vow, or tantric empowerment from me, it's a different situation. Devotion to the Buddha or to a teacher is not simply saying, with big eyes, "The Buddha and my teacher are so wonderful!" Therefore I encourage people new to Buddhism to listen, think, and assess the validity of the Dharma for themselves. They should practice what they learn and experience it themselves. On that basis, they will know that the Buddha's teachings benefit them and will develop genuine interest in the Dharma. Through this, they will naturally admire the Buddha and respect the person who explains the teachings to them. Guru yoga comes later, after ten, fifteen, or even twenty years.

Teach only what you have conviction in. For example, I have doubts about the geographical location of the hells as described in the *Treasury of Knowledge*, so I do not include this topic in my teaching. In addition, do not teach everything you have learned, but only those things with which you have had experience and which will benefit the audience.

If your teacher asks you to instruct a group, you may do so. If some people ask you to teach, ask permission from your spiritual mentor. Do not set yourself up as a teacher without permission. At each step, as you assume more responsibility for instructing others, consult your teacher. For example, if someone requests you to give refuge, check with your teacher, receive their approval, and then request them to instruct you on the proper way to conduct the refuge ceremony and give the five lay precepts. Should someone request you to give the bodhisattva vow, make sure that you keep the bodhisattva precepts well. Know the difference between aspiring and engaging bodhicitta and be familiar with the ceremonies for each. If you are not familiar with this or if you do not know the eighteen root and forty-six auxiliary transgressions well, it is better to refer the person to your teacher or another practitioner who will bestow the bodhisattva vow.

If you are requested to give a tantric empowerment, check with your tantric spiritual mentor. Make sure you have received that empowerment and have completed the requisite retreat and fire pūjā. Giving an empowerment and guiding students in tantric practice are big responsibilities, so you may wish to refer people to your teachers for these. As Buddhism evolves in the West, the empowerment texts will be translated into various languages. Then you can learn how to perform empowerments properly and ensure that the rituals are complete.

As time goes on, sincere and wise Western practitioners will write texts and ceremonies in their own language and a body of literature will gradually build up. To ensure that this process proceeds well, those of you who are first-generation Buddhist teachers in the West must be very conscientious.

Asian teachers should try to be aware of Westerners' specific problems so they can adapt their teaching methods. Learning about Western culture and values will help them to avoid teaching in an inappropriate way that results in misunderstanding or disappointment.

It is not skillful for Asian teachers to teach Western audiences as if they were speaking to Asian Buddhists. If an Asian teacher displays a culturally chauvinistic attitude toward Western practitioners, the Westerners should simply not pay attention. However, Westerners too should avoid cultural

arrogance, thinking that because some of their societies are more advanced technologically they can improve everything they come in contact with.

For both Asians and Westerners, the establishment of teachers' training programs would be helpful. These programs should emphasize teaching skills as well as communication, mediation, and counseling skills. For teachers who are not familiar with government regulations, learning how to observe those is also important so that the Dharma center, temple, or monastery conducts all affairs—be it constructing a new building, remodeling an old one, or procuring visas for teachers or monastics—according to the law.

### *Translations and Rituals*

The texts and sādhanas we chant are designed to assist us in visualization and meditation. The purpose of reciting the words is to contemplate their meaning. Without knowing the meaning of the words you chant, the value of your recitation declines sharply. Therefore, unless you know Tibetan, you should do your recitations in your own language. In that way, you will understand what the text says and will be able to visualize and meditate accordingly. Mantras, however, are recited in Sanskrit; we believe there is a special blessing from doing this.

In general, we Tibetans do not pronounce Sanskrit correctly. When I hear some Indian scholars, especially those in Varanasi University, recite the Sanskrit mantras and texts, I find it very touching and inspiring. Some of the melodies are truly remarkable; we Tibetans cannot recite this way. Maybe in a previous life I was a lazy disciple of a great Indian master, and that is why I feel so attracted to this chanting.

At the moment, translation terms and translation styles vary considerably from one translator to another. To standardize translation terms, scholars and practitioners could meet and gradually come to a consensus. Asian scholars cannot decide this. Much thought is required to select appropriate terms, and this selection should be done by those knowledgeable in the language and in the meaning of the Buddha's teachings.

Of course, each translator has his or her own style and getting a group of translators to agree on standard terms would be quite an undertaking! Let's see how the situation evolves. It could be that everyone will employ their own terms and styles, and gradually over time most people will gravitate toward one.

Westerners do not need to use Asian names or religious titles such as "lama." Much confusion can arise from not properly understanding the meaning of such Asian words, and because no uniform way of acquiring Tibetan titles exists, people with different levels of qualities use the same title. If it is beneficial to use a title at all, a Western one that conveys the correct connotation would be better.

If Westerners would like to have Buddhist ceremonies for births, rites of passage to adulthood, marriage, and funerals, meetings can be held to create them. Simple ceremonies for Buddhists of all traditions would be good. However, if a Buddhist marriage ceremony is created and its performance involves fully ordained monastics, care must be taken not to cause an infraction of the precept prohibiting monks and nuns from matchmaking. Monastics could perform an offering ritual with the couple and their dear ones in attendance, enabling the couple to create merit as an auspicious way to begin their marriage. However, it would be more appropriate if a lay Buddhist performed the actual marriage ceremony.

### *Many Ways to Benefit Sentient Beings*

In addition to teaching, counseling, giving precepts, and enhancing our own Dharma practice, there are many ways to benefit sentient beings. These include chanting protective scriptures and mantras, performing offering ceremonies, reciting words of truth, enabling sentient beings to contact holy objects, and recollecting the Buddha. All of these rely to some extent on the power of the Three Jewels to bless and inspire our minds, and all Buddhist traditions engage in these in one way or another.

Followers of the Pāli tradition often recite the *Protective Discourses*, or *Paritta Suttas*. Followers of the Mahāyāna chant the names or mantras of Amitābha Buddha, Medicine Buddha, Chenrezig (Kuan Yin), and other bodhisattvas. They also do pūjās (offering ceremonies) to create merit and

eliminate obstacles. Both traditions meditate on recollection of the Buddha (*Buddha-anusmṛti*, C. *nien-fo*) and recite words of truth.

Because results arise dependent on many factors, the effects of these practices are undoubtedly contingent on the motivation of the practitioners and their mental states and level of concentration when doing the practice. These more devotional practices work in a psychological and mysterious way—mysterious meaning that our rational mind and present level of knowledge are not fully able to grasp the dependently arising way these causes bring their effects.

### *Chanting Protective Scriptures and Mantras*

Protective discourses (*paritrāṇa*, *paritta*) express basic Dharma principles. Chanting and hearing them reminds people of these principles so that they can practice them in their daily lives. Monastics from the Pāli tradition often recite them to teach the Dharma as well as to create auspiciousness and receive blessings for new activities, such as blessing a new residence, opening a business, and beginning a marriage. The *Jewel Sutta* (*Ratana Sutta*, Sn 2.1) expresses the qualities of the Three Jewels, the *Sutta of Great Blessings* (*Mahāmaṅgala Sutta*, Sn 2.4) teaches how to live a good life, the *Sutta on Loving-Kindness* (*Mettā Sutta*, Sn 1.8) focuses on developing a kind and caring attitude toward others. All three sūtras promote harmony in society and faith in the Three Jewels.<sup>20</sup>

Using the example of the *Jewel Sutta*, we see how protective discourses inspire and bless the mind. This sūtra was taught at Vaiśālī, when the city was undergoing great hardship due to famine, evil spirits, and the plague. The citizens, who were from the Licchavi clan, invited the Buddha and Saṅgha to come, hoping they could remedy the situation. To remedy this harm, prevent future harm, and increase the safety and well-being of all, the Buddha taught this sūtra on the qualities of the Three Jewels<sup>21</sup> with a heart of loving-kindness and compassion for the spirits causing the difficulties, for the devas living in the area, and for the human beings experiencing hardship. Through the power of his reciting this and of the citizens contemplating its meaning and generating faith in the Three Jewels, the demons causing the havoc fled. Good conditions were restored to the city,

its citizens took refuge, and the town later became a stronghold of the Dharma.

In the present day, the sūtra is often recited for similar purposes and brings similar results. Reciting the verses connects our minds to the qualities of the Three Jewels. This draws the spiritual power (P. *ānubhāva*) of the Buddha, Dharma, and Saṅgha into our mind. This spiritual power comes from the Buddha's practice—his accomplishment of the ten perfections and his complete cultivation of the thirty-seven harmonies with awakening—and the results of this practice—the ten powers of a tathāgata, the four fearlessnesses, and his wisdom and compassion. It also arises from the Dharma—true cessations and true paths—and from the Saṅgha and its marvelous qualities. By calling these qualities to mind, devotion, confidence, and trust arise in our mind, and we are imbued with inspiration. That transformation of our mind is the blessing.

### *Words of Truth*

With that virtuous state of mind, we then declare words of truth (*satyavacana*, *saccavacana*). In this case, with loving-kindness and compassion, we generate the strong wish for the happiness, well-being, safety, and security of ourselves and others. One way of explaining this is that our mind becomes a channel for the blessing power of the Three Jewels—a power that arises due to their virtuous qualities. By reflecting on their qualities, we draw their spiritual energy into our mind and then express it in a strong determination for the welfare of self and others. Another way of explaining it is that our mind becomes transformed into virtue by reflecting on the wonderful qualities of the Three Jewels, and the power of that virtuous mind is expressed in the determination of truth. In both cases, spiritual power arises due to the virtues of the Three Jewels and the transformation that has occurred in our mind; in both cases, the result is compassionate wishes for the well-being of self and others.

Initially, our words of truth may not have much power because our mind is not yet strong in the Dharma. However, as we continue to practice—living ethically, being generous, generating loving-kindness, listening to and reflecting on the Buddha's teachings—the power of our declaring words of truth increases. In the case of the Buddha, it increased to such an

extent that the evil spirits at Vaiśālī could not endure the force of his virtue and realizations and left the town. The healing of Vaiśālī was not due to the Buddha’s magical powers or to his being omnipotent, because the Buddha is neither omnipotent nor a performer of magic. The effect a buddha can have on us sentient beings and the world is dependent on our mental states and our karma.

Found in both the Pāli and Sanskrit traditions, words of truth are spoken with a strong virtuous intention motivated by love and compassion. They are not a promise to do an action, but a statement of fact. The truth of this fact assures the occurrence of an event. Often the person who utters words of truth appeals to natural forces to validate their statements. For example, after attaining supreme awakening under the bodhi tree, the Buddha declared his attainment and, putting his right hand on the ground, asked the earth goddess to validate its truth. She appeared and did so.

Another example of a paritta in which words of truth are uttered occurs in the *Aṅgulimāla Sutta* (MN 86), in which the terrifying bandit and murderer was subdued and converted by the Buddha. After he was ordained as a monk but before he became an arhat, Aṅgulimāla was on alms round when he saw a woman giving birth to a deformed child. Overwhelmed with compassion, he thought, “How beings are afflicted!” He told the Buddha what he saw, and the Buddha instructed him to return and say to the woman, “Sister, since I was born with the noble birth [that is, when he became an ārya], I do not recall that I have ever intentionally deprived a living being of life. By this truth, may you be well and may your infant be well!” Aṅgulimāla did as instructed—what an amazing, truthful, and compassionate declaration this was, made by someone who had murdered 999 people! By the force of this truth spoken by a virtuous monastic, both the mother and child were healed. Nowadays people recite the same words of truth found in the scriptures. In Theravādin countries, Aṅgulimāla’s words of truth are often recited by a monk when a pregnant woman is ready to give birth.

The power of words of truth depends on the sincerity, compassion, and truth of the person who utters them. Knowing this, it is essential to pay special attention to the state of our mind when reciting words of truth. The *Questions of King Milinda* (*Milindapañha* 4.1.42) relates an event that

occurred when the Ganges overflowed its banks and a city was threatened. The king brought many sages to the site, but the water continued to rise even after each one declared words of truth. The prostitute Bindumatī heard of the danger to the city and went to the riverbank, where she uttered words of truth. Much to everyone’s surprise the waters subsided. The townspeople questioned how she could do this, to which she replied, “Since I have been in this profession, I have never distinguished between my clients. I treat them all equally, without discrimination based on their caste, physical appearance, or wealth. I used this truth as the basis for my words of truth.”

The *Sivi-Jātaka* (*Jātaka* 499) recounts how King Sivi gave both his eyes to the god Śakra, who, disguised as a blind brahmin, tested the king’s determination to give what was most dear to him by requesting his eyes. To illustrate the purity of his motivation in giving both his eyes, the king spoke words of truth, by which one eye was restored. When the king again spoke words of truth, saying, “A greater joy and more delight that action did afford. If these my solemn words be true, may the other eye be restored!” his second eye was restored.

In the *Smaller Amitābha Sūtra*, the Buddha uttered words of truth several times. The first time he said:

Śāriputra, as I perceive that such blissful benefits are matters of great importance, I pronounce these words of truth: Good men and good women of pure faith who hear Amitāyus Buddha’s name of inconceivable merits and also learn of the Pure Buddha Land of Great Bliss (Sukhāvatī) should all receive [the teaching] with faith, arouse aspiration, practice the method as prescribed, and attain birth in that buddha land.

The buddhas of the ten directions then uttered the words of truth:

Sentient beings should all receive in faith this gate of the Dharma concerning praise of the inconceivable merits of the buddha land and protection by all buddhas.

As stated by the Buddha in the sūtra itself, the purpose of these words of truth are to “urge sentient beings to receive this teaching in faith, in order to guide and benefit them and give them peace and bliss.”

In Tibetan Buddhism, words of truth are expressed when making offerings to the Three Jewels:

By the power of the truth of the Three Jewels, the power of the inspiration of all the buddhas and bodhisattvas, the great might of the completed two collections [of merit and wisdom], and the power of the intrinsically pure inconceivable sphere of reality, may [these offerings] become suchness.

Throughout history, Tibetan masters have written words of truth. In the last century, Jamyang Khyentsé Chökyi Lodrö wrote “The Sage’s Powerful Words of Truth,”<sup>22</sup> and His Holiness the present Dalai Lama composed “Words of Truth,” a prayer for the freedom of the Tibetan people.<sup>23</sup>

### *Offering Ceremonies*

In Mahāyāna countries, people often request monastics to conduct offering ceremonies in order to create merit that is dedicated for a specific purpose in addition to dedicating for the full awakening of all sentient beings. The Medicine Buddha pūjā is done to remedy illness, and the Green Tārā pūjā is performed to counteract obstacles and hindrances or to bring success when beginning a new project. The *Amitābha Sūtra* and Amitābha’s name are recited to help the recently deceased to be born in Sukhāvātī pure land. Kuan Yin’s name is often recited for this purpose, and in Tibetan Buddhism people recite and contemplate the *Guru Pūjā* and other sādhanas to create merit for many different occasions, ranging from beginning a marriage to wishing someone to be born in a pure land in their next life.

### *Holy Objects*

Just hearing Dharma words that express goodness or seeing Dharma objects sets good latencies on sentient beings’ minds, even if they lack the ability to understand them. These latencies will ripen in their having a connection

with the Dharma in the future. For this reason, many spiritual mentors encourage their students to make statues of various buddhas and bodhisattvas, to circumambulate stūpas, and to recite mantras, sūtras, and other Dharma texts.

In the *Path of Purification*, Buddhaghosa tells the story of a frog who was in the vicinity when the Buddha was teaching on the banks of the Gaggara Lake. While the frog was hearing the Buddha speak the Dharma, a cowherd put a stick on the frog's head and crushed it. The frog was born in the Celestial Realm of the Thirty-Three (Trāyastriṃśa, Tāvatiṃsa). Seeking the cause of this wonderful rebirth, he saw that it was due to having heard the Buddha's voice. With gratitude, the former frog went to pay respects to the Buddha, who again taught him the Dharma, whereby he became a stream-enterer.

The Nālandā tradition tells the story of Sthiramati (Sāramati), a great Abhidharma scholar, who in his previous birth was born a pigeon that often perched outside Vasubandhu's cave. There he heard Vasubandhu recite the entire Abhidharma. In his next life, the pigeon was born as a boy in the area. He ordained as a monastic and became a renowned Abhidharma scholar due to having had the seeds of this topic planted in his mindstream when he was a pigeon.

In the pure-land practice, just hearing the name of Amitābha can have a powerful effect on a person's mindstream, causing merit created in previous lives to ripen. Ou-i says:<sup>24</sup>

No matter what your station in life, all you have to do is hear the Buddha's name and the good roots you have accumulated over many eons immediately ripen, and all forms of negativity and perversity are transformed into virtues.

However, Ou-i continues by clarifying that for inspiration and wisdom to arise, the reciters must have refuge in the Three Jewels, meditate on the bodhicitta aspiration, and maintain ethical conduct:

Merely hearing the name of Amitābha [without faith and vows] may become a long-term causal basis [for one's

awakening], but it cannot be called the wisdom that comes from hearing. Reciting the Buddha's name is a matter of being mindful of the Buddha's name from moment to moment—thus it is the wisdom that comes from reflecting [on what you have heard].

Although what we are exposed to may influence us in subtle and profound ways, we don't want to remain ignorant and leave our spiritual progress to such rare occasions as serendipitously hearing the Dharma. Practice is essential.

### *Recollections of the Buddha*

The formal recollection of the Buddha entails reflecting on the Buddha's qualities one by one. This recollection is much deeper and has more impact on the mind than reciting sūtras quickly. Done in a meditative manner, it can lead to samādhi.

The Pāli and Sanskrit traditions both speak of the recollections of the Buddha, Dharma, Saṅgha, ethical conduct, generosity, and deities.<sup>25</sup> In the Sanskrit tradition, recollection of Amitābha Buddha or Akṣobhya Buddha generates faith in these buddhas and increases our aspiration to be born in their pure lands. They also inspire us to generate the qualities of the holy beings, such as compassion.

### *Areas of Caution*

Buddhism is new to the West; it is still in the process of finding its footing in Western culture. As such, there are many areas where caution is needed.

First, students may have unrealistic projections on and expectations of Dharma teachers. Many people tend toward a black-and-white way of thinking, with little appreciation for gray areas. If they admire someone, they praise him or her to the skies. This can lead to idolizing Dharma teachers and having unrealistic expectations of them. To avoid this, when you teach, make it clear from the beginning that you are an ordinary practitioner, not a superhuman.

When a student seeks guidance, the teacher should respond and help. But if there is danger—for example, that the student will become emotionally attached to the teacher or overly dependent on the teacher’s guidance—then for the benefit of all parties the teacher should keep some distance. Each case must be looked at individually; a general statement can’t be made that will apply to all situations.

Once a woman who attended teachings told me she loved me. I responded, “Nāgārjuna said, ‘Like the earth, water, wind, and fire, medicinal herbs, and trees in the wilderness, may I always be an object of enjoyment for all beings, just as they wish,’ so if you want to think of me like that, it’s okay.” I didn’t let what she said affect my mental attitude or behavior toward her. Another time a Russian lady said she wanted to marry me. To her I said, “Do not think like that. I’m a monk and will remain one!”

I have had the experience of people coming to me, publicly and privately, thinking “The Dalai Lama will bless me.” It is not wise for them to think like this. I can’t do this. Sometimes people think “The Dalai Lama will heal me.” This way of thinking is also dangerous, for both the teacher and the student. The teacher may be tempted to act as if he had some extraordinary ability, and the student may worship the teacher instead of practicing the teachings. Personally, I am skeptical of those who claim to heal diseases; I make sure not to present myself in that way. To avoid misleading others or becoming inflated myself, even when people look with devotion and ask, “Are you awakened?” I always reply, “I am a simple Buddhist monk. No more, no less.”

Second, there may be the temptation to dilute the Buddha’s teachings in order to make them acceptable to a larger number of people. In other words, a teacher may have faith in a certain teaching but not teach it because he or she is concerned that students will not find them pleasing and will stop attending the Dharma center. Although you should teach according to people’s dispositions, it is harmful to leave out certain aspects of the Dharma because you are more concerned with the number of students than with the purity of the teachings. As I mentioned before, our purpose is not to celebrate that many people call themselves Buddhist. We are not out to win converts or to become well-known teachers. Our purpose is to benefit sentient beings.

Third, a teacher may have deep doubt about some points and omit these teachings or say that the Buddha didn't really mean that or teach that. Simply because certain points do not agree with our opinions, we cannot say that the Buddha never taught them or that they are not part of the Buddhist worldview. Especially when teaching others, a person cannot dismiss parts of the teachings that he does not agree with and still say he is explaining the entire path of the Buddhadharma. To do so is very dangerous, because without extensive learning, thinking, and meditating, we are unable to properly discriminate what is correct and what is not. We could easily fall into picking and choosing from various teachings, putting them together, and inventing a spiritual path that agrees with our ideas. Not only would this harm us but it would also cheat students and lead to the degeneration of the Buddha's teachings in our world.

Fourth, a teacher may become emotionally dependent on his or her students. When you are in the position of teaching the Dharma, be conscientious about how you present yourself. Learn to work with your emotions and your wish for companionship by applying the mind training teachings. Don't expect your students to take care of you emotionally and don't draw them into fulfilling your personal needs for validation, appreciation, or love. Try to emulate the great practitioners such as Milarepa, who, due to their renunciation, have great love for sentient beings. Because their compassion is free from attachment, everyone is their friend. Such a practitioner has no needs arising from attachment and prefers no companions. Of course such people are rare, but we must emulate these good examples. Maybe this year we cannot be like that, but next year or after ten or fifteen years, we too can cultivate this kind of attitude.

Lay teachers should also have appropriate friends with whom they can discuss their emotions and their difficulties. Their students should not be put in the position of having to support the teacher emotionally or solve the teacher's personal problems.

Fifth, a teacher and student may be sexually attracted to each other. Due to afflictions and karma, we now have this body that tends toward attachment—including sexual desire—and anger. When the body is weak, anger comes more easily; when it is well, more sexual desire arises. Even if you control the sexual desire, on subtle levels attachment still persists.

Much depends on your practice. Even though you may not be able to eliminate your sexual desire, if you have enough conviction and spiritual strength, you will remain balanced and not get distracted from your spiritual goals and the precepts that will guide you to them. I include myself on this level.

The layperson's precepts do not prohibit sexual relations, so there is more danger of lay followers misusing sexuality. Therefore it is best for lay teachers to be married upāsikās or upāsakas and to live according to the five precepts, which include abandoning unwise or unkind sexual behavior. Monastic teachers must be celibate. Both monastic and lay teachers must avoid touching students inappropriately—in a sexual manner or in a manner that someone could misinterpret to be sexual in nature.

Another area of caution is the tendency for the eight worldly concerns to pollute your mind. For example, I was reading the works of Tsukang Lama Rinpoché, a respected and learned practitioner, and noticed that his way of explaining the process for taking refuge was the same as I use. On the one hand I was happy, knowing that I wasn't teaching my own fabrication and that there was sound basis in the writing of an authentic sage. Meanwhile, in one corner of my mind was the thought of the eight worldly concerns, "I want all the credit for this excellent explanation. If other people read Tsukang Lama's book, they'll think that I copied my explanation from him and my reputation as the originator of this explanation will be lost!"

The Tibetan tradition emphasizes the threefold process of listening to the teachings, reflecting on their meaning, and meditating to integrate them into our lives. Thus practitioners need to balance responsibilities of teaching others with their own practice. When I teach, my daily meditation is shortened because of time constraints, but at the same time the Dharma becomes more effective in my mind because I am thinking deeply about it. Also, when students ask questions, I must reflect on the meaning of the Dharma in order to answer them properly.

If a teacher is sincere and dedicated to helping others without concern for fame, problems will not arise. But if a teacher has great status yet lacks the corresponding spiritual realizations, there is the danger of creating an image to protect oneself. For that reason, I advise those who teach the

Dharma to spend a few months each year focusing on their personal practice and a few months teaching others. They must have time to develop their own practice and deepen their understanding to effectively teach others.

In conclusion, teaching the Dharma is a wonderful opportunity to share what is precious, to help others, and to create boundless merit. However, we must approach it seriously and responsibly so that we create benefit, not damage, for ourselves and others.

### *Respect for the Dharma*

The Dharma is our real refuge; the Dharma is the object of our highest respect. Śākyamuni Buddha is the product of the Dharma Jewel, which is the true paths and true cessations of duḥkha and its causes. The resultant awakening that he attained is so magnificent that since we venerate and admire it, we should also esteem its causes, the Dharma teachings. To indicate this, before the Buddha taught the Perfection of Wisdom sūtras, he himself arranged the seat on which he sat when giving these teachings.

Similarly, to show respect for the path to liberation, when five hundred arhats gathered after the Buddha's parinirvāṇa at the First Council to recite the teachings they had heard the Buddha give, they stacked their saffron upper robes to make a throne on which the reciter would sit. Such veneration was accorded not to the person but to the teachings that explained the true paths and true cessations. Similarly, nowadays a teacher sitting on a throne or high seat to teach indicates that the teaching he or she gives is worthy of admiration and reverence.

To signify the preciousness of the Dharma teachings and to prevent arrogance, before sitting on the Dharma seat, the teacher makes three prostrations to the seat as well as to the lineage of teachers and to the Dharma teachings. While sitting down, the teacher recites a verse from the *Diamond Sūtra (Vajracchedikā)* to recall the transient and empty nature of phenomena:

A star, a visual aberration, a flame of a lamp,  
an illusion, a drop of dew, or a bubble,

a dream, a flash of lightening, a cloud—  
see conditioned things as such.

Recalling the insubstantial nature of the world helps the teacher to sustain a pure motivation for teaching, one that is not defiled by worldly concerns, such as the wish to receive offerings, praise, reputation, or a large and devoted following.

The danger of arrogance arising when one sits on a high seat is real. In Tibet some lamas succumbed to what I call the “high-throne syndrome,” competing to see who had the highest throne and was thus the highest lama. To counteract this, the Fifth Dalai Lama stipulated that the thrones of the lamas in the audience should all be exactly the same height. However, some clever attendants of one lama managed to slip a slate under the cushion of their teacher’s throne. After a while, when all the others’ cushions had compressed because lamas were sitting on them, the lama sitting on the seat with the slate underneath appeared higher than the others. He and his disciples shined with pride.

### *Buddhadharma in Asia*

Buddhism contains vast and profound teachings that are set forth in detail. It is scientific and logical. But in many Buddhist countries the people do not seriously study the Dharma; for them Buddhism is just part of the tradition and culture of their country. They engage in ancestor worship, perform the practices of folk religions, and pray to the Buddha and to worldly gods without distinguishing between them. As the younger generation reexamines these old traditions, they sometimes discard Buddhism along with ancestor worship and turn to other religions. Considering oneself a Buddhist simply because it is part of one’s family tradition without understanding it does not have much meaning to them. If someone introduces a new and different religion, it may seem more attractive, and that person may adopt the new faith. Of course, this is their personal decision, but it is sad that this is done because they were ignorant of the Buddha’s teachings.

As with Westerners, people in Asia and in Asian communities in the West would benefit greatly from more Dharma study as a prelude to practice. Buddhists should conduct seminars on Buddhism in these places so that people have accurate information about the religion of their family. Initially, an informative approach could be used, giving a general explanation to raise interest. For example, the teacher could explain Buddhist beliefs in a more academic way, describe Buddhism as it is found in various countries, have courses on comparative religion, or speak of the relationship of Buddhism to science. In this way, people will receive correct information about the Buddha's teachings. With this general knowledge, some will want to learn more, and at that point, more explanation about how to practice should be given.

Two types of people take an interest in religion. One type wants help for this life and protection from harm. These people are not interested in and do not think much about the philosophy behind a religion. They simply accept what they are told. Some Asian Buddhists unfortunately have this attitude. Another type of person thinks more about human nature and investigates the nature of the mind, the purpose of life, and what happens after death. They are looking for a deeper explanation. When such a person studies the Buddha's teachings, they will be attracted to them. By employing their analytical abilities, they will find answers in the Buddhadharma. They will also find a practical method for transforming the mind from negative states to positive ones. This is the proper way for people to be Buddhists, for their faith and practice is based on understanding.

I am happy to note that when I visit Chinese Buddhist communities—for example, in Taiwan—more people are showing interest in studying the Buddhadharma. Still, more needs to be done along this line. For example, in my visit to Taiwan in 2001, about eight thousand people attended the four days of teachings, but nearly twice as many attended the last two days when I gave the Avalokiteśvara empowerment. Nevertheless, I am glad that more people in traditionally Buddhist countries see the importance of study and understand that Buddhism involves transforming our own disturbing emotions, not seeking blessings from an external teacher or deity.

Buddhism can coexist with the Confucian values found in Asia. For example, Confucius instructed people to respect their elders and parents.

The Buddha gave similar advice when he spoke to ordinary people, and he encouraged monastics to respect those senior in ordination. Respecting those more experienced and wiser than we are is good advice that everyone should follow.

However, if we ask, “According to Confucius, why do we respect elder people?” people may not know how to answer. For that reason, some young people think, “The elderly managed when they were young, and they can manage alone now too. Young plants grow, and the old plants will go. That is part of nature.” With that attitude, they neglect their parents. But explaining the reason for helping elders according to the Dharma does not allow for such self-centered thinking. Instead, we see that the elderly want happiness and not suffering just like everyone else. If we serve and help them, they will be happy, and we will accumulate merit. We are sentient beings with consciousness, and our minds continue on to future lives. To create the causes for happiness in future lives, we need to keep pure ethical discipline and not harm others. Thus helping others benefits them and ourselves, and brings happiness now as well as in future lives.

### *Dharma Centers*

The purpose of having Dharma centers, retreat facilities, and temples is to benefit sentient beings by giving them correct information about the Buddhadharma, meditation instruction, and access to qualified spiritual mentors and Dharma friends who can support them on the path. We need to remain true to this purpose and resist measuring success by the size of our institutions, the number of followers, or the beauty of our altars.

Buddhism has three parts: (1) Buddhist science, (2) Buddhist philosophy and metaphysics, and (3) Buddhist religion or spirituality. Buddhist science has to do with our theories about particles, the levels of mind, the process of cognition, and so on, whereas Buddhist philosophy focuses on impermanence, emptiness, and interdependence. Buddhist religion deals with awakening and the path to attain it. Although Buddhist religion is only for Buddhists, Buddhist science and philosophy can be shared with non-Buddhists. These are academic topics that can be taught in Dharma centers to Buddhists, non-Buddhists, and nonbelievers alike. We

present the Buddha, Nāgārjuna, and the great Indian masters as astute philosophers and professors at Nālandā University. One time I gave a Buddha statue to a close friend who was not a Buddhist and told him to regard the Buddha as a great thinker and philosopher. Twenty-six centuries ago, the Buddha was one of the chief philosophers who debated with many other philosophers and dispelled their untenable views. My friend appreciated this perspective.

Dharma centers can serve a variety of people in society: those who are interested in Buddhist science and philosophy, those who seek a method to calm their mind, and those aspiring for liberation and awakening.

### *Dharma Events, Dharma Teachers, and Finances*

It is better if resident Buddhist teachers at Dharma centers are not involved with the finances of the center. They must concentrate on teaching while the members manage the center's finances. Neither the teacher nor the members of the Dharma center should be influenced by benefactors who make large donations. Sometimes it happens that sincere practitioners who do not have a lot of money are denied teachings or access to the teacher, while those with funds are honored and respected. This is wrong. When wealthy students wave promises of sponsorship in front of teachers, monastics, or members of a Dharma center with the thought to gain special attention, teachings, or privileges, we should ignore this behavior and treat them as we would everyone else.

Traditionally, Dharma teachings are freely offered, and students, knowing that their teachers need food, shelter, clothing, medicine, and travel expenses, offer their support according to their ability. This custom is not well-known in the West, where people are used to being charged a specific amount for an event. This, however, goes against the spirit of generosity and can lead to holding Dharma events with the motivation to make money.

Nevertheless, given the reality of the situation, teachers may at times be forced to charge for teachings to cover the expenses involved—rent, travel, and food—but they should clarify with the students that the minimum is being charged and that it is just for what is needed. At the same time, we

should educate Westerners that giving freely from our heart, not in payment for receiving teachings, is part of our practice of generosity, or *dāna*.

Sometimes when I teach in the West, the organizers use this as an opportunity to raise funds. They also give me a large offering, which I either give back to the Dharma center or to worthwhile projects. I do not need these offerings. The Indian government kindly gives me a modest stipend, which is sufficient for my needs. I encourage the organizers of the teachings to give the offerings to those in need instead. Even though the organizers or I donate such funds to good causes, my preference is that my Dharma teachings not be used for fundraising. Organizers should estimate the cost of the event based on past experience and not charge more than is necessary to cover these expenses. In this way people who cannot afford costly tickets will not be turned away from the teachings. In addition, the teachings should be made accessible to a wider audience so that people who are physically challenged, have minimal income, or are deprived of educational opportunities are able to attend my talks. Now I do not accept any offering from the organizers of my teachings in the West. Instead, at the conclusion of teachings I ask them to announce the income and expenditures to the audience, including where they will donate any surplus income.

The Buddha instructed monastics on the cultivation of modest needs and desires and inner contentment. He advised them to avoid a lifestyle of either extreme luxury or asceticism. This advice should apply equally to lay practitioners, especially if they teach the Dharma. It is crucial that we ensure that whatever income we receive is not from wrong livelihood.

Supporting oneself by teaching the Dharma becomes a complex issue for lay teachers, especially those who need to provide for their family. It raises many questions: Are Dharma students responsible for supporting a lay teacher's family? How much is enough to support a family, especially in Western culture where children want designer clothing and the latest digital devices? This subject needs much thought and discussion.

Some lamas go to Taiwan, Singapore, or the West to teach or give empowerments in order to raise funds for their monasteries. Teaching the Dharma only with the thought of raising money is not correct. Those who need to raise funds for their monastery should be straightforward. Instead of

simply asking an audience for offerings for a nebulous purpose, they should show people the architectural designs, the estimated budget, and an outline of the various phases of the project. With everything clearly presented and well-organized, they can then explain, “This is the project. This is the amount we need to complete it. We appreciate whatever you are able to contribute.” Do not make people feel obliged to give; give them the space to be moved by a generous thought so that they feel inspired to contribute and give an amount that feels comfortable.

Profit from the sale of Dharma materials is a sensitive issue. In Tibet this issue is taken so seriously that it is said you should avoid eating at the home of a person who lives on the proceeds from selling Dharma books and statues. In addition, giving the proceeds from selling Dharma books and statues to a monastic community to buy food or clothing is not appropriate. If possible, avoid using this money to pay fees to attend teachings. Perhaps the money could be used for charitable works or given to a hospital or school, but best is to use it to print more Dharma materials. Motivation is extremely important. For example, using money from selling Dharma books to stay at a center so that you have a place to live is not appropriate. But if your motivation is to spread the Dharma teachings and you need money to live on and to run the Dharma center, then perhaps it is all right.

# 5

## The Ten Perfections in the Pāli Tradition

THE *Basket of Conduct* (*Cariyāpiṭaka*)<sup>26</sup> tells the story of the Buddha's previous life as King Sivi, when he desired to give his eyes to someone who asked. The god Śakra, lord of the devas, wanted to test this desire and so appeared as a decrepit, blind old man who asked the king for his eyes. With great joy, King Sivi immediately had a doctor remove his eyes to give to the old man. After doing this, he uttered these words (CP 1.8.15–16):

While I was desiring to give, while I was giving, and after the gift had been given by me, there was no contradictory state of mind; it was for the sake of awakening itself. The two eyes were not disagreeable to me nor was I disagreeable to myself. Omniscience was dear to me; therefore I gave the eyes.

Such is the pure motivation of a bodhisattva.

### *The Pāramīs*

In addition to the Pāli texts mentioned in the previous chapter, *A Treatise on the Pāramīs*, written by the great Pāli commentator Dhammapāla around the sixth century, explicitly explains how to engage in the ten bodhisattva practices. This text is found at least twice in the Pāli commentarial literature: once in a commentary to the *Basket of Conduct* and a slightly shorter version in a subcommentary to the *Brahmajāla Sutta* (DN 1). Dhammapāla drew on the *Chronicle of Buddhas* (*Buddhavaṃsa*) for his description of the bodhisattva aspiration, the eight qualities for its success in attaining buddhahood, and the enumeration of the ten perfections. He

drew on the *Jātakas*,<sup>27</sup> the *Path of Purification*, and other Pāli sources for other material included in his treatise. While the presentation of selflessness, wisdom, and the structure of the path in *A Treatise on the Pāramīs* accords with the presentation in the Pāli canon, some passages in the text were adopted from the Sanskrit treatise the *Bodhisattva Grounds* (*Bodhisattvabhūmi*)<sup>28</sup> by Asaṅga and included in Dhammapāla's treatise.<sup>29</sup>

The audience Dhammapāla had in mind is indicated by the first sentence of his treatise:

We now undertake a detailed explanation of the pāramīs for clansmen following the suttas (P. *suttantikas*) who are zealously engaged in the practice of the vehicle to great awakening (P. *Mahābodhiyāna*), in order to improve their skillfulness in accumulating the collections (requisites) for awakening.

Here “suttantikas” does not refer to followers of the Sautrāntika tenet system but to Theravāda practitioners who aspire for full awakening and seek instruction in the sūtras on how to attain it. Dhammapāla's treatise fills out the instructions they need. “Mahābodhiyāna” does not refer to Mahāyāna as a school but to the vehicle (*yāna*) or mind leading to the noble spiritual goal of great awakening (*mahābodhi*) aspired to by bodhisattvas.

Just as in the Sanskrit tradition, the ten perfections are the collections (requisites, *sambhāra*) needed to attain the full awakening of a buddha. They are also good qualities to cultivate no matter which of the three paths we follow, and in the Pāli tradition are not considered unique practices reserved only for bodhisattvas. Theravāda practitioners of all inclinations practice these ten, the difference being that bodhisattvas have to practice them more intensely and for a longer period of time in order to attain their spiritual goal. Buddhaghosa comments (Vism 1.33), “The virtue of the pāramīs done for the deliverance of all beings is superior.” In this way, he praises the Buddha for having completed the bodhisattva path and having become a *sammāsaṃbuddha*, a fully awakened buddha.

It is said that by practicing the perfections all merit and goodness comes about. Disciples in Theravāda countries frequently praise their teachers for

their great accumulation of perfections. These ten are generosity (P. *dāna*), ethical conduct (P. *sīla*), renunciation (P. *nekkhamma*), wisdom (P. *paññā*), joyous effort (P. *virīya*), fortitude (P. *khanti*), truthfulness (P. *sacca*), determination (P. *adhiṭṭhāna*),<sup>30</sup> love (P. *mettā*),<sup>31</sup> and equanimity (P. *upekkhā*).

After Sumedha (the person in the previous continuum of Śākyamuni Buddha) first generated bodhicitta, he examined the factors that would bring about buddhahood and found that they were the ten perfections. At that time, he gave a concise explanation of each (BCA 119–20, 124–25, 129–30, 134–35, 139–40, 144–45, 148–50, 154–55, 159–60, 164–65):

(Generosity) As a full jar overturned by whatever it may be discharges the water completely and does not retain it there, so, seeing supplicants—low, high, or middling—give a gift completely like the overturned jar.

(Ethical conduct) As a yak, if her tail is caught in anything, does not injure her tail, but goes to death there, so, fulfilling the ethical habits in the four planes,<sup>32</sup> protect ethical conduct continuously like the yak [does] her tail.

(Renunciation) As a person who for long has lived painfully afflicted in a prison does not generate attachment there, but seeks only freedom, so do you see all becomings (rebirths in *saṃsāra*) as a prison. Be one turned toward renunciation for the utter release from becoming.

(Wisdom) As a monastic seeking alms, do not avoid low, high, or middling families [but go in successive order] to acquire sustenance. Then by questioning discerning people [about what is virtuous and what is not] at all [possible] times, go on to [practice] the perfection of wisdom and attain full awakening.

(Joyous effort) As a lion, the king of beasts, whether he is lying down, standing, or walking, is not of sluggish energy but always exerts himself, so you too firmly exert energy in every becoming.

(Fortitude) As the earth endures all that is thrown on it, both pure and impure, and shows no repugnance (or) approval, so you too have fortitude toward all respect and disrespect.

(Truthfulness) As Osadhi is balanced<sup>33</sup> for devas and mankind in [all] times and seasons and does not deviate from her course, so you too must not deviate from the course of the truths.

(Determination) As a mountain, a rock, stable and firmly based, does not tremble in rough winds but remains in precisely its own place, so you too must be constantly stable in resolute determination.

(Love) As water pervades with coolness good and evil people alike and carries away dust and dirt, so you too develop love for friend and foe equally.

(Equanimity) As the earth is indifferent to the impure and the pure thrown on it and avoids both anger and attachment, so you too must be balanced always in the face of the pleasant and unpleasant.

Etymologically, “pāramī” could mean “supreme,” referring to the supreme qualities bodhisattvas develop on their way to buddhahood. Or, similar to the Sanskrit, “pāramī” could mean “to go beyond,” indicating that bodhisattvas’ practices enable them to reach far beyond saṃsāra. The ten perfections in the Pāli and Sanskrit traditions are not exactly the same. Generosity, ethical conduct, fortitude, joyous effort, and wisdom are identical in their terms, whereas determination (*adhiṭṭhāna*) in Pāli and resolve (*praṇidhāna*) in Sanskrit are different terms, but the description of that perfection in both traditions is similar. Bodhisattvas need strong resolve and determination to complete the path and to benefit sentient beings. The other four perfections differ in their terms and in their meaning: in Pāli, renunciation, truthfulness, love, and equanimity; in Sanskrit, meditative stability, skillful means, power, and pristine wisdom. However, both traditions teach these eight excellent qualities as part of the overall presentation of the path to liberation and full awakening.

Dhammapāla says that when seen according to their nature, the ten perfections become six: generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom—the six perfections listed in the Sanskrit tradition (TP 12).

The perfection of renunciation, as the going forth into homelessness, is included in the perfection of ethical conduct; as seclusion from the hindrances in the perfection of meditative stability; and as a generally wholesome quality, in all six pāramīs.

One part of the perfection of truthfulness—its aspect of truthful speech or abstinence from falsehood—is included in the perfection of ethical conduct, and one part—its aspect of truthful knowledge—in the perfection of wisdom. The perfection of love is included in the perfection of meditative stability, and the perfection of equanimity in the perfections of meditative stability and wisdom. The perfection of determination is included in all.

The order of the ten perfections indicates a sequence of practice. Buddhaghosa explains the progression from one perfection to the next (Vism 9.124):<sup>34</sup>

For the Great Beings' minds retain their balance by giving preference to beings' welfare (love) by dislike of beings' suffering (compassion), by desire for the various successes achieved by beings to last (empathic joy), and by impartiality toward all beings (equanimity). And to all beings they (1) give gifts that are a source of pleasure without discriminating thus: "It must be given to this one; it must not be given to this one." And to avoid doing harm to beings they (2) undertake the precepts of ethical conduct. They practice (3) renunciation<sup>35</sup> for the purpose of excelling in ethical conduct. They cleanse their (4) wisdom for the purpose of nonconfusion about what is good and bad for beings. They constantly arouse (5) effort, having beings'

welfare and happiness at heart. When they have acquired heroic patience through supreme energy, they have (6) fortitude with beings' many kinds of faults. They (7) do not deceive when promising, "We shall give you this; we shall do this for you." They have unshakable (8) determination for beings' welfare and happiness. Through unshakable (9) love they place others first. Through (10) equanimity they expect no reward. Having thus fulfilled the [ten] pāramīs, these [divine abidings] then perfect all the good states classed as the ten powers, the four kinds of fearlessness, the six kinds of knowledge not shared [by śrāvakas], and the eighteen unique qualities of the Awakened One.<sup>36</sup> This is how they bring to perfection all the good states beginning with generosity.

Unlike in the Sanskrit tradition, Pāli sages did not develop a schema of bodhisattva grounds that correlate to each of the perfections. Also, they assert that even when Gautama was an advanced bodhisattva just prior to attaining awakening under the bodhi tree, he had not yet abandoned the fetters abandoned by a stream-enterer. He traversed all four stages of stream-enterer, once-returner, nonreturner, and became a buddha arahant during one meditation session while seated under the bodhi tree. In the Pāli presentation, the bodhisattva path is open to anyone who wishes to practice it. However, it is especially crucial for those who are to become wheel-turning buddhas—buddhas who will teach the Dhamma when it is not yet present in a particular world system.

Dhammapāla's treatise speaks of the perfections in a comprehensive way in sixteen sections:

1. their definition
2. the reason for calling them pāramīs
3. their number
4. their sequence
5. their characteristics, functions, manifestations, and proximate causes
6. their condition

7. their defilement
8. their cleansing
9. their opposites
10. how to practice them
11. how to analyze them
12. how to synthesize them
13. how they are accomplished
14. time needed to accomplish them
15. their benefits
16. their results

We'll begin by looking at how to practice the ten perfections. The characteristic they all share is that they function to benefit others. They are all motivated by the aspiration to attain buddhahood and are done with a mind unpolluted by craving, conceit, and wrong views. Great compassion and skillful means are their proximate causes and accompany each of them. Here "skillful means" (*upāyakauśalya, upāyakosalla*) refers to the wisdom "that transforms giving (and the other nine virtues) into requisites of awakening." Without compassion and skillful means, the perfections would be mere virtuous activities. Dhammapāla does not define the meaning of "wisdom" in this context any further.

### *Generosity*

Generosity is the giving of ourselves and our belongings. Based on nonattachment and the relinquishing of miserliness, generosity enables us to willingly give our possessions, body, and life for the well-being of others. In terms of the object given, there are three types of generosity: the giving of material possessions, the giving of fearlessness, and the giving of Dharma.

Regarding being *generous with material possessions* or money, bodhisattvas give whatever is needed to whomever needs it. They give even if not asked, and they give a suitable amount, not just a little so that the other person will leave them alone. They give without expecting to receive

a gift, praise, or fame in return, and when there is not enough to go around, they distribute it equitably among all those in need. Things that can cause harm or that can stimulate afflictions to arise in the other person's mind—for example, weapons, intoxicants, poisons, pornography, dangerous chemicals, and amusements that can lead to lack of conscientiousness—are not given. If a person is sick, they do not give food and drink that could hinder recovery or increase the illness, even if the sick person requests it. In other words, they give only what is conducive for the other's well-being, especially in the long term. They give what is appropriate to the recipient—for example, they do not give monastic robes to householders or lay clothes to monastics.

Should bodhisattvas notice that they are becoming attached to a particular object, they immediately find someone to give it to. When asked for something, bodhisattvas contemplate the disadvantages of clinging to things: destructive karma is created to acquire and protect them, they spark quarrels and disputes, they cause worry, possessiveness, and inevitably grief because everything is left behind at death. Instead they see the person asking as a close friend who is helping free them from bondage to these items, someone who is giving them the opportunity to practice the perfection of generosity.

In addition to giving external possessions, bodhisattvas give their own body. They may do this by serving others or, if needed, by giving parts of their body. But they give their own body only when it will be used well; they do not give it to someone who is mentally unstable or sociopathic. If they hesitate to give their body, they should think that if people in need of the various parts of a medicinal tree—the root, trunk, branches, leaves, and fruit—were to come and take them, the tree would not complain, “You're taking my belongings!” Similarly, since this body is in the nature of *duḥkha* and since they have entrusted their body to the service of others, there is no sense of clinging to it, thinking, “This is mine, this am I, this is my self.” Contemplating in this way, they give whatever is required with a joyful heart, knowing that through relinquishing attachment and giving generously, they will attain full awakening.

The *generosity of fearlessness* involves offering protection to those who are frightened, lost, or in danger. Aiding others in this way calms their mind

and shields them from physical suffering. One of the *Jātaka* tales (407) recounts the story of one of the Buddha's previous lives as a bodhisattva who was a monkey. As the leader of a group of 80,000 monkeys, he saved them from the brutality of the human king, even though he was being tormented by another monkey, who was a previous incarnation of Devadatta. Witnessing the monkey-bodhisattva's willingness to sacrifice his body and life to save the other monkeys and his virtuous actions done for the sake of others, the king was inspired to change his ways, to rule his kingdom with compassion and justice, and to do kind deeds to benefit others.

*Giving the Dharma* is to give correct Dharma teachings that lead to well-being and peace in this life and future lives, and to liberation and awakening. In this way bodhisattvas enable sentient beings who have not met the Dharma to meet it and mature the minds of those who are already practicing. Bodhisattvas give discourses on the vehicles of the śrāvakas, solitary realizers, or bodhisattvas in accordance with the dispositions of those in the audience.

Bodhisattvas do not give out of fear, shame, coercion, or obligation. They do not give unwillingly or by inconveniencing others and causing them problems. They give respectfully, with their own hands, a pleasant expression on their face, and kind words from their hearts. After they have given they do not pride themselves on their generosity, nor do they regret having given. They behave amicably, without drawing attention to their generous action or the gift.

When giving, bodhisattvas reflect on the symbolism of the gift. For example, when giving beverages, they think, "May I cease the thirst of sensual attachment," and when they give medicines, they think, "May I give sentient beings nirvāṇa, which is free from aging, sickness, and death." When they give monasteries and beautiful natural environments, they aspire, "May I and all others attain the dhyānas."

While giving, bodhisattvas recall the impermanence of the possessions and their life. They consider their possessions as things that are shared in common with others. They give with no sense of loss, not being concerned that now they will lack what they need. Bodhisattvas dedicate the result of

their generosity to the happiness and peace of all beings and to their awakening.

To whom should we give? The wanderer Vacchagotta told the Buddha that he heard some people say that gifts should be given only to the Buddha and his disciples because great merit is created by doing this, but gifts should not be given to other teachers and their disciples because little merit is created by doing this. The Buddha replied that he had been misrepresented, and he clarified (AN 3:57):

Vaccha, anyone who prevents another person from giving alms causes obstruction and impediment to three people: he obstructs the donor from doing a meritorious deed, he obstructs the recipient from having the gift, and prior to that, he undermines and harms his own character... Even if one throws away the rinsings from a pot or cup in a village pool or pond, wishing that the living beings there may feed on them—even this would be a source of merit, not to speak of giving a gift to human beings.

However, I do declare that offerings made to the virtuous bring rich fruit, whereas not so much those made to the unethical.

The Buddha then continued to explain that the virtuous are those who have abandoned the five hindrances—sensual desire, malice, lethargy and sleepiness, restlessness and regret, and doubt—and who possess ethical conduct, concentration, wisdom, liberation, and the knowledge and vision of liberation of one perfect in training. The merit created by giving depends on both the intention of the donor and the ethical purity of the recipient. For example, an act of generosity done with humility, respect, and kindness by someone who abandons the ten nonvirtues creates more merit than the same gift given by someone who does not maintain ethical conduct or someone who gives with indifference. Furthermore, giving to those intent on accomplishing the path and those who have realized the path creates more merit than giving to someone who hunts or exterminates insects. This does not mean, however, that we should neglect the poor and needy and give

only to spiritual practitioners. We should help whomever we can. In addition, we should not discourage people who want to give to good causes or worthy people.

### *Ethical Conduct*

Ethical conduct is pure and blameless physical and verbal conduct. Based on personal integrity and consideration for others, it is restraint from destructive actions and engagement in beneficial actions.

Contemplating the benefits of ethical conduct encourages us to practice it. It cools the fires of anger and greed, prepares the mind to attain higher states of meditative absorption, is the path leading to the awakenings of all three vehicles, and brings about the fulfillment of our wishes. Abiding in ethical conduct prevents guilt, remorse, and anxiety. It averts fear and reproach from others and is the basis for rejoicing in our own merit and goodness. It is a contribution to world peace, for others feel safe around a person who abandons even the wish to harm others. Good ethical conduct cannot be stolen by thieves or embezzled by manipulators; it is the basis for having a fortunate rebirth that enables us to continue practicing the Dharma.

Restraint from destructive actions is the best protection from being harmed ourselves; it is more effective than thousands of warheads and the best bodyguards. While ethical conduct governs actions of body and speech, it gives sovereignty over our mind. It is said that those with pure ethical conduct exude the “fragrance of virtue,” which makes them more attractive to others, and thus more effective in benefitting them, than any perfume. The *Dhammapada* counsels (110):

Better it is to live one day  
virtuous and meditative  
than to live a hundred years  
unethical and uncontrolled.

If afflictions arise in the mind threatening their virtue, bodhisattvas ask themselves, “Didn’t you resolve to attain awakening for the benefit of all beings?” Then they remind themselves, “I cannot be successful in mundane

affairs, let alone attain supramundane states, without ethical conduct. I should always behave well and safeguard my ethical conduct, otherwise others won't want to be around me. If I want to benefit others and lead them on the paths of the three vehicles, I must teach the Dharma. But someone with dubious ethical conduct cannot be trusted; to be trustworthy I must have a pure character. In addition, to guide others, I should have attainments such as the dhyānas and wisdom, and these are founded upon pure ethical conduct. Therefore I should protect my ethical conduct as a hen does her eggs.”

Bodhisattvas wish for others to live ethically so that they will have temporal and ultimate happiness. Thus they teach others and model themselves on four activities to purify ethical conduct:

1. Purifying inclinations for nonvirtue. Some people have strong personal values and goals and naturally have revulsion toward nonvirtue. Having personal integrity, they purify their inclinations for nonvirtue. Other people are more inclined to see the harmful effects of their nonvirtuous actions on others, and with consideration for others, purify those inclinations.
2. Taking precepts. Taking lay or monastic precepts helps bodhisattvas maintain their ethical conduct.
3. Not transgressing their precepts. Cultivating mindfulness and introspective awareness regarding their actions of body, speech, and mind helps bodhisattvas to establish themselves in virtue by not transgressing their precepts.
4. Purifying any transgressions that do occur. They invoke their sense of integrity and consideration for others and purify any transgressions using the proper means to do so.

There are two types of ethical conduct, that of restraint from negativity and that of enacting virtue—that is, abandoning what should not be done and doing what should be done. Regarding the first, having great confidence in the law of karma and its effects and considering the karmic results of their actions before doing them, bodhisattvas abandon the ten nonvirtues. This frees them from all their disadvantages, and they receive

the benefits of fulfilling the ten virtues. For example, because bodhisattvas do not harm others physically, all beings feel safe around them. In addition, their meditation on love excels without obstacles, and they are healthy, live long, and are free from the pain of hatred and animosity. By abandoning lying, their speech becomes authoritative and others trust them, thus facilitating instructing sentient beings and guiding them on the path. By abandoning disharmonious speech, they have companions and assistants who are harmonious among themselves and who help them to spread the Dharma. By exercising mindfulness and introspective awareness, bodhisattvas restrain their sense faculties, have honest and right livelihood, and are thoughtful in their use of requisites such as food, clothing, shelter, and medicine.

Regarding the second type of ethical conduct, enacting virtue, bodhisattvas respect their spiritual mentors and those worthy of respect, offer service to them, and care for them during illness and old age. They appreciate advice and instructions of the wise and rejoice in the merit of others. With gratitude for those who have helped them, they benefit and honor the worthy ones in return.

Furthermore, bodhisattvas care for the ill and injured, comfort the grieving, and give wise advice to the reckless, thereby directing them toward wholesome actions. Bodhisattvas aid the elderly, the blind, the deaf, and those who are physically or mentally challenged. They help those without faith to cultivate it, teach the lazy how to be energetic, and instruct those plagued by the five hindrances in the means to dispel them. Bodhisattvas rehabilitate those whose ethical conduct has degenerated, those who have succumbed to addictions, and those whose criminal behavior has harmed themselves and their families. Bodhisattvas are there to offer help when others experience misfortunes such as natural disasters, poverty, or social disorder. In short, in whatever way their companionship, knowledge, or abilities can benefit others, they employ these without hesitation.

Being judicious, bodhisattvas are accessible to others, but only at the right time, in a suitable place, and in an appropriate situation. They neither push their help and advice on others nor refuse to offer them when needed. In guiding others to virtue, bodhisattvas behave only in ways that increase

others' good qualities and virtuous actions. They never abuse, harm, or humiliate others, or lead them to act harmfully. When with others, bodhisattvas do not antagonize them by praising those they resent or criticizing those they hold dear. They encourage others to continue cultivating their good qualities and virtue.

When hearing of the wondrous deeds and spiritual accomplishments of previous bodhisattvas, they do not become discouraged, restless, or alarmed, but reflect, "Those great beings were once human beings like me, too. They attained their great abilities by training in the perfections and fulfilling the collections. I will train as they did and attain the same realizations and abilities to benefit others." In this way, bodhisattvas generate faith and encourage themselves.

Bodhisattvas conceal their virtues and good qualities and reveal their faults. They are content, do not complain, and are not conceited or manipulative. They are honest and direct, yet tactful. Seeing the disadvantages of the afflictions, they counteract them and do not let them interfere with their ethical conduct. Avoiding complacency, they continue to train in a balanced way that brings success, without discouragement or pushing themselves.

Buddhaghosa details the practice of ethical conduct in the first chapter of the *Path of Purification*. Although his explanation is specifically directed to those seeking the awakening of a śrāvaka, they also pertain to bodhisattvas' practice of the perfection of ethical conduct. The difference is that bodhisattvas' ethical conduct is motivated by bodhicitta and the merit from this practice is dedicated for full awakening. Dhammapāla concludes (TP 10):

They dedicate it only for the purpose of becoming an omniscient buddha in order to enable all beings to acquire the incomparable adornment of ethical conduct.

### *Renunciation*

Renunciation is founded on realizing the unsatisfactory nature of everything in saṃsāra. Based on a sense of spiritual urgency (P. *saṃvega*), practitioners

abandon attachment to sense pleasures and to existence in any realm of saṃsāra. Renunciation protects bodhisattvas from extreme asceticism, involvement in the afflictions of others, and indulging in sense pleasures.

To generate renunciation—the determination to be free from cyclic existence—bodhisattvas reflect on the dangers of sensual pleasures, the distractions of the householder’s life, and the benefits of the left-home life of monastics. The Buddha spoke about this often (MN 27.12):

Household life is crowded and dusty; life gone forth is wide open. It is not easy while living in a home to lead the holy life utterly perfect and pure as a polished shell.

In response to a king who questioned why he left his wealthy and prestigious family to practice the Dharma as a monastic, the Buddha’s disciple Raṭṭhapāla replied (MN 82.42):

Sensual pleasures, varied, sweet, and delightful,  
in many different ways disturb the mind.  
Seeing the danger in these sensual ties  
I chose to lead the homeless life, O King.

As fruits fall from the tree, so people too,  
both young and old, fall when this body breaks.  
Seeing this too, O King, I have gone forth.  
Better is the monastic’s life assured.

Bodhisattvas see that work and family life lead to numerous entanglements that occupy time and stimulate afflictions to arise uncontrollably. They know the deceptive nature of sense pleasures (TP 10):

Sense pleasures, like a drop of honey smeared over the blade of a sword, give limited satisfaction and entail abundant harm. They are fleeting like a show perceived in a flash of lightning, enjoyable only through a perversion of perception like the adornments of a madman, a means of vengeance like

a camouflaged pit of excrement, unsatisfying like a thin drink...subject to the duḥkha of change like the enjoyment of a festival, inwardly burning like the fire in the hollow of a tree, intensifying thirst like a drink of salt water, and giving little satisfaction like a necklace of bones.

Seeing the disadvantages of living immersed in and preoccupied with sense pleasures, bodhisattvas contemplate the benefits of renunciation, simplicity, and solitude, and request monastic ordination. Then, living in ethical conduct, they establish themselves in three of the traditions of āryas—contentment with robes, alms food, and shelter—and in this way they attain the fourth āryan tradition—delight in meditation. Although meditative stability is not listed as a separate perfection, it is subsumed under renunciation. The first level of renunciation leads to monastic ordination and pacification of the mind through ethical conduct. The second level of renunciation leaves behind the afflictions of the desire realm to attain the dhyānas.

The thirteen ascetic practices<sup>37</sup> that the Buddha set out for some of his disciples and the forty meditation objects for the cultivation of concentration and serenity<sup>38</sup> are discussed under the topic of renunciation. These are found in the *Path of Purification* (Vism 2.1) and should be practiced as explained there, the only differences being that here they are practiced with the bodhicitta motivation by those aspiring for the full awakening of buddhahood, and they are conjoined with compassion and the skillful means of wisdom.

## *Wisdom*

Wisdom understands the general and specific characteristics of phenomena. It illuminates phenomena and banishes ignorance and confusion; it arises based on concentration and knowledge of the four truths.

Wisdom purifies all other virtues and perfections, enabling them to serve as the causes for the omniscient mind of a buddha. Wisdom enables bodhisattvas to give even their own bodies and frees ethical conduct from afflictions such as craving. Wisdom recognizes the dangers of immersion in

sensual pleasures and the householder's life; it knows the benefits of monastic ordination, meditative stability, and nirvāṇa. Wisdom properly directs joyous effort, enabling it to accomplish all virtues, and it enables bodhisattvas to be patient with others' wrongdoings and inappropriate or offensive behavior. One who has wisdom speaks truthfully, has firm determination, cares for the welfare of all beings with love, and maintains equanimity when serving and guiding them. Wisdom enables bodhisattvas to remain equanimous while still abiding with the continuous vicissitudes of cyclic existence.

To cultivate the wisdom arising from learning, bodhisattvas fully study the five aggregates, twelve sources, eighteen constituents,<sup>39</sup> four truths, twenty-two faculties, twelve links of dependent origination and its cessation in their forward and reverse orders, four establishments of mindfulness, and classifications of phenomena such as the virtuous and nonvirtuous, and so forth. Bodhisattvas also learn worthy fields of secular knowledge that could be useful in benefiting sentient beings: science, writing, and so forth. Bodhisattvas learn through studying, listening to teachings, memorizing, and asking questions. They are ingenious in developing ways to lead others on the path and provide the temporal conditions others need in order to better themselves and their situation.

Bodhisattvas then cultivate the wisdom arising from thinking by reflecting on the specific characteristics of those phenomena, such as the aggregates, that they have studied.

Following that, they engage in the preliminary portion of the wisdom arising from meditation, which is included in the mundane kinds of full understanding (*P. pariññā*), beginning with discernment of the general and specific characteristics of the aggregates. The general characteristics are the three characteristics that all things share—impermanence, *duḥkha*, and not-self. In this regard, bodhisattvas understand all internal and external phenomena as follows: This is mere name and form, which arise and cease according to conditions. There is no agent or actor here. They are impermanent because they change in every moment; they are in the nature of *duḥkha* because they oppress sentient beings by coming and going. They are not-self because they cannot be mastered or controlled.

Through this understanding bodhisattvas abandon attachment and lead others to do so too. They mature sentient beings' minds in the paths of the three vehicles, helping them to attain the meditative absorptions, deliverances, concentrations, attainments, and mundane direct knowledges. They continue doing this until reaching the peak of wisdom and the qualities of the Buddha are in sight.

The wisdom of meditation may be spoken of in two ways. The first is the mundane superknowledges and their auxiliaries. These are the first five superknowledges—supernormal powers, divine eye, divine ear, knowledge of others' minds, and the knowledge of recollecting past lives.<sup>40</sup> The second is the five purifications—purification of view, purification by overcoming doubt, purification by knowledge and vision of what is and is not the path, purification by knowledge and vision of the way, and purification by knowledge and vision, which is the supramundane knowledge of the four ārya paths.<sup>41</sup> These topics have been explained for those following the śrāvakas' path to arhatship. As before, bodhisattvas should do them with the motivation of bodhicitta and to make these the collections or requisites for full awakening. Learning, thinking, and meditating should be imbued with compassion and the skillful means of wisdom and dedicated for the awakening of all sentient beings.

Bodhisattvas develop insight up to and including purification by knowledge and vision of the way. They must wait to attain purification by knowledge and vision because this pertains to the four ārya paths that realize nirvāṇa in stages. However, bodhisattvas must first complete the requisites for awakening—the perfections—before entering the ārya paths so that their realization of nirvāṇa coincides with their full awakening. Thus before entering the ārya paths, bodhisattvas must balance their development of compassion and skillful means on the one hand and wisdom on the other, and only when the perfections are complete do they enter the ārya paths and attain full awakening.

### *Joyous Effort*

Joyous effort involves employing our body and mind to willingly and happily work for the well-being of sentient beings. Free from laziness,

restlessness, and hounding ourselves with unrealistic expectations, joyous effort is untiring. Without energy, accomplishing even worldly goals is not possible, let alone actualizing our spiritual aspirations. With joyous effort we will happily practice the path for our own and others' welfare, without becoming discouraged or exhausted. With indefatigable effort, we will undertake liberating all sentient beings from saṃsāra and will not give up.

Bodhisattvas reflect, "Have I accumulated the collections today? What have I done to benefit sentient beings today?" In this way, they remember their heartfelt spiritual aspirations and encourage themselves to energetically act upon them. Bodhisattvas willingly take upon themselves the suffering of all beings and rejoice in their merit and virtues. They frequently recall the Buddha's great qualities and abilities and do all actions motivated by bodhicitta. In this way, day by day, they accumulate the requisites for buddhahood.

In addition, bodhisattvas seek remedies for sentient beings' suffering from hunger, thirst, loneliness, oppression, cold, heat, separation from loved ones, sickness, injury, poverty, warfare, betrayal, and so forth. Whatever happiness they experience—from enjoyable environments and companions, to the blissful meditative absorptions, to the happiness they gain from helping others—all these they wish for all beings to experience as well.

Bodhisattvas frequently meditate on the duḥkha experienced by sentient beings in all saṃsāric realms and generate compassion, which instigates their joyous effort to reach out and help. Speaking especially of bodhisattvas who have actualized levels of concentration, Dhammapāla describes how they meditate on compassion (TP 10):

[Bodhisattvas] contemplate the whole world of sentient beings immersed in the great suffering of saṃsāra, with the sufferings of afflictions and karma at its base. They see the beings in hell experiencing violent, racking, agonizing pain uninterruptedly over long periods as they are cut up, dismembered, split, pulverized, and roasted in scorching fires; the great suffering of animals owing to their mutual hostility as they fight, harass, and kill one another, or fall into captivity at the hands of others; the suffering of the

various hungry ghosts who go about with their bodies aflame, consumed and withered by hunger, thirst, wind, and sun, weeping and wailing as their food turns into vomit and pus.

They contemplate as well the suffering experienced by human beings, which is often indistinguishable from the suffering in the unfortunate realms: the misery and ruin they encounter in their search [for means of sustenance and enjoyment]; the various punishments they meet, such as the cutting off of their hands, and so forth; ugliness, deformity, and poverty; affliction by hunger and thirst; being vanquished by the more powerful, pressed into the service of others, and made dependent upon others; and when they pass away, falling into the hell, hungry ghost, or animal realms.

They see the celestial beings of the desire realm being consumed by the fever of lust as they enjoy their sense objects with scattered minds; living with the fever [of passions] unextinguished like a mass of fire stoked with gusts of wind and fed with a stock of dry wood; without peace, dejected, and dependent on others. They see form and formless realm gods after a long lifespan in the end succumb to the law of impermanence, plunging from their heights back down into the round of birth, aging, and death, like birds swooping swiftly down from the heights of the sky or like arrows shot by a strong archer descending in the distance. Having seen all this, bodhisattvas arouse a sense of spiritual urgency and suffuse all beings universally with love and compassion.

Needless to say, meditating in this way will arouse us to practice the perfections without cowardice, hesitation, or self-indulgent laziness, and with joyous effort to attain full awakening for the benefit of all beings. Such energy brings incredible spiritual courage and power to enact the glorious bodhisattva deeds. Thus from the time of generating the initial aspiration for full awakening until the time we become fully awakened buddhas, we

should reflect on the benefits of joyous effort and permeate our practice of the perfections with it.

### *Fortitude*

Fortitude is the ability to endure hardship and suffering. With fortitude, we do not give up on beings no matter how they treat us. Fortitude regarding the Dharma involves accepting Dharma concepts that our wisdom has not yet completely penetrated. Unlike blind faith, this fortitude trusts the Buddha's word because we have already benefited from practicing some of the Buddha's teachings. With fortitude we continue to investigate the teachings, knowing that time is needed to fully understand them. Fortitude in the Dharma prevents restlessness.

Acceptance and tolerance contribute to fortitude, for fortitude accepts the desirable, the undesirable, and emptiness. Fortitude vanquishes anger, the destroyer of happiness and merit. Fortitude and patience are the basis for a pleasant personality and a good reputation, which enables us to benefit others. People with little fortitude are demanding and continually unhappy. They create a lot of nonvirtuous karma due to harsh speech and spiteful actions, and they consume much time in complaining and being disagreeable.

There are many ways to think to prevent ourselves from becoming angry, resentful, or belligerent when others harm us. Dhammapāla suggests contemplating these.<sup>42</sup>

- Although this suffering arises from the harmful deeds of others, this body of mine is the field for that suffering, and the karma that made me take it was created by me alone.
- What am I angry at? The hair on his head? His nails? Bones (and other body parts)? The feeling aggregate? Discrimination aggregate? Miscellaneous factors aggregate? Consciousness aggregate?
- This suffering will consume my destructive karma so that it no longer obscures my mind.
- This person who is harming me is my teacher because she enables me to accomplish the perfection of fortitude.

- Although this person is harming me now, in the past he has been my friend and benefactor and has given me great help.
- All beings are like my young children. How can I be angry at their misdeeds done through unknowing?
- The harmful action, the one who did it, and the one to whom it was done—all these have ceased at this very moment. They are past. With whom, then, should I be angry? And who is becoming angry? Since all phenomena are not-self, who can harm whom?
- This harm is showing me the suffering nature of saṃsāra. How I wish others and myself were free from it! I must work toward that end.
- It is the nature of the sense faculties to encounter pleasant and unpleasant objects. I must maintain equanimity.
- The Buddha looks at all these beings as dear ones. How can I hate someone the Buddha loves?
- Nothing beneficial ever comes from anger: Due to it, my good qualities and happiness decline. I cannot sleep or eat well.
- Anger is the real enemy because it destroys all that is good, perpetrates harm, and spreads negativity.
- Enemies are the result of angry thoughts and preconceptions. To free myself from enemies, I must relinquish anger.
- Anger destroys my ethical conduct and merit. Without these how can I fulfill my bodhisattva aspiration? And until I do that, all sentient beings will be immersed in duḥkha.
- Mere phenomena alone exist, devoid of self or of anything pertaining to a self. They arise and pass away due to causes and conditions. They do not come from anywhere, they do not go anywhere, they are not established anywhere. There is no agency in anything whatsoever.

By applying whichever way of thinking works best at any particular moment, release anger and cultivate fortitude and compassion for your own and others' benefit.

A deep understanding of conditionality and impermanence is also effective for releasing anger, even in difficult or terrifying situations. Someone who has done intensive meditation on the various components that make up an experience can dissect an event or experience into its parts and see that each component arose dependent on its causes and that each one is also transient, arising and passing away in the briefest moment. Śāriputra says in the *Greater Discourse on the Simile of the Elephant's Footprint* (MN 28.8):

If others abuse, revile, scold, or harass a monastic, he understands thus: “This painful feeling born of ear-contact has arisen in me. That is dependent, not independent. Dependent on what? Dependent on contact.” Then he sees that contact is impermanent, that feeling is impermanent, that discrimination is impermanent, that miscellaneous factors are impermanent, and that consciousness is impermanent. And his mind...acquires confidence, steadiness, and decision.

The Buddha said that to retaliate when abused, criticized, insulted, or even beaten is not the practice of his disciples. Therefore, whether or not we have erred, guarding the mind against anger when accused is an important practice. One way to do this is to examine the conditioned and conditioning factors involved in the experience. For example, first you recognize a painful feeling that comes from hearing unpleasant words. That feeling is not a given; it arises due to conditions. In this case, there was contact—the coming together of the auditory consciousness and the sound by means of the auditory sense faculty—all of these being conditioned and impermanent factors that played a role in the arising of that painful feeling. The contact arises and passes away in a micro-moment; there is nothing enduring about it at all. Similarly, the auditory consciousness that heard the sounds, the conditioning factors that interpreted their meaning, the mental consciousness that understood them, and the discrimination that this person is an enemy—all of these are conditioned, dependent phenomena. Being conditioned, they are impermanent; when their cause ceases, they too cease. They cannot endure on their own or by their own power.

Being impermanent, all these factors are also unsatisfactory, and being both impermanent and unsatisfactory, they are not suitable to be considered mine, I, or my self. That is, none of those factors is a self that is being insulted or criticized. There is no person who is being criticized and no person who is feeling hurt due to being criticized.

If we are beaten or physically attacked, we should recall (MN 28.9): “This body is of such a nature that contact with fists, clods, sticks, and knives assail it.” Even if we did not go looking for violence, it may happen that we were caught in the middle of it. At this time we should remember that this is the nature of physical existence and cultivate love toward the assailant. Remembering that the Buddha would not want us to respond with wrath or self-pity is also effective in warding off harmful emotions that otherwise could arise in us.

The *Āṅgulimāla Sutta* relates a beautiful example of practicing fortitude by seeing suffering as a ripening of our karma and thereby accepting and feeling happy about the situation. After Āṅgulimāla, the detested and feared bandit and murderer, was subdued and ordained as a monastic by the Buddha, he attained arhatship. One day while he was on alms round, the townspeople saw him and scornfully threw things at him and struck him. Bleeding, with his alms bowl shattered and his robes torn, Āṅgulimāla approached the Buddha, who advised him, “Bear it, brahmin! You are experiencing here and now the results of deeds because of which you might have been tortured in hell for many years, for many hundreds of years, for many thousands of years.”

Taking that advice to heart, Āṅgulimāla accepted his situation and generated love and compassion for those who tormented him. He then said (MN 86.18):

Who checks the evil deeds he did  
by doing virtuous deeds instead,  
he illuminates the world  
like the moon freed from a cloud...

Let my enemies hear discourse on the Dhamma,  
let them be devoted to the Buddha’s teachings,

let my enemies wait on those good people  
who lead others to accept the Dhamma.

Let my enemies give ear from time to time  
and hear the Dhamma of those who preach fortitude,  
of those who speak as well in praise of kindness,  
and let them follow up that Dhamma with kind deeds.

For surely then they would not wish to harm me,  
nor would they think of harming other beings,  
so those who would protect all, frail or strong,  
let them attain the all-surpassing peace.

The Buddha gave excellent advice for dealing with painful, pleasant, and neutral feelings when he spoke to sick patients at an infirmary. In daily life we often blindly react to these three feelings, but when we are ill or injured, painful feelings occupy our attention. Without mindfulness and introspective awareness at that time, we easily fall prey to anger and aversion toward the unpleasant feelings and to craving for pleasant, or at least neutral, feelings. The Buddha advises (SN 36.7):

When a monastic dwells thus, mindful and introspectively aware, diligent, ardent, and resolute, if there arises in him a painful feeling, he understands thus: “There has arisen in me a painful feeling. Now that is dependent, not independent. Dependent on what? Dependent on just this body. But this body is impermanent, conditioned, dependently arisen. So when the painful feeling has arisen in dependence on a body that is impermanent, conditioned, dependently arisen, how could it be permanent?” He dwells contemplating impermanence in the body and in painful feeling; he dwells contemplating vanishing, contemplating fading away, contemplating cessation, contemplating relinquishment. As he dwells thus, he abandons the underlying tendency to

aversion in regard to the body and in regard to painful feeling.

The Buddha makes similar points regarding how to contemplate pleasant feelings so as to give up the underlying tendency to sensual desire and how to contemplate neutral feelings in order to abandon the underlying tendency to ignorance.

This is excellent advice to follow whenever we do not feel well or whenever the mind is unhappy or filled with painful feelings. First, be aware that a painful feeling is present. Instead of thinking, “I don’t like this. It shouldn’t happen to me. I want it to go away,” turn your attention to the feeling itself and contemplate it. A painful physical feeling does not exist independent of all other factors. Among other factors, it depends on having a body. The body itself is transient and dependent. It depends on the various physiological systems that compose it. It arose dependent on ignorance, karma, and the consciousness taking rebirth. The body is conditioned by karma as well as by environmental factors. Painful feelings that arise in such an impermanent, conditioned body cannot be permanent. These feelings, too, are conditioned and dependently arise. They are impermanent—arising and vanishing in each split second. Furthermore, the painful feelings are not I or mine; they are not a substantial self, nor do they belong to such a self. What is “mine” about these feelings?

To be balanced in your attitude toward all feelings, do this contemplation when you experience pleasant or neutral feelings as well. Wanting to overcome painful feelings yet craving to indulge in pleasant ones will not bring wisdom or liberation. All feelings in saṃsāra are marked by the three characteristics of impermanence, duḥkha, and not-self.

When meditators with strong concentration and wisdom contemplate in this way, they naturally begin to contemplate vanishing, fading away, cessation, and relinquishment. That is, they use the wisdom gleaned in meditation to reduce and eventually abandon the underlying tendency to aversion. Then all their future pleasant, painful, or neutral feelings will be experienced with nonattachment. The Buddha says (SN 36.6):

The wise one, learned, does not feel

the pleasant and painful [mental] feeling.  
This is the great difference between  
the wise one and the worldling.

For the learned one who has comprehended Dhamma,  
who clearly sees this world and the next,  
desirable things do not provoke his mind;  
toward the undesired he has no aversion.

For him attraction and repulsion no more exist;  
both have been extinguished, brought to an end.  
Having known the dust-free, sorrowless state,  
the transcender of existence rightly understands.

### *Truthfulness*

Truthfulness is speaking without deception. To benefit sentient beings, they must trust us, and being honest enables them to do so. Not only do we train ourselves to be patient when confronted with others' wrongdoings, abuse, and ungrateful actions, we must remain true to our word to benefit them. Through speaking truthfully and acting according to our word, we do not abandon sentient beings, and they will come to see that we are reliable. Being truthful builds the foundation for all good qualities and opens the door to be able to enact the welfare of all beings.

Bodhisattvas speak what is true, whether others react by helping or harming them. This is true not only in ordinary affairs but in teaching the Dharma as well. They teach the Dharma skillfully and according to the inclination of the audience, but they do not alter the Buddha's words so that others will like them. Thus sentient beings can trust that when bodhisattvas teach they are receiving the actual Dharma, not something adjusted or made up in order to win their favor and receive more offerings.

With truthfulness bodhisattvas accept the empty nature of beings. Not being deceived about the true nature of phenomena, they complete all the collections and requisites for awakening and accomplish the bodhisattva path.

The *Basket of Conduct* (CP 3.9) relates the story of the Buddha's previous life as a bodhisattva who was born as a quail. As a tiny chick, he was completely dependent on his parents for food and protection. However, when a forest fire approached, they were forced to abandon him for fear of their own lives. Terrified and without any ability to fly away, the chick reflected on the power of the Dharma and remembered the strength of the truth as demonstrated by previous buddhas. The baby quail made a declaration of truth, whereby the fires receded and he was saved.<sup>43</sup>

### *Determination*

Determination is the unshakable resolve to fulfill our promise to liberate sentient beings and to perfect the ten perfections. It gives us the courage to remain steadfast in the practice, even when afflictive mental states attempt to sway us to do the opposite. As long as we are in saṃsāra, afflictions will arise and interfere with practicing the perfections. With determination and energy we must remain constant, doing what we know is right.

The *Temiya Jātaka* tells the story of the Buddha's previous life as a bodhisattva born as the much-longed-for son of the king and queen of Kasi. As an infant, one day he heard his father sentence some robbers to a harsh punishment, and that caused him to remember a past life in which he had been a king and had acted similarly. Subsequent to that life, he had been born in the hell realm due to the harmful karma he had created. Temiya desperately did not want to rule a kingdom again and followed the advice of a goddess who counseled him to pretend to be dumb and incapable. This he did for sixteen years, and while his parents knew this was a pretense and did everything they could to break his resolve, he was determined not to assume the throne. Finally at wits end, his parents ordered a charioteer to take him to a cemetery and club him to death. Temiya remained resolute, thinking (CP 3.6.17–18):

I did not break that resolute determination that was for the sake of awakening itself. Mother and father were not disagreeable to me, nor was self disagreeable to me.

Omniscience was dear to me; therefore I resolutely determined on that itself.

When Temiya told the charioteer his wish to become an ascetic, the charioteer wanted to join him in spiritual pursuits. But first he returned to tell Temiya's parents, the king and queen, what had happened. They came to Temiya's hermitage, where he taught the Dharma to them and their retinue, after which all of them renounced and became ascetic spiritual practitioners.

### *Love*

Love is the aspiration to give happiness to all sentient beings and create the conditions whereby they will be happy. Free from resentment or expectation, love lies behind our determination to fulfill the aspiration to awakening and to complete the practices of the perfections. Someone who is self-centered lacks genuine love; they harm others and have many enemies in this life and are not happy in future lives. Someone lacking in love and compassion cannot lead all beings to nirvāṇa. The Buddha says (AN 11.16):

When the liberation of the mind by love is developed and cultivated, frequently practiced, made your vehicle and foundation, firmly established, consolidated, and properly undertaken, eleven blessings may be expected. What eleven?

You sleep peacefully; you awaken peacefully; you see no bad dreams; you are dear to human beings; you are dear to nonhuman beings; you will be protected by devas; fire, poison, and weapons cannot injure you; your mind becomes easily concentrated; your facial complexion will be serene; you will die unconfused; and if you do not penetrate higher, you will be reborn in the Brahmā-world.

To illustrate the peace that love brings, the *Basket of Conduct* tells the story of the Buddha's previous life as Sāma, a lad who lived in the forest, taking care of his blind parents (CP 3.13):

When in a wood I was Sāma...I brought the lions and tigers in the forest to love. Surrounded by lions and tigers, by leopards, bears, buffaloes, and by spotted deer and wild boar, I lived in the wood. No one was frightened of me, nor did I fear anyone. Sustained by the power of love, I delighted in the forest then.

Bodhisattvas think, “It is good to wish for the happiness of others, but that alone will not provide them with happiness. I must act with love and employ joyous effort to accomplish the welfare of others.” Bodhisattvas also reflect that sentient beings are the incomparable, supreme field of merit with which they can cultivate virtue and fulfill the collections. In that way, they always maintain a mind that cherishes sentient beings and never abandons them. With an unbounded heart they reach out to give happiness to others. To do that, they must eliminate sentient beings’ pain, misery, and their cause—the afflictions. In this way, compassion, which is a principal cause of buddhahood, arises and expands in their minds.

### *Equanimity*

Equanimity is impartiality with respect to the desirable and pleasing and the undesirable and displeasing. It is an inner attitude that doesn’t oscillate according to either the people or the objects we encounter. Remaining equanimous, bodhisattvas are able to continue to practice no matter what comes their way. Equanimity enables us to benefit sentient beings impartially, not sliding into attachment for those who benefit, praise, and give us offerings, and not falling into animosity for those who don’t fulfill our expectations or wishes or who inflict harm on us. Without equanimity our mood resembles a yo-yo that constantly goes up and down.

The mind is reactive to the external environment and controlled by the sense objects in it. This lack of balance impedes developing concentration, disturbs ethical conduct, and obstructs acting in ways that benefit sentient beings. Without equanimity, we cannot complete the perfections well, and we find difficulty in dedicating the virtue from practicing the perfections for the awakening of all sentient beings. But imbued with equanimity, we can

face whatever comes in a balanced way, free from worry and fear regarding our life. Equanimity overcomes discontent, and being unconcerned about either the praise or the insults of others, bodhisattvas' determination to serve them never flags. In short, equanimity supports the practice of all the perfections.

The *Basket of Conduct* relates the story of the Buddha's previous life as a bodhisattva who, being impoverished, lay down in a cemetery and piled up bones to use as a pillow. Wondering who he was, some children approached. Some of them gave him gifts, others cruelly ridiculed him. Toward them all, the bodhisattva maintained equanimity.

### *The Sequence of the Perfections*

There are several reasons to explain why each perfection follows its preceding one; a summary of them will suffice. To develop our understanding of the perfections, it is helpful for us to reflect and see additional connections among them. In most cases, the preceding or subsequent perfection helps to perfect or purify the one immediately before or after it.

Generosity is first because (1) it is comparatively easy to practice, and (2) all beings—religious and nonreligious—respect and practice it.

Ethical conduct follows because (1) although generosity benefits others, ethical conduct stops us from harming them, and (2) generosity is the cause of wealth, and to enjoy that wealth in the most suitable conditions a fortunate rebirth is needed. Ethical conduct is the principal cause for good rebirth.

Renunciation comes next because (1) although ethical conduct entails having good physical and verbal conduct, renunciation involves good mental conduct, (2) one who has renunciation can develop the dhyānas without difficulty, and (3) after abandoning harmful physical and verbal actions, we should abandon mental obsessions.

Wisdom is spoken of now because (1) in the absence of the dhyānas, wisdom is difficult to develop, and (2) skillful means, which is wisdom in working for others' welfare, arises as a result of meditation focused on their well-being.

Joyous effort follows because (1) bodhisattvas undertake wonderful deeds to benefit sentient beings on the basis of understanding their emptiness with wisdom, and (2) joyous effort follows upon the careful consideration and understanding involved in wisdom.

Fortitude comes next because (1) it can balance the energy produced by joyous effort so that restlessness is calmed, (2) those with joyous effort must also persevere to accomplish their spiritual aims, (3) bodhisattvas must patiently endure hardships while joyously working to benefit sentient beings, and (4) bodhisattvas who energetically aid sentient beings do not crave award or acknowledgment as they cultivate fortitude with respect to the Dharma.

Truthfulness is mentioned now because (1) truthfulness sustains the resolve to practice fortitude, (2) while fortitude endures the harms of others, truthfulness keeps the bodhisattva's promise to benefit them, (3) bodhisattvas remain steady with fortitude when confronted with abuse, and with truthfulness they do not give up on others, and (4) this shows the truth of the wisdom that was developed through the fortitude understanding the emptiness of sentient beings.

Determination follows because (1) whereas truthfulness is nondeceptive speech, determination is commitment to fulfill the bodhisattva practices without wavering, (2) after gaining the truthfulness of wisdom knowing things as they really are, bodhisattvas have strong determination to complete the requisites (collections) for awakening.

Love is mentioned next because (1) it sustains and supports the determination to work for the welfare of sentient beings, (2) after making a strong determination to work for others' welfare, love provides for their well-being, and (3) undertaking activities to benefit sentient beings proceeds well only with an unshakable determination.

Equanimity is next because (1) when bodhisattvas are actively working to benefit sentient beings with love, they must remain equanimous to any harm or insults they receive, (2) equanimity evolves from love, and (3) bodhisattvas remain equanimous and impartial even to those who wish them well and treat them well.

The perfections are defiled by afflictions, preconceptions, and mental proliferations. They are cleansed by applying the antidotes to the afflictions.

When contemplating the perfections, it is helpful to reflect: What afflictions do I need to particularly guard against when practicing each perfection? What are the antidotes to that affliction? How can I energize mindfulness and introspective awareness to recognize the afflictions and apply their antidotes?

### *How to Accomplish the Perfections*

The perfections can be related to other categories of phenomena as a way of helping to penetrate the meaning of each and to understand the relationships among them. The ten perfections are related to the four foundations of truth, relinquishment, peace, and wisdom.<sup>44</sup>

1. Bodhisattvas practice the *foundation of truth* by acting in accordance with what they have vowed and understood. Through this they maintain their practices of generosity, ethical conduct, and so on.
2. They practice the *foundation of relinquishment* by giving up the opposite of each perfection—for example, relinquishing stinginess, unethical behavior, and so on.
3. They practice the *foundation of peace* by pacifying obstacles to each perfection—for example by abandoning ignorance, anger, attachment, and fear toward recipients and objects of generosity, by pacifying physical and verbal misconduct, and so on.
4. They practice the *foundation of wisdom* by applying each perfection at the proper time, place, in a suitable manner, and so forth.

The perfections are actualized by four methods:

1. Enthusiastically accumulating the collection of merit for the sake of full awakening by practicing the perfections without discouragement or lack of interest.
2. Engaging in them completely with respect and esteem.
3. Doing them uninterruptedly with perseverance.
4. Continuing to do them over a long time without stopping part way.

To develop the inner strength to complete the path, bodhisattvas offer themselves and their possessions to the buddhas—for example, when they receive something, they immediately resolve to share it with others and use only what remains for themselves. Having done that, they may still encounter four shackles that impede their generosity. Fortunately there are counterforces that break these shackles:

(1) Lacking the habit of giving in the past. When a bodhisattva has something to give and a potential recipient is nearby but he does not immediately think to give it, he counteracts this by thinking, “This complacency is due to my lack of familiarity with generosity in the past. In order to overcome this, I will give now, and give with delight.” In this way, he trains himself and develops the habit of giving with joy.

(2) Having only poor-quality goods to give. If a bodhisattva has only substandard objects to offer, she reflects, “The lack of good items to offer is due to my not having practiced generosity in the past. Therefore, even though what I have is poor quality, I will give it so that in the future excellent items will come my way and I can practice generosity with them.”

(3) Being attached to the good qualities of the object. When a bodhisattva is reluctant to give because he finds the object very attractive, he admonishes himself, “You vowed to attain the most excellent state of awakening. For that noble purpose, you need to give excellent and beautiful gifts. Now that you have the chance to do this, do it!”

(4) Feeling a sense of loss or worry after giving. If a bodhisattva worries about suffering from not having the object or feels the pang of loss from giving even though she has enough, she thinks, “Possessions are transient. There is no way I can own this forever, so I should use it to create merit and give it now. Because I was stingy in the past, now my belongings are depleted; I do not want to create more karma like this. Therefore, whatever I have, be it a lot or a little, I will give so that I can perfect the quality of generosity.”

In all four instances, the bodhisattva then gives generously, openhandedly, and with delight. In this way he destroys the four shackles to giving. Similarly, whenever he faces a hindrance in completing any of the other perfections, he thinks in whatever way is helpful to dispel it, for most of the hindrances are in the mind.

Sometimes bodhisattvas will encounter difficulties in their practice of the perfections: they may be deprived of means of support, be insulted or abused, face physical illness or injury, or feel low-spirited and exhausted. At this time, they reflect, “I have given myself to the buddhas for the sake of the awakening of all beings. Whatever comes, comes.” In this way they trust the Three Jewels and have confidence in the law of karma and its effects. They do not succumb to fear or worry and remain unshaken and determined to continue on the bodhisattva path. Dhammapāla concludes:

In brief, the destruction of self-centeredness and the development of love for others are the means to accomplish the pāramīs.

By contemplating sentient beings as their precious children or relatives, bodhisattvas increase their love, compassion, and affection. Having subdued their own ignorance, attachment, and animosity, they mature others’ minds with the four ways of gathering disciples—generosity, loving speech, encouragement, and acting congruently. These were described according to both traditions in the chapter “Sharing the Dharma.” With these four ways of gathering disciples, bodhisattvas cause sentient beings to enter and then reach the end of whichever of the three vehicles they choose. Bodhisattvas treat all beings as equal to themselves in importance, and emotionally they remain stable under all circumstances, be they pleasant or unpleasant, helpful or harmful. After they become buddhas, their ability to benefit others and lead them on the path is perfected due to having practiced these four ways of gathering disciples while they were bodhisattvas.

Bodhisattvas can be grouped according to which factor is prominent in them. In some bodhisattvas wisdom is predominant, in others faith, and in others energy is principal. These bodhisattvas attain full awakening, respectively, in four countless and a hundred thousand great eons, eight countless and a hundred thousand great eons, and sixteen countless and a hundred thousand great eons. Since full awakening is attained by the power of wisdom, those bodhisattvas inclined toward wisdom proceed more rapidly.

The three types of bodhisattvas all receive predictions of their awakening directly from a buddha. When they first generate bodhicitta, the length of time they will practice to fulfill the perfections and attain full awakening is not part of their aspiration. However, they perfect the perfections in the amount of time that corresponds to their respective type. It is not possible for them to attain full awakening quicker than that time period because it takes that length of time for their knowledge to mature and for them to accumulate the collections for full awakening. Just as fruit ripens after the length of time required for its growth and not sooner, so too a bodhisattva's mind ripens in the length of time required for their type.

### *Benefits and Results of Practicing the Perfections*

The benefits of practicing the perfections are countless. In Theravāda countries today, practicing them is highly respected, so much so that people who aspire for arhatship engage in ten wonderful practices similar to the perfections.

However, doing these practices with the motivation of bodhicitta and sealing them with the understanding of not-self make these practices unique. Rather than being ordinary generosity that leads to wealth in future lives, those factors make the bodhisattvas' perfections causes for full awakening. Other benefits that accrue to bodhisattvas are that they become like kind and compassionate parents of all beings. They are worthy of offerings and reverence and become supreme fields of merit. Humans and nonhumans hold them dear and they are protected by deities. Bodhisattvas cannot be harmed by wild animals and will have excellent conditions in whatever rebirth they take. They become energetic, mindful, concentrated, and wise. Their afflictions are tamed so they are easy to get along with, easy to admonish, and are hospitable and cooperative. Bodhisattvas' manifest malice, jealousy, competitiveness, hypocrisy, miserliness, stubbornness, and arrogance have greatly decreased.<sup>45</sup> Needless to say, they have many friends and helpers, and as a result of their compassion, others treat them well. Their presence in an area prevents danger and disasters. Even when bodhisattvas are born in unfortunate realms, they are not oppressed by suffering, but instead their sense of spiritual urgency increases as they

transform all experiences into methods that increase their resolve to attain buddhahood.

More benefits of bodhisattvas' perfections are:

They have a *long life* in whatever state of existence they are born, and as a result, they can accumulate many virtuous qualities, deepen their meditation, and bring to fruition many virtuous actions to benefit sentient beings.

By having an *attractive form*, bodhisattvas attract others to them and inspire confidence and reverence in those who value and respond to attractive forms.

Bodhisattvas are born in *excellent families*, who steer them to the Dharma when they are still children. Being from families that are well-known and well-respected in society, bodhisattvas can guide those who are attached to social status.

Bodhisattvas have *sovereignty* in their lives. They are influential and have many helpers who assist them in accomplishing their virtuous works, especially in enacting the four ways of gathering disciples and using the Dharma to subdue those who are rash and unrestrained.

Bodhisattvas have *credibility*. Because they are trustworthy and reliable, sentient beings value their advice and direction and give them authority. This enables them to protect others from making unwise or brash decisions and to steer them to increase their virtuous qualities.

As dedicated practitioners, bodhisattvas have the *greatness of spiritual power*. Because their minds have been transformed into the Dharma, bodhisattvas cannot be conquered or subjugated by others, but instead subdue them through their noble qualities.

Not all bodhisattvas will have the above conditions in every birth, but those who seek to benefit sentient beings through these noble qualities gain them as results of their great accumulation of merit and wisdom. Through these accomplishments, bodhisattvas' practice of the perfections increases and they become more capable of guiding others in the Dharma of the three vehicles and have more opportunities to do so.

In understanding these benefits, we should not expect each and every bodhisattva to display them. For example, it is incorrect to think, "That

person does not have an attractive form, so he must not be a bodhisattva” or “That person is from a lower social class, so he cannot be a bodhisattva.” Bodhisattvas manifest in whatever ways can benefit sentient beings, according to their karma. So bodhisattvas may appear as lepers, homeless people, refugees, or people who are physically challenged. They do this in order to benefit others. Since we do not know who is and isn’t a bodhisattva, we should avoid judging and discriminating against others but instead view all sentient beings as teachers. After all, we can learn important things from interacting with and listening to everyone.

The benefits of practicing the perfections can be found in the Pāli sūtras. In the *Sutta on the Wonderful and Marvelous* (*Acchariyaabbhuta Sutta*, MN 123), the Buddha asks Ānanda to describe the Tathāgata’s wonderful and marvelous qualities, and in the *Sutta on the Great Passing* (*Mahāparinibbāna Sutta*, DN 16.3.15–20) the Buddha speaks of eight causes of the great trembling of the earth, six of them related to events in the Buddha’s life. The *Jātakas* and the *Buddhavaṃsa* mention other benefits of practicing the perfections. While many of the stories of the Buddha’s previous lives in the *Jātakas* sound like legends and folktales, the points that they illustrate can be applied to our lives. On a deeper level, these stories illustrate the level of commitment to compassion and to fulfilling the perfections that bodhisattvas have; pondering them will inspire us to think and act in that way.

The result of bodhicitta and the bodhisattvas’ perfections is buddhahood, with the magnificent form body (*rūpakāya*) that possesses the thirty-two marks and eighty signs of a great person<sup>46</sup> and the truth body (*dharmakāya*),<sup>47</sup> glorious with its wondrous qualities such as the ten powers, the four fearlessnesses, the six kinds of knowledge not held in common with others, the eighteen unique qualities of a buddha,<sup>48</sup> and so forth. The qualities of a buddha are too numerous to ever finish describing. Dhammapāla concludes his treatise:

And it is said: If a buddha were to speak in praise of a buddha, speaking nothing else for an eon, the long eon would end but the praise of the Tathāgata would still not be finished.

## Part II. The Three Vehicles and Their Fruits

HAVING BEEN INTRODUCED to the bodhisattva perfections in both the Sanskrit and Pāli tradition, we'll now turn to the paths and fruits of the three vehicles. The paths are consciousnesses that are developed in stages as we boost our concentration and deepen our understanding and realization of the ultimate truth. Knowing these enriches our practice in multiple ways. Our understanding of the Three Jewels will expand, especially our understanding of the progressive practices of the Saṅgha Jewel and their specific result. But we cannot understand these without increasing our understanding of the Dharma Jewel—the true paths and true cessations. And since the final result of the path is supreme buddhahood, our appreciation of the abandonments and realizations of the Buddha Jewel will also grow. With this, our feeling when we take refuge in the Three Jewels will be transformed and our faith in their ability to guide us on the path will increase exponentially.

# 6

## Breakthrough to Nirvāṇa: The Pāli Tradition

LEARNING ABOUT THE PATHS and fruits of the three vehicles gives us a road map of the practices that we must engage in and the results that will come about according to the vehicle we enter. This will guide us in our practice and will enable us to check our progress on the path. Of course, conferring with our spiritual mentor is undoubtedly necessary, but this road map is helpful to keep us going straight on the path.

In addition, as we learn the paths and fruits of our chosen spiritual vehicle, we will begin to imagine gaining those realizations and qualities. Such imagination is important in Dharma practice since it inspires us to engage with joyous effort in the practices to cultivate these realizations and qualities. In addition, while we engage in Dharma practice, imagination will spark small glimpses of those realizations and qualities, which further fuels our effort to create the causes to attain them. In short, learning the paths and grounds not only plants seeds in our minds but also affects how we think about the paths and grounds now.

The remainder of this chapter will present the paths and fruits of Fundamental Vehicle practitioners from the viewpoint of the Pāli tradition. The next chapter will cover the same material from the perspective of the Sanskrit tradition.

### *The Three Vehicles*

The oldest Pāli sūtras speak of three types of individuals who attain awakening: a fully awakened buddha (*samyaksambuddha*, *sammāsambuddha*), a solitary realizer (*pratyekabuddha*, *paccekabuddha*), and a śrāvaka (P. *sāvaka*). All of them were seen as having attained the same awakened state of nirvāṇa, although each of them had different

characteristics. A fully awakened buddha realizes awakening without a teacher in his last life. He teaches the Dharma to others and begins a dispensation (*śāsana, sāsana*)—that is, he turns the Dharma wheel in a time when the Buddhadharmā is not present in the world. A solitary realizer attains awakening without the aid of a teacher, does not generally teach others verbally,<sup>49</sup> and does not begin a dispensation. A śrāvaka attains awakening through following the guidance of a teacher. All three have realized the fourfold path knowledge (P. *magga ñāṇa*)—that is, they have realized the four truths and are arhats.

With the passage of time, each of the three became known as practitioners of different vehicles. Practitioners of the Pāli tradition continued to follow the early sūtras, thus aiming for the śrāvaka awakening that they speak of. Nevertheless, the bodhisattva ideal was revered in the *Buddhavaṃsa*, a later text that was added to the Sūtra Piṭaka. This text also spoke of the bodhisattva's great aspiration (*ābhinīhāra, abhinīhāra*) and put forth ten perfections practiced by a bodhisattva, and the *Jātaka* tales illustrate a bodhisattva's practice of the perfections. Meanwhile, practitioners in some of the other early schools, such as the Sarvāstivāda and the Mahāsāṃghika, came to speak of three vehicles leading to awakening that were differentiated by the difficulty and length of practice.

As time went on, in addition to the characteristics described above, new terms came about to describe these three types of individuals and their respective states of awakening. A buddha attains full awakening (P. *sammā-sambodhi*) and is all-knowing. Here “all-knowing” does not mean a buddha knows everything, but that he could know anything if he turned his mind to it. A buddha has eradicated all defilements as well as latencies (habitual tendencies, *vāsanā*). Practitioners with a strong motivation to attain full awakening are called *sammā-sambodhisattas*. Those with a virtuous aspiration to attain a solitary realizer's awakening (P. *pacceka-bodhi*) are known as solitary realizer bodhisattvas (P. *pacceka-bodhisattas*), and those aspiring to attain śrāvaka awakening (P. *sāvaka-bodhi*) are known as śrāvaka bodhisattvas (P. *sāvaka-bodhisatta*).<sup>50</sup> All three practice the āryan eightfold path and attain the path that realizes the four truths.

A commentary on the *Buddhavaṃsa* speaks of *arhat-bodhi* (the awakening of a śrāvaka arhat) and *sabbaññu-bodhi* (the awakening of a

buddha). Present-day Theravāda practitioners regard the perfections as practices done by all three types of practitioners because they bring about qualities that are requisites for awakening. However, someone aspiring for a buddha's awakening cultivates the perfections both for a longer period of time and in more depth than practitioners aspiring to become śrāvaka or solitary realizer arhats.

### *Dhyānas and the Destruction of Pollutants*

Several modes of progressing to liberation exist and a general map is given here, but as with any map, there are smaller roads that are not shown. Similarly, there are a diversity of ways of progressing through the four stages of liberation—stream-enterer (*srotāpanna*, *sotāpanna*), once-returner (*sakṛdāgāmin*, *sakadāgāmi*), nonreturner (*anāgāmin*, *anāgāmi*), and arhat (P. *arahant*).

The dhyānas and formless realm absorptions are states of deep mental tranquility in which the defilements are temporarily suppressed but not eradicated. The Pāli commentaries say that a meditator who has developed access concentration (P. *upacāra samādhi*), which is prior to attaining the first dhyāna, can develop insight wisdom and then gradually progress through the stages of stream-enterer, once-returner, and nonreturner to attain arhatship. These are called “dry-insight arhats” (P. *sukkhavipassaka*) because their minds are not moistened and softened by the deep concentration of the dhyānas. The Sarvāstivāda Abhidharma, followed in the Tibetan tradition, speaks of similar arhats.

Those who go beyond access concentration and gain the first dhyāna can use that as the basis to attain the destruction of pollutants. They do not need to cultivate any levels of concentration beyond that. However, some meditators also develop the second, third, and fourth dhyānas and then use the latter to attain the destruction of pollutants. When describing how he attained the destruction of all pollutants, the Buddha said he attained the fourth dhyāna and then realized the three higher knowledges: recollection of previous lives, knowledge of the death and rebirth of sentient beings, and knowledge of the destruction of all pollutants.

Each level of dhyāna gives power, precision, and clarity to the mind, and the mind of the fourth dhyāna in particular is described as being “purified, bright, unblemished, free from imperfections, malleable, wieldy, steady, and attained to imperturbability.” This mind is free from the imperfections of the minor corruptions and minor defilements and can be molded according to the meditator’s needs. It doesn’t waver and is completely still.

To actualize the knowledge of the destruction of all pollutants, meditators first cultivate insight wisdom (P. *vipassanā pañña*) by meditating on the three characteristics—impermanence, duḥkha, and not-self. Based on a meditation practice such as the four establishments of mindfulness, they refine their mindfulness, and with the practice of dhyāna, the mind has become very sharp, clear, and pliant. They direct their mind to the factors of their experience—the five aggregates, six sense sources, and so on—as they are occurring. What is within the realm of awareness of this highly trained and focused meditative mind is far beyond what we can discern with our ordinary awareness. These meditators investigate the factors of their body and mind at a microscopic level, directly witnessing their subtle impermanence as they arise and pass away in the briefest moment. Seeing that everything in their present experience is arising and passing away, they know that the mind is just a process of events that are arising and passing away. What is taken to be the mind is actually a stream of events—feelings, discriminations, various miscellaneous factors, and consciousnesses—and each of them no sooner comes into being than they cease. This is the realization of the first characteristic, subtle impermanence.

The meditators then realize that whatever is impermanent—especially their cherished body and mind—cannot be relied upon for security and is not a basis for lasting happiness. This is the realization of the second characteristic, duḥkha, which the commentaries define as “oppression due to arising and passing away.”

Furthermore, whatever arises and passes away and is made of constituents is not a solid, stable self. It is not I, it is not a true self—the third characteristic. The meditators now directly perceive the entire field of

their experience in terms of these three characteristics of saṃsāric existence.

This insight wisdom, which contemplates things as they really are, serves to weaken the underlying tendencies of the defilements that have been together with the mind since beginningless time. Insight wisdom brings “specific-factor abandonment”—that is, it temporarily overcomes a particular misunderstanding or wrong conception.

As insight wisdom matures and when practitioners’ faculties are ripe, the mind momentarily turns away from all conditioned phenomena and realizes the unconditioned, ultimate peace that is not impermanent and unsatisfactory. When they have a clear realization of this, they gain the true understanding of four truths and know: this is duḥkha, this is the origin of duḥkha, this is the cessation of duḥkha, this is the path to the cessation of duḥkha. At arhatship, this clear realization is called “knowledge of the destruction of the pollutants,” which also knows: these are the pollutants, this is their origin, this is their cessation, this is the path leading to their cessation. With the wisdom of a clear realization that knows nirvāṇa directly, the defilements are eradicated in “eradication abandonment.” This clear realization is a sudden experience in that meditators see what they have never before seen—nirvāṇa, the unconditioned, the deathless. This experience is a total transformation of consciousness. In general, practitioners arrive at this through the gradual practice of the three higher trainings. However, the sūtras tell of some people who encounter the Buddha or an accomplished disciple and attain the path and fruit just by hearing a discourse, without prior practice in that life. However, they undoubtedly cultivated the three higher trainings in previous lives.

According to the Pāli commentaries, clear realization occurs at a single moment. A practitioner penetrates the third truth, nirvāṇa, as the object of their meditation, and simultaneously realizes the other three truths by way of their function. Through the realization of nirvāṇa they fully understand the five aggregates, the six sources, and so on as the truth of duḥkha, and they abandon some defilements that are the cause of duḥkha. Through their own experience they know that cultivating the eightfold path is the way to the cessation of duḥkha.<sup>51</sup>

With the experience of the wisdom of a clear realization, the destruction of the fetters (*saṃyojana*) begins. With the first realization of nirvāṇa, the first three fetters—view of a personal identity, deluded doubt, and view of bad rules and practices—are eradicated and the disciple becomes a stream-enterer. With the weakening of two more fetters—sensual desire and malice—the disciple becomes a once-returner. With the eradication of those two additional fetters, all five lower fetters have been removed and the disciple becomes a nonreturner. With the destruction of the remaining fetters—desire for existence in the form realm, desire for existence in the formless realm, conceit, restlessness, and ignorance—and the three pollutants (of sensual desire, existence, and ignorance), the disciple attains arhatship. In the *Greater Discourse at Assapura* (*Mahāassapura Sutta*), the Buddha describes this experience (MN 39:21):

When he knows and sees thus, his mind is liberated from the pollutant of sensual desire, from the pollutant of existence, and from the pollutant of ignorance. When it is liberated there comes the knowledge: “It is liberated.” He understands: “Birth is destroyed, the holy life has been lived, what had to be done has been done, there is no more coming to any state of being.”

Just as if there were a lake in a mountain recess, clear, limpid, and undisturbed, so that a person with good sight standing on the bank could see shells, gravel, and pebbles, and also shoals of fish, swimming about and resting, he might think: “There is this lake, clear, limpid, and undisturbed, and there are these shells, gravel, and pebbles, and also shoals of fish, swimming about and resting.” So, too, a monastic understands as it actually is: “This is duḥkha... This is the origin of duḥkha... This is the cessation of duḥkha... This is the way leading to the cessation of duḥkha...” He understands: “Birth is destroyed, the holy life has been lived, what had to be done has been done, there is no more coming to any state of being.”

## *Direct Knowledge, Full Understanding, and Realization*

Direct knowledge (*abhijñā*, *abhiññā*), full understanding (P. *pariññā*), and realization (*sākshāt-kriyā*, *sacchi-kiriyā*) are terms that are often found together but have slightly different meanings. Understanding their specific meanings and limits fine-tunes our understanding of the path to liberation.

*Direct knowledge* is insight wisdom that knows the specific or unique characteristics of an object as well as its general or common characteristics. Specific characteristics are what distinguish one object from another. For example, the specific characteristics of a bird are its attributes that enable us to distinguish it from a table. But both a bird and a table also share some common characteristics: they are impermanent, unsatisfactory, and not-self. Direct knowledge is possessed by both learners—stream-enterers, once-returners, and nonreturners—and arhats.

Direct knowledge leads to understanding, and understanding is enhanced along the path until it culminates in the full understanding of an arhat. What is to be fully understood? In his first teaching, the Buddha talked about how to engage in each of the four truths. True *duḥkha* is to be fully understood, true origin is to be abandoned, true cessation is to be realized, and true path is to be cultivated. The object that we want to fully understand is true *duḥkha*, which is in essence the five aggregates. The process of cultivating understanding begins as ordinary beings, progresses during the stages of stream-enterer, once-returner, and nonreturner, and culminates in full understanding at arhatship.

*Understanding* implies having extensive knowledge, but knowledge does not mean simply knowing terms and concepts. It is gained by investigation, contemplation, and gradually building up an expansive and deep understanding, specifically of conditioned phenomena such as the five aggregates. The five aggregates must be fully understood to attain liberation; a partial understanding will not suffice.

*Realize* is to see “with your own eyes” or to witness. While understanding and knowledge are developed gradually in the course of practicing the path, realization is seeing in a markedly different way than before. When knowledge and understanding of the five aggregates reach completion, the clear realization of *nirvāṇa* occurs and the practitioner sees

what had not been previously seen—the unconditioned—and enters a totally new “world” that is free of phenomena conditioned by ignorance and craving. Here nirvāṇa is the object of realization. By fully understanding the nature of the five aggregates, practitioners can see nirvāṇa, which is beyond the five aggregates. The realization of nirvāṇa does not occur without causes such as the knowledge and understanding gained previously as well as practice and meditation. Like full understanding, complete realization is the province only of arhats. With stream-entry the realization of nirvāṇa is partial. Stream-enterers must continue to sharpen their insight to see the impermanent, unsatisfactory, and selfless nature of conditioned phenomena more clearly. By developing their faculties, nirvāṇa appears more clearly to their mind. The quality of that realization increases as they progress to the levels of once-returner and nonreturner, and it culminates with complete realization of nirvāṇa at arhatship.

The *Path of Purification* says that at each point of clear realization at the four stages, the four ways of engaging with the four truths occur whereby meditators fully understand duḥkha, abandon its origin, realize true cessation, and cultivate the true path. At the lower levels, these four ways of engaging occur to some extent and are completed at the time of becoming an arhat.

Insight knowledge knows the three characteristics and can arise without having previously attained dhyāna. None of the ārya paths or fruits are the result of concentration alone; they are the outcome of insight and the cultivation of wisdom. One who follows the vehicle of insight can begin meditation to attain insight even without attaining serenity, by meditating with mindfulness on mental and physical phenomena, such as done in the four establishments of mindfulness. After cultivating insight knowledge over time, path knowledge—the knowledge of nirvāṇa—arises with the clear realization of nirvāṇa. When nirvāṇa is the object of the meditator’s mind, mental factors such as equanimity and love, which relate to sentient beings, are not manifest. Only nirvāṇa is perceived.

### *The Four Pairs of Āryas*

The four types of āryas are stream enterers, once-returners, nonreturners, and arhats. In relation to each, there are two phases—one in which the person is practicing to attain the corresponding fruit, which they are certain to attain in that life, and a second phase in which they have attained it. The Pāli commentaries call these two phases the “path” (*mārga*, *magga*) and the “fruition” (*phala*). In the Sanskrit tradition, they are called “approachers” and “abiders.” The Buddha speaks highly of these holy beings (AN 8.59):

These eight persons are worthy of gifts, worthy of hospitality, worthy of offerings, worthy of reverential salutations, the unsurpassed field of merit for the world. What eight? The stream-enterer, the one practicing for the realization of the fruit of stream-enterer; the once-returner, the one practicing for the realization of the fruit of once-returner; the nonreturner, the one practicing for the realization of the fruit of nonreturner; the arahant, the one practicing for arahantship.

These eight āryas are differentiated based on the strength of their faculties (faith, effort, mindfulness, concentration, and wisdom), the defilements they have eradicated, and the number and type of rebirths remaining before they attain arhatship. When asked if there were monks and nuns who had attained arhatship, the Buddha responded that there were not just one hundred or five hundred, but many more who in this life entered upon and dwelt in the liberation of mind, liberation by wisdom that is unpolluted.<sup>52</sup> In general, liberation of mind (P. *cetovimutti*) is the result of serenity, and liberation by wisdom (P. *paññāvimutti*) refers to wisdom and is the result of insight. When the two are conjoined and described as unpolluted, they are the result of the eradication of pollutants by an arhat’s supramundane path.<sup>53</sup>

All of us begin as uninstructed ordinary beings. Then we encounter the Dharma and listen to teachings, undertake ethical conduct, begin meditating, and gradually develop wisdom. As we do so, we become a virtuous ordinary person (P. *kalyāṇaputhujjana*) who aspires for stream-entry. Four factors are important to actualize this aspiration and generate

extensive, vast, profound, unequalled, great, abundant, quick, buoyant, joyous, swift, sharp, and penetrative wisdom:

1. *Associating with superior persons* is to be near a qualified teacher and Dharma friends who are intent on liberation and will spur us on to study and practice.
2. *Hearing the true Dharma* is essential before embarking on the practice of the path. We must know what the path is, what potential detours and roadblocks there are, how to work around them, and so on.
3. *Appropriate and wise attention* enables us to focus on what is important in a way that helps us to see the three characteristics.
4. *Practicing in accord with the Dharma* indicates that only by integrating the Dharma with our lives and our minds will realizations come about.

Practitioners enter the path to **stream-enterer** when, having diligently practiced insight, their wisdom faculty becomes strong enough to break through mundane reality. Their meditation on the three characteristics—especially again and again seeing that there is no findable self—leads to a radical elimination of the notion of self, to the point where they cannot hold any mistaken view of self at all. Whereas prior to this they have seen with insight the aggregates are not mine, not I, and not my self, at the time of breakthrough any idea of a substantial self is forever uprooted. Their wisdom now reaches beyond insight to seeing (vision, P. *dassana*) nirvāṇa as well as realizing the four truths. Their minds go beyond perceiving conditioned phenomena and they briefly experience the unconditioned, the deathless state, nirvāṇa. Simultaneous with this clear realization of the unconditioned, they eradicate the first three fetters and their seeds, thereby becoming stream-enterers.

The first three fetters are the view of a personal identity, deluded doubt, and the view of bad rules and practices. The *view of a personal identity* grasps at a self that can be identified with the five aggregates.<sup>54</sup> Since a stream-enterer has directly seen the truth of the Dharma, he no longer harbors *deluded doubt* concerning it. Having seen the truth, a stream-enterer

knows that liberation is possible only by following the three higher trainings and no longer possesses the *view of bad rules and practices*.

According to the Abhidharma concept of the “cognitive process,” the stream-enterer’s momentary breakthrough to nirvāṇa is followed by a few mind-moments that also experience nirvāṇa. This is the fruition; it enjoys the results of the path, experiencing the peace of nirvāṇa right after those three fetters have been eradicated. For example, the path is like a person who is shackled breaking free from the chains, and the fruition resembles the freedom he feels just afterward. Stream-enterers are so called because they have entered the stream of the Dharma, the stream of the supramundane eightfold path. They have attained the clear realization of the Dharma (P. *dharmābhisamaya*) and the vision of the Dharma (P. *dharmacakkhupaṭilābha*). This clear realization is called “the arising of the Eye of Dharma” because they see the Dharma as the truth of the Buddha’s teaching.

Because of this realization, a stream-enterer will never do any of the five heinous actions: killing his mother, killing his father, killing an arhat, causing a schism in the saṅgha, or maliciously drawing blood from a buddha. Stream-enterers observe ethical conduct well: Lay stream-enterers keep the five precepts and monastic stream-enterers keep monastic precepts. While they may still commit transgressions such as harsh speech, they never conceal their transgressions and confess and make amends as soon as possible.

Stream-enterers have four defining characteristics: unshakable confidence in the Buddha, the Dharma, and the Saṅgha, and firm commitment to observe at least the five precepts. Because they have seen nirvāṇa directly, all doubt about the path, the teacher, and those who have experienced the truth has been removed. Their confidence and faith in the Three Jewels are immoveable and arise as a result of their direct experience of the Dharma. Their confidence in the law of karma and its effects is also firm, and thus they are committed to keep whatever level of precepts they have taken. Stream-enterers who are householders may marry and be attached to their families, and they may enjoy praise, compete in business deals, and become angry when criticized. Nevertheless their afflictions are weaker than those of ordinary people who are not āryas.

The Buddha says that monastic āryas are far better off than wheel-turning monarchs who have great power in this life and a luxurious life as devas in the next. Even though monastic āryas maintain themselves with lumps of alms food and wear rag-robles, they are free from rebirth in unfortunate states and possess the four defining characteristics mentioned above. Sovereignty over the four continents—one of the powers of a wheel-turning monarch—is worthless in comparison to obtaining those four qualities.

The wisdom eye of a stream-enterer has been opened, and she is irreversibly headed for liberation. Having had direct insight into reality, she will never regress on the path and will never lose her understanding of the Dharma even when she dies; the Dharma is now part of the fabric of her being. She will be reborn as a human being or a deva a maximum of seven times before attaining nirvāṇa and can no longer be born in the unfortunate realms or as a demi-god. While this first direct realization of the unconditioned is not sufficient to eradicate all defilements and must be enhanced through cultivating the seven awakening factors, a stream-enterer has made an irrevocable shift. To illustrate this, the Buddha once asked monastics to compare the little bit of soil under his fingernail with all the soil on the Earth. Similarly, he said, the duḥkha that remains for those who have gained the Eye of Dharma is very small compared with the former mass of duḥkha that has been destroyed.

After a path and its fruits have been attained, the yogī engages in subsequent periods of meditation called “fruition attainment” (P. *phala-samāpatti*) during which nirvāṇa is again perceived and experienced, but the understanding is not yet deep enough to attain the next path. For example, after attaining both the path and fruition of stream-enterer, a person may again meditate on nirvāṇa and reexperience the fruit of stream-enterer without again having to attain the path of a stream-enterer. Nevertheless, her understanding may not yet be deep enough to progress to the path of a once-returner.

Some stream-enterers may attain arhatship in that very life, as did Śāriputra, Maudgalyāyana, Ānanda, and many others. Otherwise, they will be reborn as humans or devas in saṃsāra, but never in unfortunate realms. Stream-enterers with sharp faculties will take only one more rebirth, those

of middle faculties will take two to six rebirths, and those of dull faculties will take at most seven more rebirths before attaining final nirvāṇa.<sup>55</sup>

Someone who has attained stream-entry in this life may not want to stop there and may seek to become a **once-returner**. Accordingly, she continues to practice, enhancing her samādhi and insight. When her faculties mature to a certain point and her seeing of nirvāṇa deepens, she attains the path and fruit of once-returner and then comes back to normal consciousness as a once-returner. At this point her sensual desire and malice have been substantially reduced, although not totally eliminated. The three poisons of attachment, anger, and confusion have also been reduced.

A once-returner will be reborn in the desire realm at most only one more time. The Pāli commentaries say there are several types of once-returner. In one case, the person is a human being who becomes a once-returner. He takes rebirth as a deva and attains final nirvāṇa as a deva. A second case is someone who becomes a once-returner as a human, is reborn in the human realm, and attains nirvāṇa in that rebirth as human. A third possibility is a deva who becomes a once-returner, is reborn as a human, and attains nirvāṇa as a human being. In a fourth scenario, a deva becomes a once-returner, is reborn again as deva, and attains nirvāṇa in the deva realm. In a fifth case, a human being becomes a once-returner, is reborn as a deva, is reborn again as a human, and attains nirvāṇa in the human realm. As we can see, there are several permutations. Someone with ripe faculties can actualize stream-enterer and once-returner in rapid succession in the same human life.

A once-returner with sharp faculties and good supporting conditions then aspires to become a **nonreturner** and practices intensely for this. Having deepened his samādhi to the point of mastering one of the four dhyānas or one of the first three formless absorptions, he now turns his mind to examine the state of samādhi itself and sees that it is made up of various factors, all of which can be included in the five aggregates (or four aggregates if it is a formless absorption). With insight wisdom, he sees that all these factors, however sublime, are still impermanent and in the nature of duḥkha. They are substanceless and selfless; they cannot be held on to or identified as self. The sūtras themselves do not specify whether he must emerge from the meditative absorption in order to engage in the above

examination. Seeing the meditative absorptions as being marked with the three characteristics is important to eradicate the desire for rebirth in these realms. No matter how sublime these states may be, holding even the slightest ignorant desire to remain in them inhibits the attainment of liberation.

Extending the insight of the three characteristics from the meditative absorption to all conditioned phenomena, he sees all of them as impermanent, unsatisfactory, and not-self. When his faculties reach a particular level of maturity, his mind goes beyond conditioned things and touches the unconditioned, nirvāṇa. Those with very ripe faculties who can relinquish all attachments can attain arhatship then and there, whereas those whose faculties are not as sharp cannot yet let go of all attachments and thus become nonreturners.

While on the path of a nonreturner, a person completely eradicates sensual desire and malice. When she is successful, she experiences the fruit of nonreturner and is never again born as a human or a desire-realm god. If she does not attain nirvāṇa in that life, she may be reborn in a pure abode—one of five special levels of the fourth meditative stabilization where only nonreturners take birth.<sup>56</sup> A nonreturner born there is born spontaneously, without conception or gestation in the womb, and will attain final nirvāṇa in that pure abode. Although the pure abodes are connected with the fourth dhyāna, nonreturners who have not attained the fourth dhyāna may still be born there.

Some cases are recorded in the sūtras of people who are ordinary beings with no attainment. They meet the Buddha, hear his discourses, and due to the ripeness of their faculties developed in previous lives, they seem to go directly to nonreturner. The commentary says they pass through stream-entry and once-returner in brief instants, thus becoming nonreturners quickly. While we would all like to think that we have such sharp faculties and will have quick attainments, we should note that such cases are due to someone having practiced very diligently in previous lives. Such occurrences are rare nowadays.

If a nonreturner wishes to attain arhatship in this life, she again cultivates insight, progresses through the stages of insight realizations, and gains a clear realization of nirvāṇa once again. At this point, she attains the

path approaching arhatship and eradicates the five higher fetters: desire for existence in the form realm; desire for existence in the formless realm; the conceit of “I am,” which is a subtle conceit of being an existing I; restlessness, which is present in any mind that is not liberated; and ignorance.

Having eliminated these five fetters, she abides in the fruit of arhatship. She is totally free from saṃsāra and lives in the experience of nirvāṇa. This is called nirvāṇa with remainder, because the polluted physical and mental aggregates remain. When she passes away from that life, she attains the final goal, nirvāṇa without remainder, and has actualized the end of the path.

Both monastics and lay followers can practice the path and attain the fruit of stream-enterers and once-returners. Some of those lay followers continue to live at home in a couple relationship. The Buddha speaks of them as (MN 73:12) “lay followers...clothed in white, enjoying sensual pleasures, who carry out my instruction, respond to my advice, have gone beyond doubt, become free from perplexity, have gained intrepidity, and become independent of others in the Teacher’s dispensation.”

Although the sūtras do not specify this, it seems that yogīs practicing to become nonreturners would be celibate. To become nonreturners they must overcome sensual desire, and for this celibacy is necessary. Lay followers who attain the fruit of nonreturner can still live at home, but they would abide in celibacy because their sensual desire has been eliminated. After they pass away, these nonreturners may then be born in a pure abode where they attain arhatship.

The scriptures record some instances of lay followers attaining arhatship, but they are either just about to die or they ordain as monastics very soon after becoming arhats. Because arhats have severed all craving, they have no interest in a householder’s lifestyle.

THE FOUR ĀRYAS

DISCIPLE	FETTERS JUST ABANDONED	REMAINING REBIRTHS	WHO CAN ATTAIN THIS
Stream-enterer	View of a personal identity, deluded doubt, view of bad rules and practices	Seven at most; all will be either as a human or a deva	Someone who has first realization of nirvāṇa, unshakable faith in the Three Jewels, firm commitment to observe at least the five precepts; lay followers (who may or may not be celibate) and monastics
Once-returner	None, but sensual desire and malice are reduced, as are attachment, anger, and confusion	One more birth in the desire realm	Lay followers (who may or may not be celibate) or monastics
Nonreturner	Sensual desire and malice	No more birth in the desire realm, born in the form realm and attain arhatship there	Monastics or lay followers who are celibate
Arhat	Desire for existence in the form realm, desire for existence in the formless realm, conceit, restlessness, ignorance	None—while alive, they abide in nirvāṇa with remainder; after they pass away, they attain nirvāṇa without remainder	Male and female monastics; some lay followers have attained arhatship but they either were on the brink of death or became monastics shortly after becoming an arhat

The Pāli commentaries say that it is possible for someone to become a stream-enterer, once-returner, nonreturner, and arhat without having attained dhyāna. Dhyāna meditation is said to moisten and relax the mind; thus these practitioners are said to become “dry-insight” arhats.<sup>57</sup>

There are several ways in which arhats are distinguished from ordinary beings. Contemplating these inspires our effort to practice because we see

that we too can attain the same results. Speaking of an arhat, the Buddha says (MN 140:28):

Formerly, when he was ignorant, he experienced covetousness, attachment, and sensual desire...he experienced anger, malice, and hatred...he experienced ignorance and confusion. Now he has abandoned them, cut them off at the root, made them like a palm stump, done away with them so that they are no longer subject to future arising. Therefore a bhikkhu possessing (this peace) possesses the supreme foundation of peace, for this is the supreme noble peace, namely, the pacification of sensual desire, hatred, and confusion.

Arhats do not worry about whether they will lose their temper or become depressed when they encounter hardship. They are not apprehensive about not getting what they want, nor do they succumb to the jealousy of others. They do not handle difficulties by drinking and drugging, or by shopping and gambling. They still encounter people who insult them, mock them, and pressure them to act in destructive ways, but because their minds are free from defilements, they do not fall prey to these influences and maintain their independence.

There are different types of arhats. As noted above, some have not attained dhyāna, while others have attained the dhyānas and have developed the five supernormal powers, which are considered mundane knowledges that depend on samādhi. Samādhi makes the mind powerful, malleable, and agile, so that when meditators generate the intention to develop supernormal powers, such as multiplying their body, they will be able to successfully develop them. Meditators who have attained the dhyānas can also use this powerful mind of samādhi to gain the divine ear, know others' minds, recollect previous lives, or develop the divine eye that knows how other sentient beings die and are reborn according to their karma. The Buddha followed this path of samādhi, developing these supernormal powers before attaining arhatship.

Someone with samādhi at the levels of the dhyānas may aspire (MN 6:19), “May I, by realizing for myself with direct knowledge, here and now enter upon and abide in the liberation of mind, liberation by wisdom that is unpolluted with the destruction of the pollutants.” This refers to a mental state that is a liberation of mind just like the dhyānas and formless absorptions, but it differs in that it is also a liberation by wisdom. This wisdom destroys all pollutants and thus brings ultimate liberation. Such a person becomes an arhat and is never again born in cyclic existence.

Having eliminated all defilements, arhats are incapable of doing nine actions (AN 9:7): killing, stealing, engaging in sexual activities, deliberately lying, storing up or hoarding things to use later, and making bad decisions because of sensual desire, anger, confusion, or fear. In addition, arhats’ minds cannot be moved by seeing either the most enticing or the most horrific objects of the five senses or of the mental consciousness. Their minds remain steady, peaceful, and calm, free from fear, personal distress, clinging, or repulsion. Knowing all these to be impermanent, they contemplate their disappearance and are unperturbed.

In addition, arhats have ten powers that prove they have destroyed all pollutants: (1) they have seen all things as they really are with correct wisdom as impermanent and thus do not crave them; (2) they have seen all sensual pleasures as they really are with correct wisdom as similar to a pit of burning charcoal and thus are not enticed by them; (3) their minds are inclined toward seclusion, delight in renunciation, and disinterest in things that are a basis for pollutants; and (4–10) their four establishments of mindfulness, four right strivings, four bases for spiritual power, five spiritual faculties, five spiritual powers, seven awakening factors, and eightfold path have been well developed.

## REFLECTION

---

1. In your practice, how can you increase the four factors to actualize your aspiration for liberation and gain great wisdom by (1) associating with a qualified teacher and Dharma friends, (2) hearing true Dharma teachings, (3) cultivating appropriate and wise attention, and (4) practicing in accord with the Dharma?

2. Review the four pairs of āryas: the paths and fruits of stream-enterer, once-returner, nonreturner, and arhat. What fetters have they eliminated? How many future lives in saṃsāra will they have? What are their special features?
- 

### *Those Who Have Work to Do with Diligence and Those Who Do Not*

Usually the Buddha talks about four types of disciples—stream-enterers, and so forth—based on their current level of development on the path. However, in the *Kīṭāgiri Sutta* (MN 70), the Buddha speaks of seven kinds of disciples, subsuming them into two main categories: those who have completed the path and have no more work to do with diligence, and those who have work to do on the path with diligence. The first group, *those who have no more work to do with diligence*, are arhats, which are of two types: those liberated in both ways (P. *ubhatobhāgavimutta*) and those liberated by wisdom (P. *paññāvimutta*). Arhats are bhikkhus (MN 70:12):

with pollutants destroyed, who have lived the holy life, done what had to be done, laid down the burden, reached the true goal, destroyed the fetters of existence, and are completely liberated through final knowledge.

Arhats have destroyed the pollutants of sensual desire, attachment to existence in saṃsāra, and ignorance. They have lived the holy life (*brahmacarya*) as monastics perfected in ethical conduct and have attained the ārya path. Having laid down the burden of the defilements, when they pass into nirvāṇa without remainder, they also lay down the burden of the polluted body. They have reached the true goal of the path—liberation by destroying all fetters that could lead to continued existence in saṃsāra. Having attained the final knowledge of the four truths and realized nirvāṇa directly and fully, they have attained the liberation that was their spiritual goal. Having done the “work” of practicing the path and attaining the goal

with diligence, they are not capable of being negligent. Arhats are called *asekhas*—those who require no-more-learning or training on the path.

*Arhats liberated in both ways* are liberated from the physical body because of having gained the formless absorptions; they are also liberated from the mind-body (*nāma-kāya*)—the four unliberated mental aggregates—by the path of arhatship. The Buddha lauds them as the most excellent type of arhat because their faculties of wisdom and concentration are both strong. Their wisdom has destroyed the pollutants, and their concentration dwells in the formless absorptions just prior to attaining arhatship, freeing them from the limitations of both desire-realm and form-realm consciousnesses. Because they have attained the fourth dhyāna, which is the basis for developing the superknowledges, most of these arhats have also cultivated supernormal powers, the divine ear, knowledge of others' minds, recollection of past lives, and the divine eye prior to having attained the sixth superknowledge—knowledge of the destruction of the pollutants.

There are different degrees of arhats liberated in both ways. The lowest degree has attained arhatship based on the meditative absorption of infinite space, the first formless absorption. Others have attained arhatship depending on the absorptions of infinite consciousness, nothingness, and neither-discrimination-nor-nondiscrimination (the three remaining formless absorptions).

The most excellent is the one who has gone beyond the four dhyānas and the four formless absorptions to attain the cessation of discrimination and feeling (*samjñā-vedayita-nirodha*, *saññā-vedayita-nirodha*)—also known as the *absorption of cessation (nirodha-samāpatti)*<sup>58</sup>—which is an extremely refined state that only nonreturners and arhats can attain. Proficient in all four dhyānas and four formless absorptions prior to attaining liberation, these meditators can go up and down through various meditative absorptions whenever they want and dwell in them for as long as they wish. They know with insight wisdom—which is the special cause for the cessation of discrimination and feeling—that all these meditative absorptions do not go beyond being impermanent, duḥkha, and not-self. Beginning with the first dhyāna, they enter into that meditative absorption, master it, and after emerging from it, contemplate and know with the eye of insight that it is in the nature of the three characteristics. After meditating in

this way up to neither-discrimination-nor-nondiscrimination, they go back to the absorption in nothingness, dwell in it for some time, emerge from it and contemplate it as impermanent, unsatisfactory, and selfless. They then set a determination to go into cessation of discrimination and feeling and to remain in that state for a certain period of time. After that they enter neither-discrimination-nor-nondiscrimination for a few moments and then their discrimination and feeling ceases and they are in the cessation of discrimination and feeling.

*Arhats liberated by wisdom* destroy their pollutants by seeing with wisdom, although they do not attain the formless absorptions. Although their samādhi is not as strong as the arhats liberated in both ways, the Buddha does not urge these arhats to attain those absorptions, because they have already attained liberation.

In short, although all arhats have destroyed their pollutants by wisdom, they are dissimilar in other respects. One of these is the level of samādhi through which they attain liberation. Those liberated by wisdom could have attained any of the four dhyānas or they could have attained only access concentration and become “dry-insight arhats,” their minds not softened by the moisture of dhyāna.<sup>59</sup>

In contemporary Theravāda circles, some meditation masters emphasize attaining dhyāna first, then developing insight. Others teach a system of meditation that focuses on insight and also increases concentration, but not to the level of dhyāna. This is because the investigation and analysis necessary for insight meditation is not conducive for the depth of calm and stability necessary to attain dhyāna. For example, the four establishments of mindfulness do not highlight the attainment of dhyāna, although some of the methods in it can be used to do so. Its emphasis is the cultivation of insight wisdom, which does not require dhyāna.

Disciples in the second group—*those who still have work to do with diligence*—have reached at least the path to stream-enterer. They are *sekhas*—trainees or learners—because they are still learning and training in order to gain realizations. When they reside in a conducive environment, associate with wise Dharma friends, and balance the five faculties (faith, effort, mindfulness, concentration, and wisdom), they will attain the final goal of arhatship. These disciples are of five types—body-witnesses (P.

*kāyasakkhi*), ones attained to view (P. *ditṭhippatta*), ones resolved through faith (P. *saddhāvimutta*), Dharma followers (P. *dhammānusāri*), and faith followers (P. *saddhānusāri*). They are distinguished principally by their dominant faculty. The first three have reached at least the fruit of stream-enterer.

*Body-witnesses* possess some or all of the formless absorptions, and some degree of the pollutants have been removed by seeing with wisdom. When these ārya disciples gain wisdom strong enough to destroy all pollutants, they become arhats liberated in both ways. As a general group of āryas, they are more admirable because their faculties of both wisdom and concentration are strong. Among body-witnesses, there are those who have attained the fruit of stream-enterer, the path to once-returner, the fruit of once-returner, the path to nonreturner, the fruit of nonreturner, and some are on the path to arhatship. The body-witnesses proceed to arhatship by cultivating insight wisdom in relation to the formless absorptions.

*Ones attained to view* have destroyed some degree of pollutants by seeing with wisdom. They have not attained the formless absorptions. They have reviewed, investigated, and analyzed the Buddha's teachings with wisdom and have understood the four truths. The principal difference between the ones attained to view and the arhats liberated by wisdom is that the former have eliminated only a portion of their pollutants, while the latter have removed all of them. It is not guaranteed, however, that when the ones attained to view attain liberation they will become arhats liberated by wisdom. It could be that they make effort and gain some or all of the formless absorptions between now and then, and thus become arhats liberated in both ways. Among ones attained to view are the same individuals as above, ranging from ones who have attained the fruit of stream-enterer to ones on the path to arhat.

*Ones resolved through faith* (or ones liberated by faith) have not attained the formless absorptions although some of their pollutants have been destroyed by seeing with wisdom. In this way they resemble the ones attained to view. However, wisdom is the dominant faculty for the ones attained to view and they emphasize investigation and analysis of the teachings, whereas faith is the dominant faculty for the ones resolved through faith and they are motivated to practice because their faith is

“planted, rooted, and established in the Tathāgata.” Their strong devotion and love for the Buddha spurs them on the path. They may become arhats liberated by wisdom, or if they make effort to gain the formless absorptions, they may become arhats liberated in both ways. The ones resolved through faith include the same six types of individuals as above.

The last two types of the ārya disciples are both on the path leading to stream-enterer.<sup>60</sup> *Dharma followers* have not gained the formless absorptions and their pollutants have not yet been destroyed by seeing with wisdom. But due to having learned, thought about, and meditated on the Buddha’s teachings, they accept them, are eager to practice, and have cultivated all five faculties. When they attain the fruit of stream-enterer, Dharma followers will become ones attained to view.

*Faith followers* also lack the formless absorptions, and their pollutants have not yet been destroyed by wisdom. However, they have sufficient faith, devotion, and love for the Buddha, which motivates them to practice, and they have cultivated all five faculties. When they attain the fruit of stream-enterer, faith followers will become ones resolved through faith.

The main difference between the Dharma followers and faith followers is the faculty to which they are inclined. Both have all five faculties, which include faith and wisdom. To be on the path to stream-entry, both must have heard teachings on the three characteristics and so forth, and have cultivated insight and wisdom, and both must have faith in the Buddha.

Both Dharma followers and faith followers are incapable of creating karma that would cause them to be born in an unfortunate rebirth, and both are guaranteed to attain the fruit of stream-enterer before they pass away. When their insight wisdom reaches the point where the clear realization of the unconditioned occurs, they have direct knowledge of the four truths and become stream-enterers. Faith followers and Dharma followers accept the teaching due to either faith or rough investigation, whereas those attained to view and those resolved through faith are stream-enterers who know and see the Dhamma directly through their own experience.

The following chart summarizes the key points regarding the seven types of disciples as presented in the *Kīṭāgiri Sutta*.

---

## REFLECTION

1. Review the seven types of disciples and their relationships to one another (see the chart on the facing page).
  2. What are the benefits of becoming an arhat liberated in both ways?
  3. Why would a practitioner wish to become a dry-insight arhat?
- 

## SEVEN TYPES OF DISCIPLES

TYPE OF DISCIPLE	LEVEL ON PATH	FORMLESS ABSORPTIONS	POLLUTANTS DESTROYED BY WISDOM	DOMINANT FACULTY	SPECIAL FEATURE	WORK WITH DILIGENCE
Ones liberated in both ways	Arhat	Yes	All	Wisdom and concentration, maybe faith	Liberated from physical body and mind-body	No
Ones liberated by wisdom	Arhat	No	All	Wisdom	May have any of the four dhyānas or be dry-insight arhats	No
Body-witnesses	Fruit of stream-enterer to path to arhat	Yes	Some	Wisdom and concentration, maybe faith	Will become arhats liberated in both ways	Yes
Ones attained to view	Fruit of stream-enterer to path to arhat	No	Some	Wisdom	Have investigated and analyzed the Buddha's teachings with wisdom	Yes
Ones resolved through faith	Fruit of stream-enterer to path to arhat	No	Some	Faith	Faith in the Buddha is planted, rooted, and established	Yes
Dharma followers	Path to stream-enterer	No	None	Wisdom	Have reflective acceptance of the Buddha's teachings, will become ones attained to view	Yes
Faith followers	Path to stream-enterer	No	None	Faith	Have sufficient faith in and love for the Buddha, will become ones resolved through faith	Yes

### *Purification and Knowledge*

An overview of the path that points out the stages of insight knowledge that are cultivated prior to realizing nirvāṇa is a helpful guide to know how our mind will develop and how to access that development as we progress. Although the following section is concise and contains a lot of terminology, it provides a clear way to discern the steps of the path to arhatship. The seven purifications spoken of below form the structure for Buddhaghosa's

pivotal work, the *Path of Purification* (*Visuddhimagga*), which explains them elaborately by relying on the commentarial tradition.<sup>61</sup>

Wisdom is the direct antidote that frees us from *samsāra*. To describe how to cultivate it, Buddhaghosa gives the analogy of a tree—its soil, roots, and trunk. The soil is the object of analysis, and the seven purifications comprise the roots and trunk.

The *soil* in which wisdom will grow is wisdom's field of examination: the five aggregates, twelve sense sources, eighteen elements, twenty-two faculties, four truths, and dependent origination.<sup>62</sup>

Just as *roots* of the tree ground it and make it stable, so too do the first two purifications form the foundation for wisdom: (1) the purification of ethical conduct (P. *sīla-visuddhi*)<sup>63</sup> and (2) the purification of mind (P. *citta-visuddhi*).<sup>64</sup>

Just as from the *trunk* of a tree grow the branches, leaves, flowers, and fruit, so too do many qualities of the *āryas* grow from wisdom, including the next five purifications.<sup>65</sup> (3) purification of view (P. *diṭṭhi-visuddhi*), (4) purification by overcoming doubt (P. *kaṅkhāvitarāṇa-visuddhi*), (5) purification by knowledge and vision of what is the path and what is not the path (P. *maggāmaggañānadassana-visuddhi*), (6) purification by knowledge and vision of the way (P. *paṭipadāñānadassana-visuddhi*), and (7) purification by knowledge and vision (P. *ñānadassana-visuddhi*). The seven purifications are practiced in order, each one depending on the preceding ones. The first six are mundane, the last is supramundane.

1. *The purification of ethical conduct* is the higher training of ethical conduct. There are four factors to accomplish:

- (1) The ethical conduct of restraint by the *prātimokṣa* entails taking and living by the precepts: the eight one-day precepts, five lay precepts, precepts of a novice monastic, precepts of a training nun, and precepts of a fully ordained monastic. These precepts function to prevent us from physical and verbal nonvirtuous actions. To do this, we must work with the mind that motivates these nonvirtues. Taking precepts is not sufficient; we need to use them as guidelines to train our speech and physical actions and do our best to keep them well.

- (2) The ethical conduct of restraining the sense faculties involves practicing mindfulness and introspective awareness so that the mind does not get entangled in having attachment for attractive sense objects and aversion toward unattractive ones.
- (3) The ethical conduct of pure livelihood is to receive the requisites to stay alive in an honest and nonharmful way.
- (4) The ethical conduct of proper use of requisites is for a monastic to use the four requisites—food, clothing, shelter, and medicine—after reflecting on their purpose, shedding attachment to them, and dedicating for the welfare of the donors.

2. *The purification of mind* is the higher training of concentration. This involves subduing the five hindrances by the two types of concentration: access concentration and absorption concentration, which includes the four dhyānas and the four formless absorptions.

Practitioners may cultivate insight in two ways. Some follow the vehicle of serenity and attain access concentration, the dhyānas, or the formless absorptions and then use that meditative absorption as the base for generating insight. Here, the meditator emerges from the absorption, sees the factors of that absorption in terms of the five aggregates, understands their conditions, and then examines them to see that they are marked by the three characteristics. The purification of mind for these people is whatever degree of concentration they have developed from access concentration on up.

Others follow the vehicle of pure insight, do not cultivate concentration specially, but go directly to observing the mental and physical process of their own experience with mindfulness. Here concentration is developed on the ever-changing physical and mental events, producing a level of concentration called “momentary concentration,” which is comparable in strength to access concentration. Momentary concentration is the purification of mind for practitioners who follow the pure insight approach. They have “dry” insight in that it is not moistened by the calm of the dhyānas.

The five following purifications are included in the higher training of wisdom.

3. *The purification of view* begins the process of cultivating wisdom by discerning the characteristics, functions, manifestations, and proximate causes<sup>66</sup> of the five aggregates. Through doing this, meditators discern that what is called a person is a collection of interdependent mental and physical factors. This purifies the wrong view of a monolithic permanent self. This purification is also known as the analytical knowledge of mind and matter.

4. *Purification by overcoming doubt* discerns the conditions of mind and matter. Building on the purification of view, it discerns the conditions for mind and matter in the past, present, and future and eliminates doubts concerning them. By meditating on dependent origination, meditators view the present collection of mental and physical aggregates as dependently arisen, conditioned phenomena. They understand that their body-mind complex did not come into being through the work of an independent Creator, is not a manifestation of a primal or permanent cosmic substance, and did not appear causelessly. This purification is also called “the knowledge of discerning conditions,” because the understanding of conditionality is primary here.

5. *Purification by knowledge and vision of what is the path and what is not the path* is the next step. During this and the purification by knowledge and vision of the way, ten insight knowledges occur, the knowledges of (1) comprehension, (2) arising and passing away (with two phases, [a] initial and [b] mature), (3) dissolution, (4) fearfulness, (5) danger, (6) disenchantment, (7) liberation, (8) contemplation, (9) equanimity toward formations, and (10) conformity.

Knowledge of comprehension (1) and the first phase of the knowledge of rising and passing away (2a) both occur during the purification by knowledge and vision of what is and is not the path. The remaining knowledges occur during the purification by knowledge and vision of the way.

Now that meditators have discerned the mind and matter of the three realms—desire, form, and formless—and their conditions, they prepare to cultivate the knowledge of comprehension by thinking of the three realms in terms of the five aggregates. All matter—be it past, present, or future, internal or external, near or far, coarse or subtle, inferior or superior—is

subsumed in the form aggregate. Similarly, all the feelings in the three realms are consolidated in the feeling aggregate, all discriminations in the discrimination aggregate, all the other diverse mental factors in the miscellaneous factors aggregate, and all consciousnesses in the consciousness aggregate.

- (1) *The knowledge of comprehension.* To cultivate the knowledge of comprehension, meditators apply the three characteristics to the five aggregates. The aggregates are characterized by impermanence in that they disintegrate when they arise and do not keep the same identity in the next moment. They are marked with *duḥkha* in that, being momentary, they do not give any security or constancy. They lack a self because they are without an inner core or identity. Meditators apply the three characteristics to the five aggregates in specific periods of time, first a longer time—for example, the body of this lifetime is impermanent—then in increasingly shorter periods of time—for example, the feelings of this year are unsatisfactory and the discriminations of this month are not a self. Finally they see that in every split second, the body, feeling, discrimination, miscellaneous factors, and consciousness are transient, unsatisfactory, and not-self. They apply this same contemplation to the continuity of the aggregates as well as to individual moments of each aggregate.
- (2a) *Knowledge of arising and passing away (initial phase).* The knowledge of arising and passing away is developed by contemplating that conditioned things arise and pass away. Both their arising and their ceasing depends on the presence or absence of their respective conditions. They contemplate this not in a theoretical or conceptual manner but by observing the very moment in which arising and passing away occur. In each split second everything is arising and passing away, giving way to the next moment that will arise and cease.

The knowledge of arising and passing away happens in two phases. In the first, as the meditation deepens, ten imperfections of insight (P. *vipassanā-upakkilesa*) may arise in the meditators'

minds: (1) an aura of light radiating from their body; (2) joy, (3) pliancy, (4) and bliss in a way not previously experienced; (5) stronger resolution; (6) exertion in practice; (7) more mature knowledge, (8) stable mindfulness, (9) immovable equanimity, and (10) subtle enjoyment, clinging, and attachment to these experiences. This last factor is why they are called “imperfections”: the mind is relating to the first nine in an incorrect way. These “imperfections” indicate that one’s meditation is going well; but difficulties arise if, because of these experiences, meditators assume they have attained a superior stage of insight—a path or fruition of stream-enterer, and so forth—when they haven’t.

Those who lack discernment will mistakenly think that they have attained the supramundane path and fruit. Leaving insight meditation aside, they will instead enjoy these experiences without recognizing their attachment to them. This is clearly poisonous for their progress on the path.

Someone with discernment will see these experiences as natural byproducts of insight and recognize the disadvantages of being attached to them. Reflecting that they too are impermanent, unsatisfactory, and not-self, they relinquish attachment to them and continue with insight meditation.

Purification by knowledge and vision of what is the path and what is not the path is the ability to discern that these ten imperfections, no matter how fascinating they may be, are not the path to liberation and that insight meditation into the three characteristics is the correct path to liberation. This purification is instrumental in keeping meditators on the right track so that they will be able to actualize their spiritual goal.

6. *Purification by knowledge and vision of the way* occurs after having eliminated the ten imperfections as obstacles to practice. Meditators now proceed to generate nine insight knowledges with regard to the three characteristics. Together, these nine insight knowledges constitute the purification by knowledge and vision of the way.

- (2b) *Knowledge of arising and passing away (mature phase)*. Having overcome the ten imperfections of insight, the knowledge of arising and passing away continues to develop, becoming clearer and more stable.
- (3) *Knowledge of dissolution*. Once the knowledge of arising and passing away is strong, meditators focus only on the phase of dissolution, cessation, and vanishing. This brings home the fact of impermanence on a much deeper level because they see the conditioned things of saṃsāra are in a continual process of disintegration. Clearly there is no stability or anything trustworthy in them; they are wholly unsatisfactory, and because they are only ceasing, how can a self exist in them?
- (4) *Knowledge of fearfulness*. Continuing to contemplate that all conditioned things in the past, present, and future are constantly in the process of disintegration, meditators see them as fearful. This fear is not an emotional fear that rejects the world because the world is “bad” or because they have an unhealthy fear of relating to people or to the world. Rather, this is a healthy fear that is concerned about becoming attached to these things and remaining stuck in saṃsāra as a result. Because this fear can sometimes initially manifest in an unbalanced way, a teacher’s help is crucial at this point.
- (5) *Knowledge of danger*. Recognizing all conditioned things are fearful, meditators now know with certainty that conditioned things have the nature of duḥkha and lack any core of a real self. They also know that safety exists only in the unconditioned, which is free from the unpredictability and insecurity of things that are continuously arising and vanishing. This knowledge brings appreciation for nirvāṇa.
- (6) *Knowledge of disenchantment*. Seeing the danger of being attached to and seeking happiness from conditioned things that are unable to provide well-being, meditators becomes disenchanted and disillusioned with them. Their delight in saṃsāric phenomenon—no

matter the realm—ceases. Meditators now clearly see the disadvantages of clinging to existence in the desire, form, or formless realms.

- (7) *Knowledge of desire for liberation.* Now the momentum of turning away from saṃsāra and turning to nirvāṇa increases, and the meditators have a strong motivation to be liberated from and to escape from the world of conditioned existence. This is not a psychologically immature wish to escape from difficulties but a wise motivation to seek liberation by clearly knowing what actually can provide peace.
- (8) *Knowledge of reflective contemplation.* Knowing that liberation from conditioned things requires clearly seeing them as marked by the three characteristics, meditators review and again examine these things in light of their impermanence, unsatisfactory nature, and selflessness. This is an expansive way of applying the three characteristics to all conditioned things.
- (9) *Knowledge of equanimity toward formations.* Seeing that there is nothing in any conditioned thing whatsoever that is suitable to be I or mine, meditators leave aside both attraction and repulsion toward those things and abide in equanimity. This mental state is one of great relief that comes from the cultivation of proper wisdom regarding the five aggregates.
- (10) *Knowledge of conformity.* This knowledge arises in the desire-realm consciousness that precedes the consciousness of the change of lineage that leads to the supramundane path. It is called the “knowledge of conformity” because it conforms to the truth of the previous insight knowledge and of the supramundane path that will follow.

7. *Purification by knowledge and vision* is the only supramundane purification of the seven, according to Buddhaghosa. This purification is knowledge of the four supramundane paths: those of stream-enterer, once-

returner, nonreturner, and arhat. Preceding the breakthrough to the supramundane path are some moments of transition from purification by knowledge and vision of the way as the mind “changes lineage,” in that it goes from being a mundane mind with conditioned phenomena as its objects to a supramundane mind with *nirvāṇa* as its object.

When the meditator is engaged in insight meditation just prior to the arising of absorption of the supramundane path and the purification by knowledge and vision, the *bhavaṅga* consciousness stops and there are a few moments of insight consciousness that focus on either impermanence, *duḥkha*, or not-self. On the perfection of the knowledge of equanimity toward formations and the knowledge of conformity to the truths, “insight leading to emergence” arises. This is the culmination of insight that occurs just before the first moment of the supramundane path. This insight gives way to the supramundane path that emerges from conditioned phenomena by taking *nirvāṇa*, the unconditioned, as its object, and that emerges from mundane consciousness by eliminating a portion of defilements.

This last moment of insight is called the “change of lineage consciousness,” and it is the proximate cause for the supramundane path. It marks the transition from being an ordinary being to being an *ārya*. Although the change of lineage consciousness is like the path in that its object is *nirvāṇa*, it is unlike the path in that it cannot dispel the defilements that obscure seeing the four truths. This transition consciousness precedes each of the four paths. Just before it transitions to the path of stream-entry, it is called “change of lineage.” Before it transitions to the paths of once-returner, nonreturner, and arhat, it is called “cleansing” because it marks the transition to the next higher path knowledge.

The path consciousness<sup>67</sup> performs four functions: (1) fully understanding (P. *pariññā*) *duḥkha*, (2) abandoning (P. *pahāṇa*) the origin of *duḥkha*, (3) realizing (P. *sacchikiriyā*) *nirvāṇa*, and (4) cultivating (P. *bhāvana*) the *āryan* eightfold path. Each path consciousness performs these four functions, and when the corresponding level of defilements has been reduced or eradicated, that path consciousness is followed by a fruition consciousness. After each fruition consciousness, a reviewing knowledge (P. *paccavekkhanañāṇa*) looks back and reflects on the path, fruit, and *nirvāṇa*, and often, but not always, on the defilements that have been

abandoned and those that are yet to be abandoned. There is a tremendous sense of satisfaction, relief, and joy at this time, and meditators continue to practice until they reach the fruit of arhatship. The knowledge of the four supramundane paths has been accomplished and the final goal, nirvāṇa, has been attained.

In the *Relay Chariots Sutta*, Śāriputra asked the bhikkhu Puṇṇa Mantāniputta if the holy life was lived under the Buddha for the sake of the seven purifications, to which Puṇṇa Mantāniputta responded in the negative, explaining that the holy life was lived for the sake of final nirvāṇa without clinging. Here “final nirvāṇa without clinging” refers either to the fruit of arhatship that none of the four types of clinging can grasp or to nirvāṇa, the unconditioned, that does not exist due to conditions. None of the seven purifications themselves are final nirvāṇa without clinging, but final nirvāṇa without clinging cannot be attained without them. Puṇṇa Mantāniputta then gave the analogy of the king going to a faraway city on urgent business by means of a series of seven relay chariots. By means of the first chariot he arrives at the place of the second, by means of the second he arrives at the place of the third, and so on until by means of the seventh chariot he arrives at his final destination. We cannot say that the king arrived at his destination by means of the last chariot or any of the other chariots individually. Each chariot was taken for the sake of reaching the next one but all had the final destination in mind. So too, each of the seven purifications will take us to the subsequent one until we reach our final destination of nirvāṇa. In short, none of the purifications are goals in and of themselves, and no single purification is sufficient to realize final nirvāṇa without clinging. But when the seven are practiced in order, each one building on the previous one, we will arrive at our spiritual destination.

### *Occasions for Attaining Liberation*

Pāli sūtras mention five occasions or “spheres of liberation” (P. *vimuttāyatana*) that can trigger the breakthrough to liberating insight: when hearing the Dharma, teaching the Dharma to others, reciting sūtras and scriptures, reflecting on the Dharma, and meditating.

While doing any of these five activities, a practitioner may have a direct grasp of the teachings, which leads to experiencing delight and joy, which in turn bring pliancy and concentration. Of these, joy, pliancy, and concentration are awakening factors. The description of the seven awakening factors says these are preceded by mindfulness, investigation of phenomena, and effort, which lead to the direct grasp of the teachings. A mind with these awakening factors that is thus concentrated sees things as they really are, and as the Buddha often said, a concentrated mind leads to a realistic vision of things according to the four truths. Such clear insight leads to disenchantment regarding the five aggregates and dispassion, which triggers the process of eliminating ignorance, anger, attachment, and other afflictions. This process culminates in liberation.

Clearly liberation is attained not from just listening to teachings, teaching others, reciting sūtras, and so forth. Rather, these five are occasions for the ripening of previously created causes in the mindstreams of mature practitioners who have cultivated the three higher trainings. The ripening of these causes produces a breakthrough to nirvāṇa.

### *Four Kinds of Persons Who Attain Arhatship*

The Buddha speaks of four kinds of persons who attain arhatship, differentiating them according to the strength of their five faculties and based on their inclination toward serenity or insight (AN 4:169). The path where serenity is prominent is seen as one without intentional exertion, due to the smoothness and tranquility of the dhyānas. The path in which insight is prominent is considered one with intentional exertion because practitioners meditate on topics that lead directly to disenchantment and dispassion.

The first are practitioners who attain nirvāṇa in this life through intentional exertion. They meditate on the unattractiveness of the body, the repulsiveness of food, dissatisfaction with the saṃsāric world, impermanence, and death. These meditations require effort in that they open our eyes to the terrifying reality of saṃsāric existence. The sobering effect they have on the mind leads to disenchantment with saṃsāra and releases their deep attachment to conditioned phenomena. They depend on the five

powers of a trainee—faith, integrity, consideration for others, effort, and wisdom—and because their five faculties are strong, they attain nirvāṇa.

The second are those who attain nirvāṇa with the breakup of the body through intentional exertion. They do the same meditations mentioned above and depend on the same five powers. However, because their five faculties are comparatively weak, they attain nirvāṇa after death, presumably being a nonreturner when they die.

#### FOUR KINDS OF PERSONS

TYPE OF PRACTITIONER	PRACTICE WITH INTENTIONAL EFFORT	SERENITY OR INSIGHT IS PROMINENT	DEPEND ON FIVE POWERS OF TRAINEES	STRENGTH OF FACULTIES	ATTAIN NIRVĀṆA
1	Yes	Insight	Yes	Strong	In this life
2	Yes	Insight	Yes	Weak	After death
3	No	Serenity	Yes	Strong	In this life
4	No	Serenity	Yes	Weak	After death

The third are practitioners who attain nirvāṇa in this very life without intentional exertion. Living secluded from sensual pleasures and from nonvirtuous mental states, they attain the four dhyānas. They depend on the five powers, and because their five faculties are very strong, they attain nirvāṇa in this life.

The fourth are ones who attain nirvāṇa with the breakup of the body without intentional exertion. They too live secluded from sensual pleasures and from nonvirtuous mental states and attain the four dhyānas. They depend on the five powers of a trainee, but their five faculties are weak and they attain nirvāṇa after death.

*Liberation of Mind, Liberation by Wisdom*

In many sūtras we come across the phrase “liberation of mind, liberation by wisdom.” For example, in the *Discourse to Potaliya* the Buddha says (MN 54:24):

Having arrived at that same supreme mindfulness whose purity is due to equanimity, by realizing for himself with direct knowledge, this ariya disciple here and now enters upon and abides in the liberation of mind, liberation by wisdom that are unpolluted with the destruction of the pollutants.

The liberation of mind, liberation by wisdom is the ultimate liberation that comes through the destruction of the pollutants. According to the Pāli commentaries, here “mind” refers to an arhat’s samādhi and “wisdom” to an arhat’s wisdom. When these two liberations are joined together and are unpolluted, they signify the liberation attained with the destruction of pollutants by the supramundane path of an arhat.

The mind is very pure due to the eradication of defilements and very bright due to the light of wisdom. Arhats can live and act in the world without being controlled by the defilements. They make choices and decisions without being sabotaged by the defilements. They no longer crave the attractive objects they encounter; they no longer become upset or angry when things do not happen the way that they wish. They are not troubled by confusion about what is virtuous and to be practiced and what is nonvirtuous and to be abandoned. Having realized the selfless nature of all phenomena, they have cut through the web of proliferations and become a sage at peace (*P. muni santo*).

Ānanda asks the Buddha why some monastics gain liberation of mind and some gain liberation by wisdom (MN 64:16). This is a curious question, because usually arhatship is referred to as liberation of mind, liberation by wisdom, the two not being separated out.

The Buddha replies that the difference is in their faculties. That is, arhats who are inclined toward concentration are said to have liberation of mind because they developed great skill in the various samādhis and attain supernormal powers. Other arhats have greater aptitude for understanding,

analysis, and wisdom, and gain liberation by wisdom. However, they come to the same point. The Buddha's two chief disciples, Śāriputra and Maudgalyāyana, both attained arhatship through cultivating serenity and insight, but Śāriputra is known for his amazing ability in analysis and is said to have attained liberation by wisdom, while Maudgalyāyana was foremost in supernormal powers and is said to have attained liberation of mind.

### *Nirvāṇa and the Arhat*

Nirvāṇa's nature is undifferentiated, endless ultimate reality, the deathless unconditioned that is completely outside the limits of the conditioned world.<sup>68</sup> Nevertheless, according to its basis (the situation of the person who has attained nirvāṇa), it can be distinguished into nirvāṇa with remainder and nirvāṇa without remainder. The Buddha states (Iti 44):

What, monastics, is the nirvāṇa element with remainder? Here a monastic is an arahant, one whose pollutants are destroyed, who has lived the holy life, done what had to be done, laid down the burden, reached his own goal, utterly destroyed the fetters of existence, one completely liberated through final knowledge. However, his five sense powers remain unimpaired, by which he still experiences what is agreeable and disagreeable, still feels pleasure and pain. It is the destruction of sensual desire, hatred, and confusion in him that is called the nirvāṇa element with remainder.

Nirvāṇa without remainder occurs at the time an arhat passes away. The Buddha explains (SN 12:51):

With the breakup of the body, following the exhaustion of life, all that is felt, not being delighted in, will become cool right here; mere bodily remains will be left.

While an arhat is still alive, his nirvāṇa is the nirvāṇa with the remainder of the five polluted aggregates. When someone who will become

an arhat in that life is born, his aggregates were produced under the influence of ignorance and craving and are the polluted aggregates of a being who is not free from saṃsāra. After he attains liberation, he still has the same aggregates as at the time of birth; those aggregates are the “remainder.” He has nirvāṇa with remainder (*sopadhiśeṣa-nirvāṇa*, *sopādisesa-nibbāna*) of the polluted aggregates until he passes away from that life. Because of this, he experiences pleasure and pain, but contemplating these feelings as impermanent, conditioned, and dependently arisen, he does not hold to or delight in them. Thus he does not react to them with attachment, anger, or confusion, nor does he generate more karma that will cause rebirth. Still, he must decide, choose, and act within the limits of his situation.

At the time of death, his nirvāṇa is nirvāṇa without remainder (*anupadhiśeṣa-nirvāṇa*, *anupādisesa-nibbāna*) because the polluted aggregates have been left behind and no new polluted aggregates will be taken up since ignorance and craving have been totally abandoned. The literal meaning of “nirvāṇa” is to go out, as in a fire being extinguished, and this is precisely what happens to feelings at the time of an arhat’s death.<sup>69</sup> With the end of that life, there is no further rebirth, and the person is said to have become “nirvāṇa-ized” in nirvāṇa without remainder. In the commentaries nirvāṇa with remainder is called “the extinguishment of the afflictions” (P. *kilesa-parinibbāna*), and nirvāṇa without remainder is the extinguishment of the aggregates (P. *khandha-parinibbāna*).

Nirvāṇa is the state of extinguishment. Parinirvāṇa does not mean nirvāṇa after death. It is the event of passing away or extinguishment undergone by one who has attained nirvāṇa during his or her lifetime. The question of what happens to an arhat at the time of nirvāṇa without remainder, which is parinirvāṇa, has been the topic of discussion for centuries. Some people may assume that since there are no more polluted aggregates, the conventional person ceases to exist and only blank nothingness remains. However, no sūtra says that that is the case. Instead, nirvāṇa is always said to be a reality (*dharma*), a source (*āyatana*), an element (*dhātu*), and a state (*pada*).

As ordinary beings, we are used to thinking of people in terms of their aggregates and see them as real, substantial beings who are findable in

relation to their aggregates. But what happens when craving and ignorance have ceased and no new aggregates are taken because there is no cause for them? Let's look at what the sūtras say.

Godhika was a bhikkhu who became an arhat just before he died. Together with a group of monks, the Buddha went to the place where Godhika had died. Pointing to a cloud of swirling smoke, the Buddha explained to the monks (SN 4:23):

This is Māra, the Evil One, searching for the consciousness of the clansman Godhika, wondering: “Where now has the consciousness of the clansman Godhika been established?” However, monastics, with consciousness unestablished, the clansman Godhika has attained final nirvāṇa.

The commentary explains that Māra was looking for Godhika's rebirth-consciousness, but since he had passed away having ceased craving, his rebirth-consciousness was unestablished—that is, it lacked a cause for it to arise. After passing away, it is said that an arhat's consciousness is not established anywhere, meaning it has no connection with or attraction to any conditioned mode of existence. The commentary also says that “the cause for the non-establishment of consciousness was precisely the cause for his parinirvāṇa.”

Some passages in the *Suttanipāta* are interesting in this regard. In *Upasīva's Questions (Upasīvamānavapucchā)*, the Buddha says (Sn 5.6):

As a flame blown out by a gust of wind ceases and cannot be reached by conception, in the same way the Sage (*muni*), released from name and body, ceases and cannot be reached by conception...

Of him who has gone to cessation there is no measure, there is nothing in terms of which they could speak about him. When all dhammas have been uprooted, all the ways of speech have also been uprooted.

These passages indicate not only that the experience of nirvāṇa is beyond words and concepts, but also that nirvāṇa itself cannot be adequately explained with words.<sup>70</sup>

At the Buddha's time, people asked many spiritual leaders what happens to a tathāgata after death, and these leaders gave diverse responses. Those who believed in an everlasting self or soul that was separate from the aggregates asserted that a tathāgata ascended to an eternal state or merged with an eternal cosmic substance from which everything arises and into which everything returns. The Materialists, who believed the person was the body, asserted that a tathāgata disappeared into nonexistent oblivion when the body was given up.

The Buddha disagreed with these positions because they were based on the false assumption of a real person. Thus when the wanderer Vacchagotta asked the Buddha whether the Tathāgata is reborn, is not reborn, both, or neither, the Buddha replied that none of the four alternatives applied (MN 72). Had Vacchagotta not clung to the self and thought, "The aggregates of an arhat cease at death because when the pollutants have been destroyed, there is no cause for the reappearance of polluted aggregates in the future," that would not have been a wrong view. However, Vacchagotta was operating on the belief that a substantial being, a substantial tathāgata, was being destroyed at death. Such a substantial tathāgata never existed. In other words, it is like asking, "Does a turtle trim his moustache, not trim it, both trim it and not trim it, or neither trim it or not trim it?" Such a question cannot be answered because there is no moustache on a turtle to start with!

In response to Vacchagotta's confusion, the Buddha asked him: If a fire in front of him were extinguished, would he know that the fire was extinguished? If so, where did the fire go—to the north, south, east, or west? None of those choices apply because there is no fire that has gone anywhere. Similarly, a tathāgata has abandoned the five aggregates by which someone talking about him might describe him. However, the Buddha did not say the Tathāgata was nonexistent; he simply said the Tathāgata was beyond what our ordinary conceptual mind covered with ignorance can understand: "The Tathāgata is deep, immeasurable, hard to fathom like the ocean."

Within contemporary Theravāda, some say that after an arhat dies, there is nothing. There is not a self or soul that is annihilated; the arhat's previous existence with the five aggregates was a process and the process has come to an end. After that, nothing can be pointed to. Others say that nirvāṇa is the unborn reality. The process or the stream of consciousness continues until the passing away of the arhat, after which that stream of consciousness enters into nirvāṇa. There is no continuation in an individual form and no consciousness that continues in nirvāṇa. Nirvāṇa is the unconditioned, eternal reality, and the consciousness merges with that.

Others see both of the above positions as inadequate and say that nirvāṇa cannot be eternal because it is beyond time. Nirvāṇa is the unconditioned, unborn, deathless. It is not nonexistent. It is the timeless, imperishable, stable reality. When someone realizes this reality, the destruction of defilements and release from conditioned existence occurs. Nirvāṇa itself, however, is neither the destruction of defilements nor the release from conditioned existence because both of those are conditioned events that occur in time. These two events are stages in the full actualization of unconditioned nirvāṇa.

### *Tathāgatas and Arhats*

How does the Buddha fit in the four stages of awakening? What are the similarities and differences between a tathāgata and an arhat? This topic is discussed in both the Pāli and Sanskrit traditions. The following is according to the Pāli tradition.

A Buddha is an arhat, as shown in all the praises recited to the Buddha. Arhats, too, are said to have attained full awakening. This shows that the Buddha and arhats have realized the same truths. On the other hand, only a tathāgata is a perfectly awakened buddha. When asked about the difference between a perfectly awakened buddha and a monastic arhat, the Buddha says (SN 22:58):

The Tathāgata, the Arahant, the Perfectly Awakened One is the originator of the path unarisen before, the producer of the path unproduced before, the declarer of the path undeclared

before. He is the knower of the path, the discoverer of the path, the one skilled in the path. And his disciples now dwell following that path and become possessed of it afterward.

This is the distinction, the disparity, the difference between the Tathāgata, the Arahant, the Perfectly Awakened One and a bhikkhu liberated by wisdom.

The Tathāgata is the Teacher who first discovered the path in our world and declared it to all those who were interested in hearing. His disciples, also called “śrāvakas” because they listen to his teachings, follow that path and actualize it in their own continuums.

It appears that the practices done by those who become buddhas are the same as those who become arhats. In describing how all the tathāgatas of the past, present, and future become awakened, Śāriputra says, with the Buddha’s approval (SN: 47:12):

Whatever Arahants, Perfectly Awakened Ones arose in the past [or future or present], all those Blessed Ones first abandon the five hindrances, defilements of the mind that weaken wisdom; and then, with their minds well established in the four establishments of mindfulness, they develop correctly the seven awakening factors, and thereby they awaken to the unsurpassed perfect awakening.

This is the same path the Tathāgata expounds in the Pāli sūtras, through which so many of his disciples attain arhatship. On the other hand, some sūtras point out distinct qualities of a tathāgata that the arhats do not share. For example, the *Greater Discourse on the Lion’s Roar* (MN 12) speaks of the ten powers of a tathāgata, the four kinds of self-confidence, and other qualities that are unique to a tathāgata. In the *Sutta on the Wonderful and Marvelous* (MN 123) Ānanda explains many marvelous and unique qualities about the Tathāgata’s previous lives and his birth and activities in this life that his arhat disciples do not have. So clearly there is a difference in attainment and capability between the two. Therefore there must be a

difference in the path they practice, because unique causes are necessary to produce a unique result.

It is interesting that despite the Buddha obviously possessing qualities that not one of his disciples possessed completely, and despite the fact that the Buddha's activities far outweighed those of his disciples in terms of the benefit they had for sentient beings, in the earliest texts of the Pāli canon no one is recorded as having asked the Buddha how he attained his unique state by practicing the bodhisattva path.<sup>71</sup> It is indeed strange that no one had the aspiration to become exactly like the Teacher, even though he was known as having been a bodhisattva and one that became perfectly awakened. It is only in later centuries that the bodhisattva path was expounded in the Pāli tradition.

In the Pāli canon, we get to know the Buddha as a human being. We see his daily habits, his way of explaining the Dharma according to the dispositions and interests of the various people he encounters. We see him being open and friendly to a host of different people—brahmins and ascetics, the wealthy and the impoverished, the free and those enslaved. We observe how he handles disputes among his followers, how he deals with people who slander him or are contemptuous, how he reacts to those who praise him and shower him with gifts and to those who distort the Dharma he teaches. In the sūtras we see the exceptional inner qualities that manifest in his daily activities, which he imbues with the greatness of a mind at peace and endowed with wisdom and compassion.

The Tathāgata knows duḥkha, has abandoned its origin, has actualized its cessation, and has perfectly cultivated the path. His mind is all-knowing and clearly sees all that is. His speech is completely reliable: as he describes something, that is how it is. As he counsels us to do, he does that as well; he is free from all hypocrisy. With compassion he fearlessly teaches the Dharma to all those who wish to hear it.

## 7 | Fundamental Vehicle Paths and Fruits: The Sanskrit Tradition

**B**ODHICITTA AND THE WISDOM realizing emptiness are like the two wings of a bird that carry us to full awakening. Combining bodhicitta and wisdom gives us inner strength and stable self-confidence. Thinking of Śāntideva, the great scholar-adept, every day I aspire as he did (BCA 10.55):

For as long as space endures,  
and for as long as sentient beings remain,  
until then may I too abide  
to dispel the misery of the world.

When we follow Śāntideva's example and generate this noble determination, we totally dedicate our body, speech, and mind for others. This gives our existence profound meaning. We feel that every minute of our life is purposeful. I don't have this full experience, but I have enthusiasm to practice in order to generate it. Meanwhile, through my daily practice, some inner peace and satisfaction have arisen, so my talk isn't entirely empty words.

### *Realization of the Four Truths*

The four truths of āryas are the principal objects of meditation on the path to arhatship and buddhahood, and realizing their sixteen aspects is essential.<sup>72</sup> The order in which the four truths are presented—duḥkha, its origin, the cessation of duḥkha and its origin, and the path to that cessation

—is done from the perspective of realizing them. Contemplation of the four aspects of each truth is the means to deepen our understanding of that truth. By contemplating duḥkha we understand our present situation—that is, we, our aggregates, and the environment around us are impermanent, unsatisfactory in nature, empty, and selfless. Then we inquire into the origins of this unsatisfactory state and understand that it is produced by causes such as craving, polluted karma, and their root, ignorance. There is no external or permanent creator.

The question then arises, “Is there a possibility to end duḥkha and its causes?” This brings us to contemplate true cessations and to understand that nirvāṇa exists; it is a state of supreme peace that is irreversible. Knowing this, we become eager to know the unmistakable path to attain true cessation and learn of the three higher trainings of ethical conduct, concentration, and wisdom. The wisdoms realizing selflessness and emptiness have the power to definitively destroy the ignorance that is the root of saṃsāra and to bring nirvāṇa.

This is the order in which to contemplate the four truths and their sixteen aspects to gain a comprehensive understanding of them. Contemplation on true duḥkha and true origins leads to a strong feeling of renunciation of cyclic existence and contemplation on true cessations and true paths stimulates a strong wish to attain liberation.

After generating renunciation and the aspiration to attain liberation, the primary meditation to do is the one to realize selflessness. This involves meditation on impermanence and duḥkha as well, for these support and reinforce insight into selflessness. As Dharmakīrti says in the *Commentary on (Dignāga’s) “Compendium of Reliable Cognition,”* “From impermanence arises the understanding of duḥkha, and from duḥkha arises the understanding of selflessness.” Deepening of the understanding of selflessness is reflected primarily in the progression of the five paths, each of which is able to remove subtler layers of obscurations. No matter whether we follow the Śrāvaka, Solitary Realizer, or Bodhisattva (Mahāyāna) Vehicles, we need to gain the wisdom realizing the sixteen aspects of the four truths.

According to how they define ignorance, the four tenet systems have different understandings of the meanings of selflessness and emptiness in

the context of the sixteen aspects of the four truths. Non-Buddhists see that conditioned phenomena are unreliable and untrustworthy and postulate the existence of a permanent, unitary, independent self that is separate from the conditioned psychophysical aggregates. For the Vaibhāṣika and Sautrāntika systems, emptiness is the lack of such a transcendental self as asserted by non-Buddhists, and selflessness is the absence of a self-sufficient substantially-existent self that is different from the aggregates. Realizing these constitutes the wisdom realizing the selflessness of persons.

According to the Yogācāra and Svātantrika systems, the principal meditation object for śrāvakas and solitary realizers who seek arhatship is the selflessness of persons<sup>73</sup>—which they accept as the lack of a self-sufficient substantially-existent person—and for bodhisattvas who seek buddhahood it is the selflessness of phenomena as defined by each of those systems. For these systems the direct realization of its principal meditation object marks the attainment of the path of seeing of that vehicle.

The Prāsaṅgika system has unique assertions concerning both the object of negation in the meditation on emptiness and selflessness and the entry point to the path of seeing. Here the object of negation is the inherent existence of all persons and phenomena; to attain the path of seeing of any of the three vehicles, its practitioners must directly realize the emptiness of inherent existence of persons and phenomena.

Dharmakīrti praised the Buddha as a reliable teacher because he taught the four truths. Since he didn't hold the Prāsaṅgika view, the four truths he praised are the coarse four truths, which do not include the selflessness of phenomena and which assert the selflessness of persons to be the lack of a self-sufficient substantially-existent I. Nāgārjuna, on the other hand, praised the Buddha for his teaching of emptiness that leads to the relinquishing of all views of the inherent existence of both persons and phenomena and the realization of the subtle four truths.

According to Nāgārjuna's view, the view held by the Prāsaṅgikas, direct perception of the coarse four truths occurs prior to the path of seeing of any of the three vehicles. Realization of the subtle four truths occurs at the time of entering the path of seeing. The demarcation of entering the path of seeing of all three vehicles is the direct realization of the emptiness of inherent existence of both persons and phenomena.

To be free from saṃsāra, Prāsaṅgikas say we must realize the four truths perfectly as they are in reality. This means to realize that they are empty of inherent existence, empty of existing from their own side or by their own character. Śrāvakas, solitary realizers, and bodhisattvas all meditate on the emptiness of inherent existence of the four truths. The Buddha says in the *Sūtra on the Miserliness of One in Trance (Dhyāyitamuşṭi Sūtra, CTB 163)*:<sup>74</sup>

Mañjuśrī, he who sees all conditioned things are unborn thoroughly knows duḥkha. He who sees all phenomena as without origin has abandoned the origins of duḥkha. He who sees them as utterly passed beyond sorrow has actualized cessation. He who sees all phenomena as totally unborn has cultivated the path.

### *Three Vehicles: The Paths of Method and Wisdom*

Learning the systematic progression that practitioners of the three vehicles—śrāvakas, solitary realizers, and bodhisattvas—experience as they progress on their respective paths to their spiritual goals enables us to understand how the awakening of each vehicle is attained. The three types of practitioners were spoken of in the early sūtras, but the paths and grounds through which they progress to their respective awakenings were set out later, in the Abhidharma texts that arose in the centuries following the Buddha’s parinirvāṇa. The authors of these early texts developed elaborate systems of classifications of afflictions and defilements, and together with that they laid out paths and grounds that lead to their abandonment. Commentators on the Mahāyāna sūtras later laid out the bodhisattva paths and grounds.

Tibetan scholar-adepts synthesized the material in these Indian treatises, composing a genre of texts called “grounds and paths” (T. *sa lam*). These texts contain definitions of the progressive stages of the path and describe practitioners’ meditation objects, the defining characteristics of their realizations, and the practices they do between meditation sessions.

Although the grounds and paths texts are very technical and solicit many debates, studying them gives us a roadmap for spiritual development. They contain information that will help us to practice correctly, without taking unnecessary detours or becoming distracted by seemingly unusual meditation experiences. Having accurate knowledge derived from descriptions in the sūtras prevents us from having unrealistic expectations that lead to disappointment or wasted time.

Knowledge of the grounds and paths is also useful as a measuring stick that lets us know where we are. This keeps us humble and prevents the conceit thinking we are more advanced than we are. Because it makes us immune to further progress, conceit is a huge obstacle on the path. People who overestimate their attainments may also harm others by mistakenly teaching topics they believe they have experienced in meditation but in fact have not.

People may sometimes have strong or unusual experiences in meditation. Having heard certain terminology, but not really knowing what it means, they think they have attained particular realizations or levels of the path. By knowing the layout of the grounds and paths, we'll be able to distinguish a strong experience we have had once from a stable consciousness that is an actual path. When we have a stable experience, we'll be able to see if it has the other attendant characteristics that demarcate a certain level of the path. For example, we may sometimes have a strong experience of compassion in our meditation. This is excellent and to be cherished. Knowing that it is possible for us to experience such a state of mind is very encouraging. However, this one experience does not mean that we have attained the Mahāyāna path of accumulation and are now a bodhisattva. Entering the Mahāyāna path of accumulation requires not only a continuous feeling of renunciation of cyclic existence but also the altruistic aspiration to attain awakening that spontaneously arises whenever we see sentient beings. These are stable realizations, not brief experiences.

A man once came to me and announced that he had experienced direct insight into emptiness and was convinced he had attained the Mahāyāna path of seeing. I had to inform him that the attainment of this path also entailed other qualities, such as the ability to manifest in a hundred bodies

and to go to one hundred pure lands to make offerings to the buddhas. Unfortunately, he was unable to accomplish these feats.

While the grounds and paths texts are an excellent guide, nothing can replace a close relationship with an experienced spiritual mentor. Having meditative experiences themselves, they are able to question us and guide us wisely. They will offer suggestions to fine-tune our understandings or will bring us back on track if we have come to incorrect conclusions in our meditation.

As mentioned previously, the compassionate Buddha taught three vehicles, according to the inclinations and interests of various sentient beings—the Śrāvaka Vehicle, Solitary Realizer Vehicle, and Bodhisattva Vehicle. Each vehicle leads to its respective awakening—a śrāvaka's awakening, a solitary realizer's awakening, and the full awakening of a buddha. Those who actualize these vehicles differ in terms of their aspirations, the amount of merit they accumulate, the length of time they practice, and the other qualities they develop. According to the Prāsaṅgikas, all of them realize the emptiness of inherent existence, the selflessness of persons, and the selflessness of phenomena. Furthermore, according to most Mahāyāna tenet systems, all beings will eventually follow the Bodhisattva Vehicle and attain the full awakening of buddhahood. Some beings initially enter the Śrāvaka or Solitary Realizer Vehicle and, after becoming an arhat, begin the Bodhisattva Vehicle. Others enter the Bodhisattva Vehicle from the outset.

The śrāvakas (literally, hearers, disciples) are so called because they listen to teachings from the Buddha, practice them, and after attaining their result—the awakening of a śrāvaka—they cause others to hear about their attainment. They are also called śrāvakas because they hear the Buddha's teachings on the path and result of buddhahood and teach it to those who have the Mahāyāna disposition. However, they do not practice this path or actualize its results themselves.

Solitary realizers (*pratyekabuddha*, *paccekabuddha*) are so called because during their last life in saṃsāra they generate realizations on their own without depending on the instructions of a living master and during a time when no buddha is turning the Dharma wheel. Solitary realizers are also called “middling realizers of suchness” because they surpass the

śrāvakas by accumulating merit for a hundred eons, whereas śrāvakas can complete their path in a minimum of three lifetimes. Although they may have compassion, it is not the great compassion of bodhisattvas. Although they have a similitude of the two collections of merit and wisdom, they are not the two collections of bodhisattvas that lead to buddhahood. Bodhisattvas are so called because they have the bodhi mind, the aspiration for full awakening.

Each of the three vehicles has the five paths of accumulation, preparation, seeing, meditation, and no-more-learning.<sup>75</sup> Each of the five paths that comprise one of the three vehicles is called by the name of that vehicle—for example, there is the śrāvaka path of accumulation, the solitary realizers’ path of meditation, the Mahāyāna or bodhisattvas’ path of preparation, and so on. The five paths in each vehicle are differentiated in terms of the power of wisdom. That is, the five paths of each vehicle are distinguished by the power of insight into emptiness and the purification of the mind that it brings.

The three vehicles are differentiated in terms of the method aspect of the path. Śrāvakas’ and solitary realizers’ method practices are supported by renunciation of saṃsāra; bodhisattvas’ method practices are supported by bodhicitta. Practitioners of each vehicle must accumulate different degrees of merit by practicing the method aspect of their vehicle in order to support those increasingly powerful levels of wisdom.

### *Path, Ground, and Clear Realization*

Learning some vocabulary is helpful. A path (*mārga*) is an exalted knower that is conjoined with uncontrived renunciation. Path, ground (*bhūmi*), and clear realization (breakthrough, *abhisamaya*, T. *mngon rtogs*) are generally equivalent.<sup>76</sup> “Path” does not refer to an external walkway or to a doctrinal path. Rather, a path is so called because it is a consciousness that leads us out of saṃsāra and to awakening. A path is called a “ground” because like the earth, the ground is the basis for the growth of good qualities and the basis for release from afflictive obscurations and cognitive obscurations. A clear realization is a consciousness that is a path because just as an external path leads a person to their destination, a clear realization leads a

practitioner to a higher spiritual realization. The term “vehicle,” as in Fundamental Vehicle and Mahāyāna (Universal Vehicle), refers to a consciousness. Just as vehicles bear weight and take us somewhere, these consciousnesses bear the weight of sentient beings’ welfare—either our own or that of all beings—and carry us to arhatship and buddhahood.

According to the Sanskrit tradition, practitioners on all of the five paths of any of the three vehicles have path consciousnesses and clear realizations. However, in the Pāli tradition, a clear realization is a consciousness that clearly observes reality and understands existence as it actually is; it is a path wisdom that directly perceives the truth and so is a supramundane path. In the Pāli tradition, the truth is *nirvāṇa*; in the Nālandā tradition, the truth refers to emptiness, and in particular the emptiness of a mind that is forever free from all defilements. Since those defilements have been eliminated in the sphere of emptiness, *nirvāṇa* is that emptiness.

In the Pāli tradition, a clear realization is a breakthrough experience in the sense that, until that point, our understanding has not been complete, but now the obstacles preventing direct perception of the truth have been pierced and wisdom perceives the truth directly, nonconceptually, intimately. “Clear realization” is used in a technical sense on two occasions. The first is the initial clear realization of the Dharma (P. *dharmabhisamaya*), which is the initial direct seeing of *nirvāṇa*. This clear realization transforms a person from someone on the path into a stream-enterer, an *ārya*. It is equivalent to obtaining a vision of the Dharma (P. *dharmacakkhupatilabha*), to seeing the truth. The second is the full realization of the Dharma, the total eradication of conceit and the other fetters, which establishes one as an arhat. Here “clear realization” is synonymous with penetration, which refers to the four functions of a supramundane path: to understand *duḥkha*, to abandon its origin, to realize its cessation, and to cultivate the path to that cessation. The immediate cause of the clear realization of *nirvāṇa* is insight wisdom, which gives rise to the path wisdom that realizes *nirvāṇa* directly.

Each of the three vehicles has five paths. There are many common features of the five paths in all three vehicles, and there are many differences as well. The five paths of the Śrāvaka and Solitary Realizer Vehicles are similar, whereas the five paths of the Bodhisattva Vehicle have

some features in common with the Fundamental Vehicle paths and some marked differences. For example, bodhisattvas' motivation of bodhicitta and the fruit of the full awakening of buddhahood stand in contrast to śrāvakas' and solitary realizers' motivation of renunciation of saṃsāra and their fruit of arhatship.

### *Approachers and Abiders*

The presentation of the Fundamental Vehicle paths and results in the previous chapter was according to the Pāli tradition. We'll now look at the same topic from the viewpoint of the Sanskrit tradition. In accord with the general presentation of this series, these topics are explained according to the Prāsaṅgika system.<sup>77</sup>

Fundamental Vehicle āryas form four pairs of realized beings—the approacher and abider for stream-enterer, the approacher and abider for once-returner, the approacher and abider for nonreturner, and the approacher and abider for arhat. Each of these four pairs has two phases: the path and the fruit. During the path phase, one is an approacher (*pratipannaka*, *paṭipannā*) and practices to attain the fruit that is certain to be attained in that very life. During the fruit phase, one has succeeded in diminishing or overcoming that stage's corresponding fetters and becomes an abider in the fruit or result (*phalasthita*, *phalaṭṭhā*). These eight āryas may be monastics or lay practitioners. The lower tenet systems, Pāli tradition, and Prāsaṅgika system have slightly different descriptions concerning some details regarding the eight approachers and abiders.

Just as when we wash clothes the grosser dirt comes out first, while the deeper intransigent dirt requires more scrubbing and more soap, so too grosser grades of self-grasping are eliminated first and gradually the subtler grades are eliminated. There are eighty-one grades of self-grasping ignorance and its corresponding afflictions and their seeds: Each of the nine levels of saṃsāra—the desire realm, the four levels of the form realm (the first through fourth dhyānas), and the four levels of the formless realm (limitless space, limitless consciousness, nothingness, and peak of saṃsāra)—has nine grades of self-grasping. The nine grades range from gross to subtle according to the strength of self-grasping: great-great, middle-great,

small-great; great-middle, middle-middle, small-middle; great-small, middle-small, and small-small.<sup>78</sup> The antidotes that eradicate these grades of afflictions begin with the small-small, middle-small, and so on up to the middle-great and the great-great: the small-small antidotes overcome the grossest afflictions, and the great-great antidotes eliminate the small-small afflictions. That is, the smaller antidotes are sufficient to counteract the gross afflictions, while greater antidotes are needed to overcome the subtle, more deeply entrenched afflictions. This is similar to needing a stronger cleaning agent to remove subtle stains, while a weaker soap will do for the gross dirt.

According to the general Sanskrit tradition, while abandoning the first six of the nine grades of ignorance and afflictions that are related to the desire realm, Fundamental Vehicle practitioners are approachers to once-returner. When they have fully abandoned those six grades of ignorance, they become abiders in the fruit of once-returner.<sup>79</sup> Approachers to nonreturner are abandoning the seventh through ninth grades of desire-realm ignorance by an uninterrupted path. Abiders in the fruit of nonreturner have attained the liberated path that has abandoned these three grades. Nonreturners receive their name because they are no longer born in the desire realm.

Then the tenth through eighty-first grades of ignorance and afflictions of the form and formless realms are also abandoned by the uninterrupted paths of the path of meditation. The practitioners abandoning them are approachers to arhat; when they have been abandoned, those āryas become abiders in the fruit of arhat. According to Prāsaṅgikas, in general the eighty-one grades are eliminated in nine steps, whereby all the great-great afflictions are abandoned at once, the middle-great afflictions at once, and so on.

INNATE AFFLICTIONS ABANDONED ON THE PATH OF MEDITATION

REALM	LEVEL	AFFLICTIVE OBSCURATIONS BEING ABANDONED	
Afflictive obscurations of the desire realm	Great	Great-great	1
		Middle-great	2
		Small-great	3
	Middle	Great-middle	4
		Middle-middle	5
		Small-middle	6
	Small	Great-small	7
		Middle-small	8
		Small-small	9
Afflictive obscurations of the form realm	First dhyāna	10–18	Each of the afflictions on the left has nine grades from great-great to small-small.
	Second dhyāna	19–27	
	Third dhyāna	28–36	
	Fourth dhyāna	37–45	
Afflictive obscurations of the formless realm	Infinite Space	46–54	
	Infinite consciousness	55–63	
	Nothingness	64–72	
	Peak of saṃsāra	73–81	

Fundamental Vehicle practitioners have a variety of ways in which they proceed on the path to liberation. This involves the topic of the twenty saṅghas, which engenders much discussion. Below is a simplified presentation of how Fundamental Vehicle practitioners progress to liberation.<sup>80</sup>

*Simultaneous eliminators* completely overcome all great-great afflictions of the three realms at once, all the middle-great afflictions at once, and so on to the small-small afflictions of all three realms. Because they work at abandoning afflictions of the peak of saṃsāra—which are usually abandoned by nonreturners—just after becoming an abider in stream-enterer, they become approachers to arhat very quickly and do not become once-returners or nonreturners. Thus simultaneous eliminators are either abiders in the fruit of stream-enterer who are seeking to become

abiders in the fruit of arhat by leaping over the fruits of once-returner and nonreturner, or they are abiders in the fruit of arhat, having leapt over the fruits of once-returner and nonreturner.

Such practitioners progress using a preparation of the first dhyāna called the “capable preparation” (*anāgamyā*), which is a mind of the form realm. They become “dry” or “unadorned” arhats, because they haven’t attained even the first dhyāna by a worldly path of meditation. Their minds have not been moistened by meditative absorption. Although dry arhats have eradicated the afflictive obscurations, they have not abandoned the obscurations to absorption (T. *snyoms ’jug gi sgrib pa*) that prevent attaining meditative absorption. “Adorned” arhats have also accomplished all eight meditative absorptions, the absorption of cessation (T. *’gog pa’i snyoms ’jug*) as well as alternating dhyāna meditation (T. *bsam gtan spel sgom*) where they have the ability to alternate meditative absorption on polluted and unpolluted paths and in this way overcome the obscurations to concentration. Simultaneous eliminators are sharp-faculty disciples because they can overcome all afflictions in just nine steps. Being of sharp faculties, they could easily gain the meditative absorptions of the dhyānas and formless realms and become an adorned arhat.

*Gradual attainers* proceed serially through all eight stages of approachers and abiders and abandon all the grades of afflictions step-by-step. In general, they are approachers to stream-enterer during the last uninterrupted path of the path of seeing and become abiders in the fruit of stream-enterer at the last liberated path of the path of seeing. They first “abandon” the great-great grade of desire-realm afflictions by a worldly path that suppresses those afflictions and then abandon this grade of afflictions by a supramundane path of meditation. The worldly path suppresses some grades of afflictions by meditating on the grossness of the lower state and the peacefulness of the next higher one, while the supramundane path completely abandons afflictions by meditating on emptiness. Only the afflictions of the nothingness level of the formless realm and below can be abandoned by a worldly path; the afflictions of the peak of saṃsāra of the formless realm cannot be abandoned in this way because there is not a higher worldly level of meditative absorption that can

suppress these afflictions. Those on the path of meditation who are in the process of actualizing once-returned or nonreturner are gradualists.

*Leapers* bypass some of the fruits. Some leapers have suppressed the first six of the eighty-one grades of afflictions—which are desire-realm afflictions—by the worldly path before entering the path of seeing. They become approachers to once-returned and abiders in the fruit of once-returned, respectively, during the last uninterrupted path and last liberated path of the path of seeing. Other leapers have suppressed all nine desire-realm grades of afflictions by the worldly path and attained an actual dhyāna before entering the path of seeing. They are approachers to nonreturner when they attain the path of seeing and become abiders in the fruit of nonreturner upon attaining the last liberated path of the path of seeing.

## REFLECTION

---

Review: Yogīs on the Fundamental Vehicle paths may proceed in several ways.

1. Simultaneous eliminators completely overcome all great-great afflictions of the three realms at once, all the middle-great afflictions at once, and so on to the small-small afflictions of all three realms.
2. Gradual attainers proceed serially through all eight stages of approachers and abiders and abandon all the grades of afflictions step-by-step.
3. Leapers bypass some of the fruits.

---

### *Eight Grounds of the Fundamental Vehicle*

Fundamental Vehicle grounds are divided into the eight lesser grounds of śrāvakas and the grounds of solitary realizers. Here the term “realizers” refers to consciousnesses.

(1) *Grounds of lineage* are the four levels of the śrāvakas' path of preparation, which are clear realizations of common beings who are definite in the lineage of śrāvakas—that is, they will follow the Śrāvaka Vehicle to arhatship without changing vehicles. These practitioners have a union of serenity and insight observing emptiness that, as an inference, is a conceptual realization.

(2) Realizers of approachers to stream-enterer are called “the *grounds of the eighth*” by counting backward from the ground of an arhat—that is, starting with abiders in the result of arhat.

(3) Realizers of abiders in the fruit of stream-enterer are the *grounds of seeing* that first realize emptiness directly. Approachers to stream-enterer are in the process of abandoning the acquired afflictions by means of the uninterrupted path of the path of seeing. When they attain the liberated path of the path of seeing, they have eliminated the acquired afflictions and become abiders in the fruit of stream-enterer.

(4) Realizers of abiders in the fruit of once-returner are called “*grounds of diminishment*” because a once-returner has abandoned most, but not all, desire realm afflictions. Once-returners are so called because they will be reborn in the desire realm only one more time before attaining arhatship.

(5) Realizers of abiders in the fruit of nonreturner are *grounds of freedom from desire*, because that person has abandoned attachment to desire-realm afflictions. They are called “nonreturners” because, having eliminated the first nine of the eighty-one grades of afflictions, which are conjoined with the desire realm, they can never again be reborn in the desire realm due to afflictions and polluted karma.

(6) Realizers of approachers to once-returner, nonreturner, and arhat are *grounds of realizing completion*. These are śrāvakas' grounds that aren't included in the other grounds. While Fundamental Vehicle practitioners have an uninterrupted path that is abandoning the first six grades of desire-realm afflictions, they are approachers to once-returner. When they have abandoned them, they pass to a liberated path of the path of meditation and become abiders in the fruit of once-returner.

When they have an uninterrupted path that is abandoning the last three grades of desire-realm afflictions, they are approachers to nonreturner, and when those afflictions have been abandoned, they pass to a liberated path

and become abiders in the fruit of nonreturner. While abandoning the afflictions of the form and formless realms, they are approachers to arhat, and when those afflictions have been totally abandoned they become abiders in the fruit of arhat.

(7) *Grounds of śrāvakas* are realizers of abiders in the fruit of arhat. This is the path of no-more-learning of the Śrāvaka Vehicle in which all afflicted obscurations have been completely and forever eradicated. As liberated beings, these arhats are no longer bound in saṃsāra and will no longer take rebirth under the control of afflictions and polluted karma.<sup>81</sup>

(8) Realizers of solitary realizer āryas are *grounds of solitary realizers*, practitioners of the “middle” vehicle.

The eight grounds may be condensed into two: grounds of śrāvakas and grounds of solitary realizers. The most prominent classification of śrāvakas is of the four approachers and the four abiders. Although the framework of the eight approachers and abiders is not explicitly mentioned in terms of solitary realizers in the canonical scriptures, it may be applied to them.

### *Five Paths of the Fundamental Vehicle*

Readers who are unfamiliar with the grounds and paths will encounter many new terms as well as seemingly complex schemas in this and the next chapter. At first these may seem dry and technical, but as you become more familiar with them you will appreciate the spiritual roadmap that they constitute. Later, when you study a grounds and paths text in depth with a teacher and classmates with whom you can discuss the material, the background you gain here will come in handy.

The five Fundamental Vehicle paths are the śrāvaka and solitary realizer paths of accumulation, preparation, seeing, meditation, and no-more-learning.

The Fundamental Vehicle **path of accumulation** (*sambhāramārga*) is a clear realizer of the doctrine—“doctrine” here referring to the words of the scriptures. The śrāvaka and solitary realizer practitioners enter their respective paths of accumulation when they have developed full, unshakable renunciation of cyclic existence and a firm determination to attain liberation. This path is called “accumulation” because at this stage

practitioners accumulate a great amount of hearing the doctrine and because they begin to accumulate the merit and wisdom that will lead to the goal of that vehicle. There are three stages of the path of accumulation: small, middle, and great. Before being able to enter the path of accumulation, wrong views of nihilism—such as rejecting karma and its effects and rebirth—and of absolutism—such as asserting a soul (self) or a permanent creator—must be deactivated.

The Fundamental Vehicle **path of preparation** (*prayogamārga*) is a clear realizer of the meaning—that is, of emptiness. When yogīs first attain a concentration that is a union of serenity and insight focused on emptiness, they enter the path of preparation. This path is so called because this profound conceptual realization prepares yogīs for the direct, nonconceptual perception of emptiness on the path of seeing. The path of preparation has four stages: heat, peak, fortitude, and supreme mundane dharma. The first three stages are subdivided again into small, middle, and great. However, the supreme mundane dharma path of the Fundamental Vehicle lasts only one small moment that completes an action and so is not subdivided.

The Fundamental Vehicle **path of seeing** (*darśanamārga*) is a clear realizer of the truth, the emptiness of inherent existence. Practitioners enter this path when they first develop a direct, nonconceptual perception of emptiness. At that time, they begin abandoning the objects of abandonment—in this case the acquired self-grasping and its corresponding afflictions, and their seeds. There are two clear realizers on this path, each of which has subdivisions.

1. The *pristine wisdom of meditative equipoise* (*samāhitajñāna*) of the path of seeing realizes emptiness directly and nonconceptually with a concentration that is the union of serenity and insight. It is a realizer for which dualistic appearances with respect to emptiness vanish. It has three types:
  - An *uninterrupted path* (*ānantaryamārga*) is the actual antidote to the acquired self-grasping (grasping true existence) as well as acquired afflictions and their seeds. It consists of eight forbearances, which are minds that realize the emptiness of the

object (the four truths) and of the subjects (the minds meditating on the four truths). The eight forbearances occur simultaneously. Whatever is an uninterrupted path of the path of seeing is all eight forbearances. Due to the meditator's prior meditation on the antidotes, movement toward the wisdom *directly* realizing emptiness, which is the antidote, and movement toward the elimination of the last moment of self-grasping and its seeds to be abandoned by that level of that path occur at the same time. By the simultaneous arising of the antidote and the elimination of that grade of self-grasping, the uninterrupted path is attained, and that grade of self-grasping and afflictions can no longer be generated in that person's mindstream. However, she has not yet completely and forever abandoned them.

An uninterrupted path is so called because it leads the meditator uninterruptedly to liberation from those specific afflictions and their seeds. It is not that the afflictions and the uninterrupted path exist at the same time and battle each other, because an unpolluted mind and a polluted one cannot exist simultaneously.

- A *liberated path* (*vimuktimārga*) directly follows an uninterrupted path and is a wisdom that has definitely abandoned and is completely free of the acquired self-grasping. The liberated path consists of the eight knowledges, which also meditate on the emptiness of the object (the four truths) and the emptiness of the subject (the mind meditating on the four truths). The eight knowledges occur simultaneously and follow the eight forbearances. The uninterrupted path is compared to kicking the thief out of your house, and the liberated path is analogous to locking the door so he can never reenter.

Vaibhāṣikas say that these sixteen happen in a sequence—a forbearance followed by its knowledge, then another forbearance and its knowledge, and so on—whereas the Prāsaṅgikas say that the eight forbearances occur simultaneously, followed by the eight knowledges, which also

occur simultaneously. This is because the Prāsaṅgikas say that when one has direct realization of the emptiness of one phenomenon, one simultaneously directly realizes the emptiness of all phenomena.

- A *pristine wisdom of meditative equipoise that is neither an uninterrupted path nor a liberated path* occurs between the liberated path of the path of seeing and the first uninterrupted path of the path of meditation. Here yogīs strengthen their realization of emptiness until it becomes strong enough to become the uninterrupted path of the path of meditation. This occurs seamlessly in the same meditation session of meditative equipoise on emptiness.
2. The *pristine wisdom of subsequent attainment (prṣṭhalabdha-jñāna)* of the path of seeing is the subsequent clear realizer of someone who has arisen from a liberated path. This wisdom does not realize emptiness directly. Conventional phenomena again appear at this time and one accumulates merit in order to attain higher paths. This pristine wisdom is of two types:
- The *pristine wisdom concerned mainly with the method aspect of the path* supports other virtuous activities. This would be, for example, meditation on renunciation and the aspiration to attain liberation for oneself.
  - The *pristine wisdom concerned mainly with the wisdom aspect of the path* is, for example, contemplating that all phenomena are like illusions, appearing to exist from their own side but not existing in that way.

The Fundamental Vehicle **path of meditation** is a Fundamental Vehicle subsequent clear realizer. Practitioners enter this path when they attain the first uninterrupted path of the path of meditation by generating a pristine wisdom directly realizing emptiness that has the power to uproot one round

of innate self-grasping. It has two divisions: the pristine wisdom of meditative equipoise and the pristine wisdom of subsequent attainment.

1. The *pristine wisdom of meditative equipoise* is a subsequent clear realizer that perceives emptiness without any dualistic appearance. It has three subdivisions: uninterrupted paths, liberated paths, and pristine wisdoms of meditative equipoise that are neither of the two.
  - *Uninterrupted paths* are wisdoms that are the actual antidotes to the innate self-grasping that is its object of abandonment.
  - *Liberated paths* are the wisdoms that are directly liberated from the innate self-grasping that is the corresponding object of abandonment as the uninterrupted path that induces it. Each uninterrupted path flows seamlessly to become its corresponding liberated path in the same meditation session.

Just as the grades of ignorance and afflictions number eighty-one, so do the uninterrupted paths of the path of meditation number eighty-one. Here the small-small paths of each level eliminate the great-great grades of self-grasping of each level, the middle-small paths overcome the middle-great self-grasping, and so on, until the great-great paths eliminate the small-small grades of self-grasping.

The eighty-one grades of innate afflictions are abandoned in nine steps. All nine small-small paths occur simultaneously, overcoming all nine grades of great-great self-grasping ignorance. All nine middle-small paths eliminate all nine middle-great grades of ignorance and so on until all nine great-great paths overcome all nine grades of small-small ignorance.

There are nine uninterrupted paths on the path of meditation, the last one being the vajra-like concentration, but there are only eight liberated paths on the path of meditation, because the vajra-like concentration eradicates the final levels of self-grasping and brings the path of no-more-learning, which is totally free from all self-grasping, afflictions, and their seeds.

All uninterrupted paths and liberated paths realize emptiness directly. Progressing through the nine cycles of uninterrupted paths and liberated paths of the path of meditation is akin to repeatedly washing a cloth, each time removing a more strongly entrenched level of dirt until all dirt is finally abolished. As yogīs abandon more grades of self-grasping ignorance, the ignorance gets weaker and the strength of one’s assent to the appearance of true existence also declines until at the path of no-more-learning they are forever eradicated.

Śrāvaka āryas progress through the path of seeing and path of meditation in various ways, depending on whether they are simultaneous eliminators, leapers, gradual attainers, or gradual eliminators.<sup>82</sup>

- *Pristine wisdoms of meditative equipoise that are neither of the two* are, for example, the pristine wisdoms realizing emptiness that precede each uninterrupted path in the same meditation session.
2. The *pristine wisdom of subsequent attainment* is a clear realizer that does not realize emptiness directly. It arises after a liberated path while the yogī is engaged in daily life activities, as does the pristine wisdom of subsequent attainment of the path of seeing. It is of two types:
- The *pristine wisdom concerned mainly with the method aspect of the path* supports other virtuous activities. This could be, for example, yogīs’ thought to attain nirvāṇa for their own personal benefit.
  - The *pristine wisdom concerned mainly with the wisdom aspect of the path* is, for example, the pristine wisdom that directly realizes subtle conventionalities that appear like illusions in that they appear one way but exist in another.

The Fundamental Vehicle **path of no-more-learning** is a clear realizer of emptiness that has completely abandoned self-grasping ignorance, afflictions, and their seeds. This has two subdivisions:

1. The path of no-more-learning that is a method type of realizer is, for example, the intention of an arhat to enter meditative equipoise on nirvāṇa and not arise again.
2. The path of no-more-learning that is a wisdom type of realizer is, for example, a pristine wisdom of an arhat that directly realizes conventionalities as empty, like illusions.

These five paths can be condensed into two: the paths of ordinary beings (the paths of accumulation and preparation) and the paths of āryas (the paths of seeing, meditation, and no-more-learning). Fundamental Vehicle āryas consist of the eight approachers and abiders. Practitioners who attain the uninterrupted path of the path of seeing are approachers to stream-entry. When they attain the liberated path of the path of seeing and have fully abandoned the acquired afflictions, they are known as abiders in stream-entry. A stream-enterer is so called because they have entered the stream of Dharma flowing to liberation.

Approachers to and abiders in once-returner and nonreturner and approachers to arhat are on the path of meditation. Abiders in the fruit of arhatship are on the path of no-more-learning.

Śrāvakas and solitary realizers who are definite in their lineage abandon the self-grasping of both persons and phenomena by meditating on the emptiness of true existence of persons and phenomena. Śrāvakas accumulate merit for three lifetimes to attain arhatship; solitary realizers accumulate merit for one hundred eons to reach their goal. They use compact reasonings to realize emptiness, unlike bodhisattvas who realize emptiness by meditating on elaborate, multifaceted reasonings. Bodhisattvas who practice the Sūtra Vehicle accumulate merit for three countless great eons in order to gain full awakening. In general the paths of śrāvakas and solitary realizers are similar, as explained above; both groups have practitioners of modest and middling faculties who may take longer or shorter times to become arhats.

The Svātantrika Madhyamaka system and below say that first arhats attain a nirvāṇa with remainder and then nirvāṇa without remainder because when arhats attain nirvāṇa, they still have the remainder of their body produced under the influence of afflictions and karma. When they pass

away, they separate from the remainder of the polluted body and attain nirvāṇa without remainder. Vaibhāṣikas and Sautrāntikas say that at this time the continuum of the person is severed. The Yogācārins and Mādhyamikas assert one final vehicle, saying that arhats will eventually enter the Mahāyāna and attain buddhahood.

Prāsaṅgikas identify “remainder” differently, saying it refers to the appearance of true existence. When arhats directly realize emptiness in meditative equipoise, their wisdom realizing emptiness lacks the remainder of the appearance of true existence. This is a nirvāṇa without remainder. After emerging from meditation, however, the appearance of true existence returns during the time of subsequent attainment; at that time arhats have a nirvāṇa with remainder. Thus Prāsaṅgikas say that first arhats attain a nirvāṇa without remainder followed by a nirvāṇa with remainder.

In its description of the śrāvaka path, the Pāli tradition does not use the schema of the five paths, but it does use the names of four of the five paths to refer to similar stages of development. In the later commentaries, “collection” (P. *sambhāra*) is used to refer to accumulations or requisites a practitioner must assemble for the attainment of liberation. In the Abhidharma, “seeing” (P. *dassana*) is used to indicate the path of a stream-enterer, and “meditation” (P. *bhāvanā*) is used to refer to the paths of once-returned, nonreturner, and arhat who cultivate or familiarize themselves with the view attained with the experience of stream-entry. “No training” (P. *asekha*), which refers to arhatship or buddhahood, is the last ground (P. *bhūmi*). It is called a “ground,” not a “path” (P. *magga*), because it marks the end of cultivation. Here we see four terms—accumulation, seeing, meditation (familiarization), and no (more) training—referring to the same stages of development in both the Pāli and Sanskrit traditions.

## REFLECTION

---

Review what occurs with each of the five paths of Fundamental Vehicle paths:

1. The path of accumulation is attained upon gaining firm renunciation of saṃsāra and firm determination to attain nirvāṇa.

2. The path of preparation is attained when first having the union of serenity and insight on emptiness.
  3. The path of seeing is attained upon realizing emptiness directly and nonconceptually for the first time.
  4. The path of meditation is attained when one's meditation on emptiness is strong enough to eradicate innate afflictions.
  5. The path of no-more-learning is arhatship, when all afflictions and their seeds have been forever overcome.
- 

### *Solitary Realizers*

Śrāvakas meditate principally on the four truths and can attain a śrāvaka's awakening (liberation) in three lifetimes. Solitary realizers practice similar to śrāvakas, but their principal object of meditation is dependent origination, and they accumulate merit and practice for at least one hundred eons. Because of their great accumulation of merit, in their last lifetime in saṃsāra they can attain a solitary realizer's awakening (liberation) without relying on a teacher.<sup>83</sup>

There are two types of solitary realizers: community-based and rhinoceros-like. To learn the Dharma, all of them initially receive teachings from a buddha or Buddhist master. On that basis, they begin to practice and to accumulate merit and wisdom. Those on the penultimate learner path before they become arhats make three prayers when they are dying: (1) may I be reborn in a land where there is no buddha or bodhisattva performing the various activities, such as teaching the Dharma; (2) may I be able to teach the Dharma through the gestures of my body, without speaking; and (3) in my last existence, may I attain nirvāṇa without relying on the instructions of a master. These prayers are actualized, and in their last life in saṃsāra they live in a very solitary way. The meaning of "solitary realizer" is self-realized because they are able to achieve realizations in their last life without depending on a master. Both śrāvakas and solitary realizers benefit sentient beings through teaching them the Dharma.

According to some scholars, *rhinoceros-like solitary realizers* who are definite in their lineage practice the collection of merit as a disciple of a buddha for a hundred great eons on the path of accumulation, and then in one lifetime attain the path of preparation on up to arhatship without depending on a buddha or another teacher.

Community-based solitary realizers are of two types: The *great-assembly solitary realizers* attain all the fruits except arhatship in the presence of a buddha, and in their last lifetime attain the fruit of arhatship without depending on a buddha or another teacher. The *lesser-assembly solitary realizers* attain the first three of the four levels of the path of preparation—heat, peak, and fortitude—in the presence of a buddha and then attain the remaining paths and the fruits alone in their last lifetime.

While most śrāvaka and solitary realizer practitioners enter the path of accumulation and traverse the remaining paths of their respective vehicles and attain arhatship, some of them may choose to transfer to the Mahāyāna before becoming arhats. Those that generate bodhicitta can transfer to the Mahāyāna path from the heat and peak stages of the path of preparation of their respective vehicle. They then enter the Mahāyāna path of accumulation because as bodhisattvas they must accumulate the great merit necessary to attain buddhahood.

Those that do not generate bodhicitta follow their given path until attaining arhatship.<sup>84</sup> These arhats take a mental body and abide in the personal peace of nirvāṇa for a long while. It is said that at some point the Buddha will “arouse” them from their meditative equipoise on emptiness and encourage them to work for the benefit of all sentient beings and attain full awakening. They will generate bodhicitta and enter the Mahāyāna path of accumulation. Those arhats who have meditated on the four immeasurables extensively have an easier time doing this than those who have not. There is much discussion on how these arhats-cum-bodhisattvas accumulate merit. For example, to engage in the first four perfections requires having a body that lives in the world with ordinary sentient beings. Given that, why and how would those who have already accomplished their goal of arhatship take such a body?

*The Variety of Dispositions and Faculties*

As we know, sentient beings are not all alike, and eliminating the defilements through Dharma practice does not entail that we become replicas of some predetermined idea of a holy being. We have different inclinations (*āśaya, āsaya*), habits (*carita, cāritta*), dispositions (*adhimukti, adhimutti*), and levels of faculties (*indriya*). Thus the way people practice, the path they follow, and what they emphasize in their practice will vary. As a skillful teacher, the Buddha can lead all beings, no matter their personal differences.

Regarding the path to arhatship, the Pāli tradition says that some people are more inclined toward a path based on faith and devotion, while others prefer to base their practice on investigation and wisdom. While all arhats are similar in having removed all afflictions and their seeds, some are *liberated in both ways*—that is, they have attained a meditative absorption of the formless realm that liberates them from the material body and liberating wisdom that frees them from saṃsāra. Other arhats are *liberated by wisdom*; of these some have attained a dhyāna and others are “dry arhats” who have attained access concentration only. Furthermore, some arhats have supernormal powers and others do not. Some have six superknowledges, others do not. Regarding the five faculties—faith, effort, mindfulness, concentration, and wisdom—arhats may differ in terms of which faculty was stronger when they practiced the path.

The Pāli sūtras tell us about arhats with different specialties. In the *Greater Discourse in Gosinga* (MN 32), when asked what kind of monastic would illuminate or beautify the Gosinga forest, the Buddha’s foremost disciples—all of whom were arhats except Ānanda—each had a different idea. Most of their ideas were consistent with their own special proclivity. Ānanda, the Buddha’s attendant who had heard many teachings, suggested a monastic who had learned much through hearing teachings, had memorized and recited those teachings, had investigated and practiced them, and finally had penetrated them to realize them. Having done this, his ideal monastic then teaches others so that their underlying tendencies will be eradicated and they will attain liberation. Revata, on the other hand, suggested someone who delights in solitary meditation and who actualizes both serenity and insight while living alone. Anuruddha proposed someone who had attained the divine eye, while Mahākāśyapa recommended a

monastic who engages in ascetic practice, wearing only rags and eating only alms food. Mahāmaudgalyāyana put forth monastics who discuss and debate the technical aspects of the teachings, while Śāriputra advocated a monastic who has mastery of his own mind and can abide in whatever meditative absorption he wished without clinging to I and mine. The Buddha praised each of their ideas, and he himself suggested someone who had strong resolution to attain awakening.

Likewise, those who are drawn to the bodhisattva path have different faculties. Those whose faculty of faith is strong and faculty of wisdom weaker generate bodhicitta first, enter the bodhisattva path of accumulation, and then realize emptiness in order to attain the path of preparation. Those whose faculty of wisdom is stronger first realize emptiness inferentially, and by this they are convinced that attaining liberation and awakening is indeed possible. Only then do they apply themselves to gain the full realization of renunciation and bodhicitta and enter the bodhisattva path of accumulation. On the path of accumulation they accumulate the merit necessary to progress to the path of preparation. They also perfect their serenity if they hadn't attained it previously.

Owing to the difference in their faculty of wisdom, modest-faculty bodhisattvas gain the signs of irreversibility (*avaivartika* or *avinivartanīya*) with respect to awakening and abandon all thoughts seeking liberation for themselves alone on the eighth ground, whereas middle-faculty bodhisattvas gain this on the path of seeing, and sharp-faculty bodhisattvas gain it on the path of preparation. All these bodhisattvas attain buddhahood, but their practice on the path differs according to their abilities. It is said, however, that our faculties and abilities can be sharpened, so putting ourselves in one or another category as if it were fixed is not wise.

Of practitioners who are trying to generate bodhicitta, those who are inspired more by faith and devotion prefer to meditate on the seven cause-and-effect instructions, while those whose faculty of wisdom is stronger initially generate bodhicitta by meditating on equalizing and exchanging self and others.

Although all buddhas are the same in having eradicated the two obscurations and attained omniscience, we connect to them in different ways. Medicine Buddha is the personification of healing because, as a

bodhisattva, he made unshakable resolutions to cure disease. Avalokiteśvara is the personification of compassion because of the way he practiced compassion as a bodhisattva. Although each buddha has all the means to lead us to full awakening, depending on the form in which that buddha manifests, we will be more attracted to one or another due to our dispositions and inclinations.

Knowing this, it is important to respect ourselves and others while we practice as ordinary beings, when we attain the ārya path, and after we manifest the result. Some people enter the śrāvaka path, others the solitary realizer path, still others the bodhisattva path. Some people attain arhatship and then begin the bodhisattva path, others enter the bodhisattva path directly. If we can enter the bodhisattva path directly without first becoming a śrāvaka or solitary realizer arhat, that would be best because we will be able to attain full awakening and benefit sentient beings more quickly. But if we cannot, practicing to become an arhat is wonderful. What is most important is that we assist one another as we all progress.

Many topics arise in the explanation of the bodhisattva paths and grounds. You may frequently want to refer to the following outline as you read the next several chapters.

## THE FIVE MAHĀYĀNA PATHS

### 1. *Bodhisattva Path of Accumulation*

1.1 Small phase

1.2 Middle phase

1.3 Great phase

### 2. *Bodhisattva Path of Preparation*

2.1 Heat stage

2.2 Peak stage

2.3 Fortitude stage

2.4 Supreme mundane dharma stage

### 3. *Bodhisattva Path of Seeing*

### 3.1 *Pristine wisdom of meditative equipoise*

#### 3.1.1 Uninterrupted path

#### 3.1.2 Liberated path

3.1.3 Pristine wisdom of meditative equipoise that is neither an uninterrupted path nor a liberated path

### 3.2 *Pristine wisdom of subsequent attainment*

3.2.1 Pristine wisdom concerned mainly with the method aspect of the path

3.2.2 Pristine wisdom concerned mainly with the wisdom aspect of the path

## 4. *Bodhisattva Path of Meditation*

### 4.1 *Pristine wisdoms of meditative equipoise*

#### 4.1.1 *Uninterrupted paths*

4.1.1.1 Uninterrupted paths that abandon the innate afflictive obscurations

4.1.1.1.1–6 Uninterrupted paths of the second through seventh grounds that abandon the six grades of self-grasping, their afflictions, and seeds

4.1.1.1.7 Uninterrupted path of the initial part of the eighth ground that abandons the three small grades of innate self-grasping, their afflictions, and seeds

4.1.1.2 Uninterrupted paths that abandon the cognitive obscurations

4.1.1.2.1 Uninterrupted path of the later part of the eighth ground

4.1.1.2.2 Uninterrupted path of the ninth ground

4.1.1.2.3 Initial uninterrupted path of the tenth ground

4.1.1.2.4 Final uninterrupted path of the tenth ground

#### 4.1.2 *Liberated paths*

4.1.2.1 Liberated paths of the second ground through the initial part of the eighth ground

4.1.2.2 Liberated paths of the second part of the eighth ground, the ninth ground, and the initial liberated path of the tenth ground

4.1.3 *Pristine wisdoms of meditative equipoise that are neither uninterrupted paths nor liberated paths*

### 4.2 *Pristine wisdoms of subsequent attainment*

4.2.1 Pristine wisdoms concerned mainly with the method aspect of the path

4.2.2 Pristine wisdom concerned mainly with the wisdom aspect of the path

5. *Mahāyāna Path of No-More-Learning (Buddhahood)*

# 8

## The Paths of the Bodhisattva

### *Five Mahāyāna Paths*

In many ways, the Bodhisattva Vehicle (Mahāyāna or Universal Vehicle) is similar to the Fundamental Vehicle. Like the Fundamental Vehicle, it also has five paths—the Mahāyāna paths of accumulation, preparation, seeing, meditation, and no-more-learning. The paths of the Bodhisattva Vehicle are usually called Mahāyāna (Universal Vehicle) paths rather than bodhisattva paths because the path of no-more-learning is possessed by a buddha, not a bodhisattva.

Like the Fundamental Vehicle, the Mahāyāna paths of seeing and meditation are classified into the pristine wisdoms of meditative equipoise and the pristine wisdoms of subsequent attainment. These, in turn, are divided into the same branches as the Fundamental Vehicle paths, so for the details about these, please refer to the preceding chapter. In this chapter, we'll discuss the ways in which the bodhisattva paths and grounds differ from those of the Fundamental Vehicle. On the bodhisattva paths of seeing and meditation, bodhisattvas also traverse the ten bodhisattva grounds (*bhūmi*). In traversing their paths and grounds, bodhisattvas abandon not only the afflictive obscurations, as do Fundamental Vehicle practitioners, but also cognitive obscurations, resulting in the attainment of full awakening, or buddhahood, with qualities surpassing those of arhats. Nevertheless, the object of meditation of both vehicles' uninterrupted and liberated paths is the same—the emptiness of inherent existence.

Among practitioners who aspire for buddhahood, those of sharp faculties settle the correct view of emptiness before generating bodhicitta. Although at this time they have not entered the path of accumulation, their inference of emptiness has a powerful impact on other areas of their

practice. It strengthens their refuge, increases their determination to be free from saṃsāra, and motivates them to cultivate strong compassion for all sentient beings—the great compassion observing the unapprehendable that Candrakīrti spoke of in the homage to the *Supplement*.<sup>85</sup>

Several different grounds and paths (T. *sa lam*) texts are used in Tibetan monasteries. One of the most common is from the Svātantrika Madhyamaka perspective. However, here we will rely on the grounds and paths text by the Mongolian scholar-adept Losang Tayang (1867–1937), *A Brief Presentation of the Grounds and Paths of the Perfection Vehicle, Essence of the Ocean of Profound Meaning*, that is written according to the Prāsaṅgika perspective.<sup>86</sup> Losang Tayang’s method of setting out the bodhisattva grounds and paths according to the Prāsaṅgikas accords with that of Jamyang Shepa and Ngawang Palden but differs from that of Losang Chökyi Gyaltsen.

### *Bodhisattva Path of Accumulation*

Based on great compassion and the great resolve, when the bodhicitta of bodhisattva-aspirants becomes spontaneous, they enter the path of accumulation and become actual bodhisattvas. Those who freshly enter the bodhisattva path do so when they have gained genuine and spontaneous bodhicitta, such that whenever they see any sentient being, their spontaneous thought is “I want to attain full awakening in order to lead this being from duḥkha and bring him or her to the bliss of full awakening.” At present, although we admire the bodhisattva path and even generate contrived bodhicitta in our minds, we are not yet actual bodhisattvas. Those beings who have spontaneous bodhicitta are truly admirable.

All Mahāyāna tenet systems, except the Yogācāra Scriptural Proponents, assert one final vehicle. That is, all sentient beings—including Fundamental Vehicle arhats—will eventually enter the bodhisattva path and become buddhas. These arhats enter the Universal Vehicle on the bodhisattva path of accumulation. Although they have already realized emptiness and removed all afflictive obscurations, they must still create great merit in order to progress through the bodhisattva paths and grounds. The path of accumulation is so called because during this time bodhisattvas

newly or freshly entering the path—that is, those who haven’t previously attained arhatship—accumulate a great deal of merit, hear many teachings on the bodhisattva practice and on emptiness, and clarify their understanding of emptiness in order to progress to the path of preparation. Before entering the path of accumulation all bodhisattvas have overcome the wrong views of nihilism—such as rejecting karma and its effects and rebirth—and of absolutism—such as asserting a soul (self) or permanent creator.

Henceforth some bodhisattvas practice the Pāramitāyāna—the Perfection Vehicle—in which they fulfill the collections of merit and wisdom in three countless great eons to become buddhas. Others follow the Tantrayāna, where if they practice properly, the time is much shorter.

In both cases, they proceed to buddhahood by cultivating method and wisdom. The Buddha succinctly laid out the path in the *Heart Sūtra* when he spoke the perfection of wisdom mantra, *tadyathā gate gate pāragate pārasaṃgate bodhi svāhā*. *Tadyathā* means “it is thus,” *gate* means “having gone,” *pāragate* is “having thoroughly gone,” *pārasaṃgate* is “having thoroughly and completely gone,” *bodhi* means “awakening,” and *svāhā* means “may it be so.” This is explained in terms of the person who is going, that to which they are going, that from which they are going, and the means in dependence upon which they are going.

Who is going? The I that is merely designated in dependence on the mindstream is the person who is going. That from which we are going is saṃsāra, the state of being under the power of ignorance, afflictions, and polluted actions. That to which we are going is the resultant truth body, the everlasting cessation of duḥkha, its origins, and their latencies. That by which we are going is a path that is a union of method and wisdom.

By saying *gate*, the Buddha tells us to go to the other shore. From our point of view, saṃsāra is the near shore and nirvāṇa is the far shore. By saying these five—*gate, gate, pāragate, pārasaṃgate, bodhi*—the Buddha encourages and instructs us to go, go, thoroughly go, thoroughly and completely go, and (go) to full awakening. These five represent, respectively, the bodhisattva paths of accumulation, preparation, seeing, meditation, and no-more-learning.

The path of accumulation is a clear realizer of the doctrine—“doctrine” here referring to the words of the scriptures gained mainly by hearing and contemplating the teachings. The bodhisattva path of accumulation is similar to the Fundamental Vehicle path of accumulation, but bodhisattvas continue to strengthen their bodhicitta and collect a great amount of merit before passing to the bodhisattva path of preparation.

While on the path of accumulation, bodhisattvas have states arisen from meditation, but they do not yet have states arisen from the union of serenity and insight realizing emptiness. It is called “the path of accumulation” because during this time, they accumulate the conditions to gain the union of serenity and insight into emptiness arisen from meditation.<sup>87</sup> These bodhisattvas accumulate merit through engaging in the method aspect of the path with the bodhicitta motivation and accumulate wisdom by consistent meditation on emptiness.

The bodhisattva path of accumulation has three phases: small, middle, and great. *On the small phase*, bodhisattvas do not necessarily have the correct view of emptiness. In addition, their bodhicitta is not stable; it could degenerate if those bodhisattvas are not careful. This stage is like a sick person who has taken the medicine, but it’s uncertain if he will be cured. Referring to the twenty-two types of bodhicitta, the bodhicitta of small-phase bodhisattvas is like the earth.<sup>88</sup> Just as the earth is the basis for and provides nourishment for all that grows, this bodhicitta is the basis on which all the excellent qualities of the bodhisattva path will arise in the future.

*On the middle phase*, their bodhicitta will not degenerate. It is like gold—a precious substance buried under the ground for a long time. However, these bodhisattvas must still create a great deal of merit before gaining the path of preparation.

*On the great phase*, bodhisattvas’ bodhicitta and excellent qualities grow like the waxing moon. Having the concentration called “the stream of Dharma,” they are able to emanate many bodies that travel to various pure lands to listen to teachings from many buddhas.<sup>89</sup> Never forgetting the teachings they hear, these bodhisattvas also listen to Dharma discourses from supreme emanation bodies. Bodhisattvas who have not previously

gained the correct view of emptiness attain it on either the second or third phase of the path of accumulation.

### *Bodhisattva Path of Preparation*

The path of preparation is a clear realizer of the meaning—here “meaning” refers to emptiness. For “new” bodhisattvas—those who entered the Bodhisattva Vehicle directly—the demarcation of entering the path of preparation is having the union of serenity and insight on emptiness. Here their understanding of emptiness becomes more experiential because it is derived from insight and because they now attain a new concentration that is a clear conceptual realization of emptiness.

Bodhisattvas who had previously become Fundamental Vehicle arhats attain the bodhisattva path of preparation when they accumulate the requisite two collections of merit and wisdom on the path of accumulation necessary to advance to the bodhisattva path of preparation. This requisite is the same for those bodhisattvas until they reach the eighth ground because in order to eradicate the cognitive obscurations on the pure grounds—the eighth, ninth, and tenth grounds—they must first accumulate merit and wisdom for two countless great eons. For all bodhisattvas, the first great countless eon of merit is accumulated on the paths of accumulation and preparation, the second on the first to the end of the seventh ground, and the third on the three pure grounds.

On the path of preparation, bodhisattvas familiarize themselves with emptiness and further cultivate the method side of the path through altruistic activities. Within the path of preparation are four stages—heat, peak, fortitude, and supreme dharma—where their realization of emptiness continues to deepen and their awareness of emptiness becomes subtler and clearer. They continue to meditate using various reasonings to refute inherent existence and establish emptiness. Having correctly established the view, they then meditate on emptiness with the union of serenity and insight. The conceptual appearance of emptiness is gradually worn away, and conceptual elaborations and dualistic appearances begin to fade.

The four stages of the path of preparation are posited according to the gradual decrease of dualistic appearances during meditative equipoise on

emptiness and the new ability to suppress the four manifest forms of self-grasping. Yogīs suppress the manifest self-grasping of afflictive and pure objects on the first two stages and the manifest self-grasping of subjects—the consciousnesses realizing emptiness—on the last two stages. At each stage, their conceptual cognition of emptiness becomes clearer. Each of these four stages has three phases—small, medium, and great—because bodhisattvas must create a great amount of merit on the path of preparation to advance to the bodhisattva path of seeing.

The *heat stage* is so called because one is approaching the fire of the direct realization of emptiness that burns up the afflictions.

The *peak stage* is so called because one’s roots of virtues can no longer be damaged by anger and wrong views. Yogīs newly attain a concentration that is a deeper conceptual realization of emptiness.

The *fortitude stage* is so called because these bodhisattvas can “bear” emptiness without fear. From this point onward, they have certainty that they will never again be born in an unfortunate rebirth. Although the karmic seeds for such rebirths are still on their mindstream—they are not eliminated until the path of seeing—the conditions for them to ripen are now incomplete. However, these bodhisattvas do not have complete control of the rebirth process. This ability is gained on the first ground; thereafter they can take any rebirth they wish.

In the first two stages of the path of preparation, there is the appearance of subject and object during meditative equipoise on emptiness and the meditator can ascertain them. Now, although the appearance or image of emptiness is still present, it has diminished to such an extent that she no longer ascertains it. However, she does ascertain emptiness.

The *supreme mundane dharma stage* is so called because it is the highest mundane state. These bodhisattvas are still common beings (*prthagjana*, *puthujjana*), but upon attaining the path of seeing, they will become āryas. The veil of the conceptual appearance of emptiness is very thin, and the sense of a subject—a mind realizing emptiness—cannot be ascertained. They are on the verge of breaking through the veil of the conceptual appearance to realize emptiness directly.

## *Bodhisattva Path of Seeing*

The *Ornament of Clear Realizations* says that the physical support—that is, the body—of those who enter the bodhisattva path of seeing directly without having first attained arhatship in the Śrāvaka Vehicle is the body of a human being<sup>90</sup> or the body of any of the six classes of desire-realm gods. Form- and formless-realm gods have weak renunciation of saṃsāra, and because of their attachment to the peacefulness of their meditation they are unable to attain the bodhisattva path of seeing. It is said that some form-realm gods can attain the first three levels of the bodhisattva path of preparation, but not the fourth because that leads directly to the path of seeing. The mental support—that is, the sphere (*avacara*) of consciousness—needed to attain the bodhisattva path of seeing is an actual dhyāna.<sup>91</sup>

When all dualistic appearances—of subject and object, of conventional truths, and of inherent existence—dissolve, yogīs in meditative equipoise on emptiness on the supreme mundane dharma phase of the path of preparation transition to the bodhisattva path of seeing. Their insight into emptiness is now direct and nonconceptual. The mind and emptiness are fused, like water poured into water, with no appearance of subject and object. As ārya bodhisattvas, these yogīs are not subject to the duḥkha of birth, aging, sickness, and death. Although they will take rebirth, it is no longer under the control of the ignorance, afflictions, and polluted karma that would give rise to this saṃsāra duḥkha. These bodhisattvas now eliminate the acquired afflictions.

The bodhisattva path of seeing is a clear realizer of the truth, emptiness; it encompasses the first bodhisattva ground and has two clear realizers: the pristine wisdom of meditative equipoise and the pristine wisdom of subsequent attainment of the path of seeing.

1. The *pristine wisdom of meditative equipoise* realizes emptiness directly and nonconceptually with a concentration that is the union of serenity and insight. That pristine wisdom has no dualistic appearance whatsoever. It has three types: an uninterrupted path, a liberated path, and the pristine wisdom of meditative equipoise that is neither.

- An *uninterrupted path* (*ānantaryamārga*) is an exalted wisdom of the Mahāyāna path of seeing that is the actual antidote to acquired self-grasping and acquired afflictions. This uninterrupted path consists of the eight forbearances, which are synonymous with one another. This uninterrupted path leads the meditator without any interlude to liberation from the acquired afflictions. It is not that the afflictions and the uninterrupted path exist at the same time and battle each other, because an unpolluted mind and a polluted one cannot exist at the same time. Rather it is like the dawn of a new day: the approaching of radiant sunlight and the approaching of the cessation of darkness are simultaneous.
- A *liberated path* (*vimuktimārga*) directly follows the uninterrupted path and is a pristine wisdom of meditative equipoise of a Mahāyāna path of seeing that has definitely abandoned and is completely free of acquired self-grasping and acquired afflictions to be eliminated on that path. Due to the power of the antidote—the pristine wisdom of meditative equipoise—those afflictions can never again appear in the mind. Attaining a liberated path and actualizing a true cessation are simultaneous. The reality (emptiness) of the mind free from those objects of abandonment on that path is a true cessation.
 

Just as the eight forbearances, which comprise the uninterrupted path, occur simultaneously and abandon the acquired afflictions, the eight knowledges, which comprise the liberated path, occur simultaneously and are the knowledge that the acquired afflictions have been abandoned. This liberated path realizes the emptiness of both subject and object with respect to the four truths.<sup>92</sup>
- The *pristine wisdom of meditative equipoise that is neither an uninterrupted path nor a liberated path* is, for example, the pristine wisdoms of meditative equipoise of the bodhisattva path of seeing of someone who had previously become a

Fundamental Vehicle arhat. As arhats these practitioners have already abandoned all the afflictive obscurations that are the objects of abandonment of the first seven grounds. So until they reach the eighth ground, they do not have any new uninterrupted paths or liberated paths, although they still engage in meditative equipoise on emptiness. Rather, they focus on accumulating the merit necessary to support their pristine wisdoms on the pure grounds that will eradicate the cognitive obscurations.

2. The *pristine wisdom of subsequent attainment of the path of seeing* is the clear realizer of someone who has arisen from a liberated path. This wisdom does not realize emptiness directly. Conventional phenomena again appear at this time, and these yogīs engage in virtuous activities to accumulate merit in order to attain higher paths. This pristine wisdom is of two types: the pristine wisdom concerned mainly with the method aspect of the path and the pristine wisdom concerned mainly with the wisdom aspect of the path.
  - The *pristine wisdom concerned mainly with the method aspect of the path* is, for example, bodhicitta that supports virtuous activities, such as the practices of the perfections of generosity, ethical conduct, and fortitude.
  - The *pristine wisdom concerned mainly with the wisdom aspect of the path* is, for example, the wisdom contemplating that all phenomena are like illusions in that they appear to exist from their own side but do not exist in that way. Derived from the realization of emptiness, this wisdom knows that although phenomena do not inherently exist, they function in the conventional world.

On the path of seeing, bodhisattvas completely overcome acquired afflictions. Their innate afflictions are weakened so that without these gross impediments, their great compassion easily expands and intensifies. However, if the influence of the realization of emptiness wanes,

bodhisattvas on the first seven grounds may still experience manifest afflictions. These afflictions are weak, do not disturb their mind or create karma, and are easily neutralized by bodhisattvas' wisdom and compassion. Ārya bodhisattvas create only unpolluted karma.

Fundamental Vehicle learner āryas may still experience the unpleasant results of previously created destructive karma. Ārya bodhisattvas, however, experience neither physical nor mental suffering because of the power of their wisdom and compassion.

Since the virtuous karma ordinary beings create is considered polluted and is not a direct cause of awakening, the question arises: What happens to the seeds of this virtuous karma when the person becomes an ārya? They are gradually transmuted into seeds of unpolluted karma as the power of ārya bodhisattvas' realizations and excellent qualities increases.

In the following chapters that describe the practice of ārya bodhisattvas, you will see the power and capability of their great compassion and wisdom. This gives us confidence that our compassion and wisdom, when continuously cultivated, will likewise expand exponentially.

### *Bodhisattva Path of Meditation*

The bodhisattva path of meditation is a bodhisattva subsequent clear realizer. Bodhisattvas transition to the path of meditation when they have accumulated enough merit and their wisdom is powerful enough to begin eradicating the innate afflictions. "Meditation" in Tibetan has the same verbal root as "to familiarize," so this is called "the path of meditation" because yogīs are mainly familiarizing themselves with the emptiness directly realized by the path of seeing. The bodhisattva path of meditation is of two types: pristine wisdoms of meditative equipoise and pristine wisdoms of subsequent attainment.

1. The *pristine wisdoms of meditative equipoise* are a bodhisattva's subsequent clear realizers in which all dualistic appearances regarding emptiness have vanished. Here, too, there are three types: uninterrupted paths, liberated paths, and pristine wisdoms of meditative equipoise that are neither.

A. An *uninterrupted path* is a pristine wisdom of meditative equipoise that is the actual antidote to whichever of the two obscurations—afflictive obscurations and cognitive obscurations—is its object of abandonment. Uninterrupted paths of the bodhisattva path of meditation are of two types: those that abandon innate afflictive obscurations and those that abandon cognitive obscurations.

(1) *Uninterrupted paths that abandon the innate afflictive obscurations* are, in turn, divided into seven. The first six are the uninterrupted paths of the second through seventh grounds on which the six grades of innate self-grasping and its corresponding afflictions and their seeds are eradicated. These six grades are the great-great through the small-middle grades of innate afflictions of the three realms.

The seventh uninterrupted path occurs on the initial part of the eighth ground. For bodhisattvas who did not enter the Fundamental Vehicle first, this uninterrupted path eradicates the three small grades of innate self-grasping, their afflictions, and their seeds simultaneously, in one moment. Having pacified coarse striving and exertion, this uninterrupted path is very powerful because it can abandon in a short time the self-grasping and afflictions that could not be abandoned during many prior eons. In that way it is like a ship that sails with difficulty in channels, but once it reaches the open ocean can quickly traverse great distances. The *Ten Grounds Sūtra* says (EOM 18):

O Children of the Conqueror, it is like this:  
For example, until it reaches the great ocean,  
a great ship that goes on the great ocean must  
be forcibly moved and made to go. As soon  
as it reaches the great ocean, it is carried by  
billows of wind. It goes without needing to be  
moved forcibly. It [traverses] effortlessly that

which one could not traverse even in a hundred years by means of the previous forcible moving and going.

O Children of the Conqueror, similarly, one who has thoroughly accumulated the collection of roots of virtue of a bodhisattva and achieves well the Mahāyāna, having reached the ocean of the deeds of bodhisattvas, by means of a spontaneous pristine wisdom obtains in one brief period a measure of all-knowing pristine wisdom that he could not have obtained even in one hundred thousand eons of those previous forcible deeds.

When these bodhisattvas attain the liberated path of the initial part of the eighth ground, they have totally eradicated the root of saṃsāra and have attained a nirvāṇa that is the complete exhaustion of the afflictive obscurations. They are similar to arhats who are free from desire regarding the three realms of saṃsāra. The *Ten Grounds Sūtra* says, “Here, just at this time, he passes thoroughly beyond sorrow.” Candrakīrti’s *Supplement* says (EOM 18–19):

Because an awareness that is without desire does not abide together with faults, on the eighth ground those defilements are thoroughly pacified along with their root, the afflictions, are extinguished, and [one] is unsurpassed in the three realms. However, [one] is not [yet] able to attain all the fortunes of buddhas, limitless like the sky.

Although these bodhisattvas are now similar to arhats, they are not non-learners, because they haven't attained the path of no-more-learning of any of the three vehicles. Bodhisattvas that previously attained arhatship in the Fundamental Vehicle are non-learners because they attained the path of no-more-learning in the Fundamental Vehicle. However, they are not non-learners of any of the three vehicles because they are now in the Bodhisattva Vehicle.

- (2) *Uninterrupted paths that abandon cognitive obscurations* are divided into four. The uninterrupted path of the later part of the eighth ground and the uninterrupted path of the ninth ground, respectively, abandon the great and middle cognitive obscurations. The initial and final uninterrupted paths of the tenth ground, respectively, abandon the coarse and subtle small cognitive obscurations.
- B. *Liberated paths* are directly freed from either of the two obscurations that are the object of abandonment of the uninterrupted path that induced it. There are ten liberated paths from the second to the tenth grounds. The liberated path that corresponds to the last uninterrupted path of the path of meditation is the first moment of buddhahood. Thus on the path of meditation, there are eleven uninterrupted paths and ten liberated paths.
- C. The *pristine wisdoms of meditative equipoise that are neither an uninterrupted path nor a liberated path* are, for example, the pristine wisdom of meditative equipoise in the continuum of an ārya bodhisattva who is about to attain the third through the tenth grounds. These pristine wisdoms occur between one liberated path and the next uninterrupted path. During this time, yogīs collect merit and continue to enhance their wisdom realizing emptiness. Their meditative equipoise on emptiness

prepares them to attain the next uninterrupted path, and when their wisdom is strong enough to eliminate the next level of afflictions and their seeds, they seamlessly, without arising from meditation, pass into the next uninterrupted path. The actual transition from one ground to the next and from the tenth ground to the path-of-no-more-learning occurs during meditative equipoise. Similarly, the transition from the supreme mundane dharma stage of the path of preparation to the first ground occurs during meditative equipoise.

2. The *pristine wisdoms of subsequent attainment* are a bodhisattva's subsequent clear realizers that do not directly realize emptiness. These are of two types:
  - A. The *pristine wisdom concerned mainly with the method aspect of the path* supports other virtuous activities such as the practices of the perfections of generosity, ethical conduct, and fortitude. It also includes the three mental engagements of aspiration, dedication, and rejoicing. Aspiration creates the roots of virtue, dedication makes them inexhaustible, and rejoicing increases them.<sup>93</sup>
  - B. The *pristine wisdoms of subsequent attainment that are wisdom types of realizers* are exalted knowers that realize emptiness through a conceptual appearance. When yogīs arise from meditation realizing emptiness, they don't forget what they realized. The impact of that realization stays with them and influences how they perceive the objects they use in daily life. As long as their minds are informed by this realization, although people and things appear to them as inherently existent, they know that this appearance is false and that these objects are like illusions.

While on the paths of seeing or meditation, before progressing to the next uninterrupted path a yogī repeatedly generates the pristine wisdom of subsequent attainment and the pristine wisdoms of meditative equipoise that

are neither. This is done because it takes time for practitioners' merit and wisdom to become strong enough to induce the next uninterrupted path. Depending on the acuity of their faculties and other conditions, they may be on a particular path for several months, years, lifetimes, or for the good part of a countless great eon. During this time, they eat, sleep, talk to people, and do other activities in their daily lives, all the time practicing bodhicitta and virtuous actions to accumulate merit. They repeatedly meditate on impermanence and emptiness with the pristine wisdoms of meditative equipoise that are neither. Only after accumulating merit and wisdom for a long time do bodhisattvas generate the next uninterrupted path. After meditating with this new uninterrupted path and its liberating path that eradicate the next grade of afflictions, they again practice for extended periods of time meditating with the pristine wisdom of subsequent attainment and the pristine wisdoms of meditative equipoise that are neither.

On the second to the seventh grounds of the bodhisattva path of meditation, progressively more subtle levels of the innate afflictions are abandoned. When their minds are still influenced by the realization of emptiness they had in meditative equipoise, they see all phenomena as like illusions. However, if the influence of their realization of emptiness wanes, ārya bodhisattvas may still experience manifest afflictions, but they are weak, do not create karma, and are easily suppressed.

The uninterrupted path of the initial half of the eighth ground eradicates the subtlest afflictive obscurations, and its liberated path marks the full abandonment of all acquired and innate afflictions and their seeds from the root. Eighth-ground bodhisattvas resemble arhats in terms of having eliminated all afflictive obscurations and being entirely free from cyclic existence. Bodhisattvas, however, have many special qualities that śrāvakas and solitary realizer arhats lack.

#### OBJECTS ABANDONED ON THE BODHISATTVA PATHS AND GROUNDS

BODHISATTVA PATH	BODHISATTVA GROUND	OBJECTS BEING ABANDONED AND OBJECTS COMPLETELY ABANDONED
Path of seeing	1 UIP and LP	Acquired afflictions
Path of meditation	2 UIP and LP	Great-great innate afflictive obscurations

Path of meditation	3 UIP and LP	Middle-great afflictive obscurations
Path of meditation	4 UIP and LP	Small-great afflictive obscurations
Path of meditation	5 UIP and LP	Great-middle afflictive obscurations
Path of meditation	6 UIP and LP	Middle-middle afflictive obscurations
Path of meditation	7 UIP and LP	Small-middle afflictive obscurations
Path of meditation	8 initial UIP and LP	Great-small, middle-small, small-small afflictive obscurations
Path of meditation	8 initial LP	Liberated from saṃsāra
Path of meditation	8 later UIP and LP	Great cognitive obscurations
Path of meditation	9 UIP and LP	Middle cognitive obscurations
Path of meditation	10 initial UIP and LP	Coarse small cognitive obscurations
Path of meditation	10 later UIP	Subtle small cognitive obscurations
Path of no-more-learning		Buddhahood

UIP = Uninterrupted path

LP = Liberated path

## REFLECTION

---

1. What are the entry points for each of the five bodhisattva paths?
2. What is the function of each of these pristine wisdoms on the bodhisattva path of meditation?
  - *Pristine wisdoms of meditative equipoise*
    - Uninterrupted paths
    - Liberated paths
    - Pristine wisdoms of meditative equipoise that are neither uninterrupted nor liberated paths
  - *Pristine wisdoms of subsequent attainment*
    - Pristine wisdoms concerned mainly with the method aspect of the path
    - Pristine wisdoms of subsequent attainment that are wisdom types of realizers

3. Imagine what it would be like to gain these pristine wisdoms and the freedom they bring. Develop a strong determination to do so for the benefit of all beings.

---

The Yogācāra-Svātantrikas, Sautrāntika-Svātantrikas, and Prāsaṅgikas have different ways of describing the bodhisattva paths of seeing and meditation. This is related to what they consider to be afflictive obscurations and cognitive obscurations.

*Yogācāra-Svātantrikas* say grasping the coarse and subtle self of persons are afflictive obscurations, and grasping the coarse and subtle self of phenomena are cognitive obscurations. The coarse self of persons is a permanent, unitary, independent self and the subtle is a self-sufficient substantially-existent person. Grasping the coarse self of phenomena—grasping the perceiving subject and perceived object as being of different substantial entities—is the coarse cognitive obscurations, and grasping the true existence of phenomena is the subtle cognitive obscurations. For bodhisattvas who enter the bodhisattva path freshly, the path of seeing abandons acquired afflictive obscurations and acquired cognitive obscurations and their seeds. Depending on the bodhisattva path of seeing (which encompasses the first ground), bodhisattvas actualize a true cessation of acquired obscurations. The remaining nine grounds of the bodhisattva path of meditation abandon the innate afflictive obscurations and innate cognitive obscurations simultaneously. Both obscurations have been completely removed at buddhahood.

*Sautrāntika-Svātantrikas* say grasping the coarse and subtle self of persons are afflictive obscurations, and grasping the self of phenomena are cognitive obscurations. Like the Yogācāra-Svātantrikas, they say the coarse self of persons is a permanent, unitary, independent self and the subtle is a self-sufficient substantially-existent person. Unlike Yogācāra-Svātantrikas who assert a coarse and subtle self of phenomena, Sautrāntika-Svātantrikas assert only one level of grasping the self of phenomena—grasping both persons and phenomena as truly existent. For bodhisattvas who enter the bodhisattva path freshly, acquired afflictions are eliminated by the path of seeing. Unlike Prāsaṅgikas who assert that first all afflictive obscurations

are abandoned on grounds one through seven and then cognitive obscurations are abandoned on the three pure grounds, Sautrāntika-Svāntrikas assert that cognitive obscurations are abandoned on all ten grounds. All afflictive obscurations are abandoned by the beginning of the eighth ground and all cognitive obscurations have been abandoned at the path of no-more-learning, buddhahood.

*Prāsaṅgikas* assert that afflictive obscurations are the self-grasping ignorance of persons and phenomena, afflictions, and their seeds. Cognitive obscurations are the latencies of self-grasping ignorance and the subtle dualistic appearances that they cause. As described above, all afflictive obscurations are abandoned by the beginning of the eighth ground, and only at that time do bodhisattvas begin to eliminate cognitive obscurations. All self-grasping ignorance and afflictions, which are afflictive obscurations, must be eliminated prior to eliminating cognitive obscurations. This is because before removing the latencies of the afflictions, the afflictions themselves must be eliminated, just as before eliminating the smell of onions in a pot (cognitive obscurations), the onions themselves (afflictive obscurations) must be removed.

### *Three Special Times*

Although all bodhisattvas have sharp faculties compared with other practitioners, among themselves they may be of sharp, medium, or modest faculties. The path of preparation (especially the heat stage), the path of seeing, and the eighth ground come up repeatedly as times that special events may occur for bodhisattvas, depending on their level of faculties.

Signs of irreversibility (*avaivartika* or *avinivartanīya*) consist of forty-four signs, such as having stopped manifest self-grasping and not engaging in worldly talk. The forty-four signs illustrate that these bodhisattvas have an internal, stable realization of method and wisdom; they are now on an irreversible course to full awakening and will proceed directly to buddhahood. They no longer fear that self-interest or the aspiration for only their own liberation will hold them back from full awakening. The *Ornament of Clear Realizations* says that sharp-faculty bodhisattvas gradually receive signs of irreversibility on the four stages of the path of

preparation, middle-faculty bodhisattvas receive signs of irreversibility on the path of seeing, and modest-faculty bodhisattvas receive signs on the eighth ground.<sup>94</sup>

Previously it was said that after the middle level of the path of accumulation, one's bodhicitta does not degenerate. Wouldn't that mean that bodhisattvas are irreversibly on the path to full awakening at that time? Although those bodhisattvas do not reverse course from full awakening, they have not yet attained the *signs* of irreversibility because they still haven't generated the confidence that they will not succumb to any self-centered thought that would seek their own liberation. Attaining the signs of irreversibility occurs at one of the three times mentioned above.

According to a commentary on the *Ornament of Clear Realizations*, these three points on the path also correspond to the time when the respective bodhisattvas attain the fortitude of the nonarising of phenomena. Having unwavering conviction that all phenomena lack inherently existent arising or production, and developing fortitude and acceptance with respect to emptiness, bodhisattvas can now meditate on emptiness without hesitation. It is called "fortitude" because it supports bodhisattvas on the path, preventing them from backsliding into self-preoccupation and seeking only their personal liberation. Bodhisattvas realize that there are no inherently existent sentient beings to lead to nirvāṇa and no inherently existent bodhisattvas or buddhas who are leading them. All persons and phenomena, by their very nature, are free from inherent existence; all existents in saṃsāra and nirvāṇa are originally unborn and nonarisen and are empty of inherently existent birth, arising, and production.<sup>95</sup>

The Perfection of Wisdom sūtras and the *Ornament* say that at these three points of the path, the respective bodhisattvas may also receive a prophecy of their awakening from the Buddha. A prophecy occurs when a particular wheel-turning buddha indicates directly or indirectly the time in the future when this bodhisattva will attain full awakening.

There is some discussion about when the self-centered attitude seeking one's own liberation is overcome or no longer manifests. By one account, it may occur at these three times, according to whether a bodhisattva has sharp, medium, or modest faculties.

We can see why these and other occurrences may happen at these three times on the path: attainment of the union of serenity and insight on emptiness marks the beginning of the heat stage of the path of preparation; the first direct, nonconceptual realization of emptiness marks the beginning of the path of seeing; and the complete extinguishment of the afflictive obscurations marks the beginning of the eighth ground.

# 9 | Bodhisattva Grounds

## *Special Qualities of Each Ground*

The Śrāvaka Vehicle has eight grounds and the stages of the four pairs of approachers and abiders of stream-enterer, once-returner, nonreturner, and arhat, whereas the bodhisattva path is divided into ten bodhisattva grounds. These ten commence on the path of seeing and continue through the end of the path of meditation. Nāgārjuna tells us (RA 440):

Just as eight grounds are explained  
in [the texts of] the Śrāvaka Vehicle,  
so too, the ten grounds of bodhisattvas  
are taught in the Mahāyāna.

Candrakīrti's autocommentary to the *Supplement* defines a bodhisattva ground (CTB 131):

When a bodhisattva's unpolluted wisdom, conjoined with compassion and so forth, is divided into parts, each part is called a "ground" because it is a base for good qualities.

These grounds are all ultimate bodhicitta—an ārya bodhisattva's wisdom directly and nonconceptually realizing emptiness conjoined with compassion. This wisdom of meditative equipoise on emptiness is unpolluted by either ignorance or its latencies. In post-meditation time, the minds of bodhisattvas on the first seven grounds are polluted by ignorance, its seeds, and its latencies because ignorance may still manifest and phenomena appear truly existent. On the eighth ground and above,

ignorance and its seeds have been abolished and bodhisattvas' minds in post-meditation are polluted only by the latencies of ignorance. In this respect they are similar to arhats who have removed the afflictive obscurations but still have the cognitive obscurations.

Candrakīrti's definition of a bodhisattva ground is a general one. Ārya bodhisattvas do not nonconceptually realize emptiness every moment, but their minds are always conjoined with that realization. Although they are not explicitly conjoined as they are in meditative equipoise, since ārya bodhisattvas' wisdom realizing emptiness has not degenerated or been forgotten in post-meditation when they interact with others, their minds are always conjoined with ultimate bodhicitta.

Although the ten grounds are chiefly defined by their wisdom of meditative equipoise on emptiness, not every consciousness of an ārya bodhisattva is a ground. Ārya bodhisattvas' love, compassion, and first nine perfections also occur on the ten grounds, but they are not the wisdom directly realizing emptiness. Nor are ārya bodhisattvas' sense consciousnesses or their mental consciousnesses remembering past events considered grounds. Grasping true existence may arise on the first seven grounds, but it is quickly subdued and does not overwhelm their minds. Some manifest afflictions may also occur, although they are usually transmuted into a bodhisattva practice. An example is a bodhisattva's desire that manifests when they want to produce children who will benefit others.

Another example is that of a ship captain who was an ārya bodhisattva. Knowing that someone aboard the ship was going to kill the other five hundred passengers, with compassion he killed that man to prevent him from harming others and from creating the destructive karma of killing. Some scholars say that although his causal motivation was compassion, in order to actually take a life, there must have been a moment of anger or hatred at the time of doing the act; otherwise he wouldn't have been able to take a life. However, this is a topic of debate, with other scholars saying that if the preparation, action, and conclusion of the action were all done with compassion, no affliction was present. Still others say that on the first two grounds, bodhisattvas may have a little anger at the moment of doing the action, but on the third ground and above they would not because they have attained a surpassing practice of fortitude.

In any case, afflictions do not harm ārya bodhisattvas. It is like someone who has recovered from an illness, but slight remnants of the virus remain in their body without adversely affecting them.

Ārya bodhisattvas' unpolluted wisdom of meditative equipoise is nondual wisdom. Here "nondual" does not mean free from the two extremes of absolutism and nihilism, as it does when speaking of ordinary beings developing the right view. Instead, it means that the subject and object appear undifferentiable, not as two separate, distinct entities, that there are no appearances of veiled truths, and that there is no appearance of inherent existence. As bodhisattvas ascend the ten grounds, this wisdom purifies their minds of first the afflictive obscurations and then the cognitive obscurations. Once these pollutants have been removed, the continuity of the clear-light mind remains and buddhahood is attained.

Although ārya śrāvakas, like ārya bodhisattvas, have realized emptiness directly, their wisdom is not a bodhisattva ground due to several distinguishing factors. Ārya bodhisattvas' wisdom realizing emptiness is conjoined with great compassion and bodhicitta and possesses twelve special characteristics. In addition, ārya bodhisattvas' wisdom directly realizing emptiness arises from having meditated on emptiness during the bodhisattva paths of accumulation and preparation using a wide variety of reasonings to get at the meaning of emptiness.

Ārya bodhisattvas' one unpolluted wisdom of meditative equipoise on emptiness is divided into parts—its earlier and later moments—forming the ten bodhisattva grounds. Just as the earth is the foundation of life, each ground is the basis of certain qualities. The division of this one seamless wisdom is made due to differences in four features: the number of sets of twelve good qualities, the degree of their majesty of power, the surpassing practice of a particular perfection, and the fruitional rebirth they take. The grounds are not differentiated in terms of how they realize emptiness or the emptiness that is their object of observation.

However, there is a difference in the ten grounds in terms of seeing the true cessations that are gradually gained by eradicating the various grades of obscurations. All these true cessations are emptinesses of a mind that has overcome a certain portion of obscurations. To a mind directly perceiving these emptinesses there is no difference in the experience of perceiving the

emptiness of inherent existence. However, because the mind that is the basis of each true cessation is progressively cleansed, it is said that the emptiness of that mind is also progressively cleansed as more true cessations are gained. In other words, the successive uninterrupted paths of the ten grounds have increased power and greater ability to overcome subtler defilements. As a result, the successive liberated paths that they bring about have more true cessations and increased freedom from defilements. First-ground bodhisattvas directly realize the true cessation they have attained, but not the true cessations of the higher bodhisattvas, and the higher bodhisattvas directly realize the true cessations previously attained as well as the true cessation gained on their ground. Nāgārjuna describes this as a gradual process similar to the moon gradually waxing full. *In Praise of the Dharmadhātu (Dharmadhātustava 75–76)* says:

Just as the crescent moon  
is seen to increase day by day,  
similarly, those abiding on the grounds also  
are seen to increase in stages.

On the fifteenth day of the waxing moon  
the moon becomes complete.  
Similarly, on the completion of the grounds  
the truth body is fully manifest.

The following four features enable us to discern the division of this one seamless ultimate wisdom into the ten grounds:

(1) The *number of sets of twelve good qualities* a bodhisattva possesses increases. In one instant, a first-grounder can see a hundred buddhas, receive the blessing of a hundred buddhas, go to a hundred buddha lands, illuminate a hundred lands, vibrate a hundred world systems, live for a hundred eons, see the past and future of a hundred eons with wisdom, enter into and arise from a hundred concentrations, open a hundred doors of Dharma, ripen a hundred sentient beings, emanate a hundred bodies, and be surrounded by a hundred bodhisattvas. These twelve good qualities arise

just after the first-grounder arises from the meditative equipoise on emptiness.

The number of these sets of twelve increases with each ground. On the second ground a bodhisattva possesses one thousand sets of twelve good qualities; on the third ground, one hundred thousand; on the fourth ground, one billion; on the fifth ground, ten billion; on the sixth ground, one trillion; on the seventh ground, one sextillion; on the eighth ground, the number of atoms of a billion worlds; on the ninth ground, the number of atoms of ten sextillion worlds; and on the tenth ground, the number of atoms of an inexpressible number of an immeasurable number of buddha lands.

(2) The *degree of power increases*. Each successive ground has greater power to purify the various levels of obscurations and to advance to a higher path. The first ground abandons the acquired afflictions. The second through the seventh grounds sequentially abandon the great-great up to the small-middle rounds of afflictions. The first part of the eighth ground abandons the great-small, middle-small, and small-small rounds of afflictions. The eighth, ninth, and tenth grounds abandon the cognitive obscurations, and on the first moment of the Mahāyāna path of no-more-learning all obscurations have been totally abandoned.

(3) On each ground, bodhisattvas develop a *surpassing practice of a particular perfection*: generosity, ethical conduct, fortitude, joyous effort, meditative stability, wisdom, skillful means, unshakable resolve, power, and pristine wisdom. This occurs chiefly due to the power of wisdom that enables bodhisattvas to overcome manifest obstacles to that perfection and attain a superior level of its practice. Accomplishing this refines their body, speech, and mind. While bodhisattvas continue to practice that perfection—for example, joyous effort—on prior and subsequent grounds, on one particular ground they attain a special competence in it. In addition, all the other perfections become more excellent on each subsequent ground, even though they may not become surpassing on that ground.

(4) On each successive ground, bodhisattvas have *the choice to take higher rebirths* in which they have more power to benefit sentient beings. They do not take these rebirths because they seek fame, riches, or power, but to be able to influence an ever-growing number of beings in a positive way.

While the object and aspect of each of these wisdoms is the same, each ground should be understood not only as the unpolluted wisdom of meditative equipoise but also as the features it possesses in post-meditation. Due to the variances of these four features, the ability of the unpolluted wisdom of each ground differs. The *Ten Grounds Sūtra* says (CTB 136):

Just as the wise cannot express or see  
the trail of any bird across the sky,  
so none of the grounds of the Conqueror's heirs  
can be expressed. Then how can one listen?

However, [differences between these ultimate grounds] are  
explained in terms of gradual progression of a mere portion of  
those [grounds]:  
by way of love, compassion, and aspirational prayers,  
and not in terms of objects of activity of the mind.

Any description of each ground falls short of the actual experience of it; ultimate bodhicitta cannot be adequately expressed in words. We differentiate the grounds based on the four features above and in terms of the actualization of a new true cessation not present in the previous ground. These new true cessations come about due to the eradication of a certain portion of obscurations by the uninterrupted path of each ground. Due to this, the clarity of the mind's perception of emptiness increases, and with that increased clarity, the yogī's wisdom becomes capable of eliminating a new level of obscurations on the next ground. This progressive development of qualities and cleansing of the mind continues until nonabiding nirvāṇa, in which all obscurations have been forever eradicated, is attained.

## REFLECTION

---

1. In general, the ten bodhisattva grounds are one unpolluted wisdom of meditative equipoise on emptiness conjoined with compassion that is divided into its earlier and later moments.

2. This wisdom is divided into the ten grounds due to differences in four features: the number of sets of twelve good qualities, the degree of their majesty of power, the surpassing practice of a particular perfection, and the fruitional rebirth they are capable of taking.
  3. The grounds are not differentiated in terms of how they realize emptiness or the emptiness that is their observed object. However, in addition to the four features mentioned above, they also differ according to the obscurations that have been overcome and the true cessations attained.
- 

There are several ways to contemplate the qualities of the bodhisattvas on the ten grounds. One is to do so in terms of thinking of the qualities of the Saṅgha Jewel that we take refuge in. Doing this helps us to understand their abilities to protect us from saṃsāra and guide us on the path such that our faith in the ārya bodhisattvas and buddhas increases and becomes stable.

Another way to contemplate the qualities of the Saṅgha Jewel is by seeing them as the qualities we have the ability to develop and will attain as we gradually practice the path and ascend the bodhisattva grounds. This gives us great inspiration and self-confidence to practice now because we have a clearer vision of the kind of person we can become and how we can contribute to the well-being of others.

The verses below that commence the description of each ground are from Nāgārjuna's *Precious Garland* (RA 441–61). As you read the qualities and realizations of these remarkable bodhisattvas, let your mind soar and imagine what having these realizations would be like. Be aware that these are not just qualities that others possess; they are also qualities that you are capable of cultivating and bringing to completion. The *Ten Grounds Sūtra* describes the practices undertaken and perfected on the ten grounds that culminate in full awakening. The following quotations from this sūtra are from the Chinese canon.

### *First Ground, the Joyous*

The first of these is called “the Joyous”

because these bodhisattvas experience great joy  
since the three fetters have been eliminated  
and they have been born into the tathāgata family.

Through the maturation of that [ground],  
the perfection of generosity becomes supreme,  
they are able to make a hundred worlds quake,  
and they become the Great Lord of Jambudvīpa.

First-grounders are called “the Joyous” (*pramuditā*) because they have eliminated the portion of afflictions to be abandoned on the path of seeing—all acquired afflictions and most notably the acquired forms of three fetters: view of a personal identity, view of bad rules and practices, and deluded doubt. Vasubandhu in the *Treasury of Knowledge* explains why these three are specifically mentioned (CTB 141):

Not wishing to go, mistaking  
the path, and doubting the path  
obstruct progress to liberation.  
Therefore the three are indicated.

If we want to go from Dharamsala to San Francisco, we must first have the wish to go there, then we must learn the correct route, and finally we have to clear all doubts about going and the route we’ll take. Similarly, to attain awakening we must first eliminate the acquired form of the view of a personal identity, which hampers our aspiration to attain awakening. Afraid of losing the I and mine that the view of a personal identity clings to so strongly, we hesitate and back away even though we have the opportunity to practice the path.

Because of our immature understanding of selflessness, this fear often manifests as laziness, busyness, or a multitude of excuses that justify our resistance to learning and practicing the Dharma. Once we have overcome this and our aspiration to attain awakening is healthy and strong, we need to find and follow the correct path to accomplish our spiritual aim. Doing this necessitates overcoming the view of bad rules and practices that holds bad

conduct and incorrect practices as supreme. Otherwise, there is great danger of following a wrong path that will lead us not to awakening but to the unfortunate realms.

When we find the correct path, our certainty may be weak, in which case dispelling the vacillating mind of doubt is essential to practice the path effectively. If doubt remains in our mindstream, our efforts to practice will be like sewing with a two-pointed needle, making progress impossible. The acquired form of these three fetters is abandoned on the first ground, while the innate levels of these afflictions are eliminated on the second through seventh grounds.<sup>96</sup>

The coarse form of the view of a personal identity grasps the I and mine to be a self-sufficient substantially-existent person, and based on that ignorance, coarse afflictions arise. The subtle form of the view of a personal identity grasps the I and mine to be an inherently existent person, with subtle afflictions arising from this ignorance. On the second through seventh grounds, different levels of both the coarse and subtle forms of the view of a personal identity and the afflictions associated with them are gradually abandoned. At the beginning of the eighth ground, they have been completely overcome.

First-ground bodhisattvas obtain a mental body.<sup>97</sup> The causes of a mental body are unpolluted karma<sup>98</sup>—the mental factor of intention that is the subtle effort supporting the motivation to assume a mental body—and the base of latencies of ignorance,<sup>99</sup> which is the cognitive obscurations that give rise to the subtle dualistic view. Here we see that in both Sūtra and Tantra, bodhisattvas attain a similitude of a buddha's form body before attaining buddhahood.

First-grounders are said to outshine śrāvaka and solitary realizer arhats by way of lineage. The analogy is given of a monarch's child and a senior government minister. The minister may be wise and powerful now but can never become the monarch, whereas although young, the monarch's child is of royal lineage and will one day ascend the throne. In the same way, although at this moment Fundamental Vehicle arhats are free from saṃsāra and first-grounders are not, these bodhisattvas will definitely become buddhas. At present first-grounders do not outshine Fundamental Vehicle arhats by way of their wisdom, since the arhats are liberated from saṃsāra,

whereas they are not; however, these bodhisattvas outshine the arhats by way of lineage. Through generating great compassion, great resolve, a great collection of merit, and conventional and ultimate bodhicitta, first-grounders have entered the lineage of a Tathāgata Monarch of Doctrine and will not fall back to the Śrāvaka Vehicle. One day they will become fully awakened buddhas.

First-ground bodhisattvas have attained a surpassing practice of generosity. They joyfully give their possessions, wealth, and even their bodies without any attachment or sense of loss. While bodhisattvas on the paths of accumulation and preparation can freely give their possessions and wealth, they experience mental discomfort when they think of giving their bodies and they fear the physical pain of doing so. Although ordinary bodhisattvas on the path of preparation may still give their bodies, they do so with more effort and less joy than first-ground bodhisattvas, who are completely delighted.

The ripening result is that first-grounders can choose to be born as the Great Lord of Jambudvīpa, the southern continent where we presently reside according to the ancient Indian view of the cosmos.

In the *Ten Grounds Sūtra*, Vajragarbha Bodhisattva speaks of the joy of a first-ground bodhisattva (DBS 46–48):

I have joyful thoughts due to having turned away from and  
abandoned all worldly states;

I have joyful thoughts due to entering the uniform equality of all  
buddhas;

I have joyful thoughts due to departing far from the grounds of  
the common person;

I have joyful thoughts due to drawing close to the grounds of  
knowledge;

I have joyful thoughts due to severing all vulnerability to  
entering any of the wretched destinies;

I have joyful thoughts due to becoming a refuge for all beings;

I have joyful thoughts due to drawing near to and seeing all  
buddhas;

I have joyful thoughts due to being born into the domain of the buddhas;

I have joyful thoughts due to entering the ranks of all bodhisattvas;

and I have joyful thoughts due to leaving behind the fear of all circumstances that would cause hair-raising terror.

Why is it that when this bodhisattva mahāsattva gains the Joyous Ground, all types of fearfulness are immediately left far behind? In particular, they are: the fear of failing to survive; the fear of a bad reputation; the fear of death; the fear of falling into the wretched destinies; and the fear of the awesomeness of great assemblies...

It is because this bodhisattva has abandoned any perception of a self. He does not even covet his own body. How much less does he covet whatever things he happens to use. As a consequence, he has no fear of failing to survive.

His mind does not cherish any hope of receiving offerings or reverence from anyone, but instead thinks, “I should make offerings to beings of whatever they require.” Therefore he has no fear of a bad reputation.

He has abandoned any view conceiving of the existence of a self. Because he has no perception of the existence of a self, he has no fear of death.

He also thinks, “When, after I have died, I am reborn, I most certainly will not take rebirth somewhere apart from the buddhas and bodhisattvas.” As a result, he has no fear of falling into wretched destinies.

He thinks: “The object of my bodhicitta and that in which I delight have no equal anywhere, so how could anything be superior to it?” Consequently, he has no fear of the awesomeness of great assemblies...

Children of the Buddha, these bodhisattvas take great compassion as foremost and possess a profound and vast

resolve that is solid. Thus they redouble their diligent cultivation of all roots of goodness.

### *Second Ground, the Stainless*

The second ground is called “the Stainless” because [bodhisattvas’] tenfold activities of body, speech, and mind are stainless, and they naturally adhere to those [ethical activities].

Through maturation of that [ground] the perfection of ethical conduct becomes supreme; they become glorious rulers with the seven treasures, wheel-turning monarchs, beneficent to beings.

Through its maturation they become monarchs that rule all four continents, and they gain expertise in turning beings away from unethical behavior.

Second-ground bodhisattvas are called “the Stainless” (*vimalā*) due to their extremely pure ethical conduct; they restrain from engaging in the ten nonvirtuous actions and any other unethical behavior even in their dreams. Although first-grounders have no transgressions, second-grounders have attained a surpassing practice of ethical conduct and naturally abide in the ethical codes they have adopted without any difficulty. Not only do they abandon all naturally negative actions, but they also keep their precepts faultlessly, thus abandoning all actions proscribed by the Buddha. As a result they have no regret or remorse due to committing transgressions. In addition, they engage in all actions that comprise proper ethical conduct. For monastics this entails following all activities that the Buddha prescribed for monastics.

It is said that those with pure ethical conduct have the “scent of pure morality”—a delightful fragrance around them—and a peaceful radiance that comes from their having abandoned cruelty and harmful intent. Sometimes we meet people whose calm and compassionate energy

immediately puts us at ease; we trust and feel safe around them because we sense that they have no intention to harm us or anyone else. This comes from subduing the actions of their body, speech, and mind by abiding in pure ethical conduct. Candrakīrti says that these bodhisattvas are serene and radiant like an autumn moon. Their serenity derives from restraining their senses and their radiance comes from having a clear body. In addition, they do not grasp their ethical conduct or precepts as inherently existent, differentiating their practice from that of ordinary beings whose minds are immersed in ignorance. Likewise, if they do the twelve austere practices, they aren't polluted by conceit because they don't see themselves or these practices as inherently existent.<sup>100</sup> The *Heap of Jewels Sūtra* distinguishes such bodhisattvas from other bodhisattvas whose ethical conduct appears flawless but is polluted by ignorance (CTB 195):

Kāśyapa, some monastics have proper ethical conduct; they abide restrained by the prātimokṣa ethical code. Their rites and spheres of activity are perfect, and they view even coarse and subtle transgressions with concern. They thoroughly assume and train in the precepts and possess pure activities of body, speech, and mind. Hence their livelihood is thoroughly pure, but they propound a self. Kāśyapa, they are the first of those seeming to have proper ethical conduct that in fact is faulty.... Furthermore, Kāśyapa, even though some monastics thoroughly assume the twelve austere practices, they view them with apprehension [of inherent existence]. Abiding in the grasping of I and mine [as inherently existent], Kāśyapa, they are the fourth of those whose ethical conduct appears to be proper but is faulty.

These bodhisattvas may choose to take birth as monarchs who rule all four continents of our world system and who possess the seven treasures that we present in the maṇḍala offering—the precious wheel, jewel, queen, minister, elephant, horse, and general—that symbolize worldly power. By using this power with wisdom, these bodhisattvas lead their followers on the path.

Although the ripening results of ārya bodhisattvas may seem to be saṃsāric rebirths, they are not; they are produced by unpolluted virtue created on the bodhisattva path. This is similar to the Buddha’s signs and marks arising as the ripening results of the unpolluted paths of the ten grounds.

### *Third Ground, the Luminous*

The third ground is [called] the Luminous because the light of peaceful wisdom arises, the concentrations and superknowledges have arisen, and attachment and anger have completely ceased.

Through the maturation of that [ground], they practice supreme fortitude and joyous effort; they become the celestials’ skilled great lord who averts all sensual desire.

The third ground is called “the Luminous” (*prabhākarī*) because with great fortitude that is not concerned for their body or life, these bodhisattvas seek the transmitted Dharma and share the light of the Dharma with others. The third ground receives its name because the fire of wisdom burns brightly, emitting a light that consumes all dualistic elaborations during meditative equipoise on emptiness. In addition, just as a copper-colored light appears in the sky just before sunrise, in the times of subsequent attainment a red-orange light appears, heralding the upcoming cessations of defilements. This light does not appear to the mind in meditative equipoise on emptiness, although a light appears to be shining on them when they are in this meditative state. When they arise from meditation, the copper-colored light appears to their wisdom of subsequent attainment like the radiance of red-orange light at dawn.

On this ground, bodhisattvas gain the surpassing practice of fortitude. Their practice of fortitude is supramundane because it sees the three—themselves as the one practicing fortitude, the action of practicing fortitude, and the person or suffering that is the object of their fortitude—as empty of

inherent existence yet arising dependently, like reflections. Their anger and resentment are not suppressed or repressed, but have been dissolved as a result of their practice of fortitude. No matter how severely someone criticizes, rebukes, or beats them, their minds are not disturbed by anger. Instead they have deep compassion for the person who has harmed them. Wouldn't it be wonderful to have this ability?

In addition, third-grounders do not blame others for their problems, nor do they hold grudges seeking to retaliate for previous harms. Even if someone were to torture them by slowly cutting away their flesh, these bodhisattvas would have great compassion for their torturers, knowing that they will experience extreme suffering as a result of their nonvirtuous action.

In the *Supplement*, Candrakīrti discusses the way a third-ground bodhisattva who has achieved the surpassing practice of fortitude deals with suffering and harm (MMA 29):

Though another, unjustifiably disturbed by anger,  
cuts from his body flesh and bone  
bit by bit for a long time, he generates  
strong fortitude toward his mutilator.

This example of practicing fortitude is rather extreme, and fortunately few people find themselves having to undergo such torture. Nevertheless, the example is useful to illustrate this bodhisattva's degree of fortitude and know that we can attain the same through practice.<sup>101</sup>

In this situation, the bodhisattva had not acted in a way to provoke such strong anger in the attacker. In addition, the harm is extreme—the flesh is being cut from the bodhisattva's body slowly, not quickly; it is being cut one bit at a time, not all at once; and the cutting lasts a long time. Most of us would react with fear or anger, but this bodhisattva has transformed his mind so thoroughly that these emotions do not arise in him. Instead he has fortitude and compassion for the perpetrator, knowing that this person's mind is overcome by tremendous ignorance and confusion and that he is creating the cause to experience intense suffering in the hell realms.

Although first- and second-ground bodhisattvas are not disturbed when their bodies are cut, the depth of the fortitude and compassion of the third-grounder is greater, and thus he attains surpassing fortitude. This bodhisattva is totally free from self-centeredness and truly cherishes others. Thus he is focused more on the situation of the other person—the other’s confused state of mind and future suffering—than on his own.

The surpassing fortitude of third-grounders is also due to their realization of emptiness. Candrakīrti said (MMA 30):

For a bodhisattva who sees selflessness,  
*who* is being cut by *whom*, at *what time*, and in *what manner*?  
Because he sees all phenomena as resembling reflections,  
he will endure [all such harms].

In other words, this bodhisattva sees all the elements of the harm—herself as the one being cut, the person cutting her, the method of cutting, and the time the cut is made—as being empty of inherent existence and existing similar to illusions in that they do not exist in the way they appear. This wisdom protects her mind from anger and enables her to bear the suffering without physical or mental pain.

When it is said that a particular perfection becomes surpassing on a certain ground, it doesn’t mean the other nine perfections don’t also improve at that time. They do. It is simply that the particular perfection is refined in a more notable way.

Third-grounders also excel in the higher training in concentration and develop special abilities to enter into and arise from the four dhyānas of the form realm and the four meditative absorptions of the formless realm quickly and easily. The mental control and concentration necessary to do this are difficult-to-attain feats. These bodhisattvas have also attained the four immeasurables and five superknowledges that advance their practice and enable them to benefit others in a superior way due to their profound concentration. By the power of their concentration, these bodhisattvas have suppressed the manifest afflictions of the three realms and greatly diminished the fetters of sensual desire, attachment to the form and formless realms, and ignorance.

Third-grounders have abandoned the attachment and anger to be abandoned on the third ground; further levels of these afflictions will be abandoned on higher grounds.

These bodhisattvas may choose to be born as the great lord of the Heaven of the Thirty-Three, as Indra, or as other powerful gods. In these forms, they work to benefit others.

## REFLECTION

---

1. Imagine practicing the perfection of generosity the way a bodhisattva does. Although you may not be capable of practicing it as a bodhisattva does now, imagining it will open your mind and expand your heart.
  2. Similarly, imagine practicing the perfections of ethical conduct and fortitude as those ārya bodhisattvas do.
- 

### *Fourth Ground, the Radiant*

The fourth is called “the Radiant”  
because the radiance of true wisdom arises,  
and [bodhisattvas] distinctively develop  
all the harmonies to awakening.

Through the maturation of that [ground]  
they become the celestial ruler in the abode of the Suyāma [deities].  
They become skilled,  
destroying the source of the view of a personal identity.

The fourth ground is called “the Radiant” (*arciṣmatī*) because during both meditative equipoise and subsequent attainment, these bodhisattvas radiate the light of true wisdom. This light is far superior to that of the third ground and arises owing to their increased wisdom of the subtle points of the thirty-seven harmonies to awakening: the four establishments of mindfulness, four supreme strivings, four bases of spiritual power, five faculties, five powers,

seven awakening factors, and eightfold path of the āryas. The thirty-seven harmonies were extensively explained in *Following in the Buddha's Footsteps* and are wonderful practices that propel bodhisattvas on the path.

In addition, fourth-grounders attain the surpassing practice of joyous effort. This comes about because on the third ground they attained a special pliancy generated from their higher training in concentration, which they use on the fourth ground to totally eliminate all forms of laziness. These bodhisattvas are delighted to create virtue and are not impeded by laziness. Since discouragement, self-criticism, and low self-esteem—which are all forms of laziness—create big hindrances for us, it is important to note that these wrong consciousnesses can be abandoned and replaced by joyous effort and strong self-confidence.

The view of a personal identity grasps the I and mine to be an inherently existent person, and based on this, afflictions arise; its source is self-grasping ignorance. On the second through seventh grounds, progressive levels of ignorance, view of a personal identity, and the afflictions associated with them are gradually abandoned. At the beginning of the eighth ground, they are completely overcome. Here on the fourth ground, the level of ignorance that is the source for its corresponding level of view of a personal identity and afflictions is abandoned.

The ripening result is to choose to take birth as the ruler of the Suyāma Heaven, the third of six desire-realm heavens.

Regarding the qualities of fourth-ground bodhisattvas, the *Ten Grounds Sūtra* discusses the mental and personal qualities bodhisattvas gain by cultivating the path (DBS 108–9):

[To leave behind wrong views, attachment, and actions], the bodhisattva mahāsattvas dwelling on the Radiant Ground confront all of the attachments related to the view imputing the existence of a true self in association with the body. These include the attachment to the existence of self, attachment to the existence of a being, and attachments to the existence of a person, an entity possessed of a lifespan, a knower, a perceiver in association with clinging to the five aggregates, the twelve sense sources, or the eighteen

constituents. They observe that whatever arises in this connection, including whatsoever is contracted or extended, is withdrawn or set forth, or is caused to emerge or sink away is all carried forth by discursive thought's perception of something deemed to be a refuge or an individual territory worthy of affectionate attachment, or something worthy of being valued as precious. Consequently they completely sever all of these attachments.

[To gain mental and personal qualities by cultivating the path] this bodhisattva then redoubles his vigor in the factors constituting requisites for the path that are developed through wisdom and skillful means. In accordance with what he cultivates, his mind becomes ever more gentle, harmonious, tractable to use, mentally inexhaustible, inclined to seek increasingly superior qualities, possessed of increased wisdom, devoted to rescuing all beings in the world, compliant with teachers, respectful in receiving teachings, and compliant in practice with what has been taught.

At this time, this bodhisattva is cognizant of kindnesses received, knows to repay kindnesses, has a mind that becomes ever more inclined to congeniality and goodness, dwells happily together with others, is possessed of a straight mind, is possessed of a pliant mind, is free of any form of deviousness, implements the practice of right meditative concentration, is free of arrogance and is consequently easy to engage in discussion, complies with teaching instructions, and realizes the intent of those who speak to him. It is in just such a manner that he becomes completely equipped with the good mind, the pliant mind, the quiescent mind, and the patient mind.

### *Fifth Ground, the Indomitable*

The fifth is [called] the Indomitable,

since one cannot be subdued by any demons,  
and one gains expertise in knowing  
the subtle meaning of the āryas' truths and such.

Through the maturation of that [ground]  
they become the celestial ruler of Tuṣita  
and refute all the tīrthikas' (non-Buddhists') beliefs  
concerning the efficacy of austerities.

The fifth ground is called “the Indomitable” (*sudurjayā*) because these bodhisattvas cannot be overcome by māras—worldly demons and ill-intentioned gods. They attain the surpassing practice of meditative stability that enables them to enter and emerge from the dhyānas and formless-realm absorptions. Doing this requires great mental skill and flexibility, for these meditative states are much more refined than our ordinary state of mind. These bodhisattvas can enter the first dhyāna and after a while emerge from it and immediately enter a higher meditative absorption, remain there for a time, and then emerge quickly and easily enter into a lower level of meditative absorption. This increase in ability from the fourth ground results from their having eliminated more grades of afflictions, created more merit, and strengthened their concentration.

Their wisdom that realizes the four truths has increased, and this brings greater ability to refute non-Buddhist assertions that claim the practice of extreme asceticism is necessary to overcome desire. These bodhisattvas can also easily overcome the wrong views of non-Buddhists regarding duḥkha, its origin, its cessation, and the path to that cessation. In this way they greatly benefit the holders of wrong views by directing them to the correct and efficacious path to liberation.

All phenomena are included in the two truths: veiled (conventional) and ultimate. Of the four truths of the āryas, true duḥkha, true origins, and true paths are conventional truths, and true cessations are ultimate truths, emptinesses. The four truths are set forth in order to show that true duḥkha and true origins are thoroughly afflictive phenomena to be abandoned, and true cessations and true paths are pure phenomena to be assumed. Unlike the essentialists who say that reliable cognizers directly realize only

impermanent phenomena, Mādhyamikas assert that permanent phenomena, such as emptiness and true cessation, can be directly realized by reliable cognizers. Both emptiness of inherent existence and true cessations are directly realized in meditative equipoise, and the attainment of nirvāṇa involves directly realizing emptiness and selflessness. This is a stark difference between the essentialists—Yogācārins and below—and Mādhyamikas. Think about it—one says the ultimate nature of all phenomena can be seen directly by a reliable cognizer, the other says it cannot.

The object of negation—the inherent existence of all phenomena—does not exist at all; its negation is an ultimate truth. Nāgārjuna says in *Praise of the Dharmadhātu* (*Dharmadhātustava* 1–2):

Homage and obeisance to the dharmadhātu.  
When it is not thoroughly understood,  
one wanders in the three existences,  
although it does in fact abide in all sentient beings.

Just this is the truth body  
and the nirvāṇa that is the purity  
from having purified that which serves  
as the cause of saṃsāra.

Here “dharmadhātu” means emptiness. The empty nature of all phenomena is covered by defilements, the chief of which is the ignorance grasping inherent existence. When we don’t understand the emptiness of inherent existence, we take rebirth again and again in the three realms of saṃsāra. The emptiness of the mind is purified when the mind, which is the base of that emptiness, is purified. That is, when all obscurations are eradicated from the mind, the emptiness of the mind becomes a nirvāṇa and a truth body—specifically the nature truth body, the emptiness and true cessation of a buddha’s mind.

There are two objects of negation: objects negated by reasoning and objects negated by the path. Inherent existence, which has never existed and will never exist, is an *object negated by reasoning*; inherent existence can

be disproven by reasoning. The defilements that obscure the mind and are the cause of saṃsāra are *objects negated by the path*; that is, the path removes these obscurations from the mind such that they can never reappear. These defilements are knowable phenomena, existents. Since they have not entered the nature of the mind, they are adventitious and can be eliminated. If these objects of negation could not be overcome, practicing the path would be useless.

In summary, the Buddha's mind has dual purity. From beginningless time it has been empty of inherent existence. In addition, when the adventitious defilements are eradicated by the path realizing emptiness, the mind is purified of adventitious defilements too. The purification of each grade of defilement of the mind is a true cessation. The complete purification of both objects of negation from the mind is nonabiding nirvāṇa and the truth body.

The compassion of fifth-grounders becomes indomitable as well. The *Ten Grounds Sūtra* (DBS 119–20) says:

At this time, the bodhisattva's great compassion for beings becomes ever more supreme and directly manifest, and he is then able to bring forth the light of great kindness. Having acquired the power of wisdom such as this, he never forsakes any being and always strives to acquire the Buddha's wisdom. He contemplates all past and future conditioned phenomena in accordance with reality...

He then thinks: "Common people and other beings are all so very strange. Because of their ignorance and afflictions, they take on a countless and unbounded number of bodies that have been destroyed, are now being destroyed, and will be destroyed in the future. In this way, they are forever subject to births and deaths. They are unable to bring forth thoughts of renunciation for the body, but rather ever increase the mechanisms for producing bodies subject to suffering. They are always swept along in the waters of the stream of cyclic births and deaths wherein they are unable to go against its current. They take refuge in the abode of the

five aggregates and are unable to abandon it. They do not fear the poisonous snakes of the four great elements and are unable to extricate the arrows of their own pride and views. They are unable to extinguish the blazing fire of their attachment, animosity, and confusion, are unable to destroy the darkness of ignorance and afflictions, and are unable to dry up the great sea of their cravings and attachments.

“They do not seek to encounter the great ārya and guide who possesses the ten powers. They always follow along with resolute intentions influenced by māras and, within the city of cyclic births and deaths, they are for the most part diverted by bad ideation and mental discursion. Such suffering, solitary, and poverty-stricken beings have no one to rescue them, no one to shelter them, and no one possessed of the ultimate path. There is only myself, this one person, who, with no comparable companions, will proceed to cultivate and accumulate merit and wisdom.

“I will then use these provisions to cause all these beings to dwell in a state of utmost purity and then continue on in this until they are caused to acquire the Buddha’s unimpeded power of wisdom with respect to all phenomena.”

The strength of fifth-grounders’ compassion propels them to increase their wisdom in order to fulfill their resolve to liberate all sentient beings. The ripening result of a fifth-grounder is having the choice to be born as the ruler of Tuṣita, the fourth heaven of the desire realm. This is not the Tuṣita where Maitreya Buddha abides.

### *Sixth Ground, the Approaching*

The sixth is called “the Approaching” because they approach the qualities of a buddha and are enhanced by the attainment of cessation through uniting insight and serenity.

Through the maturation of that [ground],  
they become lord of the Celestials Who Delight in Emanations.  
Unsurpassable by the śrāvakas,  
they eliminate arrogant pride.

The sixth ground is called “the Approaching” (*abhimukhī*) because these bodhisattvas are approaching awakening. They attain a surpassing practice of the perfection of wisdom, as well as superior wisdom knowing the twelve links of dependent origination. Combining this wisdom with the surpassing practice of meditative stability on the fifth ground, they attain a powerful union of serenity and insight focused on emptiness that enables them to eradicate afflictions and their seeds.

People who attain serenity before entering a path practice worldly insight, which sees the disadvantages of lower levels of meditative absorption and the advantages of higher levels. By meditating in this way, they can attain higher levels of absorption. Such practice is also done by non-Buddhists. Buddhists who have realized emptiness by means of an inferential cognizer before entering a path have the wisdom arising from reflection on emptiness but not the wisdom arising from meditation on emptiness. They do not have a union of serenity and insight on emptiness. It is only after they enter a path and attain the union of serenity and insight on emptiness that marks entry into the path of preparation that they gain the wisdom arising from meditation on emptiness. At the sixth ground their union of serenity and insight and their wisdom arising from meditation on emptiness are much stronger and clearer than on the path of preparation. Now they have direct perception of emptiness, greater merit, and their concentration and wisdom are more refined.

The first six grounds correlate with development in the three higher trainings. On the first ground they excelled in generosity, which is the foundation for the three higher trainings. On the second ground, they gained surpassing ethical conduct, which includes the higher training in ethical conduct. On the third ground, their dexterity in concentration increases, advancing the higher training in concentration. On the fourth, fifth, and sixth grounds, bodhisattvas develop the higher training in wisdom: on the fourth ground, they become skilled in the wisdom of the coarse and subtle

aspects of the thirty-seven aids to awakening; on the fifth ground they increase their competence in the wisdom of coarse and subtle aspects of the four truths of āryas; and on the sixth ground they cultivate great knowledge in the wisdom of the forward and reverse orders of the twelve links of dependent origination.

From the first ground onward, ārya bodhisattvas have attained the absorption on cessation (*nirodha-samāpatti*), a very refined state in an ārya's continuum in which coarse feelings and discriminations associated with the subtle mental primary consciousness have ceased. Upon attaining the sixth ground they directly see the emptiness of dependent arising and attain the uncommon absorption on cessation due to gaining a surpassing perfection of wisdom. They can remain for a long time in deep absorption on emptiness in a way that they could not on previous grounds. Here "cessation" means emptiness, and it is a pure emptiness in which all objects of negation—from self-sufficient substantial existence up to inherent existence—have been ceased in that they do not appear to a mind of meditative equipoise on emptiness. This absorption in cessation is unique because it is supported by a superior union of serenity and insight and the surpassing perfection of wisdom.

By the power of their perfection of wisdom, sixth-grounders directly perceive the equality of saṃsāra and nirvāṇa. That is, they directly perceive that the impure world of saṃsāra and pure nirvāṇa are equal in that they are both empty of inherent existence. They move toward the end of all pollutions, yet the motivation "I will bring all other beings to awakening with me" remains vivid in their minds. Although the "end of pollutions" (the perfect end) usually refers to the ability to place the mind on suchness for as long as one wishes, here it indicates the uncommon absorption of cessation, which is deep meditation on emptiness.

Although it may be tempting for them to remain in that meditative absorption and not emerge for a long time, their great compassion and bodhicitta will not allow them to do that. Wishing to protect sentient beings who are drowning in the ocean of saṃsāra, they instead deliberately take birth in the desire realms. They have total mastery in appearing as ordinary beings in many different forms in order to work for the welfare of sentient beings.

When they emerge, in post-meditation times true-grasping may arise, but only rarely and weakly. Everything they encounter appears to them to be like a reflection in a mirror—it appears truly existent but they know that appearance is totally false.

These bodhisattvas also acquire the three doors to liberation, and understanding these three correctly, their compassion does not flag as they continue to create the causes for supreme awakening. While doing that, they consciously “take rebirth in saṃsāra”—that is, they generate manifestations that benefit sentient beings who circle in saṃsāra. This illustrates that these bodhisattvas know that although all phenomena lack inherent existence, they exist conventionally as dependent arisings (DBS 140–42).

At this time, pursuant to his reflections on the twelve links of causes and conditions, the bodhisattva contemplates and observes the nonexistence of self, nonexistence of beings, nonexistence of any entity possessed of a life, nonexistence of any person, the absence of any inherently existent nature, and the transcendence of any agent of actions, any director of actions, or any subjective entity. He observes that, because they belong to a multiplicity of subsidiary causes and conditions, they are devoid of anything at all that exists. When he contemplates in this manner, he then acquires the direct manifestation of *the emptiness door to liberation* (*śūnyatāvimokṣamukha*). Due to perceiving the cessation of these phenomena so that they no longer demonstrate any continuity of existence, he acquires what is known as the direct manifestation of *the signlessness door to liberation* (*ānimittavimokṣamukha*). Having realized both of these things, he then no longer feels any pleasure in taking on rebirths with the sole exception of doing so to implement the mind of great compassion in the transformative teaching of beings. He then acquires the direct manifestation of *the wishlessness door to liberation* (*apraṇihitavimokṣamukha*). When the bodhisattva cultivates these three doors to liberation, he abandons any mark of others or a self,

abandons any mark of any agent of actions or anyone who undergoes experiences, and abandons any mark of either existence or nonexistence.

His mind of compassion thus progressively increases. As a result of his emphasis on the importance of the mind of compassion, he becomes diligent in the practice of joyous effort. Thus, whichever factor facilitating awakening he has not yet brought to complete fulfillment, he then wishes to bring to complete fulfillment...

Children of the Buddha, so it is that the bodhisattva realizes the manifold faults of conditioned dharmas and realizes that they are devoid of any inherently existent nature, that they exist apart from any characteristic of solidly established durability, and that they are neither produced nor destroyed. Even so, he becomes conjoined with the great kindness and great compassion, refrains from forsaking beings, and then immediately acquires the direct manifestation of the light of unimpeded perfection of wisdom.

Having acquired just such wisdom, he proceeds to completely perfect the cultivation and gathering together of the causes and conditions for acquiring the unsurpassed, complete, and perfect awakening (*anuttarasamyaksambodhi*), and yet, even in doing so, refrains from abiding in the midst of conditioned phenomena. He contemplates the nature of conditioned phenomena as characterized by quiescent cessation and yet refrains from abiding in this either. This is because he wishes to completely perfect the factors leading to the unsurpassable awakening.

Sixth-grounders cannot be surpassed by Fundamental Vehicle arhats in terms of intelligence, and from the seventh ground onward bodhisattvas outshine these arhats through the power of their wisdom. Due to the excellent qualities of sixth-ground bodhisattvas—their surpassing practice

of the perfection of wisdom, their inability to be surpassed by Fundamental Vehicle arhats in terms of intelligence, and their proximity to the seventh ground when they will outshine Fundamental Vehicle arhats through their wisdom—these bodhisattvas overpower the arhats’ “arrogance.” Of course arhats have already abandoned arrogance, so this points to the differences between arhats’ self-oriented complacency with having attained liberation and ārya bodhisattvas’ continued enthusiasm that will lead them to buddhahood.

The ripening result is having the choice to take birth in the Heaven of the Celestials Who Delight in Emanations, the fifth desire-realm heaven.

## REFLECTION

---

The first six grounds correlate with development in the three higher trainings.

1. Bodhisattvas excel in generosity, which is the foundation for the three higher trainings.
  2. They gain surpassing ethical conduct, which includes the higher training in ethical conduct.
  3. Their dexterity in concentration increases, advancing the higher training in concentration.
  4. They become skilled in the wisdom of the coarse and subtle aspects of the thirty-seven aids to awakening.
  5. They increase their competence in the wisdom of coarse and subtle aspects of the four truths of āryas.
  6. They cultivate great knowledge in the wisdom of the forward and reverse orders of the twelve links of dependent origination. Grounds 4–6 pertain to the higher training in wisdom.
-

## *Seventh Ground, the Far Advanced*

The seventh is [called] the Far Advanced because the number [of excellent qualities] has advanced far, since on this [ground] they enter moment by moment into the equipoise of cessation.

Through the maturation of that [ground], they become the powerful ruler of the celestials. They become a great leader of knowledgeable teachers, knowing the realizations of the āryas' [four] truths.

The seventh ground is called “the Far Advanced” (*dūraṅgamā*) because these bodhisattvas’ surpassing perfection of skillful means in meditation and their intelligence has advanced far from the previous ground. In each instant they are adept at absorbing into and arising from the equipoise of cessation in which all elaborations of true existence have ceased. While in meditative equipoise on emptiness, the minds of seventh-grounders are nondually fused with emptiness, and a moment later they are able to emerge from that meditation in which only emptiness, the ultimate truth, appears, and immediately perceive conventionalities in all their numerous varieties. Then in another instant, they are able to reimmerse their minds in nonduality. Although Fundamental Vehicle arhats realize the same emptiness as bodhisattvas, they are not able to do this.

On the first ground bodhisattvas outshine śrāvakas in terms of lineage because their wisdom is supported by bodhicitta and the method aspect of the bodhisattva path. Although first-grounders are not equal to Fundamental Vehicle arhats in terms of afflictions that have been overcome, they later attain full awakening, whereas arhats remain in the personal peace of nirvāṇa. On the seventh ground, bodhisattvas outshine Fundamental Vehicle arhats through the power of their wisdom due to their unique ability to enter into and arise from meditative equipoise on emptiness in each moment. While first-grounders are like the monarch’s young children, seventh-grounders resemble educated and competent youths who will soon ascend the throne. The *Ten Grounds Sūtra* says (DBS 285): “On this seventh

ground, it is because of the power of their actual practice that these bodhisattvas cannot be overcome by any śrāvaka or solitary realizer learner,” and, “Now, on this ground, the bodhisattva achieves superiority [over Fundamental Vehicle arhats] due to the power of his own knowledge.”

When these bodhisattvas become buddhas, they will actualize the perfect cessation in which they will remain in meditative equipoise on emptiness forever and simultaneously engage in multifarious activities to benefit sentient beings. This is a remarkable and unique quality of buddhas, for whom meditative equipoise on emptiness and subsequent attainment are not contradictory and occur simultaneously in one consciousness. Seventh-ground bodhisattvas have advanced far on the path that will culminate in their ability to do this (DBS 159–60, 162).

The bodhisattva abiding on this seventh ground has for the most part gone beyond the multitudes beset by desire and the other afflictions. One who resides on the seventh ground is not designated as possessed of afflictions nor is he designated as entirely free of the afflictions. Why is this so? It is because he does not generate any of the afflictions that he is not designated as possessed of afflictions. However, because he desires to acquire the Tathāgata’s knowledge and he has not yet fulfilled his aspirations, he is not yet designated as entirely free of afflictions, either...

As he abides on the Far-Advanced Ground, he becomes able to enter: the bodhisattva’s samādhi of skillful investigative contemplation, the skillful consideration of meanings samādhi, the mind-augmenting samādhi, the distinguishing of the treasury of meanings samādhi, the selection of phenomena in accordance with reality samādhi, the secure abiding in solidly established roots samādhi, the gateway to knowledge and spiritual superknowledges samādhi, the Dharma realm samādhi, the Tathāgata’s benefit samādhi, the treasury of many different meanings samādhi, and the samādhi leading neither toward saṃsāra nor toward

nirvāṇa. In this way, he completely acquires hundreds of myriads of bodhisattva samādhis whereby he is able to carry out the purifying cultivation of this ground.

Having acquired these samādhis, due to thoroughly purifying wisdom and skillful means and due to deep realization of the great compassion's power, this bodhisattva then becomes one who has passed beyond the grounds of śrāvaka and solitary realizer learners and progressed toward the ground of the Buddha's wisdom...

It is beginning with the sixth ground that the bodhisattva mahāsattva has the ability to enter quiescent cessation. Now, even as he abides on this ground, he is able, even in each successive thought, to enter into quiescent cessation while nonetheless still refraining from entering final realization of quiescent cessation. This is what is known as the bodhisattva's perfection of the inconceivable karma of body, speech, and mind wherein he courses in the sphere of ultimate reality and yet still refrains from entering the final realization of ultimate reality [nirvāṇa].

Although these bodhisattvas could enter their own personal quiescent cessation of nirvāṇa, due to compassion for sentient beings, they do not.

Their ripening result is having the choice to become leaders of the gods in the Heaven Controlling Others' Emanations, the sixth and highest of the desire-realm heavens. Due to their powerful wisdom of the four truths and their surpassing perfection of skillful means, seventh-grounders become great leaders and knowledgeable teachers. The *Ten Grounds Sūtra* (DBS 289) says, "Although he has deep fondness for nirvāṇa, he still manifests bodies in saṃsāra."

## REFLECTION

---

1. First-ground bodhisattvas outshine śrāvaka and solitary realizer arhats by way of lineage, just as a royal child outshines a senior government minister. The minister may be wise and powerful now but the child will

become the monarch one day. Unlike arhats, bodhisattvas have great compassion, great resolve, bodhicitta, and a huge accumulation of merit.

2. On the seventh ground, bodhisattvas also outshine Fundamental Vehicle arhats in terms of their wisdom. They have overpowered the arhats' "arrogance" in that, unlike arhats who seek self-complacent nirvāṇa, ārya bodhisattvas seek buddhahood. Also, the quality of their concentration and ultimate bodhicitta exceeds those of arhats.
-

# 10 | Three Pure Bodhisattva Grounds

## *Eighth Ground, the Immovable*

The eighth is the youth's ground, the Immovable, because, free of conceptions, they are unshakable. The range of their physical, verbal, and mental activities is inconceivable.

Through the maturation of this [ground], they become a Brahmā who rules a thousand worlds; they are unsurpassed by the śravakas and solitary realizers in determining the meaning of the Dharma.

The eighth ground is called “the Immovable” (*acalā*) because these bodhisattvas are not moved by self-grasping ignorance or the self-centered attitude. Their minds are completely purified of afflictive obscurations and all grasping true existence has been extinguished. Eighth-grounders have completely abandoned all acquired and innate afflictions and their seeds; saṃsāra is forever finished for them. They have a mental body that has similitudes of a buddha's signs and marks and is the nature of mind. They are now intent on completing the two collections of merit and wisdom to attain buddhahood and commence eradicating cognitive obscurations. At the eighth ground, even bodhisattvas with modest faculties have abandoned the latencies of self-centeredness that seeks only their own liberation. Since their minds are no longer moved by self-centeredness or by afflictions, the eighth ground is called “the Immovable,” and the bodhisattvas on it have the ultimate fortitude with respect to suchness.

Although eighth-grounders overcome all afflictive obscurations, sentient beings are still drowning in saṃsāra. To draw these bodhisattvas out of their peaceful meditative equipoise on emptiness, buddhas radiate light rays and remind them of their previous aspirations and the importance of actualizing their spiritual goal of full awakening. They counsel these bodhisattvas to bring forth the qualities of buddhas such as buddhas' pure physical signs, and measureless wisdom, skillful means, pure lands, and speech. The buddhas then bestow on eighth-ground bodhisattvas "many doors into the generation of the causes and conditions associated with the development of wisdom."

As a result these bodhisattvas can manifest countless bodies with which they cultivate the bodhisattva path, and with countless voices they express wisdom in limitless places of rebirth and in immeasurable pure lands where they teach countless sentient beings and make offerings and serve innumerable buddhas. They manifest or emanate bodies in various saṃsāric realms motivated by their fervent aspirations and great compassion. In this way, eighth-grounders collect merit and wisdom in order to attain buddhahood and gain the buddhas' unsurpassable wisdom, compassion, and ability to benefit sentient beings.

The eighth, ninth, and tenth grounds are called "the pure grounds" because all afflictive obscurations have been forever abandoned. On the eighth ground, they have attained the yoga of the equality of saṃsāra and nirvāṇa. Now all true-grasping and all afflictions and their seeds have been eradicated forever from their mindstreams, and there is no true-grasping during the time of subsequent attainment either. Before this, their wisdom directly realizing the emptiness of true existence of both saṃsāra and nirvāṇa was manifest during meditative equipoise, but coarse exertion was necessary to prevent true-grasping from arising during subsequent attainment. Although coarse exertion for bodhisattvas is subtle compared with the exertion of ordinary beings, they still must exert effort to bring emptiness to mind to prevent manifest self-grasping from arising.

Having mastery over nonconceptual wisdom, they abide in the meditative concentration and absorption of the total pacification of all duḥkha and striving. This means they are free from coarse striving, so very little effort is needed to enter meditative equipoise on emptiness, and in

post-meditation all their activities are supported by the realization of suchness. Although they could enter personal nirvāṇa, all self-centered thought has been erased from their mindstreams, so there is no inclination to abide in liberation for their own welfare alone.

With the dawning of the eighth ground, all true-grasping and its seeds have been cut from the root and can never manifest again. On the three pure grounds, during subsequent attainment everything automatically appears as empty of true existence and like an illusion. The two truths appear simultaneously to their minds during post-meditation time, but not directly. Only buddhas can directly perceive the two truths at the same time. At the eighth ground, coarse exertion is no longer required to see things as illusion-like. For this reason, there is a big difference in the experience of illusion-like appearances for bodhisattvas on the impure grounds and those on the pure grounds.

On the first ground, bodhisattvas began making special unshakable resolves or vows. Now, due to the breadth and depth of their physical, verbal, and mental activities, these unshakable resolves are extremely potent. We can get an inkling of the vastness of these bodhisattvas' aspirations to benefit sentient beings and their activities to actualize these aspirations by reading the "King of Prayers: The Extraordinary Aspiration of the Practice of Samantabhadra." If we begin to make such aspirations now as ordinary beings, later as bodhisattvas we will be able to actualize them.

As explained in the *Ten Grounds Sūtra*, eighth-grounders attain the ten masteries (*vaśitā*) through which they manifest in various bodies to benefit sentient beings.<sup>102</sup> (1) With mastery over lifespan, they live as long as they wish. (2) With mastery over the mind, they remain in concentration for as long as they wish and enter and emerge from meditative absorptions as they wish. (3) With mastery over necessities, they acquire the requisites for life without effort, can materialize physical objects, and can adorn entire world systems with ornaments. (4) With mastery over karma, they experience the ripening of their karma as they wish. (5) With mastery over rebirth, they are reborn wherever they wish. (6) With mastery over unshakable resolve, they show awakening wherever and whenever they wish and display a universe filled with buddhas. (7) With mastery over aspirations, they fill worlds with

buddhas and fulfill the aspirations of all beings. (8) With mastery over emanations, they manifest emanations in all buddha lands and can manifest whatever sentient beings need. (9) With mastery over pristine wisdom, they show the Tathāgata's powers, fearlessness, unshared qualities, signs and marks, and complete awakening. (10) With mastery over the Dharma, they illuminate all Dharma doors devoid of extremes and give all necessary teachings without obstacle.

By means of the ten masteries and the mental body, these bodhisattvas emanate and display various bodies to sentient beings, and by working for their welfare, eighth-grounders advance in the two collections. The ten masteries are correlated with the six perfections; the first three are the result of generosity, the fourth and fifth are the result of ethical conduct, the sixth is the result of fortitude, the seventh is the result of effort, the eighth is the result of meditative stability, and the ninth and tenth are the result of wisdom. The ten masteries are also included in the twenty-one types of pristine wisdom mentioned in the *Ornament of Clear Realizations*.

Eighth-ground bodhisattvas are well established in ten types of power (STG 331): (1) the power of the pure mind through abandoning all afflictions, (2) the power of the resolute intentions through the mind's training in the pristine wisdoms of the bodhisattva grounds and its never departing from the path, (3) the power of the great compassion through never forsaking beings, (4) the power of the great kindness through rescuing the inhabitants of all worlds, (5) the power of the *dhāraṇīs* through never forgetting Dharma they have heard, (6) the power of eloquence through distinguishing and selectively choosing from among all abilities of the Buddha, (7) the power of the superknowledges through coursing in innumerable different worlds, (8) the power of unshakable resolve through never abandoning any bodhisattva practice, (9) the power of the perfections through cultivating and accumulating all qualities of the Buddha, and (10) the sustaining power of the Tathāgata through skillful development of the knowledge of all modes. Because these bodhisattvas have acquired powers of knowledge such as these, they remain free of fault in any of their endeavors.

Śrāvaka and solitary realizer arhats cannot surpass eighth-ground bodhisattvas in terms of their understanding the meaning of the Dharma and

ability to explain it to sentient beings. Both arhats and eighth-grounders are similar in having eradicated the afflictive obscurations. However, the bodhisattvas are far advanced in that they have the special method side of the path that excels in bodhicitta and the ten perfections. This enables them to fulfill the collections of merit and wisdom and attain buddhahood, something arhats cannot do. However, if the arhats overcome the subtle self-centered attitude that seeks only their own liberation, they can generate bodhicitta through either the seven cause-and-effect instructions or equalizing and exchanging self and others. They then enter the bodhisattva path of accumulation, and by accomplishing the bodhisattva paths and grounds, they will attain buddhahood.

Eighth-ground bodhisattvas have the choice to take birth as Brahmā who rules a thousand worlds. This gives them tremendous ability to influence a vast number of sentient beings and lead them on the path.

## REFLECTION

---

1. Think of the abilities of the bodhisattva saṅgha refuge by reviewing the ten sovereign masteries and the ten types of power. In doing so, let your faith in the Saṅgha Jewel soar.
2. Reviewing these same qualities, think that you have the ability to develop them and imagine the good you will be able to do for sentient beings when you have these.
3. As you learn of the excellent qualities of the ninth- and tenth-ground bodhisattvas, stop and reflect on them as you did with the two points above: by increasing your confidence and trust in the Saṅgha Jewel and by increasing your confidence that you too can attain these qualities and benefit sentient beings as these great bodhisattvas do.

---

### *Ninth Ground, Excellent Intelligence*

The ninth, like a regency,  
is called “Excellent Intelligence,”

since by attaining true awareness,  
[these bodhisattvas] have excellent understanding on this [ground].

Through the maturation of this [ground],  
they become the lord of a million worlds;  
they are unsurpassed by arhats and such  
regarding qualms in the minds of beings.

The ninth ground, Excellent Intelligence (*sādhumatī*), is so called because these bodhisattvas have exceptional ability to explain the Dharma and eliminate the doubts and misconceptions of sentient beings. They possess a special practice of four perfect knowledges: the individual perfect knowledge of phenomena that knows the specific characteristics of each phenomenon, the meanings to be expressed, the words that are terms, and the self-confidence that comes from knowing the concordant causes of things. Although ninth-grounders' ability is not the same as that of the buddhas, they are extremely skilled in teaching sentient beings according to their dispositions and can easily resolve others' qualms and inspire them on the path. Fundamental Vehicle arhats cannot surpass them in this regard. Their unimpeded knowledge of the Dharma and eloquence in speaking make them inspiring and skilled teachers. For example, to enable disciples in a great assembly to understand the Dharma, they may employ a single utterance, use many different sorts of voices, remain silent and only emanate radiant light, cause all their hair pores to express the sound of the Dharma, make things in the universe resound with the Dharma, or cause a single sound to suffuse everywhere in the world. In this way they can perform the work of the Dharma for the benefit of sentient beings.

These bodhisattvas have exceptional knowledge that is in accord with reality concerning karma and karmic actions; the characteristics of afflictions and entangling difficulties; and sentient beings' realms, minds, faculties, beliefs, resolute intentions, latent tendencies, characteristics associated with births, habitual karmic propensities, and so on.

The ninth-ground bodhisattvas are extremely astute in guiding sentient beings and will adapt the teachings and their style of teaching in order to best communicate the Dharma to sentient beings (DBS 205).

The bodhisattva dwelling on this ground knows all such characteristics in beings' different practices and, adapting to what will cause them to gain liberation, then provides them with the corresponding causes and conditions. This bodhisattva knows those factors appropriate to the teaching of beings, knows those factors conducive to the liberation of beings, and, knowing these in accordance with reality, he then teaches the Dharma for their sakes.

He knows in accordance with reality the characteristics of those with affinity for the Śrāvaka Vehicle, the characteristics of those with affinity for the Solitary Realizer Vehicle, the characteristics of those with affinity for the Bodhisattva Vehicle, and the characteristics of those with affinity for the ground of the Tathāgata. He then adapts to the causes and conditions of these beings and teaches the Dharma for their sakes.

He adapts to the differences in their minds, adapts to the differences in their faculties, and adapts to the differences in their predilections, and then teaches the Dharma for their sakes. So too, he adapts to their bases in practice and their bases in wisdom and then explains the Dharma for their sakes. He knows the bases for all courses of action and, adapting specifically to those, he teaches the Dharma accordingly.

He adapts to beings' realms and the particular entangling difficulties they have deeply entered and teaches the Dharma for them accordingly. He adapts to their rebirth destinies, adapts to the births they have taken on, adapts to their afflictions, and adapts to the permutations in their habitual karmic propensities and therefore teaches Dharma accordingly. He adapts to whichever vehicle would conduce to liberation and therefore teaches Dharma accordingly.

The eagerness and joy with which a ninth-ground bodhisattva seeks the Dharma and then shares it with others is truly amazing. For example (DBS

211):

He redoubles the intensity of his vigor in acquisition of the light of knowledge such as this even to this degree: Suppose that on the tip of a single hair there existed great assemblies as numerous as the atoms in an ineffable number of ineffably many world systems wherein buddhas residing in the midst of each of those assemblies were expounding Dharma for beings' sakes. Suppose as well that each buddha therein adapted his discourse on Dharma to the minds of however many beings were present therein, thereby causing each and every one of those beings to acquire in his own mind however countless many dharmas he was setting forth.

Suppose also that, just as this circumstance held for any one of those buddhas, so too did it also hold for all the buddhas residing in all of those great assemblies discoursing on Dharma. And suppose too that, just as this circumstance obtained on this one single hair point, so too did it also hold for all such places throughout the worlds of all the ten directions. Even in a circumstance such as this, he is accordingly able to bring forth just such a commensurately immense power of recall that, in but a single mind-moment, he is able to absorb all of the Dharma light received from all those buddhas and still not forget even a single sentence.

A ninth-ground bodhisattva also serves all buddhas and sentient beings with such enthusiasm and delight.

The ripening result is the choice to take birth as a Brahmā lord of a million worlds.

### *Tenth Ground, the Cloud of Dharma*

The tenth is the Cloud of Dharma  
because [bodhisattvas] rain down the holy Dharma,  
and these bodhisattvas are anointed

with rays of light by the buddhas.

Through the maturation of that [ground],  
they become the celestial ruler of the pure land,  
masters of inconceivable objects of wisdom,  
supreme among great lords.

The tenth ground, the Cloud of Dharma (*dharmameghā*), receives its name from an analogy: from clouds rain falls and causes crops to grow. Likewise, from the billowing clouds of the tenth-ground bodhisattvas' pure mind, the rain of Dharma teachings falls on sentient beings and the crops of virtue grow in their minds. The *Ten Grounds Sūtra* (DBS 235) tells us:

He is able, simultaneously and in but a single mind-moment, to reach everywhere without exception throughout all those worlds as numerous as or even greater than the above-described number of atoms and, in accordance with beings' dispositions, he rains down the sweet-dew Dharma rain of the good Dharma, extinguishing the smoke and flames of beings' ignorance-generated afflictions. It is for this reason that this is known as the Dharma Cloud Ground.

The remaining defilements obscuring the minds of tenth-ground bodhisattvas are very thin; they are almost buddhas. These bodhisattvas enter many samādhis at the same time, experiencing each one distinctly and knowing the differences in their functions. These bodhisattvas have knowledge of the tathāgatas' secrets and the interpenetration of eons and have gained countless liberations. They have measureless samādhis, dhāraṇīs, and superknowledges as well as unlimited memory.

Tenth-ground bodhisattvas in their last lives before attaining buddhahood require no manifest effort to motivate them to teach the Dharma or to work for the welfare of sentient beings. This is a result of having "previously planted intentions" in the past when they engaged in bodhisattvas' activities with effort while repeatedly setting the intention to be able to effortlessly and spontaneously work to benefit sentient beings. As

a result, now these bodhisattvas perfectly, spontaneously, and with minimal effort continually work for the benefit of sentient beings throughout all space. Fatigue and self-centeredness do not interfere with their vast activities. They teach sentient beings in accordance with their interests, capacities, and dispositions and emanate bodies with which they can benefit others. Through conduct suitable to the mentality of each sentient being, they engage in innumerable activities to subdue sentient beings' minds and lead them on the path.

In terms of the numbers of sentient beings they teach and in terms of their awakened activities, these tenth-ground bodhisattvas are equal to the Tathāgata. However, they are still impeded from seeing both ultimate and conventional truths simultaneously, so they are unable to remain in meditative equipoise on emptiness and simultaneously teach sentient beings. They continue their practice until they break through the last of the cognitive obscurations so that they can, at the same time, see phenomena as they actually are (their ultimate nature) and work for sentient beings (by relating to them on the conventional level).

On the pure grounds—the eighth, ninth, and tenth grounds—bodhisattvas counteract the residual latencies of the afflictions and the subtle dualistic appearance they cause as well as the taints that prevent them from seeing both the ultimate and conventional truths simultaneously with one consciousness. The last cognitive obscurations are removed by the vajra-like concentration at the end of the tenth bodhisattva ground. At that time, the buddhas confer an empowerment, and in an elaborate rite of initiation, a tenth-ground bodhisattva ascends a huge lotus throne. Magnificent sparkling offerings grace the entire space, and he or she is surrounded by all buddhas and ārya bodhisattvas. The buddhas emanate splendid and awe-inspiring radiant beams of light from the hair curls on their foreheads. The light beams circle around the worlds, display the spiritual powers of the buddhas, and extinguish all suffering in the unfortunate realms, and then gather together and enter the crown of the tenth-ground bodhisattva.<sup>103</sup> Thereupon he receives the great wisdom empowerment and enters the realm of the buddhas where he has completely developed the buddhas' ten powers and joins the ranks of the buddhas. All remaining defilements on his mind and all cognitive obscurations have been

completely eradicated and he becomes a fully awakened buddha on the Mahāyāna path of no-more-learning. Now with one consciousness he can directly perceive all conventional and ultimate truths simultaneously.

At this time, the empty nature of his mind becomes the nature truth body of a buddha; his mind becomes the omniscient wisdom truth body. He no longer has mental bodies produced by the base of latencies of ignorance and unpolluted karma; instead he has a buddha's form body that manifests spontaneously and effortlessly wherever, whenever, and in whatever form is necessary to work for the welfare of sentient beings. The extremely subtle wind, which is one undifferentiable entity with that mind, manifests as the form bodies of a buddha—an enjoyment body that teaches ārya bodhisattvas in the pure lands and emanation bodies, such as Śākyamuni Buddha, that ordinary sentient beings perceive.

The ripening result is birth in the Akaniṣṭha pure land, where these bodhisattvas will experience the empowerment described above and attain full awakening. Tenth-ground bodhisattvas may also create their own pure land in which they attain full awakening. They do this because awakening cannot be attained in the desire realm according to the Perfection Vehicle, although it can according to the Tantra Vehicle.

Whereas the Perfection Vehicle describes ten bodhisattva grounds, scriptures in the Tantra Vehicle set forth varying numbers of grounds—thirteen, fourteen, sixteen, and so forth—although there is not a big difference in meaning between these ways of counting. The demarcations of the paths in Tantrayāna differ due to its practices and special meditative techniques.

### *Summary of the Ten Grounds*

These ten are renowned  
as the ten bodhisattva grounds.  
The buddhas' ground is different—  
in all ways immeasurably vast.

Although the qualities of the bodhisattvas of the ten grounds are countless, the *Ten Grounds Sūtra* (DBS 248–49) summarizes them by comparing the

ten grounds to:

a large and precious *maṇi* jewel that by virtue of possessing ten characteristic aspects is able to bestow all manner of precious things on beings. What then are those ten? They are:

First, it comes forth from the great sea;  
second, it is enhanced by the refinements of a skillful artisan;  
third, it is made ever more refined;  
fourth, it is rid of defilements;  
fifth, fire is used in its refinement;  
sixth, it is adorned with a multitude of precious jewels;  
seventh, it is strung with precious thread;  
eighth, it is placed atop a tall pillar composed of lapis lazuli;  
ninth, its light rays radiate in the four directions;  
tenth, it rains down the many sorts of precious things in response to the king's wishes.

In his bringing forth the precious jewel of the resolve to realize bodhi (bodhicitta), the bodhisattva mahāsattva is also possessed of ten characteristic aspects. What then are those ten? They are:

First, from the point of bringing forth that resolve, he pursues the practice of giving and abandons miserliness;  
second, he cultivates the observance of the moral precepts and practices the *dhūta* austerities;  
third, through the dhyāna absorptions, liberations, and samādhis, he is caused to become increasingly refined in his marvelousness;  
fourth, he brings forth purity in his path practices;

fifth, he trains himself in skillful means and spiritual superknowledges;  
sixth, he creates adornments based on the profound dharma of causes and conditions;  
seventh, whatever he does is strung together with all the different sorts of profound skillful means and wisdom;  
eighth, he is placed high atop the pillar of the spiritual superknowledges and masteries;  
ninth, he contemplates the actions of beings and then emanates the light of extensive learning and wisdom;  
tenth, all buddhas bestow on him their consecration of his knowledge, at which time he becomes able to carry out for all beings the works of a buddha and then falls in among those counted as possessed of omniscience.

### *Do Bodhisattvas Take Birth in Cyclic Existence?*

Bodhisattvas on the first two paths—the paths of accumulation and preparation—are reborn under the influence of afflictions and polluted karma. However, ārya bodhisattvas, who have the direct perception of emptiness on the path of seeing and above, do not take birth in saṃsāra under the control of afflictions and karma. Afflictions are mental factors that disturb the mind. Ārya bodhisattvas have afflictions and their seeds in their mindstream until the beginning of the eighth ground. However, their afflictions are weak and don't fulfill the meaning of the term “afflictions.” Thus the craving and clinging that arise so easily in the minds of ordinary beings at the time of death do not arise in their minds, and any karmic seeds that could bring rebirth in saṃsāra are unable to ripen. It is said that ārya bodhisattvas intentionally “take birth in saṃsāra” by the power of fervent aspirations and compassion. The *Sūtra Requested by Sāgaramati* claims:

Although the [ārya] bodhisattvas are completely free from being reborn through the power of karma and afflictions, their birth in cyclic existence is due to great compassion.

An ordinary bodhisattva on the phase of supreme dharma on the path of preparation attains the uninterrupted path of the path of seeing and becomes an ārya. The continuum of the person is the same from one path to another, but the physical base—the body—of an ārya bodhisattva isn't considered a product of afflictions and karma; it is a mental body. What enables the polluted body of a bodhisattva on the path of preparation to transform into the mental body of an ārya bodhisattva? It is ultimate bodhicitta and the bodhicitta that is the purity of the extraordinary great resolve. Śāntideva tells us (BCA 1.10):

It is like the supreme gold-making elixir,  
for it transforms the unclean body we have taken  
into the priceless jewel of a buddha-form.  
Therefore firmly seize the bodhicitta.

When sharp-faculty bodhisattvas attain the path of seeing, due to the force of their great resolve and bodhicitta, their bodhicitta transforms into the bodhicitta that is the purity of the extraordinary great resolve. These ārya bodhisattvas definitely obtain a mental body, which arises from unpolluted karma—the intention to assume such a body—and the subtle latencies of ignorance. This body is not one entity with the mind, even though it is said to be in the nature of mind in that it is not made of atoms and lacks physical impediment. The mental body of sharp-faculty bodhisattvas on the first seven grounds is free of physical pain, although it is not free from the pervasive duḥkha of conditioning. Their bodies look similar to ours, and they show the aspect of sickness, aging, death, and so forth. If these bodhisattvas manifest in the animal, hungry ghost, or hell realm to benefit sentient beings there, they are merely assuming that appearance and are not beings of that realm.

Bodhisattvas with modest faculties definitely attain a mental body at the eighth ground, but if they exert effort, they can attain one on the first through seventh grounds. Only Fundamental Vehicle arhats and pure ground bodhisattvas effortlessly obtain a mental body.

For ārya bodhisattvas, “birth in cyclic existence” refers to taking a mental body in a process analogous to the way ordinary beings take rebirth

in saṃsāra. In the case of ordinary beings, spurred by the links of craving and clinging that arise while actively dying, karmic seeds ripen and beings take rebirth with the polluted aggregates of a saṃsāric realm as a result of self-grasping ignorance and polluted karma. (“Polluted” means under the influence of ignorance.) In an analogous fashion, spurred by fervent aspirations and great compassion, pure ground bodhisattvas take rebirth in mental bodies as a result of the base of latencies of ignorance and unpolluted karma. The base of latencies of ignorance refers to latencies of ignorance, which are cognitive obscurations that give rise to the subtle dualistic view. Together with unpolluted karma, they are the cause for arhats and pure ground bodhisattvas to take a mental body.

To explain this analogy: Latencies of ignorance are cognitive obscurations. In general, they cause subtle dualistic appearances—the false appearance of true or inherent existence. All sentient beings who are not in meditative equipoise on emptiness have the mistaken appearance of true existence. In ordinary beings, it arises from true-grasping and its latencies, but for śrāvaka and solitary realizer arhats and pure ground bodhisattvas (known as the three kinds of persons), the mistaken appearance of true existence arises solely from the latencies of ignorance. The base of latencies of ignorance specifically refers to manifest cognitive obscurations in the form of subtle dualistic appearances. It is called a “ground” because it has provided the basis for the continuity of afflictions since beginningless time. The base of latencies of ignorance is distinguished from latencies of afflictions because, together with unpolluted karma, it is a cause or basis for the three kinds of beings to take a mental body.

In the above analogy, the base of latencies of ignorance involved in the rebirth of the three kinds of persons is like the first link of ignorance that causes the second link of karmic formations. Analogous to these polluted karmic formations is unpolluted karma, which is karma unpolluted by ignorance and afflictions and formed by the circumstances of the latencies of ignorance. Unpolluted karma is the karma created by Fundamental Vehicle arhats and pure ground bodhisattvas when they engage in various activities in post-meditation time—for example, when they practice generosity, ethical conduct, and fortitude. This karma is never nonvirtuous and leads out of saṃsāra. It is mental action and is the substantial cause of

the mental body; it is also the subtle intentional force that creates the mental body and the speech of the three kinds of persons. When engaging in activities in post-meditation time, unpolluted karma is the subtle intention that the three kinds of beings generate for their physical, verbal, and mental actions because they have cognitive obscurations.

The mental body that arises and is caused by unpolluted karma as the substantial cause and the base of latencies of ignorance as a cooperative cause is analogous to the polluted body taken by ordinary beings. The mental body is not obstructed by physical objects and cannot be seen or known by beings on levels lower than the three kinds of persons. The ceasing of a mental body is analogous to old age and death under the power of afflictions and polluted karma. It is important for ārya bodhisattvas to take a mental body, because without it there's no way for them to benefit sentient beings directly.

Although they have the appearance of ordinary beings who are born, fall ill, age, and die, ārya bodhisattvas are not under the influence of afflictions and karma. To the eyes of us ordinary beings, the mental bodies of these bodhisattvas look like those of other beings born in our realm. In fact, we may know ārya bodhisattvas but not recognize them as such. To benefit ordinary beings, they may act like us, but their motivations are always altruistic. Whether or not we benefit from these ārya bodhisattvas appearing among us is up to us. We must create the causes to meet them and to be receptive to their guidance by making ourselves suitable vessels to receive their help. Any resistance we may have—which is a product of self-centered thoughts and afflictions—hinders this, so we must do our best to apply the antidotes to these.

Although ārya bodhisattvas remain in the world owing to their great compassion for sentient beings, they are not tainted by the world's chaos and negativity. As a result of their vast collection of merit, ārya bodhisattvas do not experience physical suffering, and as a result of their profound wisdom they do not experience mental pain. At the time of death, they do not have fear, craving, and clinging as ordinary beings do; their minds remain peaceful and undisturbed. Similar to lotuses that are born in the mud but are untainted by it, ārya bodhisattvas are born in the world but are not sullied by its afflictions and suffering. They are not under the

control of afflictions and can choose the type of rebirth they take. They befriend sentient beings, and possessing the method and skill to benefit us, they lead us on the path to supreme awakening.

The *Sūtra Requested by Sāgaramati* speaks of eight causes that motivate ārya bodhisattvas to take birth in our world. They aspire to (1) continue to collect merit and wisdom, (2) happily care for other sentient beings who are suffering, (3) meet the Buddha in another life, (4) without discouragement, cause sentient beings to mature in their understanding of the Dharma, (5) enthusiastically preserve the Buddha's holy Dharma by becoming holders of the transmitted and realized Dharma, (6) joyfully work for the welfare of others in any way possible, (7) not separate from a mental state that is close to the Dharma, and (8) not discard any activity associated with the ten perfections motivated by bodhicitta.

Taking birth with these motivations, ārya bodhisattvas are born only in the desire and form realms. Beings born in the formless realm do not have physical bodies and are submerged in their captivating states of concentration, making it impossible for bodhisattvas to directly benefit them. Just as polluted afflictions bind sentient beings to rebirth in saṃsāra, these eight motivations are sometimes called “afflictions” in that they bind ārya bodhisattvas to take rebirth in saṃsāra in order to benefit sentient beings.

In short, although it is sometimes said that bodhisattvas relinquish their own awakening in order to benefit others, this means that if it were most beneficial for bodhisattvas not to become awakened, they would do so out of great compassion for others. However, clearly they can benefit others much more when all obscurations have been eradicated from their mental continuums and all good qualities have been developed completely. Thus they work diligently to attain the full awakening of a buddha.

### *How Bodhisattvas Practice*

How do ārya bodhisattvas practice? Chapter 40 of the *Flower Ornament Sūtra* entitled “On Entering the Inconceivable State of Liberation through the Practices and Unshakable Resolves of the Bodhisattva Samantabhadra” gives us a glimpse of ten unshakable resolves that form the basis of the

bodhisattva Samantabhadra's practice. As mentioned earlier, these are: pay homage and respect to all buddhas, praise the tathāgatas, make abundant offerings, repent misdeeds and destructive actions, rejoice at one's own and others' merits and virtues, request the buddhas to turn the Dharma wheel, request the buddhas to remain in the world, follow the teachings of the buddhas at all times, accommodate and benefit all living beings, and dedicate all merit and virtues to the full awakening of all beings.

In particular, with his ninth unshakable resolve Samantabhadra tells how to dedicate our lives to benefiting sentient beings. Here he speaks to the youth Sudhana, who is searching for the teachings leading to supreme awakening:

Sudhana, to accommodate and benefit all living beings is explained like this: throughout the oceans of worlds in the ten directions exhausting the Dharma Realm and the realm of empty space, there are many different kinds of living beings. That is to say, there are those born from eggs, the womb-born, those born by transformation, as well as those who live and rely on earth, water, fire, and air for their existence. There are beings dwelling in space, and those who are born in and live in plants and trees. This includes all the many species and races with their diverse bodies, shapes, appearances, lifespans, families, names, and natures. This includes their many varieties of knowledge and views, their various desires and pleasures, their thoughts and deeds, and their many different deportments, clothing, and diets.

It includes beings who dwell in different villages, towns, cities, and palaces, as well as gods, dragons, and others of the eight divisions, humans and nonhumans alike. Also there are footless beings, beings with two feet, four feet, and many feet, with form and without form, with thought and without thought, and not entirely with thought and not entirely without thought. I will accord with and take care of all these many kinds of beings, providing all manner of services and offerings for them. I will treat them with the same respect I

show my own parents, teachers, elders, arhats, and even the tathāgatas. I will serve them all equally without difference.

I will be a good doctor for the sick and suffering. I will lead those who have lost their way to the right road. I will be a bright light for those in the dark night, and cause the poor and destitute to uncover hidden treasures. The bodhisattva impartially benefits all living beings in this manner.

Why is this? If a bodhisattva accords with living beings, then he accords with and makes offerings to all buddhas. If he can honor and serve living beings, then he honors and serves the tathāgatas. If he makes living beings happy, he is making all tathāgatas happy. Why is this? It is because all buddhas, tathāgatas, take the mind of great compassion as their substance. Because of living beings, they develop great compassion. From great compassion bodhicitta is born; and because of bodhicitta they accomplish supreme, perfect awakening.

It is like a great regal tree growing in the rocks and sand of barren wilderness. When the roots get water, the branches, leaves, flowers, and fruits will all flourish. The regal bodhi-tree growing in the wilderness of birth and death is the same. All living beings are its roots; all buddhas and bodhisattvas are its flowers and fruits. By benefitting all beings with the water of great compassion, one can realize the flowers and fruits of the buddhas' and bodhisattvas' wisdom.

Why is this? It is because by benefitting living beings with the water of great compassion, the bodhisattvas can attain supreme, perfect awakening. Therefore, bodhi belongs to living beings. Without living beings, no bodhisattva could achieve supreme, perfect awakening.

Good person, you should understand these principles in this way: When the mind is impartial toward all living beings, one can accomplish full and perfect great compassion. By using the mind of great compassion to accord with living beings, one perfects the making of

offerings to the tathāgatas. In this way the bodhisattva constantly accords with living beings.

Even when the realm of empty space is exhausted, the realms of living beings are exhausted, the karma of living beings is exhausted, and the afflictions of living beings are exhausted, I will still accord endlessly, continuously in thought after thought without cease. My body, speech, and mind never weary of these deeds.

### *Essential Points*

I would now like to draw together and review some of the essential points concerning the paths and grounds of the three vehicles. Śrāvaka, solitary realizer, and bodhisattva āryas all directly perceive the emptiness of both persons and phenomena. Nevertheless, due to certain factors, their respective awakenings and the results attained on their respective paths of no-more-learning differ. The differences between the final attainment of bodhisattvas and the final attainment of śrāvaka and solitary realizer arhats depend on special factors bodhisattvas cultivate on the path.

- *Motivation of bodhicitta.* Before entering the path of any of the vehicles, a person must train in the proper motivation and aspiration. Those who enter the Śrāvaka and Solitary Realizer Vehicles have firm renunciation of saṃsāra and strong aspiration for liberation. In addition to firm renunciation and aspiring for the liberation of all sentient beings, those who enter the Bodhisattva Vehicle have stable and spontaneous bodhicitta, seeking full awakening for the benefit of all sentient beings.
- The *vast collection of merit* they create by following the method side of the bodhisattva path and their trainings in the ten perfections. For bodhisattvas, the method side of the path includes the bodhicitta motivation and the perfections of generosity, ethical conduct, and fortitude. These three perfections are not direct antidotes to cyclic existence and cultivating them alone will not overcome self-grasping ignorance, the root of cyclic existence. However, through

them, bodhisattvas accumulate merit that supports the direct realization of emptiness and makes that wisdom strong enough to counteract cognitive obscurations.

- Their use of *elaborate, multifaceted reasonings to realize emptiness*. Bodhisattvas approach the refutation of inherent existence from many angles, whereas śrāvakas and solitary realizers use compact reasonings. Whenever we have detailed reasons for something, our understanding is more powerful. For example, we cultivate elaborate reasons for being angry, “This person harmed me; he harmed my friends; he helped my enemies; he harmed me in the past, in the present, and he will harm me in the future too.” Due to all these (erroneous) reasons, our anger becomes very forceful and not easily waylaid. Similarly, bodhisattvas refute inherent existence by meditating with many detailed reasonings—dependent arising, the seven-point analysis, the four extremes of arising, and so forth. They examine the emptiness of causes and effects, parts and wholes; agent, action, and object; and past, present, and future. Such investigation contributes to the strength of their wisdom, enabling it to cleanse the cognitive obscurations from their minds.
- Their *abandoning cognitive obscurations as well as afflictive obscurations*. Those on the śrāvaka and solitary realizer paths meditate on the selflessness of persons and phenomena to eliminate the afflictive obscurations from their mindstream. When they have completely removed these, those śrāvaka and solitary realizer arhats abide in nirvāṇa. However, the cognitive obscurations remain. Those on the bodhisattva path abandon both afflictive and cognitive obscurations in order to attain full awakening.
- Their *cultivation of the path for three countless great eons*. Because bodhisattvas seek to abandon both obscurations, they must accumulate merit for a long time—three countless great eons if they follow the Perfection Vehicle (Pāramitāyāna). Those following the Śrāvaka Vehicle accumulate merit for three lifetimes, and solitary realizers accumulate merit for one hundred great eons. Skilled and diligent bodhisattvas who follow the Vajrayāna may attain full awakening in this very lifetime due to its skillful method for

accumulating vast merit and its techniques for accessing the subtlest mind. To enter the Vajrayāna with its sophisticated meditation techniques requires powerful bodhicitta that motivates them to attain awakening quickly as well as the willingness to exert strong effort in practice.

All of these factors play a role in bodhisattvas' attainment of full awakening or nonabiding nirvāṇa, where they abide neither in saṃsāra nor in the personal peace of their own nirvāṇa. From this description, two conclusions can be drawn. First, to free ourselves from saṃsāra and to attain the awakening of any of the three vehicles, realization of the emptiness of inherent existence is essential. Second, bodhisattvas' great deeds and their collection of merit, accumulated over eons, distinguish them from śrāvakas and solitary realizers and enable them to attain full awakening.

Here it is useful to recap the ways in which bodhisattvas outshine śrāvakas and solitary realizers. A first-ground bodhisattva is said to outshine śrāvaka and solitary realizer arhats by way of lineage. The analogy is given of a royal child and a senior government minister. Although still young, the child is of royal lineage and will one day ascend the throne and become the monarch. In the same way, although a first-ground bodhisattva is not yet free from saṃsāra, she will definitely become a buddha. While she does not outshine arhats by way of her wisdom at this point, she does outshine them by way of lineage due to her great compassion, great resolve, bodhicitta, and huge accumulation of merit. Doing all actions with a special type of bodhicitta called "the purity of the extraordinary great resolve," she accumulates great merit.

Seventh-ground bodhisattvas' skill in meditation is tremendous: while in meditative equipoise on emptiness, their mind is nondually fused with emptiness, and a moment later they are able to come out of that state and perceive conventionalities. Then in another instant, they are able to again immerse their mind in nonduality. Due to this ability, they outshine śrāvakas and solitary realizers not only by way of lineage but also by way of wisdom, due to the quality of their concentration and ultimate bodhicitta.

Although the differences in the resultant state of an arhat attained by those following the Fundamental Vehicle and the state of a buddha attained

by those following the Mahāyāna are noticeable, as Buddhist practitioners we respect all āryas, arhats, and buddhas. Certainly all of them are much more spiritually advanced than we are at present. Although all sentient beings will eventually enter the Mahāyāna and attain full awakening, depending on our proclivities and the teachers we encounter we may initially enter different vehicles.

Emphasizing the bodhisattva path and result is not done to disparage those who seek arhatship. Their practice and goal are indeed admirable. However, since I accept one final vehicle and that all sentient beings have the buddha nature and will eventually become buddhas, I encourage people, if they are so inclined, to enter the Bodhisattva Vehicle directly.

The wisdom realizing emptiness serves as the condition for attaining all three types of awakening—that of a śrāvaka arhat, solitary realizer arhat, and buddha. But to attain the omniscient mind of a buddha, in addition to the direct realization of emptiness, the skillful means of a bodhisattva are required.

The moment someone generates genuine spontaneous bodhicitta, she becomes a bodhisattva. In contrast, even śrāvaka and solitary realizer āryas who have directly realized emptiness and arhats who are free from cyclic existence are not bodhisattvas, because they lack bodhicitta.

To generate bodhicitta, not just ordinary compassion is needed but a powerful compassion in which we ourselves are committed to bring all sentient beings out of saṃsāric duḥkha. To generate such potent compassion that has taken the responsibility of liberating all sentient beings, two factors are necessary. We first need to see sentient beings as endearing and feel close or connected to them. Without this sense of closeness, the great compassion that wishes them to be free of all duḥkha can't arise. Second, since great compassion focuses on suffering sentient beings and wishes them to be free, we also need to understand duḥkha deeply. To develop insight into others' duḥkha, we must first focus on our own, understanding and confronting our experiences of the duḥkha of pain, the duḥkha of change, and the pervasive duḥkha of conditioning. This brings us back to understanding the four truths, the framework for all the Buddha's teachings.

I make a point of bringing us back to the four truths so that we understand the path to awakening in its entirety. In this way, we will see all

the teachings are interrelated and want to practice all of them. We will not simply verbally admire the paths and grounds of a bodhisattva, but will relate them to our daily practice. To do this, it is essential to apply the teachings to our own lives. Therefore, after we learn and practice the teachings of the initial capacity disciple, we must delve deeply into the four facts seen as true by āryas—duḥkha, its origins, its cessation, and the path to that state of true freedom.

### *Tantric Paths and Grounds*

Bodhisattvas with especially strong bodhicitta, who feel the duḥkha of sentient beings is totally unbearable, want to attain buddhahood as quickly as possible. With this motivation they seek a fully qualified tantric spiritual master, receive empowerment, and keep the ethical restraints and commitments they have taken during the empowerment. They may begin by receiving empowerment into and doing the practices of action tantra, and then proceed to performance tantra, yoga tantra, and highest yoga tantra. In highest yoga tantra they first practice the generation stage, followed by the completion stage. Due to lacking the motivation of bodhicitta, śrāvakas and solitary realizers do not enter the tantric path. However, after attaining arhatship, generating bodhicitta, and following the bodhisattva path, they may later enter the Vajrayāna.

Pāramitāyāna and Vajrayāna bodhisattvas meditate on the same emptiness—there is no difference in subtlety with respect to their object of meditation. However, the mind realizing emptiness is more subtle in Tantra—it is the fundamental innate clear-light mind.

While authors writing from the Pāramitāyāna viewpoint describe that vehicle as a full path to awakening, according to the tantric teachings at some point bodhisattvas must enter the Tantrayāna in order to make manifest the fundamental innate clear-light mind and use it to realize subtle emptiness. Having done that, they will attain the vajra-like concentration in the Tantric Vehicle, which is the final uninterrupted path prior to the attainment of buddhahood.

On the Pāramitāyāna path, bodhisattvas are said to accumulate merit for three countless great eons. We may think that this is far too long—we just

don't have the energy or the will to practice for such an extended period of time. Hearing that in Vajrayāna it is possible to attain awakening in this lifetime, we may think, "That's much better. I'll do that." But to succeed, we need to have full renunciation, uncontrived bodhicitta, and a realization of emptiness. Taking that into consideration, we see that there's no shortcut to investing time and energy in practice. Bodhisattvas will do whatever is necessary to benefit sentient beings, and thus if it takes eons to attain awakening, they are willing to do that. Considering that we have wasted much more time in cyclic existence, three countless great eons isn't such a long time to practice to end cyclic existence. It is such inner strength and determination that makes bodhisattvas exceptionally suitable vessels for highest yoga tantra and enables them to succeed on that path.

It is not very practical to think about time as we study and practice the Dharma; that only makes us anxious and discontent. In fact, attaining our noble spiritual goals is done more quickly if we focus on studying and practicing the path than if we are preoccupied with how long it takes to attain the resultant buddhahood. Pushing ourselves to hurry and take shortcuts makes the path slower, like the story of the tortoise and the hare. The Tibetans have their version of this story too.

A man from eastern Tibet was going to Lhasa on horseback. On the way he met an old lady and asked her how long it takes to get to Lhasa. She replied, "If you go slowly, it takes one week. If you go very fast and run there, it takes twenty-five days." Thinking that she didn't know what she was talking about, the man galloped ahead, getting his horse to run as fast as it could. Of course the horse got exhausted, as did the man, and they had to stop for long rests. In the end, it took him twenty-five days to arrive in Lhasa. After he got there, he asked Lhasa residents how long it takes to get from that place to Lhasa, and they confirmed, "If you go slowly, it takes a week." Let's practice steadily, without pressure or anxiety and attain awakening quickly.

### *Gradual Path versus Sudden Awakening*

Do we train gradually or is awakening attained suddenly? This topic has intrigued scholars and practitioners in all Buddhist traditions.

The Nālandā tradition that heralds from the great monastic university in ancient India, and is now followed largely in Tibetan Buddhism, in general favors the gradual approach, although as noted below there are those advocating a sudden approach. The Pāli tradition, too, in general favors gradual and systematic training. In the *Kīṭāgiri Sutta*, the Buddha says (MN 70:23):

How does there come to be gradual training, gradual practice, gradual progress? Here one who has faith (in a teacher) visits him. When he visits him, he pays respect to him. When he pays respect to him, he gives ear. One who gives ear hears the Dhamma. Having heard the Dhamma, he memorizes it. He examines the meaning of the teachings he has memorized. When he examines their meaning, he gains a reflective acceptance of those teachings. When he has gained a reflective acceptance of those teachings, zeal springs up in him. When zeal has sprung up, he applies effort. Having applied effort, he scrutinizes. Having scrutinized, he strives. Resolutely striving, he realizes with the [mind-]body the ultimate truth (nibbāna) and sees it by penetrating it with wisdom [of the supramundane path].

This succinct passage has great meaning, for it instructs us exactly how to proceed in order to accomplish our goal of liberation. Counteracting our ignorant ways that are entrenched in misconceptions, craving, and clinging is not a quick or easy process. It requires proper external conditions, such as a qualified spiritual mentor, and proper internal conditions, such as our own sincerity, faith, diligence, and effort.

As with both the Pāramitāyāna and Vajrayāna, the Pāli training begins with forming a relationship with a teacher who is capable of instructing and guiding us. We must not take the teacher or teachings for granted and expect them to come to us. Rather, we exert energy to visit our teacher. When we visit, we empty ourselves of arrogance and the desire to prove ourselves or impress someone else, and pay respect to our teacher. Then we listen to the Dharma teachings, not once but many times. Remembering

what we have heard and read is important so that we can contemplate its meaning and gain the right understanding. Examining the meaning of the teachings takes time because we do not necessarily grasp the Buddha's intention at first. In addition, there are many teachings and we need to reflect on all of them and see how they fit together and complement one another to form a complete path.

By means of this process, we gain a reflective or conceptual acceptance of the teachings. The Pāli word *khanti* (S. *kṣānti*) may be translated as acceptance, patience, fortitude, tolerance, or forbearance. It connotes being willing and able to accept what is difficult to accept for the sake of a worthwhile purpose. This is similar to the practice of the perfection of fortitude for practicing the Dharma, which necessitates accepting the doctrine of emptiness that the ignorant mind resists.

Having gained intellectual acceptance, with zeal and enthusiasm we apply effort to investigate and analyze not only the meaning of the teachings but also the nature of phenomena. That scrutiny produces its own momentum as we begin to experience for ourselves the truth of the Dharma. Striving is needed to continue with investigation and analysis, because the defilements are stubborn. But when all the factors of the path come together, by means of refined wisdom that was cultivated diligently and with care, we will realize experientially (“with the body”) the supreme or ultimate truth—*nirvāṇa*.

Master Sheng-yen (1930–2009),<sup>104</sup> a wise and respected Chan (Zen) master from Taiwan, and I have discussed the notion of gradual versus sudden awakening from the viewpoint of our respective traditions. It seems that in Chan Buddhism, “awakening” refers to having direct perception of emptiness. Although we may occasionally use “awakening” in that way in the Tibetan tradition, more often than not we use the term to refer to the end point of the path, for example the awakening of a *śrāvaka* or a solitary realizer, or the full awakening of a buddha.

When we understand the descriptions of the path in both the Nālandā tradition and Chan tradition in light of this difference in usage, there does not seem to be a big gap. To paraphrase what Master Sheng-yen told me: “As we read in the *sūtras*, at the time of the Buddha, many people attained awakening suddenly, after the Buddha had spoken only a few words or gave

a short teaching to them. However, Zen stories of people suddenly realizing emptiness after being hit or scolded by their teacher apply only to highly accomplished and exceptional students. Not everyone is capable of sudden awakening, and those who are not must begin with the basics of Dharma practice.

“Although those with sharp faculties and good karma may attain awakening quickly or suddenly, they still have to practice after their first experience of awakening because they are not yet free from all afflictions. Only at buddhahood is one free from all defilements.

“Aside from those exceptional disciples with sharp faculties, everyone else practices a gradual path to amass the necessary factors, such as virtue and all the abilities of great bodhisattvas, before their awakening. Although sudden awakening is possible, it is not easy; it is not like getting something for nothing. People must still keep pure precepts and cultivate bodhicitta, concentration, and wisdom. Concentration and wisdom are said to be attained simultaneously. Chan requires great effort although it doesn’t follow any fixed sequential method of practice.”

In Tibetan Buddhism, some texts mention a sudden or instantaneous approach that isn’t limited to the structure of gradual practice. I read one Kagyü text that explicitly explained Mahāmudrā as a sudden path, stating that those who understand it in a gradual way are afflicted. In Sakya writings we find mention of the “simultaneity of realization and liberation,” and the Dzogchen practice found in Nyingma also speaks of this. But even in these paths, practitioners engage in preliminary practices (T. *sngon ’gro*) to purify their mind and create merit. They also engage in a preliminary practice called “seeking the true face of mind,” which is similar to the four-point analysis to realize emptiness. And needless to say, they must study and practice the fundamental Buddhist teachings.

In the Gelug tradition, Tsongkhapa accepts the notions of simultaneity and instantaneous liberation. However, he points out that what appears to be sudden realization is actually the culmination of many causes accumulated over time finally coming together and resulting in liberation. For example, in ancient times one king saw a painting of the Wheel of Life and instantly understood its meaning and gained high realizations. The final, momentary event of seeing the painting was a catalyst for this to happen. However, the

actual causes for his realization had been accumulated for a long time. Similarly, one of the Buddha's first five disciples realized emptiness immediately after listening to one teaching on the four truths. He had already renounced cyclic existence, accumulated great merit, and developed single-pointed concentration.

Similarly, although we say Milarepa attained awakening in that very lifetime, that was not his first exposure to the Dharma. He had engaged in serious Dharma practice for many previous lifetimes. As a result of his strong effort, determination, proper reliance on his spiritual mentor, and correct practice of Vajrayāna, he completed the collections of merit and wisdom and attained awakening in that very life.

Some highest yoga tantra literature contains statements about “spontaneous” or “instantaneous” attainment of awakening. These statements must be understood in relation to cases of exceptional people who have a great collection of merit and uncommon mental acuity due to having attained advanced levels of realization in their previous lives. But for people like us, there is not much hope for this, and in the long run practicing a gradual path will bring quicker results.

When a spaceship is launched, it appears to be moving upward very easily, but actually this is dependent on the hard work and effort of many generations of scientists. Over a long period of time, these people have analyzed and investigated every aspect and part of the spaceship. So many causes and conditions have to assemble for the spaceship to be launched.

Similarly, gradual accumulation of causes and conditions is needed for internal mental and spiritual development. Although the entire meaning and power of the path is brought together in the highest yoga tantra, we must begin at the elementary level and gradually master many methods in order to build up our merit and wisdom.

While numerous people work together to produce a spaceship, internal spiritual development requires our own effort. It is in our hands. We cannot hire anyone to practice the path for us, nor can we take a vacation and expect the work to continue without our participation. But isn't that good news? By putting forth effort ourselves, we can and will gain realizations; we don't need to wait for someone else to do it for us and we needn't please an external being to receive boons. Having found this precious human life,

we should make use of it to learn, reflect, and meditate on the Buddha's teachings so that we can gain the same clear realizations that he did. Whether or not we attain awakening in this life, consistently familiarizing ourselves with the practices will make our lives meaningful.

## 11 | Buddhahood: The Path of No-More-Learning

THROUGHOUT the *Library of Wisdom and Compassion* series, we have spoken about the aspiration to attain the full awakening of a buddha. What are the special qualities of a buddha? What do buddhas do to fulfill their determination to benefit sentient beings effectively? These are difficult questions to answer precisely because we are not buddhas and do not know with direct perception what a buddha experiences. However, by studying, reflecting, and meditating on the path and the content of the sūtras, we can infer the excellent qualities of buddhahood.

Although the qualities of tenth-ground bodhisattvas are expansive and unimaginable, they are not able to benefit sentient beings in the same way as buddhas. Huge differences still remain between tenth-ground bodhisattvas and buddhas. For example, the former require some effort to motivate their activities of body, speech, and mind in service of others. They are not able to see the two truths simultaneously with one consciousness, which prevents them from being in meditative equipoise on emptiness and at the same time teaching and benefitting sentient beings.

Normal conventions do not necessarily apply to awakened beings. Our usual ideas about time and space do not hold in buddhahood. An eon can be condensed into just a single moment, and a single moment can be expanded into an eon. As written in Milarepa's biography, he could fit into a yak's horn without the horn becoming larger or him becoming smaller.

Reviewing the chapters on refuge,<sup>105</sup> where the qualities of the Buddha, Dharma, and Saṅgha are described in detail, will give us an idea of the awakened state that we seek to actualize. In this chapter, we will look at more specific aspects of buddhahood, including the buddha bodies, the

relationship among buddhas, what buddhas perceive, their awakening activities, and the inseparability of a buddha's body, speech, and mind.

### *The Buddha Bodies*

The buddha bodies were explained in *Following in the Buddha's Footsteps* in the context of the Three Jewels that are our objects of refuge. Now we will go into more depth about them, seeing them as the result of the Bodhisattva Vehicle. Buddhahood is the state of having removed all defilements from the mind and having developed all excellent qualities. Each buddha has four buddha bodies—"body" meaning collections of qualities. We may speak of two, three, four, or five buddha bodies, depending on how many subdivisions of the basic two bodies—the truth and form bodies—are listed. To review, here is the overall layout of the buddha bodies:

(1) The *truth body (dharmakāya)* has the nature of the perfect abandonment of all defilements and the perfect realization of all excellent qualities. It is of two types:

1. The *wisdom truth body (jñāna dharmakāya)* is the omniscient mind of a buddha, which has three principal qualities. With *knowledge (jñāna)* buddhas know all phenomena; with *compassion (anukampā)* they seek to benefit sentient beings without hesitation; and with *power or ability (T. nus pa)* from their own side they lack all impediments to exercising their skillful means.
2. The *nature truth body (svabhāvika dharmakāya)* is of two types:
  - The *naturally pure nature truth body* is the emptiness of inherent existence of a buddha's mind.
  - The *adventitiously pure nature truth body* is a buddha's true cessations of afflictive obscurations (*kleśāvaraṇa*) that bind us to saṃsāra, and cognitive obscurations (*jñeyāvaraṇa*) that prevent us from knowing ultimate and veiled truths simultaneously with one consciousness.

(2) The *form bodies* (*rūpakāya*) are forms in which a buddha appears in order to enact the welfare of sentient beings. These are of two types:

1. An *enjoyment body* (*saṃbhogakāya*) is the form that a buddha manifests in his or her Akaniṣṭha pure land to teach ārya bodhisattvas.
2. *Emanation bodies* (*nirmāṇakāya*) are the forms a buddha manifests that are perceivable by ordinary beings. These are of three types:
  - A *supreme emanation body*—for example, Śākyamuni Buddha—turns the Dharma wheel.
  - An *ordinary emanation body* manifests in diverse appearances of various people or things.
  - An *artisan emanation body* subdues sentient beings' minds through showing certain worldly skills.

The dharmakāya is the fulfillment of a buddha's own purpose, in the sense that it is the complete perfection of the mind. Form bodies are the fulfillment of others' purpose because a buddha manifests these in order to benefit others.

There is another way to look at the aims or purposes of bodhisattvas: They aspire to actualize both the truth bodies and form bodies that purport to serve their own purpose. But now serving their own purpose becomes a means to fulfilling the purpose of others. This is likened to a thirsty traveler seeking water. The final purpose is to procure water to quench their thirst; the cup to drink it in is a means to fulfill that final purpose. For bodhisattvas, the water they seek is the buddhahood of all other sentient beings. Their own buddhahood is incidental. Stop and think about that for a moment. What would it be like to have such a motivation yourself? It would be completely transformative, wouldn't it? For this reason, Śāntideva marvels (BCA 11, 13, 26):

Bodhicitta is like the supreme gold-making elixir,

for it transforms the unclean body we have taken  
into the priceless jewel of a buddha-form.  
Therefore firmly seize this bodhicitta.

All other virtues are like plantain trees;  
for after bearing fruit, they simply perish.  
Yet the perennial tree of bodhicitta  
unceasingly bears fruit and thereby flourishes without end.

This intention to benefit all beings,  
which does not arise in others even for their own sake,  
is an extraordinary jewel of the mind,  
and its birth is an unprecedented wonder.

Together the wisdom dharmakāya and the nature dharmakāya are the last two of the four truths in their complete or final aspect: the wisdom dharmakāya being the final true path and the nature truth body being the final true cessation. These are one nature and different isolates—that is, one cannot exist without the other, yet they are nominally different. Candrakīrti says (MMA 11.17):

Through having burned completely the dry firewood of knowable  
objects,  
that pacification is the truth body of the conquerors.  
It is without arising and without cessation  
and [thus] the mind has stopped, whereby [the dharmakāya] is  
actualized by the [enjoyment] body.

At the beginning of the eighth ground all afflictive obscurations—the afflictions and their seeds—have been eradicated by the pristine wisdom of meditative equipoise that directly and nonconceptually realizes emptiness. The cognitive obscurations—the latencies of the afflictions and the subtle dualistic view—still cover the mind; they are the “dry firewood of knowable objects” that are burned by the vajra-like concentration (*vajropamasamādhī*) at the end of the tenth ground. Here “knowable

objects” refers to the cognitive obscurations, because cognitive obscurations cause all knowable objects to appear to the mind dualistically, as inherently existent. When these obscurations have been pacified by this wisdom of meditative equipoise the final true cessation is actualized. This wisdom is free from inherently existent arising and ceasing and it has destroyed all latencies of grasping inherently existent arising and ceasing. This pacification—the cessation of cognitive obscurations—is the nature dharmakāya, and the wisdom realizing it is the wisdom dharmakāya. “The mind has stopped” doesn’t mean the mind has become nonexistent. Rather, “mind” refers to all conceptual minds and conceptual mental factors. Since they have been completely pacified, there is no dualistic appearance of inherent existence, and the nonconceptual pristine wisdom and suchness are experienced undifferentiably, like water poured into water. Ultimate reality—suchness—is not known in the manner of dualistic appearance. Thus, on the conventional level, it is said that the truth body is actualized or attained by the enjoyment body of that buddha. Candrakīrti says (MMA 11.18):

This body of peace arises like a wish-granting tree;  
and like a wish-fulfilling jewel it does not engage in  
conceptualization.

Until [all] beings are free it remains eternal as a resource for the  
world;

it appears to those [bodhisattvas] who are free of conceptual  
elaborations.

Buddhas newly attain supreme awakening in the aspect of the enjoyment body in the pure land of Akaniṣṭha. The enjoyment body is a body of peace in that it is free from the turbulence of conceptual minds. It appears only to ārya bodhisattvas and remains eternally for the benefit of sentient beings until saṃsāra ends. Although buddhas do not engage in conceptualization, thinking “I shall benefit this sentient being,” like a wish-granting tree and a wish-fulfilling jewel, they effortlessly work for the welfare of sentient beings.

Candrakīrti says (MMA 11.44):

Again you, who possess the unmoving [truth] body, descend to the three realms of existence.

Your emanations come [from Akaniṣṭha], are born, and teach the wheel of peace and awakening.

In this way you compassionately guide to nirvāṇa all beings of the world

who are ridden with deceitful conducts and are bound by numerous snares of expectations.

The unmoving body is the dharmakāya that does not move from meditative equipoise on emptiness. Simultaneous with the attainment of awakening, a person attains the dharmakāya, the enjoyment body that appears in Akaniṣṭha, and the emanation body. When buddhas manifest as a supreme emanation body, such as Śākyamuni Buddha in the desire realm, they display the twelve deeds.

Emanation bodies do not get tired, frustrated, or discouraged by sentient beings' ignoring their help or even denouncing it. Rather, they continue to benefit each sentient being in accord with that sentient being's disposition and temperament. When we think about it, this is truly remarkable, isn't it? We may try to help someone in a small way, but if that person criticizes us, we become angry, fed up with their lack of appreciation for our effort, and quit.

Having this brief introduction to the buddha bodies, we'll now look at them in more depth.

### *Wisdom Dharmakāya*

The wisdom dharmakāya is the ultimate true path, the omniscient mind of a buddha, the final pristine wisdom that directly and nonconceptually realizes all existents. Eternal, it never discontinues or relapses to a state of defilement. As a mind that apprehends different objects each moment, a buddha's mind is impermanent.

Buddhas possess all true cessations and all wisdom—the wisdom knowing ultimate truths, which knows phenomena's actual mode of being, suchness, and the wisdom knowing conventional truths, which knows the

varieties of phenomena. Their wisdom knowing ultimate truths also knows conventional truths, and their wisdom knowing the varieties of phenomena also knows their actual mode of being. Buddhas' wisdom dharmakāya includes both wisdoms, which are inseparable and one nature with their abandonment of both obscurations. All their consciousnesses are omniscient and cross-functional. For example, their visual consciousness can perceive sounds, smells, tastes, as well as tactile and mental objects.

The *Ornament of Clear Realizations* speaks of twenty-one kinds of dharmakāya wisdom possessed by buddhas. Some of these wisdoms are practiced by bodhisattvas and those who haven't entered the path and are brought to fruition at buddhahood. Most of the practices to gain these wisdoms have been described in previous volumes; this is a good opportunity to review your understanding of them.

1. Thirty-seven harmonies with awakening (see chapters 11–14 in *Following in the Buddha's Footsteps*).
2. Four immeasurables (see chapter 1 in *In Praise of Great Compassion*).
3. Eight liberations (see chapter 8 in *Footsteps*).
4. Nine serial absorptions (see chapter 8 in *Footsteps*).
5. Ten totalities (*kaṣiṇa*): by single-pointed meditation on one or another of the ten kaṣiṇas (earth, water, fire, air, blue, yellow, red, white, space, and consciousness), its specific characteristic can be transferred to other phenomena. For example, the hardness of earth can be transferred to water so the meditator can walk on it, or the quality of space can be given to earth so a buddha can walk through a mountain.
6. Eight dominants. Four of these dominate or control shape: (1) perceiving themselves as embodied, buddhas have control over large forms; (2) perceiving themselves as physically embodied, they have control over small physical forms; (3) perceiving themselves as being disembodied, they have control over large forms; and (4) perceiving themselves as disembodied, they have control over small forms. Here “perceiving themselves as embodied or disembodied” means they are visible or invisible to others. Four dominate or have

power over color: Perceiving themselves as disembodied, buddhas can control the four colors of external phenomena—blue, yellow, white, and red. By perceiving themselves as disembodied or having an indestructible form, they perceive material objects without the solid reality that we believe them to have. They can change big into small and small into big, performing many miraculous feats.

7. Concentration without defilement is the ability to not act as an object provoking others' afflictions. Before śrāvakas enter a village for alms, they examine with their superknowledge if their presence will provoke others' attachment or anger. If so, they do not enter the village. Buddhas, to the contrary, go everywhere and benefit others by teaching the Dharma and employ all means to prevent afflictions from arising in the minds of others.
8. Exalted knower of aspirations. Śrāvakas must enter the fourth dhyāna when they wish to know something. Buddhas' exalted knowers are much vaster and have five unique qualities: (1) they know things effortlessly and spontaneously; (2) free from afflictive obscurations, they know phenomena without attachment; (3) free from cognitive obscurations, they know phenomena without any impediment; (4) they know all phenomena all the time without interruption; and (5) they can simultaneously answer all questions of each sentient being even if they are asked at the same time in different languages.
9. Six superknowledges (see chapter 8 in *Footsteps*).
10. Four individual perfect knowledges: (1) with perfect knowledge of the doctrine, they know all words of all aspects of the Dharma without confusion; (2) with perfect knowledge of the meaning, they know all the meanings expressed by those words; (3) they have perfect knowledge of how to teach, including all languages of sentient beings; and (4) they have perfect knowledge that is limitless intelligence and ability.
11. Four complete purities. Buddhas have: (1) purity of bodily existence, with mastery of assuming, abiding, and relinquishing a body; (2) purity of objects in that they emanate and transform the five sense objects; (3) purity of the mind that is the ability to enter

and leave countless concentrations in each moment; and (4) purity of knowledge that is mastery over emptiness.

12. Ten masteries (*vaśitā*). These are listed in the explanation of the eighth ground.
13. Ten powers of a tathāgata (*tathāgatabala*, T. *de bzhin gshegs pa'i stobs*); see chapter 2 in *Footsteps*.
14. Four fearlessnesses or self-confidences (see chapter 2 in *Footsteps*).
15. Three behaviors without concealment: buddhas have no need to conceal their actions because all their physical, verbal, and mental activities are virtuous.
16. Three establishments of mindfulness: buddhas have equanimity toward (1) those who want to listen and do so respectfully, (2) those who do not want to listen, and (3) those with a mixture of both attitudes.
17. Absence of forgetfulness and negligence: buddhas never forget or neglect the well-being of sentient beings, nor do they ever forget anything, no matter how long ago it occurred.
18. Complete destruction of latencies: unlike arhats, buddhas have abandoned all latencies of afflictions and all dysfunctional behavior.
19. Great compassion for all sentient beings that knows the situation of each sentient being, their disposition, who is receptive to the Dharma, and so forth, and helps accordingly (see *In Praise of Great Compassion*).
20. Eighteen unique qualities of a buddha (see chapter 2 in *Footsteps*).
21. Three exalted knowers: the exalted knowers of all aspects (omniscience), the knower of paths (of bodhisattvas), and the knower of bases (practices for śrāvakas and solitary realizers). An alternative explanation is that buddhas know all phenomena; they know the cause, nature, and result of the paths of śrāvakas, solitary realizers, and bodhisattvas (this knowledge is shared by bodhisattvas); they know that all phenomena of the base—the aggregates, sources, constituents, and so forth—are empty (this knowledge is shared by śrāvakas).

Of the twenty-one kinds of dharmakāya wisdom, the ten powers, four fearlessnesses, eighteen unique qualities, three behaviors without concealment, three establishments of mindfulness, complete destruction of latencies, and great compassion are qualities possessed only by buddhas. The ten strengths and four individual perfect knowledges are shared by bodhisattvas. All the others are shared by buddhas, bodhisattvas, solitary realizers, and śrāvakas.

Another way of classifying the wisdoms of the wisdom dharmakāya is into the five pristine wisdoms. In tantra, each of these is correlated with a specific dhyāna buddha, aggregate, wisdom, affliction, color, direction, symbol, empowerment, lineage, and element.<sup>106</sup>

A more concise way of speaking of the wisdom dharmakāya is in terms of (1) the omniscient knower that realizes suchness—emptiness, the ultimate truth—and (2) the omniscient knower that realizes the varieties of phenomena—conventionalities. Although both of these wisdoms perceive all existents, they are classified in terms of their primary object. Clearly knowing all sentient beings' previous actions as well as their present dispositions and interests, buddhas know how to best benefit each being. Due to their great compassion and bodhicitta motivation, without having to think about what to do they naturally act to benefit sentient beings according to their receptivity. They do this through manifesting form bodies that effortlessly perform awakened activities.

## REFLECTION

---

1. Contemplate the twenty-one kinds of the pristine wisdom of buddhas, knowing that they use these to guide you to full awakening. Know that the bodhisattvas are developing these wisdoms and are also using them to help you. With this knowledge, take refuge in the Three Jewels.
2. Contemplate the twenty-one kinds of the Buddha's pristine wisdom and think that these are the qualities you will have upon attaining buddhahood. Feel uplifted knowing that you have the potential to cultivate and perfect these.

3. Make a strong resolve to engage in the practices to develop these wisdoms.
- 

### *Nature Dharmakāya*

The nature dharmakāya is so called because it is emptiness, the ultimate nature of the mind. It is the natural state of the mind because it is permanent and unaltered by causes and conditions. Although the nature of ordinary sentient beings' minds is undefiled and pure by nature, it is still covered by adventitious defilements. When sentient beings attain buddhahood, these defilements have been forever eliminated. This indicates a double purity: the natural purity, which is the emptiness of the mind, and the purity of adventitious defilements, which is the true cessation that came about by cultivating the path and removing defilements. The naturally pure nature dharmakāya is the emptiness of a buddha's mind that has been empty of inherent existence from beginningless time. The adventitiously pure nature dharmakāya is the emptiness of a buddha's mind that has newly eliminated all adventitious obscurations. The *Sublime Continuum* speaks of four attributes of the nature dharmakāya (RGV 85):

Because [the purified buddha nature] is the *truth body* [of all buddhas and it is] the *tathāgata*,  
it is [also] the [ultimate] *truth of āryas* as well as the ultimate nirvāṇa.

Thus [since those are just variants in name], just as the sun and [its] rays [are indivisible, the truth body that is the *final nirvāṇa* and its] qualities are indivisible [in nature].

Hence there is no [fully qualified] nirvāṇa aside from buddhahood.

1. The nature dharmakāya is the *truth body* because this ultimate purity exists indivisible from the potential for the arising of a buddha's qualities in the continuums of sentient beings. That is, in the

naturally pure buddha nature in the continuum of sentient beings—the mind’s emptiness, its suchness—there exists the potential to transform into a buddha’s dharmakāya. This “dharmakāya” is present in the buddha essence (*tathāgatagarbha*) of each sentient being. Although the naturally abiding buddha nature in the continuums of sentient beings may be called the “dharmakāya,” it is not the actual dharmakāya. However, when it is purified by applying antidotes—the collections of merit and wisdom—the defilements are totally eradicated and it becomes the ultimate dharmakāya of a buddha, the actual nature dharmakāya of a buddha.

2. It is the *tathāgata* because it is the emptiness of a buddha’s mind that directly perceives its own ultimate nature. This ultimate nature is the naturally pure buddha nature that is now free from all defilements.
3. The nature dharmakāya is the *āryas’ ultimate truth* because it is the ultimate nature of all phenomena. Unlike veiled truths, it is not false or deceptive and exists in the way it appears. It is empty and it appears empty to the mind directly perceiving it.
4. It is *nonabiding nirvāṇa* because it is an abandonment brought about by applying the antidotes to the defilements. Even though the naturally abiding buddha nature has been quiescent by nature since beginningless time—the defilements have never penetrated its nature—the defilements must still be removed. Nonabiding nirvāṇa is free from the extremes of saṃsāra and self-complacent nirvāṇa. The special meditative concentration that is the union of serenity and insight serves to stop saṃsāra by eliminating the defilements, and great compassion prevents self-complacent nirvāṇa by leading the yogī to full awakening.

With the attainment of buddhahood, our naturally abiding buddha nature—the suchness of our mind with defilements—becomes the nature dharmakāya, and our transforming buddha nature—all conditioned phenomena that have the capacity to transform into a buddha’s wisdom truth body—sheds all defilements and completes all excellent qualities to become the wisdom dharmakāya. The totally pure state, the nature

dharmakāya of a tathāgata, is immutable. The *Sublime Continuum* describes the nature dharmakāya in terms of four characteristics—permanent, stable, peaceful, and unalterable—that make it free from four characteristics of saṃsāra—birth, death, sickness, and aging, respectively.

The nature dharmakāya is *permanent*. While ordinary beings are born in saṃsāra due to ignorance and polluted karma, and ārya bodhisattvas take birth in saṃsāra due to the base of latencies of ignorance and unpolluted karma, the dharmakāya of a tathāgata does not take *birth* in either of these ways. A tathāgata’s dharmakāya is unending—this is the meaning of “permanent” in this context. With its double purity, it is free from both (1) the twelve links of dependent origination fueled primarily by the afflictive obscurations, and (2) the twelve links of unafflicted dependent origination fueled by the base of latencies of ignorance and unpolluted karma, and supported by cognitive obscurations. There is no birth or death in the dharmakāya; it is permanent.

Being permanent, the nature dharmakāya of a buddha is not produced by causes and conditions, but it is attained by effort and fulfilling the two collections. The principal purifying factor that transforms the natural buddha nature into a buddha’s nature body is the wisdom directly perceiving emptiness complemented by the method aspect of the path—bodhicitta and the other perfections. While the unconditioned qualities of a buddha are not produced, they do come into existence in dependence on other factors. The conditioned qualities of a buddha are produced by causes and conditions and are impermanent phenomena.

The Tathāgata’s dharmakāya is *stable* because it is the final, unfailing refuge for sentient beings. Because it possesses natural purity and purity of all adventitious defilements, it abides continuously, without end, and is thus a stable refuge for beings lost in saṃsāra. In the dharmakāya, there is no *death* due to afflictions, and there is no death by the “inconceivable transformation” of the ceasing of a mental body. Therefore it is stable.

The dharmakāya is *peaceful* because it is naturally free from the two extremes of superimposition and deprecation, and in this sense it is nondual. Dwelling in suchness without conceptuality, it is naturally peaceful and also pacified of all adventitious defilements. It is not harmed by the *sickness* of

afflictions and karma or by the nonafflictive latencies of ignorance. For this reason, too, it is peaceful.

The dharmakāya is *unalterable* because it is not affected by either afflictive or nonafflictive phenomena—such as polluted and unpolluted karma—and therefore doesn't undergo *aging*. Being unconditioned, it isn't subject to change and destruction due to the ripening of either polluted or unpolluted karma.

Buddhas are totally free from the extremes of saṃsāra and nirvāṇa. In an *ultimate sense*, this means that they do not grasp at either saṃsāra or nirvāṇa as inherently existent, nor do these appear inherently existent to buddhas.

In a *conventional sense*, freedom from the extreme of saṃsāra means that buddhas and ārya bodhisattvas do not see birth in saṃsāra as something to be totally abandoned in the same way that śrāvakas and solitary realizers do. While ārya bodhisattvas eradicate the causes of rebirth in saṃsāra from their own minds, they appear in saṃsāric worlds in order to benefit sentient beings and lead them to liberation and full awakening. Freedom from the extreme of nirvāṇa means they do not view personal nirvāṇa as the complete attainment, as do śrāvakas and solitary realizers. This is because buddhas and ārya bodhisattvas seek full awakening, nonabiding nirvāṇa. Buddhas have the means to stop these two extremes: through wisdom they have destroyed afflictions and polluted karma and do not fall to the extreme of saṃsāra, and through great compassion and bodhicitta they have overcome the wish to abide in the personal peace of nirvāṇa and do not fall to the extreme of personal nirvāṇa.

To be considered the nonabiding nirvāṇa—the unique state of a buddha that is beyond both saṃsāra and personal nirvāṇa, all the countless and inconceivable excellent qualities must be purified and complete in every aspect.

While śrāvakas and solitary realizers have also attained nirvāṇa, theirs is not the nonabiding nirvāṇa of buddhas, because it has yet to abandon every single adventitious defilement by the application of counterforces. In addition, śrāvaka and solitary realizer arhats do not have the limitless wisdom and pristine wisdom of buddhas. Nor have they developed their transforming buddha nature to its fullest by generating all the inconceivable

qualities of fully awakened ones. Absorbed in meditative equipoise on emptiness, they are not inclined and do not have the ability to manifest the two form bodies to benefit sentient beings.

## REFLECTION

---

1. Review and contemplate the four attributes of a nature dharmakāya: truth body, tathāgata, āryas' ultimate truth, and nonabiding nirvāṇa.
  2. Review and contemplate the four characteristics of the nature dharmakāya: permanent, stable, peaceful, and unalterable.
- 

### *Form Bodies*

The pristine wisdom of the dharmakāya appears as the two form bodies—the enjoyment body and emanation bodies. Some people say that form bodies are mere other-appearances to sentient beings—that is, they exist in the continuums of sentient beings who see them but do not exist in the buddhas' continuums. They think that when someone becomes fully awakened, he or she is free from all elaborations, whereas form bodies, because they appear to sentient beings, are involved with elaborations. They assert that since form bodies cannot be included in buddhas' completely purified continuums, they must be in sentient beings' continuums, which are not free from elaborations. It is like the reflection of the moon in water: the moon is not in the water but the reflection is. Similarly, form bodies are within the sentient beings who see them.

Others refute this idea, saying that an awakened buddha can't be in the minds of sentient beings. If a buddha were, it would mean that bodhisattvas created the cause to attain buddhas' form bodies, but the buddhas' form bodies that are the final results of their practice were in the continuums of sentient beings. That contradicts the law of karma and its effects, in which the person who creates the cause is the one who experiences the effect.

Furthermore, saying the form bodies are in sentient beings' continuums would mean that we were once undefiled buddhas and later became defiled

sentient beings. This is impossible because once the defilements have been completely eradicated, there is nothing that can cause a pure mind to become impure. The other alternative is that we are already buddhas, but if that were the case, ignorant buddhas would exist, and that is also not possible.

The Sakya tradition says that the resultant qualities of a buddha are in the clear-light mind of sentient beings as potential. We are not yet awakened, but we have the potential to become so.

When realized beings have actually seen their meditational deities, what are they seeing? Having a vision of a form body of a buddha is very mysterious and not easily explained.

A buddha's two form bodies are not made of material such as atoms and molecules. They are not appearances in the minds of disciples but exist as part of a buddha's continuum. Buddhas appear in forms that can skillfully relate to the various sentient beings, according to their differing levels of mental purity, dispositions, and interests.

### *The Enjoyment Body*

An *enjoyment body* (*saṃbhogakāya*) is defined as “a final form body possessing the five certainties.” It is the form a buddha takes in order to teach ārya bodhisattvas in the pure land. An enjoyment body is so called because with it a buddha brings enjoyment of the Dharma to the assembly of āryas; there is communal enjoyment of the Dharma. Each buddha has an enjoyment body that appears to ārya bodhisattvas in a pure land to teach them the Mahāyāna doctrine. In this way the enjoyment body of a buddha directly accomplishes the benefit of ārya bodhisattvas and indirectly accomplishes the benefit of ordinary beings by radiating emanation bodies. Amitābha Buddha in the Sukhāvatī pure land is an example of an enjoyment body. Mañjuśrī, Tārā, Avalokiteśvara, and other deities are also enjoyment bodies.

The body of the person who is an enjoyment body is a nonmaterial vajra body that has the nature of pristine wisdom. It lacks flesh, blood, empty spaces, and so forth, and is not born from an embryo. In each pore a buddha displays countless bodies of buddhas surrounded by bodhisattvas, gods, demi-gods, and humans.

Enjoyment bodies have five certainties, qualities that an enjoyment body is certain to have: (1) the certainty of *abode* is that it resides only in Akaniṣṭha;<sup>107</sup> (2) the certainty of *body* is that it is adorned with the clear and complete thirty-two signs and eighty marks of a buddha; (3) the certainty of *retinue* is that an enjoyment body is surrounded only by ārya bodhisattvas; no other sentient beings have the purity of mind or karma to receive teachings directly from an enjoyment body; (4) the certainty of *Dharma* means that enjoyment bodies teach only the Mahāyāna Dharma; and (5) the certainty of *time* shows that enjoyment bodies remain eternally, as long as cyclic existence is not emptied of sentient beings.

In ancient Indian culture, these thirty-two physical signs indicate a great person. In the Pāli sūtras, they are also mentioned as signs of a buddha. From a Mahāyāna perspective, they are found in both enjoyment bodies and supreme emanation bodies. In the context of supreme emanation bodies, they are part of the conventional appearance of a buddha as a human. Buddhas appear in this way to disciples in order to guide them on the path to higher rebirth and highest goodness. The thirty-two signs and eighty marks are ripenings, but they are not ripened results, because ripened results are neutral (unspecified), whereas the thirty-two signs are virtuous.

The thirty-two signs are presented from the perspective of their causes and indicate a great person. The eighty marks are presented from the perspective of being results and reveal the person's inner qualities. The list below is from the *Ornament of Clear Realizations* and was taken from the Prajñāpāramitā Sūtras. Another list is from the *Sūtra Requested by the Precious Daughter (Ratnadārikā Sūtra)* and is also found in the *Sublime Continuum*. The causes for each sign give us an idea of virtuous activities to engage in.

1. On the sole of each foot and palm of each hand is the impression of a thousand-spoke wheel. Although a buddha's feet do not touch the ground, and thus do not harm sentient beings that may be underneath, they leave the imprint of a wheel when he walks. The cause for this sign is greeting and escorting our spiritual mentors and selflessly offering service to others.

2. The soles of the feet are as smooth and level as the underside of a tortoise's shell, so they are always firmly planted. The causes for this are firmly living in accord with the transmitted and realized Dharma and safeguarding the three types of ethical restraints: the prātimokṣa precepts that restrain physical and verbal negativities; the samādhi restraints arising from single-pointed concentration that keep the mind from wandering, restlessness, and laxity; and the unpolluted restraint that arises from realizing emptiness and restrains the mind from afflictions.
3. A web of white light connects the fingers and toes. Rings can pass through the web, and the fingers retain their individual movement. This arises from practicing the four ways of gathering disciples.
4. The skin is unwrinkled and smooth like a baby's skin. This comes from generously providing others with nourishing food and drink, not just giving them what we don't like or don't want ourselves.
5. Seven parts of the body are rounded and slightly raised—the tops of each hand, foot, shoulder, and the back of the neck. This derives from giving others not only physical nourishment but also other pleasing and usable objects, such as shelter and clothes.
6. The root of the fingernails and toenails are extremely long. This comes from saving the lives of animals about to be slaughtered.
7. The heels of the feet are broad. The cause for this is compassionately going out of our way to help others, save their lives, or make them comfortable.
8. The body is very straight and is seven cubits tall (usually people's height is about four cubits). This arises from totally abandoning killing any sentient being.
9. The elbows and kneecaps don't protrude. This is from intensely engaging in the six perfections.
10. The bodily hairs grow up. This arises due to engaging in constructive practices and inspiring others to do the same.
11. The calves are well-rounded, like the legs of an antelope. This sign derives from admiring and mastering medicine, other sciences, arts, and crafts, and using these skills to benefit others.

12. The arms are extremely long. This is a result of never sending beggars away empty-handed.
13. The private organ is recessed and remains concealed. This is caused by strictly keeping the pledges of secrecy and safeguarding the confidential words of others.
14. The skin is luminous and golden. This comes from offering soft and comfortable seats to others.
15. The skin is fine and unblemished, like purified gold. The cause for this is accommodating those needing lodging and always providing excellent housing.
16. The body hair curls clockwise with never more than one hair growing from each pore. This is a result of completely abandoning mental wandering, busy work, and bustling confusion.
17. The white treasure-like strand of hair on the mid-brow curls very tightly clockwise. When pulled, it extends a huge distance, and when released, it tightly recoils. This arises from respectfully serving all superiors—parents, teachers, elders, abbots, and so forth—venerating them as a crown jewel. It also arises from helping others achieve upper rebirths.
18. The upper torso becomes progressively broader, like that of a lion. This arises from never humiliating or looking down on others regardless of their power, status, wealth, and so forth. It also comes from not scolding others privately or publicly and not belittling others' beliefs or religious traditions.
19. The tops of the shoulders are round and well-connected to the neck, and the network of veins isn't visible. This comes from freely giving praise and encouragement to all others, not just to friends.
20. The area between the collarbone and the shoulder is round, fleshy, and full, without any hollow depression. This derives from giving others medicine and healthy food.
21. No matter what is eaten, it always tastes delicious. This comes from nursing the sick, old, and infirm, and especially caring for those who others find repulsive.

22. The body is stately and well-proportioned, like a full-grown peepul (bodhi) tree. The cause is building public gardens and parks for others' enjoyment and encouraging others to do the same.
23. The crown protrusion is made of radiant flesh; it is round and circles clockwise. At a distance, it seems to be four finger-widths high, but upon close scrutiny, its height cannot be measured. This is a result of visualizing our spiritual master on the crown of our head, visiting temples and monasteries, and practicing in them.
24. The tongue is extremely long and is able to extend to the top of the head, ears, and chest. This arises from speaking kindly to others, encouraging them, and treating them as gently as an animal licking her young.
25. The voice is melodious like that of an ancient song-sparrow, flowing without effort. It also resembles Brahmā's voice and temporarily relieves the suffering of those who hear it. This derives from communicating the Dharma in the individual language of each sentient being.
26. The cheeks are round and full like those of a lion. This comes from completely abandoning idle talk.
27. The eyeteeth are more brilliantly white than other teeth. The cause is offering special praise to the buddhas and bodhisattvas and showing them great respect.
28. The teeth are all of equal length. This arises from abandoning the five wrong livelihoods and always earning our living honestly.
29. The teeth are perfectly straight and properly aligned with no gaps between them. This comes from speaking the straight truth for three zillion eons, being honest, and not being devious or crooked with others.
30. There are forty teeth, with an equal number in upper and lower jaws. The cause is abandoning divisive language and working for unity and harmony among all.
31. The black and white portions of the eyes are clear and distinct, with no red or yellow discoloration. This comes from looking at others

with compassionate eyes, working for their welfare, and generating equal concern for all whether their suffering is great or small.

32. The eyelashes are beautiful and long, like those of a bull, with each hair distinct. This arises from regarding others without attachment, anger, or confusion, and striving to gain full wisdom to be able to discriminate between virtue and nonvirtue.

### *Emanation Bodies*

*Emanation bodies (nirmāṇakāya)* are the forms buddhas compassionately assume to benefit ordinary beings whose mindstreams are more polluted and whose karma does not allow them to engage directly with an enjoyment body. Seeing sentient beings drowning in saṃsāra's duḥkha, a buddha's enjoyment body manifests various emanation bodies in saṃsāra's impure realms without moving from the dharmakāya's meditative equipoise on emptiness. Emanation bodies do not have the five certainties and manifest in the realms of saṃsāra in order to guide sentient beings by assuming a form similar to the beings in that realm. They then teach disciples who have not yet entered the path of any of the three vehicles whatever will benefit, be it topics from the Fundamental Vehicle or topics from the Mahāyāna or Vajrayāna.

Both the enjoyment body and emanation bodies of a buddha are impermanent phenomena that change moment by moment. Among the different types of impermanent phenomena, they are considered persons, which are abstract composites. An enjoyment body is eternal and remains forever. Emanation bodies appear and are withdrawn according to their opportunity to benefit sentient beings. They manifest spontaneously and effortlessly according to the dispositions, interests, and receptivity of sentient beings. Emanation bodies appear in sentient beings' realms for as long as they can benefit those particular sentient beings. A buddha may radiate many emanation bodies in various parts of the universe simultaneously. They may even appear as inanimate objects. After serving their purpose, or when sentient beings' have consumed the karma to benefit from them, they absorb back into the enjoyment body.

There are three types of emanation bodies: supreme emanation bodies, ordinary emanation bodies, and artisan emanation bodies. Śākyamuni

Buddha is an example of a *supreme emanation body*, so called because in that form the Buddha first turned the wheel of Dharma in our world, where previously the Buddhadharma was not in existence. Supreme emanation bodies perform the twelve deeds of a buddha and have the thirty-two signs and eighty marks of a great person.

The twelve deeds of supreme emanation bodies occur in the desire realm among human beings. In other realms and worlds, beings are either subject to such overwhelming suffering or experience such grand and stable pleasure that it is difficult for them to turn their minds to the Dharma. In our world, great disparity among sentient beings exists: some are rich, others poor; some live long, others do not. Due to this combination of suffering and happiness and the instability of both, it is easier for us to generate renunciation. For this reason, Śākyamuni Buddha enacted the twelve deeds here. The list of twelve deeds differs slightly in various texts; the following is from the *Sublime Continuum*. Although Śākyamuni Buddha was already fully awakened before performing the twelve deeds, he appeared in ordinary form so that his life would be an inspiring example for us to contemplate and follow.

1. He reigned in the blissful realm of Tuṣita, Maitreya Buddha's pure land, which is located in the outskirts of the Tuṣita celestial realm. Descending from the blissful land of Tuṣita is the first deed.
2. He enters his mother's womb.
3. He is born.
4. He masters the sciences and arts and is skilled in various sports.
5. He marries and enjoys sensual pleasures, family, and royal life. Although it is not mentioned here, he enters the city on four occasions, seeing a sick person, an old person, and a corpse, which brings him face to face with the tragedy of saṃsāric existence. Upon seeing a wandering mendicant during the fourth excursion, he has the idea that there is a way out of saṃsāra and wants to pursue it.
6. Longing for release from the tormenting cycle of birth and death, he leaves the palace and renounces his princely life, clothes, and appearance to live as a wandering renunciant.

7. Together with a small group of other renunciants, he engages in severe ascetic practices for six years.
8. Seeing that torturing the body does not purify the mind, he leaves behind the ascetic lifestyle, meditates under the bodhi tree, and makes a strong resolve to attain full awakening there.
9. Facing the demons of ignorance, anger, and attachment in his own mind, he overcomes the hosts of Māra—that is, all external and internal impediments to full awakening.
10. At dawn, he attains perfect supreme awakening.
11. He turns the Dharma wheel, teaching sentient beings the paths to higher rebirth, liberation, and full awakening.
12. He passes away, entering parinirvāṇa.

The twelve deeds occur in the time of subsequent attainment, but without moving from the dharmakāya. In bodhisattvas, subsequent attainment and meditative equipoise do not occur at the same time, but in buddhahood they do without any impediment, just as the sun and the sunshine occur simultaneously.

*Rebirth or ordinary emanation bodies* appear in various forms to guide us, for example appearing as wise and compassionate spiritual mentors who guide us on the path by giving teachings, ordination, and so forth. By appearing in the aspect of an ordinary being in any of the three realms, emanation bodies can communicate easily with ordinary beings. A buddha's manifestations as a bridge, blanket, or other material object are included in this category. *Artisan emanation bodies* are, for example, the appearance the Buddha assumed as a musician in order to subdue the conceit of a violinist and turn him toward the Dharma path. Ordinary emanation bodies and artisan emanation bodies do not necessarily have the clear and complete signs and marks and their physical appearance is usually indistinguishable from that of ordinary sentient beings of that realm.

However we count a buddha's bodies, the motivation for actualizing them is to benefit all sentient beings, and the path to actualize them is a complete path of method and wisdom. Reflecting on the qualities of fully awakened buddhas will inspire us to practice the path leading to buddhahood. It will also deepen our refuge and trust in our Teacher,

Śākyamuni Buddha, and in all the buddhas who guide and inspire us along the path.

### *Buddha, Ārya Buddha, and Sentient Being*

The eighth chapter of Maitreya’s *Ornament of Clear Realizations* distinguishes between buddha and ārya buddha. *Buddha* is an excellent quality arisen from the fulfillment of the collections of merit and wisdom that are its causes. Buddha is synonymous with “resultant dharmakāya” and has four divisions—nature dharmakāya, wisdom dharmakāya, enjoyment body, and emanation body. Each of these is buddha. Since one of these—the nature dharmakāya—is permanent, that makes buddha permanent. (In philosophy, if one member of a category is permanent, even though other instances of that category are impermanent, the category itself is considered permanent.) Buddha is not a person. In general, a buddha’s thirty-two signs, hands, feet, and so forth are buddha, because they are a buddha’s physical qualities. The twenty-one unpolluted wisdoms in the continuum of an ārya buddha are also buddha.

*Ārya buddha*, on the other hand, refers to a person who is fully awakened—for example, an enjoyment body or emanation body. An ārya buddha is necessarily a buddha, but buddha is not necessarily an ārya buddha. Understanding the relationship between buddha and ārya buddha through four points is helpful.

- There is something that is buddha, but not an ārya buddha—for example, the nature truth body.
- There is something that is both an ārya buddha and buddha—for example, Śākyamuni Buddha.
- There is nothing that is an ārya buddha but not buddha.
- There is something that is neither—for example, a sentient being.

An ārya buddha is not a sentient being, although all other āryas—stream-enterers, once-returners, nonreturners, arhats, and bodhisattvas—are sentient beings. “Sentient being” literally means “having mind.” Here “mind” refers to a mind with defilements, so “sentient being” refers to a

person with defilements. All persons except ārya buddhas fall into this category.

When we speak more casually, “the Buddha” refers to Śākyamuni Buddha, and “a buddha” refers to an ārya buddha. The naturally pure nature dharmakāya is directly perceived only by āryas. The adventitiously pure nature dharmakāya and the wisdom dharmakāya are directly perceived only by ārya buddhas. The enjoyment body is directly perceived by ārya bodhisattvas. The supreme emanation body is directly perceived by sentient beings with pure karma. The other emanation bodies are directly perceived by all sentient beings.

A buddha is said to be an omniscient one, whose mind is omniscient (*sarvajñatā*). “Omniscient mind” refers only to the mental consciousnesses of a buddha, not to his or her sense consciousnesses or any other aspect of a buddha. However, buddhas’ sense consciousnesses and all parts of their physical bodies are said to be omniscient in that they know all phenomena directly.

### *What Buddhas Perceive*

Unlike buddhas, ārya bodhisattvas are unable to simultaneously nonconceptually and directly cognize the two truths. They must alternate knowing one and then the other, perceiving emptiness directly during meditative equipoise on emptiness and knowing conventionalities in the time of subsequent attainment. However, they are able to cognize the two truths simultaneously, but with different consciousnesses. During the time of subsequent attainment after arising from meditative equipoise on emptiness, ārya bodhisattvas engage in their daily life activities and teach emptiness to their students. At that time, they apprehend veilings—the students, books, the room, and so forth—with their sense consciousnesses, and simultaneously cognize emptiness conceptually with their mental consciousness. Although veilings appear truly existent to them, because their minds are informed by their prior direct realization of emptiness, they see these things as like illusions—as falsities because they appear truly existent although they are not. Ārya bodhisattvas’ minds are relaxed; they

do not get embroiled in reactive emotional responses to inherently existent things.

Ārya bodhisattvas have obscurations to perceiving all knowable objects simultaneously. In contrast, buddhas directly perceive all ultimate truths and veiled truths simultaneously with one consciousness. Buddhas never emerge from meditative equipoise, and for them meditative equipoise and subsequent realization become one entity; they no longer need to alternate between the two to know all phenomena. This ability is unique to a buddha. All awakening activities of a buddha—the chief of which is their speech that teaches the Dharma to sentient beings—proceed effortlessly.

Buddhas have removed all impediments to knowing all existents. An omniscient mind explicitly knows all phenomena; all phenomena appear clearly and without confusion to a buddha's mind.

Free of all cognitive obscurations, buddhas do not have mistaken appearances. How then do they know veilings, which are falsities? What an omniscient mind knows from its own perspective differs from what it knows from others' perspectives. When unpolluted phenomena such as buddhas' signs and marks appear to sentient beings, they appear truly existent although they are not. This is not due to the signs and marks having arisen because of the latencies of ignorance, but due to sentient beings' minds being polluted by the latencies of ignorance. In other words, the mistaken appearances are due to the subject, the perceiving consciousness, not the object being perceived. From buddhas' perspective, these pure phenomena do not appear as false; buddhas have no mistaken appearances from their own perspective.

In contrast, the appearance of things such as the table and book that appear truly existent in the perspective of sentient beings is an appearance to buddhas only from the perspective of their appearing to sentient beings. While truly existent tables do not exist, the appearance of them to sentient beings does exist. For example, someone with vitreous floaters has the appearance of falling hairs. While the falling hairs do not exist, the appearance of them to that person does.

Since these mistaken appearances are existent phenomena, they must appear and be known by buddhas. They appear to buddhas' pristine wisdom of varieties not because buddhas have mistaken appearances from their own

perspective. Rather, they perceive what sentient beings perceive, which are mistaken appearances. There is a big difference between sentient beings having the appearance of true existence because their minds are under the influence of ignorance and/or its latencies and buddhas having the appearance of true existence because these appearances are existent phenomena, and being omniscient, buddhas perceive them. From their own side, buddhas experience only purity. From the perspective of the pristine wisdom of varieties all phenomena appear as empty and selfless; they do not appear as truths, but as falsities.

Buddhas have two types of pristine wisdoms (*jñāna*): the exalted knower that cognizes things as they are that perceives emptiness, and the exalted knower that cognizes the varieties of phenomena that perceives all conventionalities. These two pristine wisdoms are inseparably one nature; both are omniscient and both know all ultimate and veiled truths directly. They are differentiated with respect to their objects. The pristine wisdom that cognizes things as they are knows emptiness—the ultimate truth—nondually. The pristine wisdom knowing varieties knows the diversity of phenomena—veiled truths—dualistically by means of their appearance to sentient beings.

A buddha's exalted knower that cognizes things as they are also perceives veilings, but *to the perspective of that exalted knower* veilings do not appear and are not seen. Similarly, the Buddha's exalted knower that cognizes the varieties also perceives emptiness, but *to the perspective of that exalted knower* emptiness does not appear and is not perceived. The exalted knower of things as they are is the fruition of meditative equipoise on emptiness, and the exalted knower of varieties is the result of meditation on illusion-like appearances in the subsequent realization time.

We may wonder: "If veiled truths are true for a mind influenced by ignorance, how can they exist for a buddha, whose mind is not influenced by ignorance in the least? Do conventional truths—the world, sentient beings, houses, and so forth—cease to exist at buddhahood because a buddha does not see them as true?" Veiled truths exist at buddhahood. A buddha perceives what we sentient beings perceive—veiled truths—but does not perceive them in the same way that we do. A buddha perceives them as false.

People who say that knowledge of the varieties of phenomena exists only in the continuums of sentient beings and that buddhas perceive only emptiness and not veilings disparage the buddhas' omniscience and their pristine wisdom of varieties. Similarly, saying that buddhas don't perceive conventionalities because the multifarious phenomena are nonexistent deprecates the buddhas' omniscience and their pristine wisdom of varieties. In addition, some hold the erroneous notion that pristine wisdom realizing the ultimate mode of existence, emptiness, does not exist in a buddha's continuum because meditative equipoise on emptiness abides just on a non-finding (of inherent existence), and if you find the non-finding, then the non-finding must be truly existent. These people disparage both pristine wisdoms.

In summary, in the insight section in his *Middle-Length Stages of the Path*, Tsongkhapa explains that in addition to perceiving ultimate truths, buddhas perceive impure and pure conventionalities, which appear to the exalted knower of varieties. Pure conventionalities are those that are not polluted by ignorance and its latencies. These include a buddha's speech, the qualities of a buddha's mind, and the thirty-two signs and eighty marks of a buddha's body, all of which are produced by a buddha's virtue, not by ignorance or its latencies. Impure veiled truths are those that are polluted by ignorance and the latencies of ignorance, for example all true *duḥkha* such as the aggregates of sentient beings in *samsāra* and the environments we live in.

When pure phenomena such as a buddha's signs and marks appear to sentient beings, they appear to exist from their own side, even though they do not exist in that way. This is due to the latencies of ignorance obscuring sentient beings' minds that make everything appear inherently existent. When these pure phenomena appear to a buddha's mind, they appear purely, without the appearance of inherent existence.

Buddhas experience only purity. If they experienced what is an impure thing to sentient beings, such as a foul smell, they would still experience it as pure. It's not that impure things don't appear to buddhas at all. They appear to them because buddhas perceive what appears to sentient beings. Although both pure and impure phenomena appear to buddhas, they experience only purity.

Impure phenomena appear to a buddha's exalted knower of varieties, but only from the viewpoint of their being appearances that exist for sentient beings. Nevertheless, a buddha's mind is nonmistaken, even though it perceives the mistaken appearance of inherently existent phenomena in the minds of sentient beings. From their own perspective, buddhas do not experience the impure phenomena that are true *duḥkha* and true origins of *duḥkha*.

Dual appearance or dual perception is of three types: (1) the appearance of veilings, (2) the appearance of subject and object as separate, and (3) the appearance of inherent or true existence. Buddhas have the appearance of veiled phenomena and the appearance of subject and object, so we can say they have dual appearance. However, they do not have *mistaken* dual appearances because they lack the aspect of the mind that mistakenly perceives or apprehends phenomena as truly existent.

Saying that the Buddha has pure appearance does not mean that he perceives impure things as pure or that his having pure appearances makes impure things pure. The Buddha still perceives sentient beings and our *duḥkha*. Sentient beings and their *duḥkha* don't cease to exist at buddhahood, but how they are perceived changes.

How we perceive and experience things depends on the state of our mind—from their side phenomena do not inherently exist as this or that. During a famine in India during the Buddha's time, the saṅgha had nothing to eat. A horse trainer offered to the monastics the only thing he had—grain husks. To the monastics it tasted terrible. Ānanda, the Buddha's attendant, started weeping thinking that he had failed to serve the Buddha well because the Buddha was eating such dreadful fare. However, the Buddha quelled Ānanda's sorrow by pulling out a piece of the husk that was stuck in his teeth and giving it to Ānanda to eat. When Ānanda put it in his mouth, he was amazed because it tasted delicious, unlike anything he had ever experienced before. He realized that due to the purity of the Buddha's mind, how the Buddha experienced things encountered in daily life was totally unlike the experience of ordinary beings.

When buddhas teach, although they use words to communicate with their audience, they do not have conceptions. Conceptual consciousnesses involve obscuration; they are mistaken consciousnesses that do not know

their objects directly but get at them only by means of a conceptual appearance. Buddhas, however, have abandoned both afflictive and cognitive obscurations and thus have neither mistaken minds nor obscurations; thus they have no conceptions whatsoever. They also do not impute any objects, so when we say that things exist by being merely designated by term and concept, it is sentient beings' minds that are doing the designating, not buddhas.

I once asked the late Gen Nyima-la, "How does a buddha see an object without that object appearing truly existent?" He responded that we cannot explain this, because here we are talking about the uncommon field of experience (T. *spyod yul las 'das pa*) of a buddha that only a buddha can know. Of course we can talk about what buddhas perceive and how they perceive it, but it is not easy to gain a clear mental picture of what this means. We can say that buddhas see things as merely designated, but if we really think about this, it is very difficult to imagine what seeing something as merely designated would be. This is similar to the difference between talking about and directly perceiving emptiness. We ordinary beings can talk about emptiness as the mere absence of the object of negation, but unless our mind is intimate with emptiness, we don't really have an idea of what emptiness is. We may talk a lot about nonduality, but do we even have a correct assumption, let alone an actual experience, of nonduality?

We have many discussions about what the Buddha perceives and how. Does he perceive veiled truths—phenomena that appear true to the mind of ignorance? Or does he perceive nominal truths—phenomena that exist by being merely designated? How do the buddhas see their own omniscient minds? To answer these, the only alternative is to become a buddha ourselves, and then through our own experience we will know how a buddha perceives things. Otherwise, we are just poking our nose here and there and talking about things that are not within our own reach!

## 12 | Buddhahood: The Buddhas' Awakening Activities

**T**HE *Sublime Continuum* describes the buddhas' awakening activity (*samudācāra*) by which all buddhas work to benefit each sentient being spontaneously, continuously, and without partiality.

A buddha's awakening activity is spontaneous in that it requires no effort on the part of the buddhas. Because their minds are free from all obstructions, they know each sentient being's dispositions, aspirations, thoughts, and tendencies. They know which of the three vehicles each sentient being aspires to as well as the teachings and trainings of each vehicle so that they are able to instruct and guide that sentient being to upper rebirth, liberation, and full awakening. In addition, the buddhas effortlessly and intuitively know the suitable place, time, and manner to teach and train each sentient being, and manifest accordingly. All this is done without error and without having to ponder what to do. Without thought or intention, the reflection of the moon appears on dewdrops, ponds, and in countless containers that hold calm and clear water. Similarly, when sentient beings are ready to be led on the path, the Buddha's awakening activities spontaneously manifest. The *Sublime Continuum* says (RGV 4:3–4):

For whom? How? By which training?  
Where? And when? Since conceptual thought  
regarding such [questions] does not occur,  
the *Muni* (Buddha) always [acts] spontaneously.

The temperaments of the disciples,

which of the many means for each,  
which training at what place and time:  
[the buddhas are not mistaken as to any of] these.

Awakening activity is also continuous and flows forth uninterruptedly. Having excellent qualities unmatched by others, buddhas have perfected the three higher trainings and the six perfections and possess profound wisdom. Having completed the two collections of merit and wisdom, they are able to ripen the minds of all sentient beings and have mastered all vehicles and paths to arhatship and buddhahood. As a result of these immaculate and extensive causes, they have attained complete and perfect awakening and can see that each and every sentient being possesses the treasure-like potential to become a buddha that is shrouded by clouds of afflictions and defilements. To overcome these adventitious defilements, the buddhas' awakening activity continuously flows.

### *Nine Similes for Awakening Activity*

The *Adornment with the Light of Pristine Wisdom Entering the Domain of the Buddha Sūtra* (*Sarvabuddhaviṣayāvātārājñānālokālamkāra Sūtra*) speaks of nine similes that help us understand how the buddhas' awakened activities function. Elaborated on in the fourth chapter of the *Sublime Continuum*, the similes reveal the awakening activities of the Buddha's body, speech, mind, body and speech together, pristine wisdom, secrets of the Tathāgata's mind, secrets of his speech, secrets of his bodies, and compassion. Although we speak of the Buddha below, what is said applies to all buddhas.

(1) *The form of the god Indra illustrates the display of the illusory manifestations of the Tathāgata's body.* If the surface of the earth were to transform into polished and immaculate lapis lazuli, the reflection of Indra, his palace, and his entourage would appear on it. People who saw this would aspire to become like Indra, and to actualize that wish they would create virtue and abandon nonvirtue. As a result they would be born as Indra.

Although these people do not understand that they are perceiving only the reflection of Indra, not Indra himself, still the reflection, which is without intention, has a positive effect on them and aids them in attaining a higher rebirth. Similarly, due to the firm powers of faith, effort, mindfulness, samādhi, and wisdom, ārya bodhisattvas, whose minds are pure and polished like lapis lazuli, can see in their minds the appearance of the Buddha with thirty-two signs and eighty marks. Although the Buddha didn't think "I'm going to benefit sentient beings in this world," and although the Buddha did not move from the stillness of the dharmakāya, he emanates countless illusion-like forms that appear to the minds of those who have created the cause to perceive them.

When the supreme emanation body of the Buddha appears in the world, people are not aware that this is an appearance of his pristine wisdom. They may even cling to his body, mistakenly thinking it is made of atoms. These appearances of the Buddha are the Buddha; it would be a mistake to say they are not. It would also be mistaken to think they are made of coarse material. Nevertheless, all those who see them receive enormous benefit. Relying on beholding his form, all Mahāyāna followers are inspired to practice well and will come to generate bodhicitta and see their inner dharmakāya with their own pristine wisdom.

Although we do not think that this is the appearance of our own mind, it is a dependent arising relying on both the Buddha and our merit. Like the appearance of Indra reflected in the lapis lazuli ground, these appearances of the Buddha reflected in the ground of our virtuous mind should not be viewed as either existent or nonexistent—that is, they are neither truly existent nor totally nonexistent. Nevertheless, these appearances function to inspire us to become buddhas, and as a result, bodhicitta grows in our mind. We then engage in studying, thinking, and meditating on the Dharma and in practicing the bodhisattvas' compassionate deeds. Following the Mahāyāna path, we will realize the clear light—the true nature of the mind—and through this we will attain the ultimate result we long for, the truth body of a fully awakened buddha.

The Buddha does not leave the state of dharmakāya to radiate out this appearance. It happens naturally when all the causes and conditions come together. From the Buddha's side, his completion of all the abandonments

and realizations of a buddha give him the ability to benefit others effortlessly. From our side, our faith, merit, bodhicitta, meditation, and practice of the six perfections make us receptive vessels. When ārya bodhisattvas, who have created all these causes, see the enjoyment body in their pure minds, it becomes a cause contributing to their attainment of full awakening.

(2) *The celestial drum illustrates the Tathāgata's speech expressing the holy Dharma.* In the God Realm of the Thirty-Three, a celestial drum is suspended in the sky. A product of the gods' past virtuous karma, without effort (it is not beaten by anyone), without origin (such as being produced by the vocal cords, tongue, and lips), without thought (of a thinking mind), without vibration (of any physical basis), and without intention (to make a sound), the drum produces the meaningful sound of the four seals: all conditioned things are impermanent; all polluted things are in the nature of duḥkha, all phenomena are selfless, and nirvāṇa is peace.<sup>108</sup> This sound awakens the gods from their indulgence in sense pleasures and alerts them to the impending attacks of the jealous demi-gods, and in this way enables them to maintain peace.

In the same way, the Buddha effortlessly teaches all sentient beings who have sufficient virtue, without generating the motivation or energy to do so and without thinking about who to teach and what to teach them. The Buddha's speech expresses the Dharma in accordance with sentient beings' various levels of aspirations and capacities, without effort, origin, thought, physical basis, or intention. In this way, the Buddha answers sentient beings' spiritual questions, dispels their doubt, and instructs them in what to practice and abandon. By hearing the teachings and putting them into practice, sentient beings are able to overcome their afflictions, subdue their suffering, and attain the peace of nonabiding nirvāṇa. In the meantime, hearing the Buddha's speech enables them to have favorable rebirths in order to continue their Dharma practice.<sup>109</sup>

Just as someone who lacks good hearing cannot hear the subtle sounds of a drum, sentient beings whose merit and wisdom are minimal are oblivious to the subtle meaning of the Dharma teachings. Those with good hearing who listen attentively can hear the sound of the drum clearly. What we are able to take in and benefit from depends on our merit and wisdom as

well as the effortless speech of the Buddha. While the Buddha's teachings are always available, we must study and put them into practice, thereby purifying our minds and creating the conditions to be able to hear and understand the teachings in the future.

It is said that all virtue of any sentient being anywhere depends on the Buddha's awakened activity of giving teachings and guidance. Of all the various types of awakening activities of the buddhas, their speech is principal, for teaching us the Dharma is the primary way that they lead us to liberation and awakening. As that is the case, we should rely on the Buddha's speech. Doing so will enable those who have not attained a path to attain one and those who have entered the path to deepen their understanding and progress through the paths and grounds to full awakening (RGV 4:43).

Any cause of happiness for worldly beings and gods,  
in whichever sphere of the world without exception,  
briefly spoken, fully depends upon this melody [of the Buddha's  
teachings]  
that pervades all the worlds, not forsaking one.

(3) *Clouds illustrate the all-pervading nature of the Tathāgata's mind of compassion and wisdom.* In hot Indian summers, monsoon clouds continuously and effortlessly pour down rain that nourishes the rice paddies and produces abundant crops. In a similar way, in the unpolluted space of emptiness from the clouds of the dharmakāya, stirred by the wind of love and compassion, effortless and uninterruptedly the Buddha rains down the impeccable Dharma, bringing about a harvest of virtue in the minds of sentient beings.

Just as the rain water is pure but acquires different tastes and qualities depending on the type of land it falls on, the Dharma will take on the taste of the Śrāvaka, Solitary Realizer, or Bodhisattva Vehicle depending on the mind, dispositions, and aspirations of those to be tamed. While the nectar of the Dharma is of a single taste—nirvāṇa—it assumes a different flavor depending on the vessel into which it is poured.

When the monsoon rain falls, human beings are delighted because it will nourish their fields; peacocks are indifferent because rain neither helps nor hinders their activities; and hungry ghosts are unhappy because it appears as hail to them. Similarly, the three dispositions of sentient beings respond in different ways to the Dharma rain. Those who have cultivated conviction and confidence in the Mahāyāna are nourished by the rain, those who are uninterested are neither happy nor unhappy, and those who have wrong views and are hostile to the Mahāyāna doctrine are unhappy.

The clouds do not think “I will cause benefit or harm,” they simply allow the rain to fall. Some people take shelter and enjoy the rainfall, mindful of the crops that will flourish, but insects may dislike the downpour. Similarly, the cloud of the Buddha’s compassion lets fall the rain of the Dharma without the notion “I will purify the negativities and afflictions of those with faith in the Mahāyāna” or “I will ripen the seeds of wrong views in those who are antagonistic to it.” Whether sentient beings benefit or not from the buddhas’ activities in the short term depends on their situation, but the buddhas’ awakening activities are always conducted with compassion to benefit sentient beings in the long term.

Buddhas fully understand the implications of being born in cyclic existence with its three types of duḥkha. Because they realize the danger of sentient beings remaining apathetic toward the dire situation they are in, from the cloud of compassion they shower the Dharma upon us continuously and in accordance with our dispositions and karma. Sentient beings who have some discriminating wisdom see the nature of saṃsāra and nirvāṇa and leave behind all hankering for the former and seek the latter. Having cultivated faith based on understanding the path in previous lives, in this life they again follow the Buddhist path and understand that duḥkha is to be known, its origin is to be abandoned, and its true cessation is to be actualized. With that in mind, they gladly practice the path that leads to the fruit they desire. This is what we too must do. With that in mind, in the *Guru Pūjā*, we request teachings with this verse:

Please let fall a rain of vast and profound Dharma from a  
hundred thousand billowing clouds of wisdom and

compassion, to nurture, sustain, and propagate a garden of kunda flowers for the benefit and bliss of all limitless beings.

(4) *The god Brahmā illustrates the illusory emanations of the Tathāgata's body and speech.* Without departing from the Brahmā Heaven, the Great Brahmā effortlessly sends out illusory manifestations of himself to the desire-realm gods. Seeing these manifestations, they want to emulate Brahmā and forsake their attachment to the delights of the desire realm to create the causes to be born as a Brahmā god.

In the same way, without departing from the dharmakāya—the omniscient mind that dwells in emptiness yet knows all conventionalities at the same time with one consciousness—the Tathāgata effortlessly emanates a multitude of illusion-like forms in all realms of saṃsāra to benefit the beings who have the karmic fortune to encounter them. By meeting a supreme emanation body that performs the twelve deeds, sentient beings are inspired to emulate him and so observe the law of karma and its effects and practice renunciation, bodhicitta, and the correct view.

Brahmā's ability to emanate these manifestations is due to aspirational prayers he made in previous lives to benefit the gods. In addition, in previous lives, the gods aspired to see Brahmā and created the merit for this to happen. In this way the situation of their seeing his illusory emanations now occurs. Similarly, by the power of aspirational prayers made by the Buddha when he was a bodhisattva and the power of the virtue created by sentient beings who want to meet and practice the teachings, now these sentient beings are able to see the illusion-like emanation body of the Buddha. These emanations effortlessly flow forth from the Buddha's truth body when the causes and conditions assemble for sentient beings to benefit from them. Thus Śākyamuni Buddha appeared in our world, and like all supreme emanation bodies, he performed the twelve deeds.

(5) *The sun illustrates the Tathāgata's mind radiating the light of pristine wisdom.* When the sun shines, lotuses blossom and display their beauty, while kumuta flowers close. Yet the sun does not praise one or criticize the other, nor is the sun encouraged by the former and discouraged by the latter. In the same way, the sun of the Tathāgata sheds its rays of the sacred Dharma on the beings to be trained, without any thought or

judgment, just with the wish to be of benefit. The lotus of wisdom unfolds in those with merit who are receptive to the Dharma, while the kumuta-flower minds of those who are obscured close.

The radiant sun will be reflected in whatever upturned vessels are filled with water. The acuity and brilliance of the reflections depend on the clarity of the water. In the same way, numberless form bodies are reflected in the vessels of various disciples. Depending on the degree to which their minds have been purified of defilements, the clarity of the reflection will differ. Like vessels that are upside down, those whose minds are disinterested in or even hostile to the Buddhadharma are temporarily immune to the reflections of the Buddha's wisdom.

In the clear, open sky, the sun rises and shines its rays first on the highest mountain peaks, then on the medium-sized mountains, and finally on the hills. Likewise, in the space of the nature truth body, the sun-like omniscient mind of the Buddha arises and with its wisdom illuminates the minds of sentient beings: first those with great merit, then those with medium merit, followed by those of least merit. In this way the Buddha leads sentient beings who are subject to great suffering in unfortunate births to take a human birth. He illuminates with wisdom the minds of human beings immersed in wrong views, enabling them to attain freedom from saṃsāra. And his brilliant sun of wisdom propels arhats and bodhisattvas to full awakening. Just as the sun dispels darkness and stimulates growth, so too does the awakening activity of the Buddha's wisdom spontaneously dispel the darkness of ignorance and stimulate the growth of realizations within sentient beings' minds.

(6) *A wish-fulfilling gem illustrates the secret aspect of the Tathāgata's mind.* Just as a wish-fulfilling jewel is continuously present and without exertion grants riches to those beings in its field of activity according to their wishes, the Buddha continuously shares the teachings, fulfilling the spiritual aspirations of all those who rely on him. A wish-fulfilling jewel lies deep underground or in the ocean and is very hard to find. It has no intention or thought to give one thing to one person and another thing to another, but when people are near this jewel and pray to it, it fulfills each and every one of their wishes—whatever it may be—spontaneously and fully. In the same way, sentient beings with different dispositions seek

teachings and practices according to their aspirations and interests, and the Buddha fulfills their spiritual needs completely.

From its side, a wish-fulfilling jewel doesn't discriminate whose wishes it grants and whose it doesn't; that depends on whether a person is near the jewel and prays to it or not. Similarly, from the Buddha's side, he guides all sentient beings equally, whether those people have faith in his teachings or not. Whether people receive his guidance or not depends on their receptivity, sincerity, merit, and eagerness to learn.

Once a person finds a wish-fulfilling jewel, he or she cares for it meticulously, never being careless or taking it for granted. Similarly, the pure Dharma teachings are difficult to encounter during our countless saṃsāric rebirths and in the vastness of our universe. This is especially the case for those with little merit and strong mental poisons. Once finding the precious teachings, we must treasure them as being more valuable than a wish-fulfilling jewel, for they can end the suffering that a jewel can never touch (RGV 4:73).

As a precious gem, which is free from thought, fully bestows  
the desired riches on others, doing so without effort,  
the Buddha always stays for others' sake, as merited by each,  
and as long as existence lasts, doing so without any effort.

(7) *An echo illustrates the secret aspect of the Tathāgata's speech.* The cave that reflects a sound has no intention of making an echo and exerts no energy to do so. The echo abides nowhere; it isn't like the sound of a conch that exists externally, and it's not like a thought that exists internally. Nevertheless, while appearing as various sounds, an echo communicates a meaning according to the perception of those who hear it. Likewise, the sound of the buddhas' speech appears in various tones but it takes meaning in the minds of disciples in accordance with their perceptions—their individual perspectives and dispositions. The Buddha is free from effort or thought to teach a specific topic to a specific individual. Like the echo, the source of the Buddha's speech cannot be located, even though it arises due to causes and conditions.

(8) *Space illustrates the secret aspect of the Tathāgata's bodies.* Uncreated space is not a material thing. As the absence of obstructing contact, it does not appear, it has no form, and it is not an object of our senses. There is no way for us to hold on to it or point out where it is. And yet appearances of beings and their environments arise in space and these appearances are high and low and consist of a variety of colors. While space appears in these ways, this is not its actual nature. Similarly, the infinite illusory appearances, emanations, and manifestations of the Buddha appear but cannot be pinpointed anywhere. All the illusion-like appearances of the Buddha, such as his twelve deeds, appear because of the aspirations and temperaments of disciples. While manifesting in forms that arise and cease, the ultimate Buddha is not subject to arising and disintegration. Nevertheless it pervades everywhere, endures forever, and allows all excellent qualities to exist until all beings are freed from cyclic existence.

(9) *The earth illustrates the awakening activity of the Buddha's compassion.* All flowers and fruit, as well as everything that sustains us, grow from or exist within the earth. Although the earth has no intention to grow plants or yield minerals, it does so without any exertion. Without thought, seeds germinate, plants take root, and trees and bushes grow, providing nourishment for the earth's denizens. In the same way, the fully awakened Buddha does not think "I must benefit these sentient beings," but when sentient beings rely on him, the seeds of our good qualities sprout and soon the flowers and fruits of realizations and the two collections flourish. In this way, due to great compassion, the Buddha is the source and support of sentient beings' spiritual growth.

Maitreya explained the Buddha's awakening activity through these nine similes because it is hard for us to conceptualize how the Buddha's awakening activity functions. We are so habituated to every activity requiring thought, planning, effort, and evaluation that we find it puzzling to consider that the Buddha's awakening activities can occur without these. His being able to do so is a result of the innumerable causes he created as a bodhisattva before attaining awakening. These causes include the vastness of his spiritual realizations and the magnitude of his dedication prayers. The depth of his compassion and the urgency with which he cultivates the wisdom that will abolish all defilements and perfect all good qualities are of

such an intensity that the Buddha's ability to benefit sentient beings never dissipates and continues spontaneously and without interruption until the end of saṃsāra.

As seen through these similes, the benefit we receive from the Buddha's awakened activities also depends on the causes we have created. Our karma and the Buddha's awakening activities are of equal strength in bringing results. If we have strong virtuous karma, we can receive the Buddha's awakening influence and make great progress in our spiritual practice. If our virtue is weak and our nonvirtuous karma strong, the Buddha's awakening activity cannot override the force of our negativities. However, as we direct our energy away from destructive thoughts and actions and toward constructive ones, we create the space in which the Buddha's awakening activity can reach and touch us. Our wish to change our ways and make ourselves into a receptive vessel is often fueled by the weariness of constantly experiencing dissatisfaction or misery. It may also be sparked by seeking meaning in our lives. A strong impetus for making changes in our lives may be meeting a qualified spiritual mentor.

The nine similes are presented in a particular order. Although each simile resembles the Buddha's awakened activities in a certain aspect, it does not resemble them in another aspect. Each subsequent simile eliminates the way in which the previous simile does not correspond to the Buddha's awakened activities.

1. The Buddha's body is similar to the reflection of Indra in the smooth lapis lazuli surface in that countless illusory physical manifestations of the Buddha are displayed in sentient beings' minds. It is dissimilar in that Indra's reflection is voiceless and cannot turn the Dharma wheel, whereas the Buddha can.
2. The Buddha's speech is similar to the great celestial drum teaching the four seals in that the Buddha's speech turns the Dharma wheel and gives teachings to sentient beings. However, the great drum doesn't benefit everyone in all directions and is not able to fulfill the welfare of sentient beings for all time, whereas the Buddha's benefit pervades all worlds for all time.

3. The Buddha's awakened mind is similar to a vast cloud whose rain ripens crops in all directions in that the Buddha's mind matures disciples by means of its compassion and wisdom. Nevertheless, the cloud does not eliminate harmful or worthless factors, whereas the rain of Buddha's compassion and wisdom eliminates the sufferings of sentient beings and the afflictions and karma that cause them.
4. The Buddha's awakened body and speech are similar to Brahmā in that just as Brahmā eliminates the worthless factors of attachment to sense gratifications, so does the endless display of the Buddha's body and speech. However, Brahmā doesn't benefit sentient beings extensively or continuously, nor does he enable sentient beings to experience ultimate happiness. In contrast, the Buddha's physical and verbal activities continuously lead sentient beings to final, complete fulfillment and joy.
5. The Buddha's radiant light of pristine wisdom is similar to the radiating light of the sun that ripens all crops in that the radiating light of the Buddha's pristine wisdom continuously ripens the crops of realizations in disciples. However, the sun shines on crops only during the daytime, not continuously, and it does not overcome darkness everywhere. The radiating light of the Buddha's pristine wisdom shines on all sentient beings everywhere without interruption and overcomes the darkness of ignorance.
6. The secrets of the Buddha's mind are similar to a wish-granting jewel that, by means of its brilliance, continuously eliminates darkness at all times. Similarly the mysterious aspect of the Buddha's mind radiates the light of nonconceptual pristine wisdom forever, without end. Nevertheless, compared to the mysteries of the Buddha's mind, a wish-granting jewel is more readily present. It can be found with the nāgas and in the sea. However, it is hard and rare to find the Buddha, for the Awakened One cannot appear to sentient beings who lack the karmic fortune to encounter him. In addition, to accomplish the mysteries of the Buddha's mind necessitates collecting merit and wisdom for three countless great eons.
7. The secrets of the Buddha's speech are similar to an echo, which is difficult to pinpoint because it cannot be found. Likewise, the

mysteries of the Buddha's speech that give the excellent teachings are also hard to find. Nevertheless, an echo occurs due to causes and conditions, whereas the Buddha's nature body is self-arising, uncreated, and does not appear due to causes and conditions.

8. The secrets of the Buddha's body are similar to space, which does not arise from causes and conditions and is uncreated, but which appears as a variety of things. Similarly, the mysteries of his body display countless illusion-like manifestations. However, space is not a basis for virtue, whereas the Buddha is the basis of all purified virtuous qualities.
9. The Buddha's awakened activities are like the earth that is the basis supporting everything in that his awakened activities are the basis for all goodness and virtue and for whatever is best for ordinary beings and āryas. The awakening activities of all buddhas is the basis on which the sacred Dharma arises. The Dharma is the three vehicles, the paths that lead us beyond saṃsāra to personal nirvāṇa and nonabiding nirvāṇa; the śrāvakas, solitary realizers, and bodhisattvas all depend on it. Based on the Buddha's awakening, the path of the ten virtues, which are the cause of happiness in the desire realm, arises; the four dhyānas and four immeasurables, which constitute the happiness in the form realm, arise; and the four formless absorptions also arise. Thus all worldly happiness of the three saṃsāric realms depends on the awakening of the Buddha and the Dharma he taught.

### *Twenty-Seven Awakening Activities*

The awakening activities of all the buddhas are classified into twenty-seven types. They are pure qualities of the wisdom dharmakāya, meaning that they arise depending on the wisdom dharmakāya. The wisdom truth body appears to sentient beings as the enjoyment body and emanation bodies in order to work for their welfare. These awakening activities operate spontaneously and without interruption to set sentient beings in the realizations of the path. "Setting" does not mean a buddha physically or mentally places realizations in sentient beings; that is impossible because

each of us must train our own mind. Rather, “setting” indicates that the buddha’s wisdom dharmakāya knows our dispositions and interests, and the two form bodies display the awakening activities by explaining the Dharma in a way that each of us can understand at our present level. Through hearing and practicing the teachings, we gain understandings that set us on the next level.

Although these twenty-seven awakening activities are delineated in terms of bodhisattvas who have entered the path, each buddha works for the welfare of all sentient beings in all realms of saṃsāra. Initially buddhas instruct us in the preciousness of a human life with its freedoms and fortunes, as well as in impermanence and death, to set us in understanding the importance of engaging in Dharma practice.

In each line below, “them” indicates the specific disciples on the various paths and grounds that a buddha is setting on this level. The buddhas give similar instructions to others who are at lower as well as higher levels.

Gyaltsab’s *Ornament of the Essence (Rnam bshad snying po rgyan)*, a subcommentary on *Ornament of Clear Realizations*, explains the twenty-seven awakening activities in two ways: according to Vimuktisena (sixth century) and Haribhadra (eighth century). The following is according to Vimuktisena:

SETTING TRAINEES ON THE PATH OF ACCUMULATION	
1	Setting them in the excellent attitude, the intention to attain liberation rather than seeking higher rebirths in saṃsāra.
2	Setting them in the maturing of others’ continuums by teaching them the four ways to gather disciples so that they will gather and benefit their own disciples.
3	Setting them in the wisdom that realizes the four truths so they realize that true duḥkha and true origins are afflictive factors to be abandoned and true cessations and true paths are pure factors to be adopted, and that none of these exist inherently.
SETTING TRAINEES ON THE PATH OF PREPARATION	
4	Setting them in the intention of others’ welfare, the realization of the exact meaning of the mode of abidance.
5	Setting them in the method to complete the qualities of a buddha in their own continuums by completing the practice of the six perfections.
6	Setting them in the basis of accomplishing the welfare of self and others by practicing the paths of the ten virtues, which forms a good foundation for accomplishing the two welfares.
7	Setting them in the pure view, the realization of the emptiness of inherent existence

	with a mundane wisdom arisen from meditation.
SETTING TRAINEES ON THE PATH OF SEEING	
8	Setting them in new and direct realization of the emptiness in which the elaborations of inherent existence have been extinguished.
SETTING TRAINEES ON THE PATH OF MEDITATION	
9	Setting them on the second and third grounds through the perfections of ethical conduct and fortitude and understanding that all phenomena in these grounds are mere imputations.
10	Setting them in the fourth, fifth, and sixth grounds through the wisdoms knowing the thirty-seven harmonies with awakening, the four truths, and dependent origination conjoined with the realization of emptiness.
11	Setting them in the seventh ground through the perfection of skillful means so they will ripen other sentient beings' minds.
SETTING TRAINEES ON THE EIGHTH GROUND	
12	Setting them in the knower of paths that directly knows the śrāvaka, solitary realizer, and bodhisattva paths.
13	Setting them in the extinction of manifest grasping at true existence.
14	Setting them in the attainment of awakening that is imputed "Buddha Jewel," which is so called because eighth-grounders, like buddhas, do not need coarse effort to work for the benefit of sentient beings.
15	Setting them in the application of the pure land so they purify their own buddha field in which they will attain full awakening.
SETTING TRAINEES ON THE NINTH GROUND	
16	Setting them in the definite attainment of buddhahood so they will have the ability to set others in definitely attaining buddhahood without falling to the Śrāvaka or Solitary Realizer Vehicles.
17	Setting them in accomplishing the immeasurable welfare of sentient beings in a huge number of world systems.
SETTING TRAINEES ON THE TENTH GROUND	
18	Setting them on the about-to-be-attained tenth ground by their accomplishing the special excellent qualities of relying on the buddhas, hearing the excellent Dharma, making offerings, and so forth in a huge number of world systems.
	Setting them in increasing realization. <sup>110</sup>
19	Setting them in completing all virtues, which are the branches of awakening.
20	Setting them in directly seeing that coarse and subtle actions do not go to waste.
21	Setting them in seeing the complete four truths.
22	Setting them in abandoning the four errors of seeing the impermanent as permanent, the impure as pure, and so forth.
23	Setting them in the realization of the mode—the absence of grasping true existence—which is the basis for generating the four errors.
24	Setting them in the completion of the completely pure that realizes the equality of all phenomena in being empty of true existence.
25	Setting them in the completion of the two collections that are the causes of awakening.

26	Setting them in the realization of the equality of conditioned saṃsāra and unconditioned nirvāṇa in being empty of true existence.
SETTING TRAINEES IN THE RESULT OF THE PATH—THE PATH OF NO-MORE-LEARNING	
27	Setting them in the nonabiding nirvāṇa of a tathāgata.

## REFLECTION

---

1. Contemplate that at this moment there are buddhas who are trying to set you in Dharma understandings. You are not alone on the path; the more you make yourself a receptive vessel, the more the buddhas' awakening activities can affect you.
  2. What can you do now to make yourself more receptive to the Buddha's awakening activities?
  3. Think that when you attain buddhahood, you will spontaneously and effortlessly be able to work for the benefit of sentient beings through enacting the twenty-seven awakening activities. How would it feel to be able to do this for sentient beings?
  4. How can you begin to benefit others right now?
- 

### *Ānanda Settles His Doubts*

Despite knowing the Buddha's marvelous awakening activities, if you nevertheless wonder if the Buddha possesses the capability to liberate all beings, this story from Nāgārjuna's *Exegesis on the Great Perfection of Wisdom Sūtra* will assuage your doubts.<sup>111</sup>

Ānanda once thought to himself, "In the past, at the time of Burning Lamp Buddha, the world was a fine one, the lifespan of the people was long, and they were easy to teach and bring across to liberation. Now, in the time of Śākyamuni Buddha, the world is an evil one, the lifespan of the people is short, and they are difficult to teach. Will the

Buddha nonetheless go ahead and enter nirvāṇa even though the Buddha’s work will not have been completed?”

It was early in the morning when [Ānanda] expressed this concern to the Buddha. The sun had already risen. At that very time the Buddha then entered into the sunrise samādhi. Just as when the sun rises, its light illuminates all of Jambudvīpa, so, too, it was with the body of the Buddha. His hair pores all sent forth light that universally illuminated worlds throughout the ten directions as numerous as the grains of sand of the Ganges.

Each of the rays of light put forth a seven-jeweled thousand-petalled lotus blossom. Atop each blossom, a buddha was seated. Each one of those buddhas sent forth an incalculable number of light beams. On each ray of light was a seven-jeweled, thousand-petalled lotus blossom. Atop each blossom a buddha was seated.

All these buddhas universally filled up worlds throughout the ten directions as numerous as the grains of sand of the Ganges, and each of them carried forth with the teaching and transforming of beings. In some cases they spoke Dharma. In some situations they remained silent. In some cases they were walking along. In some circumstances they engaged in displays of the superknowledges wherein they transformed their bodies and made water or fire pour forth from them. In manners such as these they employed all sorts of skillful means whereby they crossed over to liberation beings throughout the ten directions who were immersed in the five realms of rebirth.

Due to receiving assistance from the awesome spiritual power of the Buddha, Ānanda was able for a time to completely observe these phenomena. The Buddha then withdrew his manifestation of the fulfillment of spiritual power and then arose from samādhi, asking of Ānanda whether or not he had seen these phenomena and whether or not he had heard these phenomena.

Ānanda replied, “Having received the assistance of the Buddha’s awesome spiritual power, I have indeed seen and I have indeed heard.”

The Buddha asked, “Given that the Buddha possesses powers such as these, is he able to bring the Buddha’s work to ultimate completion or is he not?”

Ānanda replied, “Bhagavān, even in a case where beings filled up worlds throughout the ten directions as numerous as the grains of sand of the Ganges, if the Buddha were to employ powers such as these for just a single day of his life, he would still certainly be able to completely implement the work of the Buddha.”

Ānanda exclaimed, “This is a matter such as I have never experienced before. Bhagavān, the Dharma of the buddhas is immeasurable, inconceivable, and ineffable.”

### *Individuals Acting in Unison*

In the *Ornament of the Mahāyāna Sūtras (Mahāyānasūtrālaṃkāra)*, Maitreya speaks of individual sentient beings becoming awakened using the similes of the sun’s rays illuminating the world and rivers flowing into a great ocean. These similes help us understand what happens to the individual at the time of full awakening and the relationship of the individual buddhas to each other. Maitreya says (10:3–4):

Just as the immeasurable rays of the sun all intermingle (mix  
together, merge)  
in the sun’s corona,  
always engaged in the same activity,  
that of illuminating the world,  
likewise in the stainless dhātu,  
innumerable buddhas intermingle, engaged in the same deeds,  
illuminating pristine wisdom.

Later in the same chapter he says (10:84–87):

As long as rivers have not merged in the ocean,  
they have different locations and separate waters,  
are small and have different activities,  
providing only slight support for aquatic life.

Once they merge into the ocean, their location is one,  
and their water has become one great body.  
They act as one and provide support  
for great quantities of aquatic life.

As long as they have not become buddhas,  
they have separate bases<sup>112</sup> and intellects,  
little realization, and do separate deeds,  
able to provide for the welfare of only a few sentient beings.

When they enter buddhahood their forms  
and realizations are not different;  
all of their deeds converge into one and they provide forever  
for the welfare of great hosts of beings.

These verses illustrate the great advantage of attaining buddhahood. As sentient beings, we have different bodies and minds that are all under the control of afflictions and polluted karma, our understanding of the Dharma is small, and each of us acts separately. In sum, we are able to benefit only a few others.

However, when sentient beings attain buddhahood, each of them has an omniscient mind. These omniscient minds are not different in the sense of one having higher realizations and another lower. Each of them perceives all phenomena without impediment, and in that way they are the same. Similarly, there is no difference in the capacity of each buddha to perform awakened deeds to benefit sentient beings. When any buddha acts to benefit a sentient being—for example, when Mañjuśrī radiates awakening deeds—it is all the buddhas acting in unison. There is no difference in the awakened deeds of all the buddhas. What Mañjuśrī does to help sentient beings is the

same as what Tārā, Chenrezig, Yamāntaka, and all other buddhas do. We can't say this is the awakened deed of Mañjuśrī but it's not the awakened deed of the other buddhas.

When water from many rivers flows into the ocean, although all the molecules of water have the same qualities, they do not become one molecule. They remain distinct molecules, and a buddha is able to differentiate them, "This molecule is from the Ganges; that molecule is from the Brahmaputra." Nevertheless, they function in union to support aquatic life, and in this sense they cannot be differentiated. Water from both the Ganges and the Brahmaputra contribute to the Indian Ocean, but once they intermingle with other water molecules in the ocean, we can't tell which water molecule is from which river and all of them perform the same function.

Since there are already countless buddhas benefiting sentient beings, why is it important for us to become buddhas? Before becoming buddhas, each of us had different relationships with various sentient beings. Because of these different karmic links formed when we were sentient beings, it may be easier for us after we attain buddhahood to guide a specific sentient being to awakening. This indicates that each buddha has his or her own mental continuum, although their awakened activities flow forth in unison with other buddhas.

Another indication that buddhas have individual mindstreams is that when they were bodhisattvas on the path they expressed different unshakable resolves that they would accomplish as buddhas. For example, due to the strong unshakable resolve that Amitābha Buddha made while he was a bodhisattva, he was able to establish Sukhāvātī pure land as a buddha. As a result of the strong unshakable resolves made by each of the thirty-five buddhas, they are able to aid sentient beings with purifying specific destructive karma.

In the *Treasury of Knowledge*, Vasubandhu says that all buddhas are the same in three aspects: (1) their attainment of the dharmakāya, the state of full awakening; (2) their completion of the two collections of merit and wisdom; and (3) their activities directed toward the benefit of sentient beings. However, to benefit sentient beings in the most suitable and extensive way, they appear differently in the world in three ways: (1) they

have different form bodies, (2) the lifespan of their supreme emanation bodies differ, and (3) the size and appearance of the bodies that they emanate are different.

The mindstreams of sentient beings do not become one at the time of attaining full awakening. According to the Vajrayāna, the combination of the subtlest wind, which becomes the enjoyment body of that buddha, and the subtlest mind, which becomes the dharmakāya of that buddha, is the basis of designation of that particular buddha. A buddha, like all sentient beings, has five aggregates; however, a buddha's aggregates are pure, whereas those of sentient beings are not. A buddha's five aggregates act as the basis of designation of that buddha. Nevertheless the buddhas who are merely designated in dependence on a set of aggregates do not have a reified sense of I and mine and instead relate to I and mine as mere designations that fulfill a purpose conventionally.

### *Questions about the Buddha*

As we learned in the chapters about refuge and the Three Jewels in *Following in the Buddha's Footsteps*, buddhas have many unique features that are not shared with ordinary beings or even with other āryas. Here we'll look at some questions that arise about the qualities and abilities of buddhas.

Does a buddha create karma? A buddha's awakening activity is action (*carya*), but it is beyond polluted and unpolluted karma. Polluted karma is created by those who have not directly realized emptiness, and unpolluted karma is created by āryas who still have latencies of ignorance and other cognitive obscurations. The āryas who are arhats and pure-ground bodhisattvas take a mental body that arises due to the base of latencies of ignorance and unpolluted actions, all of which a buddha has abandoned. Because of having this mental body, bodhisattvas of the pure grounds cannot act in completely spontaneous ways, whereas all of a buddha's activity is spontaneous and effortless. For this reason, the mental body is called "the subtle māra of the aggregates," a negative force that buddhas have overcome. In contrast, a buddha's body is not a mental body like that.

The purified subtlest winds have become an enjoyment body that is the nature of that buddha's wisdom mind.

Buddhas have no conceptual consciousnesses and perceive all phenomena directly and nonconceptually. How do they identify objects without conception? Identifying objects occurs due to the mental factor of discrimination, which is one of the five omnipresent mental factors that accompany all consciousnesses. Buddhas also have this mental factor. In sentient beings, discrimination accompanies nonconceptual minds such as visual direct perceivers, where it discerns one color from another, for example. It also accompanies conceptual mental consciousnesses. In higher-level mental functions, discrimination plays an important role in determining the attributes of an object and in discerning the value of one idea over another. Although buddhas no longer have such conceptual consciousnesses, discrimination functions in their mental consciousnesses—which are all nonconceptual—to identify objects.

Discrimination performs a similar function in other nonconceptual consciousnesses of āryas as well. For example, the uninterrupted path of the path of seeing is a nonconceptual mental consciousness that realizes emptiness directly. It does not think, “This is emptiness,” because the mind and emptiness are nondual, like water mixed in water. Nevertheless the mental factor of discrimination in this mind identifies emptiness correctly.

In the state of full awakening, there is no conceptual thought, so there is no sense of I and mine. That doesn't mean there are no designations of I and mine, because the Buddha himself said “I'm walking” and “in my past life, I was so-and-so.” Prāsaṅgikas say that buddhas use names and labels to accord with conventional reality so that they can communicate with sentient beings, not because they have conceptual thoughts.

### *The Buddhas' Three Mysteries*

Candrakīrti says the qualities of a tenth-ground bodhisattva are beyond the cognition and comprehension of ordinary beings and are inexpressible in language. If the qualities of a tenth-grounder are like this, needless to say the resultant stage of buddhahood is beyond our ability to express in language or to know through our limited conceptual mind.

The inexhaustibility of the Buddha's three mysteries—the awakened body, speech, and mind—is spoken of primarily from the tantric perspective. These three mysteries of the Buddha are inseparable; they are one nature, and the ultimate source for attaining them is the subtlest wind-mind that we have at present. Because our current subtlest mind and subtlest wind are one nature, they can be transformed into the inseparable body, speech, and mind of a buddha. The subtlest wind is the mount that consciousness rides on. The subtle wind manifests as our voice, which is an expression of or the tone of that wind. At the time of attaining buddhahood, the subtlest wind becomes a buddha's speech as well as a buddha's form bodies; the subtlest mind becomes the wisdom truth body, and its emptiness becomes the natural stainless purity of a buddha's nature truth body. A buddha's body, speech, and mind are one nature but nominally different.

To effect a buddha's activities, body, speech, and mind must be unified, and to bring that about, the complete unmistakable path as shown in highest yoga tantra must be practiced. How does a buddha's inseparability of body, speech, and mind come about? The coarse bodies and minds of ordinary beings are different natures. Although the continuity of the mental consciousness continues after death, the coarse body ceases. The sense consciousnesses, such as the visual consciousness, that depend on the brain, also cease. At the time of death, the coarse consciousnesses—the sense consciousnesses and coarse mental consciousness—absorb into the subtlest clear light. This extremely subtle mind is without beginning or end and is inseparable from the subtlest wind. This subtlest wind-mind is inexhaustible in that it continues on forever. When its continuity is purified by means of tantric practices, it transforms into the body, speech, and mind of a buddha.

When advanced practitioners of highest yoga tantra emerge from meditation on the actual clear light and spontaneously generate a pure illusory body on the completion stage, that pure illusory body and the actual clear-light mind are one nature; they are now free of all afflictive obscurations. As these advanced yogīs continue to practice, they eliminate the cognitive obscurations and become buddhas. At that time, their truth bodies and form bodies are inseparable and are one nature. The subtlest wind that became the pure illusory body is the substantial cause for a buddha's body. The radiance of the subtlest wind becomes a buddha's

speech. The subtlest clear light, which became the actual clear light, is the substantial cause for a buddha's mind. A buddha's body, speech, and mind are the inexhaustible source of benefit for all sentient beings, because through them a buddha manifests, teaches, and leads us to full awakening.

These three are called “mysteries” or “secrets” because the inseparability of a buddha's body, speech, and mind is very different from the obvious and coarse body, speech, and mind of ordinary beings, which are not one nature and separate after death. They are also called “mysteries” because they are difficult to understand with our conceptual minds. Only buddhas fully understand and experience them.

### *Seeing the Buddha*

People may speak of “seeing the Buddha,” but what does that really mean? The *Flower Ornament Sūtra* says:<sup>113</sup>

Even if, across the course of a hundred thousand eons,  
one constantly gazed at the Tathāgata,  
he would still not be relying on the genuine meaning  
in his contemplation of the World's Protector.

This person, so seizing on appearances,  
simply increases the scope of his net of foolishness and delusion  
and ties himself up in the prison of births and deaths  
wherein, entirely blind, he fails to see the Buddha at all.

If, in deeply contemplating all phenomena,  
one sees that they are devoid of any inherent existence,  
sees that as befits their characteristic arising and ceasing,  
they are mere utterances of false names,  
sees that all phenomena undergo no production at all,  
and sees that all phenomena undergo no destruction at all—  
if one is able to comprehend them in these ways,  
then all buddhas will always appear directly before him.

The nature of phenomena is fundamentally empty and peaceful, and as such, has nothing one can grasp and nothing one can see. The emptiness of any inherent nature is just the Buddha and is such as one cannot assess through thought.

If one realizes that all phenomena are in their essential nature just thus, this person then will not become defiled by and attached to the afflictions.

When the common person observes any phenomenon, he simply follows the permutations in its characteristic signs, fails to completely comprehend that phenomena are utterly signless, and on account of this, then fails to perceive the Buddha.

The *Muni* has gone beyond the three periods of time, has completely perfected all of the characteristic signs, abides in nonabiding, is universally present everywhere and yet unmoving.

In this volume we have learned about the six and ten perfections as well as how śrāvakas, solitary realizers, and bodhisattvas progress along the paths of their respective vehicles. In addition, since all sentient beings will become fully awakened buddhas, the qualities, realizations, and awakening activities of the buddhas have been explained. But don't think that just because buddhahood has been described that the *Library of Wisdom and Compassion* is nearing its end. In this volume the perfection of wisdom was briefly introduced, but there is a lot more to learn about selflessness, emptiness, the two truths, and the mind that realizes these. In addition, the tantric path must be explained, since it is also a major branch of the Mahāyāna. So there are several more volumes of the *Library of Wisdom and Compassion* to come!

# Notes

1. The *Mahāprajñāpāramitā Upadeśa* is Nāgārjuna’s extensive commentary on the *Twenty-Five-Thousand-Line Perfection of Wisdom Sūtra*. Translated into Chinese by Kumārajīva in 402–5, this text has been popular and influential in China throughout the centuries and is the central text of the Sanlun (Madhyamaka) school in China. Étienne Lamotte does not attribute this exegesis to Nāgārjuna but thinks it was written by a monk of the Sarvāstivāda or Mūlasarvāstivāda school from northwest India. Unfortunately, the text was not translated into Tibetan.
2. The root text says:

Then there are its twenty-two aspects:  
Similar to the earth, gold, the moon, and fire,  
a treasure, jewel mine, and the ocean,  
a vajra, mountain, medicine, and guide,  
  
a wish-fulfilling jewel, the sun, and a song,  
a king, a treasury, and a great highway,  
an excellent horse, and a spring of water,  
sweet-sounding music, a river, and a cloud.

See *In Praise of Great Compassion*, 56, 157, and 163–69 for details on the twenty-two types of bodhicitta, each of which is correlated with a level of the bodhicitta path and has an accompanying feature that enhances it.

3. Of the ten nonvirtues, three are done physically: killing, stealing, and unwise sexual behavior; four are verbal: lying, creating disharmony with our speech, harsh speech, and idle talk; and three are mental: coveting, ill will or maliciousness, and wrong views.
4. The meaning is the virtue created by generosity is ours; the merit will ripen in good conditions in future lives. But whatever we do not give because of our miserliness, we must leave behind at death. Neither it nor the virtue from giving it away is ours.
5. See chapters 10–12 in *The Foundation of Buddhist Practice* for more about karma and its effects.
6. See chapter 7 in *Approaching the Buddhist Path* for the text of the “Eight Verses of Thought Transformation” and His Holiness’s commentary on it.
7. Monastics may not take lower levels of prātimokṣa precepts such as the eight one-day prātimokṣa precepts, but they can take the eight Mahāyāna precepts.
8. Twelve ascetic practices taught by the Buddha, as laid out in the Dharmaguptaka Vinaya, which concern *shelter* (staying in a forest, beneath trees, in a charnel ground, or in an open area

without a roof); *sleeping* (sleeping sitting up cross-legged, using grass as a mattress); *food* (going on alms, eating only one meal a day, not taking a second helping, not omitting any house when on alms round); and *clothes* (wear robes made from discarded material, have only one set of the three robes).

9. Depending on their faculties and aptitude, at different points on the path bodhisattvas will receive signs that they will definitely not relapse to lower levels. For those with high faculties, this occurs on the path of preparation, for those of middle faculties on the path of seeing, and for those of lesser faculties on the eighth ground. One of the signs they receive is either meeting a buddha or having a vision of a buddha who prophesies the circumstances of that bodhisattva's awakening.
10. See chapter 2 in *The Foundation of Buddhist Practice* for more about syllogisms and reliable cognizers.
11. Access concentration in the Pāli tradition is equivalent to the capable preparation in the Sanskrit tradition. See chapters 8 and 9 in *Following in the Buddha's Footsteps* for more about access concentration and the capable preparation.
12. Found in the "King of Prayers: The Extraordinary Aspiration of the Practice of Samantabhadra," in the *Array of Stalks Sūtra (Gaṇḍavyūha Sūtra)*, which is included in the *Flower Ornament Sūtra*.
13. Found in the "Pure Conduct" chapter of the *Flower Ornament Sūtra*.
14. For example, in the paths and grounds texts, they are generally synonymous, while in Tantrayāna they are not.
15. Asaṅga's explanation does not divide the perfection of wisdom and the perfection of pristine wisdom into fixed categories. As mentioned above, the last four perfections are branches of the perfection of wisdom, and as noted in the description of the perfection of wisdom, one type of the perfection of wisdom knows conventional truths such as the five fields of knowledge.
16. The fundamental innate clear-light mind that is focused on emptiness is the ultimate meaning of "ultimate bodhicitta" in Tantra. The secret meaning of "bodhicitta" is the subtle drops of the male and female, which are neither conventional nor ultimate bodhicitta.
17. Does the subtle innate clear-light mind of sentient beings transform at the time of awakening or not? There are two positions: Some say that it does not transform when awakening is attained. They give the analogy of ice and water. Although ice melts and changes into water, the nature of water and ice is the same. Similarly, in terms of the nature of their subtle innate clear-light minds, there is no difference between sentient beings and buddhas. Others say that the subtle innate clear-light mind of sentient beings transforms when they become buddhas. This is because the subtle innate clear-light mind of sentient beings is not yet free from cognitive obscurations and does not yet possess all the qualities of a buddha.
18. The Tzu Chi Foundation, founded by the Chinese nun Dharma Master Cheng Yen, is an international organization that reaches out to refugees, victims of natural disasters, and many others. Buddhist Global Relief, founded by the American monk Bhikkhu Bodhi, directs its efforts toward resolving hunger across the globe. The Bodhicitta Foundation, begun by the Australian nun Ayya Yeshe, serves the Dalits in India and women and children in developing countries.
19. "The vast" refers to the method aspect of the path, especially the bodhisattva deeds that collect merit. "The profound" refers to the wisdom aspect of the path, especially the wisdom realizing emptiness and the collection of wisdom.

20. These sūtras most likely existed in other schools among the early eighteen schools in India. For example, a version of the *Ratana Sutta* is found in the *Mahāvastu*, a text in the Lokottaravāda school. A comparative study of the Pāli and Sanskrit versions can be found at <https://www.ancient-buddhist-texts.net/Buddhist-Texts/C1-Ratanasutta/Ratanasutta.htm>.
21. Some verses from the *Jewel Sutta* were explained in chapter 1 of *Following in the Buddha's Footsteps*.
22. [http://www.lotsawahouse.org/powerful\\_words\\_of\\_truth.html](http://www.lotsawahouse.org/powerful_words_of_truth.html).
23. <http://www.tibet.com/DL/truth.html>.
24. *Mind-Seal of the Buddhas: Patriarch Ou-i's Commentary on the Amitābha Sūtra*, trans. J. C. Cleary (San Francisco: Sūtra Translation Committee of the United States and Canada, 1997), 103–4. Chih-hsu Ou-i (1599–1655) was a distinguished Pure Land master.
25. The recollections of the Buddha, Dharma, and Saṅgha are described in chapter 2 of *Following in the Buddha's Footsteps*.
26. This text is from the Khuddaka Nikāya in the Pāli canon. Together with the *Buddhavaṃsa* and *Apadāna*, it is considered a later text.
27. Found in the Khuddaka Nikāya and also in the Chinese and Tibetan canon, this is a collection of stories of Śākyamuni Buddha's previous lives as both a human being and animal. Popular in traditional societies, these stories illustrate valued qualities such as generosity and ethical conduct.
28. The *Bodhisattvabhūmi* is the fifteenth chapter of the *Yogācārabhūmi*. The Tibetans attribute it to Asaṅga, whereas the Chinese attribute it to Asaṅga's teacher, Maitreya.
29. Bhikkhu Bodhi said the sections from the *Bodhisattvabhūmi* that Dhammapāla included were those on the practice of the perfections, the four shackles to giving, and the special accomplishments resulting from the practice of the perfections. However, nothing from Mahāyāna philosophy—for example, the three buddha bodies, the emptiness of inherent existence, one final vehicle—was included.
30. *Adhiṭṭhāna* originally meant “foundation” or “basis” in Pāli but later came to mean “determination.” The Sanskrit equivalent, *adhiṣṭhāna*, acquired yet another meaning—“blessing” or “transformation into magnificence” (T. *byin rlab*), referring to the Buddha's spiritual power that inspires and transforms the minds of practitioners so they will gain Dharma realizations. Perhaps this meaning of *adhiṣṭhāna* derives from it being seen as a foundation or support that sustains bodhisattva practitioners. In its usage in Vinaya, *adhiṣṭhāna* refers to determining, mentally resolving, or designating that these robes are one's monastic robes. Sometimes it has been mistranslated in English as “blessing the robes,” and people mistakenly think that some special power of the Buddha is absorbed into the robes. However, the action is more prosaic: we are determining that these particular robes are our set of robes.
31. *Mettā* is sometimes translated as “loving-kindness.”
32. These four are keeping the prātimokṣa precepts, controlling our senses so they don't wander, procuring our daily requisites or livelihood in a completely pure way, and relying only on the requisites permitted for a monastic to use in daily life.
33. Osadhi is a “bright star”—it is actually the planet Venus—that is balanced in the sense that it does not deviate from its course. This is analogous to the chief disciples not deviating from the truth.
34. The translator, Bhikkhu Ñāṇamoli, gives as an endnote to this passage, “For 10 powers and 4 fearlessnesses, see MN 12. For 6 knowledges see *Paṭisambhidāmagga* i, 12lf. For 18 states of

awakened one, see *Cariyāpiṭaka* Commentary.”

35. In general, “renunciation” in the Pāli tradition refers to relinquishing attachment to sense pleasures, which usually leads someone to leave the household life and take up the homeless life of a monastic.
36. According to Mingun Sayādaw (<http://homepage.ntlworld.com/pesala/Nibbana/html/fruit.html>), these are (1) having no hindrance with regard to knowledge of the past, (2) having no hindrance with regard to knowledge of the present, (3) having no hindrance with regard to knowledge of the future, (4) being preceded by wisdom in all physical actions, (5) being preceded by wisdom in all verbal actions, (6) being preceded by wisdom in all mental actions, (7) having no falling off in intention, (8) having no falling off in energy, (9) having no falling off in concentration, (10) having no falling off in wisdom, (11) having no falling off in teaching the Dhamma, (12) having no falling off in emancipation, (13) not indulging in joking and laughter, (14) not making blunders, (15) having nothing that cannot be gauged by wisdom, (16) having nothing that needs to be attended in a hurry, (17) never being negligent, and (18) not undertaking anything without due reflection. These are the same in the Sanskrit tradition.
37. The thirteen ascetic practices (*dhutaṅga*) are the practices of the (1) refuse-rag wearer who wears robes made from discarded or torn cloth and does not accept ready-made robes offered by lay followers; (2) triple-robe wearer who possesses and wears only three robes without having any additional allowable robes; (3) alms-food eater who consumes only food collected on alms round and does not accept food brought to the monastery or offered at lunch *dāna* by a lay follower; (4) house-to-house seeker who goes to all houses on alms round and not only to wealthy households or those chosen for special reasons; (5) one-sessioner who eats one meal a day and does not take food offered before midday; (6) bowl-food eater in whose bowl all the food is mixed together; (7) later-food refuser who does not accept any more food after he has shown that he is satisfied, although lay followers want to offer more; (8) forest dweller who does not live in a town or village but in a secluded place; (9) tree-root dweller who lives under a tree without the protection of a roof; (10) open-air dweller who dwells in the open with only a tent made of his robes; (11) charnel-ground dweller who lives in or near a charnel ground, graveyard, or cremation ground; (12) any-bed user who is content with any place he is given to sleep; and (13) sitter who stays only in the postures of walking, standing, and sitting without ever lying down.
38. These are the ten *kaṣiṇas*, the ten impurities, the ten recollections, the four immeasurables, the four formless states, the one perception, and the one analysis.
39. The twelve sources are a way of classifying phenomena according to the type of object and the faculty facilitating its perception. The eighteen constituents are a way of categorizing phenomena according to the object, faculty, and perceiving consciousness. See chapter 3 of *The Foundation of Buddhist Practice*.
40. See chapter 8 in *Following in the Buddha's Footsteps* for more on the superknowledges.
41. See *Vism* chapters 18–22 for more on the five purifications.
42. The antidotes to anger that Dhammapāla proposes are very similar to the ones Śāntideva teaches in chapter 6 of *Engaging in the Bodhisattvas' Deeds*.
43. A declaration of truth is a statement of fact spoken with a strong virtuous intention motivated by love and compassion. The truth of this fact assures the occurrence of an event. In this case, the chick's mind was transformed into virtue by reflecting on the marvelous qualities of the Three Jewels. The power of that virtuous mind was expressed in the declaration of truth and resulted in the chick escaping the fire.

44. The four foundations are also found in the *Sutta on the Exposition of the Elements (Dhātuvibhanga Sutta, MN 140.11)*.
45. According to the Pāli tradition, bodhisattvas only become āryas when they take their seat under the bodhi tree and attain the four paths and fruitions in immediate succession. According to the Sanskrit tradition, they become āryas at the path of seeing and at that time they are free from manifest malice, jealousy, competitiveness, hypocrisy, miserliness, stubbornness, and arrogance.
46. These physical signs of a buddha are spoken of in the Pāli canon. The Pāli tradition says the thirty-two signs are found in the treatises of the brahmins, although strangely, they are not found in the Vedas and their ancillary texts that have come down to us in the present day. In any case, the presence of these signs were the way that many brahmins determined that the Buddha was a great man (P. *mahāpurisa*). See the *Brahmāyu Sutta, MN 91:9*. In another sūtra (SN 47.11), the Buddha says a great man is one who has a liberated mind gained through practicing the four establishments of mindfulness.
47. Here the truth body refers to all the magnificent qualities of the fully awakened ones. It does not refer to the Buddha's subtle form body as explained in the Mahāyāna.
48. According to the Prajñāpāramitā Sūtras, these are six unique behaviors: a buddha has no mistaken physical actions, verbal actions, lack of mindfulness, unequipoised mind, discordant appearances, or indifference of not investigating individual characteristics of phenomena; six unique realizations: a buddha has undeclining aspiration, joyous effort, mindfulness, concentration, wisdom, and complete liberation; three unique awakening activities of body, speech, and mind; and three unique pristine wisdoms that know everything in the past, present, and future. See chapter 2 of *Following in the Buddha's Footsteps*.
49. According to several Pāli commentaries and narrative texts, solitary realizers teach others ethical conduct and concentration meditation practices. They ordain and take disciples. But they don't convey the essence of their realization—that is, they don't lead others to final liberation. See the commentary to the *Suttanipāta (Sn)*, the chapter on the *Rhino Horn Sutta*.
50. Those called bodhisattvas in any of the three vehicles are not yet āryas. They become āryas only with the attainment of stream-entry. For fully awakened buddhas and solitary realizers, the passage through the four ārya levels occurs in one session. Once śrāvakas become stream-enterers, they are no longer considered bodhisattvas. Bodhisattva status pertains only to the period prior to actual attainment.
51. According to the Sarvāstivādins and Vaibhāṣikas, this is a sequential process of sixteen moments, while in the Pāli tradition, it occurs in one single moment.
52. The person who questioned the Buddha spoke from the perspective of standard Buddhist doctrine that says lay practitioners do not attain arhatship and continue to lead the household life. Although it is possible for lay practitioners to attain arhatship—the merchant's son Yasa and the courtesan Khemā did so—they do not remain as lay practitioners afterward. Immediately after becoming arhats, they either pass away (like the Buddha's father) or they seek monastic ordination (like Yasa and Khemā). There are no accounts in the Pāli canon of a layperson attaining arhatship and continuing to live the lay life.
53. The *Greater Series of Questions and Answers (Mahāvedalla Sutta, MN 43)* describes several kinds of liberation of mind: the neither-painful-nor-pleasant liberation of mind is the fourth dhyāna; the immeasurable liberation of mind is the meditative attainment of the four immeasurables; the liberation of mind through nothingness is abiding in the meditative absorption on nothingness; the liberation of mind through emptiness is insight into the emptiness of self in persons and things; and the signless liberation of mind is the attainment of

fruition (nirvāṇa is the signless element in which all signs of conditioned phenomena are absent). The liberations of mind of the four immeasurables, nothingness, and emptiness are considered mundane. However, the commentary also explains that there are different types of these three liberations, some that are the four paths and four fruits. In a monastic whose defilements have been destroyed, the liberations of mind of the four immeasurables, nothingness, emptiness, and the signless liberation refer to the fruition attainment of arhatship, which is also called the “unshakable liberation of mind” (P. *akuppa cetovimutti*). Here immeasurable, nothingness, emptiness, and the signless are all names for nirvāṇa, the object of that fruition attainment.

54. According to the Prāsaṅgika system, the view of a personal identity is a form of self-grasping ignorance. Prāsaṅgikas assert that ignorance actively grasps at inherent existence, the opposite of reality, and since the view of a personal identity grasps the inherent existence of I and mine, it is a form of ignorance. Thus they say that both ignorance and view of a personal identity, in both their acquired and innate forms, are totally eradicated at arhatship or upon a bodhisattva attaining the eighth ground.

According to the Pāli tradition, the view of a personal identity holds that one or another of the aggregates is a self, whereas ignorance is obscuration that does not clearly know the four truths. Eradicating the view of a personal identity when attaining the fruit of stream-enterer does not remove all deluded notions of I and mine; the conceit “I am” remains and is eliminated only with the attainment of arhatship. The conceit “I am” and the spontaneous notion of I remain in the stream-enterers, once-returners, and non-returners. These graspings of I may still arise in them, threatening to give rise to pride or conceited self-love, but these āryas are able to recognize them as afflictive and dispel them. While such thoughts may arise, they cannot crystallize into a view of a substantial, findable self as held by the view of a personal identity. In the *Khemaka Sutta* (SN 22:89), Bhikkhu Khemaka states that he does not regard anything among the five aggregates as self or as belonging to self. Nor does he regard anything among the aggregates as “This I am.” However, he admits he is not an arhat because the residual conceit “I am,” the desire “I am,” and the underlying tendency “I am” in relation to the aggregates have not yet been uprooted. By repeatedly contemplating the rising and ceasing of the five aggregates, these deeper layers of grasping at self are totally eradicated. The *Khemaka Sutta* says:

Suppose there was a cloth that had become soiled and dirty, and the owners gave it to a laundryman. With various kinds of lye and soap he washes out the dirt, yet there is still a remainder of smell. By mixing it with various kinds of fragrance he makes that disappear. In the same way, although rightly contemplating these five aggregates of clinging as not-self and not belonging to a self, still the learned ariya disciple has not yet abandoned the conceit “I am” in relation to these five aggregates of clinging, the desire [related to the notion] “I am,” and the underlying tendency toward “I am”; he has not yet fully understood it, not yet become separated from it, not yet vomited it out.

55. Svātantrikas say these stream-enterers will be reborn in the desire realm no more than three more times; Prāsaṅgikas say no more than one time.
56. Although only nonreturners are reborn in the pure abodes, there is no pervasion that all nonreturners are reborn there.

57. A qualm is raised here. Nonreturners have eliminated the fetters of sensual desire and malice, which are two of the five hindrances that impede attaining the dhyānas. It would seem that someone who has eliminated those two fetters would therefore have also attained at least the first dhyāna. Also, since nonreturners may be born in the pure lands in the fourth form realm, it would seem that they should have attained dhyāna. According to certain sutras, dhyāna is a condition to become a nonreturner.
58. See chapter 8 in *Following in the Buddha's Footsteps* for more about this meditative state.
59. In the Chinese āgama counterparts to SN 12:70, the monks who become arhats explicitly deny having attained any of the dhyānas when they say they are liberated by wisdom. The *Mahāvibhāṣā* commentary to that sūtra explains that arhats liberated by wisdom have not necessarily attained full dhyāna, although they have access concentration (*sāmantaka, upacāra samādhi*).
60. For more on Dhamma followers and faith followers see SN 25:1.
61. The seven purifications are also mentioned in the *Relay Chariots Sutta* (*Rathavinīta Sutta*, MN 24). They are included in the list of nine factors of the effort for perfect purity (P. *pārisuddhi-padhāniyaṅgāni*) in the *Expanding Decades Sutta* (*Dasuttara Sutta*, DN 34.2.2), where the purities of wisdom and liberation are added to make nine factors.
62. See Vism chapters 14–17.
63. See Vism chapters 1 and 2.
64. See Vism chapters 3–13.
65. See Vism chapters 18–22 for more on the following five purifications.
66. A proximate cause of a mental state is the immediately preceding mental state that gave rise to it without any intervening mental state. It is a cause whose result arises in immediate succession to it.
67. A path consciousness resembles an uninterrupted path in the Nālandā tradition, and a fruition consciousness is comparable to a liberated path.
68. For more about nirvāṇa from the viewpoints of both the Pāli and Sanskrit traditions, see chapter 11 of *Saṃsāra, Nirvāṇa, and Buddha Nature*.
69. For the etymology of a few of the other synonyms for nirvāṇa, see Vism 8:247.
70. Looked at from another perspective, could these perhaps intimate that nirvāṇa is free from the conception of “inherent existence”?
71. Included in the Khuddaka Nikāya is the *Chronicle of Buddhas* (*Buddhavaṃsa*), which most scholars believe was written during the first and second centuries BCE and is a late addition to the Pāli canon. Here Śāriputra asks the Buddha how he attained buddhahood, and the Buddha relates the story of his encounter as the ascetic Sumedha with the past Buddha Dīpaṅkara.
72. See *Saṃsāra, Nirvāṇa, and Buddha Nature* for a detailed description of the four truths.
73. The exception to this is that Yogācāra-Svātantrikas say that the principal meditation object for solitary realizers is the nonexistence of subjects and objects as different substantial entities.
74. From the *Sūtra on the Miserliness of One in Trance* (*Dhyāyitamuṣṭi Sūtra*), as cited in the twenty-fourth chapter of Candrakīrti's *Clear Words*.
75. See *Following in the Buddha's Footsteps*, 449, for a brief explanation of the five paths.
76. According to Bhikkhu Bodhi, the etymology for the Pāli word *abhisamaya* is *abhi* = superior; *sam* = together, but also functions as a simple intensifier; *aya* = going, but sometimes has the sense of “to know.” The etymology according to the Sanskrit tradition is *abhi* = toward, over;

*sam* = together with; *i* = to understand. In general, it means a coming together of a knower and an object to be known. The Tibetan *mngon* = clear; *rtogs* = realization and could refer to liberation, so a clear realization is a path that leads to liberation.

77. See EOM, *A Brief Presentation of the Grounds and Paths of the Perfection Vehicle, Essence of the Ocean of Profound Meaning (Phar phyin theg pa'i lugs kyi theg pa gsum gyi sa dang lam gyi rnam par bzhag pa mdo tsam du brjod pa zab don rgya mtsho'i snying po)* by Losang Tayang (Rje btsun Blo bzang rta dbyangs), trans. Jules Levinson.
78. You may want to review chapter 8, especially 226–27, in *Following in the Buddha's Footsteps*, which speaks about the various grades of ignorance and afflictions.
79. The mental basis of a practitioner refers to the sphere of consciousness he or she possesses in meditation. See *Following in the Buddha's Footsteps*, 212, for more about this topic. The mental basis of approachers to stream-enterer and approachers to once-returners is a preparation of the first concentration and not an actual dhyāna. This is because these practitioners have not yet eliminated the five hindrances to concentration and thus have not attained an actual dhyāna.
80. Also see chapter 8 of *Following in the Buddha's Footsteps*.
81. Nevertheless, śrāvaka and solitary realizer arhats will experience aging, sickness, and death under the influence of karma because their body is true duḥkha.
82. See chapter 8 of *Following in the Buddha's Footsteps* for more about these four.
83. Although in English these practitioners are referred to by one term, “solitary realizers,” in Sanskrit and Tibetan they may be referred to as *pratyekabuddha* (self-buddha, T. *rang sangs rgyas*) or *pratyekajina* (self-victor, T. *rang rgyal*).
84. The manuals of individual monasteries may have different explanations of when this transference can occur.
85. See chapter 5 of *In Praise of Great Compassion*.
86. In his introduction to the text Losang Tayang (aka Losang Dadrin) says, “Within the Mahāyāna there are two [vehicles], the causal Perfection Vehicle and the effect Vajra Vehicle. I will express briefly a presentation of the grounds and paths of the three vehicles in the system of the first [of those], the Perfection Vehicle, in accordance with the uncommon mode of assertion of the glorious Prāsaṅgikas, the great thoroughly nonabiding Mādhyamikas.” See EOM.
87. Some people say these bodhisattvas have attained serenity before entering the path of accumulation; others say that if they have not already attained it, they do so during the path of accumulation.
88. For more on analogies for the twenty-two types of bodhicitta, see chapter 4 of *In Praise of Great Compassion*.
89. See chapter 8 for more on the concentration of the stream of Dharma and how to attain it.
90. Human beings born in the Northern Continent (according to ancient Indian cosmology), hermaphrodites, and neuters are not able to enter the bodhisattva path of being in that lifetime.
91. Śrāvakas and solitary realizers can attain their path of seeing with access concentration—a preparation for an actual dhyāna. Bodhisattvas, on the other hand, have definitely attained the fourth dhyāna by meditating on aspects of peace and grossness on the path of preparation.
92. This is according to the Prāsaṅgikas. Vaibhāṣikas assert that each fortitude is followed by its own knowledge. That is followed by the next fortitude and its knowledge, and so on.
93. See Karl Brunnhölzl, *Groundless Paths: The Prajñāpāramitā Sūtras, The Ornament of Clear Realization, and Its Commentaries in the Tibetan Nyingma Tradition* (Boston: Snow Lion Publications, 2012).

94. For a sharp-faculty bodhisattva, twenty of the forty-four signs of irreversibility occur on the path of preparation: eleven on the heat stage, six on the peak stage, two on the fortitude stage, and one on the supreme mundane dharma stage.
95. Some texts limit the realization of the fortitude of nonarising of dharmas to the bodhisattva path of seeing or the eighth bodhisattva ground. However, as a realization of the truth of emptiness, it can also be applied to the Fundamental Vehicle path of seeing.
96. Although the Pāli tradition does not differentiate between acquired and innate levels of afflictions, it says that these same three afflictions are abandoned by stream-enterers.
97. This is the view of Tsongkhapa and Kedrup Gelek Palzang. Gyaltsab Darma Rinchen says that bodhisattvas on the first through seventh grounds can attain a mental body if they exert effort, but only śrāvaka arhats and pure-ground bodhisattvas effortlessly obtain a mental body.
98. In this context “unpolluted karma” refers to the mental factor of intention free from the influence of afflictive obscurations.
99. Base (ground) of latencies of ignorance has the same meaning as latencies of ignorance. When speaking of latencies of ignorance, we are also speaking of the latencies of all afflictions.
100. The Buddha prescribed the twelve austere practices—which concern shelter, bedding, food, and clothing—for disciples with great attachment. There are various versions of these twelve, and some texts say there are thirteen practices. They are to stay in the forest, beneath trees, in a charnel ground, or in the open air; to sleep sitting cross-legged, not lying down, using grass as a mattress; to eat by going for alms, having one meal a day without going for another helping, and eating from one’s alms bowl; and to wear robes made from discarded material, having only one set of three robes (five for nuns).
101. Another doubt may arise: At the path of seeing, some bodhisattvas make strong effort and attain a mental body that is not produced by afflictions and polluted karma but through prayers and virtue. How is it possible to cut the body of these bodhisattvas when they no longer have gross physical bodies like ours? To the perspective of ordinary beings, an ārya bodhisattva’s mental body appears to be an ordinary body that can be cut into pieces.
102. Some scholar-adepts say that eighth-grounders are nearing the ten masteries and completely attain them at buddhahood, because the set of ten masteries is one of the twenty-one kinds of dharmakāya wisdom possessed by buddhas.
103. Some people may wonder if descriptions of such elaborate ceremonies are to be taken literally considering that the transition from the last uninterrupted path as a sentient being to the liberated path of buddhahood occurs in meditative equipoise on emptiness. I (Chodron) think that the point is for us to pause and contemplate what attaining full awakening means, rejoice that bodhisattvas in the past, present, and future will attain it, and be energized to do the same ourselves.
104. Master Sheng-yen established Dharma Drum Mountain as well as several other associated institutions for the propagation of the Dharma. He invited His Holiness to give several days of teachings in New York City in 1998. At the conclusion of this, the two had a public dialogue during which the following topics about Chan Buddhism and the Nālandā tradition were discussed. See H. H. the 14th Dalai Lama and Venerable Chan Master Sheng-yen, *Meeting of Minds: A Dialogue on Tibetan and Chinese Buddhism* (Taiwan: Dharma Drum Publications, 1999).
105. See *Following in the Buddha’s Footsteps*, chapters 1 and 2.
106. The place of each buddha in a maṇḍala may differ according to the maṇḍala. Vairocana’s and Akṣobhya’s elements are exchanged in some versions.

107. Various places are called Akaniṣṭha. This particular one is a pure land outside of saṃsāra that is not made of coarse matter. Each buddha establishes their own Akaniṣṭha pure land that has arisen due to their great collections of merit and wisdom.
108. See chapter 1 in *The Foundation of Buddhist Practice* for more about the four seals that make a teaching Buddhist.
109. In Chinese temples and monasteries, when the Dharma drum is sounded in the early morning to arouse the monastics, they imagine that all sentient beings from the hell realms to the god realms hear the Dharma that alleviates their suffering.
110. This is a branch of setting trainees on the tenth ground although it is not listed as one of the twenty-seven awakening activities. It has eight branches itself (19–26) that count among the twenty-seven.
111. Nāgārjuna, *Exegesis on the Great Perfection of Wisdom Sūtra*, in *Nāgārjuna on the Six Perfections*, trans. Bhikṣu Dharmamitra (Seattle: Kalavinka Press, 2009), 523–25.
112. “Basis” most likely refers to the body in this context. However, one geshé suggested that it could refer to the emptiness of the mind. In the Perfection of Wisdom sūtras and the *Ornament of Clear Realizations* “basis” often refers to the emptiness that is the basis for accomplishing the path.
113. From chapter 14, “The Praise Verses on Sumeru’s Summit,” in the *Mahāvaiṣṭhīya Buddhāvataṃsaka Sūtra* as translated into Chinese in 699 by Śikṣānanda in T10n0279\_p0081c07–22. From unpublished manuscript provided by courtesy of the translator, Bhikṣu Dharmamitra.

## Glossary

*Abhidharma*. A field of study and its texts that contain detailed reworkings of material in the Buddhist sūtras according to schematic classifications.

*absolutism* (eternalism, permanence, *śāśvatānta*). The belief that phenomena inherently exist.

*access*. See preparatory stages for a dhyāna.

*access concentration* (P. *upacāra samādhi*). Pāli tradition: a level of concentration that prepares the mind to enter the next actual dhyāna. It is comparable to a preparation (*sāmantaka*) in the Sanskrit tradition.

*actual dhyāna* (T. *bsam gtan gyi dngos gzhi*). A more refined dhyānic concentration attained upon completing its preparatory stages.

*afflictions* (*kleśa*). Mental factors that disturb the tranquility of the mind. These include disturbing emotions and wrong views.

*afflictive obscurations* (*kleśāvaraṇa*). Obscurations that mainly prevent liberation; afflictions and their seeds.

*aggregates* (*skandha*). The four or five components that make up a living being: form (except for beings born in the formless realm), feelings, discriminations, miscellaneous factors, and consciousnesses.

*analytical meditation* (*vicārabhāvanā*, T. *dpyad sgom*). Meditation done to understand an object.

*arhat* (P. *arahant*, T. *dgra bcom pa*). Someone who has eliminated all afflictive obscurations and attained liberation.

*ārya* (P. *ariya*). Someone who has directly and nonconceptually realized the emptiness of inherent existence; someone who is on the path of seeing, meditation, or no-more-learning.

*ārya buddha*. A person who is fully awakened, such as an enjoyment body or emanation body.

*awakening activity* (*samudācāra*, T. *'phrin las*). A buddha's spontaneous, continuous, and impartial activity that helps bring all sentient beings to higher rebirth, liberation, and full awakening.

*basis of designation*. The collection of parts or factors in dependence on which an object is designated.

*base of latencies of ignorance*. Cognitive obscurations that give rise to the subtle dualistic view. Together with unpolluted karma, they are the cause for arhats and pure-ground bodhisattvas to take a mental body; latencies of ignorance.

*bhavaṅga*. A deep, underlying consciousness that accounts for the continuity of mind.

*bodhicitta*. A main mental consciousness induced by an aspiration to bring about others' welfare and accompanied by an aspiration to attain full awakening oneself. Its arising in an uncontrived manner marks entry into the Mahāyāna.

*bodhisattva*. Someone who has genuine, uncontrived bodhicitta.

*bodhisattva ground*. A consciousness in the continuum of an ārya bodhisattva characterized by wisdom and compassion. It is the basis for the development of good qualities and for the eradication of obscurations to full awakening.

*Bön*. An indigenous spiritual tradition in Tibet.

*buddha*. All aspects of a buddha. It includes the four buddha bodies.

*Buddhadharma*. The teachings of the Buddha.

*clear realization / clear realizer* (breakthrough, *abhisamaya*, T. *mngon rtogs*). A path, an exalted knower. According to the Pāli tradition, it is a supramundane path.

*cognitive obscurations* (*jñeyāvaraṇa*). Obscurations that mainly prevent full awakening; the latencies of ignorance and the subtle dualistic view that they give rise to.

*collections* (requisites, *sambhāra*, T. *tshogs*). A bodhisattva's practice of method and wisdom that lead to full awakening. Śrāvakas and solitary realizers create the two collections, but they are not fully qualified ones.

*collection of merit* (*puṇyasambhāra*). A bodhisattva's practice of the method aspect of the path that accumulates merit and is the main cause for a buddha's form body.

*collection of wisdom* (*jñānasambhāra*). A bodhisattva's practice of the wisdom aspect of the path—a Mahāyāna exalted knower that focuses on the ultimate truth, emptiness, and is the main cause for a buddha's truth body.

*concentration* (*samādhi*). A mental factor that dwells single-pointedly for a sustained period of time on one object; a state of deep meditative absorption; single-pointed concentration that is free from discursive thought.

*concomitant* (T. *mtshungs ldan*). Accompanying or occurring together in the same mental state.

*consciousness* (*jñāna*). That which is clear and cognizant.

*conventional existence* (*saṃvṛtisat*). Existence.

*conventional truth* (veiled truth, *saṃvṛtisatya*). All phenomena except ultimate truths.

*counterpart sign* (P. *paṭbhāga-nimitta*). The meditation object of a dhyāna consciousness; a conceptual object that arises on the basis of an object that is form.

*cyclic existence (saṃsāra)*. The cycle of rebirth that occurs under the control of afflictions and karma.

*death (maraṇabhava)*. The last moment of a lifetime when the subtlest clear-light mind manifests.

*defilement (mala, T. dri ma)*. Either an afflictive obscuration or a cognitive obscuration.

*deity (iṣṭadevatā, T. yi dam)*. A manifestation of the awakened mind that is meditated on in Tantra.

*dependent arising (pratītyasamutpāda)*. This is of three types: (1) causal dependence—things arising due to causes and conditions, (2) mutual dependence—phenomena existing in relation to other phenomena, and (3) dependent designation—phenomena existing by being merely designated by terms and concepts.

*desire realm (kāmadhātu)*. One of the three realms of cyclic existence; the realm where sentient beings are overwhelmed by attraction to and desire for sense objects.

*deva*. A being born as a heavenly being in the desire realm or a being born in the form or formless realms.

*dhyāna (P. jhāna)*. A meditative absorption in the form realm.

*dualistic appearance*. The appearance of subject and object as separate, the appearance of inherent existence, the appearance of conventional phenomena.

*duḥkha (P. dukkha)*. Unsatisfactory experiences of cyclic existence.

*duḥkha of change*. Mundane happiness and pleasure that are unstable and change into pain or discomfort.

*duḥkha of pain*. Evident physical and mental pain.

*Dzogchen*. A tantric practice emphasizing meditation on the nature of mind, practiced primarily in the Nyingma tradition.

*eight liberations* (*vimokṣa*, *vimokkha*, T. *rnam thar*). Eight concentrations that are the mind's temporary release from defilements. They are brought about by mastering certain meditative skills.

*eight worldly concerns* (*aṣṭalokadharmā*). Attachment or aversion regarding material gain and loss, fame and disrepute, praise and blame, pleasure and pain.

*eighteen constituents*. A way of categorizing phenomena according to the object, faculty, and perceiving consciousness. See chapter 3 in *The Foundation of Buddhist Practice*.

*eighteen unique qualities of a buddha*. Eighteen distinctive qualities of a buddha that are not shared by arhats.

*emanation body* (*nirmāṇakāya*, T. *sprul sku*). The buddha body that appears as an ordinary sentient being or as an inanimate object to benefit others.

*emptiness* (*śūnyatā*). The ultimate nature of persons and phenomena; the lack of inherent existence, true existence, and so forth.

*enjoyment body* (*saṃbhogakāya*, T. *longs sku*). The buddha body that appears in the highest pure lands to teach ārya bodhisattvas.

*establishments of mindfulness* (*smṛtyupasthāna*, *satipaṭṭhāna*, T. *dran pa nyer bzhaḡ*). One of the seven sets of practices comprising the thirty-seven harmonies with awakening. It focuses mindfulness on the body, feelings, mind, and phenomena.

*exalted knower* (*jñāna*, T. *mkhyen pa*). A realization of someone who has entered a path. It exists from the path of accumulation to the buddha ground.

*fetters* (*saṃyojana*). Factors that keep us bound to cyclic existence and impede the attainment of liberation. The five lower fetters—view of a personal identity, deluded doubt, view of bad rules and practices, sensual desire, and malice—bind us to rebirth in the desire realm. The five higher fetters—desire for existence in the form realm, desire for existence in the formless realm, arrogance, restlessness, and afflicted ignorance—prevent a nonreturner from becoming an arhat.

*five dhyānic factors.* Investigation (*vitarka, vitakka*), analysis (*vicāra, vicāra*), joy (*prīti, pīti*), bliss (*sukha*), and one-pointedness of mind (*ekāgratā, ekaggatā*).

*five hindrances* (*āvaraṇa, T. sgrib pa*). Hindrances that interfere with attaining serenity: sensual desire (*kāmacchanda*), malice (*vyāpāda, byāpāda*), lethargy and sleepiness (*styāna-middha, thīna-middha*), restlessness and regret (*auddhatya-kaukrīya, uddhacca-kukkucca*), and deluded doubt (*vicikitsā, vicikicchā*).

*form body* (*rūpakāya*). The buddha body in which a buddha appears to sentient beings; it includes the emanation and enjoyment bodies.

*form realm* (*rūpadhātu*). A realm in saṃsāra in which the beings have subtle bodies; they are born there by having attained various states of concentration.

*formless realm* (*ārūpyadhātu*). The realm in saṃsāra in which sentient beings do not have a material body and abide in deep states of concentration.

*fortitude of the nonarising of dharmas* (*anutpattika dharmakṣānti, T. mi skye ba'i chos la bzod pa*). A special realization of emptiness and nonduality by bodhisattvas that makes them irreversible on the path to full awakening.

*four buddha bodies.* These are the nature dharmakāya, wisdom dharmakāya, enjoyment body, and emanation body.

*four fearlessnesses.* The Tathāgata is completely confident and lacks all fear in declaring that (1) he is fully awakened regarding all phenomena, (2) he has destroyed all pollutants, (3) he has correctly identified all obstructions to be eliminated on the path, and (4) when practiced, his teachings lead to the complete destruction of duḥkha.

*four seals* (*caturmudrā*). Four views that make a philosophy Buddhist: all conditioned phenomena are transient, all polluted phenomena are duḥkha, all phenomena are empty and selfless, nirvāṇa alone is true peace.

*four truths of the āryas (catvāry āryasatyāni).* The truths of duḥkha, its origin, its cessation, and the path to that cessation.

*four ways of gathering or assembling (saṃgrahavastu, saṅgahavatthu, T. bsdu ba'i dngos po).* This is (1) being generous and giving material aid, (2) explaining the Dharma according to the listeners' disposition, (3) encouraging them to practice, and (4) acting congruently and living the teachings through example.

*full awakening (samyaksambodhi).* Buddhahood; the state where all obscurations have been abandoned and all good qualities developed limitlessly.

*fundamental innate mind of clear light (T. gnyug ma lhan cig skyes pa'i 'od gsal gyi sems).* The subtlest level of mind.

*Fundamental Vehicle.* The vehicle leading to the liberation of śrāvakas and solitary realizers.

*god.* See deva.

*grasping inherent existence (svabhāvagraha).* For Prāsaṅgikas: grasping persons and phenomena to exist by its own entity without being posited through the force of an internal mind; grasping persons and phenomena to exist from their own side, independent of all other phenomena.

*grasping true existence (true-grasping, satyagrāha).* For Prāsaṅgikas: grasping persons and phenomena to exist objectively through their own entity without being posited by thought.

*ground (bhūmi).* A path. Ten bodhisattva grounds span the bodhisattva paths of seeing and meditation.

*guru yoga.* Joining the qualities of our body, speech, and mind with those of a spiritually advanced spiritual mentor.

*harmonies with awakening (bodhipākṣya-dharma, bodhipakkhiya-dhamma).* Thirty-seven practices condensed into seven sets that lead to liberation and awakening.

*hell being (nāraka)*. A being born in an unfortunate realm of intense physical pain due to strong destructive karma.

*highest yoga tantra (anuttarayogatantra)*. The most advanced of the four classes of tantra.

*hungry ghost (preta)*. A being born in one of the unfortunate realms who suffers from intense hunger and thirst.

*ignorance (avidyā)*. A mental factor that is obscured and grasps the opposite of what exists. There are two types: ignorance regarding ultimate truth and ignorance regarding karma and its effects.

*impermanent (anitya, anicca)*. Momentary; not remaining in the next moment.

*inferential cognizer (anumāna)*. A mind that ascertains its object by means of a correct reason.

*inferential realization*. An infallible conceptual cognizer that arises in direct dependence on a correct reason or a consequence as its basis. This mind is a reliable cognizer.

*inherent existence (svabhāva)*. For Prāsaṅgikas, it means existence without depending on any other factors; independent existence. Such existence does not exist.

*insight (vipaśyanā, vipassanā, T. lhag mthong)*. A wisdom of thorough discrimination of phenomena conjoined with special pliancy induced by the power of analysis.

*insight knowledge (P. vipassanā-ñāṇa)*. Mundane (P. *lokiya*) knowledge of the three characteristics gained through insight. It leads to supramundane (P. *lokuttara*) path knowledge that realizes the four truths and nirvāṇa.

*insight wisdom (P. vipassanā-paññā)*. Wisdom of the three characteristics gained through insight.

*introspective awareness (saṃprajanya, sampajañña)*. An intelligence that causes one to engage in activities of body, speech, or mind heedfully.

*karma*. Intentional (volitional) action; it includes intention karma (mental action) and intended karma (physical and verbal actions motivated by intention).

*karmic seeds*. The potencies from previously created actions that will bring their results.

*knowable objects* (*jñeya*, T. *shes bya*). Existents, phenomena.

*latencies* (*vāsanā*). Predispositions, imprints, or tendencies.

*liberated path* (*vimuktimārga*, T. *rnam grol lam*). A wisdom that directly follows an uninterrupted path and has definitely abandoned and is completely free from the objects of abandonment of that path.

*liberation* (*mokṣa*, T. *thar pa*). A true cessation that is the abandonment of afflictive obscurations; *nirvāṇa*, the state of freedom from cyclic existence.

*liberation of mind by love* (P. *mettā cetovimutti*). A mind genuinely wishing all beings to be happy that has temporarily abandoned the five hindrances, especially anger and malice, through the force of concentration.

*Madhyamaka*. A Buddhist tenet system that asserts there are no truly existent phenomena.

*Mahāmudrā*. A type of meditation that focuses on the conventional and ultimate natures of the mind.

*maṇḍala offering*. A spiritual practice in which we offer the universe and all the beautiful objects in it, imagined in their pure form, to the holy beings.

*meditative equipoise on emptiness*. The mind of someone on a path who is focusing single-pointedly on the emptiness of inherent existence. On the paths of accumulation and preparation, it is conceptual; on the ārya paths, it is nonconceptual.

*mental body*. The body taken by arhats and pure-ground bodhisattvas caused by the base of latencies of ignorance and unpolluted karma.

*mental consciousness (mano-vijñāna)*. A primary consciousness that knows mental phenomena in contradistinction to sense primary consciousnesses that know physical objects.

*mental factor (caitta)*. An aspect of mind that accompanies a primary consciousness and fills out the cognition, apprehending particular attributes of the object or performing a specific function.

*mind (citta)*. That which is clear and aware; the part of living beings that cognizes, experiences, thinks, feels, and so on. In some contexts it is equivalent to primary consciousness.

*mindfulness (smṛti, sati)*. A mental factor that brings to mind a phenomenon of previous acquaintance without forgetting it and prevents distraction to other objects.

*mindstream (cittasaṃtāna)*. The continuity of mind.

*momentary (kṣaṇika)*. Not enduring to the next moment.

*monastic*. Someone who has received monastic ordination; a monk or nun.

*nature truth body (svabhāvika dharmakāya)*. The buddha body that is the emptiness of a buddha's mind and the true cessations in the mindstream of that buddha.

*nihilism (ucchedānta)*. The belief that our actions have no ethical dimension; the belief that nothing exists.

*nimitta*. The sign or mental image that is the object for cultivating serenity. It is of three types: the preliminary, learning, and counterpart nimittas.

*nine stages of sustained attention (navākārā cittasthiti, T. sems gnas dgu)*. Stages of concentration on the way to attaining serenity.

*nirvāṇa*. The state of liberation of an arhat; the purified aspect of a mind that is free from afflictions.

*nirvāṇa with remainder (sopadhiśeṣa-nirvāṇa, sopādisesa-nibbāna)*. (1) The state of liberation when an arhat is still alive and possesses the

remainder of the polluted aggregates, (2) an arhat's nirvāṇa in which things appear to be truly existent in post-meditation time.

*nirvāṇa without remainder (anupadhiśeṣa-nirvāṇa, anupādisesa-nibbāna).*

(1) The state of liberation when an arhat has passed away and no longer has the remainder of the polluted aggregates, (2) an arhat's meditative equipoise on emptiness where there is no appearance of true existence whatsoever.

*nonabiding nirvāṇa (apraṭiṣṭha-nirvāṇa).* The nirvāṇa of a buddha that does not abide in either saṃsāra or the personal peace of a śrāvaka's or solitary realizers's nirvāṇa.

*nonexistent (asat).* That which is not perceivable by mind.

*nonreturner (anāgāmin, anāgāmi, T. phyir mi 'ong pa).* A Fundamental Vehicle ārya who has eliminated the five lower fetters.

*object (viśaya, T. yul).* That which is known by an awareness.

*object of negation (praṭiśedhya, T. dgag bya).* A nonexistent that sentient beings erroneously grasp as existent. It is negated or refuted by reasoning.

*observed object (ālambana, ārammaṇa, T. dmigs pa).* The basic object that the mind refers to or focuses on while apprehending certain aspects of that object.

*once-returner (sakṛdāgāmin, sakadāgāmi, T. lan gcig phyir 'ong pa).* A Fundamental Vehicle ārya who has abandoned three of the lower fetters and significantly reduced sensual desire and malice and who will be born in the desire realm at maximum only one time before attaining nirvāṇa.

*one final vehicle.* The belief that all beings—even śrāvakas who have become arhats—will eventually enter the Mahāyāna and become buddhas.

*ordinary being (pṛthagjana, puthujjana, T. so so skye bo).* Someone who is not an ārya.

*path (mārga, magga, T. lam)*. Sanskrit tradition: an exalted knower that is conjoined with uncontrived renunciation. Pāli tradition: a consciousness of an ārya that realizes the four truths.

*path knowledge (P. magga-ñāṇa)*. A supramundane path that knows nirvāṇa.

*path of accumulation (sambhāramārga, T. tshogs lam)*. First of the five paths. It begins when one aspires for liberation day and night for a śrāvaka path or when one has spontaneous bodhicitta for the Mahāyāna path.

*path of meditation (bhāvanāmārga, T. sgom lam)*. The fourth of the five paths. This begins when a meditator begins to eradicate innate afflictions from the root.

*path of no-more-learning (aśaikṣamārga, T. mi slob lam)*. The last of the five paths where a trainee attains the final goal of their vehicle: arhatship or buddhahood.

*path of preparation (prayogamārga, T. sbyor lam)*. The second of the five paths. It begins when a meditator attains the union of serenity and insight on emptiness.

*path of seeing (darśanamārga, T. mthong lam)*. The third of the five paths. It begins when a meditator first has direct, nonconceptual realization of the emptiness of inherent existence.

*permanent (nitya, nicca, T. rtag pa)*. Unchanging, static. It does not mean eternal.

*permanent, unitary, independent self*. A soul or self (*ātman*) asserted by non-Buddhists.

*permissory ritual (T. rjes snang)*. A meditative ceremony in which the recipient receives the inspiration of an awakened deity's body, speech, and mind and is qualified to do the practice of that deity.

*person (pudgala)*. A being designated in dependence on the four or five aggregates.

*pervasive duḥkha of conditioning.* Taking the five aggregates under the influence of afflictions and polluted karma. This is the basis of the duḥkha of pain and the duḥkha of change.

*pliancy* (tranquility, *praśrabdhi*, *passaddhi*). A mental factor that enables the mind to apply itself to a constructive object in whatever manner it wishes and dissipates mental or physical rigidity.

*polluted* (*āsrava*, *āśava*). Under the influence of ignorance or its latencies.

*Prāsaṅgika.* The Buddhist philosophical tenet system that asserts that all phenomena lack inherent existence both conventionally and ultimately.

*prātimokṣa.* The various sets of ethical precepts for monastics and lay followers to uphold in their pursuit of liberation.

*preliminary practices.* (1) Meditating on important initial stages of the path, such as preciousness of a human life with freedom and fortune, death and impermanence, karma and its effects, and the defects of saṃsāra. (2) In the context of tantra, practices that purify negativities and collect merit, such as taking refuge, reciting the names of the buddhas and prostrating to them, making offerings, reciting the mantra of Vajrasattva, guru yoga, and so on.

*preparatory stages for a dhyāna* (access, preparations, *sāmantaka*, T. *bsam gtan po'i nyer bsdogs*). Stages of meditation that prepare the mind to enter an actual dhyāna.

*primary consciousness* (*vijñāna*). A consciousness that apprehends the presence or basic entity of an object. There are six types of primary consciousness: visual, auditory, olfactory, gustatory, tactile, and mental.

*pristine wisdom of meditative equipoise* (*samāhitajñāna*, T. *mnyam bzhag ye shes*). A clear realization that perceives emptiness directly and nonconceptually with a concentration that is the union of serenity and insight.

*pristine wisdom of subsequent attainment* (*prṣṭhalabdha-jñāna*, T. *rjes thob ye shes*). A subsequent clear realization of someone who has arisen from a liberated path.

*proliferations* (*prapañca*, *papañca*, T. *spros pa*). Mental fabrications ranging from anxious thoughts to grasping true existence.

*pure lands*. Places created by the unshakable resolve and merit of buddhas where all external conditions are conducive for Dharma practice.

*realization* (T. *rtogs pa*). An awareness that eliminates superimpositions on an object and is able to induce ascertainment of it. It may be inferential (conceptual) or direct (nonconceptual).

*realized Dharma*. The realizations in a person's mindstream.

*sādhana*. The means of achievement expressed in a tantric text or manual that details the steps of visualization and meditation in the practice of a deity.

*samādhi*. See concentration.

*samsāra*. (1) Constantly recurring rebirth under the control of afflictions and polluted karma. (2) The five aggregates of a person who has taken rebirth in this way.

*Sautrāntika*. A Fundamental Vehicle tenet system that asserts that functional things are ultimate truths and phenomena that are imputed by thought are conventional truths.

*self* (*ātman*). A person or inherent existence.

*self-grasping* (*ātmagrāha*). Grasping inherent existence.

*self-sufficient substantially-existent person* (T. *gang zag rang rkya thub pa'i rdzas yod*). A self that can be identified independent of the aggregates. Such a self does not exist.

*sentient being* (*sattva*). Any being that has a mind and is not a buddha.

*serenity* (*śamatha*, *samatha*). Sanskrit tradition: concentration arisen from meditation that is accompanied by the bliss of mental and physical pliancy in which the mind abides effortlessly without fluctuation for as long as we wish on whatever virtuous object it has been placed. Pāli

tradition: one-pointedness of mind; the eight attainments (meditative absorptions) that are the basis for insight.

*six perfections (ṣaḍpāramitā)*. The practices of generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom that are motivated by bodhicitta.

*solitary realizer (pratyekabuddha)*. A person following the Fundamental Vehicle who seeks liberation and emphasizes understanding the twelve links of dependent arising and who aspires to spend their last lifetime in saṃsāra without depending on a teacher.

*sphere of three*. The agent, object, and action.

*śrāvaka* (hearer, disciple, P. *sāvaka*). Someone practicing the Fundamental Vehicle path leading to arhatship who emphasizes meditation on the four truths.

*stabilizing meditation (sthāpyabhāvanā, T. 'jog sgom)*. Meditation to focus and concentrate the mind on an object.

*stages of the path to awakening (T. lamrim)*. A systematic presentation of the path to awakening found in Tibetan Buddhism.

*stream-enterer (srotāpanna, sotāpanna, T. rgyun zhugs)*. A Fundamental Vehicle practitioner who has eliminated the first three fetters of the five lower fetters: view of a personal identity, deluded doubt, view of bad rules and practices.

*substantial cause (upādāna-kāraṇa)*. The cause that becomes the result, as opposed to cooperative causes that aid the substantial cause in becoming the result.

*subtle latencies*. Latencies of ignorance and other afflictions that are cognitive obscurations that prevent simultaneous nonconceptual cognition of the two truths.

*subsequent attainment (prṣṭha-labdha)*. Post-meditation time when āryas do practices to create merit and meditate on other topics aside from meditative equipoise on emptiness.

*superknowledge* (*abhiññā*, *abhiññā*, T. *mngon shes*). Direct, experiential knowledge, of six types: (1) supernormal powers, (2) divine ear, (3) knowledge of others' minds, (4) recollection of past lives, (5) divine eye (includes knowledge of the passing away and rearing of beings and knowledge of the future), and (6) the destruction of the pollutants. The sixth is attained only by liberated beings.

*supernormal powers* (*rddhi*, *iddhi*). The first of the six superknowledges, gained in deep *samādhi*: to replicate one's body, appear and disappear, pass through solid objects, go under the earth, walk on water, fly, touch the sun and moon with one's hand, go to the Brahmā world, and so forth.

*supramundane* (transcendental, *lokottara*, P. *lokuttara*). Pertaining to the elimination of fetters and afflictions; pertaining to āryas.

*tathāgata*. A buddha.

*ten powers*. The ten powers are knowing (1) what is worthwhile and worthless, (2) the ripening result of all actions, (3) the path leading to various rebirths, (4) the temperaments and (5) aspirations of sentient beings, (6) their faculties, (7) meditative stability, and (8) past lives, (9) sentient beings passing away and being reborn, and (10) liberation and full awakening.

*tenets* (*siddhānta*). A philosophical principle, belief, or system.

*thought* (*kalpanā*). Conceptual consciousness.

*three characteristics*. Impermanence, *duḥkha*, and no-self.

*three kinds of persons*. Śrāvaka and solitary realizer arhats and pure ground bodhisattvas. They are grouped together because all have eradicated the afflictive obscurations.

*three realms* (*tridhātuka*, *tedhātuka*). Desire, form, and formless realms.

*transmitted (scriptural) Dharma*. The words and meanings of the Buddha's teachings in the form of speech and scriptures.

*true cessation (nirodhasatya)*. The cessation of a portion of afflictions or a portion of cognitive obscurations. It can also refer to the cessation of all afflictive obscurations, cognitive obscurations, or both obscurations.

*true existence (satyasat)*. The objective existence of phenomena through their own entity without being posited by thought. True existence does not exist.

*truth body (dharmakāya)*. The buddha body that includes the nature truth body and the wisdom truth body. Sometimes it refers only to a buddha's omniscient mind.

*twelve links of dependent origination (dvādaśāṅga-pratītyasamutpāda)*. A system of twelve factors that explains how we take rebirth in saṃsāra and how we can be liberated from it.

*twelve sources*. A way of classifying phenomena according to the type of object and the faculty facilitating its perception. See chapter 3 of *The Foundation of Buddhist Practice*.

*twenty-two faculties (indriya)*. Six are sense faculties: sight (*cakṣus*), hearing (*śrotra*), smell (*ghrāna*), taste (*jihvā*), touch (*kāya*), mind (*manas*). Three are physical faculties: male organ (*puruṣendriya*), female organ (*strīndriya*), vital organ (*jīvitendriya*). Five are feeling faculties: sensation of pleasure (*sukha*), pain (*duḥkha*), mental happiness (*saumanasya*), mental suffering (*daurmanasya*), equanimity (*upekṣā*). Five are spiritual faculties: faith (*śraddhā*), energy (*vīrya*), mindfulness (*smṛti*), concentration (*samādhi*), wisdom (*prajñā*). Three are faculties of understanding the truths: thinking "I shall know the unknown" (*anaññāta-ñassāmīt-indriya*), gnosis (*aññ-indriya*), one who knows (*aññātā-vindriya*).

*two truths (satyadvaya)*. Ultimate truths and veiled (conventional) truths.

*ultimate nature*. The ultimate or deepest mode of existence of persons and phenomena.

*ultimate truth (paramārthasatya)*. The ultimate mode of existence of all persons and phenomena; emptiness.

*unfortunate realms (apāya)*. Unfortunate states of rebirth as a hell being, hungry ghost, or animal.

*uninterrupted path (ānantaryamārga, T. bar ched med lam)*. A wisdom that abandons the objects of abandonment of that path.

*union of serenity and insight*. Absorption in which the bliss of mental and physical pliancy has been induced by analysis.

*unpolluted (anāsrava)*. Not under the influence of ignorance.

*unpolluted karma*. The mental factor of intention that is the subtle effort supporting arhats' and pure-ground bodhisattvas' motivation to assume a mental body.

*Vajrasattva*. A meditation deity whose practice is associated with purification of destructive karmic seeds and other defilements.

*veiled truths (conventional truths, samvṛtisatya)*. Objects that appear true to ignorance, which is a veiling consciousness; objects that appear to exist inherently to their main cognizer although they do not exist that way.

*veilings*. Conventionalities.

*view of a personal identity (view of the transitory collection, satkāyadṛṣṭi, sakkāyaditṭhi)*. Grasping an inherently existent I or mine (according to the Prāsaṅgika system).

*Vinaya*. Monastic discipline; a body of texts about monastic life, discipline, and conduct.

*wind (prāṇa, T. rlung)*. One of the four elements; energy in the body that influences bodily functions; subtle energy on which levels of consciousness ride.

*wisdom truth body (jñāna dharmakāya)*. The buddha body that is a buddha's omniscient mind.

*Yogācāra (Cittamātra)*. A philosophical tenet system asserting that objects and the consciousnesses perceiving them arise from the same substantial

cause, a seed on the foundation consciousness, and that the mind is truly existent.

## About the Authors

THE DALAI LAMA is the spiritual leader of the Tibetan people, a Nobel Peace Prize recipient, and an advocate for compassion and peace throughout the world. He promotes harmony among the world's religions and engages in dialogue with leading scientists. Ordained as a Buddhist monk when he was a child, he completed the traditional monastic studies and earned his geshe degree (equivalent to a PhD). Renowned for his erudite and open-minded scholarship, his meditative attainments, and his humility, Bhikṣu Tenzin Gyatso says, "I am a simple Buddhist monk."

BHIKṢUṆĪ THUBTEN CHODRON has been a Buddhist nun since 1977. Growing up in Los Angeles, she graduated with honors in history from the University of California at Los Angeles and did graduate work in education at the University of Southern California. After years studying and teaching Buddhism in Asia, Europe, and the United States, she became the founder and abbess of Sravasti Abbey in Washington State. A popular speaker for her practical explanations of how to apply Buddhist teachings in daily life,

she is the author of several books on Buddhism, including *Buddhism for Beginners*. She is the editor of Khensur Jampa Tegchok's *Insight into Emptiness*. For more information, visit [sravastiabbey.org](http://sravastiabbey.org) and [thubtenchodron.org](http://thubtenchodron.org).

THE LIBRARY OF WISDOM AND COMPASSION : VOLUME 7

# SEARCHING FOR THE SELF

The Dalai Lama with Thubten Chodron

THE DALAI LAMA WITH THUBTEN CHODRON

THE LIBRARY OF WISDOM AND COMPASSION : VOLUME 7

## Advance Praise for SEARCHING FOR THE SELF

“I am thrilled to see *Searching for the Self*. All the volumes in the *Library of Wisdom and Compassion* are a highly cherished treasure—they are profound yet easily accessible. *Searching for the Self* will help to open your wisdom eye to investigate emptiness. With that understanding, you can fly in freedom without grasping to illusory objects.”—GESHE LHAKDOR, director, Library of Tibetan Works and Archives, Dharamsala, India

“It is refreshing to come across such a clear and in-depth study of the Middle Way teaching of no-self and emptiness as found in the Mahāyāna and Theravāda traditions. This remarkable book opens the door to a wide and profound understanding of those teachings and to the path leading to their realization.”—AJAHN SUNDARA, author of *Walking the World*, *Seeds of Dhamma*, and *Pacupanna: The Present Moment*

“This seventh volume in the *Library of Wisdom and Compassion* is undoubtedly the masterpiece of H. H. the Dalai Lama and Thubten Chodron. *Searching for the Self* deals not only with the heart of the Buddhist view on emptiness, which distinguishes it from the great monotheistic religions, it also discusses the approaches of Pāli and Chinese Buddhism on the ultimate nature. A brave, impressive, and convincing presentation toward a theory of “Buddhist ecumenism,” it enables Buddhists worldwide to speak in one voice about important issues that concern all of us today. At the same time, it gives non-Buddhists fresh insight into the world of Buddhist thought and practice.”—DR. CAROLA ROLOFF (Bhikṣuṇī Jampa Tsedroen), Professor for Buddhism and Dialogue at the Academy of World Religions of the University of Hamburg

“With this book the authors have opened the door to a vast treasure of Buddhist ideas. Based on instruction given by the Dalai Lama to audiences around the world, it speaks directly to issues of the human condition. A valuable

compendium of Buddhist philosophy that addresses both simple, grounded, spiritual practice, and the need to comprehend higher profound truths.”—IAN COGHLAN (Jampa Ignyen), Monash University

## THE LIBRARY OF WISDOM AND COMPASSION

*The Library of Wisdom and Compassion* is a special multivolume series in which His Holiness the Dalai Lama shares the Buddha's teachings on the complete path to full awakening that he himself has practiced his entire life. The topics are arranged especially for people not born in Buddhist cultures and are peppered with the Dalai Lama's unique outlook. Assisted by his long-term disciple, the American nun Thubten Chodron, the Dalai Lama sets the context for practicing the Buddha's teachings in modern times and then unveils the path of wisdom and compassion that leads to a meaningful life, a sense of personal fulfillment, and full awakening. This series is an important bridge from introductory to profound topics for those seeking an in-depth explanation from a contemporary perspective.

Volumes:

1. *Approaching the Buddhist Path*
2. *The Foundation of Buddhist Practice*
3. *Samsāra, Nirvāṇa, and Buddha Nature*
4. *Following in the Buddha's Footsteps*
5. *In Praise of Great Compassion*
6. *Courageous Compassion*
7. *Searching for the Self*

More volumes to come!

THE LIBRARY OF WISDOM AND COMPASSION • VOLUME 7

# SEARCHING FOR THE SELF

---

Bhikṣu Tenzin Gyatso,  
the Fourteenth Dalai Lama

*and*

Bhikṣuṇī Thubten Chodron

“So many still struggle with Buddhist teachings on no-self and emptiness. In this wonderful new volume, His Holiness the Dalai Lama and Venerable Chodron explain the wide range of Buddhist teachings on this topic in a clear and accessible way. This is an especially impressive book in an outstanding series. I cannot recommend it more highly. Exceptional!”

—GUY NEWLAND, author of *Introduction to Emptiness*

---

**I**N *SEARCHING FOR THE SELF* the Dalai Lama leads us to delve deeply into the topic of the ultimate nature of reality, presenting it from a variety of approaches while focusing on identifying our erroneous views and directing us to the actual mode of existence of all persons and phenomena.

Placing our study of reality within the auspicious context of a compassionate motivation to benefit all sentient beings, the Dalai Lama explains why realizing emptiness is important and what qualities are needed to do that, and he evaluates various tenet systems' perspectives on this vast topic. He then helps us understand our perceptions and the mental states involved in both our ignorant and accurate cognitions. He examines inherent existence and other fantasized ways of existence that we seek to disprove through reasoned analysis and presents the Middle Way view that abandons all extremes. The closing chapters by Thubten Chodron discuss the three characteristics of impermanence, unsatisfactoriness, and not-self as explained in the Pāli tradition and show how meditation on these can lead to the meditative breakthrough to realize nirvāṇa.

Engaging in this investigation with His Holiness will challenge our deepest-held beliefs and uproot false ways of viewing ourselves and the world that are so habitual we don't even notice them. Get ready to be challenged and intrigued, for realizing the nature of reality has the power to cut our defilements at the root and free us from cyclic existence forever!

## *Publisher's Acknowledgment*

The publisher gratefully acknowledges the generous help of the Hershey Foundation in sponsoring the production of this book.

# Contents

Preface by Bhikṣuṇī Thubten Chodron

Abbreviations

INTRODUCTION BY HIS HOLINESS THE DALAI LAMA

1. THE IMPORTANCE OF REALIZING THE ULTIMATE NATURE, EMPTINESS
  - Why Realizing Emptiness Is Important
  - What Is Emptiness?
  - Emptiness, Its Nature, Its Purpose, and Its Meaning
  - Suitable Vessels to Receive Teachings on Emptiness
  - Prerequisites for Insight
2. THE NĀLANDĀ TRADITION
  - Illuminating the Threefold Faith: An Invocation of the Seventeen Great Scholar-Adepts of Glorious Nālandā
  - Commentary on “Illuminating the Threefold Faith”
  - Reliable Guides and Explanations
3. INTRODUCTION TO THE PHILOSOPHICAL TENET SYSTEMS
  - The Value of Studying the Tenet Systems
  - Buddhist Tenet Systems and Their Sages
4. OVERVIEW OF BUDDHIST AND NON-BUDDHIST TENET SYSTEMS
  - The Worldly Person and the Yogī
  - Non-Buddhist Tenet Systems
  - Buddhist Tenet Systems

About the Authors

## Preface

MANY OF THE PRACTICES we do on the path to awakening are to prepare us to study, contemplate, meditate on, and realize the nature of reality, for this is the realization that has the power to cut our defilements from their root. So in the *Library of Wisdom and Compassion*, we now arrive at this topic. Although His Holiness has sprinkled his discussion of emptiness—the absence of inherent existence—throughout previous volumes, in this and the next two volumes he delves deeply into this topic, presenting it from a variety of approaches. This first of the three volumes on emptiness, *Searching for the Self*, focuses on identifying our erroneous views and directing us to the actual mode of existence of all persons and phenomena. Doing this will challenge some of our deepest-held beliefs—some false ways of viewing ourselves and the world that are so habitual that we don't even notice them. Get ready to be challenged and intrigued!

## *How This Book Originated*

The *Library of Wisdom and Compassion* has been many years in the making. As relayed in the prefaces of previous volumes, the idea for such a series began in the early 1990s when I requested His Holiness the Dalai Lama to write a short text that Tibetan lamas could use when teaching the Buddhadharma to Westerners and other non-Tibetans. His Holiness responded that we should write something longer first, gave me a transcript of one of his teachings, and sent me off to work.

In interviews with him over the ensuing years, the focus and scope of the series became clearer. The following is some of His Holiness' advice:

Our main aim is to help practitioners of the Pāli and Sanskrit traditions have a better understanding of each other's teachings and practice; a better understanding between the two traditions will bring closer contact, which will not only benefit individual practitioners but also enable the Buddhadharma to exist longer. In addition, it will enable Buddhist leaders from all traditions to speak in one voice about important issues in the world, such as climate change.

Except for minor differences, the Vinaya practice in all traditions is basically the same; the Vinaya and prātimokṣa are emphasized in both the Fundamental Vehicle and the Mahāyāna. The thirty-seven harmonies with awakening are also held in common. After reading this book, Theravāda practitioners will have clearer understanding that Mahāyāna practitioners also engage in these practices and Mahāyāna practitioners will know that Theravāda practitioners meditate on immeasurable love and compassion.

The Pāli tradition is the foundation of the Buddhadharma. Although there may be some people who think Vinaya is old-fashioned, that is a wrong view. The Buddha established the Vinaya, so deprecating the Vinaya and the value of monastic life is similar to dismissing the Buddha's wisdom and denigrating the path to

awakening. It would be good to have more explanation in this series about the Theravāda tradition, especially its Vinaya practice—how ordination is given, the three monastic practices (*poṣadha*, *varṣā*, *pravāraṇā*)—and its practice of samādhi, insight, and the thirty-seven harmonies with awakening.<sup>1</sup> I know that some practitioners in Theravāda countries are very accomplished and some monks are considered arhats.

When I meet monks from Sri Lanka, Thailand, Burma, and so forth, we discuss Vinaya, the thirty-seven harmonies, the four truths, and so forth—Buddhist teachings that all of us share. When I meet Japanese tantric practitioners, we discuss tantra. But when Japanese tantric practitioners and Sri Lankan Buddhist monks meet, aside from the practice of refuge in the Three Jewels, they can discuss only a few common practices. That is sad. I would like us Buddhists to understand one another better.

I also try to create closer understanding between Buddhists, Hindus, Christians, Muslims, and Jews. Theistic religions' emphasis on faith in God, the creator, helps people to live better. When they think that they are created in God's image, that God is like a protective father, and that everything is in God's hands, it helps them develop single-pointed faith. Such faith reduces self-centeredness and supports them in abandoning harm and extending forgiveness, kindness, and generosity to others. Based on pinpointing self-centeredness, anger, greed, fear, jealousy, and so forth as destructive emotions, we can understand and respect practitioners of theistic religions.

In the Tibetan community, some people stress their identification with a particular Tibetan tradition, "I'm Nyingma, you are Gelug; I am Sakya, you are Kagyu." Doing this in a discriminatory way is silly. By seeing our commonalities, I hope we Tibetans will overcome old divisions and that these misconceptions will not spread to Western, Chinese, and other practitioners of Tibetan Buddhism.

With this in mind, we'll explore the Buddha's teachings on the nature of reality. Although there are many educational systems in the world, each with its own methodology, here we follow the Nālandā tradition of India. In some educational systems today, teachers explain topics to students who are expected to remember all the information. They then take tests on the material to see if they have memorized it properly. Students are not necessarily taught how to think about the material or to question the ethical value of exploring a certain field of knowledge.

In the Nālandā tradition, our motivation for education is to increase our ability to contribute to the well-being of others and to progress on the path to full awakening. Here a teacher's role is to put forth varying ideas and help students to investigate them one by one, stating their qualms and debating the issues. Teachers don't give students all the answers, but present different viewpoints and questions that the students discuss and debate among themselves. This functions to increase students' discriminating wisdom and their ability to think clearly. They learn what is true by refuting wrong ideas and establishing correct reasons.

The first book His Holiness and I did, *Buddhism: One Teacher, Many Traditions*, as well as the previous six volumes of the *Library of Wisdom and Compassion*, establish many of the common points shared among the prominent Buddhist traditions (there are many Buddhist traditions and ways of practice—too many for us to include in this series). Now we will turn to the cultivation of a special kind of wisdom: the wisdom that realizes selflessness and emptiness. This wisdom has the power to free us from saṃsāra forever.

In learning about selflessness and emptiness, you will encounter new words, definitions, and ideas. You may wonder: If reality is empty of all false ways of existence, why do we need so many complicated words and concepts to explain it? Shouldn't reality be simple to understand and easy to realize?

Once seen directly, emptiness probably seems obvious and easy to understand, but for the minds of us ordinary beings that are obscured by wrong views and disturbing emotions, discerning reality is not at all simple. If emptiness were easy to realize, we would have done so long ago and would have already become buddhas by now. But this is not the case. If emptiness were obvious, we would already have the correct view and would know how to meditate on emptiness correctly. This too is not the case. People have a variety of views, and even within one person there exist many contradictory ideas and perceptions.

Look at ourselves, for example: Do all our perceptions and conceptions about reality form one logical, consistent philosophy, or do they sometimes contradict each other, leaving us confused?

The Indian and the Tibetan texts dealing with emptiness contain many debates that employ reasoning and critical analysis. This may cause us to wonder: Why is so much time and energy spent refuting others' wrong views? Shouldn't we be meditating instead? Reasoning and debate are tools that expose our own misconceptions. Although the texts ostensibly appear to refute others' distorted views, we may hold some of those very misconceptions and wrong views ourselves. Logic and reasoning are not employed for the egotistic goal of being the victor in a debate. Rather, they are employed to disprove the distorted views we cling to so strongly and ignite the light of wisdom in our minds.

Meditation on emptiness isn't the simple activity of closing our eyes, emptying all thoughts from our mind, and waiting for reality to magically appear to our consciousness. In minds that are crowded with wrong views and distracted by attachment to only the happiness of this life, there is no room for reality. We must clear away the wrong conceptions by means of reasoning and analysis so that we can see the ultimate nature that already exists in ourselves and in all phenomena around us.

For these reasons, we must continually cultivate enthusiasm and interest to understand emptiness deeply as well as to comprehend the words and concepts that lead to such understanding. Then we must meditate one-pointedly on emptiness to gain insight into emptiness, and then familiarize ourselves with that realization of reality to eradicate all afflictions and defilements in our mental continuum. I encourage you to be enthusiastic to study, reflect, and meditate on this topic for a long time.

## *Overview of the Book*

This volume begins with an introduction by His Holiness in which he places our study of reality within the framework of a compassionate motivation to benefit sentient beings. Since the value of whatever we undertake depends on our motivation, cultivating a motivation to contribute to the welfare of all beings places our study of emptiness in a beneficial context.

Chapter 1 explains why realizing emptiness is important and describes the qualities to develop to understand it correctly. Chapter 2 speaks of the Buddhist sages whose teachings are the most reliable for us to follow. It culminates with a praise His Holiness wrote that introduces us to the seventeen great scholar-adepts of the Nālandā tradition followed in Tibetan Buddhism. Then in chapters 3, 4, and 5 we explore assertions of both Buddhist and non-Buddhist philosophical tenet systems. This topic is vast, so only the important positions regarding the topics of the present volume—selflessness and emptiness—are spoken of here. Although initially this material may seem replete with new terms and ideas, as you progress in your study and practice to develop insight into emptiness, you will see the value of learning these because they point out some of our own incorrect ideas and direct us to views that are more reasonable.

Chapter 6 provides some of the epistemological material that helps us to understand both cognizing subjects and cognized objects, and chapter 7 fleshes out some of the mental states involved in both our ignorant and accurate cognitions. Chapter 8 discusses inherent existence and other fantasized ways of existence that comprise the objects of negation—what we seek to disprove when meditating on emptiness—and chapter 9 establishes the Middle Way view that has abandoned the extremes of absolutism and nihilism. The view of absolutism superimposes false ways of existence, whereas the nihilistic view negates what does in fact exist. Chapter 10 looks more closely at the extreme of absolutism, as this is the view that we ordinary sentient beings usually cling to.

Chapter 11 speaks of the two extremes as presented in the Pāli tradition and the three characteristics of impermanence, *duḥkha*, and not-self that counter the absolutist views. Chapter 12 goes into some of the many arguments presented in the Pāli tradition that help to overcome clinging to a false notion of the I. Although the arguments to support selflessness in the Sanskrit tradition are expounded in the upcoming volume 8 of the *Library of Wisdom and Compassion*, readers who are already familiar with these will see the similarities with arguments found in the Pāli sūtras.

The coda is designed for people who have studied the tenet systems in the Tibetan tradition as well as for followers of the Pāli tradition who want to learn more about their own Abhidharma system. Many Tibetans believe that modern-day Theravāda corresponds to the Vaibhāṣika and/or Sautrāntika systems as these systems are explained in the Tibetan tradition. However, this is not the case;

although the Pāli tradition shares many commonalities with these two systems, there are some important differences. In addition, this coda orients the reader to some of the foundational, canonical ideas informing the Tibetan treatises on the nature of reality, selflessness, and emptiness. Being aware of the development of the Abhidharma provides background for the refutations in Nāgārjuna's *Treatise on the Middle Way*.

When His Holiness said he wanted me to include the perspective of the Pāli tradition in the *Library of Wisdom and Compassion*, his office gave me a letter requesting Theravāda monks to give me teachings and allow me to stay in their temple. Thus I spent two weeks studying and practicing with Ajahn Anan at Wat Marp Jan in Thailand. This was followed by studying Bhikkhu Bodhi's lengthy series of teachings on the Majjhima Nikāya and meeting with him to ask questions. This led to reading about the Pāli Abhidharma, participating in a vipassana retreat, and discussing the Dharma with Western monks and nuns whom I met at our annual Western Buddhist Monastic Gatherings. Having taught the Dharma in Singapore for almost two years, I also got to know some monks from that tradition, participated in panel discussions with them, and was invited to speak at their temples. This study and engagement with the Pāli tradition has helped my own Dharma practice considerably.

## *Please Note*

Although this series is coauthored, the vast majority of the material is His Holiness's teachings. I researched and wrote the parts about the Pāli tradition, wrote some other passages, and composed the reflections. For ease of reading, most honorifics have been omitted, but that does not diminish the great respect we have for the excellent sages, practitioners, and learned adepts. Foreign terms are given in italics parenthetically at their first usage. Unless otherwise noted with "P." or "T.," indicating Pāli or Tibetan, respectively, italicized terms are Sanskrit, or the term is the same in Sanskrit and Pāli. When two italicized terms are listed, the first is Sanskrit, the second Pāli. For consistency, Sanskrit spelling is used for Sanskrit and Pāli terms in common usage (nirvāṇa, Dharma, arhat, and so forth), except in citations from Pāli scriptures. Tibetan terms can be found in the glossary. The term *śrāvaka* encompasses solitary realizers, unless there is reason to

specifically differentiate them. To maintain the flow of a passage, it is not always possible to gloss all new terms on their first usage, so a glossary is provided at the end of the book. “Sūtra” often refers to Sūtrayāna and “Tantra” to Tantrayāna—the Sūtra Vehicle and Tantra Vehicle, respectively. When these two words are not capitalized, they refer to two types of scriptures: sūtras and tantras. “Mahāyāna” or “Universal Vehicle” here refers principally to the bodhisattva path as explained in the Sanskrit tradition. In general, the meaning of all philosophical terms accords with the presentation of the Prāsaṅgika Madhyamaka tenet system. Unless otherwise noted, the personal pronoun “I” refers to His Holiness.

## *Appreciation*

My deepest respect goes to Śākyamuni Buddha and all the buddhas, bodhisattvas, and arhats who embody the Dharma and with compassion teach us confused beings who seek happiness but are ignorant of the means to create the causes for it. I also bow to all the realized lineage masters of all Buddhist traditions through whose kindness the Buddhadharma still exists in our world.

This series consists of many volumes. For their aid in this seventh volume, I want to express my gratitude to His Holiness’s translators—Geshe Lhakdor, Geshe Dorji Damdul, and Mr. Tenzin Tsepak. I am grateful to Geshe Dorji Damdul, Geshe Dadul Namgyal, and Bhikṣuṇī Sangye Khadro for checking the manuscript, and to Samdhong Rinpoche, Geshe Yeshe Lhundup, and Geshe Dhamchoe Gyaltsen for clarifying important points. Geshe Thupten Jinpa’s help was always welcome, and Dr. Yakupitiyage Karunadasa and Stephen Wainwright kindly checked the coda. I also thank Bhikkhu Bodhi for his clear teachings on the Pāli tradition and for generously answering my many questions. He also kindly looked over the sections of the book on the Pāli tradition before publication. The staff at the Private Office of His Holiness kindly facilitated the interviews, Sravasti Abbey supported me while I worked on this volume, and Mary Petruszewicz skillfully edited this book. I thank everyone at Wisdom Publications who has contributed and continues to contribute to the successful production of this series. All errors are my own.

Bhikṣuṇī Thubten Chodron

Sravasti Abbey

## Introduction

WHenever I speak with people, I think of myself as a member of their family. Although we may be meeting for the first time, in my eyes you are already a friend. When we share together, I don't think of myself as a Buddhist, a Tibetan, or as the Dalai Lama. I think of us as one human being speaking with another.

When we interact, I hope that you will think of yourself as a human being rather than as an American, Asian, European, African, or member of any particular country, ethnic group, gender, political party, age group, or religion. These conventional identities and loyalties are secondary, and sometimes they interfere with our connecting with and understanding one another. If you and I find common ground as human beings, we can communicate well; my being a monk, Buddhist, Tibetan, or man are peripheral in comparison to my nature as a human being.

Being human is our fundamental commonality; it is the foundation we will always share. Each of us is born as a human being, a fact that doesn't change until we die. Everything else—whether you are educated or uneducated, young or old, rich or poor, black, white, yellow, or red—is secondary.

In truth, you and I already know each other profoundly as human beings who share the same basic goals. All of us seek happiness and do not want suffering. Everyone, no matter where we live, is engaged in various projects because we are motivated by the desire to be happy. This is natural, and there is nothing wrong with it. However, we must keep in mind that too much involvement in the superficial aspects of life will not solve our bigger problems of discontentment and suffering. And too much self-centeredness will not make us fulfilled. Love, compassion, and concern for others are the real sources of happiness. When we cultivate these in abundance, we will not be disturbed by even the most uncomfortable circumstances. If we nurse resentment, jealousy, and hatred, however, happiness will elude us even if we live in the lap of luxury. So if we really want to be happy, we must widen the sphere of our love. This is both religious thinking and basic common sense.

Look at it this way: We are born helpless. We own nothing and cannot take care of ourselves. Without the kindness of our parents or another caregiver, we could not survive, much less prosper. Because the minds of small children are very delicate, their need for kindness is particularly obvious, but adults need kindness too. If someone greets me with a smile and expresses a genuinely friendly attitude, I appreciate it very much. Although I might not know that person or even understand their language, my heart instantly feels relaxed. On the other hand, if kindness is lacking, even if I'm with someone from my own culture whom I have known for many years, I feel an icy chill between us. Kindness and love—a real sense of sisterhood and brotherhood—are very precious. They make community possible and therefore are an essential part of any society.

On the last day of a visit to Los Angeles, the geshe and his students who organized the teachings, my staff, and security were walking to the hotel elevator on the way to the airport. I saw the maid who had taken care of my room and went over to thank her. To everyone's surprise, she reached up and gave me a quick kiss on the cheek. Everyone around was not sure how to respond; I think they were a little uncomfortable, thinking the kiss on my cheek was inappropriate, so they just kept silent. But after we got into the elevator, I told them that was a sweet kiss—the maid was just expressing natural human affection—and they relaxed.

As small children, we depend on the kindness of others. In old age, we again depend on the kindness of others. Between childhood and old age we falsely believe that we are independent beings who are in control, but this is not so. Human society exists because it is impossible to live in complete isolation. Especially with the present structure of society, a global economy, specializations in particular fields of study, and the pervasiveness of technology and industry, we are more dependent on one another than at any other time in human history. Interdependent by nature, we must live together. Since this is unavoidable, we must have concern for one another. The aim of society must be the compassionate betterment of everyone from one lifetime to the next; this endeavor must include all living beings on this planet, not just human beings.

As you gain more appreciation for both the kindness intentionally bestowed on you by others and the unintended kindnesses reflected in the goods and services you depend on daily, you will automatically want to repay that kindness—or pay it forward—by contributing to a healthier society so others will benefit.

By benefitting others, you will improve your own lot too. Without appreciation of kindness, society breaks down.

When people in need are ignored, abandoned, or exploited for political or economic reasons, it reveals what is lacking in us human beings: although we are intelligent and powerful enough to destroy the planet, we lack genuine kindness and love for one another. There is an Indian saying: “When an arrow has struck you, there is no time to ask who shot it or the type of arrow it was.” Similarly, when we encounter human suffering, we must respond with compassion rather than question the political, national, religious, or racial identities of those we help. Instead of asking whether their country is a friend or foe, we must think, “These are human beings; they are suffering and their right to happiness is equal to our own.”

Consider, too, the animals who are being raised for slaughter, a number so great that the environment itself is harmed. These sad facts are the result of insufficient loving care. If humanity’s sense of compassion for others increased, not only would people in the world be happier but so would the countless animals whose lives we directly affect.

A better society is not something that can be legislated. Our common well-being depends on each of us as individuals cultivating peace, tolerance, forgiveness, love, and compassion in our own hearts and minds. Even if others don’t do this, we must. It is our personal contribution to world peace, and we must not back out with the limp excuse that others must be kind first, then we will return the kindness. Rather, we must go forward with optimism and determination and do what we know in our hearts is right.

With this awareness and an altruistic intention to benefit all beings, we will explore the nature of reality together. In doing so, we will examine a number of Buddhist and non-Buddhist assertions. This will prompt a lot of debate, where we compare and contrast different ideas and try to defend our own positions. The motivation for this is for all parties to develop their wisdom by closely investigating various philosophical assertions. Any dissecting of others’ views is not done out of hostility, the wish to take others down, or the intention to criticize people who hold views that differ from ours. Rather, through discussion and debate all of us will benefit.

Bhikṣu Tenzin Gyatso, the Fourteenth Dalai Lama

## Thekchen Choling

# 1 | The Importance of Realizing the Ultimate Nature, Emptiness

THE PREVIOUS VOLUMES of the *Library of Wisdom and Compassion* predominantly explored the method aspect of the path—the topics leading us to aspire to be free from saṃsāra and to generate bodhicitta and joyfully work for the liberation of all sentient beings. The ultimate nature of phenomena was explicitly spoken of from time to time because it underlies all these topics. The emptiness of inherent existence is the space in which all phenomena exist.

Now we will turn to make the ultimate nature—the emptiness of inherent existence—the chief object of our exploration. Emptiness is the ultimate mode of existence, and the wisdom realizing it directly is the only medicine that can cure saṃsāra and its duḥkha once and for all. This wisdom, coupled with bodhicitta, removes both afflictive and cognitive obscurations, enabling us to become fully awakened buddhas who are of great benefit to all beings.

## *Why Realizing Emptiness Is Important*

All of us share the wish to be happy and to overcome duḥkha. Upon close examination, it is evident that the situation in saṃsāra is utterly unsatisfactory. Its faults—especially birth, aging, sickness, and death, which we undergo without choice—continuously plague us in one rebirth after another. All the seeming pleasures of saṃsāra are transient and leave us dissatisfied. Chasing after them ensnares us in a cycle of excitement followed by disillusionment and depression. When we become fully aware of our predicament in saṃsāra and the danger of it continuing, strong aspiration for liberation and full awakening arises.

Ceasing saṃsāra entails eradicating its causes—afflictions and polluted karma—which are rooted in the ignorance grasping persons and phenomena as inherently existent. To identify this ignorance and the false object it grasps necessitates observing our mind closely, seeing how we easily assent to and grasp

as true the false appearance of everything existing under its own power, independent of all other factors. Correctly identifying this self-grasping ignorance that is the root of saṃsāra is extremely important, for without this we will not be able to eliminate it.

Having correctly identified self-grasping and its erroneous object, we must ascertain that such inherently existent persons and phenomena do not exist at all. Doing this involves refuting inherent existence, which is called the “object of negation” (*pratiṣedhya* or *niṣedhya*,<sup>2</sup> T. *dgag bya*), because we need to prove to ourselves that it does not and cannot exist. Through contemplating correct reasonings that refute inherent existence, a correct assumption regarding the emptiness of inherent existence will arise. There are many levels of correct assumption that are gained over time until a correct inference knowing emptiness is gained. This conceptual realization of emptiness is then combined with a mind of serenity to attain the union of serenity and insight on emptiness. Through familiarization with emptiness by meditating with the union of serenity and insight over time, the conceptual appearance of emptiness gradually fades away and profound wisdom increases until it directly perceives emptiness, the ultimate nature of reality.

Again, by meditating over time with the wisdom directly perceiving emptiness, the levels of afflictions and their seeds are gradually cleansed from the mindstream. Continued meditation gradually removes the cognitive obscurations—the latencies of ignorance and the factor of the appearance of inherent existence—from the mind. When this wisdom is complemented by faith, collection of merit, and bodhicitta, full awakening is on the horizon.

Thus if we seek true peace and if we take the Buddha’s teachings to heart, there is no other choice than to cultivate the wisdom realizing emptiness. Āryadeva’s *The Four Hundred* (CS 135cd–136ab, 288) tells us:

All afflictions are overcome  
through overcoming ignorance.  
When dependent arising is seen,  
ignorance does not arise.

It is the only doorway to peace;  
it destroys wrong views;

it [captures] the attention of all buddhas—  
this is called selflessness.

All existents—be they impermanent or permanent—exist depending on other factors. Being dependent, they lack an independent, inherent essence that makes them what they are. These dependent arisings' lack of inherent existence is their fundamental or final mode of existence. It is the object realized by all buddhas of the past, present, and future; it is the object of the meditative equipoise of all śrāvakas, solitary realizers, and bodhisattvas. Through it, nirvāṇa and full awakening are attained. The *King of Concentration Sūtra* (*Samādhirāja Sūtra*) says (MP 71):

If phenomena are individually analyzed as selfless  
and what has been analyzed is meditated on,  
that is the cause for attaining the fruit, nirvāṇa.  
Through any other cause one does not go to peace.

It is crucial to seek the correct antidote to ignorance. Although a variety of religious practices and philosophies benefit people, not all of them explain the correct view of the nature of reality. I have been to more than one Kumba Mela, a Hindu pilgrimage and festival held every twelve years at the confluence of the holy rivers Ganges, Yamuna, and the mythical Sarasvatī. It is one of the largest religious gatherings on the planet, attended by, among others, Hindu yogis who live in the Himalayas and meditate on the practice of inner heat (*candālī*). From the Buddhist perspective, although these yogis have great faith in their gurus and have renounced the pleasures of this life, they are not able to cut the root of self-grasping. Similarly, some of my Christian friends weep when they speak of their love of God, but they too aren't able to stop rebirth in saṃsāra.

Although we Buddhists learn and apply the antidotes to specific afflictions—such as meditating on impermanence to counteract attachment and on love to subdue anger—these antidotes alone cannot eradicate self-grasping ignorance. In *Clear Words* (*Prasannapadā*), Candrakīrti explains (FEW 37–38):

Among the extensive teachings in nine divisions—discourses and so  
forth—rightly proclaimed by the Buddha,

based on the two truths and corresponding to the forms of behavior of worldly beings,  
those spoken for the sake of removing attachment do not remove hatred,  
and those spoken for the sake of removing hatred do not remove desire.

Moreover, those spoken for the sake of removing arrogance and so forth do not overcome other defilements.  
Therefore, they are not very pervasive, and those teachings are not of great import.  
But those spoken for the sake of removing confusion overcome all afflictions,  
for the Conqueror said all afflictions thoroughly depend on confusion.

Attachment, anger, arrogance, jealousy, and so forth are problematic in our lives and applying the specific antidotes to them—contemplating impermanence, cultivating love, rejoicing in others' good fortune, and so forth—subdues them temporarily. However, their seeds still remain in our mindstream, ready to rise up in an instant as full-blown afflictions. To cut these off so they can never reemerge, eradicating them from the root is imperative. The only antidote capable of eradicating self-grasping ignorance (also called “confusion”) is the wisdom realizing the subtle selflessness of persons and phenomena. By realizing emptiness, we cease to assent to or grasp ignorance's false appearances. At that time, there is nothing that can act as a basis for us to give rise to afflictions such as attachment and anger.

### *What Is Emptiness?*

Emptiness is equivalent to suchness (*tattva*).<sup>3</sup> Candrakīrti describes it as the complete refutation of self-existence with respect to all internal phenomena (those conjoined with sentient beings' minds) and external phenomena (those not so conjoined).

Among Buddhists and non-Buddhists there are many different assertions regarding selflessness and suchness (emptiness). Those that are incorrect fall into two extremes: the extreme of nonexistence, deprecation, or nihilism where too much has been negated, and the extreme of absolutism, permanence, eternalism, or superimposition where not enough has been negated. In his commentary to the *Treatise on the Middle Way*, Buddhapālita says that in the first turning of the Dharma wheel, the Buddha presented selflessness as an antidote to counter distorted ways of viewing our aggregates as a self. However, the selflessness presented there is not the final understanding of selflessness, because not enough has been negated. Although the Yogācārins go a step further and reject the reality of the external material world, they still maintain the reality of the internal subjective consciousness. This, too, is a form of exaggerated views where not enough has been negated. Meanwhile Svātantrika Mādhyamikas, in their commentaries on Nāgārjuna's works, insist that phenomena possess some objectified basis on the conventional level. They, too, have fallen to the extreme of superimposition or absolutism. Materialists, on the other hand, say that the self and the world arise randomly without any causes, and people who misunderstand the Prāsaṅgika view say that according to that view nothing at all exists because ultimate analysis negates all existents. These people, who resemble scientific reductionists, also fall to the extreme of deprecation. The Middle Way view as presented by the Prāsaṅgikas avoids both these extremes by realizing the suchness that is the emptiness of inherent existence and still being able to establish conventional, dependent existence.

The view of superimposition exaggerates what exists by saying that dependent arisings exist inherently. This view is faulty because if things existed inherently, they would be independent of all other factors, such as causes and conditions, parts, and so forth. In this case, the person would be permanent because it would exist without depending on causes and conditions. Such an independent, permanent self would continue unchanged eternally after death.

The view of deprecation denies the existence of what does exist. This involves thinking that if phenomena do not exist inherently, they do not exist at all. Those who hold this view say that if the inherent existence of impermanent, dependently arising things were negated, then these things could not perform the function of creating effects. In that case, when the person dies, he or she would

become totally nonexistent, there being no continuity of the person and thus no rebirth.

Both extreme views are based on the premise that if phenomena existed, they must exist inherently, and if they don't exist inherently, then they don't exist at all. Those adhering to the view of absolutism say that since phenomena exist, they must exist inherently. Otherwise they would be totally nonexistent, and that is not acceptable. Those holding the view of deprecation assert that since phenomena don't exist inherently, they don't exist at all. People who fall to either of these extremes are unable to establish dependently arising phenomena. In his *Commentary on [Āryadeva's] Four Hundred*, Candrakīrti says (EMW 179):

Therefore, here (1) this [deprecation] is an erroneous view of nonexistence due to deprecating—as nonexistent—dependently arisen causes within the thoroughly afflicted (saṃsāra), and [phenomena] within liberation or the very pure, which are compounded [by causes and conditions] and are like illusions, and (2) a view of thingness (inherent existence) also is erroneous because an inherently existent nature does not exist. Hence, in this way those who propound that things have an inherent nature incur the fault that dependent arisings do not exist and incur the faults of the views of permanence and of annihilation.

The correct view is the view of the Middle Way that proclaims the dependent arising of all phenomena and their emptiness of inherent existence are complementary. This book will delve into emptiness and explain how emptiness and dependent arising come to the same point. It will also enable us to gain a correct understanding of emptiness and develop the tools to realize it in our meditation.

## *Emptiness, Its Nature, Its Purpose, and Its Meaning*

The nature of emptiness is the mere negation of grasping inherent existence; the purpose of teaching emptiness is to eliminate that grasping that lies at the root of

all afflictions and duḥkha; the meaning of emptiness is that all phenomena lack inherent existence and exist dependently.

The nature of emptiness is the absence of an objectified basis for grasping—anything in relation to which we could say “This is the self” or “This is such-and-such phenomenon.” In his *Commentary on Bodhicitta (Bodhicittavivaraṇa)*, Nāgārjuna says (BV 51–52):

The abiding of a mind that has no object  
is defined as the characteristic of space;  
[so] they accept that meditation on emptiness  
is [in fact] a meditation on space.

With the lion’s roar of emptiness  
all [false] pronouncements are frightened;  
wherever such speakers reside,  
there emptiness lies in wait.

“A mind that has no object” is a mind that does not grasp any phenomenon to have an objectified or inherently existent basis. As long as we believe there is an objectified basis—something that by its own nature *is* that object—grasping its inherent existence will arise. That this happens is confirmed by the fact that we so quickly react to people, objects, and events with attraction and rejection, based on believing they have their own inherent nature; they exist as self-enclosed, independent things just as they appear to. In *Sixty Stanzas of Reasoning (Yuktiṣaṣṭikākārikā)*, Nāgārjuna asks (YS 44):

Those who assert the conditioned things  
as being established in terms of ultimate reality,  
why wouldn’t the faults of permanence and so on  
not arise within their minds?

If the impermanent things that surround us in daily life existed independent of all other factors, they would be unable to change. Someone who asserts inherent existence should therefore believe conditioned phenomena are permanent, a view that our experience refutes, since we and everything around us is in constant flux.

To avoid these errors, it is crucial to analyze if the basis of objectification we believe exists is actually findable. When we search for an essence of things—a person, paycheck, or rainstorm—instead of finding an objectified basis, we find their emptiness of inherent existence. If we then search for the essence of that emptiness, we find in turn its emptiness. Seeking an essence, we find only essencelessness. This lack of an objectified basis applies when we search for the essence of persons, phenomena, and their emptiness.

At the end of our search for an objectified essence, all that remains is emptiness—the absence of inherent existence—which is like space. Space is defined only in negative terms; it is the absence of obstruction. Aside from this, nothing can be pointed to as being space. Similarly, when we search for the essence of any object with ultimate analysis, only emptiness—the absence of inherent existence—is found. In this way, the teachings on emptiness dismantle any basis for grasping, and the meditative equipoise on emptiness is called “space-like meditation.”

Essentialists—philosophers who assert that the person and aggregates truly exist—do not refute enough and leave an objectified basis for grasping inherent existence. Although some of them, such as the Yogācārins, negate an external world, by affirming the true existence of consciousness they too maintain a basis for grasping. Svāntarikas leave room for grasping because they accept inherent existence on the conventional level. Prāsaṅgikas—those who negate inherent existence both ultimately and conventionally—dismantle any basis of grasping.

In the *Treatise on the Middle Way* (*Mūlamadhyamakakārikā*), Nāgārjuna states that whatever is dependent arising is empty, and that holding phenomena as being dependently designated is the Middle Way view. In other words, he equates the meaning of emptiness with the meaning of dependent arising. Understanding this prevents falling to the two extremes. Such a view is like a lion’s roar that decimates all wrong views.

In the opening verses of chapter 24 of *Treatise on the Middle Way*, someone who misunderstands the meaning of emptiness thinks that Nāgārjuna’s refutation of inherent existence undermines both the Buddhadharma and mundane conventions. Not accepting the meaning of the Perfection of Wisdom sūtras, he accuses Nāgārjuna of being a nihilist (MMK 24.1–6):

If all these were empty [of inherent existence],

there would be no arising and no disintegration,  
and it would [absurdly] follow for you  
that the four truths of the āryas would not exist.

Since the four truths would not exist,  
knowing thoroughly, abandoning,  
meditating on, and actualizing [them]  
would not be logically feasible.

Since those would not exist,  
the four fruits also would not exist.  
When the fruits do not exist,  
abiders in the fruit would not exist;  
approachers also would not exist.

If those eight persons did not exist,  
the spiritual community would not exist.  
Because the four truths would not exist,  
the doctrine of the excellent also would not exist.

If the doctrine and spiritual community did not exist,  
how would the buddhas exist?  
If emptiness is construed in this way,  
the existence of the Three Jewels is undermined.

The existence of effects,  
what is not the doctrine, the doctrine itself,  
and all conventions of the world—  
all these are undermined.

The objector says that if everything is empty of inherent existence, nothing could arise and cease, and thus true duḥkha and true origins would not arise and could not cease. If that were the case, then true paths could not be cultivated and true cessations could not be actualized. In short, the four truths of āryas would not exist. If the four truths didn't exist, thoroughly knowing true duḥkha,

abandoning true origins, meditating on true paths, and actualizing true cessations would not be possible. If these weren't possible, the four fruits of stream-enterer, once-returner, nonreturner, and arhat would not be feasible, nor would the four approachers to these states and the four abiders in them. In that case, the Saṅgha Jewel and the Dharma Jewel would not exist, and if these did not exist neither would the Buddha Jewel. Cause and effect, the Dharma teachings, and all societal conventions would be negated. In short, the objector claims that emptiness is equivalent to total nonexistence and would undermine both the ultimate truth (true cessations and nirvāṇa) as well as all mundane conventions (true duḥkha, origins, path, and everything else in the world).

Nāgārjuna replies that this person has misunderstood the nature of emptiness, its purpose, and its meaning, and as a result his mind is proliferating with many pernicious misconceptions. Nāgārjuna then explains that the nature of emptiness is peaceful (quiescent) and not fabricated by the mental elaborations of inherent existence; it is the absence of all dualistic appearances. The purpose of realizing emptiness is to eliminate afflictions, polluted karma, and cognitive obscurations, and the meaning of emptiness is dependent arising.

Nāgārjuna then directly confronts the objector's points, saying that his understanding is completely backward, and the situation is the opposite of what he believes: the fact that all phenomena are empty of inherent existence allows all the functions and relationships of saṃsāra and nirvāṇa to exist. If phenomena existed independent of all other factors, they couldn't interact with other factors and thus couldn't arise, change, function, or cease (MMK 24.14):

For whom emptiness is feasible,  
all is feasible.

For whom emptiness is not feasible,  
all is not feasible.

Since phenomena are empty by nature, all the faults the objector accuses the Mādhyamikas of having actually accrue to him. Nāgārjuna confronts the objector with the undesirable consequence of his wrong views (MMK 24.20):

If all these were not empty [of inherent existence],  
there would be no arising and no disintegration,

and it would [absurdly] follow for you  
that the four truths of the āryas would not exist.

Because phenomena lack inherent existence, they exist dependently. True duḥkha arises dependent on its causes, true origins. These can be overcome by realizing true paths, which bring true cessations. True paths and true cessations are the Dharma Jewel, and the Saṅgha Jewel, which includes the eight approachers and abiders to stream-entry, and so on, and the ārya bodhisattvas, has actualized them. Since the Saṅgha Jewel is feasible, the Buddha Jewel is also possible. All mundane and supramundane realizations and attainments are feasible, as are cause and effect and all worldly conventions.

In this way, Nāgārjuna clarifies that the meaning of the Perfection of Wisdom sūtras' statements about emptiness are definitive and can be understood just as they are expressed. In addition, the above argument clears away all doubt regarding the existence of the Three Jewels and the four truths: because phenomena are empty and arise dependent on other factors, all phenomena in saṃsāra and nirvāṇa are feasible.

---

## REFLECTION

1. Why is realizing emptiness important?
2. What is the purpose of realizing emptiness?
3. What are the disadvantages and inaccuracies of the view of superimposition and the view of deprecation?
4. Review Nāgārjuna's argument that because all phenomena are empty of inherent existence and exist dependently, the four truths as well as the Three Jewels and the path to full awakening exist.

---

## *Suitable Vessels to Receive Teachings on Emptiness*

For teachings on emptiness to benefit us, we must be proper vessels. Scriptures contain warnings about the danger of teaching emptiness to those who are not

suitable vessels, and doing so transgresses a root bodhisattva percept. The chief danger is that an untrained person will misunderstand the teachings, mistake the emptiness of inherent existence for total nonexistence, and fall to the extreme of nihilism (deprecation), thinking that nothing exists or that actions do not bring results. It is especially deleterious if people disbelieve the law of karma and its effects and cease to care about the ethical dimension of their actions. Behaving recklessly, they create destructive karma, winning for themselves only an unfortunate rebirth.

Alternatively, by misunderstanding the teachings on emptiness, someone may think that emptiness is nonsensical, thus hardening their belief that all phenomena inherently exist. Abandoning suchness, they close the door to liberation by falling to the extreme of absolutism (superimposition). Such wrong views perpetuate duḥkha in saṃsāra for a long time to come. The Sakya scholar-adept Drakpa Gyaltsen (1147–1216) summarizes the disadvantages of incorrectly understanding emptiness in “Parting from the Four Clingings” (26):

There is no liberation for those who grasp at existence;  
there is no higher rebirth for those who grasp at nonexistence;  
those who grasp at both are ignorant;  
so place your mind freely in the nondual sphere.

Those who grasp inherent existence cannot realize emptiness; until they relinquish that view, they cannot attain liberation. Those who grasp nonexistence negate the law of karma and its effects and ignore the ethical dimension of their actions. As a result, fortunate rebirth eludes them. Those who hold both the view of absolutism and nihilism are confused and cannot progress on the path. The view of emptiness is the remedy of all these wrong views.

Āryadeva mentions the qualities of suitable disciples: they are open-minded and willing to hear new ideas, intelligent and able to discern the validity or error in those teachings, and earnest, having a sincere spiritual motivation. Some arrogant people erroneously think that they have understood the subtle meaning of emptiness. Teaching their wrong view to others, they not only harm themselves but also lead others astray.

Candrakīrti speaks of external signs that a teacher may look for to determine if a student is ripe to hear teachings on emptiness (MMA 6.4–5):

Upon hearing about emptiness even while an ordinary being,  
whoever gives rise repeatedly to great inner joy,  
tears flowing from utter joy moisten the eyes,  
and the hairs of the body stand on end,

they have the seed of the mind of complete buddhahood.

They are vessels for the teaching of suchness.

The ultimate truth is to be revealed to them.

In him, qualities that follow after that will arise.

People familiar with the doctrine of emptiness from past lives and those who have wisdom arisen from hearing and wisdom arisen from reflecting on emptiness may have these physical reactions when they hear teachings on emptiness in this life. However, weeping or one's bodily hair standing on end during teachings do not necessarily indicate that a person is a completely suitable vessel for learning about emptiness, because these physical signs could occur for a variety of reasons. On the other hand, the absence of these signs does not mean that those people are not suitable vessels to hear teachings on emptiness. People who have heard teachings on the stages of the path, have conviction in the infallibility of karma and its effects, and do not stray from their teacher's instructions should learn and study emptiness and will receive great benefit from doing so.

Maitreya's *Ornament of Clear Realizations* says that suitable vessels for teachings on emptiness are students who have made offerings to the Three Jewels, created roots of virtue, and are under the guidance of a qualified and virtuous spiritual mentor. A great collection of merit is needed before learning about emptiness to ensure that the student will adequately think about the teachings, reach correct understandings, and thus benefit from the teachings. Students of the Buddhadharmā must be willing to exert effort to examine the teachings on emptiness with unbiased wisdom and to persevere until they gain the correct view.

To make your mind receptive to emptiness, engage in practices to accumulate merit and purify negativities and develop a firm foundation in the Buddhist worldview and the four truths. In addition, cultivate humility and be willing to familiarize yourself with the foundational teachings, such as those on impermanence, duḥkha, and karma and its effects, without impetuously jumping

ahead to more advanced teachings. By studying and practicing the foundational topics, your confidence in the Dharma and in yourself as a Dharma practitioner will increase.

Try to learn and reflect as your spiritual mentor and the lineage masters instruct so that you are not the confused students Āryadeva speaks about: people who, not understanding the teachings, fault the Buddha for not explaining them well, think emptiness means that nothing whatsoever exists, or favor views that make them feel emotionally comfortable although those views are not supported by reasoning. I heard a story about a Buddhist monk who converted to Christianity. When a friend asked him why, he responded, “Buddhism explains things that are impossible for me to do, such as realize emptiness. But in Christianity, I just have to have faith and God will provide for everything. I can do that.”

Do not take the teachings about emptiness for granted. Following his awakening, the Buddha reportedly reflected:

Profound and peaceful, free from elaboration, uncompounded clear  
light—  
I have found a nectar-like Dharma.  
Yet if I were to teach it, no one would understand,  
so I shall remain silent here in the forest.

“Profound and peaceful” refers to the true cessation that is the focus of the first turning of the wheel of Dharma. “Free from elaboration” alludes to the content of the second turning of the wheel, and “uncompounded clear light” indicates the third turning of the wheel.<sup>4</sup> These teachings are precious, and fearing that no one would understand them, the Buddha almost didn’t teach. Receiving these teachings is a dependent arising, and making ourselves receptive students prior to receiving the teachings and enthusiastically investigating the teachings afterward create the cause for our spiritual mentors to instruct us on emptiness.

If we follow an intelligent approach to the Buddha’s teachings, diligently study them, and gain a correct understanding, the Buddhadharma will endure. But if we rely only on faith and worship the Three Jewels without valuing their realization of emptiness, how long will the Dharma exist in our world? If we can explain the Buddha’s philosophical views on the basis of reason and science,

people today will pay attention. Thus it is important to study the sūtras and the treatises, commentaries, and autocommentaries of the great Indian scholar-adepts. The classical Indian commentaries unlock the meaning of the terse root verses and enable us to discern the assertions of other tenet systems from those of our own.

When people who are suitable vessels hear teachings about emptiness, good qualities will arise in them. Candrakīrti says (MMA 6.6–7a):

After adopting an ethical code, they will always abide in ethical conduct.

They will practice generosity, cultivate compassion, meditate on fortitude,

and fully dedicate the virtue of these toward awakening for the sake of liberating migrators.

They will respect the exalted bodhisattvas.

Suitable disciples understand that emptiness and dependent arising are complementary, not contradictory. This increases and stabilizes their faith in karma and its effects, which is essential to avoid the extreme of nihilism. Convinced that realizing emptiness is the key to awakening, they are keen to learn, reflect, and meditate on emptiness from one life to the next without interruption. To ensure they have future lives with all the conducive conditions to do this, they create the causes for fortunate births by cherishing ethical conduct and purify any previously created causes so they cannot ripen. To prevent poverty from interfering with their ability to receive teachings and practice in future lives, they create the causes to receive life's necessities by practicing generosity.

Aware that realization of emptiness conjoined with compassion will bring full awakening, bodhisattvas cultivate compassion and bodhicitta to ensure that they will continually follow the Mahāyāna and attain buddhahood. To prevent anger from creating destructive karma, destroying virtue, and propelling them to an unfortunate rebirth, they practice fortitude. Practicing fortitude also brings a pleasant appearance, so they can meet more people, especially āryas who will instruct them. Knowing that familiarizing themselves with emptiness is the way to overpower afflictions and defilements, they learn, think, and meditate on emptiness as much as possible and cultivate serenity focused on emptiness. To

direct the merit from the above practices to full awakening, they dedicate it to attain buddhahood. Their respect for bodhisattvas increases exponentially because they understand that only buddhas and bodhisattvas can teach emptiness using a myriad of reasonings. To repay the kindness of the buddhas, they engage in the four ways of gathering disciples that give them the opportunity to instruct others on emptiness.

In short, suitable vessels do not erroneously think that the method aspect of the path, which includes compassion, bodhicitta, the collection of merit, ethical conduct, generosity, fortitude, and so on, is only to be practiced by those who have not understood emptiness. They know that although these practices are empty of inherent existence, they exist conventionally. They also contemplate the three—themselves as the agent, the actions engaged in, and the objects acted upon—as empty of inherent existence yet conventionally existent, and they dedicate their merit with that awareness. In this way, those who are suitable vessels practice both the method and the wisdom aspects of the path without deprecating either one.

The activities of listening to and teaching emptiness create great merit. The *Gift of the Precious Child Sūtra* (*Āryasatpuruṣ Sūtra*) says (EES 21):

Mañjuśrī, whoever listens [even] with doubt to this rendition of the teaching [on emptiness] generates much greater merit than a bodhisattva who, lacking skillful means, practices the six perfections for a hundred thousand eons. This being so, what need is there to say anything about a person who listens without doubt! What need is there to say anything about a person who imparts the scripture in writing, memorizes it, and also teaches it thoroughly and extensively to others!

Even though someone lacks skillful means—that is, doesn't understand emptiness—and has doubt about it, he plants powerful seeds for liberation on his mindstream by listening to teachings about emptiness. If this is the case, a person who has full confidence in the teachings on emptiness creates that much greater merit. Needless to say, someone who teaches it without error creates extensive merit.

Why does someone who copies or memorizes a scripture create great merit? After all, nowadays we can easily photocopy or digitize Dharma texts without

having a virtuous thought! It takes a long time to copy a scripture by manually writing it, and dedicating so much time and effort to writing it meticulously increases our respect for its contents. Copying it slowly provides time to contemplate the scripture's meaning, and memorizing it entails repetition, which is conducive to contemplation. These activities of writing, memorizing, and reciting the scriptures connect us with the precious teachings. Because of this familiarity, when we later hear or read teachings the meaning impacts us more deeply. For this reason, monastics in Tibetan monasteries memorize and recite the scriptures beginning when they are young children.

Contemplating emptiness can prevent unfortunate rebirth. The *Treasury of the One Thus Gone Sūtra* (*Tathāgatakośagarbha Sūtra*) says (EES 21):

A living being—who, possessing all these [ten great nonvirtues], enters into the doctrine of selflessness and has faith and belief that all phenomena are from the beginning pure—does not take a bad rebirth.

For example, someone has committed a powerful destructive action that will result in an unfortunate rebirth in the next life. Embracing the teachings on emptiness, he generates tremendous faith and respect toward them and with great enthusiasm tries to understand these teachings. Even if he isn't able to understand them fully, having a good understanding can prevent an unfortunate rebirth in the next life.

Many benefits accrue from instructing others on emptiness. However, teaching emptiness should not be done haphazardly, and much care is required. Two principal requirements are necessary: First, a pure motivation, one that is genuinely concerned about the students and wants them to attain awakening is required. This motivation must also be free from the eight worldly concerns, such as seeking material or financial gain, praise, fame, pleasure, or services. Second, the ability to explain the correct meaning of emptiness without error is essential. This requires years of study, contemplation, and meditation.

If, lacking these two requirements, someone gives an erroneous explanation on emptiness or even a correct explanation with an afflictive motivation, his speech becomes the nonvirtue of idle talk. Incorrectly explaining emptiness to someone new to the Dharma is especially grievous because people tend to take to heart the first teachings they hear and, as a result, may hold a distorted view of

emptiness for a long time. If an incorrect explanation is given to someone who has studied philosophy, at least that person has the opportunity to use reasoning and discern that it is incorrect. A correct explanation given with a motivation of compassion free from attachment to the happiness of this life is an excellent gift to a student and an excellent offering of our practice to the Buddha.

---

## REFLECTION

1. What are the qualities of a suitable student to hear teachings on emptiness?
  2. What benefits do suitable students accrue from learning about emptiness, and what benefits do qualified teachers gain by teaching the doctrine of emptiness?
  3. How can you help yourself become a suitable student who will reap these benefits?
- 

## *Prerequisites for Insight*

Insight and the wisdom realizing emptiness must be specifically cultivated. They will not arise by themselves or by meditating on other unrelated topics such as compassion or serenity. Nevertheless, contemplating other aspects of the path supports our understanding of emptiness. For example, meditating on the defects of saṃsāra or on bodhicitta will increase our joyous effort to learn and meditate on emptiness.

For the practice of insight to flow smoothly, certain prerequisites must be complete. In his *Middle Stages of Meditation (Bhāvanākrama II)*, Kamalaśīla speaks of three causes to prepare to meditate on emptiness and cultivate insight: relying on a knowledgeable and experienced spiritual mentor, hearing and studying the teachings under his or her guidance, and properly contemplating what was taught.

The first prerequisite—choosing and relying on a qualified spiritual mentor—was discussed in chapters 4 and 5 of *The Foundation of Buddhist Practice*. The second prerequisite is fulfilled by listening to your spiritual mentors' teachings on emptiness as explained in authoritative sūtras, commentaries, and treatises. The

Buddha said that one who hears another will be released from aging and death. “Hears another” indicates that the profound view of emptiness is generated by first hearing its meaning from an external spiritual mentor and thinking about the meaning to ensure we have understood it correctly. Without hearing an unmistakable explanation of emptiness from a qualified spiritual master, the profound view will not be generated in your mind no matter how powerful your concentration, how many books you read, how strong your faith in the guru and Three Jewels is, or how many retreats you have done.

To gain a correct understanding of the definitive meaning of emptiness, rely on the treatises of great sages, such as Nāgārjuna. Since distorted understandings of emptiness abound, take care to follow the wise and to develop wisdom in accord with their explanations.

Having heard and studied correct explanations of emptiness, settle the view by contemplating it deeply. A correct inferential understanding of emptiness is an essential prerequisite to cultivating insight on emptiness. Simply saying “All phenomena are empty” does not mean you have understood emptiness. Doing stabilizing meditation for years on your idea of emptiness, without having discerned the correct view, does not generate insight realizing emptiness. Therefore, the upcoming chapters and volumes contain a detailed explanation of how to determine the correct view of emptiness, followed by how to generate insight into emptiness.

Hearing and studying bring the wisdom arising from hearing; contemplating what you have learned and discussing and debating it with others induce the wisdom arising from thinking. By employing complete forms of reasoning, examine how the person exists and decisively conclude that a truly existent self—the object of negation—does not exist. Then meditate to unite serenity and insight and gain the wisdom arising from meditation. With this integrate your understanding of emptiness with your mind to effect deep transformation.

## 2 | The Nālandā Tradition

**B**UDDHISM IN INDIA was the result of the Buddha's three turnings of the Dharma wheel in which he established the basic principles of his teaching. During the first turning, he explained the four truths—how we enter the cycle of existence under the control of afflictions and polluted karma, and how to free ourselves by practicing the path and achieving cessation. Although the Buddha said this, we need to explore whether it is actually possible to cease saṃsāric duḥkha and attain liberation. The Buddha discouraged blind belief and instead encouraged investigation by reasoning and logic.

The Nālandā tradition, which began in India, is named after Nālandā University near Rajgir. This tradition, which stresses the use of reasoning and logic, was later transmitted to Tibet, Mongolia, China, Korea, Japan, and Vietnam. It takes as a starting point the Buddha's advice to his followers, "As the wise test gold by burning, cutting, and rubbing it, so, bhikṣus, should you accept my words—after testing them, and not merely out of respect for me." The Nālandā masters took him at his word and scrutinized his teachings, classifying them into those that were definitive and those requiring interpretation.

The Nālandā tradition has brought great benefit to the world. People in the East and in the West are practicing Buddhadharma, and scientists have interest in it. In the East in general, people have great faith in Buddhism and many recite prayers and the *Heart Sūtra*. But when I ask them what the meaning of the *Heart Sūtra* is, they don't know. To preserve Dharma, people have built many monasteries and temples filled with beautiful statues on the altar, but teaching the meaning of the Dharma is most important so that people will understand and practice the teachings and benefit from doing this. This is the true way to preserve the Buddhadharma.

To show the importance of the Nālandā tradition and my gratitude toward the great masters who comprise it, I wrote a homage expressing my admiration for seventeen Nālandā masters entitled "Illuminating the Threefold Faith: An Invocation of the Seventeen Great Scholar-Adepts of Glorious Nālandā."

Although a praise to eight great Indian masters already existed, this praise to the seventeen masters includes other sages whose writings we rely on. They are some of the major scholar-adepts whose views we will examine in the following chapters. Although not all of them lived at Nālandā University, Nālandā's way of study and practice was present in the other large Buddhist universities. Each of these masters specialized in a particular area of the Buddhadharma and all were knowledgeable and realized practitioners of the three higher trainings—the higher trainings of ethical conduct, concentration, and wisdom.

### *Illuminating the Threefold Faith: An Invocation of the Seventeen Great Scholar-Adepts of Glorious Nālandā*<sup>5</sup>

1. Lords of Lords, arisen from the compassionate wish to benefit wandering beings,  
you have attained sublime protection, abandonment, and realization,  
and liberate sentient beings through teaching dependent arising.  
I bow to you, Conqueror, Sun among Teachers.
2. I call to mind esteemed Nāgārjuna, who, as the Conqueror prophesied,  
introduced the Middle Way of the Universal Vehicle and was skilled in clarifying  
the meaning of suchness, free of extremes, as intended in the Mother of Conquerors (Perfection of Wisdom sūtras),  
through the profound, logical presentation of dependent arising.
3. I call to mind the Bodhisattva Āryadeva,  
his principal spiritual child, the most learned and accomplished,  
who traversed the ocean of Buddhist and other philosophies,  
who is the glorious crowning jewel among all holders of Nāgārjuna's treatises.

4. I call to mind esteemed Buddhapālita,  
who clarified the ultimate meaning of dependent arising—the  
thought of Ārya [Nāgārjuna],  
essential point of the profound, existence as mere designation and  
name—  
and has ascended the utmost state of accomplishment.
5. I call to mind Ācārya Bhāvaviveka, erudite master  
who introduced a philosophical view  
that refutes such extremes as truly existent production  
while accepting commonly verified knowledge and external objects.
6. I call to mind Candrakīrti, who promulgated the complete path of  
Sūtra and Tantra,  
who was skilled in expounding the profound and vast Middle Way,  
in which appearance and emptiness eliminate the two extremes  
through dependent arising and the merely conditional [nature of  
things].
7. I call to mind the Bodhisattva Śāntideva,  
skilled in teaching a host of fortunate disciples  
the truly marvelous path of great compassion  
through versatile means of reasoning, profound and vast.
8. I call to mind the great Abbot Śāntarakṣita,  
who introduced the nondual Middle Way to suit disciples' mental  
dispositions,  
was well versed in differentiating the reasonings of the Middle Way  
and reliable cognition,  
and disseminated the teaching of the Conqueror in the Land of  
Snows (Tibet).
9. I call to mind esteemed Kamalaśīla,  
who thoroughly explained the stages of meditation on the Middle  
Way view, free from extremes,

and the union of serenity and insight according to Sūtra and Tantra;  
he flawlessly clarified the Conqueror's doctrine in the Land of  
Snows.

10. I call to mind esteemed Asaṅga,  
whom Maitreya inspired and looked after,  
who was adept in disseminating all Mahāyāna discourses,  
and revealed the vast path and, as the Conqueror prophesied, blazed  
the trail of Yogācāra.
11. I call to mind esteemed Ācārya Vasubandhu,  
who, by maintaining the system of the *Seven Treatises of  
Abhidharma*, and the nonduality [of Yogācāra],  
clarified the philosophies of Vaibhāṣika, Sautrāntika, and  
Vijñānavāda;  
foremost safe, renowned as a second Omniscient One.
12. I call to mind esteemed Dignāga,  
the logician who gave us the discerning insight of fine discrimination  
by thoroughly opening one hundred doors of logic  
to reveal the system of the Buddha's scriptures through empirical  
reasoning.
13. I call to mind esteemed Dharmakīrti,  
who fathomed the vital points of Buddhist and non-Buddhist modes  
of logic,  
granted conviction in the vast and profound paths of Sautrāntika  
and Yogācāra through reasoning,  
and was adept in expounding the marvelous ways of Dharma.
14. I call to mind esteemed Vimuktisena,  
who interpreted the Perfection of Wisdom that came from the  
Asaṅga brothers  
in accordance with the Middle Way, free from the extremes of  
existence and nonexistence,

and who lit the lamp illuminating the meaning of the *Ornament [of Clear Realization]*.

15. I call to mind esteemed Haribhadra,  
who clarified the three Mothers,<sup>6</sup> supreme Perfection of Wisdom  
scriptures,  
in line with Maitreyanath's pith instructions,  
and who the Conqueror prophesied would expound the meaning of  
the Mother.
16. I call to mind esteemed Guṇaprabha, excelling in stability and  
learning,  
who integrated the intentions of a hundred thousand categories of  
Vinaya,  
and in accordance with Mūlasarvāstivāda,  
thoroughly and unmistakably explained the prātimokṣa.
17. I call to mind esteemed Śākyaprabha, ideal Vinaya holder,  
master of the treasure of the three trainings'<sup>7</sup> qualities,  
who, to ensure the longevity of the flawless Vinaya teachings,  
thoroughly explained what the vast scriptures meant.
18. I call to mind Jowo Atiśa, kind Lord  
who caused the Sage's teaching to flourish in the Land of Snows,  
who expounded doctrines vast and profound—complete teaching of  
the Conqueror—  
in the context of paths of persons of three capacities.<sup>8</sup>
19. Making such invocations with an unflinchingly pure mind  
to you, exceedingly fine sages, ornaments for the world,  
and sources of stupendous, elegant teachings,  
inspire me to ripen my mind so that I may attain liberation.
20. Through understanding the meaning of the two truths, the ground  
reality of how things are,

- I ascertain by way of the four truths just how beings arrive in and  
leave saṃsāra;  
thus valid cognition engenders a firm faith in the Three Jewels.  
Inspire me to be enduringly grounded in the path to liberation.
21. Inspire me to master renunciation, the mind intent on liberation—  
total pacification of duḥkha and its causes;  
and the uncontrived bodhicitta rooted in compassion,  
the boundless yearning to protect wandering beings.
  22. Inspire me to gain conviction with effortless ease  
in the profound points of all paths of the Perfection Vehicle and  
Vajrayāna,  
by listening to, contemplating, and meditating on  
the meaning of the commentaries of the great pioneers.
  23. May I, in successive births, perfectly obtain a human life endowed  
with the three trainings,  
and serve the doctrine as the great pioneers did  
by safeguarding and promoting scriptures and insights  
through explanation and practice.
  24. May all Saṅgha communities be strengthened by noble, learned  
practitioners  
who devote their time to hearing, contemplation, teaching, and  
practice  
and have totally given up wrong livelihood;  
may the entire world be forever adorned with such beings.
  25. Due to these invocations may I traverse all grounds and paths of  
Sūtra and Tantra  
and quickly attain the state of an Omniscient Conqueror  
who spontaneously fulfills the two purposes;  
may I work for sentient beings as long as space endures!

## Colophon

*Thus the foremost sages of the Noble Land of India mentioned above have composed numerous excellent, meaningful treatises and grant insight to those who think critically about the profound and vast teachings of the Fully Awakened Supramundane Victor, the Buddha. To this day, even after nearly 2,550 years have passed, those treatises survive intact for us to study, contemplate, and meditate on. Therefore, I am grateful to those masters who were the cream of sages and aspire to follow them in my practice with unflinching faith.*

*At the present time, when the world has made great progress in the fields of science and technology and we are distracted and preoccupied by the hustle and bustle of our lives, it is extremely important that followers of the Buddha have faith based on an understanding of what he taught. These texts were composed by such renowned masters as the Six Ornaments and Two Supremes, as well as by Buddhapālita and Ārya Vimuktisena, and others, who analyzed his teachings closely with unbiased and inquisitive minds seeking the reasons [that underlie] them and who developed faith supported by an understanding of those reasons. For those reasons, these excellent texts concerning the profound and vast are indispensable. With this in mind, I commissioned a new thangka painting depicting the seventeen scholar-adepts of Nālandā. I added nine other masters of the vast and profound lineages to [those portrayed in the] traditional painting of the Six Ornaments and Two Supremes.*

*Consequently, I was moved to compose an invocation with wholehearted respect for these supreme sages, and some of my aspiring Dharma friends encouraged me. This is how it came about that I, the Śākya Bhikṣu Tenzin Gyatso, who am in the back row of those studying the works of these sages, have developed unfeigned conviction in the superb work of these sublime masters and have composed this text “Illuminating the Threefold Faith,” an invocation of the seventeen great and renowned sages of Nālandā.*

*It was completed at Thekchen Chöling, Dharamsala, Kangra District, Himachal Pradesh, India, on the 1st day of the 11th month of the Iron Snake year in the seventeenth Tibetan “rabjung” [sixty-year cycle], corresponding to 15th December 2001 of the western calendar, 2,545 years, according to the Theravāda system, after the Buddha passed away.*

*May Peace Prevail.<sup>9</sup>*

## *Commentary on “Illuminating the Threefold Faith”*

The verses of praise begin with the Buddha, who, because of his unique philosophical position, is unparalleled in speech. Next is Nāgārjuna (1), who explained the perfection of wisdom teachings, elucidated dependent arising, and was the trailblazer of the Madhyamaka system. Āryadeva (2) was his disciple, as was Buddhapālita (3), who clarified the Prāsaṅgika view. Then comes Bhāvaviveka (4), another student of Nāgārjuna,<sup>10</sup> who disagreed with some of Buddhapālita’s assertions by maintaining that things have some objective existence on the conventional level. This prompted a debate among Madhyamaka philosophers that has lasted many centuries.

Candrakīrti (5) emphasized the importance of explaining all phenomena as dependent arisings to avoid the two extremes of nihilism and absolutism. This is the basis for understanding appearance and reality. Candrakīrti also explained the entire teaching of Sūtra and Tantra. Then comes Śāntideva (6), the author of *Engaging in the Bodhisattvas’ Deeds*, the most profound and extensive explanation of bodhicitta. In my childhood, I had some interest in bodhicitta but felt it would be very difficult to achieve. I admitted as much to my tutor Tagdrag Rinpoche, who advised me not to feel discouraged and confided that he had some experience of bodhicitta. After going into exile, I received teachings on Śāntideva’s text from Khunu Lama Rinpoche and, as a result, came to understand that if I make an effort, I too could feel some closeness to bodhicitta.

Next is Śāntarakṣita (7), to whom we are grateful for establishing the tradition of study in Tibet based on reason and logic. He also ordained the first monks in Tibet, instituting the monastic community there. As the abbot of Nālandā, he began the Yogācāra-Madhyamaka system, which united the Madhyamaka tradition of Nāgārjuna and Āryadeva, the Yogācāra tradition of Asaṅga and Vasubandhu, and the logical and epistemological thought of Dignāga and Dharmakīrti. He is followed by his student Kamalaśīla (8), who wrote the *Stages of Meditation*, an important text that instructs us in proper meditation techniques as well as the cultivation of bodhicitta by the seven cause-and-effect instructions.<sup>11</sup>

Asaṅga (9) was founder of the Yogācāra, or Cittamātra (Mind Only), school. Vasubandhu (10), his younger brother, specialized in Abhidharma. Vasubandhu was originally a proponent of the Fundamental Vehicle, but later adopted the

Universal Vehicle (Mahāyāna). Asaṅga knew that his younger brother was very intelligent and was concerned he might misuse his intelligence to deprecate the Mahāyāna, so he sent a messenger to Vasubandhu saying that he was seriously ill and asking Vasubandhu to come and help.

Arriving at Asaṅga's dwelling, Vasubandhu inquired about the cause of his brother's sickness, to which Asaṅga responded that he had a serious illness of the heart that arose because of Vasubandhu. He went on to explain that because Vasubandhu had discredited and defamed the Mahāyāna, Asaṅga was concerned that Vasubandhu would fall to an unfortunate rebirth. This pained him so much that, as a result, he had a heart ailment that might prove fatal. Alarmed, Vasubandhu asked his brother to teach him the Mahāyāna. Listening to Asaṅga's exposition, Vasubandhu applied his penetrating wisdom to gain conviction in the Mahāyāna teachings and meditated on them.

Vasubandhu then became worried that he might take an unfortunate rebirth as a result of previously deprecating the Mahāyāna. Confessing his error to Asaṅga, Vasubandhu considered cutting out his tongue to atone for his destructive speech. Asaṅga told him that that would not purify his negative speech and instead counseled, "Previously you skillfully used your speech to criticize the Mahāyāna. Now you must use it to wisely and effectively propound the Mahāyāna." Vasubandhu then went on to write several texts from the Yogācāra viewpoint.

Vasubandhu's student, Dignāga (11), was a master of logic. He was followed by another logician and epistemologist, Dharmakīrti (12). Both of them used reasoning to demonstrate the truth of the Buddha's teachings, and Dharmakīrti in the second chapter of his *Commentary on Reliable Cognition* used reasoning to prove the Buddha is a reliable authority. Although Vimuktisena (13) was Vasubandhu's disciple, he explained the perfection of wisdom from the Madhyamaka point of view.

Haribhadra (14) too was a celebrated commentator on the perfection of wisdom. Many students in the monasteries today memorize his commentary, *Clear Meaning*. I remember a group of nuns from Kopan Monastery in Nepal who had memorized it, and I commented to them that they had surpassed me by doing so.

Guṇaprabha (15) and Śākyaprabha (16) were both masters of Vinaya, the monastic discipline. Finally, Atiśa (17) was the kind spiritual mentor who caused

the Conqueror's teaching to flourish in the Land of Snows during the time of the second dissemination. The first dissemination began when Śāntarakṣita and Guru Padmasambhava brought Buddhism to Tibet in the eighth century, but it was severely curtailed and damaged under the reign of King Langdarma (r. 838–41). Atiśa was invited to Tibet to revitalize the Buddhadharma there.

The praise concludes, “May I be inspired to mature my mindstream and attain liberation. May I be inspired to establish the root of the path to liberation. May I be inspired to perfect an uncontrived awakening mind of bodhicitta. May I be inspired to quickly and easily develop conviction about the profound paths of the perfection of wisdom and the Vajrayāna.” May we work with joyous effort to accomplish these aims.

In the colophon I stressed the importance of examining and analyzing the Buddha's teachings with an unbiased and inquisitive mind. Don't be satisfied simply with performing rituals and reciting prayers, but try to understand the Buddha's teachings on the two truths and the four truths of the āryas. Haribhadra said there are dull and intelligent followers of the Buddha; the intelligent question and investigate what they have heard and read, whereas the dull accept the teachings on faith. If you follow the Nālandā tradition and rely on reasoning and logic, the Buddha's teachings will last long in the future; but if you simply fall back on having faith, that is unlikely to happen.

Training in the Nālandā tradition with its extensive use of reasoning and logic is compatible with the scientific method. For almost forty years I have engaged in dialogue with modern scientists to our mutual benefit. Both science and Buddhism emphasize investigation to discover the truth.

The Buddha's teachings of course developed further in Tibet. King Songtsen Gampo (c. 604–49) adopted an Indian model to create a system for written Tibetan. When Śāntarakṣita (725–88) came to Tibet in the eighth century at the king's invitation, he encouraged the translation of Buddhist literature into Tibetan so that Tibetans could study in their own language and set up a translation department at Samye Monastery.

Dignāga's and Dharmakīrti's extensive writings on logic and epistemology were translated into Tibetan. Later Tibetan scholars such as Chapa Chokyi Senge (1109–69), the abbot of Sangphu, and Sakya Pandita (1182–1251) elaborated on these themes.

Marpa Lotsawa (1012–97) transmitted many tantric teachings from India to Tibet, and his disciple Milarepa (1052–1135), who is said to have attained full awakening in that very life, was one of Tibet’s greatest meditators. Tsongkhapa (1357–1419) was a brilliant scholar and meditator. The accomplished logician Gyalsab Dharma Rinchen set out to challenge Tsongkhapa. Attending one of Tsongkhapa’s teachings in a state of inflated confidence, he took a seat next to Tsongkhapa on the throne. Ignoring him, Tsongkhapa continued to teach. Hearing Tsongkhapa’s profound presentation, Gyalsab took off his hat, and he then conceded Tsongkhapa’s superiority by sliding off the throne and sitting at Tsongkhapa’s feet. Although Tsongkhapa had visions of meditation deities—Mañjuśrī in particular—he emphasized study of the classical texts. He never used his mystical experiences to validate his understanding of the teachings, but relied on extensive reasoning.

Among the dedication verses at the end of his *Great Exposition on the Stages of the Path* (*Lamrim Chenmo*), Tsongkhapa wrote:

In regions where the supreme, precious teaching has not spread,  
or where it has spread but then declined,  
with my heart deeply moved by great compassion,  
may I illuminate this treasure of happiness and benefit.

Taking this to heart, I have tried to serve humanity and feel that I have not let the Buddha down.

## *Reliable Guides and Explanations*

The Buddha explained the ultimate nature differently according to the dispositions, interests, capacities, and needs of the particular audience. To help us discern the Buddha’s definitive meaning, we should rely on his sagacious followers. The Buddha clearly prophesized a sage named Nāgārjuna, who, by employing reasoning, would destroy the two extremes of existence (absolutism) and nonexistence (nihilism). Nāgārjuna’s many texts—the most important of which is *Treatise on the Middle Way*—speak extensively about emptiness. His student Āryadeva wrote *The Four Hundred* to supplement his teacher’s treatise.

After introducing some preliminary topics, Āryadeva critically examines the tenets of non-Buddhist as well as Buddhist tenet systems that do not see emptiness and dependent arising as complementary. *Commentary on “Treatise on the Middle Way”* (*Buddhapālita-Mūlamadhyamakavṛtti*) by Buddhapālita (470–550) is a short but profound text that stresses that it is not possible to reify functioning things beyond their being merely conditioned—that is, aside from being produced by causes and conditions, there is no inherent essence in functioning things. In his *Heart of the Middle Way* (*Madhyamakahr̥daya*) and its extensive autocommentary *Blaze of Reasoning* (*Tarkajvālā*), Bhāvaviveka (c. 500–570) develops his own unique interpretation of Nāgārjuna. Śāntideva’s *Engaging in the Bodhisattvas’ Deeds* delves deep into the meaning of emptiness.

Atiśa, the scholar-adept who brought the New Transmission of teachings to Tibet, recommended that, of the plethora of Indian sages who wrote about emptiness, we follow the texts of Candrakīrti. Atiśa praised Candrakīrti as someone who correctly understood the thought of Nāgārjuna, and therefore of the Buddha. In his *Introduction to the Two Truths* (*Satyadvayāvatāra* 15–16ab), Atiśa says:

Through whom should emptiness be realized?  
Through Candrakīrti, the student of Nāgārjuna,  
who was prophesized by the Tathāgata  
and who saw truth, the reality.  
Through the quintessential instructions transmitted from him,  
reality, the truth, will be realized.

The great masters of all four Tibetan Buddhist traditions agree that the Prāsaṅgika view as explained by Nāgārjuna and Candrakīrti is the most sublime, although they may call it by different names and describe it somewhat differently. I recommend that you hear, read, study, reflect, and meditate on the works of the above sages. Relate their teachings to your own perceptions, conceptions, and emotions and examine how you perceive and conceive things. Then you will notice the impact that even a small understanding of emptiness has on your mind.

Until the time of Rendawa Zhonnu Lodro (1349–1412), the Sakya master who was one of Tsongkhapa’s closest teachers, the Middle Way view was not widely known. It seems that people did not place special emphasis on the Middle

Way, or perhaps did not have a special interest in it, even though Nāgārjuna's teachings were present in Tibet. While the Middle Way view was taught as one feature of the broader Sūtra practice and was seen as necessary for Tantric practice, emptiness was not emphasized as a major subject for study and meditation, and in the early centuries of Buddhism in Tibet, not many treatises elucidated and analyzed its subtle nuances.

Because of Rendawa's special interest in the Middle Way view, people began to understand its importance, and from that time onward studying it became a prominent aspect of Buddhism in Tibet. Rendawa's student, Tsongkhapa, was likewise highly interested in emptiness and wrote extensively on it. Masters from other Tibetan Buddhist traditions began to write on it as well. In fact, the topic of emptiness became so popular at that time that people said, "In Tibet, when you teach, teach emptiness; when you meditate, meditate on emptiness; when you travel, reflect on emptiness."

I talk about emptiness a lot; I'm compelled to do so because without emptiness, nothing works. The realization of emptiness is the only thing that will overcome self-grasping ignorance. Without it, bodhicitta can't be truly effective and we can't progress through the five paths to awakening. Understanding emptiness enables us to know that liberation is possible and to prove the existence of the Three Jewels. The ability to study, contemplate, and meditate on emptiness makes our human life meaningful. As our understanding of emptiness increases, we naturally will see the greatness and kindness of the spiritual mentors who teach it.

For these reasons, the study and practice of works by Nāgārjuna, Āryadeva, Buddhapālita, Bhāvaviveka, and Candrakīrti, as well as the commentaries by Tsongkhapa and other Tibetan luminaries, is of foremost importance. People from the West and other countries are intelligent and can understand emptiness when it is taught to them. Skillfully introducing suitable vessels to the doctrine of the emptiness of inherent existence encourages them to use their intelligence and cultivate wisdom and leads them on the right path.

The philosophers and yogis of India valued poetry, and many of their compositions were written in verse. This allows for diverse interpretations of the words and meanings, which have been debated for centuries. Some of these sages wrote autocommentaries on their metered root texts, whereas others wrote the short root text and left it to others to expand the meaning in commentaries. As a

result, there is a wealth of literature that approaches the subject matter from a variety of perspectives.

Sometimes we may wish that the Buddha and the Indian sages would tell us the “one right meaning” of their words that we can latch on to and that will pacify our uneasiness about ambiguity. But the purpose of the Buddha and the sages was to provoke us to think and to sharpen our ability to investigate and test the teachings with reasoning. As a result of that lengthy process, we will gain firm and clear wisdom that goes beyond intellectual knowledge.

While learning the various tenet systems, you will encounter many points of debate. The purpose of the debates is not philosophical argument. Simply proving one’s intellectual prowess and refuting others’ views does not lead to liberation. Rather, the debates help to clarify your own views. When Prāsaṅgikas refute Svātantrikas’ view of emptiness, look inside yourself and see if you hold the Svātantrika view and subtly grasp inherent existence. In meditation, investigate how things actually exist, and examine the view of each tenet system to determine which is the most profound and comprehensive. This is a challenging process that requires much reflection. Having found the correct view, meditate and realize it.

I encourage you to study a variety of Indian commentaries as well as the sūtras that they explain. Some people believe that studying just the debate manuals written by their own monastic college is sufficient to know a subject. They say this out of great respect for the lineage, thinking that the previous masters were so astute that they figured everything out. They see their job as students as simply imbibing and duplicating in their own minds what the main master from their monastic college taught. Some people may even go so far as to think, “I only need to study what my own teacher taught because he or she is the Buddha and knows everything.” These narrow viewpoints limit the individual’s perspective and cause the tradition to stagnate. All of us need to learn, investigate for ourselves, and use our own intelligence to understand the teachings. Studying widely and looking at a topic from a variety of angles sharpens our faculties and expands our comprehension. It also breathes new energy into our debates and into the tradition as a whole.

### 3 | Introduction to the Philosophical Tenet Systems

**I**N HIS *Commentary on Bodhicitta* (BV 70), Nāgārjuna tells us:

A happy mind is tranquil indeed;  
a tranquil mind is not confused.  
To have no confusion is to understand the truth;  
by understanding the truth one attains freedom.

The main purpose of discussing selflessness, emptiness, and insight is to see reality so that we can attain the freedom and peace of liberation and full awakening and help others do the same. To do this, we must investigate the process through which our unwanted *duḥkha* comes about and how to reverse it. In *Samsāra, Nirvāṇa, and Buddha Nature*, we traced the origin of *duḥkha* to karma—our intentional actions—and from karma back to afflictions such as attachment, anger, jealousy, arrogance, and so on. The root of all afflictions is the ignorance that grasps persons and phenomena to exist inherently—that is, as able to set themselves up and exist under their own power independent of all other factors.

This ignorance can be eradicated by the wisdom that perceives phenomena as they actually are, as empty of inherent existence. The way to generate this wisdom is the topic of this and the next two volumes. As we embark on this exploration of how our mind misapprehends the way phenomena exist, let's be curious and open to consider ideas we may not have heard before. In addition, let's continually maintain a sincere motivation to question, analyze, and learn in order to support our long-term goal of buddhahood.

By realizing the truth of how persons and phenomena actually exist, our mind will become tranquil and free from the pain of ignorance. Beyond fear, anxiety, and insecurity, an unruffled mind imbued with great compassion and wisdom is capable of benefiting others, especially by guiding them to *nirvāṇa* and full awakening.

Our inquiry into the nature of reality begins with a general overview of the assertions of Buddhist and ancient Indian non-Buddhist philosophical tenet systems. These systems developed as a result of learned adepts questioning, “Who am I?” and “How do things exist?” In these tenet systems, they lay out what they believe is the source of unwanted *duḥkha* and the wisdom that will undercut that source.

Having heard that the Madhyamaka (Middle Way) view is considered supreme, we may want to immediately jump to it rather than plod through learning other tenet systems first. However, there is great value in studying these other systems, because we may discover that we hold views similar to theirs. In that case, we need to examine if our views are correct. Another benefit of studying other systems is that by taking their positions and trying to defend them, we come to see where they lack evidence and reason, and in that way, gradually sharpen our wisdom and refine our own view.

### *The Value of Studying the Tenet Systems*

During his forty-five years of teaching the Dharma, the Buddha instructed a vast variety of people who had different mental capacities and dispositions. A skillful teacher, he taught whatever would be most effective for guiding a particular person from his present level to awakening. For this reason, the Buddha’s method of explaining the ultimate nature—emptiness or selflessness—varied according to his audience. Since emptiness is the opposite of how we ordinarily perceive things to exist, the Buddha had to prepare people so that they would understand its meaning correctly without distorted conceptions or extreme views. He taught people the correct view in stages, according to their aptitude at that time. When speaking to some people, the Buddha negated a permanent, unitary, and independent self. To others, he refuted a self-sufficient substantially existent person but affirmed the person’s inherent existence, while to another group he negated the inherent existence of both persons and phenomena. To some people the Buddha taught truly existent external objects and to others he explained that external objects exist but lack true existence. If we do not understand the Buddha’s skill in teaching people according to their aptitude, we risk thinking that the Buddha was either confused or that he contradicted himself.

In ancient India, Buddhist practitioners who followed a diversity of sūtras lived in close proximity to one another and debated and discussed the views put forth in these sūtras. Over time, practitioners who had common assertions loosely identified as a group and, later, as proponents of a system of thought. In this way, the names Vaibhāṣika, Sautrāntika, Yogācāra, and Mādhyamika came to identify groups of people with similar views. Although these four systems are not an exhaustive treatment of all Buddhist tenets, they are a helpful tool for understanding the principal ideas that were popular in Buddhist India and the diversity of thought in what was called “Buddhism.” Knowledge of these four systems is integral to much of Tibetan Buddhist thought and will help you understand the writings of Buddhist sages throughout history.

While these groups are often called “philosophical systems” or “schools,” they did not propound a rigid catechism of tenets that all their proponents adhered to. Not everyone in one system lived in the same place in India, and if someone wanted to study the tenets of a particular system, they did not have to go to a specific monastery to do so. People with various beliefs lived together and debated among themselves as well as with non-Buddhists. Monastics in a single community did the Vinaya ceremonies together: their differing tenets did not interfere with the harmony of the saṅgha.

The Buddha did not announce that he was teaching a particular tenet system; the idea of tenet systems arose later among the Indian sages and became more systematized in Tibet. In his *Heart of the Middle Way* and its autocommentary *Blaze of Reasoning*, Bhāvaviveka extensively explains the tenet systems. Two Indian masters—the second Āryadeva (eighth or ninth century) in *Compendium of the Essence of Wisdom (Jñānasārasamuccaya)* and Jetāri (c. 940–980), a pandit from Vikramaśīla, in *Sugatamatavibhaṅgakārikā* and its extensive autocommentary—wrote about the Indian tenet systems. Āryadeva presented Buddhist as well as non-Buddhist systems, whereas Jetāri explained the four main Buddhist systems. In their works, both of these masters suggested that these tenet systems form a progressive series that gradually leads a student to the most accurate view of the basis, path, and result.<sup>12</sup> Śāntarakṣita (725–88), who wrote *Compendium of Principles (Tattvasamgraha)*, a huge compilation of the views of Buddhist and non-Buddhist tenets, recommended studying the lower and higher tenet systems. His student Kamalasīla elaborated on that in his commentary to that text.

Tibetan masters agreed with this presentation of progressive tenet systems and composed a genre of texts concerning philosophical tenets (*siddhānta*). These texts are widely taught in Tibetan monasteries and now in Dharma centers and monasteries outside Tibet and India. Among contemporary scholars in the four Tibetan traditions—Nyingma, Kagyu, Sakya, and Gelug—there are some differences in presentations of the tenet systems, although the overall meaning and presentation is similar.<sup>13</sup> Tibetan scholars filled out certain tenets in each system, adding definitions and, in some cases, inferring what followers of a particular system would say about a topic. For example, a Buddhist system in India may not have explicitly asserted inherent existence, but by examining its tenets scholars inferred that it did. This is because asserting partless particles, a foundation consciousness (*ālayavijñāna*), or a mental consciousness that carries the karmic seeds is done within the assumption that phenomena inherently exist.

Tibetan philosophers also contributed to the development of the systems by elaborating on the assertions of their Indian predecessors. For example, the Yogācāra system described in current tenet texts is more detailed than the presentations in Asaṅga's and Vasubandhu's treatises, which themselves fleshed out the meaning of sūtras such as the *Sūtra Unraveling the Thought* and the *Descent into Lanka Sūtra*. Later Tibetan and Chinese masters described various types of latencies and elaborated on other topics that were not spelled out in these sūtras and treatises. For that reason, Tibetan and Chinese assertions about Yogācāra differ in some aspects.

The doxographical approach in which later sages classify the statements of prior sages into systems has both advantages and shortcomings. Regarding the benefits, it allowed Tibetans to organize and systematize the enormous amount of Buddhist literature that came to Tibet into a comprehensible form. It enables us to easily identify the important points of each tenet system and see how they interrelate to other points to form a cohesive system. Setting up tenet systems in a certain order was done to gradually lead disciples to what is considered the highest and most accurate view. Together, the presentations of these systems form a pedagogical tool that helps students become acquainted with the major views that they will examine in more depth and meditate on as their Dharma practice progresses.<sup>14</sup>

Regarding the shortcomings, by strictly classifying various positions into one system, the diversity of viewpoints and debates within each system is obscured,

and the tenets of each system become codified, although they weren't like that in ancient times. In addition, interestingly, the author of each tenet text belongs to the tenet system that they acclaim to be the highest.

One other result of establishing tenet systems that has both benefits and drawbacks is that it allows an author to set up straw men to refute positions that they disagree with and to clarify the position of their own system. These artificial debates can be very helpful for students' understanding, even when they are not historically accurate. For example, Bhāvaviveka reputedly held certain beliefs that later scholars severely rebuked, but since he had died centuries before the tenet texts were compiled, he had no opportunity to affirm that he actually held those positions or to defend them if he did.

In this volume, we will focus on the organization of the tenets systems according to the Gelug tradition. In general, they are four in number: the Vaibhāṣika, Sautrāntika, Yogācāra, and Madhyamaka. The order of the schools should not be seen as the historical sequential development of Buddhist thought, and the views of a codified system may not always coincide with the actual beliefs of their so-called founders or chief proponents. Sometimes the tenets in a particular system are those of scholars with similar but not identical views to the founder, some tenets may be inferred from what that system's chief proponent said, and some assertions are elaborations on what the proponent said. Nevertheless, by presenting an amalgamation of different tenets into what appears to be a summary of religious doctrine for each school, Tibetan scholar-adepts could differentiate and clarify the subtle points regarding emptiness according to the Prāsaṅgika view, as they understood it, by refuting the tenets of the lower schools.

Theravāda is not included in the four tenet systems described in Tibetan tenet texts, although most of its tenets may be found among the four tenet schools. Buddhism spread to Sri Lanka in the third century BCE. Since Sri Lanka was far from the large Buddhist monastic universities in northern India, Buddhism there developed in a comparatively isolated way and later came to be called the "Theravāda tradition." It is incorrect to equate the Theravāda with the Vaibhāṣika or Sautrāntika schools.<sup>15</sup> There is no mention in the Pāli commentaries or subcommentaries (*ṭīkā*) of the four tenet systems as mentioned in classical India and later formulated in Tibet.

Tsongkhapa, whose followers began the Gelug tradition, lived at a time when the ultimate nature of phenomena was widely discussed and debated. From circa 800 to 1000, Śāntarakṣita's Yogācāra-Svātantrika Madhyamaka views were prominent in Tibet and were considered the most accurate presentation. After Patsab Nyima Drak (1055–1145?) and others began to translate Candrakīrti's works, Śāntarakṣita's view was questioned and no longer seen as the pinnacle view in the period between 1100 and 1400. With Dolpopa Sherab Gyaltzen's (1292–1361) presentation of other-emptiness, more debates arose. Tenet texts became invaluable aids as Tibetans debated these various views.

You may wonder why there are so many different views of emptiness and just want someone to tell you which one is right. Or you may learn the tenet systems according to one tradition and then get confused on discovering that another tradition has a different explanation. I sympathize with your bewilderment, and I also believe this diversity of views makes Buddhism very rich. Each tenet system presents a model of the world according to its unique perspective on conventional and ultimate truths. We are challenged to understand how the assertions of each system form a cohesive whole and to investigate deeply using reasoning to determine which system makes the most sense to us. Our minds will become more flexible because we'll also understand that various systems and traditions may each define the same word differently. This forces us to study other views instead of criticizing them based on our misunderstanding of the meaning of their words and concepts.

Many of the writings of later masters were in response to the assertions of earlier masters. Studying the tenet systems and knowing a little about the history of Buddhist philosophy shows us the context in which different positions arose and various masters wrote their treatises. For example, Nāgārjuna's radical refutation was largely in response to the substantiality propounded by the Sarvāstivādins. Dignāga's and Dharmakīrti's writings emerged in a climate of intense debate between Buddhists and non-Buddhists. Bhāvaviveka's assertions countered those of Buddhapālita, while Candrakīrti defended Buddhapālita's position and refuted that of Bhāvaviveka.

Study of the various tenet systems prompts us to investigate the nature of reality more deeply, instead of assuming that the superficial appearances to our mind are true. Each system presents a progressively more refined view, and while that of the Prāsaṅgikas is considered the most accurate, that does not mean that it

is the best view for everyone at this moment. The assertions of other Buddhist systems may be more suitable for a particular individual at this time. As you study the tenet schools, see which one is the most comfortable for you right now and adopt that one. As time goes on, you can refine your view. How do you discern which system to accept? Investigate which system challenges you and helps you do away with mistaken grasping without destroying your faith in conventional existence, the law of karma and its effects, and the importance of practicing the method aspect of the path.

To those new to the study of tenets, the terminology may seem daunting, and you may be inclined to dismiss tenets as intellectual machinations that have little to do with life. But if you look closer, you'll find that when you understand the terminology better, these teachings can aid in understanding your mind, uncovering and dispelling erroneous conceptions, disarming disturbing emotions, and penetrating the nature of reality.

For example, Buddhists refute the view held by many non-Buddhists that the person is essentially permanent but superficially impermanent. Initially we may not understand what this means, but if we think about it we will see that sometimes we view people as having an unchanging essence but also as changing over time. We have to ask ourselves if a person can have both a fixed nature and a transient nature. Are there two selves—one that is permanent and the other that changes with time? In this way, we flesh out our misconceptions and familiarize ourselves with seeing people and things more in accord with the way they exist.

If you are new to tenets, in the first reading, become familiar with the words. In the second reading, remember the concepts. In subsequent readings, investigate the meaning. When you have understood the tenets systems well, meditate on their views to gain insight into how things exist.

Two of my students who engaged in a long retreat were working hard to understand emptiness, so I suggested several great works for them to read. At that time there were not as many books on emptiness in English as there are now, and most were written by scholars for scholars. One day they came to see me and said that they felt burdened by all the reading and wanted to meditate more and study less. I told them about Asaṅga, who was a third-ground bodhisattva when Maitreya instructed him to keep studying. To make sure they understood my point, I held up three fingers and said firmly, “third ground.” As they were leaving, I told them they didn't need to read every Madhyamaka book, but at

least to continue studying Nāgārjuna, Candrakīrti, and Tsongkhapa. They looked relieved and years later returned to report the progress they had made in understanding emptiness.

## *Buddhist Tenet Systems and Their Sages*

We begin with a brief outline of the Buddhist tenet systems and the Indian sages that expounded them, and in the next chapter we will explore their views on the nature of reality.

The Fundamental Vehicle tenet systems are:

1. Vaibhāṣika, which may be subdivided into three branches according to their location: Kashmiri, Aparāntaka, and Magadha.
2. Sautrāntika, which has two branches: (1) Scripture Proponents, who follow Vasubandhu's *Treasury of Knowledge*, and (2) Reasoning Proponents, who follow Dharmakīrti's *Seven Treatises on Reliable Cognition*.

The Mahāyāna (Universal Vehicle) tenet systems are:

1. Yogācāra (Cittamātra, Mind Only), which has two branches: Scripture Proponents and Reasoning Proponents.
2. Madhyamaka (Middle Way), which has two branches: (1) Svātantrika Madhyamaka (Autonomist), which has two subdivisions: Yogācāra-Svātantrika Madhyamaka and Sautrāntika-Svātantrika Madhyamaka, and (2) Prāsaṅgika Madhyamaka (Consequentialist).

The Vaibhāṣikas follow the tenets expressed in the *Great Detailed Explanation* (*Mahāvibhāṣāśāstra*), a treatise written by Arhat Nyepe and other arhats. It condenses the meaning of the Seven Abhidharma Treatises that only Vaibhāṣikas consider to be the words of the Buddha. Other well-known Vaibhāṣikas are Vasumitra, Dharmapāla, Buddhadeva, and Saṅghabhadra.

Vasubandhu (c. 316–96) wrote the famous *Treasury of Knowledge* (*Abhidharmakośa*). Although he is reputed to hold Yogācāra views, this text is

associated with the Vaibhāṣika school. He later wrote a commentary on it, the *Explanation of the Treasury of Knowledge* (*Abhidharmakośabhāṣya*), which is studied by both the Vaibhāṣikas and the Sautrāntika Scripture Proponents.

The great sage Dharmakīrti (c. 600–660) studied with Īśvarasena, a disciple of Dignāga (c. 480–540). Dharmakīrti wrote *Seven Treatises on Reliable Cognition*, which are said to explain the positions of the Sautrāntikas and Yogācāra, although it seems that Dharmakīrti himself was a Yogācāra Reasoning Proponent. Sometimes great sages gave explanations that differed from their own personal beliefs because those were the views more suitable for their disciples.

Historically, the Mahāyāna tenet systems began with Nāgārjuna, the great Indian sage (c. second century CE) who discovered and then propagated the Perfection of Wisdom sūtras in India. This magnificent scholar and practitioner wrote six great treatises on emptiness, the most significant of which is *Treatise on the Middle Way* (*Mūlamadhyamakakārikā*, also known as *Root Wisdom* or *Fundamental Wisdom*),<sup>16</sup> in which he set forth what came to be known as the Madhyamaka view of emptiness as explained in the Perfection of Wisdom sūtras. Nāgārjuna's spiritual heir Āryadeva (c. 170–270), who understood Nāgārjuna's thought completely, further explained this view in his work *The Four Hundred* (*Catuhśataka*).

Asaṅga (c. 310–90) was himself a Mādhyamika, but he elaborated on and extensively taught the Yogācāra view and thus was known as the “great charioteer” of this view. This view must have been present in Nāgārjuna's time because Nāgārjuna refuted it in his *Commentary on Bodhicitta* (*Bodhicittavivaraṇa*). When explaining the Yogācāra view, Asaṅga refuted the existence of external objects and asserted that an object and the consciousness apprehending it had the same substantial cause. Asaṅga also wrote an Abhidharma commentary, the *Compendium of Knowledge* (*Abhidharmasamuccaya*), from the Yogācāra viewpoint.

By the eighth century in India, Madhyamaka, Yogācāra, and the logico-epistemological views of Dignāga and Dharmakīrti were among the prominent philosophical views. The great sage Śāntarakṣita (c. 725–88) synthesized these three, creating the Yogācāra-Madhyamaka system (later known as the Yogācāra-Svātantrika Madhyamaka in Tibet), which was the last major development in Indian Buddhist thought before Buddhism in India was destroyed in the late twelfth and early thirteenth centuries. When Buddhism first went to Tibet,

Śāntarakṣita's view was seen as the highest explanation of Madhyamaka because he was the first abbot ordaining monks in Tibet as well as the first prominent teacher of Buddhist philosophy there.

Since Nāgārjuna and Āryadeva did not clarify whether external objects existed, Bhāvaviveka (500–570) refuted the Yogācāra view of no external objects and established that external objects exist conventionally. Śāntarakṣita asserted that external objects do not exist conventionally and that the mind ultimately lacks inherent existence. Śāntarakṣita's student, Kamalaśīla (c. 760–815), further explained this view. Other prominent followers of the Yogācāra-Svātantrika system were Vimuktisena, Haribhadra, Jetāri, and Lavapa. Because Bhāvaviveka accepted that external objects exist conventionally, his system became known as the Sautrāntika-Svātantrika Mādhyamika. Jñānagarbha was a proponent of this system, although Tibetans usually identify him as Yogācāra-Svātantrika Madhyamaka.

Another branch of Madhyamaka is the Prāsaṅgika Madhyamaka. Buddhapālita (c. 470–540) wrote a commentary on Nāgārjuna's *Treatise on the Middle Way*, using many consequences in support of Nāgārjuna's view. Objecting to the way in which Buddhapālita refuted the Sāṃkhya view of arising from self, Bhāvaviveka asserted that phenomena exist by their own character and have inherent existence on the conventional level.

Candrakīrti (600–650) supplemented and expanded Nāgārjuna's explanations, asserting that external objects exist conventionally and that all phenomena lack inherent existence. He also asserted that syllogisms are not necessary and consequences are sufficient to establish the correct view.<sup>17</sup> Although Candrakīrti asserted some tenets that seem to accord with the Vaibhāṣika and Sautrāntika schools—such as the existence of external objects conventionally (which is accepted by both Fundamental Vehicle schools) and the nonexistence of apperception<sup>18</sup> (which is accepted by Vaibhāṣikas)—his reasons derive from his views on emptiness, which differ from the reasons used by the lower systems. Candrakīrti did not always agree with Dignāga's and Dharmakīrti's system of logic and epistemology and set out other tenets that formed part of the Prāsaṅgika-Madhyamaka system in Tibet.

Although Candrakīrti's writings were infrequently studied during his lifetime or for two or three centuries afterward, he later became known as the chief upholder of the Prāsaṅgika view; Bhāvaviveka was the chief upholder of the

Svātantrika view. Śāntideva (eighth century) also expounded the Prāsaṅgika-Madhyamaka view. However, this distinction into two branches of Madhyamaka only occurred later in Tibet, at the time of Tsongkhapa, so it is in retrospect that the Indian masters are designated as being Svātantrika Mādhyamikas or Prāsaṅgika Mādhyamikas. The names of these systems derive from their preferred manner of establishing the correct view—Bhāvaviveka by using autonomous syllogisms (*svatantra-prayoga*) and Buddhapālita and Candrakīrti by using consequences (*prasaṅga*). However, the actual reason for the division into two systems was Bhāvaviveka's acceptance that phenomena exist by their own character conventionally.

Although Mādhyamikas later refuted specific assertions in the two *Knowledges*,<sup>19</sup> it does not appear that they wrote their own Abhidharma texts. Rather, apart from specific assertions in the two *Knowledges* that contradicted Madhyamaka tenets, the Prāsaṅgikas accepted these texts. Examples of the portions they refuted are the definition of the ignorance that is the root of cyclic existence and the wisdom needed to eradicate it.

From India, the Yogācāra and Madhyamaka systems spread to North and East Asia. In China the Yogācāra view became very popular, although the Madhyamaka view still exists among some Chinese Buddhists. The Prāsaṅgika view was widespread in Tibet, and all Tibetan traditions follow it, although the vocabulary they use to explain it may differ.

Atiśa (982–1054), a prominent teacher who brought the teachings to Tibet during the second dissemination of Buddhism in Tibet, mainly referred to Bhāvaviveka's texts *Heart of the Middle Way* and *Blaze of Reasoning*. Although Atiśa recommended that people follow Candrakīrti's view, it was only during the time of the Kadam geshe that Patsab Nyima Drak began to translate Candrakīrti's *Supplement to the Middle Way* (*Madhyamakāvatāra*), *Clear Words*, and *Commentary on the Bodhisattva Yogic Deeds of the Four Hundred* (*Bodhisattvayogācāracatuḥśatakaṭīkā*) from Sanskrit into Tibetan. Patsab gave the first draft of the translation of the *Supplement* to the Kadam Geshe Sharawa to comment on. Although Sharawa did not understand Sanskrit, he pointed out certain passages that needed to be checked. When Patsab compared these comments to the original Sanskrit, he saw that he indeed needed to revise those sections. For this reason, Patsab praised Sharawa's understanding of the Middle Way.

The admiration went the other way too. Sharawa publicly praised the revised translation and expressed gratitude for Patsab Lotsawa's contribution in bringing Candrakīrti's work to Tibet. The Tibetan translators who worked from the original Sanskrit texts were very learned and courageous people. They remained faithful to the original Sanskrit and developed a consistent vocabulary, resulting in modern scholars praising the accuracy of their translations. Of course the philosophical language they used was too complex for the average reader, but their efforts enabled serious students to connect to the thought of the past, to great Indian sages, and to the Buddha himself.

Patsab taught the followers of the Kadam school, which originated with Drömtönpa, Atiśa's foremost Tibetan disciple. The Kadampas influenced the teachings of the New Transmission traditions in Tibet—the Sakya, Kagyu, and Gelug traditions. Unless otherwise noted, the explanation of emptiness given in the subsequent chapters is according to the Prāsaṅgika-Madhyamaka view as presented by the great masters of the Nālandā tradition in India.

## REFLECTION

1. What is the purpose of studying the tenet systems?
  2. Review the four principal tenet systems and the scholar-adepts who are their proponents.
-

## 4 | Overview of Buddhist and Non-Buddhist Tenet Systems

TIBETAN TENET TEXTS begin by briefly covering non-Buddhist tenet systems and then introduce Buddhist systems, beginning with those propounding a coarse view and progressing to those with more refined views of both conventional and ultimate truths.

### *The Worldly Person and the Yogi*

Some of the tenet systems that flourished in ancient India exist today, others do not. Meanwhile new views have appeared. In this chapter, I will mention some of the most important ones. These summaries of non-Buddhist and Buddhist tenet systems are brief and, for the purpose of this book, will focus on their view of ultimate reality. They will give you a foundation for the explanations and discussions in later chapters and volumes and spark your interest in the nature of reality. There are several excellent books on the tenet systems that have been translated into English; please study them for a more comprehensive view.<sup>20</sup>

When beginning to study the tenet systems, some people comment that some of their assertions are nonsensical and think that there is no need to spend much time refuting these views because their defects are so obvious. However, there are several reasons to study and refute these views. First, some of these erroneous views may exist unnoticed within our minds. Only by stating them clearly and examining their validity do we ferret out our own misunderstandings. Second, we may meet people who hold these views. By understanding these views and their refutations, we can help others gain the correct view of reality. Third, those who propound these “silly” views are sophisticated people, not fools. If they came here to teach us, we may very well be convinced by their views. Since our intelligence is limited, it behooves us to develop it, lest we listen to a proponent of incorrect tenets and adopt them ourselves.

Our purpose is to attain full awakening in order to liberate ourselves and others from saṃsāric duḥkha. To do this, we must cut the self-grasping ignorance that is the root of saṃsāra by realizing the ultimate nature of reality. This is our reason for learning philosophy. Śāntideva distinguishes two types of people—worldly people, or those who are not philosophically inclined, and yogis, who rely on philosophical analysis. Here “yogi” does not necessarily refer to a meditator but to someone who grounds their understanding of the world in a philosophical perspective. The Tibetan word for yoga is *naljor* (T. *rnal 'byor*), which means to join or unite one’s mind with a chosen virtuous object; “yogi” and “yoginī” refer to an individual who is familiar with a specific virtuous object and fuses his or her mind with it. In a way, this could apply to modern education too, where a diligent student tries to gain mastery over the field—to fuse her mind with it. Such a person does not relate to the world in a naïve way.

Perspectives of worldly beings are undermined by yogis, and among yogis, those who are more advanced philosophically undermine those whose tenets are more superficial. Science is a discipline of inquiry, and although the scientific method and the philosophical method differ, both use critical analysis. So, according to Śāntideva’s definition, scientists could be called a type of “yogi” because they engage in investigation and analysis, and some of their findings undermine ordinary appearances. For example, worldly beings see the world composed of discrete objects that are seemingly solid. Scientists know there is more space than mass in these objects. They know that our ordinary perception of the world is a projection, and that reality is more complex than what appears to our senses.

To introduce some of the vocabulary used in tenet systems: in general, “phenomena” refers to all existents. But when speaking of the “self of phenomena” and the “selflessness of phenomena,” it refers to all phenomena other than persons, specifically the aggregates (form, feeling, discrimination, miscellaneous factors, and consciousness) that are the basis of designation of a person. The lack of inherent existence of the I is the selflessness of persons (*pudgalanairātmya*); the lack of inherent existence of the aggregates is the selflessness of phenomena (*dharmanairātmya*).

The basis of designation (basis of imputation) is the collection of parts in dependence on which the designated or imputed object is designated. For example, a car is designated in dependence on the collection of its parts—the

engine, wheels, axle, and so forth—which is its basis of designation. Similarly, a person or I is designated in dependence on its basis of designation, the five psychophysical aggregates.

The word “self” has multiple meanings, depending on the context. Sometimes “self” refers to the person or I. At other times it refers to the object of negation—the nonexistent object fabricated and grasped by ignorance—as in the terms “self-grasping ignorance,” “self of persons,” “self of phenomena,” and “selflessness.” While all Buddhist systems say the object of negation is self, how they define “self” varies. It may be self-sufficient substantial existence, the subject and object being substantially different, true existence, ultimate existence, inherent existence, and so forth.

Similarly, the Tibetan word *'dzin* may be translated as “grasp”<sup>21</sup> or as “apprehend.” While we mistakenly grasp inherent existence, we can accurately apprehend a table. In the context of investigating the ultimate nature, we speak of self-grasping ignorance, ignorance, or self-grasping. For the Prāsaṅgikas these terms come to the same point.

It is easy to confuse the meaning of a word in one system with its definition in another. For example, Prāsaṅgikas understand “ultimate truth” as the final mode of being of persons and phenomena, the actual way they exist. For Vaibhāṣikas “ultimate truth” does not refer to the ultimate mode of existence of phenomena. Rather, an ultimate truth is an object that when physically broken up into parts or mentally dissected, the awareness apprehending it is not cancelled. Thus they say that directionally partless particles and temporally partless moments of consciousness are ultimate truths, whereas tables and people are not.

Just because two terms or phrases contain similar words does not mean that the word has the same meaning in both of them. For example, for Prāsaṅgika-Mādhyamikas, an ultimate truth does not ultimately exist, and a consciousness apprehending a rabbit’s horn (which does not exist) is a reliable cognizer with respect to its appearing object (the appearance of a rabbit’s horn), but it is not a reliable cognizer. These puzzling uses of words will be clarified later.

---

## REFLECTION

1. Review some of the basic vocabulary used in the study of emptiness, such as phenomena, aggregates, basis of designation, self, ultimate truth, selflessness, dependent arising, and so on.
  2. Remember the meaning of each term.
- 

## *Non-Buddhist Tenet Schools*

Non-Buddhist schools are sophisticated philosophical systems. Although the brief description below does not do justice to them, it gives you some idea of their approaches to saṃsāra, its origin, liberation, and the path. In later chapters, we will examine some of their assertions in more detail. Most non-Buddhist tenet systems assert an independent creator and/or a permanent cosmic principle from which the world originates. Since the person we see is transient and ephemeral, these schools also assert a permanent self—an *ātman* or soul—that is separate from body and mind and endures from one life to the next.

Vaiśeṣikas (Particularists) and Naiyāyikas (Logicians) assert an inherently existent self that is separate from the mind and the body with its physical senses. The self is a real, findable, all-pervasive entity. A practitioner realizes this self by purifying the mind through rituals and fasts and thereby ceases to create either destructive or constructive karma. The self then separates from the body and, not taking another rebirth, is thereby liberated.

Sāṃkhyas (Enumerators) assert that the consciousness is a permanent self. They also assert a fundamental nature or primal substance (*prakṛti, pakati*) that is unborn, unchanging, and partless. This fundamental nature is a cause of other phenomena but itself has not been produced by anything. It is similar to the idea of a universal substance out of which everything is created and which thus pervades all phenomena. Saying that everything already exists in the fundamental nature yet still arises from it, Sāṃkhyas assert that things are produced from themselves—that is, they already exist within the cause.

Theistic Sāṃkhyas say that the creator Īśvara together with the fundamental nature create phenomena. Saṃsāra occurs because one does not understand that everything—including the misery of saṃsāra—is a manifestation of the fundamental nature. When one realizes this, all manifestations absorb back into

the fundamental nature and conventional phenomena no longer appear to the yogi's mind. The self now abides alone; this is liberation.

Mīmāṃsakas (Analyzers or Ritualists) state that defilements abide in the nature of the mind and therefore are impossible to eradicate fully. Many people nowadays have a comparable view, saying, for example, that we human beings are inherently selfish and true altruism is impossible. A somewhat similar view is to say that our mental states arise from or in the brain and that our genetic makeup determines our habitual mental states. Anger, for example, is therefore programmed into us on a genetic or physical level and is impossible to eliminate.

Mīmāṃsakas say omniscience is impossible because phenomena are infinite, so a person could never know them all. This view is also shared by some people today who state that it is impossible for ordinary beings to become omniscient because only a creator God is capable of that; others say because the human brain is finite, it cannot know all of infinity.

Some Nirgranthas (Jains) advocate a path of asceticism that consumes all karma. One is then born in a place that resembles the Christian concept of heaven, where one is free from saṃsāra. In almost every culture there have been groups that assert ascetic practices or extreme physical hardship as the path to heaven or liberation. Some walk across fire; others go naked in freezing weather. Some engage in self-flagellation or extreme fasting. When I was teaching in Mundgod, South India, in 2002, I saw some Indians whipping themselves. I don't know if they were doing this to attain liberation or for some other reason; in either case, a crowd would gather around to stare at them.

From a Buddhist viewpoint, most of the non-Buddhist schools fall to the extreme of absolutism. The Cārvākas (Materialists), however, tend toward the extreme of nihilism, because they assert that only things we can directly perceive with our senses exist. They do not accept inference as a reliable way to know objects. Although they do not reject that a seed produces a sprout because that causal relationship is evident to our senses, they do reject causality that is not evident to the senses, such as the law of karma and its effects and the causality involved in rebirth. Believing that neither the person nor the mind continues after death, they deny the existence of past and future lives because the rebirth process isn't knowable with our physical senses. Instead they assert that the mind is a byproduct of the body, and/or the body and mind are one entity. Since the body no longer functions after death, they believe the mind also ceases. This view

is similar to scientific reductionism, in which only things perceivable by the senses or measurable by scientific instruments are said to exist.

To this, some people add the belief that many elements of our personality are controlled or heavily determined by genetics. Such a view can leave people feeling disempowered, as if their mental or physical state were predetermined. It also discounts the fact that everything depends on multiple causes and conditions and that we can make choices in our lives.

## *Buddhist Tenet Systems*

Vaibhāṣika and Sautrāntika are considered Fundamental Vehicle tenet systems, while Yogācāra and Madhyamaka are Universal Vehicle (Mahāyāna) tenet systems. However, a practitioner of one vehicle may follow the tenet system of the other vehicle. A Fundamental Vehicle practitioner who seeks arhatship may hold the tenets of any of the four tenet systems. Similarly, a practitioner of the Universal Vehicle may follow any of the four tenet systems. In addition, someone may change the tenet system they follow, and a follower of any of the tenet systems may change their practice vehicle.

The tenet systems vary in terms of their definition of the ignorance that is the root of saṃsāra and the conceived object of that ignorance. They also differ in terms of their assertions regarding selflessness, afflicted obscurations, and cognitive obscurations.

When observing your mind, you may discover that you hold some non-Buddhist views that you hadn't recognized before. As a child you may have learned that there is a creator God who himself was not created but who created the universe and the beings in it. Prayers to God may have comforted you as a child. You may have learned that you have an immutable soul that is the essence of who you are. Although you may have already come to disbelieve such things intellectually, those beliefs may have been deeply imprinted in your mind, and when crises loom they are emotionally appealing. You may know the words of Buddhist tenets but find that deep inside your mind you have non-Buddhist views.

In your study and exploration of the tenet systems, first think as the Vaibhāṣikas do—many of their assertions make sense to us. After a while, if you

see some weaknesses in them, adopt the Sautrāntika tenets. If these later become unsatisfactory, explore the Yogācāra assertions. If that system makes sense to you, stay with it. If not, delve into the Yogācāra-Svātantrika or Sautrāntika-Svātantrika Madhyamaka systems, which are fascinating. But if you find logical inconsistencies in them, look into the Prāsaṅgika view. Whatever system you settle on, use reasoning to clearly evaluate its assertions.

## *Vaibhāṣika*

All Buddhist tenet systems (schools)—and many non-Buddhist systems as well—speak of ultimate truths and conventional truths and ultimate and conventional existence, although what they mean by these terms varies widely. Vaibhāṣikas<sup>22</sup> define an ultimate truth as a phenomenon that if physically or mentally separated into parts, the consciousness apprehending it does not stop. Directionally partless particles (the smallest unit of matter), partless moments of consciousness (the smallest units of consciousness), and unconditioned space are examples of ultimate truths because they cannot be further subdivided physically or mentally and thus do not lose their identity under any circumstances. Tables and people, on the other hand, are conventional truths because when broken up into parts, they are no longer recognizable as tables and people. Mind in general is an ultimate truth and substantially existent because when it is broken into smaller moments, it can still be apprehended because each of those small moments is mind.<sup>23</sup>

Vaibhāṣikas also differentiate substantially established (*dravyasiddha*), which refers to all phenomena, and substantially existent (*dravyasat*). They say all knowable objects are substantially established because they have their own entity that is not dependent on thought. Since phenomena are divided into the two truths, ultimate truth is equivalent to substantially existent, and conventional truths are equivalent to imputedly existent.

According to the Svātantrikas and below, all imputedly existent phenomena need to have substantially existent phenomena as their basis of imputation. Imputedly existent phenomena are called “self-isolates” (T. *rang ldog*) and substantially existent phenomena are called “illustration isolates” (T. *gzhi ldog*). The self-isolate person is the general person, the I that we think of when we say

“I’m happy” or “I’m cold.” It is imputed on the aggregates. This imputedly existent self has the characteristics of the aggregates—for example, both are impermanent. When the person is mentally separated into parts—the five aggregates—the consciousness apprehending the I ceases. This self-isolate self is the self on which self-sufficient substantial existence is negated when meditating on selflessness.

But when Vaibhāṣikas look more closely and ask just what this self is, they point to something substantially existent, such as the mental consciousness, the collection of aggregates, or each individual aggregate. This is the illustration-isolate person that is found when the person is searched for. Most Vaibhāṣikas consider the illustration-isolate person to be the mere collection of the physical and mental aggregates that are a person’s basis of designation. However, some Vaibhāṣikas say that each of the five aggregates is a person, and others assert that the mental consciousness is the person. In short, the self-isolate self is imputedly existent and is not substantially existent; the illustration-isolate self—in this case, the mental consciousness and so forth—is substantially existent.

Vaibhāṣikas speak only of the selflessness of persons. The coarse selflessness of persons is the lack of a permanent, unitary, and independent person; the subtle selflessness of persons is the nonexistence of a self-sufficient substantially existent person (the meaning of these terms will be explained below). They do not assert a selflessness of phenomena.

All Buddhist and non-Buddhist schools that speak of karma must account for how karma goes from one life to another. Kashmiri Vaibhāṣikas say that the continuum of the mental consciousness carries it, whereas the other Vaibhāṣikas assert that acquisition (*prāpti*) or non-wastage (*avipranāśa*), which are abstract composites, prevent the loss of the result of an action. Acquisition is likened to a rope that ties up goods and non-wastage is like an IOU, a voucher, or a seal that ensures a lender will not experience the loss of what he has loaned.

According to Vaibhāṣikas, when a buddha or arhat dies, his or her consciousness discontinues. Thus they do not speak of four buddha bodies, nor do they accept the existence of pure lands created by buddhas. In addition, they say that the Buddha is not omniscient—that is, he does not effortlessly know all phenomena simultaneously—but is all-knowing in that when he consciously directs his mind toward something, he can know it individually.

Usually “thing” (*bhāva*) is defined as that which is able to perform a function and is equivalent to products and impermanent phenomena. Vaibhāṣikas, however, say “thing” refers not just to impermanent phenomena but to all phenomena because even permanent phenomena perform functions. For example, permanent space performs the function of allowing things to exist in it. This is the only Buddhist system that asserts this.

## *Sautrāntika*

Sautrāntikas define the two truths differently from Vaibhāṣikas. For Sautrāntikas an ultimate truth is a phenomenon that is able to bear reasoned analysis in terms of having its own mode of existence without depending on imputation by terms and concepts. Ultimate truths are real objects that don’t depend on the mind imputing them. Ultimate truths are equivalent to things, products, truly existent phenomena, the impermanent, and specifically characterized phenomena (phenomena that are ultimately able to perform a function). In speaking of ultimate truths in this way, Sautrāntikas emphasize the importance of functionality and being directly perceivable. Tables, persons, and mindstreams are ultimate truths, whereas in the other tenet schools they are considered conventional truths.

According to Sautrāntikas, conventional truths are phenomena that exist only by being imputed by a conceptual consciousness; they are not able to ultimately perform a function. They are equivalent to permanent phenomena, uncompounded phenomena, false existents, and generally characterized phenomena (phenomena that are ultimately unable to perform a function). They are known only by conceptual consciousnesses. These include conceptual appearances, unconditioned space, and true cessations.

Sautrāntikas assert directionally partless particles and temporally partless moments of consciousness. Sautrāntika Scripture Proponents, like Vaibhāṣikas, say these are ultimate truths because they cannot be further divided, whereas Sautrāntika Reasoning Proponents say they are ultimate truths because they are ultimately able to perform a function. However, some people say that only Sautrāntika Scripture Proponents assert partless particles and that Sautrāntika Reasoning Proponents, who follow Dharmakīrti, do not.

In the Sautrāntika system “imputedly existent” (*prajñaptisat*)<sup>24</sup> and “imputed” have different meanings. To say an object is “imputedly existent” means that to identify it depends on identifying something else. A person, Tashi, is imputedly existent because he can be identified only by perceiving his body, voice, or mind. Similarly, a forest is identified by apprehending many trees. “Imputed,” on the other hand, refers to whatever is established by being merely imputed by thought without having its own objective nature. An example is permanent space.

To say something is substantially existent means that to identify it doesn’t depend on identifying something else. Here “substantially existent” means self-sufficient in that the object doesn’t depend on another object for it to be identified. Cars and stars are known in this way. We see them directly with our eyes. The mind and mental factors are likewise substantially existent because, according to the Sautrāntikas, apperception—a type of self-perceiving consciousness—directly perceives them. To know anger in our own mind, we don’t need to perceive something else first, whereas to know an hour—which is not substantially existent—we have to first perceive the change in another object.

In *Succinct Guide to the Middle Way* (*Dbu ma’i lta khrid phyogs bsdebs*), Tsongkhapa says (SRR 76):

Thus the meaning of substantial reality and nominal [imputed] reality is the following: When a thing appears to the mind, if it does so in dependence on the perception of another phenomenon that shares characteristics different from said object, then the object is said to be nominal reality. . . . That which does not depend on others in such a manner is said to be substantially real.

Self-sufficient substantial existence is the same as substantially existent for Sautrāntikas up to and including Svātantrikas. In and of itself, substantial existence is not an object of negation. However, a self-sufficient substantially existent person is. The self-isolate person is imputedly existent; it is not a self-sufficient substantially existent person, which is the object of negation when Svātantrikas and below refute the subtle self of persons. A self-sufficient substantially existent person does not exist.

When a self-sufficient substantially existent person is negated, the selflessness of person is realized. The absence of being a self-sufficient substantially existent person can be realized with respect to any phenomenon. If the base is the person, then the person not being a self-sufficient substantially existent person is realized. If the base is a phenomenon other than the person, then that phenomenon not being an object of possession of a self-sufficient substantially existent person is realized. For this reason, all schools that assert the absence of a self-sufficient substantially existent person as the subtle selflessness of persons agree that any phenomenon can be the base of the selflessness of persons. Prāsaṅgikas agree with this, except for them it is called the “coarse selflessness of persons.”

Sautrāntikas, like Vaibhāṣikas, assert only a selflessness of persons, not a selflessness of phenomena.<sup>25</sup> According to Sautrāntikas, the appearing object of a direct perceiver—including direct perceivers that are uninterrupted paths and liberated paths on the paths of seeing, meditation, and no-more-learning—must be an impermanent object. Selflessness, however, is a permanent phenomenon. Thus they say that these path consciousnesses, which are yogic direct perceivers, do not directly realize selflessness. Rather, they directly perceive the aggregates and indirectly know that the aggregates lack a self-sufficient substantially existent person.

The common assertion of almost all Buddhist tenet systems is that the selflessness of persons is the absence of a self-sufficient substantially existent person and of an I that makes the aggregates mine—the possessor of the aggregates. “Self-sufficient” (T. *rang rkya ba*) means that the person is different from the mental and physical aggregates. However, that is not the case; the person and the aggregates are related: the aggregates are one nature with the person, and because of that we can identify the person by cognizing their body, speech, or mind. Here a substantially existent person would be perceivable without anything else appearing to the mind. That means that without apprehending the body, speech, or mind of a person, we could still perceive a person. That clearly is not the case. To cognize a person, at least one of the aggregates needs to appear. Because a person can be identified only by perceiving some other phenomenon, such as the body, a person is dependent on and related to the aggregates. Thus, the person exists imputedly, not substantially.

The lower Buddhist tenet systems, Svātantrika Madhyamaka and below, negate self-sufficient substantial existence on the general self—the self that is

imputed on the aggregates. The general self has the characteristics of the aggregates in that the person walks, talks, knows things, and feels emotions just like one or more of the aggregates does. It is the self that we refer to in everyday conversation when we are not analyzing what the I is.

A person is not substantially existent because his or her body, speech, or mind must be identified in order to identify the person. The person also is not self-sufficient because it is not the controller of the body and mind. However, the person appears to be self-sufficient substantially existent: the I appears to be independent of the body and mind and to control them like a master who tells the servants what to do. The I says, “Walk outdoors,” directing the body to walk. The I states, “I will think about this later,” telling the mental aggregates what to do. The body and mind seem to depend on the person who orders them about, and the person appears to be different from the aggregates. A yogi, however, realizes that the person does not exist self-sufficiently; it is not an independent controller of the body and mind because it depends on the aggregates. Since there is no self-sufficient person, nothing can be possessed by such a person, so both the I and the mine lack self-sufficient substantial existence.

In short, a self-sufficient substantially existent person is one that appears to be different from the aggregates but is also the controller of the body and mind. It appears to be the self-sufficient substantially existent owner and user of the aggregates that are grasped as mine. This sense of I is false because the I depends on the aggregates and does not exist separate from them. There is no person that authoritatively bosses the body and mind around, even though we sometimes feel there is.

Although the lower systems negate a self-sufficient substantially existent person, they say that the person does exist and point to a personal identity—an illustration of the person—that is the person. Many of these schools say that the mental consciousness is the personal identity because the mental consciousness goes from one life to the next. Others say the collection of the aggregates, the continuity of consciousness, or a foundation consciousness is the personal identity. All of these schools say that the personal identity substantially exists. In the case of saying the mental consciousness is the personal identity, the mental consciousness substantially exists because its appearance to a consciousness doesn't depend on another phenomenon appearance. The mental consciousness appears and is cognized without being imputed, and for this reason it is

substantially existent. Although the mental consciousness is a composite of different mind moments, it is not imputed because all those mind moments are of a similar type (that is, they are all moments of mind). In short, while the lower systems negate the substantial existence of the person, they assert that the personal identity—such as the mental consciousness or the collection of the aggregates—is substantially existent. The personal identity does not have all the characteristics of the person. For example, the mental consciousness does not have physical characteristics although the person does.

Objects of possession of the self include the body and mind as well as external objects such as chairs and cups. To meditate on the lack of self-sufficient substantial existence in relation to these objects, we reflect that they are not objects of possession of a self-sufficient substantially existent person.<sup>26</sup> However, the body and mind themselves are substantially existent because they can be identified without another phenomenon first appearing to the mind.

Regarding the second meaning of substantial and imputed existence described above, Asaṅga, in his *Compendium of Ascertainments* (*Nirṇayasamgraha*), says:

Anything whose definition (or characteristic) is designated without relating to others and without depending on others, in short, is to be known as *substantially existent*. Anything whose definition is designated in relation to others and dependent on others, in short, is to be known as *imputedly existent*, not substantially existent.

This explanation is accepted by all Buddhist schools. For the lower schools, the substantial existence mentioned here is the subtle object of negation in the meditation on the selflessness of persons. Prāsaṅgikas, however, say that this meaning of substantial existence is coarse and that the selflessness of the lower schools does not negate enough, because the person is also empty of inherent existence.<sup>27</sup>

In short, according to the view common to all four tenet systems, the view of a personal identity grasps an independent or self-sufficient substantially existent I in our own continuum. Here “independent person” does not refer to an inherently existent person, which is the unique object of negation of the Prāsaṅgika Madhyamaka school. Rather it indicates a person who is the owner or

the enjoyer of the psychophysical aggregates. Just as a king rules over his subjects, this I rules over the body and mind, which are subservient to it. The I seems to be independent of the aggregates, like the boss of the body and mind.

A clear indication that we have this feeling of an independent I is, for example, when we see someone with an attractive body or an intelligent mind, we think, “If it were possible to exchange my body with his and my intelligence with hers, I would readily agree.” Here, the I seems to be separate and independent from the body and the mind. It appears to be their owner, and this owner can benefit by exchanging its body for a more attractive one or its mind for a more intelligent one. Such an independent, self-sufficient substantially existent I does not exist; when searched for, it cannot be found as one of the aggregates or separate from the aggregates.

---

## REFLECTION

1. What would a directionally partless particle be like? Why doesn't such a thing exist?
  2. What are the two ways that Sautrāntikas use the terms “substantially existent” and “imputedly existent”?
- 

## *Yogācāra (Cittamātra)*

Yogācārin are defined as proponents of Buddhist tenets who use reasoning to refute external objects and assert that dependent phenomena are truly existent. The Yogācāra school<sup>28</sup>—also called Cittamātra (Mind Only), Vijñānavāda, and Vijñaptivāda—has two branches: Yogācāra Scripture Proponents who mainly follow Asaṅga and Yogācāra Reasoning Proponents who principally follow Dignāga and Dharmakīrti. The main sūtras Yogācārin refer to are the *Sūtra Unraveling the Thought [of the Buddha]* (*Samdhinirmocana Sūtra*) and the *Descent into Laṅkā Sūtra* (*Laṅkāvatāra Sūtra*). In addition, the Yogācāra Scripture Proponents rely on Asaṅga's *Compendium of the Mahāyāna* (*Mahāyānasamgraha*) and Vasubandhu's *Thirty Stanzas* (*Triṃśikā*) and the commentary on it by Sthiramati (c. 510–70).

Following Asaṅga's *Five Treatises on the Grounds*,<sup>29</sup> Yogācāra Scripture Proponents assert eight consciousnesses: the five sense consciousnesses, mental consciousness, plus a foundation consciousness (*ālayavijñāna*) and an afflicted consciousness (*kliṣṭamanas*). The foundation consciousness is a neutral, undefiled, enduring mental consciousness that exists throughout one's life and into future lives. It is the storehouse for all latencies and karmic seeds. Because it is stable and exists while one is awake, asleep, and in the intermediate state between births, it is able to carry karmic seeds and other latencies from one life to the next. For this reason, the foundation consciousness is said to be the person. The afflicted consciousness views the foundation consciousness and, not seeing its nature, mistakenly holds it to be a self with a self-sufficient substantially existent nature.

Yogācāra Reasoning Proponents adhere to Dharmakīrti's *Seven Treatises on Reliable Cognition*.<sup>30</sup> They assert the usual six consciousnesses (visual, auditory, olfactory, gustatory, tactile, and mental consciousnesses) that cognize their corresponding objects (forms, sounds, etc.) through their associated sense faculties (eye, ear, etc.), as do the other tenet schools, and assert that karmic seeds and latencies are deposited on and carried by the mental consciousness. Thus they assert the mental consciousness to be the person.

The Yogācāra Scripture Proponents have a unique way of presenting phenomena and their deeper mode of existence. All conventional things that we interact with on a daily basis—books, trees, and so forth—arise due to the latencies placed on the foundation consciousness. Although these things appear to be external objects unrelated to our minds, this is a false appearance. In fact, they arise from the same latency as the consciousness that perceives them, and they exist simultaneously with their perceiving consciousness. This is very different from other systems that assert external objects and say that the consciousnesses perceiving them are caused by the object and its corresponding sense faculty. In other words, according to these Yogācārins, the flower and your mind perceiving it arise from the same latency on the foundation consciousness. There is some similarity between these Yogācārins and scientific views regarding the lack of objectively existent external matter. More discussion on this topic between Buddhists and scientists would be interesting.

Yogācārins hold the second turning of the Dharma Wheel and the teachings of the Perfection of Wisdom sūtras to be interpretable and the third Dharma

Wheel to be definitive. To explain the teaching propounded in the second turning, “All phenomena are empty of inherent existence,” they developed the classification of three natures (*trisvabhāva*) and then described the meaning of naturelessness (*niḥsvabhāva*) for each of them. All knowable objects have these three natures.

1. The dependent or other-powered nature arises depending on the power of others, specifically the latencies that produce them. Because the dependent nature arises from causes, it does not last more than a moment.
2. The imputed or imaginary nature includes our imputations and concepts about things. These do not exist by their own characteristics but exist for thought. Unconditioned space is an example of the existent imaginary nature and a self of persons is an example of the nonexistent imaginary nature.
3. The consummate or thoroughly established nature is twofold: (1) the emptiness of external objects—that is, the emptiness of subject and object arising from different substantial entities, and (2) the emptiness of an object existing by its own characteristics as the referent of its name. In short, the consummate nature is the nonexistence of the imaginary nature in the dependent nature.

A flower, for example, is a dependent nature because it is dependent on the latencies that produced it. Although the flower appears to us to be “out there,” separate from the mind perceiving it, this is false. Its being a separate entity from the consciousness perceiving it is its imputed nature. Negating this type of existence in terms of the flower is the flower’s consummate nature.

Each nature is natureless in its own way:

- Dependent natures are *production natureless* (*utpatti-niḥsvabhāvatā*) because they arise from causes that are a different nature than themselves and do not arise from causes that are the same nature as themselves. (To be one nature, two phenomena must exist at the same time, whereas a cause and its effect are sequential.) They are also *ultimate natureless* (*paramārtha-niḥsvabhāvatā*) because the ultimate nature is the ultimate

object of meditation that brings about the purification of obscurations, and dependent natures are not this.

- Imputed or imaginary natures are *character natureless* (*lakṣaṇa-niḥsvabhāvatā*) because they don't exist by their own characteristics. Existent imaginaries such as unconditioned space exist only by the force of conception.
- Consummate natures are *ultimate natureless* (*paramārtha-niḥsvabhāvatā*) because they are the ultimate nature of phenomena that is perceived by the ultimate purifying consciousnesses and do not exist as the self of phenomena.

A *conventional truth* is an object found by a reliable cognizer that is a correct knower distinguishing a conventionality. Dependent natures—such as a table, person, and emotions—and existent imaginaries—such as permanent space—are conventional truths. Conventional truths are falsities in that they appear to be external objects that are different entities than the consciousnesses perceiving them. They do not exist in this way because the object and the perceiving consciousness arise from the same substantial cause, a latency on the foundation consciousness.

An *ultimate truth* is an object found by a reliable cognizer that is a correct knower distinguishing an ultimate—emptiness, consummate phenomena, selflessness, and suchness.

Yogācāra defines true existence as being established by way of its own uncommon objective mode of existence without being posited by conceptuality. Dependent natures—especially the mind—and consummate natures are truly existent. They have their own objective mode of existence that does not depend on being imputed by thought. Imaginaries do not truly exist because they are merely imputed by conception.

For Yogācārins, the selflessness of persons is the lack of a self-sufficient substantially existent person. They also assert selflessness of phenomena from four approaches, which come to the same point: (1) an object's emptiness of existing by its own characteristics as the referent of a term, (2) an object's emptiness of existing by its own characteristics as the object clung to by a conceptual thought, (3) an object's emptiness of being a different entity from the consciousness perceiving it, and (4) an object's emptiness of being external to the mind. Some

scholar-adepts condense these four into two approaches to the selflessness of phenomena: (1) an object's emptiness of existing by its own characteristics as the referent of term and concepts, and (2) an object's emptiness of being an external object and a different entity from the consciousness perceiving it.

When on the dependent nature (for example, a flower) the imaginary natures (the flower's existing by its own characteristics as the referent of a name, and the flower and its apprehending consciousness being distinct entities) are negated, that is the consummate nature (emptiness, the ultimate reality).

If dependent natures did not exist by their own characteristics, arising and ceasing would not be feasible and dependent phenomena would not exist. Similarly, if the consummate did not exist by its own characteristics (*svalakṣaṇa*), it would not be the ultimate nature of phenomena.

Vaibhāṣikas and Sautrāntikas assert substantially existent partless particles that do not have any directions (such as east, west, front, and back) and partless moments of mind that do not have earlier and later parts. Yogācārins call this into question, saying that while it may be hard to further subdivide something physically, all particles must have directional parts and sides because physical particles meet side by side to form larger objects. Without directional parts, these particles could not join together to form coarser objects, such as a chair. Instead, all the particles would merge into one another and occupy the same space, becoming one particle. Similarly, moments of mind that lack parts, such as a beginning, middle, and last part, would conflate into one moment, and a continuum could not exist. Mādhyamikas agree with Yogācārins' refutation of partless particles and partless moments of mind.

Studying the Yogācāra view is a good steppingstone that broadens our view and facilitates understanding Madhyamaka views later. Vaibhāṣika and Sautrāntika schools speak only of the selflessness of persons, whereas Yogācāra adds the selflessness of phenomena. In doing so, it spurs us to examine not only how the person exists but also how the aggregates, which are the basis of designation of the person, exist. In asserting that there are no external objects and that phenomena and their apprehending consciousnesses are one nature, Yogācāra draws us into examining the role the mind plays in the existence of phenomena. Although subject and object being one nature is refuted by the Prāsaṅgikas, contemplating the Yogācāra view enables us to see that the appearances of objectively existent external objects to our sense consciousnesses are false and that

things exist in relation to the mind. This approach reduces clinging to attractive and repulsive objects because these are seen as illusory; they are not objective external objects as they appear to be but are one nature with the mind perceiving them.

Furthermore, the Yogācāra assertion that phenomena are empty of existing by their own characteristics as the referent of terms stimulates us to explore the role of language and concepts in the existence of phenomena. Understanding these two Yogācāra approaches to the selflessness of phenomena prepares us for the Madhyamaka view.

---

## REFLECTION

1. Why do some Yogācārins assert a foundation consciousness? What is its function?
  2. What is their belief about external objects? Does that view make sense to you?
  3. Review the three natures and their non-natures.
- 

## *Madhyamaka*

Mādhyamikas are holders of Buddhist tenets who assert that all phenomena do not truly or ultimately exist. They are of two types: Svātantrikas and Prāsaṅgikas, the differences between them being the topic of much discussion. Contrary to the Yogācārins, Mādhyamikas assert there is no difference between the mind and the external world in that both are empty of true existence—neither has its own mode of being. When Mādhyamikas say that the mind is unborn, they mean that the mind arises, abides, and ceases, but not ultimately or truly. These functions occur dependent on other factors.

Although a clear distinction is made between Svātantrika Madhyamaka and Prāsaṅgika Madhyamaka in contemporary tenet texts, this was not so in India or in the early years of Buddhism in Tibet. It seems to be a distinction made by Tibetans that was widely accepted by the fourteenth century.

## *Svātantrika Mādhyamaka*

Differences exist between the two types of Mādhyamikas in several areas, most prominently in how they assert the object of negation. By seeing how the Svātantrikas define conventional existence, we can understand their object of negation, which is the opposite of that. Conventional existence depends on objects being merely posited through the force of appearing to a nondefective awareness. Ultimate existence (*paramārthasiddhi*), which is negated, is the opposite of this. Ultimate existence is without being posited through the force of appearing to a nondefective awareness. If things existed ultimately, they would exist from their own side by their unique mode of being. Ultimate existence is equivalent to true existence (*satyasat*), existence as its own reality (*samyaksiddhi*), and existence as its own suchness (*tattvasiddhi*).

To conventionally exist, two factors are necessary: the object must be posited through the force of appearing to a nondefective awareness, and it must also exist inherently. For Svātantrikas “posited” means an object is designated by a consciousness through appearing to it. Since the object also exists inherently, the consciousness to which it appears is unmistakable regarding its inherent existence. This nondefective awareness to which an object appears inherently existent can be either a conceptual thought or a nonconceptual perception. In both cases, that awareness is not mistaken with regard to its engaged object.

Both Prāsaṅgikas and Svātantrikas assert that all existents are posited<sup>31</sup> by terms and concepts. However, Prāsaṅgikas add that they are *merely* designated by terms and concepts—“merely” indicating that they do not inherently exist—whereas Svātantrikas do not add “merely” and instead assert that all phenomena exist inherently on the conventional level. That is, Svātantrikas assert that conventionally, phenomena exist by their own characteristics (*svalakṣaṇasiddhi*), inherently exist (*svabhāvasiddhi*), and exist from their own side (*svarūpasiddhi*), although they do not exist ultimately, truly, or perfectly on the conventional level. On the ultimate level, they lack all of the above modes of existence.

To get a glimpse of this difference, observe your mind when meditating on emptiness. You may deeply investigate how the I exists and find only its emptiness of true existence. But part of the mind objects, saying that there must be something that really is me conventionally. You agree that phenomena exist by being designated, but still feel that there must be something in the object that makes it what it is. If there weren't, then either things wouldn't exist at all or they

would become whatever your thought imputes them to be. Thus they must have some degree of inherent existence conventionally.

Seeing that functioning things each have their own unique potential to bring their results, Svātantrikas say that when searched for with ultimate analysis—analysis that investigates what an object really is and its deeper mode of existence—phenomena cannot be found and are empty of true existence. But on the conventional level they must have some degree of inherent existence, otherwise any cause could produce any effect. For this reason, Svātantrikas assert that things do exist by their own characteristics but not *solely* by their own characteristics, for they also need to be posited through the force of appearing to a nondefective awareness. That is, things do not exist by their own characteristics except when they are designated by mind through the force of appearing to a nondefective awareness. There is something from the side of the object that supports what it is. That, in combination with being posited by a nondefective mind, is the way phenomena exist. The appearance of inherent existence to the sense consciousnesses is not false, for things inherently exist conventionally.

A conventional truth is an object found by a conventional reliable cognizer—that is, by a direct perceiver or inferential cognizer not affected by an internal or external cause of error, an awareness that is not erroneous with respect to its apprehended object. An ultimate truth is an object found by a reliable reasoning consciousness analyzing the ultimate. An ultimate truth, such as emptiness, is realized nondualistically by an unpolluted awareness—that is, by the pristine wisdom of meditative equipoise.

There are two main subdivisions of the Svātantrika school: Yogācāra-Svātantrika and Sautrāntika-Svātantrika. Like Yogācārins, Yogācāra-Svātantrikas say that there are no external objects and that all phenomena are the same nature as the mind cognizing them because they arise from the same substantial cause, a latency on the mind. The appearance of things as separate entities from their reliable cognizing consciousness is a false appearance. Also, like Yogācārins, they assert apperception (*svasaṃvedana*). Apperception is a consciousness that is nondualistically aware of the consciousness it observes and experiences. Simultaneous with the consciousness it is observing, apperception is one nature with that consciousness and enables us to remember cognizing an object.<sup>32</sup> Yogācāra-Svātantrikas differ from the Yogācārins in that they do not assert that the mind is truly existent. Nor do they assert a foundation consciousness (the

eighth consciousness) or an afflicted consciousness (the seventh consciousness). Instead, they say that the mental consciousness carries the karmic seeds and the latencies that create the appearance of the external world.

The Sautrāntika-Svātantrikas do not accept a foundation consciousness, an afflicted consciousness, or apperception; they accept external objects. They assert that external objects exist by their own characteristics conventionally.

Although Yogācārins' identification of the object of negation differs from the Prāsaṅgikas, the two are similar in that both say the object of negation appears to sense consciousnesses. Svātantrikas, on the other hand, say the object of negation appears only to the mental consciousness, because they accept inherent existence on the conventional level.

The main difference between Svātantrikas and Prāsaṅgikas is that, in brief, by refuting true existence and ultimate existence, Svātantrikas avoid absolutism, and by asserting that phenomena inherently exist conventionally, they avoid nihilism. Prāsaṅgikas, on the other hand, refute true existence, ultimate existence, and inherent existence on both the ultimate and conventional levels. They assert nominal existence, meaning that phenomena exist by being merely designated.

### *Prāsaṅgika Madhyamaka*

Of the various Buddhist tenet systems, Prāsaṅgika has the complete understanding of emptiness. It is this view that we will closely examine in upcoming chapters. Prāsaṅgikas assert that things are empty of inherent existence—that is, they are not self-enclosed entities that exist independent of all other factors; they do not exist under their own power, from their own side, or by their own characteristics because they depend on other factors.

Phenomena exist by being merely imputed or designated by mind. “Merely” excludes their being inherently existent. Although phenomena depend on their basis of designation, they are not their basis of designation and cannot be found within it. Neither can they be found separate from it. For example, a person exists by being merely posited by mind in dependence on its basis of designation, the five aggregates. But a person is not any of the aggregates, nor is it the collection of aggregates; and it does not exist separate from the aggregates. Although a person is not findable when we search for it with wisdom analyzing the ultimate nature, it does exist conventionally. We say “I’m walking” or “I’m thinking,” and others

understand what is meant. Although phenomena lack a findable essence, they still function. In fact, if they had an inherent, independent essence, they couldn't function at all. They would be frozen phenomena, unable to interact with the things around them. Establishing phenomena's functionality and their lack of inherent existence as being compatible is challenging, but the great Prāsaṅgikas such as Nāgārjuna and Candrakīrti have succeeded in doing that.

Unlike the lower schools, the Prāsaṅgika considers all of the following as equivalent: substantial existence, existence by its own characteristics, inherent existence, existence from its own side, true existence, ultimate existence, objective existence, and so forth. Prāsaṅgikas refute all of them on all phenomena across the board. Nevertheless, phenomena do exist: they exist conventionally by being merely designated by mind. The fact that they arise dependently does not contradict the fact that they are empty of inherent existence. In fact, dependent arising and emptiness of inherent existence come to the same point.

As Candrakīrti explained in the *Supplement*, objects are known from two different perspectives. Those known by worldly conventions without critical examination of how they exist are conventional truths. The fact that these objects are not found under ultimate analysis is their ultimate truth. These two perspectives—of worldly conventions and of ultimate reality—are the bases of differentiating the two truths—the conventional and ultimate truths.

An object found by a conventional reliable cognizer perceiving a false knowable object is a conventional truth. A conventional truth is the object of a mistaken cognizer. It is that with respect to which a conventional awareness comes to be a reliable cognizer distinguishing a conventionality. What does it mean to say that conventional truths are false objects known only by mistaken consciousnesses? They are *false* in that they appear truly existent although they are not. They are known by *mistaken consciousnesses* in that inherent existence appears to these consciousnesses although inherent existence does not exist. They are *truths* in the perspective of a veiler—the veiler being the ignorance grasping inherent existence. However, they *are not true* because they do not exist as they appear to the principal consciousness perceiving them. When subjected to ultimate analysis, they cannot be found.

An ultimate truth is an object with respect to which a reasoning consciousness comes to be a reliable cognizer distinguishing the ultimate and which is found by that reliable cognizer. Ultimate truths are found by a

nonmistaken consciousness, consciousnesses that know objects' deeper mode of existence. Ultimate truths are emptinesses; they are true in that they exist as they appear to the mind directly perceiving them. To this mind, emptiness appears without the dual appearance of subject and object and without the appearance of inherent existence.

---

## REFLECTION

1. How do Svātantrikas define ultimate truth and conventional truth?
  2. How do Prāsaṅgikas define these?
  3. What does it mean when Prāsaṅgikas say that things exist by mere designation?
-

## 5 | Comparing Assertions

EACH TENET SYSTEM has its own definitions of conventional and ultimate truths and its own notions of what selflessness and the object of negation are. Although keeping all of these clear in your mind, let alone understanding what they mean, is initially daunting, as you study and reflect on this material, it will become clearer. The chart below summarizes the definitions of the two truths and gives a short explanation according to each system.

### CONVENTIONAL AND ULTIMATE TRUTHS

SYSTEM	CONVENTIONAL TRUTH	ULTIMATE TRUTH
Vaibhāṣika	A phenomenon that if separated into parts physically or mentally, the consciousness apprehending it ceases (that is, the perception of it ceases); for example, a pot.	A phenomenon that if physically or mentally separated into parts, the consciousness apprehending it does not stop; for example, directionally partless particles, temporally partless moments of consciousness, and unconditioned space.
Sautrāntika (Reasoning Proponents)	A phenomenon that exists only by being imputed by a conceptual consciousness; for example, unconditioned space. It is also a phenomenon that is not able to ultimately perform a function.	A phenomenon that is able to bear reasoned analysis in terms of having its own mode of existence without depending on imputation by terms or conceptual consciousness; for example, a table. It is a phenomenon that is able to ultimately perform a function.
Yogācāra	An object found by a prime cognizer that is a correct consciousness distinguishing a conventionality. It is a conventional object of observation suitable to generate afflictions; for example, a computer.	An object found by a prime cognizer that is a correct knower distinguishing an ultimate. It is a final object of observation of a path of purification; for example, the emptiness of a person.
Svātantrika Madhyamaka	An object that is realized dualistically by a direct reliable cognizer that directly realizes it; for example, a shoe. It is an object found by a conventional reliable cognizer (that is, a direct perceiver or inferential cognizer not affected by an internal or external cause of error).	An object that is nondualistically realized by a direct reliable cognizer explicitly cognizing it; for example, the emptiness of true existence of a bank.
Prāsaṅgika Madhyamaka	An object with respect to which a conventional consciousness becomes a reliable cognizer distinguishing the conventional and	An object with respect to which a reasoning consciousness becomes a reliable cognizer distinguishing the ultimate and which is found by

<p>which is found by that reliable cognizer; for example, a bicycle. It is an object found by a conventional reliable cognizer perceiving a false knowable object.</p>	<p>that reliable cognizer; for example, the emptiness of inherent existence of an apple, the unfindability of a pot in its basis of designation.</p>
--	--

In the Vaibhāṣika and Sautrāntika systems, the two truths are different sets of unrelated objects. In the Yogācāra and Madhyamaka systems, the two truths are one nature and nominally different. For Vaibhāṣikas, a cup and the partless particles that compose it are unrelated, and for Sautrāntikas, phenomena that perform functions and those that do not are unrelated. Yogācārins say there are no phenomena external to the mind, whereas all the other systems except Yogācāra-Svātantrika Mādhyamikas assert external objects. For Mādhyamikas, the cup is a conventional truth and the cup’s emptiness of inherent existence is an ultimate truth. The cup and its emptiness are one nature because they exist simultaneously, and if one exists, so does the other. However, they are nominally different because they are not the same thing and can be distinguished conceptually.

### *Levels of Selflessness of Persons*

After first hearing or reading these various views, we may wonder what all the fuss is about and why there are so many categories and definitions. The purpose of studying tenets is not to make us confused—although it may initially seem to have that byproduct! Rather, it is to help us figure out how things exist, and eliminate the ignorance that is the root of saṃsāra.

Throughout the ages people have questioned, “Who am I?” Arriving at the correct answer to this question is crucial because our concept of self lies at the center of our worldview, and everything we encounter is referenced in terms of ourselves. Be it a person, an idea, or an event, our primary concern is how it will affect Me. Depending on this, we act, creating karma that will influence our future experiences. If our initial concept of self is incorrect, everything that follows will also be erroneous.

The tenet systems have different ways of defining the object of negation—what does not exist that we mistakenly grasp as existent. How a system identifies the object of negation influences how it identifies the self-grasping that holds that object of negation as true and the selflessness that is realized by understanding that the object of negation does not exist. The sequence of the tenet schools is arranged in terms of the depth of their understanding of these issues. By progressively understanding each level of the object of negation, the self-grasping that holds it as true, and the realization that knows that object of negation to be nonexistent, we approach an ever more subtle understanding of reality—how persons and phenomena actually exist.

As each successive level of selflessness is realized, one part of grasping a false self is chipped away. Nevertheless, each of the lower systems leaves something that can act as a basis for further grasping. All Buddhist schools refute the existence of a permanent, unitary, and independent self, the coarsest mistaken notion of self. They then refute a self-sufficient substantially existent person. However, the lower schools leave the inherent existence of the person and all other phenomena untouched. Only by refuting this do we arrive at a full understanding of reality. After fleshing out the residual grasping not refuted by the lower systems, we see the subtlety of the Prāsaṅgika view.

Beginning with the coarsest, the following are the different levels of self of persons that are objects of negation.

### *Permanent, Unitary, and Independent Self*

The first level of the object of negation is a permanent (unchanging), unitary (partless, monolithic), and independent (autonomous) self or soul (*ātman*). This is an unchanging soul or absolute self that continues after death. The person and the aggregates are of two completely different natures: the aggregates are impermanent—the body dies, the mind changes—but the person is permanent. The relationship between the self and the aggregates is like a person carrying a burden. An independent soul or self “picks up” a set of aggregates at the beginning of each rebirth and “sets them down” at death. This unchanging self continues throughout the entire series of saṃsāric rebirths. The mind grasping this is the misconception of a permanent, unitary, and independent self or soul. Most non-Buddhist religions assert such a self, whereas all Buddhist tenet schools refute it.

### *Self-Sufficient Substantially Existent Person*

The next level of the object of negation to establish the selflessness of persons is a self-sufficient substantially existent person. Here, the I and the aggregates appear to be different and exist separately. Grasping a self-sufficient substantially existent person does not regard the I as being designated to the aggregates. The person is like a shepherd, and the mind and body are like the sheep that the shepherd controls. The shepherd and sheep are distinct; the shepherd is in charge and the sheep follow his directions. Here the aggregates appear to be dependent on the I, but the I directs the aggregates and appears to be independent of them. We may feel this when we don't want to get out of bed in the morning and think, "Okay, body, time to get up!" or "I'll try to be more mindful." Realizing the nonexistence of such a person counteracts grasping a self-sufficient substantially existent person.<sup>33</sup>

Grasping a self-sufficient substantially existent person has both acquired and innate forms. Acquired grasping comes about from studying incorrect philosophies, whereas the innate grasping has existed beginninglessly and is carried from one life to the next. Almost all proponents of Buddhist tenets assert the lack of a self-sufficient substantially existent person.<sup>34</sup> The acquired grasping is abandoned at the path of seeing, whereas for bodhisattvas, the innate grasping and the afflictions that arise due to it are abandoned beginning on the fourth ground. They are completely eradicated on the eighth bodhisattva ground. The explicit mention of grasping a self-sufficient substantially existent person being abandoned on the fourth ground has the purpose of asserting that there are innate levels of this grasping and the afflictions it engenders that are the portion of the afflictions to be abandoned on the fourth ground. Similarly, another portion of the innate grasping of a self-sufficient substantially existent person and the afflictions it engenders are to be abandoned on each of the subsequent grounds up to the eighth.

If a self-sufficient substantially existent person existed, then whatever we wished for in terms of our aggregates would happen because a self-sufficient substantially existent person could control the aggregates. If we wished to exchange our polluted body for the body of a buddha with its thirty-two signs and eighty marks, our wish would immediately come true. If we wished to exchange our confused mind for the omniscient mind of a buddha, that, too, would happen.

The mode of apprehension of the innate grasping of a self-sufficient substantially existent person holds the person to be the controller of the aggregates. This is the self that is negated in the common four truths—the four truths accepted by all the Buddhist schools. Coarse true duḥkha arises from its origin, grasping a coarse self—a self-sufficient substantially existent person. True cessation is the nirvana brought about by abandoning the coarse afflictions that arise from grasping a self-sufficient substantially existent person. The true path realizes the absence of such a self. This is the coarse selflessness. It is called “coarse” because in comparison to grasping an inherently existent person and the selflessness of an inherently existent person, it is coarse.

The uncommon four truths are those propounded by the Prāsaṅgika Mādhyamikas, and they center around inherent existence. True duḥkha is the aggregates produced by true origins, which are the afflictions and karma created by grasping inherent existence. The true path refutes inherent existence on both the person and all other phenomena. The nonaffirming negation that the true path realizes is the emptiness of inherent existence. This is subtle emptiness.

### *Inherently Existent Person*

The subtlest degree of the object of negation regarding the person is its inherent, ultimate, or true existence. The false I appears to set itself up and exist under its own power, without depending on any other factors such as causes and conditions, parts, or being designated by term and concept.

Prāsaṅgikas say the I exists *by being merely imputed or designated by name and concept in dependence on the aggregates*. Sautrāntikas say the I is *imputed to the aggregates* and doesn't exist independent of them. But what they mean by this differs from the Prāsaṅgika meaning. Sautrāntikas assert that in order to identify a person, the body, voice, or mind of the person must be perceived; Prāsaṅgikas agree with that but go deeper, saying that the existence of the person depends not only on causes and conditions and parts (the aggregates) but also on the mind that conceives and designates the person.

Only Prāsaṅgika Mādhyamikas assert the inherent existence of the person as an object of negation. They say the lack of a self-sufficient substantially existent person is the coarse selflessness of persons and realizing this alone cannot remove the afflicted obscurations. Why? Because someone could realize with a direct

perceiver that there is no self that is the controller of the aggregates but still grasp a self that exists independently, from its own side, truly, and inherently. Only by identifying this subtle object of negation and then refuting it can we realize the deepest level of selflessness of the person.

Of the two types of afflictions—the innate afflictions that go from one life to the next and the acquired afflictions that we learn from false philosophies—holding a permanent, unified, and independent self is an acquired affliction. We learn this view when we are taught that there is a permanent, unified, and independent soul. Grasping a self-sufficient substantially existent person has both innate and acquired aspects, as does grasping the inherent existence of persons and phenomena. Acquired afflictions and views are easier to overcome, whereas innate afflictions and views require more effort and time to eradicate.

### *Levels of Selflessness of Phenomena*

The Yogācāra and Madhyamaka systems also assert grasping a self of phenomena. That is a type of ignorance. The nonexistence of such a self of phenomena is the selflessness of phenomena. Yogācārin speak of two basic misconceptions or grasping regarding phenomena. One is grasping the subject and object of a cognition to be different entities. The other is grasping phenomena to exist by way of their own character as the referent of terms and conceptual thoughts about them. The emptiness of these two objects of negation, according to the Yogācārin, is the selflessness of phenomena.

Mādhyamikas say the true existence or ultimate existence of phenomena is the object of negation of the selflessness of phenomena. The emptiness of true or ultimate existence of phenomena is the selflessness of phenomena, according to this school.

Within the Madhyamaka school, there are further distinctions. Svātantrika Mādhyamikas define true or ultimate existence as existing without being posited through the force of appearing to a nondefective awareness—that is, to a consciousness that is not mistaken with respect to its engaged object that appears inherently existent. This awareness has no superficial causes of error, such as a defective sense faculty or the mental consciousness holding erroneous views. Phenomena's objective existence, without their being posited by the force of

appearing to a nondefective consciousness, is the object of negation for Svātantrikas. The emptiness of such true or ultimate existence of phenomena is the selflessness of phenomena. Nevertheless, Svātantrikas hold that phenomena are indeed established inherently and by their own characteristics on the conventional level because there must be something inherently findable conventionally that is the object; if there were not, anything could be anything.

Prāsaṅgika Mādhyamikas put forth the subtlest view of selflessness, the final thought of the Buddha, as described by such luminaries as Nāgārjuna, Buddhapālita, Candrakīrti, and Śāntideva. They assert that inherent existence—a findable, independent nature that exists without depending on being designated by term and concept—is the object of negation of meditation on emptiness. This false object appears to our senses, deceiving the mental consciousness so that it grasps phenomena to exist in this manner. The absence of phenomena's existing inherently, in their own right, from their own side, and by their own characteristics is the deepest meaning of emptiness.

All of these schools have their sources in Buddha's word, as found in the sūtras. The Buddha set forth these varying views as skillful means. To help us understand their meaning, they are classified as interpretable (provisional) and definitive teachings, to be explained below. To understand emptiness properly, study of the definitive teachings is necessary.

**SELF, THE OBJECT OF NEGATION: THE SELF REFUTED ON PERSONS AND PHENOMENA**

TENET SYSTEM	COARSE SELF OF PERSONS	SUBTLE SELF OF PERSONS	COARSE SELF OF PHENOMENA	SUBTLE SELF OF PHENOMENA
Vaibhāṣika	Permanent, unitary, and independent self	Self-sufficient substantially existent person	-	-
Sautrāntika	Permanent, unitary, and independent self	Self-sufficient substantially existent person	-	-
Yogācāra	Permanent, unitary, and independent self	Self-sufficient substantially existent person	-	Subject and object as different entities; external phenomena; phenomena existing by their own characteristics as the basis of names; phenomena existing by their own characteristics as the basis of conceptions
Yogācāra-Svātantrika Madhyamaka	Permanent, unitary, and independent self	Self-sufficient substantially existent person	Subject and object as different entities; external phenomena	True existence of persons and phenomena
Sautrāntika-Svātantrika Madhyamaka	Permanent, unitary, and independent self	Self-sufficient substantially existent person	-	True existence of persons and phenomena
Prāsaṅgika Madhyamaka	Self-sufficient substantially existent person	Inherently existent person	-	Inherent existence of phenomena

## REFLECTION

1. What are the qualities of a permanent, unitary, and independent person?
  2. Did you learn a view comparable to this as a child?
  3. If so, what do you think of that view now? Does a permanent soul or self exist?
- 

### *What Is the Middle Way?*

Each tenet school has its own way of explaining the basis, path, result, object of negation, and Middle Way view. In future chapters, some of these differences will be explored to flesh out the Prāsaṅgikas' unique interpretation of the Middle Way view. The Middle Way is valued because it is free of the extremes of absolutism and nihilism; the former superimposes a way of existence that phenomena don't have—inherent existence—and the latter deprecates the way phenomena do exist. The extreme of absolutism is also called “the extreme of permanence,” since if phenomena existed inherently, functioning things would have a permanent essence. A person, for example, would be permanent and unable to change, making awakening impossible. The extreme of nihilism is also called “the extreme of annihilation,” since if phenomena existed in that manner, the continuum of functioning things would be totally severed when those things disintegrated. For example, when a person dies, there would be no mental continuum or rebirth in the case of ordinary beings.

Someone may be philosophically nihilistic or ethically nihilistic. A philosophical nihilist thinks that phenomena do not exist; an ethical nihilist deprecates the law of karma and its effects and believes that our actions do not have an ethical dimension that influences our future lives. Many people who initially are philosophically nihilistic become ethically nihilist, whereas those who are ethically nihilistic may or may not be philosophically nihilistic. In the following sections, nihilism chiefly refers to philosophical nihilism.

As you read each school's assertion in the statements below describing how it avoids the two extremes and establishes the Middle Way, think deeply: Which assertions feel most comfortable at first glance? Which makes the most sense when you apply reasoning?

Cārvākas avoid absolutism by saying that no phenomenon exists beyond what is perceived by our senses. They avoid nihilism by saying that all phenomena are manifest to our senses.

Sāṃkhyas avoid absolutism by asserting that phenomena are manifestations of the fundamental nature. They avoid nihilism by stating that the fundamental nature—a real substance from which all phenomena manifest—is unchangeable.

Sāṃkhyas are absolutists in that they hold that the cause continues to exist at the time of its result. Vaibhāṣikas avoid this extreme of absolutism by asserting that a cause must cease for its effect to arise. They avoid nihilism by saying that an effect arises after the cessation of its cause—after the bud ceases, the flower arises. They also avoid nihilism by saying that past and future are substantial entities (T. *rdzas*). The past of an object exists after its present existence, and the future of an object exists before its present existence. For Vaibhāṣikas, everything is substantially established (T. *rdzas su grub pa*).

Sautrāntikas avoid absolutism by asserting that conditioned phenomena disintegrate moment by moment; things change and transform into something else in each new moment. They also avoid absolutism by saying that permanent phenomena, such as unconditioned space, are not substantial entities. They avoid nihilism by asserting that the continuity of most products—such as the self and the six elements—isn't severed and exists continuously. In this way, the self continues from one life to the next. They also say that objects exist by their own characteristics as referents for terms and concepts—that is, there is something in a table that makes it suitable to be called a “table” and for our mind to think of it as a table. Furthermore, they assert that external objects are composed of partless particles and are truly existent.

Yogācārins avoid absolutism by asserting that dependent phenomena do not exist by their own characteristics as the referent of words and thoughts. They also avoid absolutism by asserting that imaginary phenomena are not truly existent. They avoid nihilism by saying that dependent and consummate phenomena are truly existent. If they weren't, they would not exist at all.

Svātantrika Mādhyamikas avoid absolutism by saying that nothing truly or ultimately exists without being posited by the power of appearing to a nondefective awareness. They avoid nihilism by asserting that all phenomena exist inherently and exist by their own characteristics conventionally. If they did not, they would not exist. That is, things exist from the side of the object

conventionally; this appears to a nondefective awareness that posits the phenomena. In that way, phenomena exist.

Prāsaṅgika Mādhyamikas say that what Svātantrikas assert to avoid nihilism makes them fall to the extreme of absolutism. Prāsaṅgikas avoid this fault by asserting that all phenomena are not established from their own side or under their own power either ultimately or conventionally. When sought among their bases of imputation, phenomena cannot be found. They avoid nihilism by asserting that phenomena exist conventionally by being merely designated by terms and concepts in dependence on their bases of designation. Although things exist as mere designations, they are still able to perform functions. If they didn't exist in this way, either they would be permanent or they wouldn't exist at all.

## HOW EACH TENET SYSTEM ESTABLISHES ITS MIDDLE WAY VIEW

TENET SYSTEM	HOW IT AVOIDS ABSOLUTISM	HOW IT AVOIDS NIHILISM
Cārvāka (non-Buddhist)	Phenomena do not exist beyond what is perceivable by our senses.	All existents are manifest to our senses.
Sāṃkhya (non-Buddhist)	Phenomena are manifestations of the fundamental nature—a real substance from which all phenomena manifest.	The fundamental nature is unchanging.
Vaiśhāṅika	(1) All products are impermanent and disintegrate moment by moment. (2) For an effect to arise, its causes must cease.	(1) An effect arises after the cessation of its causes. (2) All phenomena are substantially established.
Sautrāntika	(1) Conditioned phenomena disintegrate in each moment; things momentarily disintegrate and transform into something else. (2) Permanent phenomena such as unconditioned space are not substantial entities.	(1) The continuity of many products, such as the self, isn't severed and exists continuously. (2) Objects exist by their own characteristics as referents for terms and concepts.
Yogācāra	(1) There is no external matter composed of partless particles. (2) Dependent phenomena do not exist by their own characteristics as the referent of words and conceptual consciousnesses. (3) Imaginary phenomena are not truly existent.	(1) Dependent and consummate phenomena are truly existent. (2) Ultimate truths are ultimately established and exist inherently.
Svātantrika Madhyamaka	Phenomena do not truly or ultimately exist without being posited by the power of appearing to a nondefective awareness.	All phenomena are established from their own side, exist by their own characteristics, and exist inherently on the conventional level.
Prāsaṅgika Madhyamaka	All phenomena do not exist from their own side, under their own power, or inherently. They lack inherent existence even conventionally.	Phenomena exist conventionally by being merely designated by terms and concepts in dependence on their basis of designation.

You may have noticed that what one school asserts as its way of avoiding the extreme of negating too much (nihilism), the next school says is actually the extreme of adding too much (absolutism). Thinking about the views of these schools in progressive order gradually leads our mind to the correct view. Although each successive tenet system negates the unique position of the lower ones, understanding the views of the lower tenet systems serves as the basis to understand the views of the higher systems. As we gradually accept the positions of the higher systems, we must be careful not to denigrate the lower ones.

After you finish reading and reflecting on this volume and the next two volumes on emptiness, you may want to come back to this section. Chances are you will see much deeper meaning in it then.

### *Gradually Leading Us to the Correct View*

The Buddha is a skillful teacher who leads us through a sequence of objects of negation and assertions regarding the Middle Way view in order to counteract our distorted views and ignorance. He does this by explaining a steady progression away from substantial, true, and inherent existence and toward dependent, imputed existence. A short summary will illustrate how he did this.

Vaibhāṣikas say that ultimate truths substantially exist because the awareness knowing them isn't cancelled when they are physically broken or mentally divided into parts, whereas conventional truths imputedly exist in that they cannot be perceived when mentally or physically broken into smaller parts. Nevertheless, all of these are substantially established because they have their own autonomous entity that is not dependent on conceptuality.

Sautrāntikas take this a step further, saying that ultimate truths, which are impermanent, functioning things, are substantially existent because they perform functions, and conventional truths are not because they are imputed by term and thought; but all are truly existent because they exist in reality in just the way they appear.

Yogācārins take yet another step, saying that dependent and consummate phenomena are truly existent because they are not merely imputed by the consciousness apprehending them and exist by their own uncommon mode of existence. Imaginaries are imputed by conception. But all of these inherently exist

in that they have their own mode of being and are findable when the object to which the term is attributed is sought.<sup>35</sup>

Svātantrikas go further, saying that no phenomena truly exist because they don't exist without being posited through the force of appearing to a nondefective mind, but they do exist inherently on the conventional level because they appear to a nondefective mind.

At the end, Prāsaṅgikas say that no phenomenon inherently exists but everything is merely imputed because it exists by being merely designated by term and concept. For them, substantially existent implies something exists as it appears, whereas “imputedly existent” means that it is dependent on being designated by term and concept and does not exist as it appears. Emptiness exists as it appears to a direct perceiver and is therefore true, but it is not truly existent.

The Buddha also presented a progression of objects of negation, examining first how the person exists and then how phenomena exist. He began by first refuting the existence of a permanent, unitary, and independent self, a view held by many non-Buddhists. This view is acquired—it is fabricated by our intellectual mind through incorrect philosophical speculation—and is comparatively easy to refute. Innate afflictions that go from one life to another are more deeply rooted and difficult to remove.

Having refuted a permanent, unitary, and independent self, we are ready to look deeper, so the Buddha introduces the notion that there is no self-sufficient substantially existent person. This is an innate view and is the prominent object of negation of the lower schools for the selflessness of persons. By refuting this, one layer of grasping and the afflictions that depend on it are released.

We also need to be aware of the Buddhist essentialists' assertions regarding substantial existence and imputed existence. In their view, a person is imputedly existent because it cannot be identified without some other phenomena—in this case the aggregates—appearing to the mind. The aggregates, however, are substantially existent because they can be known directly. In general, essentialists speak about two types of cognizers: conceptual cognizers and nonconceptual direct perceivers. This gets us thinking about the role of conception and how unconditioned phenomena come into existence by imputation. These points are developed in the Sautrāntika tenet school.

Incorrect graspings and misconceptions abound. We may hold the idea that smallest partless particles compose larger forms and forms can be reduced to such

particles. However, if particles were directionally partless, it would be impossible for them to join together to form larger objects. If they had no sides, either they would merge and become one or they could not touch. In either case, a larger composite would not be created. The Yogācāra school and above refute such particles.

To counteract grasping things as being external, objective, and unrelated to the mind apprehending them, the Buddha teaches the absence of external objects and teaches that the apprehending mind and the apprehended object arise from the same seed on the foundation consciousness.<sup>36</sup> In teaching this object of negation, the Buddha helps us to see that the mind and the object it apprehends are not unrelated to each other. This view is useful because seeing that objects of our attachment and anger are in the nature of the mind dramatically reduces the intensity of our afflictions.

The Buddha also taught that things do not exist by their own characteristics as the referent of terms. Here he challenges us to investigate the relationship between an object and the term imputed to it. We see that terms are useful as conventional devices to communicate with other people, but that the relationship between an object and its name is dependent upon the mind. A name does not exist from its own side in the object.

The Buddha then teaches that phenomena come about in a collaborative manner: something exists from the side of the object, but it also depends on being designated by a nondefective awareness. An object's inherent nature appears to a nondefective awareness and is also posited by mind. Although objects are unfindable when searched for with a reasoning consciousness analyzing the ultimate nature, conventionally they have their own inherent nature. In that way, anything can't be called anything; each object has something in it that warrants its receiving a certain name. This is the Svātantrika view.

By working through all these views, our mind has loosened its belief in many incorrect notions of existence. Yet it still holds on to one bit of security—that conventionally phenomena have an inherent nature and there is something in each phenomenon that exists independent of other factors. Without this, we fear that nothing exists at all. Now the Buddha cuts away even this grasping by saying that all phenomena exist by being merely designated by term and concept. Everything depends on the imputing mind to exist, even the mind itself. Contrary to the Yogācārins, who say that the mind truly exists, the Prāsaṅgikas

assert that the mind exists by being merely designated. Contrary to the Svātantrikas, who say that all phenomena have their own inherent nature conventionally, Prāsaṅgikas say they lack such a findable nature both ultimately and conventionally.

Just as a tangled ball of yarn cannot be untangled quickly by pulling at just one place, our mind cannot instantaneously drop all misconceptions and grasping at once. After all, the mind has held these erroneous views from beginningless time! The guidance of a skillful teacher, the Buddha, is needed to gradually lead us to the correct view through the progression of the four tenet systems.

Why is negating a permanent, unitary, and independent self not enough? Because we still hold on to the self as a controller of the aggregates, and many afflictions arise due to this grasping.

While refuting a self-sufficient substantially existent person helps to reduce the strength of the coarse afflictions, it nevertheless is insufficient to eradicate all afflictions. This is because grasping at the basis of the self—the mental and physical aggregates—as inherently existent still remains. Without negating the inherent existence of the aggregates, we will continue grasping the inherent existence of the I imputed in dependence on them.<sup>37</sup> This grasping leads to attachment and anger. Grasping at agreeable objects as inherently existent, we seek to procure and protect them, and attachment arises. Grasping at disagreeable objects as inherently existent, we want to destroy them or distance ourselves from them, and anger arises. Even though we may have realized the lack of a self-sufficient substantially existent person, subtler afflictions that grasp inherent existence<sup>38</sup> still exist in our mindstream.

Viewing objects as existing by way of their own character as the referent of their terms and seeing external phenomena as being unrelated to the perceiving mind, we believe that things exist objectively “out there.” This sets the stage for attachment, anger, and other afflictions to arise. Dismantling these views, as the Yogācārins do, reduces our emotional reactivity to external objects.

But negating the objective existence of the external world is not sufficient because it doesn’t stop grasping the true existence of the internal mind and mental states. We continue to be fixated on truly existent emotions and perceptions. The Mādhyamikas counteract this by negating true existence across the entire spectrum of phenomena, internal and external. However, the way the Svātantrika Mādhyamikas do this is not sufficient; they leave a degree of objective

reality by saying that phenomena exist from their own side. They still hold on to an objectified locus in phenomena that makes them what they are. As long as we hold on to anything whatsoever as existing from its own side, we cannot cut the root of cyclic existence and will continue to grasp the aggregates, and thus the person, as inherently existent. This, in turn, perpetuates afflictions. Nāgārjuna says (YS 51–52ab):

As long as there is an [objectified] locus,  
one is caught by the twisting snake of the afflictions.  
Those whose minds have no [objectified] locus  
will not be caught.  
How could the deadly poison of the afflictions fail to arise  
in those whose minds possess an [objectified] locus?

As long as we consider phenomena and persons as having an objectified locus that is their true essence, afflictions will continue to arise. Only when the full meaning of selflessness is realized directly can that basis for self-grasping ignorance be cut. Thus Prāsaṅgikas take the Madhyamaka refutation a step further than Svātantrikas by saying there is not the tiniest bit of an objectified locus in any phenomena and that things exist by being merely designated in dependence on their basis of designation. Here, “merely” excludes inherent existence. In this view, there is nothing left to grasp because inherent or objective existence is negated on all external and internal phenomena, including the person and the mind. Everything is empty of inherent existence and yet exists nominally and dependently.

A similar understanding is growing among scientists. Newtonian science took for granted an objective external world that exists separate from the observer. The findings of quantum physics cast doubt on this and make it difficult to ground reality in objective matter. Some scientists are considering that perhaps things are not completely separate and unrelated to the perceiver after all.

Although you see the inconsistencies in the tenets of the lower schools, you may initially feel uneasy with the Prāsaṅgikas’ radical idea of emptiness. Go slowly and continue to deepen your understanding of that system. In time, your inquiry and analysis will deepen your understanding.

Personally speaking, I'm inclined to the Prāsaṅgika view of emptiness; it helps avert attachment, anger, and other afflictions and at the same time confirms that we human beings have a common, shared world that arose due to causes and conditions.

In short, all Buddhists agree that ignorance is dispelled by wisdom, but tenet systems differ on what the object of that ultimate wisdom is. The layout of the tenet systems articulates the various diversions we could easily fall into as well as the correct direction to follow when eliminating ignorance and cultivating wisdom. To understand emptiness, question how the people and environment and even your self exist. Reflect on the mechanism with which we construct our self-identity and the world around us, and how ignorance reifies these. In this process, you will counteract wrong views and familiarize yourself with correct ones.

---

## REFLECTION

1. Why does each tenet system want to portray itself as the Middle Way? What is it the middle between?
2. Review how each tenet system asserts itself as the Middle Way.
3. How does the sequence of tenet schools from lowest to highest lead students to the actual Middle Way view?
4. What are the advantages of provisionally adopting the view of each tenet school beginning with the Vaibhāṣika, investigating it and noticing both its strong and its weak points, and then progressing to the next tenet school and doing the same?

---

## *Definitive and Interpretable*

As we know, the Buddha gave a variety of teachings to different audiences in the forty-five years after attaining awakening. In doing so, he took into consideration their dispositions and interests because his ultimate intention was to lead them to fully realize the emptiness of inherent existence, banish all saṃsāric duḥkha, and attain full awakening. Nāgārjuna comments that the Buddha gave seemingly

contradictory statements to different audiences in order to skillfully lead the variety of listeners to nirvāṇa (MMK 18.8):

Everything is real, and is not real;  
both real and unreal;  
neither unreal nor real—  
this is the Lord Buddha's teaching.

On some occasions the Buddha said that the aggregates are like a burden and the person is the carrier of that burden, implying that the person is separate from the aggregates. To another group he said there is no permanent, unitary, independent self that is different from the aggregates. Sometimes he said the self is self-sufficient substantially existent; at other times he said a self-sufficient substantially existent person does not exist. In some sūtras, he stated that external phenomena do not exist but the mind truly exists, and in still others, he negated the true existence of all phenomena.

Aware of the Buddha's compassion and skill as a teacher, we are left with the task of discerning the definitive (*nītārtha*, *nītattā*) and the interpretable or provisional (*neyārtha*, *neyyattā*)<sup>39</sup> with respect to the meaning (subject matter) and the scriptures. In terms of the meaning, we must discern whether the subject matter that is expressed is to be understood definitively or provisionally, and in terms of scriptures—the words and means of expression—we must also distinguish definitive and interpretable. This issue is important because our philosophical understanding impacts our meditation, and meditation on the correct view is essential to cut the root of saṃsāra.

Each philosophical tenet system has its own criteria for discerning what is the Buddha's teaching and what is not. The way they do this reflects their unique understanding of the object of negation, selflessness, and ultimate truth.

Some Vaibhāṣikas and Sautrāntikas assert that all statements of the Buddha can be taken literally and are definitive and that no sūtra passage requires interpretation. They accept as literal and definitive sūtras explaining that conditioned phenomena are impermanent, that things conditioned by ignorance are duḥkha in nature, and that selflessness is the lack of a self-sufficient substantially existent person. In this context “sūtra” does not necessarily refer to whole texts but to passages, or even a few words, spoken by the Buddha.

Some later Vaibhāṣikas assert there are both definitive and interpretable meanings. Citing the Perfection of Wisdom sūtras as interpretable, they say the Buddha did not really mean that all phenomena have no inherent nature; rather, he was refuting non-Buddhist assertions concerning the fundamental nature and production from self.<sup>40</sup> In the same vein, some Sautrāntikas accept the Perfection of Wisdom sūtras as the Buddha's word but say these sūtras cannot be taken at face value and require interpretation. For example, they assert that when the Buddha said that products do not exist, he was referring to their disintegration in each moment.<sup>41</sup>

Only in the Yogācāra and Madhyamaka systems do we see a well-defined method to differentiate definitive and interpretable teachings of the Buddha. The Yogācārins assert that definitive sūtras are those whose explicit teachings can be accepted literally—for example, the *Sūtra Unraveling the Thought* (*Samdhinirmocana Sūtra*). Interpretable sūtras are those whose explicit teachings cannot be accepted literally—for example, the *Heart Sūtra* (*Prajñāpāramitāhṛdaya Sūtra*). Because Yogācāra Scripture Proponents say dependent phenomena and consummate natures truly exist and exist by their own characteristics, whereas imaginaries do not, they assert as definitive the sūtras that assert a foundation consciousness, explain their view of the three natures, and whose literal content refutes external objects.

Yogācārins base their way of distinguishing definitive and interpretable meanings and sūtras on the *Sūtra Unraveling the Thought*, which says the first and second turnings of the Dharma wheel are interpretable and the third is definitive. The first turning is interpretable because there the Buddha said that all phenomena exist by their own characteristics; the second turning is interpretable because there the Buddha said that no phenomenon exists by its own characteristics. The third turning of the Dharma wheel is definitive because there the Buddha clearly laid out which phenomena exist by their own characteristics and which do not.<sup>42</sup> Expressed in another way, the first turning presents the selflessness of persons but not the selflessness of phenomena, because it doesn't refute that phenomena exist by their own characteristics as bases of names and concepts. The second turning literally sets forth the non-true existence of all phenomena but doesn't differentiate that some phenomena truly exist and others do not. The third turning differentiates the true existence of dependent and consummate natures and the non-true existence of imaginaries.

Yogācārins differentiate words and meanings as definitive or interpretable by discussing the four reliances and the four reasonings. They differentiate the sūtras as definitive and interpretable through the four thoughts and four indirect intentions. An in-depth study of these four sets of four and the reasons that both groups of Yogācārins employ them to differentiate definitive and interpretable sūtras and meanings reveals a great deal about their view of emptiness.<sup>43</sup>

Mādhyamikas refer to the *Teaching of Akṣayamati Sūtra* (*Akṣayamatīnirdeśa Sūtra*) to discern definitive and interpretable. It says (MP 809):

What are definitive sūtras? Which require interpretation? Sūtras setting forth the establishment of conventionalities are called “requiring interpretation.” Sūtras setting forth the establishment of the ultimate are called “definitive. . . .”

Those sūtras teaching [about various objects] by way of various words and letters are called “requiring interpretation.” Those teaching the profound, difficult to view, and difficult to realize are called “definitive.” Those teaching, for instance, [the inherent existence of] an owner when there is no [inherently existent] owner and teaching those objects indicated by various words [such as] self, sentient being, life, nourisher, being, person, progeny of Manu, child of Manu, agent, and experiencer are requiring interpretation.

Those sūtras teaching the doors of liberation—the emptiness of things, signlessness, wishlessness, no activity, no production, no creation, no sentient being, no living being, no persons and no controller—are called “definitive.” This is called “reliance on definitive sūtras and non-reliance on those requiring interpretation.”

The sūtras requiring interpretation are those whose subject matter is the diversity of conventionalities, such as everyday objects. Those that are definitive speak about the absence of inherent existence of those objects, saying “no sentient being” and so forth. For Prāsaṅgikas, the interpretable may or may not be taken literally, but its main subject matter is not the final mode of existence, emptiness.

An example of a sūtra whose meaning is not to be taken literally is the one where the Buddha said that one’s mother and father are to be killed. He said this

to help relieve the crippling grief and remorse of someone who had killed his own parents. Clearly, this cannot be taken at face value but needs to be interpreted and understood in context. In this case, the Buddha was referring to killing not biological parents but the second and tenth of the twelve links of dependent origination—formative action and renewed existence. By “killing” these, saṃsāra ceases and nirvāṇa is attained.

Similarly, in the *Guhyasamāja Tantra*, the Buddha says that the Tathāgata is to be killed, and by killing the Tathāgata, one will attain supreme awakening. Obviously this cannot be taken literally but must be understood in a tantric context as controlling the life and vitality (T. *srog tshol*). The winds in the body are related to the mind. When the winds are uncontrolled, distractions arise. By controlling the winds through the practice of life and vitality, distractions are stopped. With much practice, this meditation stops the functioning of the coarse winds and coarse consciousnesses, enabling the extremely subtle mind to manifest. Meditators then employ this mind to realize emptiness, purify the mind of all defilement, and attain full awakening.

An example of a sūtra whose meaning is literal but whose subject matter is not the final mode of existence is a sūtra explaining the lack of a self-sufficient substantially existent person. While the person does lack such a mode of existence, that is not its final, deepest nature. Similarly, the statement “forms are impermanent” is literally correct, but impermanence is not the ultimate nature of forms. The meaning of both these statements is provisional.

The Buddha’s sūtras on the twelve links of dependent origination—“from ignorance polluted actions arise”—are also interpretable. A cause produces an effect on the conventional level. On the ultimate level both the cause and effect are empty of true existence. Because there is a deeper meaning—the emptiness of inherent existence—to be understood, these sūtras are provisional.

According to the Svātantrikas, sūtras of definitive meaning are those that explicitly teach the ultimate truth as their main topic and can be understood literally. Such sūtras are definitive because the ultimate can be established by a reliable cognizer and cannot be interpreted to be other than the ultimate. Sūtras that cannot be taken literally or that mainly teach conventionalities require interpretation.

According to Prāsaṅgikas, definitive scriptures are those whose main and explicit subject matter is the emptiness of inherent existence. They are called

“definitive” because they teach the emptiness of inherent existence—the subtle selflessness of all existents, the ultimate truth beyond which there is no more profound meaning to be discovered—and refute the elaboration of inherent existence. Within the sphere of reality, all phenomena become undifferentiable in that their ultimate nature is equally free of inherent existence. A sūtra’s meaning is said to be definitive when it cannot be interpreted to mean other than the deepest mode of existence, emptiness, which is the final view to be settled and the final nature of phenomena. Passages of definitive meaning cannot be interpreted to mean other than what is expressed because their meaning has been validly proven and realized.

Sūtras of interpretable meaning mainly and explicitly discuss conventionalities—all phenomena other than emptiness, such as sentient beings and karma—and describe how these arise, function, and cease. These sūtras are considered interpretable because they require interpretation to know the final mode of existence of conventionalities. Prāsaṅgikas say that conventionalities are falsities because they appear one way and exist in another. For example, money appears to exist “out there,” with its own inherent value, while in fact it is merely designated in dependence on paper and ink. It has worth only because we have attributed value to it. Interpretable sūtras do not challenge the seeming inherent existence of phenomena.

The word “interpretable” or “provisional” implies “to be led to” or “to be drawn out.” That is, provisional scriptures lead to understanding the final mode of existence. Their meaning must be drawn out because it is not the ultimate nature. The process of interpretation leads the literal meaning of the sūtra around to a different meaning, one that is emptiness.

In the *Heart Sūtra*, Avalokiteśvara speaks inspired by the blessing of the Buddha, “There is no eye, no ear . . . .” He is not refuting the existence of eyes, ears, and other conventionalities. If he did, someone could say that if eyes and ears did not exist, his words were also nonexistent, in which case they could not prove his point. Earlier in the sūtra Avalokiteśvara said, “the emptiness of inherent existence of the five aggregates also.” That qualification of “no inherent existence” is to be carried over to the other negations in the sūtra, such as “no eye, no ear . . . .,” so the meaning is that there is no inherently existent eye, no inherently existent ear, and so forth. Therefore the *Heart Sūtra* is definitive.

Since Svāntrikas negate inherent existence only ultimately but accept it conventionally, they say statements such as “all phenomena are empty of inherent existence” cannot be accepted literally and are interpretable. For it to be definitive, this statement would have to be qualified to read “all phenomena are *ultimately* empty of inherent existence.” The *One Hundred Thousand Stanza Perfection of Wisdom Sūtra* has the qualification “ultimately” and thus is considered definitive, whereas the *Heart Sūtra* lacks this qualification and is said to be interpretable.

To review: both Svāntrikas and Prāsaṅgikas accept that the *Heart Sūtra* mainly and explicitly teaches emptiness. However, for Svāntrikas it is an interpretable sūtra because it is not acceptable literally. This is because the sūtra literally states that the aggregates and so forth are empty of inherent existence, whereas Svāntrikas assert that they are empty of inherent existence only on the ultimate level but not conventionally. For Prāsaṅgikas, the sūtra is definitive because phenomena do not exist inherently on either the ultimate or conventional level, and this emptiness is phenomena’s final mode of existence.

While Svāntrikas say there are instances of both interpretable and definitive meanings in the second turning of the Dharma wheel, Prāsaṅgikas say sūtras of the second wheel are definitive because all phenomena lack inherent existence both ultimately and conventionally. In addition, Prāsaṅgikas carry over the qualification “no inherent existence” that is found in one sūtra to all sūtras of the same class. For them, the second turning of the Dharma wheel consists of definitive sūtras, and there are instances of definitive passages in the first and third turnings of the Dharma wheel where emptiness is explicitly taught.

The *Sūtra Unraveling the Thought* and the *Teaching of Akṣayamati Sūtra* employ different criteria to discriminate definitive and interpretable teachings of the Buddha. If we were to determine what is definitive and what is interpretable only according to what a sūtra says, there would still remain the question of what makes that sūtra authoritative. If citing another sūtra were required to validate the first sūtra, we would soon have an infinite regression. Thus we cannot rely entirely on scripture to make this differentiation, and since the Buddha is not here now, we cannot ask him. We must use reasoning and analysis to discern what is definitive. When a sūtra statement concerning the ultimate nature is subjected to critical analysis and does not contradict reasoning, it is said to be definitive. If a statement does not pertain to the ultimate nature—or even if it does, if it is not

supported by reasoning—it requires interpretation. With this in mind, Nāgārjuna wrote the *Treatise on the Middle Way*, where his primary approach was reasoning.

In summary, according to the Prāsaṅgikas, interpretable and definitive can refer to either a scripture or its meaning. Scriptures that speak mainly and explicitly about the emptiness of inherent existence are definitive because emptiness is the final mode of being of all phenomena and understanding it leads directly to liberation. All other topics are provisional because they are not the deeper nature of reality and lead to liberation only indirectly. Passages that speak of emptiness are definitive, even when the term “inherently” is used as a qualification in some but not all occasions in that scripture.

All of the Buddha’s teachings lead to liberation. Interpretable teachings indirectly steer us toward the correct view, and definitive teachings directly point out the ultimate nature of reality. For that reason, we should respect both sūtras of definitive meaning and those of interpretable meaning. Deprecating provisional sūtras would be an error because following their teachings—especially those concerning bodhicitta and renunciation of saṃsāra—leads us toward the realization of the emptiness of inherent existence. As a follower of Nāgārjuna and a Madhyamaka practitioner, I respect and revere the *Sūtra Unraveling the Thought*, which presents an alternative explanation on the meaning of emptiness, even though my faith and conviction are directed toward the teachings on dependent arising and emptiness expressed in the Perfection of Wisdom sūtras.

Similarly, we should respect the teachings of other religions because they benefit sentient beings and are therefore valuable. Nevertheless, our faith, conviction, and practice should be directed toward the tradition and path that we follow. In the following chapters, when explaining the ultimate truth, I will rely upon the definitive teachings of the Prāsaṅgika Madhyamaka system, which is considered the supreme, definitive view.

---

## REFLECTION

1. Why did the Buddha teach a diversity of views, some of which seemingly contradict each other?
2. Why is differentiating definitive and interpretable sūtras important to our Dharma practice?

3. What do Yogācārinś consider definitive and interpretable sūtras?
  4. What do Prāsaᅅgikas consider definitive and interpretable sūtras?
- 

## *Proving the Definitive Meaning*

We cannot simply claim that the definitive teachings as understood by the Prāsaᅅgikas are supreme, but must offer some logical proof that all phenomena are empty of inherent existence that others can verify for themselves. When engaging with the world, we have the sense that things exist out there, independent of our perception or conception. But when we search for the actual object—the real referent of our words—we cannot find something that exists from its own side or under its own power. If phenomena possessed inherent existence, they would have an objective basis that grounds their reality. However, when we closely examine the nature of things, we see that their identities depend on factors other than themselves. If they were not dependent on other factors and were self-enclosed entities in and of themselves, they could not impact one another. In that case, causes could not produce effects.

A similar reasoning used in quantum physics can apply to material phenomena. To our naïve everyday perception, the flower in front of us seems to be “out there,” something different from me. I can touch it and see it. It is there in front of me, waiting for me or someone else to come along and see it. But when you examine “What exactly is that flower?” and start reducing the flower to its constitutive elements on the molecular level and then to subatomic particles, we come to a point where there are simply subatomic particles without any difference between organic and inorganic phenomena. When you deconstruct even the notion of subatomic particles, nothing can be found. This approach from quantum physics is helpful to deconstruct the solidity of the objects that we perceive.

Yogācārinś apply the process of deconstruction to the external material world, but stop there. They still reify the internal world of experience and maintain the view that it is truly real. Mādhyamikas continue the examination and extend the same type of analysis to our inner mental world of experience and consciousness. The mind is immaterial, so we can't examine its spatial dimensions. It is a

continuum, and when deconstructed there is only a series of minute temporal points; there is nothing to identify as a mindstream.

The Yogācāra rejection of the external world of matter can almost be seen as a kind of nihilism. Because they cannot find an objective basis of the material world, they negate the external, material world even conventionally. Mādhyamikas, however, do not ground their notion of reality on some kind of objective basis. The reality and existence of things is understood only within the framework of conventional day-to-day experience. From that perspective, both the mental world of experience and the external world of material phenomena exist. Mādhyamikas do not make one more or less real than the other.

The essentialists—those who assert true existence—use the principle of dependent arising as the premise to argue that phenomena possess a real, specific, true nature. For them, dependent arising is proof of true existence. Nāgārjuna responds by saying that the reason they use to prove true existence—dependent arising—actually proves the exact opposite—emptiness. The fact that things arise from causes and conditions and depend on other factors shows that they do not possess any truly existent nature of their own.

According to the essentialists, if things didn't truly exist, they wouldn't exist at all. Nāgārjuna retorts that in a system that does not accept emptiness, there is no way to establish the existence of karma and its effect, the four truths, dependent arising, and so on. If all phenomena were not empty of true existence, none of these things would be tenable; they could neither arise nor cease. In contrast, in a system that upholds the emptiness of true existence, all these phenomena are possible.<sup>44</sup> In fact, emptiness and dependent arising come to the same point. In this way, Nāgārjuna demonstrates through reasoning that the meaning of the Perfection of Wisdom sūtras cannot be interpreted otherwise but is definitive. He also shows that the sūtras that disagree with this require interpretation and cannot be understood literally.

How, then, do we understand sūtras that contain statements such as “everything is mind only”? Nāgārjuna explains that they were spoken to allay the fears of some disciples; in *Precious Garland* he said (RA 394–96):

Just as a language teacher makes [some students]  
read from a diagram of the alphabet,  
likewise, the Buddha taught the Dharma

in accord with his disciples' abilities.

To some, the Dharma he taught is  
for the purpose of stopping negativity.

To some, it is aimed at the practice of virtue.

And to some, he taught one that is based on duality.

To some, the Dharma he taught is not based on duality,  
and to some, he taught a profound Dharma that terrifies the timid.

Its essence is wisdom and compassion,  
and it is the means to attain full awakening.

As these verses show, the Buddha teaches the Dharma according to the aptitude, receptivity, and needs of the specific disciples. In general he begins by teaching ethical conduct—abstaining from destructive actions and engaging in constructive ones. Then he teaches the most basic level of no-self. When disciples are prepared, he teaches them the Yogācāra presentations of the nonduality of subject and object. Finally, to those of advanced mental faculties, the deepest meanings of emptiness and bodhicitta are revealed. This skillful method of introducing students to teachings requiring interpretation first, followed by teaching on the definitive meaning when they are receptive to it, protects students from falling into nihilism by misunderstanding emptiness.

Tsongkhapa himself struggled to maintain the balance between negating inherent existence on all phenomena and at the same time maintaining the everyday reality of cause and effect. In the earlier part of his life, he held a view that considers everyday reality to be a mere illusion and the meditation on emptiness to be constituted by disengagement from phenomena. Just as reality is indescribable and indefinable, in the same way the meditation on emptiness is one of nonjudgment and disengagement, he thought. Later in his life Tsongkhapa refuted this view and realized that although phenomena are empty of inherent existence, they function in the world and exist conventionally like illusions.

### *Avoiding Confusion*

We may easily mistake the meaning of words when reading Madhyamaka texts on emptiness. For example, sometimes both “things” (*bhāva*) and “non-things”

(*abhāva*) are negated. Here, “thing” refers to inherent existence, and “non-thing” to total nonexistence. In this case Mādhyamikas are refuting the two extremes. They are not saying all impermanent and permanent phenomena don’t exist at all.

Similarly, sometimes Madhyamaka texts negate existence and nonexistence. We may become confused because these are a dichotomy and if one is negated, the other must be asserted. However, in this context “existence” means inherent existence and “nonexistence” refers to total nonexistence. Refuting “existence” and “nonexistence” undermines the two extremes.

## *The Three Doors of Liberation*

Definitive sūtras speak of the three doors of liberation (*vimokṣa, vimokkha*). These are selflessness seen from three perspectives: the entity, cause, and result of conditioned phenomena. The first, *emptiness* (*śūnyatā, suññata*) door of liberation, is the lack of inherent existence of the entity or nature of any phenomenon—for example, a sprout or a person. Meditation on this leads to realization that the entities of phenomena lack inherent existence, and this leads to the pacification of grasping the entities of phenomena as inherently existent.

The *signless* (*ānimitta, animitta*) door of liberation is the emptiness that is the absence of inherent existence of the cause of anything—for example, the emptiness of a seed in relation to the sprout. Meditation on this leads to the realization that causes do not inherently exist and this pacifies grasping the causes of a conditioned thing to be inherently existent. Here “sign” means cause.

The *wishless* (*apraṇihita, appaṇihita*) door of liberation is the lack of inherent existence of the effects of any phenomenon. Meditation on this leads to the realization that effects do not inherently exist and frees us from the effects of saṃsāra. “Wish” means the objects that are wished for, both those in saṃsāra and in nirvāṇa, and the wishlessness is their lack of inherent existence. There are no inherently existent objects to be sought, hoped for, or attained. Although we seek the cessation of duḥkha and its causes and the attainment of the path and cessation, none of these exist from their own side, and neither do we.

The three doors of liberation can be understood in multiple ways. First, emptiness is the emptiness of a phenomenon, let’s say an apple. Signlessness is the lack of inherent existence of its causes and conditions—the apple seed, water,

fertilizer, and so forth. Wishlessness is the lack of inherent existence of its results—applesauce or an apple pie. These too do not exist inherently.

The three doors of liberation can be contemplated in terms of saṃsāra and nirvāṇa: the entity, causes, and effects of saṃsāra lack inherent existence. Nirvāṇa is permanent and its entity is empty. The true paths that are causes of the attainment of nirvāṇa are impermanent, and they too lack inherent existence. The nature of both saṃsāra and nirvāṇa are empty. The causes of our saṃsāra—afflictions and polluted karma—are empty of inherent existence, as is the wisdom that brings about nirvāṇa. The wise do not try to eliminate inherently existent afflictions or attain inherently existent nirvāṇa, for they know these do not exist. Nor do the wise conceive of an inherently existent person who practices the path and later becomes an inherently existent buddha. Meditation on each of the three doors of liberation leads us to realize the emptiness of inherent existence and pacifies grasping at inherent existence.

In addition to things, their causes, and effects being empty, the relationship between these—the activity of arising from causes and the activity of producing effects—are also empty.

The three doors of liberation are related to other topics. They include the eight profound meanings stated in the *Heart Sūtra* when Avalokiteśvara says:

Śāriputra, like this all phenomena are merely empty, having no characteristics. They are not produced and do not cease. They have no defilement and no separation from defilement. They have no decrease and no increase.

*Empty, having no characteristics* speaks of the emptiness door of liberation: phenomena lack both an inherently existent general nature and an inherently existent specific nature. A lamp's general nature is, for example, its impermanence, and its specific nature is its function to light up an area. The four characteristics—*not produced and do not cease, no defilement and no separation from defilement*—pertain to the signless door of liberation because they speak of the cause (and effect) of the thoroughly afflictive, saṃsāra, and the thoroughly pure, nirvāṇa. The cause and effect in terms of saṃsāra are true cause and true duḥkha; the cause and effect in terms of nirvāṇa are true path and true cessation. The remaining two—*no decrease and no increase*—speak of the wishless door of liberation. The faults

that we wish to decrease and the excellent qualities we want to increase lack inherent existence.

The three doors of liberation are also related to the basis, path, and result. Grasping the basis of our saṃsāra—the five aggregates, eighteen constituents, ignorance, afflictions, and so forth—as inherently existent blocks the emptiness door to liberation. Realizing the emptiness of these opens the emptiness door to liberation.

Holding the path to freedom as having inherently existent signs or characteristics blocks the signless door to liberation. Realizing that they lack such signs of inherent existence and using this realization to cease craving and clinging to an inherently existent path opens the signless door to liberation.

Believing the results of liberation and full awakening to be inherently existent blocks the wishless door to liberation. Abandoning the wish to attain inherently existent liberation or awakening opens the wishless door to liberation.

In addition, the three doors can be related to the sixteen aspects of the four truths. The explanation of this is slightly different in the *Ornament of Clear Realizations* and the *Treasury of Knowledge*. The *Ornament* explains that the three doors are paths of antidotes. Paths of antidotes are exalted knowers that are able to destroy the superimpositions that are their objects of negation, in this case the superimposition of inherent or true existence. In the mindstreams of ārya bodhisattvas, the door of emptiness relates to the last two aspects of true duḥkha: empty and selfless. It is an antidote to the view of self because it directly realizes the absence of a permanent, unitary, independent self (empty) and the absence of a self-sufficient substantially existent self (selfless). The door of signlessness is the pristine wisdom that directly realizes the four aspects of true cessation—cessation, peace, magnificence, and definite emergence—and the four aspects of true paths—path, suitable, accomplishment, and way of deliverance. As such, it is an antidote to grasping inherent existence. The door of wishlessness is the antidote to the wish for birth in the three realms of saṃsāra. It is the pristine wisdom that directly realizes the lack of inherent existence of the first two aspects of true suffering—impermanence and duḥkha—and of the four aspects of true origins—cause, origin, strong producer, and condition.

Although three doors of liberation are mentioned, in fact the view of emptiness—the absence of inherent existence—is the door to liberation that takes priority over the others. When we know that all phenomena lack self—

inherent existence—and employ that wisdom to extinguish craving for things, we no longer crave for or apprehend signs of inherent existence in anything. The *Requisites for Awakening (Byang chub kyi tshogs)*<sup>45</sup> explains (LC 3:194):

Because [phenomena] do not inherently exist, they are empty.  
Further, because [phenomena] are empty, what use are signs?  
Inasmuch as they have overcome all signs,  
why would the wise wish [for such phenomena]?

The aspiration for liberation, bodhicitta, faith, and ethical conduct are among the many qualities needed to attain awakening, but the realization of the three doors of liberation are the incomparable cause for awakening because they cut the root of saṃsāra completely.

The three doors of liberation are also explained in the Pāli tradition. The liberations are ārya paths that realize nirvāṇa—the signless, wishless, and empty doors of liberation. These three are one nature but are differentiated depending on the aspect of nirvāṇa they focus on. Signlessness sees nirvāṇa as being free from the signs of conditioned phenomena. Wishlessness sees nirvāṇa as completely devoid of clinging and desire. The emptiness door of liberation sees nirvāṇa as empty of a self or any kind of substantial identity.

Because there are three liberations, there are three doors of liberation (*vimokṣamukha, vimokkhamukha*) through which one leaves the world and enters liberation. These three doors correspond to insight into the three characteristics. Insight into impermanence is the door to the signless liberation because it removes all signs of conditioned phenomena—specifically the aggregates—so that the undeclining, undisintegrating nature of nirvāṇa can shine forth. By knowing impermanence, we know all conditioned things to be limited and circumscribed by their arising and ceasing. They do not exist before they arise, and they do not go beyond disintegrating. The signless element is nirvāṇa in which all signs of conditioned things—such as their arising and ceasing—are absent.

Insight into duḥkha is the door to wishless liberation, since directly knowing the unsatisfactory nature of conditioned phenomena stops any wish or desire for them. Contemplation of duḥkha leads to a sense of urgency to be free from conditioned things and the mind enters into nirvāṇa viewed as the wishless

element. The wishless element is nirvāṇa because in nirvāṇa there is no desire, greed, or clinging that wishes for conditioned existence.

Insight into selflessness is the door to empty liberation, since it reveals that no conditioned phenomenon has a substantial identity and therefore it is unreasonable to think nirvāṇa, the unconditioned, is encumbered by a solid identity. Contemplating that conditioned things are not I or mine leads to seeing them as foreign, and the mind enters into nirvāṇa viewed as the empty element, which derives its name because it is empty of self.

In all three cases, the correct understanding of the conditioned cuts through mental fabrications to reveal the unconditioned, nirvāṇa. Thus the way to realize the unconditioned is through understanding the conditioned correctly—as impermanent, duḥkha, and not self. Nirvāṇa is not some isolated, absolute entity; rather it is realized by seeing with wisdom conditioned phenomena as they really are.

## *Nāgārjuna's Homage*

Like the three doors of liberation, Nāgārjuna's homage to the Buddha in *Treatise on the Middle Way* explores the emptiness of causes and their effects:

I prostrate to the perfect Buddha,  
the best of all teachers,  
who taught that that which is dependent arising  
is without ceasing, without arising,  
without discontinuation, without permanence,  
without coming, without going,  
without difference, without identity,  
and peaceful—free from [conceptual] fabrication.

Here Nāgārjuna identifies emptiness as the absence of eight characteristics of conditioned things: ceasing, arising, discontinuation, permanence, coming, going, difference, and identity. These eight absences are not qualities of an absolute or permanent entity that neither arises from causes nor produces effects. Rather, they pertain to the very things that conventionally have causes and

effects, that come and go, that are the same (identical) or different, and so on. Conditioned phenomena and their eight characteristics all exist conventionally, but ultimately cannot be found by analytical wisdom.

In what sense do things arise? How can we understand causation? In his text, Nāgārjuna explains that on the conventional level, when we say something arises from something else—for example, peach trees arise from peach seeds—we do so in the context of everyday convention. We do not examine whether the peach tree arises from a cause that is identical to itself, a cause that is inherently distinct, both, or causelessly. We simply observe a peach tree growing from a peach seed and say, “This thing arises from that thing.”

But when we move beyond the limits of conventional truths and search for some kind of inherent, objective arising or production of the peach tree, we have to consider what kind of cause could produce an inherently existent peach tree. Such a cause has to be either identical to its effect or completely distinct and unrelated to it. The non-Buddhist Sāṃkhyaś assert the former, saying the result is already in the cause at the time the cause exists. Buddhists refute this, saying that if the result is present in the cause while the cause exists, then a fully formed adult elephant would exist in the womb in a mother elephant, and a peach tree with leaves and branches would exist in a peach seed. The alternative is that an effect arises from a cause that is completely unrelated to it. In that case, the adult elephant would have no relationship at all to the embryo in the mother elephant and a peach tree would be totally unrelated to the seed from which it grew.

On the conventional everyday level, there is no problem with talking about causes and effects being different. We know the elephant embryo and the adult elephant are not the same thing but are causally related to each other. But when we search with ultimate analysis, asking “How exactly does an effect arise from a cause? At what specific moment does the cause become the effect?” the process of production becomes amorphous.

Nāgārjuna presents two arguments to refute that an effect arises from a cause that is inherently different and other than it. The first points out that the very idea of “other” presupposes something that has its own unique, inherent nature that is unlike anything else. But if something does not possess its own self-nature—if it is not an inherently existent thing—then how can we posit something that is different from it? If something is not inherently real, how can we posit

something that is inherently other than it? This is one way in which the notion of an objectively real difference between self and other is undermined.<sup>46</sup>

Nāgārjuna's second argument states that the very idea of arising becomes untenable if we assert that cause and effect are inherently different or inherently other. A cause precedes its effect, and the effect follows its cause. But when we look at the activity of something arising, we see that two processes are occurring simultaneously: the ceasing of the cause and the arising of the effect. When the effect is arising the cause is ceasing; when the cause is ceasing the effect is arising.

The cessation of the cause is an activity of the cause, and the arising of the effect is an activity of the effect. While the seed is ceasing, the sprout is arising. If these two simultaneous activities existed inherently, the two agents that are doing these two activities—the seed and the sprout—should also exist at the same time. But this is impossible because the seed must cease for the sprout to arise. Such faults appear if we assert inherently existent causes and effects. Through these two arguments, Nāgārjuna undermines any notion of something arising from another thing that is a totally unrelated other.

Commenting on Nāgārjuna's homage, Candrakīrti says that these eight attributes of dependent phenomena are negated from the perspective of unpolluted wisdom—the āryas' wisdom of meditative equipoise that directly and nonconceptually realizes emptiness. This wisdom is free of subject-object duality and free of conceptual fabrications. The only content or object of that wisdom is the emptiness of inherent existence; veiled truths do not appear to this nonconceptual wisdom. For that reason, Candrakīrti says that the negation of the eight characteristics of dependent phenomena has to be understood from the perspective of emptiness, not on the conventional level. While conventionally things arise and cease, are identical or different, come and go, these activities do not exist on the ultimate level, nor do the agents of these activities exist in the perspective of the wisdom realizing the ultimate nature.

Understanding this is important. Dzogchen contains the practice of searching for the nature of mind—what the mind is, where it comes from, what its shape and color are, and so on. This is a skillful way to lead beginning meditators to approach understanding the nature of mind, for they come to understand that the mind has no form, no shape, no color; it cannot be touched or smelled or tasted. These meditators have not realized the ultimate nature of the mind, which is the absence of inherent existence; they have only realized the

mind's lack of conventional qualities such as color and shape. We have to clearly distinguish the conventional and ultimate natures of the mind and understand that realizing the ultimate nature of the mind involves negating its (fabricated) inherent existence, not its form or location.

---

## REFLECTION

1. What are the three doors of liberation? How are they similar? How are they different?
  2. What was the Buddha's purpose in teaching them?
  3. What are Nāgārjuna's two arguments refuting inherently existent causes and effects?
-

## 6 | Cognizing Subjects and Cognized Objects

AS MENTIONED BEFORE, a direct perceiver of emptiness has the power to cleanse our mind from all defilements. Generating this kind of wisdom mind involves gaining the correct understanding of the meditation object—in this case emptiness—as well as the types of minds that can perceive it, be they conceptual consciousnesses or direct perceivers. These are the topics of the present chapter.

### *The Steps to Understand Emptiness*

Practitioners gradually pass through several stages of knowledge while progressing from ignorance to the correct realization of emptiness. We begin with wrong awareness, progress to doubt inclined to the right understanding, followed by correct assumption, then inference, and finally a direct perceiver of emptiness.

We ordinary people have a wrong awareness that grasps both persons and other phenomena to exist inherently; this is the opposite of how they actually exist. This erroneous mind doesn't disappear by itself; the first step to removing it is to listen to correct teachings on emptiness. Contemplating these teachings arouses doubt. Doubt inclined to the wrong conclusion rejects emptiness, but if we continue to study and reflect on emptiness, it will gradually give way to doubt that thinks phenomena may or may not be empty. After more study and reflection, doubt inclined to the right conclusion thinks, "I'm not sure, but phenomena lacking inherent existence makes sense." Continuing to learn and discuss, you reach a correct assumption that phenomena lack inherent existence. Although you are now going in the right direction, your understanding is shallow, and the reasoning proving emptiness is not adequately clear to your mind. You know the words to explain emptiness and intellectually you may believe that all phenomena are empty of inherent existence because they are dependent arising, but it doesn't impact your mind very much.

The step of correct assumption may last a long time, as you must continue to learn, question, and analyze in order to refine your understanding of emptiness. After some time you will gain the correct understanding of emptiness and have a correct inference, which irrefutably knows through valid reasoning that all persons and phenomena lack inherent existence. Inference is a conceptual consciousness that realizes emptiness by means of a conceptual appearance of emptiness. This realization, which may occur before or after entering a path, has a powerful effect on the mind; it shakes how you view the world because you understand that the world and the sentient beings in it don't exist the way they appear to.

Practitioners who have not already developed concentration at the level of serenity now put effort into that. When cultivating serenity, their object of concentration can be any of the objects explained in the scriptures.<sup>47</sup> After gaining serenity, they continue to meditate, alternating analytic and stabilizing meditation on emptiness. As time goes on, emptiness becomes more and more familiar to their minds, to the point where, by engaging in minimal analysis, the analysis itself leads to pliancy and serenity. They then meditate on emptiness with a mind that is the union of serenity and insight; this marks the beginning of the path of preparation. Through continual meditation, emptiness becomes clearer until eventually the conceptual appearance is worn away and they directly and nonconceptually perceive emptiness. At this point, they enter the third path, the path of seeing. Though a conceptual consciousness and a direct perceiver are very different, the former can lead to the latter, since in this case they are both mental consciousnesses and have the same apprehended object, emptiness.

Now the process of eliminating the afflictions begins, starting with the acquired afflictions, which are eliminated at the beginning of the path of seeing. Through familiarization with the view of emptiness on the fourth path, the path of meditation, the innate afflictions are eradicated. Those following the paths of śrāvakas and solitary realizers reach the fifth path, the path of no-more-learning of their vehicles, when all afflictive obscurations have been uprooted. Those following the bodhisattva path abandon all afflictive obscurations at the eighth bodhisattva ground on the Mahāyāna path of meditation. They attain the Mahāyāna path of no-more-learning, buddhahood, when the cognitive obscurations have been completely overcome.<sup>48</sup>

*Realization of emptiness* can refer to a range of mental states, from a correct inference to a nonconceptual direct perceiver. Both of these mental consciousnesses are reliable cognizers that know emptiness correctly. Realization does not occur suddenly in a flash to a completely unprepared person. The rare practitioners who experience sudden awakening have done considerable practice in many previous lives and left strong imprints on their mindstreams for understanding emptiness. When these imprints ripen in this life, it may appear that their realization is “sudden,” but in fact it was cultivated gradually over many lifetimes.

*Awakening* has different meanings according to various Buddhist traditions. Zen masters explained to me that in their tradition, awakening includes the first glimpse of emptiness, which is a conceptual realization. Awakening is neither a final attainment nor a stable realization, and when the person arises from meditation on emptiness, dualistic appearances and afflictions appear again. A long time may pass before having another glimpse of emptiness. Only when their realization of emptiness is stable, direct, and nonconceptual do they begin the process of removing afflictions from the root.

In the Theravāda tradition, awakening has four stages: stream-enterer, once-returned, nonreturner, and arhatship. A practitioner becomes a stream-enterer upon having the direct perceiver of nirvāṇa.<sup>49</sup> This introductory realization is deepened and integrated into their minds during the stages of once-returned and nonreturner and finally becomes the stable and profound realization of an arhat.<sup>50</sup>

In the Tibetan tradition, gaining the realization of emptiness does not mean one is awakened. “Awakening” refers to having attained the path of no-more-learning of whichever vehicle one follows. Although texts speak of the awakening of a śrāvaka or solitary-realizer arhat, in the Sanskrit tradition, in general “awakening” refers to buddhahood.

---

## REFLECTION

1. Contemplate the steps to realize emptiness with a direct perceiver, beginning with a wrong view, progressing to doubt and then correct assumption, followed by inference and finally direct perceiver.

2. What changes occur from one step to the next?
  3. What does it mean to realize emptiness? What minds do that?
  4. What are the various meanings of “awakening”?
- 

## *The Process of Cognition*

In any process of cognition, there is the subject—the consciousness that apprehends—and the object—what is apprehended. When examining how things exist, identifying the varieties of subjects and objects and differentiating the accurate from the mistaken is crucial. Some background regarding Buddhist ideas of cognition will be helpful to do this. In addition to the following sections, we recommend reviewing chapters 2 and 3 in *The Foundation of Buddhist Practice*, the second volume of the *Library of Wisdom and Compassion*.

### *Subjects—Consciousnesses Knowing an Object*

Among subjects—the minds that know or experience an object—there are nonconceptual consciousnesses (*nirvikalpaka*) and conceptual consciousnesses (*kalpanā*). Nonconceptual consciousnesses know their objects without the medium of a conceptual appearance (generic image, *artha-sāmānya*), while conceptual consciousnesses know their objects by means of a conceptual appearance.<sup>51</sup> In general, direct perceivers are knowers that are free from conceptuality (*kalpanā-apodha*) and nonmistaken (*abhrānta*). There are three kinds of direct perceivers that are nonconceptual consciousnesses: (1) Sense direct perceivers (visual, auditory, olfactory, gustatory, tactile, and mental direct perceivers). These are, for example, the visual consciousness apprehending yellow and the auditory consciousness apprehending a melodious sound. (2) Mental direct perceivers—for example, clairvoyance and clairaudience. (3) Yogic direct perceivers—mental consciousnesses, developed through meditation, that directly know more subtle phenomena, such as impermanence and emptiness. This is the Sautrāntika view; Prāsaṅgikas gloss “direct” as meaning not dependent on a reason, and so consider the second moment onward of inferences to be direct perceivers even though they are conceptual.

Conceptual consciousnesses are mental consciousnesses that know their object indirectly, by means of a conceptual appearance. These consciousnesses think, imagine, plan, remember, visualize, impute, designate, learn ideas and concepts, and so forth. Often, for a conceptual appearance to arise, first a sense consciousness perceives raw sense data directly. A conceptual consciousness gives a name to that object, and the name and concept are mixed with what we see. The appearing object to the conceptual consciousnesses is a conceptual appearance of that thing, not the actual object. It may be a visual image when we remember something we saw, or it may be an image of a sound, tactile sensation, feeling, abstract object, and so forth.

One conceptual consciousness may give rise to another one. When planning where to put a table in a room, we imagine it being against the wall, in the middle of the room, turned this way or that. Each one is a new conceptual appearance known by a new moment of consciousness.

For example, a visual direct perceiver directly sees the blue color of the sky. Later when we remember the sky's color, we do not see it directly. Instead a conceptual appearance of blue appears to our mental consciousness. This conceptual appearance is not the actual blue color, yet it appears to be the same as the blue color. For this reason, conceptual consciousnesses are considered mistaken, even though they may understand their object properly. The conceptual appearance is only an approximation of the blue we saw, a mixture of each moment of the shades of blue we saw in the sky that forms a conglomerate general image of the blue sky.

Imagining an apple is very different than actually tasting one. A conceptual consciousness does not perceive the distinct qualities of a particular apple; rather an abstract aspect of an apple that seems to be an apple appears to our mind. When we eat an apple, we directly perceive its color, shape, smell, taste, and tactile qualities by means of our sense direct perceivers.

All the qualities of a flower do not appear simultaneously to a conceptual consciousness in the same way they do to a direct perceiver. While the color, shape, impermanence, and so forth of a flower appear simultaneously to a visual direct perceiver, a conceptual consciousness must think about each of these traits one by one. Conception knows the qualities of the flower individually and indirectly; it does not perceive the flower and its attributes as clearly as a direct perceiver does.

Both sense consciousnesses and conceptual consciousnesses (thoughts) may be either erroneous (*viparyāsa*) or nonerroneous (*aviparīta*). A visual consciousness correctly seeing the color of a flower in a garden and an inferential cognizer of emptiness are nonerroneous. Seeing flowers in the sky under the influence of drugs and asserting a permanent, unified, and independent soul are erroneous. A reliable visual consciousness and an inferential understanding of not-self discounts these.

Although direct perceivers know their objects more vividly than conceptual consciousnesses, both types of consciousness have their roles. Many of the advances human beings have made are due to our ability to think and reason, which involve conceptuality. Learning the Dharma involves conceptual consciousnesses; auditory direct perceivers hear the sound of words, but conceptual consciousnesses attribute meaning to them, enabling us to discuss and exchange ideas. Before attaining a yogic direct perceiver of emptiness, it is necessary to hear or read teachings, study, think about, and discuss or debate our understanding of emptiness. These activities all involve conceptual consciousnesses. Only by meditating over time with a correct conceptual understanding of emptiness will we be able to diminish the conceptual appearance of emptiness and perceive emptiness directly. To make this point, the *Kāśyapa Chapter Sūtra* gives the analogy of a fire created by two sticks rubbed together that in turn burns the sticks:<sup>52</sup>

Once the fire has arisen, the two sticks are burned. Just so, Kāśyapa, if you have the correct analytical intellect, an ārya's faculty of wisdom is generated. Through its generation, the correct analytical intellect is consumed.

If the stick of correct thought rubs against the stick of wrong thought, the fire of wisdom will arise and consume both thoughts. The stick of correct thought is needed to start the fire, but once the fire begins, it is no longer needed and is destroyed. Although thought is initially necessary to learn the correct view of reality, the union of serenity and insight that directly perceives emptiness goes beyond thought.

---

## REFLECTION

1. What is a conceptual appearance?
  2. What is the difference between how a conceptual consciousness knows an object and how a direct perceiver knows it?
  3. Consider your day. Make examples of direct perceivers and conceptual consciousnesses knowing objects.
- 

### *Objects—Phenomena Known by a Consciousness*

One perception or conceptual consciousness has different types of objects. Knowing these enables us to better understand the process of cognition and is essential for comprehending the relationship between emptiness and dependent arising. Among the various types of objects are appearing objects, observed objects, apprehended objects, and conceived objects. The presentation below is according to the Sautrāntika system; Prāsaṅgikas agree with it unless otherwise noted.

The **appearing object** (*pratibhāsa-viṣaya*) is the object that appears to that consciousness. The appearing objects of sense direct perceivers include color, shape, sound, smell, taste, texture, temperature, and so forth.

The appearing object to a conceptual consciousness is a conceptual appearance of the object. Conceptual appearances are considered permanent phenomenon. A conceptual consciousness is mistaken with respect to its appearing object because the conceptual appearance of a table appears to be a table, although it is not. For this reason, thought consciousnesses, which are always conceptual, are mistaken with respect to their appearing object because they mistake a conceptual appearance of the object for the actual object.

The **observed object** (*ālambana*) is the basic object that the mind refers to or focuses on while apprehending certain aspects of it. It is equivalent to the focal object (*viṣaya*).<sup>53</sup>

The **apprehended object** (object of the mode of apprehension, *muṣṭibandhaviṣaya*) of a consciousness is equivalent to its **engaged object** (*pravṛtti-viṣaya*) and its **object of comprehension** (*prameya*). This is the main

object with which the mind is concerned, the object that the mind is getting at. This is the object that is apprehended. For direct perceivers, the appearing object and the apprehended object are the same. For a conceptual consciousness thinking about a table, the appearing object is a conceptual appearance of a table, and the apprehended object is a table. This mind is mistaken with respect to its appearing object because it knows the object via a conceptual appearance, but is not erroneous with respect to its apprehended object. According to the Prāsaṅgikas, an ignorant mind grasping the table as truly existent is erroneous with respect to both its appearing and its apprehended object because the table is not inherently existent. Although a casual visual consciousness seeing the table is not erroneous with respect to its apprehended object, the table, it is mistaken with respect to that object because it appears truly existent.

The **conceived object** (*adhyavasāya-viṣaya*) is the principal object of a conceptual consciousness. The appearing object of a conceptual consciousness thinking about a flower is the conceptual appearance of a flower; its conceived object is the same as its apprehended object—a flower.

Let's apply these different types of objects to a common situation. Jane and her friends go out to an Italian restaurant and order lasagna. Although we may think of eating as a single experience, actually a lot is going on. When the plates of lasagna are served to them, they see the red of the sauce, the white of the noodles, and the green of the salad with their visual consciousness. These are the observed objects of their visual consciousness. The smell of the lasagna is the observed object of their olfactory consciousness. The various tastes are the observed objects of their gustatory consciousness and the smoothness of the noodles is the observed object of their tactile consciousness. The consciousnesses directly perceiving these attributes are reliable sense direct perceivers, and their apprehended objects are the same as their observed objects—the color and shape for the visual consciousness, the taste for the gustatory consciousness, and so on.

A week later Jane and her friends return to the same restaurant. While looking at the menu and thinking about what to order, they remember the lasagna they ate the previous week. The color and shape, taste, and so on of the lasagna are known through conceptual consciousnesses. The appearing object of the taste is a conceptual appearance of the taste that appears to the mental consciousness knowing the taste of the lasagna. The apprehended object is the

taste of the lasagna, and because this is a conceptual consciousness, its conceived object is also the taste of the lasagna.

It may happen that some exaggeration slips in. If Jane is very hungry, when she remembers the qualities of the lasagna from last week, the mental factor of distorted attention exaggerates its delicious taste, appealing smell, and colorful appearance. As a result of this exaggeration, attachment arises. Attachment is a conceptual consciousness; it is erroneous because the lasagna appears to be really fantastic, although it is not.

Not everything that appears to a sense consciousness is its appearing object. When a visual consciousness sees a table, the subtle impermanence of the table—its quality of changing moment by moment—also appears to that consciousness, but since impermanence is a subtle object, the visual consciousness cannot apprehend it. Thus subtle impermanence appears to that visual consciousness, but it is not its appearing object; the table is. If the person later thinks about subtle impermanence and correctly infers its existence, their mental consciousness apprehends it via a conceptual appearance; the conceptual appearance of subtle impermanence is the appearing object of that thought, and subtle impermanence is its apprehended object. If, through meditation, they remove the veil of the conceptual appearance, they will know subtle impermanence with a yogic direct perceiver. At that time subtle impermanence is both the appearing and apprehended objects of that consciousness. For view of the personal identity, according to the Prāsaṅgikas the observed object is the I and mine in your own continuum, and the apprehended object is an inherently existent I and mine.

---

## REFLECTION

1. What is a conceptual appearance?
2. As you go about your day, be aware when you are directly perceiving an object and when you are thinking about it.
3. What is the difference in your experience between knowing an object with a direct perceiver and knowing it with a conceptual consciousness by means of a conceptual appearance?
4. Does your mind go from a direct perceiver to a conceptual consciousness of the object quickly? Do you sometimes think you're directly perceiving an object when you're actually

thinking about it?

5. What are the benefits and disadvantages of a direct perceiver? What are the benefits and disadvantages of a conceptual consciousness?

---

Of our many conceptual consciousnesses during the day, some are useful and some aren't. The conceptual mind involved in reading this book enables you to learn ideas that will lead you to deeper understanding and wisdom. But the mind ruminating about a problem or judging other people's seeming faults easily turns the mind to nonvirtue. On these occasions, observe that although the object is not actually present, the conceptual mind has been so drawn into it that attachment, anger, or another destructive emotion easily arises. This accounts for many of our distractions during meditation.

These terms and distinctions among subjects and objects may initially seem confusing, but becoming familiar with them will clarify your understanding of the object of negation in the meditation on emptiness. The following chart encapsulates some of the key elements regarding objects according to the Sautrāntika system, which accepts inherent existence.

## CONSCIOUSNESSES AND THEIR OBJECTS

CONSCIOUSNESS	OBSERVED OBJECT	APPEARING OBJECT	APPREHENDED OBJECT	CONCEIVED OBJECT
Visual consciousness perceiving blue	Blue	Blue	Blue	—
Memory or thought of blue *	Blue	Conceptual appearance of blue	Blue	Blue
Thought of a permanent self (wrong conceptual consciousness of a nonexistent) * ^	Self	Conceptual appearance of a permanent self	Permanent self	Permanent self
Visual consciousness perceiving moving scenery when riding in a vehicle (wrong consciousness) ^	Scenery	Moving scenery	Moving scenery	—
Conception of a rabbit's horn (wrong consciousness) * ^	Rabbit's ear	Conceptual appearance of a rabbit's horn	Rabbit's horn	Rabbit's horn
Thought apprehending truly existent aggregates (wrong consciousness)* ^	Aggregates	Conceptual appearance of truly existent aggregates	Truly existent aggregates	Truly existent aggregates
Visual consciousness of an adult apprehending the reflection of a face in a mirror	Reflection of a face	Face	Reflection of a face	—
Conceptual mental consciousness knowing the reflection of the face in the mirror as a face is false *	Reflection of a face	Conceptual appearance of a reflection of a face	Nonexistence of a real face in the mirror	Nonexistence of a real face in the mirror

\* Thought consciousnesses are mistaken with respect to their appearing object because they confuse the actual object with the conceptual appearance of it.

^ Wrong consciousnesses are erroneous with respect to their apprehended object because they do not apprehend or know it correctly.

---

## REFLECTION

Identifying the objects of the various types of consciousness you have during the day helps you determine the type of minds that know an object and thus to assess if those cognizers are accurate.

1. When gazing at a garden and enjoying the colors of the flowers, what is the appearing object to your visual consciousness? What is the apprehended object?
2. Close your eyes and think about the flowers. Be aware that a conceptual appearance of the flowers appears to your mind, not the actual flowers. How does that differ experientially from seeing the flowers directly?
3. When you find yourself becoming irritated, stop and investigate, “What is the appearing object? What is the apprehended object?” If you’re remembering an incident in the past, be aware of how anger arises even though the incident is not happening now.
4. Look at one of the dishes on your lunch plate. Close your eyes and imagine its taste.
5. Taste that food. Is the conceptual appearance of the taste to your conceptual consciousness the same as the actual taste? Was it better or worse?

---

Applying these teachings to your daily life can be fun and will enhance your understanding of your outer and inner environment. It brings the teachings home and enables you to understand them through your personal experience.

Let’s now bring inherent existence into the discussion and speak from the viewpoint of the Prāsaṅgika system. The objects of consciousness are basically the same, but whether they are considered mistaken or erroneous differs.

In the Prāsaṅgika system, all phenomena mistakenly appear to be inherently existent to all sense and mental consciousnesses of sentient beings, except for an ārya’s meditative equipoise on emptiness. The appearance of an inherently existent table, inherently existent taste, inherently existent sound, and so forth to the five sense consciousnesses is false, and those consciousnesses are mistaken

with respect to their appearing objects because these things appear inherently existent although they are not. From the viewpoint of the Svātantrikas and below, the appearance of inherent existence is an accurate appearance. For them those sense consciousnesses are not mistaken with respect to either their appearing object or their apprehended object because inherently existent objects exist.<sup>54</sup>

Prāsaṅgikas say a visual consciousness apprehending yellow is mistaken with respect to its appearing object because the yellow *appears* to exist inherently although it does not exist in that way. Nevertheless, this visual consciousness realizes its apprehended object, yellow, and is a direct reliable cognizer of yellow. Regarding conceptual mental consciousnesses, there are those that do not grasp inherent existence and those that do. In the case of the former, the appearing object is the conceptual appearance of inherently existent yellow to a consciousness remembering the yellow you saw yesterday. The apprehended object and conceived object are yellow. That mind is mistaken in two ways: first, it conflates the conceptual appearance of yellow with the color yellow; second, yellow appears inherently existent although it is not. However, that consciousness is not erroneous because it knows yellow and can differentiate it from blue, red, and other colors.

But let's say you saw the perfect color yellow to paint your house and start thinking with attachment about how beautiful your house will be and how much your neighbors will admire it. This conceptual mind grasps that yellow color as inherently existent. It is mistaken with respect to its appearing object because it's a conceptual consciousness and because its object appears inherently existent. It's also erroneous with respect to its apprehended object because it grasps inherently existent yellow although inherently existent yellow does not exist. Similarly, a mind grasping the I as inherently existent is mistaken with respect to its appearing object because the I appears to exist inherently although it does not, and it is an erroneous consciousness because an inherently existent I does not exist at all. This means that attachment, anger, jealousy, arrogance, and so on—which all depend on grasping inherent existence—are erroneous consciousnesses.

Although all minds have apprehended objects, their apprehended objects do not necessarily exist—for example, a permanent self apprehended by the mental consciousness grasping the self as permanent. When we pull the corner of our eye while looking at the moon, a double moon is both the appearing object and the

apprehended object of that visual consciousness, even though a double moon does not exist.<sup>55</sup>

Let's look again at Jane's lasagna dinner. While she was eating, the appearing object, observed object, and apprehended object of her visual, olfactory, gustatory, and tactile consciousnesses were the color and shape, smell, taste, smooth texture, and warmth of the lasagna. However, these appear to exist inherently, and thus these sense consciousnesses are mistaken. Jane may or may not grasp these objects as inherently existent. If she doesn't, her mental consciousness is still mistaken because the taste and so forth appear to exist inherently, but that conceptual consciousness is not erroneous because it doesn't hold them as inherently existent. But if Jane is very attached to delicious lasagna and starts planning how she can take some extra orders of lasagna home, then her mental consciousness is erroneous because attachment is based on self-grasping ignorance. In addition, since attachment is based on distorted attention that exaggerates or projects unfounded good qualities on an object, that mind is also erroneous. Note the difference between appearing inherently existent and being grasped as inherently existent. Also note that sense consciousnesses do not grasp inherent existence although inherent existence appears to them. Only the mental consciousnesses grasp inherent existence.

## CONSCIOUSNESSES AND OBJECTS ACCORDING TO THE PRĀSAṄGIKAS

CONSCIOUSNESS	OBSERVED OBJECT	APPEARING OBJECT	APPREHENDED OBJECT	CONCEIVED OBJECT
Visual consciousness perceiving truly existent blue	Blue	Truly existent blue *	Blue	—
View of a personal identity	I and mine in one's own continuum	Conceptual appearance of truly existent I and mine *	Truly existent I and mine in one's own continuum ^	Truly existent I and mine in one's own continuum ^
Wisdom directly realizing emptiness of a truly existent I and mine	I and mine in one's own continuum <sup>36</sup>	Emptiness of true existence	Emptiness of true existence	—
Wisdom conceptually realizing the emptiness of a truly existent I and mine in one's own continuum	I and mine in one's own continuum	Conceptual appearance of the emptiness of a truly existent I and mine *	Emptiness of I and mine in one's own continuum	Emptiness of I and mine in one's own continuum

\* These consciousnesses are mistaken.

^ These consciousnesses are erroneous with respect to their apprehended objects.

---

## REFLECTION

1. When there is not a strong emotion in your mind and you think "I'm reading this book," what kind of consciousness is that? What are its appearing and apprehended objects? Are either of them mistaken or erroneous?
2. When you feel guilty or angry at yourself, is that a direct perceiver or a conceptual consciousness?
3. Do you appear truly existent at that time?
4. Do you grasp a truly existent I that is bad because you made a mistake?

5. Is that an accurate or erroneous mental state?

---

## *Syllogisms and Consequences*

Reasonings—especially syllogisms and consequences—are important when delving into the meaning of emptiness. Please refer to chapter 2 of *The Foundation of Buddhist Practice* to review the parts of a syllogism and the three criteria necessary to prove the thesis. A person who is receptive and understands the three criteria will understand the thesis because they know (1) the reason applies to the subject, (2) the pervasion (whatever is the reason must be the predicate), and (3) the counterpervasion (whatever is not the predicate must not be the reason).

In the syllogism, “Consider the subject, the I; it is empty of true existence because it is a dependent arising, like a mirage,” the thesis that is understood is that the I is empty of true existence. To understand this, we must establish the three criteria in our mind. The world contains many people who know that things arise dependent on causes and conditions. All of us know that flowers grow from seeds, but we still hold flowers to be truly existent. To disprove true existence by the above syllogism, we must first clarify the meaning of dependent arising, specifically understanding causal dependence—how the I depends on causes and conditions that have the ability to produce it. The I also depends on parts: the body and mind of the person. This establishes the first criterion, the presence of the reason in the subject of the syllogism—the person is a dependent arising.

Then we clarify the meaning of the predicate—empty of true existence. What constitutes true existence? What would it look like if the self were truly existent? After that, we check the pervasion: Is whatever arises dependently necessarily empty of true existence? With analysis, we discover that yes, if something arises dependently, it necessarily lacks true existence.

To test the counterpervasion, we examine if whatever is the opposite of the predicate is necessarily the opposite of the reason—that is, is whatever is not empty necessarily not a dependent arising? Here, too, the response is yes, if something is not empty of true existence, it cannot arise dependently. Now we

can draw the conclusion that the self is indeed empty of true existence because of being a dependent arising.

This brief description may sound intellectual and dry, but when we are aware of how things appear to us and how we grasp them as truly existent, these reasonings challenge our deeply held assumptions and beliefs as well as our ordinary cognitions. We must go slowly, preparing ourselves properly by being aware of how things appear to us and how we apprehend them. We must also understand the various terms, their meanings, and their relationships in order to investigate if a syllogism is correct.

Sometimes a person holds a wrong view very strongly, and their confidence in this view needs to be dislodged before they can generate a correct understanding. This is done by presenting the person with a consequence—a statement in which his beliefs contradict each other. Consequences operate as a *reductio ad absurdum* by showing internal inconsistencies in the other's view. For example, the ancient brahmins strongly believed the sound of the Vedas was permanent. To show them the fallacy of this belief, we present the consequence, "Sound is not a product of causes because it is permanent." This person already knows that sound is a product of causes, and now he is faced with the fact that it can't be if it is permanent. This makes him reflect if sound is indeed permanent or not.

The Svāntrikas and below not only assert that the self is inherently existent but also support that belief by giving the reason that it is a dependent arising. To them, dependent arising indicates inherent existence, and they assert that if phenomena didn't exist inherently, they wouldn't exist at all. To cause them to doubt their adherence to inherent existence, Prāsaṅgikas may present them with the consequence, "The self is not a dependent arising because it exists inherently." Because these Buddhists believe that the self is a dependent arising, they feel uncomfortable saying that it cannot be dependent because it exists inherently. That makes them examine their belief that the I inherently exists.

Prāsaṅgikas say that the dissonance provoked by this consequence will cause those who are receptive yet still adhere to inherent existence to understand that the I is empty without having to state the syllogism: Consider the self; it is empty of inherent existence because it arises dependently. Seeing the undesirable consequence of their previous view, someone who already has some doubt about that view will abandon it and gain a right understanding. However, when a person strongly holds a wrong view, a consequence followed by a syllogism is

necessary to help him gain the right understanding. The consequence is used to disprove the wrong view, and the syllogism is used to establish the correct one.

To be receptive to a consequence, someone must have certain qualifications. Although she has a wrong view, she is open-minded and willing to investigate that view. A person who accepts that a sprout inherently exists, but understands the two pervasions that whatever arises dependently is empty of inherent existence and whatever is not empty of inherent existence does not arise dependently, is on their way to a correct understanding. When hearing the consequence—the sprout is not a dependent arising because it inherently exists—she will feel uncomfortable asserting inherent existence because she knows the sprout is a dependent arising.

A person who is completely closed-minded is not receptive, and presenting them with a consequence will bring either resistance or a blank look. Likewise a person who is cynical or stubborn and has no wish to think deeply or reconsider his opinions is not receptive. Consequences and syllogisms do not move the minds of such people, so it is better not to waste time debating with them.

Sages advocate that we begin to contemplate emptiness by examining the nature of things that are commonly known as deceptive in the world, such as mirages, dreams, reflections, hallucinations, and holograms, because it is easier to see that they don't exist as they appear. We can later apply this to other phenomena where understanding the discrepancy between how something exists and how it appears is more difficult.

A mirage appears to be water, but it is not; its appearance is false. This appearance arises depending on sand, sunshine, the angle at which it strikes the sand, our distance from the sand, and so forth. Understanding that the silvery sparkle on the sand falsely appears to be water is not an understanding of the mirage's lack of inherent existence, although it is a step in that direction.

From there, we move to the syllogism: Consider a person; he does not inherently exist because he arises dependently, like a mirage. Contemplating that the water in the mirage is a false appearance helps to understand the thesis of the syllogism, that the person does not inherently exist.

## 7 | The Importance of Realizing Emptiness

### *Who Am I?*

The Buddha counseled us to recognize true duḥkha, abandon true origins of duḥkha, actualize true cessations, and cultivate true paths. Because this is done by a person, the self, questions relating to the existence and nature of the self become important. The self is the agent who experiences suffering and happiness, engages in constructive and destructive actions, practices the path, and attains nirvāṇa. What is the nature of this being—this self or I? This was an important issue for both Buddhist and non-Buddhist schools in ancient India and continues to be so today. Many philosophical systems have arisen on this topic.

When we examine the causal process of happiness and duḥkha, it is evident that these experiences arise in relation to multiple causes and conditions—both internal factors such as our sense faculties and our way of interpreting events, and external factors such as sense objects. What is the nature of these factors that give rise to our experiences of pain and pleasure? Do they actually exist? In what way do they exist? This, too, was the focus of major reflection in ancient India.

In our own experience, when we ask “What is this I?” we notice an innate, natural, instinctual sense of self. If our hand is hurt, we automatically say, “I am hurt.” Although our hand is not us, we instinctively identify with that experience and feel “I am hurt.” Here the sense of I arises in relation to our body.

The sense of I also arises in relation to the mind. When there is a grumpy mood, we say, “I am grumpy,” and when delight is present, we exclaim, “I am delighted.”

However, this I isn’t completely identifiable with our body, because if we could exchange our old, wrinkled, sick body with a fresh, youthful, healthy body, we would do so. In the depth of our heart we feel that there is a self who would benefit from this exchange. Similarly, if we were given the opportunity to exchange our afflictive, ignorant mind with a buddha’s fully awakened one, we would eagerly do this. This suggests that we do not completely identify with our

mind either. This willingness to exchange our mind for another person's mind indicates a belief in the depth of our heart that there is a separate person, an I, who would benefit from this exchange. On one hand, the sense of I arises in relation to our body or our mind; on the other hand, we do not completely identify with either our body or mind.

In our naïve, ordinary sense, there is a feeling of self, of a being who is intricately involved with the body and mind and is the master who can control them. Yet the I feels independent of both the body and mind, with its own distinct identity. In the case of those who believe in rebirth, this sense of a separate self extends across lifetimes with an independent self taking birth in one life and then another. Even those who do not believe in multiple lives think the same person experiences childhood, adolescence, adulthood, and old age. Although the body and mind constantly change, we have the sense of an I that endures over time when we say, "I was young and now I'm old." We believe there is a person that holds the continuums of body and mind over time.

Because of the problematic identity of the self, many non-Buddhist schools posit a self or soul (*ātman*) that has an absolute status; it is unchanging, unitary, and autonomous. Buddhist schools in general reject the notion of such a self, soul, or eternal principle. They espouse that the self or person is dependent on its mental and physical aggregates, and only on the basis of the continuum of the physical and mental aggregates can we say that the person exists through time. When the body and mind become old, we say that the person becomes old. Aside from the body and mind, we cannot find an autonomous person that ages.

The Buddha was clear that the conception of a permanent, unified, and independent self is a metaphysical construct, an artificial conjecture that exists only in the minds of people who have intellectually thought about it. Our innate sense of self does not feel that we exist in this way. While unliberated sentient beings have an erroneous innate sense of a real self, this conception of self as unchanging, monolithic, and autonomous is not it.

In addition, our naïve sense of the self being a master over the body and mind is also false. The self does not exist as an independent controller or master of the aggregates. In this way, the Buddha rejected self-existence and embraced selflessness—"not-self," as translated by Pāli translators. Various tenet systems contain different assertions concerning the meaning of selflessness, the self that is

negated, and the conventionally existent self that is born, dies, practices the path, and attains liberation.

The *Heart Sūtra*, a popular Mahāyāna sūtra, speaks of realizing the emptiness of *even* or *also* the five aggregates, depending on the translation. This indicates the wide range of phenomena that are empty. The five aggregates on which a person depends are empty of inherent existence. Since they are empty, so too is the person that depends on them. Since the I is empty of inherent existence, the mine is also empty of inherent existence. Just as the aggregates and the self are empty because they are designated in dependence on their parts, so too all other conditioned phenomena are also empty. Because all conditioned phenomena are empty, all unconditioned or uncompounded phenomena that are necessarily imputed in relation to conditioned things are also empty. Finally, even emptiness, the ultimate nature of all phenomena, is empty of inherent existence. Just as sentient beings in saṃsāra are empty of inherent existence, so too are buddhas who dwell in nonabiding nirvāṇa.

Does this mean nothing exists? Does this mean that when we sit in the hot sun, the person getting sunburned is nonexistent? Of course not! Although persons and other phenomena cannot be found when analyzed, someone who experiences and what is experienced still exist.

Understanding the nature of reality is challenging. How do we identify and refute what doesn't exist and still establish what does? In response, ancient Indian philosophical traditions developed various theories. Some accept the concept of an eternal soul or self; others assert a primordial substance out of which everything arises. Buddhists reject such notions. Meanwhile, some Buddhist schools accept the selflessness of persons and phenomena, although others do not accept a selflessness of phenomena. Among the Buddhists that accept the selflessness of both persons and phenomena, some accept true existence and others do not. Among those who reject true existence, some maintain some notion of inherent existence conventionally, whereas others reject inherent existence even conventionally. For this reason, there is a great deal of discussion about the nature of reality.

## *The Root of Saṃsāra*

In general, two types of ignorance exist: ignorance that does not understand karma and its effects, and ignorance that misunderstands the ultimate nature (self-grasping ignorance). Although both cause cyclic existence, the self-grasping ignorance is the *root* of cyclic existence. This ignorance is not just the lack of wisdom regarding the final nature; it is an active misconception of it. The way ignorance apprehends persons and phenomena is totally opposite to the way they exist; it apprehends the opposite of what the wisdom realizing the ultimate nature perceives. While ignorance grasps phenomena as inherently existent, wisdom perceives them to be empty of inherent existence. This ignorance is the first of the twelve links of dependent arising. In *Seventy Stanzas on Emptiness* (VV 64–65), Nāgārjuna explains:

That which conceives things produced  
from causes and conditions to be real (inherently existent)  
was said by the Teacher (Buddha) to be ignorance.  
From it, the twelve links [of dependent origination] arise.

Through knowing well that things are empty  
because of seeing reality, ignorance does not arise.  
That is the cessation of ignorance,  
whereby the twelve links cease.

Nāgārjuna asserts that the root of saṃsāra is the ignorance grasping inherent existence and the antidote that eliminates it is the direct realization of the emptiness of inherent existence. Because this ignorance is of two types—grasping a self of persons and grasping a self of phenomena—there are two types of selflessness: the selflessness of persons and the selflessness of phenomena. Here “person” refers to the beings of the six classes (gods, demi-gods, humans, animals, hungry ghosts, and hell beings), as well as to āryas, arhats, bodhisattvas, and buddhas. The person is the one who wanders in saṃsāra, cultivates the path, and attains liberation and awakening.

Meanwhile, Candrakīrti says the view of a personal identity (*satkāyadr̥ṣṭi*) is the root of saṃsāra (MMA 6.120):

Seeing with his mind that all afflictions and defects  
arise from the view of a personal identity . . . .

Since Candrakīrti identifies the view of a personal identity as the root of saṃsāra and Nāgārjuna identifies the ignorance grasping true existence as the root, are there two roots? No, these two are not considered two separate roots of saṃsāra, for they apprehend their objects in the same erroneous way—as existing inherently, truly, or independently. The difference between them is that ignorance is the mistaken superimposition of a self of persons and phenomena, whereas the view of a personal identity superimposes inherent existence on our own I and mine, not on other people or phenomena.<sup>57</sup> Tsongkhapa says (FEW 56–57):

The view of a personal identity is the root of all other afflictions. If it were something other than ignorance, there would be two discordant roots of saṃsāra; therefore, both [grasping the inherent existence of persons and of phenomena] should be taken as ignorance.

Ignorance must be eliminated in order to attain nirvāṇa. Only the wisdom directly realizing emptiness has the power to eradicate this ignorance because it refutes the existence of the object ignorance holds as true—inherent existence, existence from its own side, existence by its own characteristics, and so on. While loving-kindness, meditation on impermanence, and other meditations are useful in counteracting specific afflictions and are necessary to attain awakening, they cannot eradicate ignorance. Thus gaining the correct view of emptiness and realizing it nonconceptually is of crucial importance.

In the *Precious Garland*, Nāgārjuna explains that the self-grasping of phenomena—specifically the aggregates—is the cause of the self-grasping of persons (RA 35):

As long as there is grasping at the aggregates,  
so long the grasping at I will exist.  
Further, when grasping at I exists,  
there is action, and from it there also is birth.

Based on grasping the body and mind as inherently existent, grasping the I that exists in dependence on them as inherently existent arises.<sup>58</sup> Thus the self-grasping of phenomena is the root of *all* afflictions. However, we cannot say the same about the view of a personal identity, for it is the effect, not the cause, of the

self-grasping of phenomena. Nevertheless, both graspings must be eliminated to attain liberation.

Self-grasping of persons pertains to grasping both ourselves and others to be inherently existent. Grasping ourselves to exist inherently is the view of a personal identity (as I and mine). Sometimes “view of a personal identity” is translated as “view of the perishing aggregates.” This translation undercuts two erroneous views. First, by saying the aggregates are perishing, it negates the idea of an unchanging soul and emphasizes that the person and aggregates are momentarily impermanent. Second, “aggregates” indicates plurality, which negates the notion that the person is one indivisible monolithic unit and affirms that the person depends on the collection of its physical and mental aggregates.

The view of a personal identity is an afflictive “wisdom”: it is an ascertaining consciousness that misapprehends its object. According to the Prāsaṅgikas, the observed object of the view of a personal identity is the mere I, the conventionally existent person. The apprehended and conceived objects are a truly existent I, and this consciousness is erroneous with respect to them because it grasps a truly existent I, which does not exist at all, as existent.

Yogis begin by examining how the self exists. Could the self that they think and feel exists objectively, the self that is the object of self-grasping ignorance, exist? By investigating with reasoning how the self exists, they conclude that it cannot truly exist. The mind that erroneously grasps an objective self cannot be manifest at the same time as the wisdom that sees the nonexistence of an objective self, because those two minds are contradictory. Wisdom has the power to overcome ignorance because wisdom is a correct mind, whereas ignorance is erroneous. By repeated familiarization with the wisdom realizing the emptiness of an objective self, self-grasping, the afflictions that depend on it, and their seeds are gradually eliminated and saṃsāra is brought to an end.

### *How Ignorance Grasps Its Object*

Ignorance grasps persons and phenomena as inherently existent—that is, as existing from their own side, independent from all other factors. This view is erroneous because, in fact, everything exists dependent on other factors,

including imputation by thought and name. The *Questions of Upāli Sūtra* (*Upālipariṣcchā Sūtra*) says:

Here the various mind-pleasing blossoming flowers  
and attractive shining supreme golden houses  
have no [inherently existent] maker at all.  
They are posited through the power of thought;  
through the power of thought the world is imputed.

Although all phenomena exist by being imputed, designated, or posited by the mind, ignorance apprehends them as existing in exactly the opposite way—as existing under their own power, with their own inherent nature. According to the Prāsaṅgika Mādhyamikas, the observed object of the self-grasping of phenomena is phenomena such as our eye, leg, house, emotions, and so forth. The observed object of the self-grasping of persons is the mere I, the person that exists conventionally, the dependently designated self, the I that is observed when we generate the mere thought “I.” This I is bound in saṃsāra; it cultivates the path and will attain liberation.

The conceived object and apprehended object of the two self-grasplings is inherent existence—an inherently existent I, inherently existent aggregates, and so forth. Let’s say you have intense anger toward Tashi. If you examine your mind, you’ll notice the idea that Tashi is an objective person who is the target of your displeasure. The conceived object of this self-grasping is an inherently existent Tashi. At that time, pause and reflect, “Who or what exactly is Tashi? Is he his body? His mind? A soul that is completely separate from his body and mind?” If Tashi existed inherently as he appears to, you should be able to find who Tashi really is. And if you did, the conceived object of ignorance would exist and ignorance would be a reliable cognizer. But the more you search for the “real” Tashi, the more it becomes evident that you cannot isolate something that is him. In fact, the opposite occurs: you can’t find a real Tashi that you’re mad at, and the intensity of your anger decreases.

Self-grasping ignorance is a deceptive mind that has tricked us since beginningless time. It has two levels: innate (*sahaja*) and acquired (*parikalpita*). All beings revolving in saṃsāra have innate ignorance, the root of saṃsāra. Acquired ignorance comes from learning incorrect philosophical or

psychological theories. Acquired ignorance depends on engaging in incorrect analysis, whereas innate ignorance grasps its object without any analysis. Phenomena appear inherently existent and, assenting to that appearance, innate ignorance grasps them as existing inherently. To combat ignorance, investigation and analysis are essential. We must use our intelligence to examine how ignorance holds its object and whether things exist in the way ignorance apprehends them to exist. Only through rigorous analysis can we become convinced that phenomena do not exist the way they ordinarily appear to us and that their actual mode of existence is not something reified, objective, and “out there,” unrelated to the mind. There is another way of existing, but it is not apparent to our obscured, distracted mind.

Ignorance is the source of all other afflictions. In *The Four Hundred*, Āryadeva says (CŚ 135):

Just as the tactile sense [pervades] the body,  
likewise confusion is present in all [afflictions].  
Therefore, by overcoming confusion  
one will also overcome all afflictions.

Here confusion (*moha*) is synonymous with ignorance. The tactile sense faculty pervades all parts of the body, while the other sense faculties—visual, auditory, olfactory, and gustatory—exist in specific areas: the eyes, ears, nose, and tongue, respectively. The tactile sense is analogous to innate ignorance that pervades and lies at the root of the other afflictions, whereas the other sense faculties resemble the other afflictions that depend on ignorance. Afflictions such as anger and attachment have their own specific functions that do not overlap with each other, although they both are informed by ignorance. The other afflictions do not function on their own but exist in dependence on innate ignorance.

By eliminating ignorance, all the afflictions that depend on it are stopped, just as by uprooting a tree, its branches and leaves die. In the *Treatise on the Middle Way*, Nāgārjuna says (MMK 18.4):

When thoughts of I and mine  
are extinguished in regard to internal and external things,  
the appropriators [of the aggregates—afflictions and karma] will stop;

and through its extinguishment, birth will be extinguished.

“Thoughts of I and mine” refers to the wrong view of a personal identity that grasps I and mine. When this is extinguished, afflictions and polluted karma cease. Without afflictions and polluted karma, birth in saṃsāra—the eleventh of the twelve links of dependent origination—cannot occur.

Āryas still create karma, but not the karma that leads to rebirth in saṃsāra. Their unpolluted karma results in liberation and awakening. Ārya bodhisattvas are “born”—that is, they manifest—in our world by the force of wisdom and compassion, not ignorance.

---

## REFLECTION

1. What is the view of a personal identity?
  2. How is it similar to and how does it differ from self-grasping ignorance?
  3. What is the root of saṃsāra? What does it mean to be the root of saṃsāra?
- 

### *The Development of Afflictions in Daily Life*

Although afflictions often arise quickly in our mind, seeming to come out of nowhere, they develop through a sequential process. To have the notion of I, one or more of our mental or physical aggregates must appear. Based on this appearance, a valid sense of I arises. This I exists by being merely designated in dependence on the aggregates. Observing this mere I, ignorance erroneously grasps it to exist inherently. That grasping is the view of a personal identity grasping I (*ahaṃkāra*).

Based on that, the view of a personal identity grasping mine (*mamakāra*) arises when we think, “This is *my* body. These are *my* thoughts.” The object of the grasping at mine is the sense of “myness,” the I that makes things mine; it is not the body or the thoughts themselves. Grasping the body or thoughts to be

inherently existent is self-grasping of phenomena, not self-grasping of persons. Tsongkhapa says (FEW 43):

. . . the observed object of an innate awareness thinking “mine” is that very “mine.” It should not be held that your own eyes and so forth are the observed object.

The body, intelligence, table, and so forth are *examples* of “mine” because in ordinary language we say, “This body is mine. This table is mine.” But the observed object of grasping “mine” is the mine that is the owner, and not the body, intelligence, or table.

Once the I is grasped as inherently existent, attachment, anger, and other destructive emotions quickly follow, because we want to give this I pleasure and protect it from pain. These mental factors arise very quickly, one right after the other. If our mindfulness is sharp, we can observe this process and thwart it. Otherwise, these afflictions control us.

Grasping the inherent existence of I and mine are erroneous minds. They are not present every time we use the conventions “I” and “mine.” When we casually and calmly say “I’m walking” or “This is my book,” grasping I or mine is not present. This way of apprehending I and mine differs greatly from the self-grasping that is present when we arrogantly think “*I am famous,*” or greedily say “This is *mine.*”

---

## REFLECTION

1. Observe how you relate to people and your surroundings when afflictions are present in your mind; for example, when you crave a certain food, crave love, or are very angry or upset.
2. Observe how you relate to the same people and objects when afflictions are not manifest in your mind.
3. Reflect that this difference is due to the presence or absence of the self-grasping ignorance that underpins all afflictions. Get a sense of how things appear to you when grasping true existence is and is not present.
4. Reflect that this true-grasping is an erroneous mind as well as the source of all afflictions and make a determination to uproot it.

---

## *Inappropriate Attention and Distorted Conceptions*

Based on ignorance, distorted conceptions (inappropriate attention, *ayoniśo-manaskāra*) superimpose attractiveness or ugliness on objects that we believe to truly exist. Other types of distorted conceptions project permanence on impermanent things, purity on impure things, and pleasure on things that are unsatisfactory by nature.

When we apprehend an object that appears attractive, we become attached to it; when we apprehend an object that appears disagreeable, we generate aversion; and when we apprehend a neutral object, we remain indifferent. These and other disturbing emotions depend on ignorance and do not operate separately from it.

Both virtuous attitudes and afflictions arise depending on this mental factor of attention. Appropriate attention leads to virtuous attitudes and emotions—such as compassion and equanimity—while inappropriate attention (distorted conception) produces disturbing ones, such as animosity and arrogance. A practitioner who cultivates the appropriate attention that sees saṃsāric pleasures as impermanent and unsatisfactory and views nirvāṇa as blissful will easily generate the determination to be free. Someone who habitually interprets others' actions as suspicious and malicious will go through life with fear, mistrust, and anger. Since distorted conception misinterprets sense data, projects and exaggerates positive or negative qualities, imputes motivations on others, and so on, it's important to monitor our mind vigilantly.

The observed object of both love and attachment is sentient beings. Appropriate attention sees sentient beings as kind, subject to duḥkha, and possessing buddha nature. From it, empathy, love, and compassion arise. Inappropriate attention sees sentient beings as permanent and desirable, which leads to clinging to them. In both cases, sentient beings appear truly existent. Both love and attachment are *mistaken* consciousnesses in that sentient beings appear truly existent to them. However, love is not a *wrong* or *erroneous* consciousness because conventionally it sees sentient beings in a realistic manner. Attachment, anger, and other afflictions are erroneous consciousnesses because they view their objects in a distorted way, based on distorted conception

projecting qualities such as permanence, beauty, ugliness, pleasure, and suffering on them.

Here we see the difference between two types of *innate awarenesses* (T. *blo lhan skyes*): those that are conventionally correct and those that are not. With the first, their objects exist conventionally and cannot be refuted by reasoning. These include minds of love and forgiveness, consciousnesses apprehending apples or persons, and reasoning examining impermanence. With the second, their objects can be refuted by reasoning and do not exist even conventionally. These include attachment, anxiety, resentment, and true-grasping.

Virtuous mental factors and conventional reliable cognizers are not abandoned by the wisdom realizing emptiness, because distorted conception doesn't operate on them. Our understanding of emptiness and dependent arising will purify them of the influence of distorted conception and ignorance, which enables them to operate more fully and to develop completely.

## *Conceptualizations and Elaborations*

This leads us to the topic of conceptualizations and elaborations, which also spur the arising of afflictions. Nāgārjuna said (MMK 18.5):

Through ceasing karma and afflictions there is nirvāṇa.

Karma and afflictions come from conceptualization.

These come from elaborations.

Elaborations cease by [or in] emptiness.

In the first line, Nāgārjuna defines nirvāṇa as the complete cessation of karma and afflictions resulting from the application of the antidote, the wisdom realizing emptiness. How does nirvāṇa, the state of true freedom, come about? By ceasing the first-link ignorance, its branches (the afflictions) cease, as do second-link formative actions (karma). In this way, resultant rebirth in saṃsāra comes to an end. Where do afflictions and karma come from? Conceptualizations (*vikalpa viparyāsa*) involving distorted concepts in which we focus on the imagined attractive or unattractive aspects of objects. Conceptualizations are fueled by elaborations (mental fabrications, proliferations, *prapañca*, *papañca*), which here

principally refers to the ignorance grasping inherent existence. The cessation of these four—karma, afflictions, conceptualizations, and elaborations—is nirvāṇa.

The fact that different people have very different reactions to the same object demonstrates that afflictions arise from our own subjective conceptualizations, not from the side of the object. We cannot account for the arising of attachment on the basis of that object being desirable or attractive in and of itself. Nor can we account for the arising of anger on the basis of the object being objectively distasteful or threatening, because one object can arouse various emotions in different people as well as opposite emotions in the same person at different times. For Jeff football is interesting, for Lucy it is boring. When Sarah is hungry, she craves food, but after she has eaten her fill, the same food is unappetizing. This shows that our subjective conceptualizations and interpretations are powerful conditions that give rise to these emotional reactions.

When speaking of an object being attractive or unattractive, we must see it in relation to a specific person or group of people. “This person is attractive” actually means “I find them attractive.” “This place is repugnant” actually indicates “To me it is disgusting.” The qualities of attractiveness and unattractiveness are dependent on the perspective of the individual experiencing them. Our subjective conceptualizations are the main factors that give rise to our emotional reactions.

We can see this clearly by observing the people we encounter in our daily lives. Some individuals are very self-centered, referencing all objects and events to themselves. A short phrase or small event misinterpreted by their inappropriate attention can instantly trigger strong emotional reactions in these people.<sup>59</sup> They cannot tolerate what they perceive to be criticism and flare up in anger when hearing words that are not offensive to all others. We also know people that are more relaxed and not very self-centered. We can tease them, and they laugh and aren’t offended. They admit their faults and weaknesses without trying to conceal them. An individual’s conceptualizations and interpretations determine how they experience a person, object, or situation. Their emotional reactions arise primarily from these, not from the objects themselves.

A speaker at a conference I attended told me that people who excessively use the first person pronouns I, me, and mine have a greater risk of having a heart attack. Another scientist explained that when we develop hostile feelings toward someone, 90 percent of the negativity we see in that object is our own mental projection. Although this scientist is not a Buddhist, his view resonates with the

Buddhist explanation of how afflictions arise. The Buddha pointed out that the attractiveness and unattractiveness that provoke the arising of attachment and anger are predominantly a function of our own, often erroneous, conceptualization. We tend to see a person, object, or situation as either 100 percent attractive or 100 percent repugnant, whereas few, if any, things are like that.

---

## REFLECTION

1. Remember a disturbing situation in your life. Recall what you were thinking and feeling. Examine how your attitudes created your perception and experience.
  2. Examine how your attitude affected what you said and did in the situation. How did your behavior either calm or agitate the situation?
  3. Was your attitude realistic? Was it seeing all sides of the situation or was it viewing things through the eyes of “me, I, my, mine”?
  4. Consider other ways you could have viewed the situation and how that would have changed your experience of it.
  5. Determine to be aware of how you’re interpreting things that happen in your life and to cultivate beneficial and realistic ways of looking at things.
- 

Conceptualizations come from *elaborations*, the chief of which is grasping persons and phenomena as inherently existent. The word “elaborations” has various meanings according to the context, and there are several types of elaborations.

- The elaboration of inherent existence is the object of negation.
- The elaboration of grasping true or inherent existence (T. *bden ’dzin gyi spros pa*) is the root of saṃsāra and the chief culprit.
- The elaboration of afflictive states of mind is derived from grasping inherent existence.
- The elaboration of dualism is subject and object appearing to be separate (T. *gnyis snang gi spros pa*).

- The elaboration of the appearance of inherent existence (T. *bden snang gi spros pa*).
- The elaboration of conventionalities (T. *kun rdzob kyi spros pa*) is the multiplicity of conventional truths. In the perspective of a direct cognizer of emptiness, conventional truths do not exist because they are not the ultimate nature. However, conventionally they exist.
- The elaboration of the object (T. *chos chan gyi spros pa*) concerns an object and its properties—for example, emptiness is a property or attribute of a person; arising and ceasing are characteristics of impermanent phenomena. This kind of relationship exists to a conceptual mind; to a direct perceiver of emptiness, only emptiness appears.
- The elaboration of conceptuality (T. *rtog pa'i spros pa*) refers to any concept or thought that knows its object by means of a conceptual appearance.
- The elaborations of the eight extremes are inherently existent arising and disintegration, annihilation and permanence, going and coming, and sameness and difference. These also are objects of negation.
- The elaboration of the coarse winds and minds (*rlung sems rags pa'i spros pa*), spoken of in Tantra, includes all winds and minds except the fundamental innate clear light mind and the subtlest wind that is its mount.

Nāgārjuna describes emptiness as the total dissolution of all elaborations. Some elaborations do not exist because they are opposite to the ultimate nature of reality—for example, the elaborations of inherent existence and the elaborations of the eight extremes. These elaborations are objects of negation that are refuted by reasoning. Other elaborations exist—for example, the elaboration of conventionalities, the elaboration of the object, and the elaboration of conceptuality. Although these elaborations exist, they too are not the ultimate nature of reality.

None of these elaborations—be they existent or nonexistent—are present in āryas' meditative equipoise on emptiness. It is by the non-seeing of elaborations that āryas in meditative equipoise are said to realize emptiness directly. That does not mean, however, that the valid characteristics of dependently arising

phenomena are to be negated or that they do not exist conventionally. Rather, they are not perceived by āryas in meditative equipoise when the mind is totally fused, single-pointedly and directly, with emptiness. However, they *do* conventionally exist in dependently originated phenomena.

Therefore, we need to distinguish between emptiness, which is the ultimate nature of reality, and *having the nature of* emptiness. Conventional phenomena, such as our parents, the table, and the government, are not emptiness, but they have the nature of emptiness in that they are empty of inherent existence. In the perspective of the meditative equipoise that perceives emptiness directly and is totally fused with emptiness, these conventional phenomena do not exist because they are not perceptible to someone in that meditative equipoise.

To review the causal sequence of saṃsāra: the elaboration of grasping inherent existence gives rise to distorted conceptions—erroneous thought processes—which, in turn, provoke afflictions. Afflictions lead to the creation of actions that bring rebirth in saṃsāra and its attendant duḥkha. To give a rough analogy, self-grasping ignorance and its elaborations are like the unscrupulous boss of a company producing faulty products; conceptualizations and distorted concepts are like the salespeople who exaggerate the qualities of the product; afflictions are like our signing the contract; and karma is all the actions we take afterward.

What ends this chain of events? The realization of the emptiness of true existence. Bringing an end to elaborations involves dismantling all grasping of an objectified basis (T. *yul gyi ngos nas yod pa*) of persons and phenomena, all grasping of persons and phenomena as having an inherent, independent essence.

Emptiness is free from all such elaborations, and the direct realization of emptiness gradually eradicates all grasping of any objectified basis that could serve as the basis for grasping inherent existence. This involves negating all inherent existence and inherent characteristics even on the conventional level.

In general, conceptualizations and conceptuality (*kalpanā*)<sup>60</sup> are synonymous and refer to thought—a mind that knows its object via a conceptual appearance.<sup>61</sup> In Nāgārjuna’s verse above, “conceptualizations” has a negative connotation, but in the conventional world, thoughts can be helpful. After all, learning and reflecting on the Buddha’s teachings takes place in the context of language and thought. There are different types of conceptualizations; some are helpful on the path and others are not. Some examples of conceptualization are:

- Virtuous conceptualizations. The wisdom understanding emptiness on the levels of learning, thinking, and the initial phase of meditating is conceptual. It does not know emptiness directly but is an essential step to realize emptiness directly. Understandings on the method side of the path—including the aspiration to attain liberation, love, compassion, and bodhicitta—are all conceptual consciousnesses in sentient beings. Only in the continuum of buddhas are these nonconceptual.
- Conceptualizations involving distorted conceptions. These include the four distorted conceptions seeing the impermanent as permanent, the foul as pure, the unpleasant as pleasant, and that which lacks a self as having one.<sup>62</sup>
- Discursive thought or discursiveness, which is an impediment to developing serenity.
- Afflictions. All afflictive views and emotions are conceptualizations. They do not see their objects correctly and are erroneous.
- The conception, or grasping, of true existence (T. *bden 'dzin gyi rnam rtog*). As the root of saṃsāra, this is the most detrimental type of conceptualization.
- The conception of ordinariness (T. *tha mal pa'i rnam rtog*) is found in the context of Tantra.

The various meanings of “conceptualization” and “conception” challenge us to be aware of the various contexts in which these terms are used. Certain types of conceptions are helpful and necessary on the path to buddhahood. However, at the culmination of the path all conceptions must be transcended, for buddhas know all phenomena directly and nonconceptually.<sup>63</sup>

According to the Tibetan translation of Nāgārjuna’s verse, the cessation of elaborations—especially grasping inherent existence—is brought about *by* emptiness. Here the instrumental case is used, indicating that elaborations are ceased *by* the wisdom that realizes emptiness. Ignorance *grasps* the inherent existence of all phenomena, whereas the wisdom realizing emptiness *negates* the inherent existence of phenomena and perceives its opposite—the emptiness of inherent existence. Both ignorance and wisdom focus on the same object, but they relate to it in a dramatically opposed manner.

While giving an oral commentary on the *Treatise on the Middle Way*, Khunu Lama Rinpoche, a great Buddhist master as well as a Sanskrit scholar, explained that in Sanskrit this final line can be read in the locative case as well—that is, elaborations cease *within* emptiness. This latter reading has profound meaning because all elaborations and defilements arise within the empty nature of the mind. The ultimate creator of all phenomena of both saṃsāra and nirvāṇa is the mind. All afflictions are created by mind and must finally be cleansed within the nature of the mind itself. At the time a meditator has a nondual experience of emptiness, all elaborations and defilements dissolve back into that reality—into the emptiness of the mind. The emptiness into which all afflictions have been extinguished through the antidote of wisdom is the true cessation of duḥkha and its origins; it is nirvāṇa. In this sense, all elaborations are extinguished in the sphere of reality.

The result—buddhahood—is also a state of mind. The mind plays a tremendously important role in the process of purification and perfection. The *Sublime Continuum* (*Ratnagotravibhāga Śāstra*, *Uttaratantra Śāstra*) states that all pollutants of the mind are adventitious—they can be separated from the mind—and all the awakened qualities of the Buddha’s omniscient mind exist as potentials in the minds of sentient beings.

A statement in Sakya literature says that within the basis, which is the causal mind-basis-of-all,<sup>64</sup> all phenomena of saṃsāra and nirvāṇa are complete. The mind-basis-of-all is, in some sense, the fundamental innate mind of clear light. At the level of ordinary beings, this foundation consciousness is called the “causal continuum.” Within that causal continuum, all phenomena of saṃsāra are complete in the form of their natural characteristics, all phenomena of the paths and grounds are complete in the form of their qualities, and all awakened qualities of the Buddha’s omniscient mind are complete in the form of their potentials. This beautiful and comprehensive picture summarizes the essence of the Sakya approach to the basis, path, and result.

The Nyingma’s Dzogchen, the Mahāmudrā of the Kagyu, the Sakya Lamdre’s view of the union of profundity and clarity, and the Gelug understanding of *mind isolation* according to the Guhyasamāja Tantra—in all of these, the emphasis is on realizing the ultimate nature of the mind. Although in meditative equipoise there is no difference between the mind’s emptiness and the emptiness of external objects, contemplation on the emptiness of mind is emphasized in meditative

practices in all four traditions of Tibetan Buddhism because it has such a dramatic impact on the mind of the practitioner.<sup>65</sup>

---

## REFLECTION

1. Recall an event that disturbed you.
  2. Try to identify the fundamental elaboration—self-grasping—that arose and grasped the people and elements of the situation to exist objectively “out there.”
  3. What were the distorted conceptions, such as seeing impermanent things as permanent, that arose?
  4. What other distorted conceptions (inappropriate attention) were active in interpreting the elements of the event?
  5. What affliction(s)—such as attachment, anger, jealousy, arrogance, and so forth—arose?
- 

## *Ceasing Saṃsāra*

Self-grasping ignorance is an erroneous mind. Since its conceived and apprehended objects—the self (inherent existence) of persons and the self of phenomena—do not exist, cultivating the wisdom that sees things as they actually are reduces and eventually completely eradicates it. Candrakīrti outlines the process whereby yogis enter into emptiness and actualize liberating wisdom by first refuting the conceived object of the view of a personal identity (LC 3:120–21):

Yogis who wish to enter reality and who wish to eliminate all afflictions and faults examine the question, “What does this saṃsāra have as its root?” When they thoroughly investigate this, they see that saṃsāra has as its root the reifying view of a personal identity, and they see that the self is the object observed by that reifying view of a personal identity. They see that not observing the self leads to eliminating the reifying view of a personal identity, and that

through eliminating that, all afflictions and faults are overcome. Hence, at the very beginning they examine only the self, asking, “What is the self that is the object of grasping self?”

Tsongkhapa confirms the necessity of refuting the conceived object of self-grasping (FEW 56–7):

. . . without rejecting the object of the grasping of a self of persons, a realization of selflessness cannot occur. . . . Furthermore, because the two graspings of self operate mainly within observing functioning things—persons and phenomena—you need to delineate that just those bases, with respect to which the error is made, do not exist in the way that they are grasped.

Having identified the object of negation, yogis go about refuting it. By familiarizing their minds with the direct realization of emptiness, they eradicate the acquired and innate afflictions, and the entire structure of saṃsāra begins to crumble. The *Sūtra on the Secreties of the Tathāgata* says (FEW 56):

Śāntimatī, it is like this. For example, when the roots of a tree are cut, all the branches, leaves, and twigs dry. Śāntimatī, similarly, when the view of a personal identity is pacified, all [root] afflictions and auxiliary afflictions are pacified.

Although not all the Buddha’s teachings directly speak of selflessness, they directly or indirectly lead to this realization. The elimination of wrong views and afflictions cannot be accomplished simply by making aspirational prayers. We must cultivate the wisdom that directly opposes their false and erroneous perspectives. Just abiding in a state of nonconceptuality and non-mentation does not eliminate these obscurations. Although defilements may not arise in a nonconceptual state, there is nothing in the nonconceptual content of that experience that contradicts or reduces their power.

Disturbing elaborations are overcome by realizing that inherent existence does not exist at all. This is accomplished by the probing awareness (*yuktijñāna*) analyzing the ultimate. Probing awarenesses are of two types: (1) conceptual (inferential) probing awareness that realizes emptiness in dependence on a

reason, and (2) the nonconceptual pristine wisdom of an ārya's meditative equipoise that directly and nonconceptually perceives emptiness. The latter probing awareness is not actively analyzing emptiness, but having previously done in-depth analysis, it has given rise to a union of serenity and insight focused on emptiness.

Both types of probing awareness harm the elaboration of inherent existence, but the pristine wisdom of an ārya's meditative equipoise on emptiness eradicates the elaboration of conceptuality because it perceives emptiness directly, not through the medium of a conceptual appearance. This meditative equipoise is free from the elaboration of dualistic appearance, because that wisdom and its object (emptiness) are experienced as undifferentiable, like water poured into water. Conceptual probing awareness, however, still has the appearance of subject and object; this wisdom has eliminated only a portion of elaborations.

Many people associate conceptual knowledge with intellectual knowledge, but in Buddhadharma, analysis is not about intellectual acrobatics and juggling a proliferation of words. It involves a process of observing how things appear to the mind, how ignorance grasps them to exist, and then investigating whether or not things actually exist in that way. A conceptual probing awareness realizing emptiness contradicts belief in inherent existence and has a powerful effect on our mind.

## *Emptiness Is a Nonaffirming Negative*

To identify the apprehended object—the object realized—by the wisdom realizing emptiness, we must understand nonaffirming negatives (*prasajya-pratiṣedha*) and how they differ from affirming negatives (*paryudāsa-pratiṣedha*). An affirming negative negates one thing while asserting another. In the expression “an unhappy event,” happiness is negated, but an event is asserted. A nonaffirming negative, on the other hand, is a simple negation: it excludes something without implying anything else. An example is “no sugar.” Here, sugar is negated and nothing else is implied or asserted in its place.

Nonaffirming negatives are absences; as such, they are permanent phenomena. Most essentialists say that permanent phenomena cannot be known by direct perceivers, be they sense, mental, or yogic direct perceivers.

Mādhyamikas, however, say that the emptiness of true existence can be directly perceived by a yogic direct perceiver.

According to Mādhyamikas, the apprehended object of the wisdom realizing emptiness is a nonaffirming negative. It is simply the negation of inherent existence. Other than that mere negation, nothing else is apprehended or affirmed. Although we are used to thinking in terms of affirmative or “positive” phenomena that we can point to and see, emptiness is the mere refutation of inherent existence. Here “positive” and “negative” don’t refer to virtue and nonvirtue; these terms indicate that something is put forth in an affirming or negating way. Making a positive statement, “There is a chicken,” influences the mind in one way—it starts to think about all the attributes of the chicken and what it does. But “There is no elephant here” leaves us with the simple negation of an elephant.

The purpose of cultivating the correct view of emptiness is to undermine any objectified basis—any inherently existent phenomenon—that can give rise to afflictions such as greed, anger, and so on. Being able to refute inherent existence and focus on that simple negation has liberating power.

For example, if you are afraid that a snake is in your bedroom, and your friend searches everywhere in the room and, not finding a snake, tells you “There is no snake here,” just that simple statement has the power to dispel your fear. However, if your friend says, “There is no snake, but I saw a scorpion,” your fear is not quieted. Similarly, the wisdom realizing emptiness knows just the absence of inherent existence—it has dismantled any objective basis that you could hold on to and doesn’t project anything else. Realizing a nonaffirming negative can have a strong impact on your mind. Consider people who walked past the twin towers of the World Trade Center in New York every day and suddenly one day the towers are no longer there. Those people know the absence of the towers.

As a simple negation that implies nothing in its place, emptiness is said to resemble empty space. Unconditioned space, which is the mere negation of physical obstruction, is also a nonaffirming negative. Although both emptiness and space are mere negations that don’t affirm something in their place, they are not the same. Space is the mere negation of physical obstruction, and emptiness is the mere negation of inherent existence. The two must be differentiated in meditation. Apprehending the latter leads to liberation; apprehending the former does not.

The Second Dalai Lama explains that just the phrase “free from elaboration,” or “without elaboration,” is a nonaffirming negative. Those words negate the elaboration of inherent existence but do not establish anything positive in its stead. During meditative equipoise on emptiness, only this nonaffirming negative appears to the mind, and that mind knows emptiness nondualistically. At that time there is no grasping true existence of emptiness, nor is there the thought “This is emptiness.” The perception of emptiness energizes the mind, giving it power and strength. This is completely different from a weak mind that focuses on nothingness. Meditating on nothingness does nothing to harm self-grasping ignorance, whereas an invigorated mind realizing emptiness contradicts ignorance.

In my own case, although I lack a direct realization of emptiness and haven’t had even a meditatively derived realization,<sup>66</sup> by repeatedly analyzing if phenomena exist the way they appear and by reflecting on the reasons disproving inherent existence, sometimes an unusual experience occurs. Although these experiences may be brief, within that state of meditation, there is no grasping.

As with a direct perceiver of emptiness, the apprehended object of an inference realizing emptiness is also a nonaffirming negative—the emptiness of inherent existence, the ultimate truth. Whereas the appearing object of a mind directly perceiving emptiness is emptiness itself, the appearing object of an inferential realization of emptiness is the conceptual appearance of emptiness in which emptiness appears mixed with the conceptual appearance of emptiness. There is debate whether the object that is the base of emptiness—the person, the body, the mind, and so forth—also appears to an inferential realization of emptiness. Most scholar-adepts think that it does not.<sup>67</sup> It definitely does not appear to a direct perceiver of emptiness.

## *Realizing the Selflessness of Persons and Selflessness of Phenomena*

Because there is a multiplicity of phenomena, there is a multiplicity of phenomena to grasp as inherently existent. These can be subsumed in two: grasping the person as inherently existent and grasping other phenomena as

inherently existent. The significance of this division is to emphasize the distinction between the subject—the person who is bound in saṃsāra and attains liberation—and the object—the aggregates that are the basis of designation of the person and other phenomena that a person uses or enjoys. Because grasping is twofold, selflessness is also twofold: the selflessness of persons and the selflessness of phenomena. Tsongkhapa clarifies (FEW 40):

... the mode of grasping inherent existence—the object of negation—is to grasp [that objects] are not posited through the force of beginningless conceptuality but are established objectively, by their own entity. The conceived object of that grasping is called self or inherent existence. The nonexistence of that with a person as the substratum is called the selflessness of persons, and the nonexistence of that regarding [other] phenomena, such as an eye, ear, and so forth as the substratum, is called the selflessness of phenomena. Hence, we can implicitly understand that grasping inherent existence with respect to persons and [other] phenomena are the self-grasplings of the two selves.

Vaibhāṣikas and Sautrāntikas confine themselves to refuting only the self of persons, which they say is a self-sufficient substantially existent person. However, by refuting this, a practitioner decreases clinging to oneself, but not to the aggregates and other objects. In the Yogācāra and Madhyamaka systems, selflessness applies both to the person and other phenomena. Realizing the selflessness of both has a stronger impact because it dismantles grasping both the subject and object of the afflictions as inherently existent. When attachment arises for an object—let's say a new device—there is the component of the subject, “*I want this*,” and the object, “*This device is wonderful!*” Both the subject of the affliction—I—and the object of the affliction—the device—appear to exist in and of themselves, and ignorance grasps them as existing in this way. The understanding of emptiness gained through deconstructing the false appearance of both subject and object has a powerful effect on the mind.

To attain arhatship or buddhahood, the realization of both selflessnesses is necessary. A yogi begins by focusing on the most serious troublemaker, the view of a personal identity in his own continuum—grasping an inherently existent I and mine—and investigates if the I exists in this way. If it does, it should be either

identical to the aggregates or totally separate and unrelated to the aggregates. Through analysis we understand that both options are impossible and conclude that an inherently existent I does not exist. If the I does not exist inherently, neither can the aggregates that are the basis of designation of that I. For example, if a cart is burned, its parts—the wheels, axle, and so forth—are burned. If inherent existence is refuted on the I, it is also refuted on the mine—what is possessed by the I, for example, the five aggregates.

The conventional self that exists is merely designated in dependence on the aggregates, which are its basis of designation. This conventional self or mere I is the base on which ordinary beings project and grasp inherent existence. The self and the aggregates have the relationship of appropriator and appropriated, or “clinger” and “clung to.” That is, the self “takes,” “appropriates,” or “clings to” the mental and physical aggregates, and the aggregates are what are taken, appropriated, or clung to by the self. While this language may give us the idea that there is a real self that exists by itself and later takes on the aggregates, this is not the case. Rather, the terms “appropriator” and “appropriated” indicate a mutually dependent relationship. We cannot posit an I that is the appropriator without positing aggregates that are appropriated, and vice versa.

Because Vaibhāṣikas and Sautrāntikas do not assert a selflessness of phenomena and believe the aggregates exist inherently, they realize neither the selflessness of phenomena nor the subtle selflessness of persons. Because they believe the aggregates to exist inherently, they will continue to hold the self designated in dependence on them to also exist inherently. This occurs because the mode of apprehension of the self-grasping of phenomena and self-grasping of persons is the same: they both grasp inherent existence.

Yogis first realize the selflessness of persons followed by the selflessness of phenomena. Because the I is an abstract composite imputed in dependence on the aggregates, realizing that it doesn't exist independently or under its own power is easier than realizing the aggregates are empty of such existence. However, to realize the emptiness of the person, strong self-grasping of the aggregates cannot be manifest in our mind. If someone strongly grasps the aggregates as inherently existent, they won't question whether the person, which is imputed in dependence on those aggregates, exists inherently.

The awareness that inferentially realizes the emptiness of persons and the awareness that inferentially realizes the emptiness of phenomena are not the same

consciousness, because these conceptual consciousnesses have different objects. Although the consciousness realizing the selflessness of persons does not realize the selflessness of phenomena either explicitly or implicitly, through its force it can induce a consciousness that does realize the emptiness of phenomena such as the aggregates. That is, although the mind realizing the emptiness of the person does not think “The aggregates are empty,” it can induce a mind realizing this when attention is turned to the aggregates. Tsongkhapa says (CTB 175):

If a selflessness of phenomena is established by a reliable cognizer in terms of one phenomenon, then when you analyze whether or not another phenomenon inherently exists, you can realize its non-inherent existence on the basis of your previous reasoning.

This applies to inferential reliable cognizers of emptiness that arise through reasoning, not direct reliable cognizers. When you have an inferential reliable cognizer of the emptiness of one phenomenon, just by turning your mind to another phenomenon and wondering how it exists, you can realize its emptiness as well because you’ve already understood the reasoning. This does not mean that at the precise moment you realize the emptiness of the person, you also realize the emptiness of the aggregates. Rather, after realizing the emptiness of the person, when you consider the aggregates, you immediately realize their emptiness. For example, when you realize there is no elephant in this room, you don’t simultaneously realize there is no elephant’s trunk here. But when you turn your mind to consider the elephant’s trunk, you immediately know that it is nonexistent because an elephant in this room is nonexistent. Similarly, you realize there are no inherently existent aggregates of a person because there is no inherently existent person to begin with. The *King of Concentration Sūtra* says (YDB 194):

Through one all are known  
and through one all are seen.

Āryadeva agrees (CŚ 191):

[One who sees] the emptiness of one phenomenon  
is said [to see] the emptiness of all.

That which is the emptiness of one [phenomenon]  
is the emptiness of all.

Āryadeva affirms that an inferential cognizer of the emptiness of the I immediately generates an inferential cognizer of the emptiness of other phenomena merely by directing the mind to those things while holding the question “Is this inherently existent or not?” The inherent existence of each and every phenomenon does not need to be refuted individually. If that were the case, it would be impossible to realize the emptiness of all countless phenomena.

If we taste one drop of ocean water, we know the rest is salty. The emptiness of inherent existence is the ultimate mode of existence of all phenomena. It doesn’t appear in different ways, as do blue and red. Emptiness is like the space in different receptacles: we speak of the space inside a pot and the space inside a cup separately, but when we apprehend the space inside the pot, we know what the space inside a cup looks like. Similarly, by knowing the emptiness of inherent existence of Susan, we’ll know the emptiness of Trinley by merely directing the mind to him. The process of reasoning that induced the initial cognition of Susan’s emptiness doesn’t need to be repeated. The *Sūtra Requested by Gaganagañja* (*Gaganagañjaparipṛcchā Sūtra*) says (YDB 194):

Whoever through one phenomenon knows through meditation  
that all phenomena are inapprehensible like illusions and mirages—  
hollow, deceptive, and ephemeral—  
will before long reach the essence of awakening.

This verse corroborates the same principle when it comes to knowing all phenomena are like illusions in post-meditation time. By tasting one drop of honey in a bottle, you thereby know that the remaining honey is sweet.

Unlike realizing emptiness inferentially, when meditators directly perceive the emptiness of one phenomenon, they simultaneously realize the emptiness of all phenomena. As the ultimate nature of all phenomena, the emptiness of each thing appears the same to the mind of meditative equipoise directly perceiving emptiness.

---

## REFLECTION

1. What is a nonaffirming negation? Why do masters insist that the ultimate truth is a nonaffirming negation?
  2. What is the self of persons according to the four tenet systems? What is the self of phenomena?
  3. What are the selflessness of persons and selflessness of phenomena? Are they emptiness?
- 

### *Characteristics of Reality*

Although the full experience of suchness—the way things really are—is beyond words and concepts, it can be expressed through language and thought. This description doesn't impute false characteristics on reality; it simply uses conventional terms to describe them. Nāgārjuna mentions five characteristics of the way things really are (MMK 18.9):

Not understandable from another [person], void, and  
not captured by verbal phantasms,  
not conceptualized, without distinctions;  
that is the characteristic of things as they really are.

1. The way things really are *cannot be fully understood* by depending on another person's teachings or description of it. Reality has to be realized by our own purified wisdom. A person with the visual impairment of vitreous floaters sees falling hairs where there are none. Someone who doesn't have this appearance can tell him that there are no falling hairs, and through that, the person with vitreous floaters knows the hairs aren't real. However, he doesn't know their absence in the same way that the person without this visual impairment does. When the visual impairment is resolved, he will know by his own experience that there are no falling hairs.

Similarly, ordinary beings can hear a correct explanation of the way

- things really are and in that way understand the ultimate by means of a conceptual appearance. However, they do not understand it the way āryas who directly perceive emptiness do. When their wisdom shatters their ignorance, ordinary beings become āryas and realize emptiness directly by themselves.
2. The way things really are is *devoid* of false appearances. Just as vitreous floaters do not exist in the eyes of someone without that visual impairment, likewise reality is devoid of inherent existence.
  3. Reality is *not expressed by verbal fabrications*; it cannot be fully captured by words.
  4. It is *without* the distraction of *conceptualizations* and thought.
  5. It is *without distinctions*; all phenomena equally lack inherent existence. Ultimately there is no individuality; reality cannot be differentiated into separate objects.

Words and concepts may give us an idea of the way things really are, and in that way we can intellectually understand the ultimate nature. However, we must never mistake words and concepts for the actual experience of emptiness. Nor should we dismiss the benefits that derive from conceptual analysis of the ultimate nature in helping us to gain direct experience.

## *The Object of Attainment*

Between our present mind and our future buddhahood lie two obscurations: the afflictive obscurations (*kleśāvaraṇa*) and the cognitive obscurations. The afflictive obscurations are the afflictions—wrong views and disturbing emotions that cause saṃsāra and their seeds. The cognitive obscurations (*jñeyāvaraṇa*) are the aspect of the mind that continues to mistakenly perceive all internal and external phenomena dualistically (T. *gnyis snang 'khrul pa'i cha*)—that is, as inherently existent—as well as the latencies that cause this dualistic aspect (T. *gnyis snang 'khrul pa'i bag chags*). Cognitive obscurations are not consciousnesses. The aspect that continues to perceive inherent existence is a quality that is concomitant with the consciousness, whereas the latencies are the cause of these dualistic perceptions or appearances.<sup>68</sup>

Nirvāṇa is the passing beyond sorrow—the extinguishment of duḥkha and its origins, the afflictive obscurations. This is liberation, the object of attainment for śrāvakas and solitary realizers. For bodhisattvas the object of attainment is nonabiding nirvāṇa (*apratiṣṭha-nirvāṇa*), the elimination of both the afflictive and cognitive obscurations. The purified emptiness, or suchness, of the mind in which all defilements have been extinguished is both the object of attainment—the *dharmakāya* (nature truth body) of a buddha—and the object of meditation. This is called “nonabiding nirvāṇa” because having eliminated afflictive obscurations, a buddha does not abide in saṃsāra, and having additionally eliminated the self-centered attitude and cognitive obscurations, a buddha does not abide in personal peace.

The afflictions that cause saṃsāra, the actions they motivate, the aggregates we take as a result of those actions, the person who performs the actions and experiences their results, and the results that person experiences all appear to ordinary beings to have their own inherent nature. However, they do not exist in this way; they are false, like a hologram that appears to be a person but is not.

Since these things do not have their own inherent nature or essence, what is the actual nature of phenomena that we seek to realize? This is nonabiding nirvāṇa, the extinguishment of grasping at I and mine with respect to all internal phenomena—the sense faculties, body, mind, and mental factors—and external phenomena—forms, sounds, and other sense objects—that is rooted in grasping inherent existence and its seeds. This is attained by removing all mistaken appearances of phenomena as inherently existent through familiarizing ourselves with their emptiness of inherent existence. Nonabiding nirvāṇa is the emptiness of a buddha’s mind, the purified state of the natural buddha nature, the nature *dharmakāya*. Nonabiding nirvāṇa possesses two purities: the natural purity that is the mind’s primordial emptiness of inherent existence and its purity from adventitious defilements—its final true cessation—that is attained by practicing the path.

What happens to the seeds of polluted karma when someone becomes an arhat or a buddha? According to the upper tenet systems—the lower tenet systems have a different idea—the seeds of nonvirtuous karma in the mindstream of someone who has become a śrāvaka or solitary realizer arhat or an eighth-ground bodhisattva have become powerless and no longer exist; nothing

nonvirtuous remains in their mindstreams. Seeds of previously created virtuous karma become unpolluted seeds of virtuous karma.

## 8 | Objects of Negation

CORRECTLY IDENTIFYING the object of negation—the false mode of existence that ignorance grasps as real—is the most important step when meditating on emptiness. If we do not properly identify the object of negation, we may meditate on selflessness and think we have realized emptiness, but in fact we may understand only the lack of a self-sufficient substantially existent person, not the full emptiness of the person. Alternatively, we may have an experience of vacuity and mistake this for the emptiness of inherent existence.

It is wise to banish all romantic ideas that the ultimate nature of all phenomena will automatically appear to you in a flash as an amazing experience that will instantly free you from all duḥkha forever. Instead let's deepen our understanding of ignorance and what it grasps as true so that our meditation on emptiness will bear fruit.

### *Objects Negated by the Path and Objects Negated by Reasoning*

Objects of negation are of two types: those negated by the path and those negated by reasoning. “Negated” has different meanings in these two phrases. Regarding objects negated by the path, “negated” means abandoned or eradicated; but when speaking of objects negated by reasoning, “negated” means disproved or refuted.

*Objects negated by the path* are mental obscurations, which can be subsumed in the afflictive obscurations and cognitive obscurations. Afflictive obscurations primarily interfere with attaining liberation, and cognitive obscurations primarily hinder attaining the omniscience of a buddha. The objects negated by the path are existent phenomena. If they weren't, sentient beings would not have to work to eliminate them.<sup>69</sup>

*Objects negated by reasoning* are nonexistents that we erroneously believe exist. The chief of these is inherent existence. Although the ignorance that grasps inherent existence, which is a mental factor, exists, its conceived and apprehended object—inherent existence—has never existed. Grasping inherent existence is a consciousness and is an object negated by the path, whereas its conceived object—inherent existence—is an object negated by reasoning. When inherent existence is negated, the awareness grasping it gradually weakens and ceases.

If inherent existence existed, it could not be refuted by reasoning. We cannot prove as nonexistent things that in fact exist. Even though inherent existence does not exist at all, refuting it is essential because to eliminate the erroneous consciousness that grasps it, we must first disprove the object that consciousness apprehends.

Why is self-grasping ignorance a wrong consciousness? Why is the object it apprehends nonexistent? If things existed inherently, as ignorance apprehends them, when we searched for what they really are we would be able to find something. When we analyze what the name “apple” actually refers to—what the inherent nature or true essence of the apple really is—it should become clearer. Among the parts of the apple—the skin, pulp, and core—we could point to something that is indeed the apple. However, instead of the apple becoming clearer to our mind when we analyze it, the apple seems to vanish.

Ignorance apprehends phenomena as existing independent of all other factors. If ignorance apprehended things correctly, then everything would exist in its own self-enclosed manner, unrelated to everything else. However, when we examine how things exist, it becomes apparent that they are dependent—on their causes and conditions, on their parts, and even on the mind that conceives them and gives them a name. Something that is dependent cannot be independent—the two are contradictory. Thus ignorance is a wrong consciousness.

Refuting inherent existence is not like erasing writing on a white board; we are not making something that exists nonexistent. Instead, it is like proving that the bogeyman—a mythical creature fabricated by adults to frighten children to be good—doesn’t exist; we realize that something we believed existed has, in fact, never existed. When we realize the bogeyman doesn’t exist, we stop being afraid of him; we see that he never existed at all and that all along our ignorance had blindsided us and we were terrified of a monster that didn’t exist. Similarly, when

we realize inherent existence does not exist, we gradually stop being under the control of our ignorant grasping that it does exist.

Refuting inherent existence and establishing the emptiness of inherent existence is not destroying something that exists. Everything has always lacked inherent existence. No one made phenomena empty of inherent existence; that has always been their ultimate nature. We understand this truth for the first time upon refuting inherent existence. Furthermore, realizing emptiness does not create something new that didn't exist before, such as constructing a bicycle. It's like removing the cataract-like mental obscurations so that you can see clearly.

We may wonder: "Why are so many words needed to prove that a nonexistent doesn't exist? If it exists, we cannot refute it, and if it does not exist, we don't need to refute it; so of what use are all these refutations and proofs?" Let's look at the example of the bogeyman again. Although the bogeyman doesn't exist, a child who believes he does trembles in fear. If we hold the child's hand and take him around the house to look for the bogeyman, when we can't find him anywhere, the child will understand there is no bogeyman and his fear will vanish.

The mind is very powerful and misconceptions can make us terrified when there is nothing to fear. Ignorance has blindsided us into believing that the I and all other phenomena exist inherently, and as a result our attachment and anger, having grown out of ignorance, have caused us eons of *duḥkha* in *saṃsāra*. When we refute and familiarize ourselves with the nonexistence of the object of this grasping, ignorance gradually ceases, the afflictions arising from it gradually cease, polluted karma is no longer created, and our *saṃsāra* comes to an end.

Words alone do not overcome true-grasping, but they can teach us how to do this. Although the words of the teachings also lack inherent existence, they can function to generate the understanding in our minds that inherent existence does not exist. Here it becomes evident that attaining liberation or awakening doesn't involve going somewhere else; it is a matter of changing our mind.

In addition to our innate grasping, the mind is home to a plethora of acquired wrong views. Some of these wrong views are held by non-Buddhists, others by adherents to the lower Buddhist tenet systems. All of them are rooted in grasping inherent existence. For example, in asserting the existence of a permanent, unitary, independent self, non-Buddhists do not begin by apprehending the self as permanent or perceiving it as one monolithic whole.

Rather, they grasp the self as existing from its own side. By not recognizing that the inherent existence apprehended by this innate grasping does not exist, they then make up beliefs to explain how karmic seeds can go from one life to the next. The notion of a permanent self that is one partless whole and is independent of causes and conditions is one such fabricated belief.

Proponents of the lower Buddhist tenet systems recognize the fallacies of that belief, so they instead assert that a foundation consciousness or the mental consciousness is the self. In this way, self-grasping constantly seeks a way to make itself prevail and feel secure.

Because of our deep-seated belief in inherent existence, we cling to people and things that appear to be attractive from their own side, have aversion to disagreeable people who appear hateful in and of themselves, are arrogant about our seemingly inborn talents, and become jealous of those who have opportunities we do not. If we were to correctly identify the grasping consciousness that is the root of all these disturbing emotions and refute its conceived object, all other wrong views would be gradually destroyed. The antidote for each individual affliction—for example, meditating on the ugly aspects of an object to counteract attachment and on fortitude to subdue anger—temporarily overcomes only that disturbing emotion and does not damage the others. Using these antidotes is comparable to cutting down one obtrusive branch and then another, with new ones growing from the trunk. Realizing the emptiness of inherent existence and familiarizing our mind with it over time is like uprooting a poisonous tree; nothing more can grow from its trunk.

## *The Importance of Correctly Identifying the Object of Negation*

Correctly identifying the object of negation by reasoning is essential for our meditation on emptiness to be effective. Śāntideva affirms (BCA 9.139ab):

Without having identified the object [of negation] that is imputed,  
the absence of that object cannot be apprehended.

The word “emptiness” in Buddhism designates something completely different from the word’s ordinary meaning. The emptiness is not like the emptiness of our stomach or the emptiness of our bank account. It is a mode of existence that is the absence of incorrect ways of existence that ignorance projects on persons and phenomena; in the context of the Prāsaṅgikas, this is inherent existence, which is synonymous with existence by its own characteristics, existence from its own side, and so on.

The first step in refuting inherent existence is to have an idea of what it would be like if it in fact existed. This process is called “identifying the object of negation.” For example, to expel a thief from your house, you must first know what he looks like.

Even great masters such as Tsongkhapa initially had difficulty in identifying the subtlest object of negation. His early writings such as *The Golden Rosary* (*Legs bshad gser phreng*) show that like many of the early Tibetan Buddhists, he believed that since nothing can be found when analyzed with reasoning, nothing exists conventionally. He thought that sages assert dependent arising and conventionalities only when talking to others—that is, discussion of conventionalities is done for the sake of others, not because oneself asserts their existence.

By asking questions to Mañjuśrī, the Buddha of wisdom, Tsongkhapa later saw the error in that view. In the “Three Principal Aspects of the Path,” he emphasized that if we think emptiness is an independent, absolute truth such that dependent arisings and emptiness are incompatible, then we have not understood emptiness correctly. As long as dependent arising and emptiness are seen as alternating realities that do not converge, we lack the correct view.

Identifying the object of negation—inherent existence—is a subtle process that takes time, especially since conventionally existent phenomena and inherent existence appear to us completely mixed. Teasing these apart is delicate; it is easy to veer toward negating too much or not negating enough. Tsongkhapa reminds us (LC 3:126):

Just as, for example, to ascertain that a certain person is not here, you must know the person who is not here, so in order to ascertain the meaning of “selflessness” and “lack of [inherent] nature,” you must also identify well that self and nature that do not exist. This is

because, if the conceptual appearance of that which is to be negated does not appear well, then also the negative of that will not be unmistakably ascertained.

To catch a terrorist, we have to know what he looks like. If we have no idea whether he is tall or short, fat or thin, our efforts to locate him will not bring any results. Similarly, if we have no conceptual image of what inherent existence would be like, it will be hard to tell it does not exist. Of course we could say the words “There is no inherent existence,” but that would be like saying “There is no terrorist here” when the terrorist is standing next to us but we don’t recognize him. If we refute too much or not enough, if we negate the wrong object, or if we remain in blank-minded meditation, our efforts will not bring the desired result of liberation or awakening. For this reason, proper identification of the object of negation is crucial.

Changkya Rolpai Dorje (1717–86), a sage from eastern Tibet, says that some dialecticians, people skilled in philosophical debate, insist on consistency and are obsessed with giving a rational account of everything. They claim to be intelligent scholars and good practitioners, but they leave intact the solidity of what they perceive in front of them. They think the object of negation is something external that can be identified without questioning the way the I appears in the everyday functioning of the ignorant mind. It seems as if they are negating something with horns that is completely unrelated to their own apprehension of I. This is because they haven’t correctly identified the inherent existence that appears to them in their daily perceptions and thoughts as being the object of negation. Changkya says:<sup>70</sup>

Among today’s thinkers, there seem to be  
some caught in the web of words:  
“self-substantial,” “ontologically real,” and so on.  
They only invent monsters  
with horns to negate, leaving intact  
our vivid, coarse, apparent world.

It is crucial to recognize that the solid, concrete, objective reality of an object appearing to us is the very object of negation. Doing this can be unnerving

because it involves challenging our everyday, habitual perceptions. The object of negation must be tied to the way we see ourselves. If it isn't, negating an inherently existent I won't have any effect on us. When our meditation on emptiness is successful, we discover that how we have been thinking of ourselves and all other phenomena from beginningless time until now has been completely wrong. We do not exist in the way we thought we did. At that time, it's almost as if we are no longer able to posit the self. It seems as if things barely exist—they do not have their own essence but exist dependently, like illusions.

Nāgārjuna identifies emptiness as the meaning of dependent arising, thus pointing out the necessity of not only negating inherent existence but also establishing dependently arising conventional truths. In other words, the object of negation is not all existence whatsoever, only inherent existence. In the case of persons, the I exists in dependence on the body and mind. This I meditates, eats, creates karma and experiences its results, practices the path, and attains awakening, and it does all these without existing under its own power. This sense of I is a valid innate conception; on its basis we seek happiness and not suffering. This valid sense of I is not the object of negation, and negating it would lead to the extreme of nihilism. Grasping the reified I is the troublemaker, and its conceived object is the object of negation. Identifying it takes time and finesse.

---

## REFLECTION

1. What are objects negated by the path and objects negated by reasoning?
  2. Why is correctly identifying the object of negation important in order to realize emptiness?
- 

### *What Is Not the Object of Negation*

In *The Four Hundred*, Āryadeva says (CŚ 398):

If things existed inherently,  
what good is it to perceive emptiness?

Seeing by way of conceptions binds;  
this is refuted here.

The first two lines warn that if phenomena existed inherently, inherent existence would be the nature of phenomena and could not be refuted. In that case, emptiness could not be realized. “Conceptions” refer to conceptions of inherent existence that superimpose existence from their own side onto persons and phenomena.

Of the three types of phenomena—evident, slightly obscure, and very obscure—emptiness is a slightly obscure phenomenon.<sup>71</sup> Ordinary beings cannot initially directly apprehend slightly obscure phenomena with their sense consciousnesses. They can initially be known only through reasoning, by means of an inference. Only after correctly ascertaining the emptiness of true existence conceptually, and then repeatedly meditating on it until the conceptual appearance of emptiness is worn away, can ordinary beings realize emptiness directly and become āryas. If all conceptual consciousnesses—even inferences that are correct conceptions of emptiness—were erroneous, then teachers and students could not use conceptual consciousnesses to teach and listen to explanations on emptiness. Cultivating the correct view of emptiness would then be impossible.

Not all conceptual consciousnesses grasp true existence. A mental consciousness envisioning the layout of a building and the mind designing a scientific experiment do not necessarily grasp true existence, and their apprehended objects are not objects of negation. If we are not clear about this point—that the object of negation is the conceived object of self-grasping ignorance, not the objects of all conceptual consciousnesses—we may spend a long time doing blank-minded, nonconceptual meditation that doesn’t engage with any object whatsoever, mistakenly believing that it will lead to liberation.

The object of negation being discussed here is not wrong objects learned through the study of faulty philosophies. The conceptual consciousnesses holding those objects are acquired afflictions and are not the root of saṃsāra. Although refuting directionally partless particles, apperception, a permanent creator, a primal substance, one universal mind, and so forth are steppingstones to gain the correct view of emptiness, refuting these does not discredit the conceived object of innate ignorance. However, when we correctly negate the conceived object of

ignorance, all the false objects posited by non-Buddhists and the lower Buddhist tenet systems are negated, and the process of gradually uprooting all incorrect conceptions begins. Just as uprooting a noxious weed decimates its stalks, leaves, and flowers, uprooting the root of saṃsāra damages all the wrong conceptions and afflictions that grow from the innate self-grasping ignorance.

Furthermore, the object of negation is not the object of sense consciousnesses or of mental direct perceivers. Training ourselves to think that the inherently existent things that appear to our senses do not exist is a skillful method to help us recognize the mistaken quality of our sense perceptions. However, this does not directly refute the object of negation. Objects apprehended by the five sense consciousnesses are not the object of negation because the object of negation is apprehended, conceived, and grasped by a conceptual mental consciousness grasping inherent existence. It is the *conceived object* of this erroneous *mental* consciousness that grasps true existence that is to be refuted by reasoning. This reasoning consciousness is a special mental consciousness, a pristine wisdom (*jñāna*) that is either an inference or a direct mental reliable cognizer. Emptiness is not perceivable by the sense consciousnesses. Only a special type of mental consciousness—the pristine wisdom of meditative equipoise—can perceive emptiness directly. Tsongkhapa said (LC 3:212):

Therefore, the awarenesses whose mode of apprehension is to be eradicated by reasoning are only conceptual mental consciousnesses, and moreover, are the two graspings of self [of persons and of phenomena] or those conceptual consciousnesses that mistakenly superimpose further attributes on objects imputed by those two graspings of self.

## *The Valid Sense of I*

Before refuting the inherent existence of the I, it is important to differentiate the valid sense of I and the view of a personal identity, and their objects. This will clarify how the view of a personal identity reifies the valid I by superimposing inherent existence on it. It will also help us discern the object of negation and the valid I that exists.<sup>72</sup>

The psychophysical aggregates are the basis of designation of the self; they are the basis of our innate sense of self. The notion “I” comes about as a result of some experience; it arises in relation to one of our aggregates. We say “I’m sick” when our lungs are tight and “I’m full” when our stomach is full. We comment “I’m happy” or “I’m sad” in relation to the feeling aggregate. “I’m clever” and “I know what’s going on” are said referring to our aggregate of discrimination, and “I’m angry” or “I have compassion” come in reference to the aggregate of miscellaneous factors. We say “I’m thinking” in dependence on the mental consciousness and “I’m hearing” in dependence on the auditory consciousness. In short, the thought “I” arises only in relation to our body and mind.

At these times, we’re not thinking “I am my body,” “I am my feelings,” or “I am the one who is thinking.” Rather, there’s just the sense of a conventionally existent I. This is a valid mind apprehending the mere I, the I that is merely designated in dependence on the aggregates. The I *appears* inherently existent to this valid I-apprehending mind; however, that mind does not *grasp* the I to exist inherently.

Self-grasping arises after this. Something may happen in our environment that triggers it, or internally we may think of a troubling or desirable situation. At that time, the appearance of an inherently existent I becomes more vivid—the I seems to have its own essence and exist under its own power, independent of all other factors. It seems that there is a real I that is being threatened or wants something very badly. This I is the apprehended and conceived object of the view of a personal identity. At this time, the view of a personal identity, which is a form of self-grasping ignorance, has arisen, and it grasps that independent I.

It’s at this point that the trouble begins, because based on this self-grasping, afflictions such as craving, belligerence, conceit, and so forth arise. Sometimes a virtuous mind arises supported by the view of a personal identity—for example, when we have faith in the Three Jewels or experience compassion for a homeless person. In either case, polluted karma is created and the ripening of the karmic seeds will perpetuate saṃsāra. However, the experience in saṃsāra will be happy or suffering depending on if the causal karma was virtuous or nonvirtuous.

## *Inherent Existence*

Ignorance superimposes inherent existence on both persons and other phenomena. What is inherent existence? We cannot define what it is because it doesn't exist. However, we can talk about what it would be like if it did exist. As we closely examine our own perceptions and thoughts, we'll gradually be able to identify how inherent existence *appears* to our mind and how ignorance *grasps* this appearance as true. Several ways of describing the object of negation follow. As you ponder them, you will see that they revolve around a common theme. In his *Commentary on the "Four Hundred,"* Candrakīrti says (LC 3:213):

“Self” is an essence of things that does not depend on others; it is an inherent nature.

Commenting on the statement that all phenomena are without their own power—that is, they cannot set themselves up—and therefore there is no self, Candrakīrti points to four terms equivalent to self (LC 3:212):

This refers to existing essentially (T. *rang gi ngo bo*), inherently (T. *rang bzhin*), autonomously (T. *rang dbang*), and without depending on another (T. *gzhan la rag ma las pa*).

These terms have varying English translations, but their meanings come to the same point:

- Inherent, intrinsic, or essential existence (*svabhāvasiddhi*, T. *rang bzhin gyis grub pa*): existence able to set itself up (T. *tshugs thub tu grub pa*).
- Existence by its own entity (*svarūpasiddhi*, T. *rang gi ngo bo nas grub pa*): having its own inherent nature.
- Existence by its own power, autonomous existence (T. *rang dbang du grub pa*): a phenomenon appears to its apprehending consciousness as not depending on others—that is, not dependent on merely being posited by conceptuality—and it is taken to exist in that way. A phenomenon has a mode of abiding that is able to set itself up by its own entity right with the object. Its nature has an essence, its own unique mode of existence.
- Existence without depending on another (T. *gzhan la rag ma las pa*): existence without depending on merely being posited by conceptuality.

Ignorance apprehends persons and phenomena as if they existed as self-enclosed phenomena without being posited by a conventional consciousness. Tsongkhapa says (LC 3:212–13):

What exists objectively in terms of its own essence without being posited through the power of a subjective mind is called “self” or “inherent nature.” . . .

In the case of reification by ignorance, there is, with regard to objects, be they persons or other phenomena, a grasping (T. *bzung*) that those phenomena have ontological status—a way of existing—from their own side (T. *rang gi ngos nas*), without being posited through the force of an awareness. The conceived object that is thus apprehended by that ignorant grasping, the independent ontological status of the phenomena, is identified as a hypothetical self or inherent nature.

If the conceived and apprehended objects of the innate self-grasping ignorance existed, they would exist from their own side, in and of themselves, under their own power, and without being posited by a conventional consciousness. Self is something that has its own essence and is able to set itself up. Self-enclosed, it does not depend on anything else. It exists by its own entity, truly, ultimately, and independently. Self refers to any nature or state that objects could have in which they do not rely on anything.

The ignorance that grasps such a self is erroneous because nothing can be established independent of the power of thought. Although things appear to exist “out there” objectively, and we assent to that appearance and grasp them as truly existent, that view is incorrect because phenomena do not exist in that way.

My guru, Kyabje Ling Rinpoche, described the object of negation to be the basis of designation and the designated object appearing undifferentiable. In other words, the object of negation is the designated object mixed with the basis of designation or inside the basis of designation. In the case of the view of a personal identity, it is an I that seems independent but still mixed with the aggregates.

The object of negation has also been described as what exists beyond what is merely designated by concept and term. That is, the conventional object—for example, the I—exists by being merely designated by concept and term, but

ignorance grasps as existent something that goes beyond that—an I that has its own mode of being, its own independent essence.

Another description of the object of negation in terms of the I is: the meditator has already negated that the aggregates are the I, but an I that appears to be independent of the aggregates still seems to exist from the side of the aggregates.

Tsongkhapa says (FEW 40):

. . . the mode of apprehending true existence—the object of negation—is to conceive [that objects] are not posited through the force of beginningless conceptuality but are established objectively by way of their own entity.

In *Seventy Stanzas on Emptiness* (*Śūnyatāsaptati*), Nāgārjuna says that ignorance grasps dependently arising phenomena as having a final reality of their own. Nāgārjuna uses causal dependent arising to reject the object of negation: things having a final reality of their own (ŚS 64–65):

The Buddha said:  
grasping that things truly arise  
from causes and conditions is ignorance,  
and from that, the twelve links [of dependent origination] arise.

When you realize that things are empty,  
you see properly and are not confused.  
That stops ignorance,  
and from that, the twelve links stop.

All conditioned phenomena are empty because they arise by the power of causes and conditions. The coarse form of causal dependence is not difficult to understand: we get an education so that we can work and earn a living. We save for the future so that we will have enough to live on when we are unable to work. Even animals understand this level of causality: they know that if they eat they will not feel hungry!

What allows for a cause to produce a result? Anything that is a cause is impermanent by its very nature, changing in each and every moment. Thus its

arising is sufficient for it to disintegrate. As it ceases, something new arises—its result. If causes or results existed from their own side, they would have their own unchanging essence, would not be affected by other factors, and could not change. If things existed inherently, they would be frozen, unable to be influenced by causes and conditions. If the environment were an objective entity, it would not be influenced by carbon dioxide levels, earthquakes, and the increase in human population.

In the chapter “Questions from Upāli” in the *Ratnakūṭa Sūtra*, the Buddha clearly states that causes are not being emptied by means of emptiness—that is, causes are not negated or made nonexistent by emptiness. Rather, causes themselves are empty. As long as we assume that phenomena have some kind of objective reality of their own and think that not finding the conventional phenomenon when we search for its true essence is the meaning of emptiness, we have not arrived at the full understanding of emptiness. Rather, the basis of designation of a term has no inherent existence. For example, the basis of designation that has been designated “truck”—the wheels, axle, hood, and so forth—is totally devoid of inherent reality. There is not a findable, inherently existent truck in that collection of parts. Nevertheless, we can drive the merely designated truck.

Āryadeva explains ignorance and the object it grasps by explaining its antidote (CS 136):

When dependent arising is seen,  
ignorance will not occur.  
Thus every effort has been made here  
to explain precisely this subject.

By identifying the wisdom of dependent arising as the antidote to ignorance, Āryadeva points out that ignorance grasps phenomena as devoid of dependence and as having an independent reality of their own. This is another way to express the object of negation.

In summary, a self of persons or phenomena would be something that existed objectively, apart from being posited by mind. Although things are designated in dependence on their basis of designation, they are not their basis of designation. There is nothing in any of the five aggregates or in the collection of the aggregates

that is a person. However, a person exists; we know that from our own experience. The only way a person can exist is by being merely designated in dependence on the aggregates that are its basis of designation.

As we contemplate this, we get the sense that a person does not exist under their own power or from their own side. However, when we observe how things appear to us, they do not appear to be dependent on conceptuality; they appear to exist from their own side, objectively. This is the object of negation: that aside from our conception and name of an object, there is something in the basis of designation that is that object.

Since inherent existence does not exist at all, only hypothetical definitions and descriptions of it can be given. A coiled rope appears to be a snake, and we may think it is one. But when we analyze to find the snake on that base, no snake is found. Similarly, the person appears to be an inherently existent, independent entity, but when we analyze to find this real person, it is not found.

---

## REFLECTION

1. Describe the I that is the object of negation in the meditation on the emptiness of the person.
2. Describe the conventional I that exists.
3. Why is it important to differentiate between those two?

---

## *Self of Persons*

Having seen how a valid sense of I arises and how self-grasping quickly solidifies it, making it seem to inherently exist, let's look at the various levels of misconception and grasping concerning the I. Some of these wrong conceptions are acquired due to incorrect ways of thinking in this life, whereas others are innate and have been with us from beginningless time. Understanding the various levels of wrong conceptions and their erroneous objects helps us identify the ignorance that is the root of saṃsāra and the object of negation that it grasps.

Regarding the I, the erroneous conceptions grasping it, from the coarsest to the subtlest, are (1) the misconception of the person as permanent, unitary, and independent from causes; (2) grasping the I to be self-sufficient substantially existent; and (3) grasping the I to exist inherently.

Each of these errs in how they view the relationship of the I and the aggregates and superimposes a false mode of existence on the self. Although what is superimposed does not exist, there are different levels of superimpositions; some are subtler and more difficult to identify than others. They are like layers of an onion peeled away until nothing remains. We will begin examining the coarsest, since it is the easiest to recognize and to negate.

### *Permanent, Unitary, and Independent Self*

The first, grasping at a permanent, unitary, independent self (*ātman*), is an acquired wrong view that holds the self and the aggregates to be totally separate and unrelated to each other in that they have contradictory characteristics: the self is seen as permanent, whereas the aggregates are impermanent; the self is one, whereas there are many aggregates, and so forth. “Permanent” means the self is unchanging; it neither arises nor passes away. “Unitary” means that the I does not depend on parts; it is one monolithic object. “Independent” signifies that it does not depend on causes and conditions. The self is like a porter and the aggregates are the burden he carries; the two are completely different entities. This view does not arise in our minds innately; it is acquired by studying erroneous philosophical views. All Buddhist schools refute the existence of such a self.

How did the view of such a self come about? We notice that, from birth until the present, our body has grown and our mind has matured. But our sense of self feels constant. We say “When I was in my mother’s womb” with the feeling that we are the same person now as then. Since people in ancient India accepted rebirth, they said that there must be something that goes from one life to the next and carries the karmic seeds. They concluded that a permanent self maintains the continuity of the person. Although the body and mind consist of parts, the self must be a unitary whole. Furthermore, while the body and mind are subject to causes and conditions, the self that transmigrates is beyond that; it is independent.

Most non-Buddhist religions have a similar idea of a permanent, unitary, and independent soul. Some people believe that a soul—the unchanging essence of a person—goes to heaven or hell after death. Some believe the soul remains in an undecided state until just before the Day of Judgment when it will be reunited with the body. Others believe this self is immutable and does not experience birth and death, although the aggregates change. This permanent self is trapped in the aggregates, where it suffers from creating karma and experiencing its result. Liberation is attained when the self transcends conditioned existence and either reunites with its creator or dwells in eternal bliss.

You may have been taught a similar view of the self or soul as a child, or you may have absorbed such a view simply through cultural conditioning. Because this conditioning is deep, portions of it may remain in your mind, and you may unconsciously think you have a soul that is your unchanging essence in this life and beyond. It is helpful to identify this belief in the mind and then investigate if it is possible for such a self or soul to exist.

Related to this conception of an unchanging self is the notion of an external, permanent creator of sentient beings and the universe. Buddhists employ several reasonings to negate the possible existence of such an independent creator:

- A permanent creator cannot create because creation involves change from what was to something new, and a permanent creator is fixed.
- If the creator succeeded in creating, it would be impermanent. As an impermanent thing, the creator would arise from causes and conditions and produce results. This contradicts the basic notion of an independent creator.
- Why did the creator create? It must have had a motivation, in which case it is not independent of causes and conditions but is influenced by them.
- Some people say the creator is permanent but is temporarily impermanent while it creates. But something cannot be both permanent and impermanent, because these are contradictory qualities. Also a permanent creator cannot change to become an impermanent one and then change again to become unchanging.

*Self-Sufficient Substantially Existent Self*

The next level is grasping a self-sufficient substantially existent I, of which exist an acquired form and an innate form. Here the I appears to stand on its own, as if it could be identified without one or more of the aggregates having to be identified by the mind. The relationship between a self-sufficient substantially existent person and the aggregates is like that of a controller and the controlled—the person is the controller and the aggregates are what the person controls.

Here, the aggregates are seen as different from the person, yet having concordant characteristics with the person. This is noticeable when we think “My body falls ill so often. I wish I had the body of a deva.” It seems as though the I could exchange its body for another, more preferable body, as if the body were a commodity that is different from the person possessing it. An example of seeing the person and the mind as different occurs when thinking, “My mind is full of afflictions. I wish I had the mind of a buddha!” The self seems to be the possessor of the mind, and the mind is like merchandise that can be exchanged. Holding the self and aggregates to be different in this way is grasping a self-sufficient substantially existent person. This is the self that the lower schools assert to be the object of negation when realizing the selflessness of persons.

Grasping a self-sufficient substantially existent person is present when we say “I can lose weight anytime I want,” as if the I were the boss of the body that is overweight and the mind that likes to snack. Sometimes we may think “I can stop drinking, no problem,” or “I’ll be able to remain single-pointed on the object of meditation once I make up my mind to do so.” In these cases, it seems as if the I is the mental consciousness that rules over the body and mind, which are its subjects.

How does grasping a permanent, unitary, independent self differ from grasping a self-sufficient substantially existent self? The non-Buddhists who assert the existence of a permanent, unified, and independent self assert that the I and the aggregates are different natures and have discordant characteristics. Different natures means two things can exist at different times and different places. Discordant characteristics means that some of their characteristics are dissimilar. For example, non-Buddhists believe the I is permanent, partless, and independent, whereas the Buddhists who refute a self-sufficient substantially existent person consider the person to be impermanent, composed of the aggregates that are its parts, and dependent on causes and conditions. In short, seeing the self as a self-sufficient substantially existent person does not entail

seeing the person and the aggregates as having discordant characteristics, whereas the conception of a permanent, unified, and independent self does.

Although the lower schools—the Svātantrikas and below—believe that they are refuting the subtle self-grasping of persons, according to the Prāsaṅgikas, they are not. The Prāsaṅgikas differentiate two levels of innate self-grasping of persons—innate self-grasping of a self-sufficient substantially existent person and innate self-grasping of an inherently existent person. They say that the lower systems refute only a self-sufficient substantially existent person while leaving grasping an inherently existent I intact.<sup>73</sup>

Tsongkhapa asserts that grasping the self-sufficient substantial existence of the I exists in the minds of both those whose awarenesses have and have not been affected by tenets; this means that it has an acquired form that is learned in this lifetime and an innate form that comes from previous lives. However, grasping the person and the aggregates to have discordant characteristics—as in conceiving the self to be permanent, unified, and independent—exists only in the minds of those who have learned incorrect philosophies. This indicates that it is an acquired, not an innate, affliction (FEW 245):

Apprehension that persons are substantially existent in the sense of being self-sufficient also exists among those whose awarenesses are not affected by tenets, but apprehension that persons exist as other than the [mental and physical] aggregates in the sense of having a character discordant with them does not exist among those whose awarenesses are not affected by tenets.

In the *Supplement*, Candrakīrti says that at the fourth ground ārya bodhisattvas eliminate the ignorance that is a coarse self-grasping. This ignorance is the innate self-grasping of a self-sufficient substantially existent person; it is considered coarse in comparison to the ignorance grasping an inherently existent person.

Realizing the lack of a self-sufficient substantially existent person is similar to the meditation having the aspect of grossness and peacefulness—which is common to both Buddhists and non-Buddhists—in that it temporarily suppresses the manifest afflictions explained in the two Knowledges (the *Treasury of Knowledge* and *Compendium of Knowledge*). But it cannot suppress even the

manifest afflictions dependent on grasping inherent existence that are considered afflictive obscurations by the Prāsaṅgikas, let alone uproot any afflictions, be they those explained in the two Knowledges or those asserted by the Prāsaṅgikas. Since grasping the inherent existence of persons and phenomena is the root of saṃsāra, practitioners who have realized the lack of a self-sufficient substantially existent person are still far from cutting the root of saṃsāra and attaining liberation. Here we see not only the benefits of realizing the lack of a self-sufficient substantially existent I—its temporary suppression of manifest coarse afflictions—but also its limitations in that it does not free us from saṃsāra.

However, the meditation realizing the absence of a self-sufficient substantially existent person and the meditation having the aspect of grossness and peacefulness do differ in that the former is capable of suppressing the manifest afflictions up to and including the fourth formless realm, whereas the latter can suppress manifest afflictions only up to the third formless realm.

The Svātantrikas and below assert that the person is imputedly existent in that one of the aggregates must be known in order to identify the presence of a person. For example, we see a person's body or hear their voice, and in that way know a person is there. They refute a self-sufficient substantially existent person who can be known without first knowing one of the aggregates.

Unlike the Prāsaṅgikas, the lower schools assert something that is the person—that is, something that is findable when we investigate what the person is. Some of these schools say the mental consciousness is found and is the person; others say the collection of aggregates is the person. In their systems, the mental consciousness and the aggregates are substantially existent, so although they say the self-isolate person—that is, the person in general—is imputedly existent, the illustration-isolate person—what is found when the person is searched for (the mind or the collection of aggregates)—is substantially existent. In the refutation of the self-sufficient substantial existence of a person, the substantial existence of the self-isolate person is negated, not the illustration-isolate person, which is substantially existent.

While refuting a permanent, unitary, and independent self and a self-sufficient substantially existent self are steppingstones to the realization of the emptiness of inherent existence of persons and phenomena, these are not the conceived objects of the innate ignorance that is the first link of dependent origination. By accepting that the mental consciousness, the collection of

aggregates, or so on is the person, Svāntrikas and below do not accept that the I is merely designated in dependence on the collection of aggregates, and thus they do not negate an inherently existent person.

To understand the lack of a permanent, unitary, independent self and a self-sufficient substantially existent I, it is not necessary to first realize the emptiness of inherent existence or the selflessness of phenomena. However, the direct, nonconceptual realization of the emptiness of inherent existence completely overcomes all the other misconceptions and graspings.

### *Inherently Existent Self*

The third level of erroneous grasping is grasping the self as inherently existent. Prāsaṅgikas negate inherent existence on both the person and other phenomena such as the aggregates. We may learn an acquired form of grasping the inherent existence of the person by studying incorrect tenets, but the innate form is more insidious; it has kept us chained in saṃsāra since beginningless time. It exists in animals, babies, and all ordinary beings, whether or not they know language or hold philosophical tenets.

How does the innate self-grasping ignorance view the relationship of the self and the aggregates? Innately, we do not conceive the I and the aggregates to be unrelated, as shown in the examples of saying “I’m sick” when our stomach hurts and “I’m thinking” when the mind is thinking. Seeing the self and the aggregates as totally different is an acquired view.

We also do not innately see the person and the aggregates as completely the same, as shown by the examples of being willing to exchange our body or mind with that of another person. If our ordinary innate mind saw the self and the aggregates as completely the same, these thoughts would not arise. Therefore, seeing the I and the aggregates as identical is also an acquired view.

When we say “*I*’m sick,” our sense of self is identified with the body, although there is not the thought “I am my body.” Similarly, when we say “*I* don’t want to be reborn in unfortunate states,” the sense of self is closely related to the mind, although we’re not thinking, “I am my mind.” These are not the subtle innate self-grasping. The Fifth Dalai Lama clarifies (HSY 133):

Sometimes the I will seem to exist in the context of the body.  
Sometimes it will seem to exist in the context of the mind.

Sometimes it will seem to exist in the context of feelings, discriminations, or other factors. At the end of noticing a variety of modes of appearance, you will come to identify an I that exists in its own right, that exists inherently, that from the start is self-established, existing indistinguishably with mind and body, which are also mixed like milk and water. This is the first step, ascertainment of the object of negation in the view of selflessness. You should work at it until deep experience arises.

The sense of self does not arise in a vacuum but is based on the body and mind. After “I” has been validly designated in dependence on the body and mind, grasping that I as inherently existent may arise. The subtle self-grasping of the person takes the mere I as its observed object, not the body or mind. That is, the observed object of the view of a personal identity is the conventionally existent I, and the view of a personal identity erroneously apprehends it as inherently existent.

The innate view of a personal identity grasps the self as mixed in with the aggregates yet able to stand on its own. As the Fifth Dalai Lama said above, the self appears blended with the aggregates but still distinct from them. When we are in physical danger, we easily experience a strong sense of I focused on the body: “I’m going to get hurt.” When we think of all the destructive karma we have accumulated, we may experience a strong sense of I based on the mind: “I’m going to be born in an unfortunate birth.” The way the I appears in both of these situations is not the subtlest object of negation, because the I appears identified with one of the aggregates, whereas the I that is the subtlest object of negation appears mixed with the aggregates but still a self-enclosed entity.

As mentioned above, the mere I, the conventional I that exists—not the aggregates—is the observed object of the view of a personal identity. This view thinks “I” and holds that I to exist by its own characteristics. Its conceived object, which is the object of negation, is an inherently existent I that does not exist at all. However, its observed object, the mere I, is not refuted, for it exists conventionally. It is the self that creates karma, is reborn, and becomes a buddha.

The notions of a permanent, unified, and independent self, a self-sufficient substantially existent person, and an inherently existent person differ in terms of how they view the relationship of the I and the aggregates. The non-Buddhists

who grasp a permanent, unified, and independent self assert the I and aggregates are different natures and totally unrelated. Buddhist essentialists—from the Vaibhāṣikas up to and including the Svātantrika Mādhyamikas—refute a permanent, unified, and independent self as well as a self-sufficient substantially existent person. Here the self is the controller of the aggregates, such that the aggregates depend on the person but the person does not depend on the aggregates. Prāsaṅgika Mādhyamikas refute the previous two notions of the person as well as an inherently existent person. An inherently existent person is one in which the I and the aggregates are neither completely the same nor totally unrelated. The I is mixed in with the collection of the body and mind but exists in its own right and is able to stand on its own. Prāsaṅgikas are the only ones who refute all three wrong views of the self.

Only the Prāsaṅgikas negate an inherently existent self; the lower Buddhist schools proclaim that the I must have some inherent essence from its own side because if it didn't, it would be only an arbitrary name. There must be some objective nature or essence that allows us to have a sense of identity as the doer of actions and the experiencer of results. The Prāsaṅgikas, however, refute even this, saying the I exists merely nominally.

In other words, all Buddhist systems agree that the I is dependent on the aggregates, but everyone except the Prāsaṅgikas states that when the I that travels from one life to the next is sought within the aggregates, something can be found that is the person. Unlike the Prāsaṅgikas, the lower systems do not understand that because the I is dependent, it lacks inherent existence. In fact, they believe that the I must inherently exist or it would not exist at all.

In your meditation, be aware of the various ways in which self-grasping can grasp the person. Try to identify if you grasp a permanent, unified, and independent I; at other times see if you can detect grasping a self-sufficient substantially existent person. Also be aware of when you grasp an inherently existent person. Becoming familiar with the above descriptions of these three will help you to do this. However, it takes time to identify these wrong views of how the person exists, so be patient.

In the meditation on emptiness, identifying the appearance of an inherently existent I is the first and most difficult step. It doesn't work to sit down and say to yourself, "What is my conception of the I?" That is like asking a thief to stand up

and declare his activities. He won't do it. Yet without having a clear idea of the false self we naively believe exists, how can we realize its emptiness?

As beginners it's difficult to identify the inherently existent I that is the object of negation. Start with observing your sense of I when you feel a strong emotion. For example, one day a group that I (Chodron) was teaching had an interview with His Holiness. When we entered the room, His Holiness greeted each of us individually and then a monk directed us to a row of seats in a semi-circle. Since I was first, he indicated to me to move down the row to make room for the others. Following directions, I went to the last chair, and when the monk told us to be seated I sat down. His Holiness finished greeting people and then approached me, and leaning over, gently said, "I think that's my chair." How embarrassed I was! The object of negation was showing itself in living color!

To identify the object of negation, one corner of our mind must discreetly and unobtrusively observe how the sense of I manifests in our lives. We may have any or all of the above notions of the self at different times during the day. So we must quietly observe how the I appears to exist in various situations—for example, when we are unjustly blamed or when we are highly praised. What is the sense of I when we crave to have something? When we criticize ourselves? When others ignore us or shower us with attention? When someone says our name?

When we observe the sense of I that exists when a strong emotion is present, how do we differentiate the apprehended objects of coarse and subtle self-grasping in our own experience—coarse self-grasping of persons being grasping a self-sufficient substantially existent person and subtle self-grasping of persons being grasping an inherently existent person? Most of our glaring anger, for example, probably involves grasping the self as self-sufficient substantially existent in addition to grasping the self as inherently existent. Grasping inherent existence is the source of all afflictions. It may lead to grasping a self-sufficient substantially existent person, which then gives rise to the manifest affliction. However, it is extremely difficult to tease apart the conceived objects of the two types of self-grasping in our actual experience.

In your practice, first identify and then refute a permanent, unitary, and independent I by reflecting that it is impossible for a permanent, unitary, independent self to exist. Since this is a coarse notion of self created by incorrect philosophies, it is comparatively easy to disprove. The idea of a self-sufficient substantially existent person is more subtle, and the idea of an inherently existent

person is the subtlest and therefore the most difficult to identify and refute. If you refute the existence of an inherently existent self, all other graspings of self are automatically overcome.

Once you have identified how the false, inherently existent I appears, investigate if such an I can actually exist. Here, reasoning and analysis are critical. Inquire how the I exists until you are convinced that it cannot exist inherently. At that time, rest the mind in the absence of such an inherently existent self.

---

## REFLECTION

1. When you were a child, were you taught that there is a permanent soul and a permanent creator?
2. Review the reasons that disprove these. Do the reasons make sense to you? Does one part of your mind still find attractive or comforting the idea of a permanent creator of the universe and the permanent soul that is your essence?
3. Review the characteristics of a permanent, unitary, independent self, a self-sufficient substantially existent person, and an inherently existent person.
4. Can you identify in your experience when you are grasping at any of these?

---

### *Grasping Mine*

The view of a personal identity involves grasping both I and mine as inherently existent. Just as casually saying “I’m walking” does not involve grasping the inherent existence of I, casually thinking “my body” or “my mind” is not grasping mine to be inherently existent. However, when a strong destructive emotion such as attachment or anger arises, grasping inherently existent I or mine is involved. At that time we think, “Don’t you treat *me* like that!” “This is *mine*,” or “*My* child was admitted to a prestigious school.”

Grasping mine implicitly grasps the I. The view of a personal identity grasping mine arises in relation to things that belong to us—our body, mind, possessions, and so forth. However, these things are not its observed object; it focuses only on the sense of mine—the feeling of “myness” or ownership<sup>74</sup>—not on the things that are mine. Technically speaking, mine is neither a person nor a

phenomenon in the context of the division of persons and phenomena as the basis of the two selflessnesses. It is just the sense of mine. However, implicit in thinking “mine” is the notion of a person. For that reason, grasping mine as inherently existent is part of the self-grasping of persons, and within that, the view of a personal identity.

The body, mind, and possessions are illustrations of things that are mine, but they are not the mine that is the observed object of the view of a personal identity. Grasping the body and mind as inherently existent is grasping the self of phenomena, whereas grasping the body and mind as inherently mine is grasping the self of persons. Grasping mine takes our body, mind, and other external things and views them as mine while holding that mine to exist inherently. We think, “These are *my* eyes. This is *my* house. These emotions are *mine*.”

In the above examples, grasping inherent existence is involved, whereas casually clarifying ownership—for example, saying “Is this pen yours or mine?”—does not involve self-grasping.

Not all grasping of a self of persons is the view of a personal identity. The view of a personal identity refers just to grasping one’s own self, whereas grasping a self of persons applies to grasping any person as inherently existent. When we grasp Tashi, Sally, and Fluffy the cat as inherently existent, this is self-grasping of persons but not the view of a personal identity.

---

## REFLECTION

Observe what happens when you superimpose inherently existent “my” or “mine” on someone or something.

1. Recall an object in a store before you bought it—for example, a car on the showroom floor. If it were damaged, would you be disturbed?
2. What would your reaction be if it were damaged after you purchased it, once it became “mine”? You park your new car and do an errand. When you return, it has a big dent in the side.
3. Consider your expectations when you think of *my* child (spouse, parent, or sibling). Do you hold those same expectations and judgments for another person’s child? They are both children. Why does the term “my” change your feelings and judgments so drastically?

4. What would happen if you left the designation “my” aside and just looked at people and things without imputing ownership?
- 

## *Self of Phenomena*

When inherent existence is superimposed or projected onto persons, it is called “self of persons”; when it is superimposed onto the psychophysical aggregates and other phenomena, it is called “self of phenomena.” The terms “self-grasping of persons,” “self-grasping of phenomena,” “selflessness of persons,” and “selflessness of phenomena” are given accordingly.

Non-Buddhist tenet systems generally do not talk about the selflessness of phenomena. Vaibhāṣikas and Sautrāntikas speak of the selflessness of persons, but not the selflessness of phenomena. Yogācārins and the Svātantrika Mādhyamikas speak of both, but they assert that realizing the selflessness of persons is sufficient to attain liberation, whereas realizing both the selflessness of persons and of phenomena is necessary to attain full awakening. How they define the self and selflessness of phenomena differs from the Prāsaṅgikas. Understanding their assertions helps us get at the more subtle Prāsaṅgika view.

To review, Yogācārins speak of four approaches to grasping a self of phenomena: (1) grasping the subject and object of a perception to be different substantial entities, (2) grasping phenomena to exist by their own characteristics as the referents of names and terms, (3) grasping external objects, and (4) grasping phenomena to exist by their own characteristics as the basis adhered to by thoughts. All four come to the same point, although they have different approaches. Realizing the absence of all four is realizing the selflessness of phenomena according to the Yogācārins. Their ideas will be explained in more depth in a future volume.

Svātantrikas speak about grasping phenomena as truly existent, ultimately existent, or existent as its own reality. To them, these three mean a phenomenon exists exclusively as self-instituting without being posited by the force of appearing to a nondefective consciousness. “Nondefective consciousness” means a consciousness that is not erroneous with respect to its engaged object. For example, it does not have superficial causes of error, such as faulty sense faculties, being in a moving vehicle, or holding wrong views. Svātantrikas say that

phenomena exist inherently and are posited by the force of appearing to a nondefective awareness, but ignorance grasps them as existing without being designated by a nondefective awareness.

Svāntarikas negate true existence and ultimate existence—as their school explains the meaning of these terms—but they hold that phenomena are indeed established by way of their own character and exist inherently on the conventional level. For Prāsaṅgikas, “true existence,” “inherent existence,” “existence from its own side,” “ultimate existence,” “substantial existence,” and so forth are synonyms. However, these terms have different meanings according to the lower tenet systems, so when discussing the assertions of each system, it is necessary to clarify the meaning of the terms we use.

All of the above terms refer to the object of negation of the Prāsaṅgikas. For them, inherent existence is something that can set itself up and exists without being merely designated by name and concept. For example, when we look at a building, it seems to exist objectively, independent of our mind. When we think of the CEO of a company or the president of a country, they seem to have some inherent power or quality that makes them that. We forget that “CEO” or “president” is merely a name that has been temporarily designated to a person as a result of societal consensus.

Prāsaṅgikas say that all phenomena exist by the force of mind—by being merely designated by mind in dependence on a basis of designation. However, things appear to the six consciousnesses to exist by their own nature, to have their own inherent essence or true reality. Innate ignorance assents to these false appearances and grasps phenomena to exist inherently as they appear.

All four Buddhist tenet systems have their source in Buddha’s word, although they differ in which sūtras they consider definitive and interpretable. A skillful teacher, the Buddha set forth different views of emptiness according to the capabilities of his audience in order to lead us gradually to the subtlest and most complete view. In the next volume, we will explore the ways he sets forth for refuting the various objects of negation.

## *The Heart Sūtra*

The *Heart Sūtra* concisely expresses the meaning of all the Perfection of Wisdom sūtras in its four famous and profound phrases: “Form is empty. Emptiness is form. Emptiness is not other than form. Form is not other than emptiness.” The meaning of these four phrases illustrates the noncontradictory nature of emptiness and dependent arising. The key to understand this is to avoid negating too much or too little in the meditation on emptiness.

The sūtra uses form as an example; its fourfold approach applies to the other aggregates—feelings (discriminations, miscellaneous factors, and consciousnesses) are empty. Emptiness is feelings (and so forth). Emptiness is not other than feelings (and so forth). Feelings (and so forth) are not other than emptiness. These four phrases concern all impermanent phenomena, which together comprise the five aggregates. They can also be applied to permanent phenomena, thereby including all existents.

Observing what is negated and what is affirmed in this passage from the *Heart Sūtra* will give us a better idea of what is and isn't the object of negation. While it is easy to say that inherent existence is negated and the conventional world of dependent arising is affirmed, we ordinary beings are not skilled in actually doing this.

### *Form Is Empty*

Although some translators render this first phrase as “form is emptiness,” this is incorrect. Form is not emptiness because form is a conventional truth and emptiness is an ultimate truth, and what is one truth cannot be the other. Emptiness is an attribute of form; it is form's ultimate nature. Said in another way, form's emptiness is form's lack of inherent existence.

“Form is empty.” When we perceive form, it appears as if form itself constitutes its own ultimate reality. If the form we perceive is its ultimate reality—if form were inherently existent—then when we subject form to critical analysis that seeks its true or ultimate reality, form should be able to withstand that analysis. The reasoning analyzing the ultimate should be able to identify something that definitely is form. However, this is not the case. Form is unfindable through such an analytic process. This doesn't mean form doesn't exist. Rather, it is empty of the inherent existence that our ignorance erroneously projected on it. Form does not exist in its own right; it doesn't exist under its own

power, independent of other factors. This emptiness of inherent existence of form is the ultimate nature of form.

Form arises due to the assembly of its causes and conditions. Because form is dependent on other factors, it does not exist independently. Dependent and independent existence are mutually exclusive, and because independent existence is synonymous with inherent existence, form is empty of inherent existence. It has never and will never exist inherently because its very nature is dependent.

### *Emptiness Is Form*

What then is form? The *Heart Sūtra* says, “Emptiness is form.” This doesn’t literally mean emptiness is form; it indicates that what we call “form” is a dependent arising and is utterly empty of independent existence. Because it arises dependent on other factors, it lacks inherent existence. Its emptiness of inherent existence allows for form to arise dependent on other factors that are not it. A form arises from a multiplicity of causes and conditions, and in turn it becomes a cause or condition for other things. A form is part of a vast interconnected array of interdependent functioning things that exist within emptiness, within their being empty of true existence.

When the sūtra says “form is empty; emptiness is form,” the meaning is “emptiness, therefore form; form, therefore emptiness.” In other words, because form is empty, the only way it can exist is dependently. It is not possible for something that is not empty to exist. And because form’s emptiness exists, form exists. Form and form’s emptiness depend on each other. They are mutually dependent.

The *Kāśyapa Chapter Sūtra* from the *Heap of Jewels Sūtra* (*Ratnakūṭa Sūtra*) lists many ways in which something can be empty. One is “other-emptiness,” as in the temple being empty of monastics. The temple being empty of monastics is other-emptiness because the basis of emptiness, the temple, is empty of some other thing, the monastics. But the manner of being empty in “form is empty” is self-emptiness—empty of self-nature. Emptiness of self-nature does not mean form is devoid of form. Form is form, and the reality of form being form is not rejected. Rather, form is devoid of an inherent nature; it is empty of being an inherently existent form. Emptiness does not imply nonexistence. Rather, the fact

that things are empty of inherent existence allows for them to arise dependent on causes and conditions. Emptiness and dependent arising are compatible.

We may think that form has some sort of objective existence or existence from its own side and that it is now being made empty of objective existence. In the *Perfection of Wisdom Sūtra in 25,000 Lines*, the Buddha states, “Form is not made empty by emptiness. Form itself is empty.” In the chapter “Questions from Upāli” in the *Ratnakūṭa Sūtra*, the Buddha clearly states that causes are not made empty by emptiness, nor are they being negated by emptiness. Rather, causes themselves are empty. That means that there is no objectified basis that is the referent of the term “form” or “cause.” All phenomena are totally devoid of any inherent reality in and of themselves.

“Emptiness is form” indicates the conventional existence of form. The expression “the dawning of emptiness as the meaning of dependent arising” is the meaning of “emptiness is form.” That is, the fact that phenomena lack inherent existence indicates that they exist conventionally. Conversely, the expression “the dawning of dependent arising as the meaning of emptiness” is the meaning of “form is empty.”<sup>75</sup> Because phenomena arise dependently, they lack inherent existence.

The conventional reality of form is that it is a dependent arising. It comes into being as a result of causes and conditions. In a dependently arising world, the law of causality is feasible, and cause and effect can be posited. Form’s nature as a dependent arising is possible only because it is empty of inherent existence. “Emptiness is form” tells us that form arises within the emptiness of inherent existence; the ultimate nature of all phenomena, emptiness, is the basis that allows for the form and everything else to exist. The world of diverse objects is an expression or manifestation of emptiness. If emptiness were not phenomena’s ultimate nature—if phenomena existed inherently—they would be frozen in time and unable to arise or function because they would be independent of all other factors, such as causes and conditions. Dependent arising is possible only in a world that is empty of inherent existence, and the emptiness of inherent existence is possible only in a world that exists dependently.

Emptiness is not an absolute reality like Brahmā, God, or a cosmic energy or primal substance that is an underlying reality at the heart of the universe out of which the world of multiplicity arises. Emptiness is not an independent reality

somewhere far away out of which the diversity of phenomena arise. Emptiness is right here, right now. It is our very nature and the nature of everything around us.

From the Madhyamaka viewpoint, emptiness is the absence of the elaboration of inherent existence. It is not an emptiness that is totally devoid of any basis, because emptiness can be understood only in relation to individual phenomena. Emptiness depends on a conventionally existent phenomenon whose ultimate nature it is.

Emptiness is a nonaffirming negation; it is not an affirmative phenomenon that we can find. It is not an independent, absolute reality because it depends on phenomena whose ultimate nature is empty. We can speak only of the emptiness of specific objects; emptiness is not an external, independent, absolute energy.

Since emptiness can only be known in relation to individual phenomena, if an individual thing ceases, its emptiness also ceases. Although that emptiness is not a product of causes and conditions, because the basis upon which it is understood no longer exists, the emptiness of that thing also no longer exists. When the cup breaks into pieces, the emptiness of the cup no longer exists. However, since the pieces exist, the emptiness of the pieces exists.

Depending on the conventional object we choose as the basis of our meditation on emptiness, our meditation may be more or less powerful. When we meditate on emptiness in deity yoga, the basis of our meditation is a pure object—the form of a deity—and we meditate on its emptiness. In Mahāmudrā and Dzogchen, the mind is the basis of meditation, and we focus on its emptiness. Meditating on the emptiness of the mind, the I, or the form of a deity will have a stronger impact on us than meditating on the emptiness of a candle.

### *Emptiness Is Not Other Than Form, and Form Is Not Other Than Emptiness*

All of the Buddha's teachings were given within the framework of the two truths—conventional (veiled) and ultimate. These two sentences indicate the relationship between the two truths. Although understanding the nature of reality in terms of the two truths was common to many systems of thought in ancient India, both Buddhist and non-Buddhist, the subtlest explanation speaks of them not as two separate independent entities, but as two aspects of one phenomenon.

Conventional truths—which include form and the other four aggregates—are the truths of everyday worldly conventions. This is the level of reality that is ascertained by mere appearance to our ordinary consciousnesses. Conventional truths are not established by the reasoning analyzing the ultimate, nor are they in the purview of that wisdom. They constitute the world of multiple and diverse phenomena. Ultimate truths, on the other hand, are those arrived at through a reasoned analysis of the ultimate. When we search for the deeper mode of existence of phenomena, we find their emptiness of inherent existence. This is their suchness (*tattva*), their ultimate mode of existence, the ultimate truth.

“Emptiness is not other than form” indicates that the emptiness of form is form’s ultimate nature. It is not separate and unrelated to form. Emptiness does not exist apart from the individual objects that are empty. Emptiness cannot be independent from the basis on which it is ascertained.

Similarly, “form is not other than emptiness” means that form and other veiled truths exist within the reality of emptiness and are in the nature of emptiness. Form—and veiled truths in general—and its emptiness cannot be separated: if one exists, so does the other; if one ceases, so does the other. The two truths are inseparable. They are one nature but nominally different.

We must contemplate the emptiness of feelings and so forth as well as the emptiness of form. When the *Heart Sūtra* says “perfectly looking at the emptiness of inherent existence of the five aggregates also,” the word “also” indicates the person who is designated in dependence on the five aggregates. That person—I, me—is also empty of inherent existence. In your practice, it is helpful to think, “I am empty; emptiness is me. Emptiness is not other than me; I am not other than emptiness.” Such meditation will have a powerful effect on your mind.

---

## REFLECTION

1. Think of a form such as your body. It feels very solid, as if it were independent of causes and conditions and existed objectively from its own side.
2. Does your body exist in the way it appears? Is it independent of causes such as the sperm and egg of your parents?
3. Focus on the thought: My body exists only because the causes of it existed. If those causes didn’t exist, my body wouldn’t exist. When the causes for each moment of the body cease, a

new moment of the body will arise; then it too will cease.

4. This understanding contradicts the feeling that the body is an independent entity that will always be there. Your body is impermanent and empty of inherent existence.

---

The tradition coming from the Nyingma master Mipham (1846–1912) presents these four lines in the *Heart Sūtra* as “the four approaches to understanding emptiness.” Here the four lines are related to the refutation of the four alternatives:

*Form is empty* indicates that all phenomena are empty of inherent existence. This counteracts the extreme of existence (the extreme of absolutism), which holds that phenomena are their own ultimate reality (that they exist inherently).

*Emptiness is form* indicates that within emptiness, form and other dependent arisings appear. While phenomena are empty, they also exist dependently; emptiness must be understood in terms of dependent arising. This counteracts the extreme of nonexistence (the extreme of nihilism).

*Emptiness is not other than form* indicates the union of dependent arising and emptiness, the union of conventional appearances and their emptiness. Far from being unrelated, emptiness and dependently arising phenomena exist in relation to each other. This annuls the extremes of both existence and nonexistence, both absolutism and nihilism.

*Form is not other than emptiness* shows that dependent arising and emptiness—appearances and emptiness—are compatible and complementary. This line presents the total elimination of all conceptual elaborations and enables us to transcend the extreme of neither-existence-nor-nonexistence.

The Sakya Lamdre (Path and Fruition) tradition has a similar fourfold approach to emptiness: appearances are established as empty; emptiness is dependent arising; emptiness and appearance are a unity; this union of emptiness and appearance is beyond expression or language.

Usually the wisdom realizing emptiness is presented as the antidote to both grasping inherent existence and the extreme of absolutism, and the understanding of dependent arising as the counterforce to both total nonexistence and the extreme of nihilism. However, if our understandings of emptiness and dependent arising have correctly penetrated the depths, these two understandings will work in the reverse order as well. Understanding emptiness will help us transcend the

extreme of nihilism. The fact that phenomena are empty indicates that they are not totally nonexistent; they are empty of just inherent existence. Understanding the appearances of dependently arisen phenomena enables us to transcend the extreme of absolutism; because phenomena exist dependently, they cannot exist inherently. This reverse way of opposing the two extremes is profound and is unique to the Prāsaṅgika approach.

## 9 | The Middle Way View

AS A SKILLFUL TEACHER, the Buddha taught people according to their varying aptitudes and dispositions in order to lead them to the correct realization of the ultimate nature. These teachings evolved to become the philosophical tenet schools in ancient India. Some key points the proponents of these systems discussed were the object of negation and the view of selflessness. We will begin this chapter with a review and overview of the positions of the various Buddhist philosophical schools on these and other topics and then show the Madhyamakas' and, within that, the Prāsaṅgikas' unique assertions of the Middle Way.

For some readers, understanding the meaning of so many terms may initially be daunting. But just as a young science student gradually becomes familiar with scientific terms until they seem very natural to him, so too will you become familiar with these philosophical terms.

### *Settling the Object of Negation and the View of Selflessness*

Meditation on emptiness involves ensuring that the apprehended object is a nonaffirming negative that is the negation of inherent existence. The lower Buddhist tenet systems meditate on the selflessness that is the refutation of a self-sufficient substantially existent person. Although nothing else may be affirmed after negating a self-sufficient substantially existent person, that is not the deepest object of negation. It is like a person who wants to have a clean floor thinking “there are no pebbles on the floor” while neglecting to see the dirt there.

Among the various philosophical systems, different assertions exist regarding the observed and conceived objects of the self-grasping of persons. The observed object—the conventional I—is the basis on which self-grasping of persons superimposes a false way of existence and therefore misapprehends the I. The conceived object is a false person that self-grasping apprehends instead. The tenet

systems also have different definitions of the self-grasping of persons and the self-grasping of phenomena, as well as what constitutes obscurations to be abandoned to attain liberation and awakening.

Sammitīya Vaibhāṣikas say the observed object of the self-grasping of persons is all five aggregates, Yogācārins state it is the foundation consciousness, and Sautrāntikas and Svātantrika Mādhyamikas say it is the mental consciousness. According to Prāsaṅgikas, it is the mere I—the I that exists by being merely designated.

Most systems say the conceived object of the view of a personal identity and of the innate self-grasping of persons is a self-sufficient substantially existent self. Prāsaṅgikas explain that that is the coarse object of negation, whereas an inherently existent self is the actual conceived object to be negated.

Vaibhāṣikas and Sautrāntikas do not speak of self-grasping of phenomena. Yogācārins present four approaches related to self-grasping of phenomena: (1) grasping the subject and object of a perception to be different substantial entities, (2) grasping phenomena to exist by their own characteristics as the referents of names and terms, (3) grasping external objects, and (4) grasping phenomena to exist by their own characteristics as the basis adhered to by thoughts. They accordingly assert four formulations of the selflessnesses of phenomena: (1) the absence of duality of subject and object, (2) the absence of phenomena existing by their own characteristics as referents of names and terms, (3) the absence of external existence, and (4) the absence of phenomena as existing by their own characteristics as the basis adhered to by thoughts.

Svātantrika Mādhyamikas say the self-grasping of phenomena grasps phenomena as ultimately existent. For them ultimate existence and inherent existence are different, and they negate inherent existence only on the ultimate level. Also, the lack of ultimate or true existence of persons for Svātantrika is considered a selflessness of phenomena, not of persons. This is because, unlike the Prāsaṅgikas, Svātantrikas differentiate the self of persons and the self of phenomena not so much by the basis of negation—the person or other phenomena—but by the object of negation. The self of persons is a self-sufficient substantially existent person, whereas the self of phenomena is the ultimate existence and true existence of all phenomena, including persons. Prāsaṅgika Mādhyamikas, on the other hand, differentiate the selflessness of persons and the selflessness of phenomena in terms of the basis—the person or phenomena other

than the person. They assert that ultimate existence and inherent existence are synonymous and say the object of negation for both selflessnesses is ultimate, true, and inherent existence.

These two branches of Madhyamaka also differ in their assertions of the selflessness of phenomena: the Svātantrikas state it is their absence of ultimate existence, whereas Prāsaṅgikas propound a selflessness of persons and phenomena that are the absence of inherent existence of persons and phenomena, respectively. In chapter 5, see the chart of the object of negation—the self refuted on persons and phenomena by each tenet system. Their coarse and subtle selflessnesses of persons and phenomena are the nonexistence of their corresponding object of negation.

Below is a chart regarding what each system asserts as coarse and subtle afflictive and cognitive obscurations. All Buddhist systems agree that overcoming afflictive obscurations is necessary to attain liberation, and all Mahāyāna tenet systems agree that eradicating cognitive obscurations brings full awakening. However, they differ on what they assert the afflictive and cognitive obscurations to be. This depends on how they define selflessness, which in turn accords with their varying assertions regarding the object of negation in the meditation on selflessness. As you explore the assertions of the tenet systems concerning many topics, you will see how their assertions regarding the object of negation influence their other assertions to a great extent.

All schools except Prāsaṅgika say that to attain liberation, realizing only the selflessness of persons—which for them is the absence of a self-sufficient substantially existent person—is necessary. Yogācārins and Svātantrikas assert that to attain full awakening, realizing the selflessness of phenomena as they define it is also necessary. Prāsaṅgikas disagree, proclaiming that the attainments of liberation and full awakening both entail realizing the selflessness of persons and of phenomena, which are the absence of inherent existence. For them, the two self-graspings do not differ in terms of how they grasp the person or phenomena, because both grasp inherent existence.

## AFFLICTIVE AND COGNITIVE OBSCURATIONS

	COARSE AFFLICTIVE OBSCURATIONS	SUBTLE AFFLICTIVE OBSCURATIONS	COARSE COGNITIVE OBSCURATIONS	SUBTLE COGNITIVE OBSCURATIONS
Vaibhāṣikas and Sautrāntikas	Conception of a permanent, unitary, independent self	Grasping a self-sufficient substantially existent person, afflictions it produces, and their seeds	none	none
Yogācārin	Conception of a permanent, unitary, independent self	Grasping a self-sufficient substantially existent person, afflictions it produces, and their seeds	none	Grasping self of phenomena and its latencies (grasping phenomena to exist by their own characteristics as the referents for names; grasping phenomena to exist by their own characteristics as the basis adhered to by thoughts; grasping subject and object as different entities; grasping external existence)
Yogācāra-Svātantrika Mādhyamikas	Conception of a permanent, unitary, independent self	Grasping a self-sufficient substantially existent person, afflictions it produces, and their seeds	Grasping subject and object as different entities, grasping external objects	Grasping self of phenomena as truly existent and its latencies

Sautrāntika-Svātantrika Mādhyamikas	Conception of a permanent, unitary, independent self	Grasping a self-sufficient substantially existent person, afflictions it produces, and their seeds	none	Grasping phenomena as truly existent and its latencies
Prāsaṅgika-Mādhyamikas	Grasping a self-sufficient substantially existent person, afflictions it produces, and their seeds	Grasping inherent existence of persons and other phenomena, afflictions it produces, and their seeds	none	Latencies of ignorance, subtle dualistic appearance, latencies for grasping the two truths as different entities

Vaibhāṣikas and Sautrāntikas do not speak of cognitive obscurations but differentiate a buddha's awakening from that of an arhat by saying that in addition to afflictive ignorance, buddhas also overcome nonafflictive ignorance. Afflictive ignorance mainly impedes liberation and consists of grasping a self-sufficient substantially existent person; the three poisonous minds of confusion, attachment, and anger; and their seeds. Nonafflictive ignorance mainly impedes the attainment of the all-knowing of a buddha. This ignorance has four aspects: the ignorance of the profound and subtle qualities of a buddha; ignorance due to the object being far away; ignorance due to distant time; and ignorance due to the object's nature, such as the result of a specific karma that a certain individual has created.

How do we determine which tenet system has the most profound and accurate view? Reasoning is the essential key. We must determine which views hold up when scrutinized with logic and which ones crumble. Something "feeling right" is not sufficient, because to our ignorance, grasping inherent existence feels right! Referring to the sūtras as well as the treatises and commentaries by the great Indian and Tibetan scholar-adepts is extremely helpful, but solely banking on them is not sufficient. We must apply reasoning as the true test of their accuracy. We must be able to negate what does not exist and at the same time establish what does exist.

## *Correctly Identifying the Object of Negation to Avoid the Two Extremes*

Discerning the subtle and coarse objects of negation is not an easy process. Because we are so used to believing that persons and phenomena exist in the way they appear, we ordinary beings generally don't think that is anything to question. Imagine if you can, people born wearing sunglasses: they would be so used to seeing everything as dark that they wouldn't realize there was anything wrong with their perceptions. Similarly, the cognitive obscurations have covered our minds since beginningless time; we have never cognized anything else but inherent existence, so we naturally believe everything exists objectively— independent of our mind. As a result we attribute all our problems and suffering to other people or to external conditions, and we believe all happiness comes from obtaining whatever external object, person, or circumstance that appears desirable and attractive to us.

From beginningless time, we have endeavored to procure everything that we believe will bring us happiness and fight off everything that threatens or interferes with that happiness. Has this strategy worked? If it had, we would no longer be experiencing saṃsāric duḥkha and would instead experience the bliss of nirvāṇa. But this isn't the case. Now is the time to try a different strategy: to examine our mind and see the way it misapprehends and misconceives how the self, other people, and things in our environment exist; to refute the objects of our erroneous consciousnesses; to banish all misapprehensions, erroneous grasping, and false appearances; and to establish realistic and beneficial views.

The crucial first step to gain the correct view of the ultimate nature is to accurately identify the subtlest object of negation—the inherent existence that appears to our mind and that we grasp as true. If we do not have a clear idea of what inherent existence would be like if it existed, we will be unable to investigate it and perceive its absence, and the realization of selflessness, the nonaffirming negative that is the negation of inherent existence, will elude us.

Someone who fails to properly identify the subtlest object of negation, inherent existence, will fall to either the extreme of absolutism (also called “the extreme of existence,” “permanence,” or “eternalism”), or to the extreme of nihilism (the extreme of nonexistence or annihilation). Adhering to an absolutist view, some people do not negate enough, and grasping inherent existence will

continue its dreadful antics in their lives. Adhering to a nihilistic view, other people negate too much and lose faith in the functioning of cause and effect. Some go so far as to insist that nothing exists. Holding such a view, they give themselves permission to ignore ethical conduct, which leads to unfortunate rebirths and continued wandering in saṃsāra in addition to sufferings in this very lifetime.

By negating too much, those who fall to the extreme of nihilism rule out inherent existence plus some more. Because they have not properly identified the object of negation, they mistakenly negate dependently arisen phenomena in addition to whatever they think inherent existence is. By denying the conventional existence and functioning of karma and its results, they abandon the basis for good ethical conduct. This is much more harmful than falling to the absolutist extreme because it leads its proponents to rationalize their destructive actions and the degeneration of their ethical conduct. Someone with an absolutist view may still grasp karma and its effects as inherently existent, but at least they will respect the fact that their actions have an ethical dimension that brings the results of happiness and suffering and will try to live ethically.

Someone who holds an absolutist view, even if they think they have the correct view, has also not properly identified the object of negation. Instead of negating inherent existence, they leave it untouched and refute something else. As a result, their saṃsāra continues on unobstructed.

Although absolutism and nihilism are posited as two opposite extremes, they are in fact based on similar premises. Proponents of both extremes believe that if something exists, it must exist inherently, and if something is empty of inherent existence, it must not exist at all. Those falling to the extreme of absolutism dare not negate inherent existence because they fear that it would mean nothing at all exists. Thus they assert inherent existence. Those falling to the extreme of nihilism think that they have negated inherent existence although they have not. Unable to accept dependent arising as complementary to emptiness, they deny dependent arising and therefore state nothing exists.

Although almost every society contains people who fall to either of the two extremes, at the time of Nāgārjuna in the second century, many Indian philosophers tended toward absolutism. Some of them negated something that had no relation to the actual cause of duḥkha and in its place asserted a path that does not challenge self-grasping ignorance at all. Others accepted inherent

existence, even though they refuted something coarser such as a permanent, unitary, independent self or a self-sufficient substantially existent person. To lead these people on the correct path, Nāgārjuna's texts focused on refuting the absolutist views of inherent existence.

Several centuries later, many Tibetan philosophers believed that they held the Madhyamaka view, but these so-called Mādhyamikas had in fact adopted nihilistic views. Some said that the ultimate truth could not be perceived and was not a knowable object; others thought that conventional truths did not exist but were only spoken about to help others. For this reason, the teachings of Rendawa, Tsongkhapa, and others emphasized the refutation of nihilism as well as of absolutism and established the Middle Way. They rejected both total nonexistence and inherent existence. It is interesting to note, however, that both nihilists and absolutists make the same mistake of thinking that if things lack inherent existence, they don't exist at all and that if they exist, they must inherently exist. This demonstrates that both do not correctly identify the object of negation.

When discussing these views, let's remember that we are not simply refuting other people's wrong conceptions; we must examine our own mind and ferret out our own erroneous views and refute them. If we focus on pointing out the flaws of others' views without recognizing the errors in our own, we will remain in saṃsāra, far from liberation and full awakening.

### *Confusing Existence with Inherent Existence and Emptiness with Nonexistence*

Both so-called Mādhyamikas, who negate too much, and absolutists, who do not negate enough, do not see dependent arising and emptiness as complementary. Confusing existence with inherent existence and confusing emptiness with total nonexistence, they fall to the two extremes of absolutism and nihilism. They think that if something is empty of inherent existence, it is totally nonexistent, and if it exists, it must inherently exist. As a result, neither so-called Mādhyamikas nor absolutists can establish cause and effect within emptiness. Nor can they see cause and effect as like illusions because they do not understand

that things mistakenly appear inherently existent. Instead they believe that if things appear to inherently exist, they must inherently exist.

People deal with this quandary in different ways. Nihilists deny the existence of dependently arisen veiled truths, whereas absolutists abandon the emptiness of inherent existence, assert something else as the ultimate truth, and fall to the extreme of absolutism. Until people relinquish the tenet systems that have such views, they will continue to confuse existence with inherent existence and emptiness with total nonexistence.

Dependent arising counteracts the extreme of nihilism, for although things are empty, they still exist dependently. Emptiness opposes the extreme of absolutism because, being empty, phenomena do not inherently exist. In the Prāsaṅgika system, it works the other way around too: dependent arising counteracts the extreme of absolutism and emptiness counteracts the extreme of nihilism. This is explained in more detail in the next volume of the *Library of Wisdom and Compassion*. Phenomena exist only nominally, by being merely designated by term and concept.

Saying that functioning things are unreal does not mean that they lack the ability to perform functions. “Unreal” means they lack inherent existence. They are unreal in the sense that a reflection of a face in a mirror is unreal: it appears to exist in one way but exists in another. A reflection appears to be a real face but is empty of a face.<sup>76</sup> In spite of its being false, a reflection still functions: by perceiving it, we wash our face. Similarly, although phenomena falsely appear as inherently existent, they arise from causes and conditions and perform their specific functions.

---

## REFLECTION

1. How does a tenet school's assertion regarding the object of negation influence how they define the afflictive obscurations and the cognitive obscurations?
  2. In what ways are the absolutists and nihilists similar?
  3. What is happening in someone's mind when they confuse existence with inherent existence? When they confuse emptiness with nonexistence?
-

## *Madhyamaka's Unique Quality*

Madhyamaka means Middle Way. This Middle Way view that eschews both absolutism and nihilism is difficult to detect. Tsongkhapa says in the *Middle Exposition of the Gradual Path* (FEW 80):

The difficult point is that one must, from the depths, be able to induce ascertainment with respect to the negation of an inherent nature, without residue—establishment by way of [the object's] own nature—and be able to posit those very persons and so forth lacking inherent existence as the accumulators of actions, experiencers of effects, and so forth. A composite of these two hardly occurs. Hence the Madhyamaka view is very difficult to find.

Both the so-called Mādhyamikas and the essentialists fail to see the Mādhyamikas' unique quality: that being empty and arising dependently are noncontradictory and mutually supportive.

Buddhadharma speaks of the basis, path, and result. The basis is what we begin with; in this context it is the two truths, which encompass all existents. The paths are the realizations cultivated in our minds. The result is nirvāṇa. For Mahāyāna practitioners the result is full awakening, the state of having the two buddha bodies: the truth body (*dharmakāya*) and the form body (*rūpakāya*).

Attaining the two buddha bodies depends on practicing a path of inseparable method and wisdom. Method refers to the collection of merit by practicing the first five perfections. Method practices involve working with conventional truths, such as sentient beings and virtuous actions. The method aspect leads primarily, but not exclusively, to attainment of the form body. Wisdom refers primarily to the collection of wisdom, specifically the wisdom realizing emptiness. Wisdom practices involve realization of the ultimate truth—the way things actually are. The collection of wisdom leads primarily to a buddha's truth body.

Correct understanding of conventional truths involves ascertaining the functionality of cause and effect. This entails becoming convinced from the depths of our hearts, not just intellectually, that desired effects—from fortunate rebirths to awakening—come from virtuous causes, and undesired effects—from bad rebirths to obstacles on the path—arise from destructive causes.

Correct understanding of ultimate truths stems from studying the definitive texts and ascertaining through reasoning and analysis that each and every phenomenon lacks even the tiniest bit of inherent existence. This conviction must be profound, not simply words that we mouth.

In addition, understanding that the two truths are noncontradictory and mutually supportive is an essential aspect of the Middle Way view. Because phenomena arise dependently and exist only nominally, they do not exist under their own power or from their own side. They are empty of inherent existence. Being empty of inherent existence, they arise dependent on other factors—causes and conditions, parts, and the mind that conceives and names them.

Only the Madhyamaka view can fully explain the two truths in a complementary manner. Those who negate too much or too little confuse inherent existence with existence, and confuse non-inherent existence with total nonexistence. Therefore they mistakenly believe that if phenomena exist, they must exist inherently, otherwise they would not exist at all; and if phenomena lacked inherent existence, they would be totally nonexistent. For someone who has realized the Middle Way view, however, emptiness dawns as the meaning of dependent arising, and dependent arising dawns as the meaning of emptiness. Knowing this, they appreciate the Buddhadharmā and respect the Buddha as the teacher of such a marvelous doctrine. Nāgārjuna concludes the *Refutation of Objections* by saying (VV 71–72):

For those to whom emptiness is possible,  
everything is possible.

For those to whom emptiness is not possible,  
nothing is possible.

I bow down to the Buddha,  
the unequaled, supreme teacher,  
who taught that emptiness and dependent arising  
hold a single meaning in the Middle Way.

Mādhyamikas are unique in being able to accept the suitability of saṃsāra and nirvāṇa, arising and cessation, bondage and release, and so forth within their being empty of inherent existence. In fact, they say that if these things were not

empty of inherent existence, they could not exist or function at all. Nāgārjuna affirms (MMK 36):

Those who deny emptiness,  
which is dependent arising,  
undermine all  
mundane conventions.

Someone who denies that phenomena are empty also disavows dependent arising, because emptiness and dependent arising are one nature. They are complementary and support each other. By undermining dependent arising, that person also rejects all dependently arisen worldly conventions, such as saying “Put this on the table” or “Who called?”

A person who denigrates emptiness and seeks to establish inherent existence runs into the difficulty of how to establish cause and effect, and the triad of agent, object, and action. If these existed inherently, none of them could function because inherently existent things don't rely on other factors: effects cannot arise from their causes without depending on them; an agent couldn't commit an action with an object without the three depending on one another.

Furthermore, if phenomena weren't empty and therefore weren't dependent, then sentient beings could not be born or die because birth and death depend on causes, or once born they would never die because there would be no cause of death.

Things are produced in dependence on concordant causes—causes that have the potential to produce those results. They are not produced in a confused manner by unrelated causes or by no cause at all. An inherently existent cause cannot produce a result; it needs conditions for the result to come forth. A seed alone cannot give rise to a sprout; it must depend on water, fertilizer, and the correct temperature. If it existed as a self-enclosed entity and had its own inherent essence, it could never produce a sprout, even if the other three conditions were present. These are the kind of logical conundrums that come about if we say that dependently arisen phenomena are not empty.

If things existed inherently, from their own side and under their own power, they would have an essence that was findable under analysis. After searching for this essence by examining all of the object's parts, we would be able to identify it.

For example, if we looked through all the parts of a car to find the real car, we would find something that was the essence of the car. But whether the parts of the car are piled in a disorderly heap or arranged to form the shape of the car, we still could not identify one part or the collection of parts to be the essence of the car. And even if we could, such an independent object could not be influenced by other factors, such as their causes and conditions, and therefore could not function or change. In short, for something to exist and function it must depend on other factors, which means it must lack an independent essence.

---

## REFLECTION

1. People often worry about the economy, but what is the economy? Can you identify one thing that is the real economy or the essence of what the economy really is?
  2. The economy has many factors: banks, human beings, the stock market, individuals' spending habits, interest rates, production of goods, supply and demand, governmental rules, international trade, and so on. It is influenced by a multitude of conditions, such as viruses, wars, natural disasters, climate change, politics, and so on.
  3. None of those factors alone are the real economy, and if they were a collection of unrelated parts, they wouldn't be the economy.
  4. In addition, each aspect of the economy could not function unless the majority of them were present and functioned together. All these aspects depend on one another.
  5. Can the economy be changed? Who invented it?
- 

By seeing that dependence and emptiness come to the same point, we avoid the extremes of absolutism and nihilism as well as the extremes of permanence and annihilation and the extremes of real and unreal. Here, *permanence* means a cause continues to exist in its effect, and *annihilation* means that the continuity of the cause is completely severed when it ceases. People holding the view of permanence say that each person has a permanent soul that is not produced and does not cease. It goes from one life to the next without changing. Those holding the view of annihilation fear that at the time of death, the continuity of the person is destroyed: the person ceases to exist and becomes nothingness. The argument for the beliefs of permanence and annihilation is this: If the I existed

inherently, it would be independent of causes and conditions and would therefore be permanent. In that case, we should be able to see the I before it was produced and after it ceased. Since this is not the case and such a self cannot be found, the I would become nonexistent at death.

Another set of extremes is thinking that things either have a real essence and exist with their own independent nature or that they lack a real essence and are therefore unable to perform functions. Understanding the inseparability of dependent arising and emptiness negates these two extremes, because things exist and perform functions precisely because they lack an independent nature of their own. This is the beauty of the Madhyamaka system.

---

## REFLECTION

1. Observe your present mood. Does it feel very solid and real? Try to identify exactly what it is.
  2. Did it arise without a cause or were there events, memories, or other thoughts that caused it?
  3. Is that mood permanent and unchanging? Is it exactly the same as when you began this reflection?
  4. Does it have its own immutable essence, or is it like a cloud that forms and then dissolves?
- 

## *Samsāra and Nirvāṇa Are Empty and Dependent*

Let's return to the opening verses of chapter 24 of Nāgārjuna's *Treatise on the Middle Way*, which we discussed in the first chapter. This begins with Buddhist essentialists raising an objection to Nāgārjuna's teachings, particularly his principal point that no phenomenon exists inherently or by its own characteristics (*svalakṣaṇa*). The essentialists give a lengthy challenge: If nothing has its own specific characteristics, then nothing has any reality of its own. In that case, making distinctions between specific characteristics that are unique to each object and general characteristics that are shared by several objects would be impossible because there would be no basis for that distinction. When speaking

of characteristics, we must assume an entity, a thing that possesses these characteristics. If nothing has inherent existence, there would be no entity that had any of these characteristics. In that case, we wouldn't be able to account for any functions, such as the arising and ceasing of functioning things. The essentialists continue by presenting a lengthy argument that begins with saying that if arising and disintegration are not tenable, then the existence of the four truths, the Three Jewels, and all worldly conventions are undermined.

Nāgārjuna begins his rebuttal to this serious objection by saying that the essentialists do not understand emptiness, its purpose, and its meaning. The purpose of teaching emptiness is to eliminate the afflictions. This is done by undermining any objectified basis that could serve as a basis for grasping—that is, there is no inherent essence possible in phenomena that would enable grasping them as existing by their own characteristics. In that case, there is nothing in phenomena to be grasped as inherently attractive or repugnant. When one sees this reality, there is no longer a support for attachment, anger, or other afflictions to arise.

Within the fact that all phenomena of saṃsāra and nirvāṇa are empty of inherent existence, their existence and functioning can still be established. Duḥkha arises dependent on the assembly of specific causes and conditions. Because dependent arising exists, production from causes and conditions exist, and therefore duḥkha can arise. If dependent arising did not exist, duḥkha would be independent of causes and conditions and, being permanent, it could neither arise nor cease. In that case we would never get a cold even if we were surrounded by people coughing and sneezing, or if we had a cold, we could never recover. However, as a dependently created phenomenon, a cold, like all duḥkha, does not exist under its own power and is empty of inherent existence. Thus when the causes for duḥkha cease, duḥkha also ceases.

Because duḥkha exists, its causes exist, its cessation exists, and the paths leading to those extinguishments of duḥkha exist. Thus the four truths are established. Since the four truths exist, knowing true duḥkha, eliminating true origins, actualizing true cessations, and cultivating true paths also exist. Because these exist, the fruits of the path exist. These fruits, which are successive levels of realization, are stream-enterer, once-returner, nonreturner, and arhat.<sup>77</sup> Since these exist, practitioners who have attained them (abiders) exist, as do people

who are approaching those attainments (approachers). These approachers and abiders are part of the Saṅgha. Thus the Saṅgha Jewel exists.

Since the four truths exist, the Buddha's doctrine—the Dharma Jewel, which consists of true cessations and true paths—exists. Since the Saṅgha Jewel and the Dharma Jewel exist, the Buddha who has completed the path also exists. Thus the Three Jewels exist as reliable objects of refuge for those wandering in saṃsāra.

Reflecting deeply on the above argument will lead us to a profound understanding of the Buddhadharma based on the reasoning that all phenomena lack inherent existence and exist dependently. We can then establish the existence of virtuous and nonvirtuous actions and their results—happiness and misery, respectively. All phenomena of the thoroughly afflictive class (those having to do with saṃsāra) and all phenomena of the very pure class (those leading to or being nirvāṇa) can be established. These 108 groups of afflictive phenomena and pure phenomena<sup>78</sup> are either conventional truths or ultimate truths. Thus the two truths exist. In this way, we see that things being empty is what allows for them to exist conventionally and to function. Such understanding makes our refuge in the Three Jewels irrefutable and increases our joyous effort in practicing the Dharma.

In Nāgārjuna's homage in the *Treatise on the Middle Way*, he states that dependent arisings are empty of inherent existence and lack eight characteristics: In terms of characteristics, they are without cessation and arising. In terms of time, they are without annihilation and permanence. In terms of mobility, they lack coming and going. In terms of number, they lack being distinct (multiple) and identical (one and the same). Although these eight characteristics exist on the conventional level, they do not inhere in things as their ultimate nature. Phenomena have characteristics conventionally, but they do not exist by their own intrinsic characteristics in terms of their ultimate nature. From the perspective of the direct realization of emptiness, these characteristics do not exist and do not appear to āryas' minds that are single-pointedly and directly perceiving emptiness.

Because things arise in dependence on other factors such as their causes, parts, and the mind that conceives and designates them, they do not exist under their own power and cannot set themselves up. Lacking any independent essence or nature, they are empty of inherent existence. Something that arises dependently cannot exist inherently. If something were inherently existent, it could not be a dependent arising; it could not arise due to causes and conditions,

and therefore it could not function. Since our daily experience confirms that functioning things arise and change into something else, they clearly are dependent and thus lack existence from their own side.

People and things appear to us to have a real essence of their own. A person that we are fond of appears to be a real person, existing right there in front of us. We don't think that they exist simply because the causes for them exist. Rather, they appear to have a real essence, a concrete personality that makes them so loveable. Similarly, someone who has harmed us appears to have their own intrinsic personality that makes them despicable. They, too, don't appear to depend on causes and conditions. We don't consider their family's dynamics, the influence of the society around them, or the karmic seeds that accompanied them into this life.

This accounts for our perplexed reaction when someone acts "out of character." We thought they had a fixed, independent character, and this new behavior or trait doesn't fit with it. We don't think that a person is composed of many different attitudes, views, and emotions, and many of them contradict one another. Societal attitudes toward those who have been convicted of performing harmful deeds demonstrate this. A person is now an inherently existent criminal; in their very nature they are corrupt and irredeemable. We don't want anything to do with them even if we speak about having compassion for them. We don't consider that causes and conditions in their family and society helped to create the person they are now, or if we do admit to damaging influences when they were children, we think they are inherently defective individuals.

Sometimes we even consider ourselves in such a harsh light, especially when we feel shame or guilt. Shame arises based on seeing ourselves as intrinsically damaged and incapable, as if that were our permanent nature and we came into this life that way independent of causes and conditions. Not only do we seem to be inherently existent, so does the shame. We don't consider that this self-image arose due to causes and conditions, that it is a projection of our mind based on ignorance.

By familiarizing ourselves with the doctrine of dependent arising, we can overcome these wrong ideas about ourselves and others. This frees us to understand that each and every living being has the buddha nature and is to be respected and appreciated.

---

## REFLECTION

1. In your daily life, observe how you think about yourself and others.
  2. Do you see yourself and others as fluid individuals changing in each moment, or do you see yourself and others as having fixed personalities that are who you really are?
  3. Which view is accurate?
  4. How does your feeling about yourself and others change when you alter your view?
- 

Phenomena are simultaneously empty of inherent existence and dependently existent. The fact that these two are mutually supportive does not mean things switch back and forth between being empty of inherent existence and existing dependently. A sweater arises dependent on its substantial cause—wool—and conditions such as the people who made it and the implements they used to do so. Being created in this way, the sweater does not exist under its own power; nor does it have an independent nature of “sweaterness”—there isn’t a sweater in the wool, the people, or the implements. The sweater came into being because of the functioning of many things that are not sweaters. Because it arose dependent on other factors, it is empty of having its own independent nature. Because a conditioned phenomenon such as a sweater is empty, it will disintegrate and one day become a rag. If it were not empty, it would be static and nothing could influence it, in which case it could neither arise nor cease, or exist for that matter.

If we were to put this in the form of a syllogism as explained in chapter 6, it would be:<sup>79</sup> Consider the sweater; it is empty of inherent existence because it is a dependent arising. *Sweater* is the subject, *empty of inherent existence* is the predicate, *the sweater being empty of inherent existence* is the thesis to be proven, and *dependent arising* is the reason. The *application of the reason* is: the reason (dependent arising) applies to the subject (sweater)—that is, the sweater is a dependent arising. The *pervasion* is: whatever is the reason (a dependent arising) necessarily is the predicate (empty of inherent existence). That is, whatever is a dependent arising necessarily is empty of inherent existence. The *counter-pervasion* is: Whatever is the opposite of the predicate (empty of inherent existence) necessarily is the opposite of the reason (dependent arising). That is, whatever isn’t empty of inherent existence is necessarily not a dependent arising. Someone must ascertain all three criteria—the application of the reason to the

subject, the pervasion, and the counter-pervasion—to realize that the sweater is empty of inherent existence.

The point—whether we explain it as a syllogism or in ordinary language—is that emptiness and dependent arising are mutually inclusive. Whatever arises dependently is empty; whatever is empty arises dependently. Examples such as a sweater or a football are useful to understand this, but our reflection becomes more interesting when we apply this reasoning to a problem, such as our anger at someone's criticism, and see it as being both empty and arising dependently.

Neither the so-called Mādhyamikas who negate too much nor the essentialists who negate too little can reconcile dependent arising and emptiness, although they deal with this difficulty differently. Those who negate too much sacrifice conventional truths and dependent arising in order to hold their view that emptiness means total nonexistence. Essentialists relinquish emptiness in order to assert the inherent existence of dependent arisings.

The essentialists use the reason of dependent arising to refute emptiness by saying that whatever is a dependent arising must exist inherently; thus, it cannot be empty of inherent existence. Those who negate too much, on the other hand, say that because things are empty, they lack any existence whatsoever; thus dependent arisings do not exist. In this way, both fail to understand the profound view of the Middle Way that the Buddha expounded.

Wrong conceptions, ignorance, and the seeds of ignorance obscure us from understanding emptiness. For example, if we look closely at our body, it is clear that it is composed of filthy substances. We may not like to hear this, but our experience validates this. No one thinks the excrement our body produces is lovely, and no one falls in love with another person's intestines. However, in our ordinary view, we consider our own and others' bodies as desirable and become attached to them. If our mind is so obscured that such disparity between reality and our thoughts exists in a comparatively simple example such as this, needless to say, our mental obscurations make understanding the Middle Way view very difficult.

Avoid being proud, thinking that you are wiser than the ignorant people who negate too little or too much. Many of these people are knowledgeable, have strong faith in the Three Jewels, and practice well. The non-Buddhist teachers as well as Buddhist sages such as Asaṅga, Dharmakīrti, Bhāvaviveka, and so forth

are not fools. If you engaged them in a debate, they could very well convince you of their views!

## *Mādhyamikas Are Not Nihilists*

Having the correct view is essential if we want to meditate on emptiness. Without a proper understanding, we will not negate enough or will negate too much, leaving the Middle Way beyond our reach. Falling to the extreme of nihilism is especially dangerous. Nāgārjuna cautions (MMK 24.11):

By a misperception of emptiness  
a person of little intelligence is destroyed,  
like a snake incorrectly seized  
or like a spell incorrectly cast.

Someone misperceives emptiness and falls to the extreme of nihilism by adopting incorrect reasonings. For example, to identify what a pot actually is, they investigate with ultimate analysis to see if the pot is one with or different from its parts. They see that a pot cannot be found in or among its parts—it is not the bottom, the sides, the inside, or the outside—and they conclude that a pot does not exist. They then investigate: Who am I, the one who analyzes? Here, too, they see that they are not their head, heart, legs, belly, or mind and conclude that they do not exist. Finally they think: If there is no person who analyzes, then no one exists who can determine phenomena as existent or nonexistent. Therefore phenomena are neither existent nor nonexistent.

Another way nihilists negate too much is by discounting reliable cognizers. “Reliable” means nondeceptive and implies that these consciousnesses apprehend their objects correctly. Since phenomena cannot be found under ultimate analysis, nihilists go overboard and think that since a reliable cognizer doesn’t apprehend objects, these things do not exist at all. Their confusion arises because they think reliable cognizers of the ultimate also perceive conventionalities. However, conventional truths are beyond the purview of consciousnesses analyzing the ultimate, so the fact that such consciousnesses don’t perceive them doesn’t mean they don’t exist. That would be like saying because the visual

consciousness didn't hear the music, the music doesn't exist. Music isn't within the purview of the visual consciousness! By erroneously rejecting reliable cognizers of conventional truths, these people deny conventional existence altogether.

The meaning of nihilism varies in different contexts. By negating conventional existence, some people say virtue and nonvirtue do not exist. They may say: "Everything is a dream; it does not exist in reality. Therefore there is no good and no bad." Such a person is nihilistic in the sense that they do not believe that constructive actions lead to happiness and destructive ones to suffering. In this way, they negate the functioning of karma and its effects.

Another type of nihilism is believing that a previously inherently existent person becomes totally nonexistent at the time of death. Nihilists believe an inherently existent person exists while alive, but the continuity of the person ceases altogether after death. With the cessation of the person, all karma ceases and no effects of their actions are experienced.

A third nihilistic view is denying the existence of past and future lives because we cannot see an inherently existent person coming from a previous life to this life or going from this life to the next. The non-Buddhist Cārvākas (Materialists) of ancient India were nihilists in this sense because they believed that only things that could be directly perceived by the physical senses exist. We meet some people with similar nihilistic views nowadays.

Asserting that rebirth does not exist because we cannot see it with our senses does not disprove the existence of rebirth. There is a difference between not perceiving something with our senses and perceiving its nonexistence. As ordinary beings our senses are incapable of perceiving everything that exists: eagles and cats see things we cannot; dogs detect odors we cannot. If our senses or if inference could prove the nonexistence of rebirth, we would have to accept that. However, they cannot. Saying that we do not perceive something does not establish its nonexistence. Many reasons in favor of rebirth exist; we have discussed some of them in previous volumes.<sup>80</sup>

Another nihilistic belief is that because the mind depends on the body, it is not possible to transform the mind because it is always bound by this material human body. The urge for self-preservation and self-protection is hardwired in our brain. We have no choice but to become hostile and aggressive or to flee in fear when in danger. These qualities as well as the self-centered attitude are in our

biological makeup, so the best we can do is mitigate their extreme forms, but freeing ourselves from them completely is neither desirable nor possible. I wonder how someone could prove that the mind is the brain or that the mind is an emergent property of the body.

In the context of discussing the Middle Way, nihilism specifically refers to believing that because phenomena are empty, conventional objects either do not exist or they do not bring the results that they do bring. Based on this view, more nihilistic views proliferate.

Nihilistic views prevent properly positing both conventional and ultimate truths and result in deprecating both. If we do not affix the word “ultimately” when doing ultimate analysis, we may think: A pot does not exist because it is neither one with nor different from its parts. The correct way to investigate is: A pot does not *ultimately* exist because it is neither one with nor different from its parts. Ultimate analysis does not examine the conventional existence of something; it determines if that thing exists on the ultimate level.

Essentialists erroneously think that because Mādhyamikas negate inherent existence, they are nihilists, for, according to essentialists, if phenomena do not inherently exist, they do not exist at all. Mādhyamikas disagree, saying that phenomena are empty of inherent existence, but are not empty of all existence whatsoever. They exist dependently. If they existed from their own side, they could not function at all because they would be independent of all other factors. But functioning things that exist merely on the nominal level are able to produce results because they depend on causes and conditions. The four truths and all the thoroughly afflictive phenomena of saṃsāra and the very pure phenomena of nirvāṇa exist because they are empty of inherent existence and exist dependently. In this way Mādhyamikas affirm conventional existence while negating inherent existence.

The theses and reasons that Mādhyamikas and nihilists put forth to prove their assertions differ considerably. Mādhyamikas do not assert total nonexistence, as nihilists do; they assert non-inherent existence. Whereas Mādhyamikas claim that past and future lives do not inherently exist because they arise dependent on causes and conditions, Cārvāka nihilists declare that past and future lives do not exist because we cannot see anyone coming from a past life to this life or going from this one to the next. Furthermore, Mādhyamikas say

that past and future lives are conventional truths, whereas nihilists say they are neither conventional nor ultimate truths because they do not exist at all.

Sometimes the words Mādhyamikas and nihilists use sound similar. For example, both say “phenomena do not inherently exist.” But what they mean by these words is different, for nihilists equate non-inherent existence with total nonexistence, while Mādhyamikas equate it with dependently arising existence.

In answer to the essentialists’ question “If nothing inherently exists, what is there?” Buddhapālita responds in *Buddhapālita’s Commentary on “Treatise on the Middle Way”* (DAE 399):

. . . time and so forth are established as mere entities that are mutually dependent designations, conventions of this and that with respect to individual appearances of things.

People veering toward nihilism will benefit from studying dependent arising, which reaffirms the conventional existence of phenomena. In addition, they should understand that emptiness is a phenomenon—it is an existent; it is not nothingness. Emptiness is a property of conventionally existent phenomena. All properties of a phenomenon are one nature with that phenomenon, and when that phenomenon exists, so do its properties. For people who understand this, saying that the table exists implies that its emptiness also exists, because these two are inseparable. When meditators realize emptiness directly, they do not fall to nihilism because they know that emptiness is a property of an existing phenomenon.

Someone who misunderstands the meaning of emptiness and refutes it creates the powerful destructive karma of abandoning emptiness, which leads to an unfortunate rebirth. Such karma may be created by thinking, “Emptiness means total nonexistence. Since everything is empty, nothing exists.” This is the extreme of nihilism. The karma of abandoning emptiness may also be created by thinking, “All these things appear so real, so they must inherently exist. Therefore emptiness cannot mean the lack of inherent existence.” This is the extreme of absolutism.

The disadvantages of holding such views are clear. If we think our *duḥkha* exists inherently, we see no way out of it. We become depressed and give up hope because the present situation seems so overwhelmingly real and unchanging. On the other hand, if we see our difficulties as empty of inherent existence, we see

that they arise dependent on other factors. If those causes are eliminated, the resultant duḥkha can be stopped, and if the causes of happiness are created, happiness will arise. With this view, we feel optimistic and make effort to cease the causes of our pain and create causes for happiness.

---

## REFLECTION

1. Name some nihilistic views.
  2. How does holding one of the views influence someone's behavior and the karma they create?
  3. Refute each of the nihilistic views you listed.
- 

### *Emptiness Exists and Is Itself Empty*

Many early Mādhyamikas in Tibet—those who lived during the early phase of the second transmission of the Dharma to Tibet in the eleventh century—said that emptiness was ineffable and could not be perceived by the mind. Since emptiness cannot be perceived by mind, they thought it did not exist. They misunderstood the Perfection of Wisdom sūtras that clarified that emptiness exists (NT 42):

Whether the tathāgatas appear or not, the reality of phenomena just abides.

Citing a sūtra, Candrakīrti states in his *Autocommentary on the Supplement* (*Madhyamakāvatārabhāṣya*, NT 43):

Who could say that it [emptiness] does not exist? If it did not exist, for what purpose would bodhisattvas cultivate the path of the perfections? For what purpose would bodhisattvas initiate hundreds of efforts for the sake of realizing such a reality?

In *Clear Words*, Candrakīrti says (NT 44):

What is this suchness? The entity of suchness does not change and always abides. For that which is not produced in any way because of not being fabricated and because of not relying on another is called “the [ultimate] nature of fire” and so forth.

These quotations show that emptiness is an existent phenomenon. In *Clear Words*, Candrakīrti affirms that emptiness exists conventionally even though it is the ultimate nature of all phenomena. Initially, it may sound strange to hear that emptiness exists conventionally although it is the ultimate nature. Conventional existence is the only kind of existence there is. Ultimate existence is disproven because nothing can bear ultimate analysis. Because emptiness is not fabricated and is the ultimate nature of all phenomena, it always exists, whether the tathāgatas appear in our world or not.

If emptiness were nonexistent, then no one could cognize it, and thus it would be useless for bodhisattvas to cultivate the perfections—especially the perfections of meditative stability and wisdom—in an effort to realize it.

Since emptiness exists, what is its ultimate mode of existence? Is it related to us and our world, or does it exist separate from all phenomena as an inherently existent reality? Emptiness is not nothingness, nor is it merely a linguistic convention. It is a permanent phenomenon that is known by a reliable cognizer—in this case an ārya’s meditative equipoise directly and nonconceptually perceiving emptiness. It is our ultimate nature and the ultimate nature of all persons and phenomena around us.

Emptiness exists dependently. It depends on the reliable cognizer that knows it directly. It also depends on its parts. Emptiness is not a partless absolute reality that existed first and from it the universe and sentient beings arose. Emptiness has parts in the sense that there are many emptinesses—the emptiness of the moon, the emptiness of the table, the emptiness of the parts of the table, and so forth. Each thing has its own emptiness that comes into existence when that thing arises and goes out of existence when that thing ceases. The emptiness of the apple comes into existence simultaneously with the apple and it stops existing when the apple ceases.

The *Kāśyapa Chapter Sūtra* makes clear that emptiness should not be reified or seen as truly existent (OR 300):

That which is emptiness does not empty phenomena, because phenomena themselves are empty. That which is signlessness does not make phenomena signless, because phenomena themselves are signless. That which is wishlessness does not make phenomena wishless, because phenomena themselves are wishless. To so analyze, Kāśyapa, is called the middle path—in the correct analysis of phenomena. Oh Kāśyapa, I say that whoever analyzes emptiness by objectifying emptiness has fallen, fallen far from my teachings.

Saying that emptiness does not empty phenomena and so on indicates that the ultimate nature of phenomena itself is emptiness. It is not the case that phenomena that are not themselves empty are made empty by something else. Someone who objectifies emptiness and holds it to inherently exist as a reality separate from phenomena that are empty lacks the correct view. Similarly, reifying the view of emptiness and clinging to it also misses the point. This doesn't mean we can't think about or discuss emptiness. After all, teachers talk about emptiness when instructing their students. It means holding the view that emptiness exists inherently. Nāgārjuna says (MMK 13.8):

The victorious ones have said  
that emptiness is the elimination of all views.  
Anyone for whom emptiness is a view  
is incorrigible.

If someone negates true existence and then grasps the emptiness of true existence as truly existent, correcting his view will be difficult. This is like a sick person who took medicine that cured his illness. However, since the medicine was itself not digested completely, it remained in his stomach and made him sick again. In the same way, refuting the true existence of phenomena solves one set of problems by diminishing afflictions, but to turn around and grasp emptiness as truly existent makes one sick with afflictions once again.

Other people do not hold emptiness to be truly existent, but after negating the true existence of emptiness, they say that emptiness doesn't exist. These people confuse emptiness with total nonexistence and fall to the extreme of nihilism, whereas those who hold emptiness as truly existent fall to the extreme of absolutism.

## *Do Mādhyamikas Have Theses?*

Some scholars question whether Mādhyamikas have theses or not. Because Mādhyamikas completely negate inherent existence and because emptiness doesn't affirm anything in the wake of that negation, these scholars think that Mādhyamikas don't affirm any theses in a debate and that they focus solely on refuting others' views. These scholars believe that even if Mādhyamikas were to give any affirming statements about emptiness—such as “emptiness is the nature of all phenomena”—that would mean emptiness is truly existent, which would contradict Mādhyamikas' own beliefs that nothing exists truly. In the past, this radical way of thinking became an issue in Madhyamaka circles in both Tibet and China. It arose from misinterpreting some of Nāgārjuna's statements, for example from *Refutation of Objections* (VV 29):

If I had any thesis,  
then I would suffer from that fault.  
But as I have no theses,  
I am purely without fault.

When Nāgārjuna says he has no thesis, he says that from the ultimate perspective, where nothing can withstand ultimate analysis. From this perspective, there is no syllogism, no subject, no predicate, no reason, no thesis, or anything else. But that doesn't mean nothing exists. From the conventional perspective, all these things exist, and Nāgārjuna employs conventionally existent syllogisms and consequences to prove his assertions. In that way, he cannot be faulted. Non-ultimately existent words have the power to refute ultimate existence because those words exist and function, precisely because they are empty of ultimate existence. Not realizing that Nāgārjuna was speaking from the perspective of the ultimate, these scholars misinterpreted his words and thought he was saying Mādhyamikas had no theses at all.

Imagine Nāgārjuna debating with one of these scholars who saw everything as inherently existent on the topic of whether phenomena existed inherently or not. In response to everything the scholar said, Nāgārjuna would probably say, “no,” indicating that the subject, thesis, and reason of the scholar's argument did not exist from its own side. Not realizing that Nāgārjuna was speaking from the

perspective of the ultimate, the scholar would misunderstand and think that Nāgārjuna was a nihilist refuting all existence whatsoever.

We use a reflection of our face in a mirror to check our appearance, even though the appearance of the face is false and no face exists in the mirror. Similarly, we can realize the meaning of a syllogism in which each part lacks ultimate existence yet exists falsely or conventionally. A reflection of a face is not totally nonexistent, nor does it ultimately exist. It arises due to causes and conditions and is dependent, although it is false in that there appears to be a face in the mirror when there isn't. Similarly, the words of a thesis exist and function although they are not ultimately existent. When it is said that Mādhyamikas have no positions, it means they have no assertions in which they accept ultimately existent phenomena.

Essentialists say Nāgārjuna deprecates existence and is nihilistic. They fail to realize that Nāgārjuna did not say that things are empty of true existence because they cannot perform a function. He did not negate the ability of tables, diplomas, and emotions to perform their respective functions. Rather, he honored functionality and causality by saying that things are empty of true existence because they arise dependently.

Some people say Mādhyamikas assert the existence of things only from the perspective of others—that they speak of conventional objects only because others think they exist, but they do not affirm anything by speaking of conventional things. This is incorrect because Mādhyamikas assert theses for themselves.

If Mādhyamikas had no theses, they could not set forth consequences when refuting others' systems. This is because consequences show the fallacy of the opponents' theses, and by doing that, the right view is implied. By negating true existence, Mādhyamikas automatically prove non-true existence.

People who mistakenly believe that Mādhyamikas have no assertions even conventionally haven't properly identified the object of negation. These people refute the truly existent assertions of their opponents,<sup>81</sup> and then when they apply those same arguments to their own theses, they mistakenly think that they have refuted them as well. Because they have not been able to differentiate true existence from existence, they erroneously think that refuting truly existent assertions is the same as refuting all assertions whatsoever. The Mādhyamikas,

however, say that assertions, like all other phenomena, exist conventionally but not ultimately.

Since Madhyamaka is the Middle Way system, it must assert something. Its principal assertion is that nothing is truly existent, yet conventionally everything exists like illusions. Since Mādhyamikas reach this conclusion by refuting wrong views, there must be reliable cognizers that know the theses that are proven and the nonexistence of those that are refuted. Since Mādhyamikas also teach others, they must have theses.

### *Abandoning the Two Extremes*

How do Mādhyamikas abandon the two extremes? They refute absolutism by saying that things are empty of inherent existence and refute nihilism by asserting that they exist dependently. It can also be said that they avoid absolutism by accepting dependent arising and avoid nihilism by asserting that phenomena are empty. In this case, instead of going to the extreme of inherent existence, they assert dependent existence, and instead of going to the extreme of total nonexistence, they assert no inherent existence.

Just the words “dependent arising” refute the two extremes. “Dependent” refutes inherent or independent existence, the extreme of absolutism, and “arising” refutes total nonexistence and the extreme of nihilism. “Dependent” indicates phenomena are empty, “arising” indicates that they exist. Dependent arising means no inherent existence because phenomena arise depending on many factors that are not them. A pear exists dependent on many factors that are not that pear—the pear seed, water, fertilizer, sunshine, and the farmer—and a person exists dependent on a diversity of factors that are not that person, such as her parents.

Dependent arising also means to exist falsely. Existing falsely isn't nonexistence; it means that like illusions, dreams, and holograms, things appear one way but exist in another. They exist nominally, only on the level of appearances, because like clouds in the breeze, they lack any essence. They appear and exist dependent on causes and conditions, parts, and the mind that conceives and designates them. In this way, dependent arising refutes the extreme of nonexistence.

Things can be either inherently existent or non-inherently existent. There is no third choice. These two are a dichotomy, and if something is not one, it must be the other. By refuting inherent existence, non-inherent existence or the emptiness of inherent existence is automatically established.

Inherent existence has never existed. Realizing emptiness does not entail destroying an inherently existent object by making it empty. Because the object never existed inherently, its inherent existence cannot be destroyed. Rather, we are simply realizing that it was never there to start with. Emptiness is right here in every person and object around us. It is our very nature, yet it too is empty of inherent existence.

Grasping something as inherently existent is the extreme of absolutism, and thinking that thing was once inherently existent and now has become totally nonexistent is the extreme of nihilism. An example of the latter is thinking that at present a truly existent person exists—we see and speak with them—but after death there is no continuity of their mindstream and they become totally nonexistent.

At present, because grasping inherent existence is firmly entrenched in our mind, we usually hold the extreme of absolutism, which lies behind the attachment, anger, and other afflictions that besiege us. Still, the danger of falling into nihilism is real. Sometimes we meet people who claim that everything is illusory and has no real existence so there is no need to observe the law of karma and its results. Others claim that since virtue and nonvirtue are merely designated, they are completely fabricated by the ignorant mind and thus ethical standards have no weight.

If we wish to develop the Middle Way view, the Buddha advised us to cultivate its causes by abiding in pure ethical conduct, relying on an excellent spiritual mentor, purifying our negativities, and accumulating merit and wisdom. To do this, we should follow definitive scriptures and the works of great sages such as Nāgārjuna, Āryadeva, and Candrakīrti to understand them. Then the Buddha directed us to study, contemplate, and meditate on emptiness and its compatibility with dependent arising.

---

## REFLECTION

1. Do you see emptiness as some absolute thing that exists independently?
  2. Why is that view incorrect?
  3. Try thinking of emptiness as a quality of all persons and phenomena that is here right now.
  4. Reflect that although conventional truths and ultimate truths are contradictory, they exist together and are inseparable.
-

## 10 | The Extreme of Absolutism

AMONG ALL THE TEACHINGS the Buddha gave, the teaching on dependent arising is the most profound. It is what marks the Buddha as an unexcelled teacher. Although the Buddha can be praised from many angles and for many of his spectacular qualities, Nāgārjuna, Tsongkhapa, and many other scholar-adepts praise him for revealing the profound message of dependent arising. I, too, have found the impact of his teachings on the compatibility of emptiness and dependent arising to be profound and feel the same reverence for the Buddha as an unsurpassable teacher. Every day I chant the homage to the Buddha from the *Treatise on the Middle Way* to reaffirm my deep spiritual connection to him and his teachings, especially to the teaching on dependent arising.

Because things are dependent, they cannot arise from an unchanging, independent entity or substance. If they did, we could never attain higher spiritual states because that entails change, and change depends on causes and conditions. Absolutist notions cannot stand up to scrutiny by reasoning because they are antithetical to the fact that everything exists by depending on other factors.

During India's classical period,<sup>82</sup> in the great monastic universities such as Nālandā in India, non-Buddhist and Buddhist sages debated with one another. This led to a rich exchange as these sages explored a broad variety of views, testing them with the rigor of reasoning and logic. The writings of many of the great Indian scholar-adepts consisted of analyzing the inconsistencies in many of the non-Buddhist systems as well as the lower Buddhist systems. In this chapter we'll look at a few of these, hopefully whetting your appetite to study such treatises as *Commentary on the "Compendium of Reliable Cognition"* (*Pramāṇavārttika*) by Dharmakīrti and *The Four Hundred* (*Catuḥśataka*) by Āryadeva as we ferret out these beliefs in our own minds and use reasoning to overcome them.

In this chapter we will examine some ideas held by those holding an absolutist position, beginning with some tenets of the lower Buddhist systems and then analyzing some non-Buddhist beliefs. Some of these assertions may be

similar to ones you may have learned either from your family, school, or another religion. This is an opportunity to reassess them in light of what you know now about dependent arising and, in doing so, clarify and refine your beliefs.

## *Buddhist Essentialists That Don't Refute Enough*

Like nihilists, Buddhist essentialists also fail to identify the object of negation properly. Although they may negate something, they have missed the mark—for example, by negating a superficial distorted view while leaving inherent existence untouched. Many philosophies fall to the extreme of absolutism because assenting to inherent existence agrees with our innate self-grasping. Asserting a real, unchanging essence that is the person and a permanent divine entity that is in control of the universe is much more emotionally satisfying for some people. Such views are comforting and protect from the fear arising from having limited control over our body, mind, other people, and our environment. All of these factors make us hesitant to challenge our accustomed views and assumptions.

To help us overcome these hindrances, the great masters recommend that prior to delving into emptiness, we engage in practices to purify negativities and accumulate merit. They also emphasize the importance of contemplating the four truths—especially the defects of saṃsāra and the afflictions that cause it—in order to generate renunciation of duḥkha and the aspiration to attain liberation. That strong aspiration for freedom, as well as bodhicitta, gives us the inner determination and strength to challenge the self-grasping ignorance that has imprisoned us since beginningless time.

An example of not negating enough is refuting only a permanent, unitary, independent self and not looking deeper. Although refuting such a self or soul is a necessary beginning, it only touches the surface of the object of negation. The concept of a permanent and eternal soul or self that exists after death and is the essence of a person is an acquired obscuration, one fabricated by incorrect philosophies, such as those propounded by non-Buddhist schools. Refuting only it does not eliminate the culprit causing all our problems. We are still far from realizing the emptiness of inherent existence.

The lower Buddhist schools negate a self-sufficient substantially existent person, but that too doesn't get to the root problem of grasping inherent

existence. They too have not identified the full object of negation, which is more subtle. It is worthwhile to spend time trying to identify the object of negation, inherent existence.

To refute inherent existence, we contemplate the unwanted consequences that would come about if persons and phenomena existed inherently. For example, the I would be permanent and unchanging; it wouldn't have components such as the body and mind and would be totally unrelated to the body and mind. Although these unwanted consequences would arise, they are not the meaning of inherent existence. That is, being permanent or independent from the aggregates is not the definition of inherent existence. Inherent existence is more subtle. Nevertheless, seeing the contradictory consequences that would arise if things existed inherently enables us to chip away at that wrong view.

Similarly, if something truly existed, it would have to be partless, but partless minute particles that are the building blocks of the universe and partless moments of mind do not exist—they are notions created by incorrect philosophies. Although they are to be negated, negating them does not destroy the root of our duḥkha, the innate self-grasping ignorance.

Refuting these coarser objects of negation is a steppingstone to realizing emptiness, but only realizing the emptiness of the conceived object of innate self-grasping ignorance will cut all afflictions. For example, if someone is afraid that a poisonous snake is in the room, telling him there isn't an elephant here doesn't calm his fears. Similarly, if someone clearly sees the untrustworthy nature of saṃsāra and wants to be free from it, but spends her time refuting only a permanent soul as asserted by non-Buddhists, partless particles as accepted by Vaibhāṣikas, external phenomena as refuted by Yogācārins, or inherent existence on the conventional level as accepted by the Svātantrikas, she is missing out.

Although some philosophies and psychologies may be comforting, we must persevere and recognize the actual source of saṃsāric duḥkha to eliminate it. In the spiritual supermarket of the modern age, so many beliefs exist. Many are much more glamorous than the Buddhadharma. They promise quick results and attract many followers. Although some of these beliefs may alleviate some problems, they do not identify the deep cause of suffering or show the method to overcome it. They may help the people who practice them live more peacefully in this life—and that is wonderful—but spiritual aspirants seeking liberation or full

awakening should not be satisfied with superficial remedies. They must persevere and correctly identify the object of innate ignorance and then refute it.

## *What Do Śrāvakas and Solitary Realizers Realize?*

How do we reconcile that the two Fundamental Vehicle tenet systems, the Vaibhāṣika and Sautrāntika, assert inherent existence with the fact that śrāvakas and solitary realizers who are Fundamental Vehicle practitioners attain arhatship? Not all Fundamental Vehicle practitioners follow Fundamental Vehicle tenet systems; similarly, not all Mahāyāna practitioners follow Mahāyāna tenet systems. Let's unpack the significance of this.

Prāsaṅgikas speak of the coarse and subtle four truths, the coarse being the presentation in the *Treasury of Knowledge* and the *Compendium of Knowledge*, and the subtle being the Prāsaṅgika presentation.<sup>83</sup> The principal differences between the two lie in their assertions regarding the object of negation and the root of saṃsāra. The non-Prāsaṅgika systems assert that the object of negation is a self of persons—specifically a self-sufficient substantially existent person—and the root of saṃsāra is grasping at such self of persons. In addition, the Yogācārins and Svātantrikas negate a self of phenomena, saying that grasping a self of phenomena is the *final* root of saṃsāra.

According to the coarse four truths, the first truth is the duḥkha arising from grasping at a self-sufficient substantially existent person. The second truth is grasping a self-sufficient substantially existent person, the afflictions arising from it, and the karma propelling rebirth created by them. The third truth is the cessation that is the abandonment of this grasping and the afflictions that arise due to it. The fourth truth is the wisdom path that counteracts this grasping and the afflictions stemming from it.

The presentation of the subtle four truths accords with the Prāsaṅgika view in which grasping the inherent existence of persons and phenomena, not grasping at a self-sufficient substantially existent I, is the origin of saṃsāra.<sup>84</sup> The object of negation is the inherent existence of both persons and phenomena. The other three truths are asserted accordingly.

Of the four attributes of true duḥkha in the presentation of the coarse four truths, the attribute of emptiness refers to the lack of a permanent, unitary,

independent self or I, and the attribute of selflessness is the lack of a self-sufficient substantially existent person. According to the Prāsaṅgikas, the path directly realizing coarse emptiness and coarse selflessness can temporarily stop the manifestation of the coarse afflictions, but cannot eradicate those afflictions. Although the manifest coarse afflictions may be temporarily suppressed, those practitioners will still take rebirth in saṃsāra by the force of grasping inherent existence and the afflictions and karma arising from it.

Someone may have directly realized the selflessness of a self-sufficient substantially existent person and still grasp the person and the aggregates as inherently existent. This practitioner has yet to realize the deepest mode of existence of persons and phenomena—their emptiness of inherent existence. Only the wisdom directly realizing this emptiness is capable of abolishing grasping inherent existence and the afflictions it generates. In the *Questions of Adhyāśaya Sūtra* (*Adhyāśayasamśōdana Sūtra*), the Buddha makes this point in a dialogue with a disciple (CTB 161):

“For example, during a magical display, a man sees a woman created by a magician and desire arises in him. His mind becomes ensnared with desire, and he is frightened and ashamed in front of his companions. Rising from his seat, he leaves and later considers the woman to be ugly, impermanent, unsatisfactory, and selfless. O child of a good lineage, what do you think? Is that man behaving correctly or incorrectly?”

“Blessed One, he who strives to consider a nonexistent woman to be ugly, impermanent, unsatisfactory, and selfless behaves incorrectly.”

The Blessed One said, “O child of a good lineage, you should similarly view those bhikṣus, bhikṣuṇīs, laymen, and laywomen who consider unproduced and unarisen phenomena to be ugly, impermanent, unsatisfactory, and selfless. I do not say that these foolish persons are cultivating the path; they are practicing in an incorrect manner.”

Here the Buddha emphasizes that if we contemplate nonexistent objects of attachment as ugly, impermanent, empty, and lacking a self-sufficient substantially existent I, we are missing the point. There’s no use contemplating the

impermanence and so forth of nonexistents; if we understood that these things did not exist to start with, our attachment to them would vanish. Meditating on the attributes of coarse true duḥkha is like discussing how to dispose of wilted flowers in a hologram or how to shave the moustache off a turtle when such flowers and such a moustache do not exist. To attain liberation, realization of the ultimate mode of existence—the emptiness of inherent existence of both persons and phenomena—is essential. Saying phenomena are unproduced and unarisen indicates that they are not inherently produced and do not inherently arise, although they are produced and arise conventionally.

In the *Sūtra on the Miserliness of One in Dhyāna* (*Dhyāyitamūṣṭi Sūtra*), the Buddha describes the disadvantages of not meditating on subtle selflessness by speaking of someone who, adhering to true existence, meditates on the coarse four truths and thinks, “I know duḥkha, have abandoned all fetters that are its origin, actualized cessation, and cultivated the path. I am now an arhat.” However, when he dies, he sees that he will be reborn in saṃsāra and doubts the Three Jewels, which causes him to be reborn as a hell being. Although this does not happen to everyone who mistakenly believes they have realized subtle emptiness, it does happen to some.

In the sūtra, the Buddha then explains how the four truths should be cognized to attain liberation (CTB 163):

Mañjuśrī, he who sees all products as not produced knows duḥkha thoroughly. He who sees all phenomena as without origin has abandoned the origin of suffering. He who sees them as utterly passed beyond sorrow has actualized cessation. He who sees all phenomena as totally unproduced has cultivated the path.

When the Buddha speaks in such seemingly enigmatic language, he means that one who sees all produced things as lacking inherent arising, all phenomena as lacking truly existent origin, and so forth knows how phenomena actually exist—they are empty of true existence. Only someone who directly realizes the absence of true existence of persons and phenomena can eliminate both the coarse and subtle afflictions as well as their seeds and attain liberation from saṃsāra. This applies equally to everyone, whether they are Buddhist or non-Buddhist and whether they follow the śrāvaka, solitary realizer, or bodhisattva path.

As Fundamental Vehicle practitioners, do śrāvakas and solitary realizers realize the emptiness of inherent existence and attain liberation, or do they meditate on the coarse four truths, in which case they remain far from liberation? Since Fundamental Vehicle arhats have attained liberation, they must have meditated on and realized the emptiness of inherent existence of persons and phenomena. For this reason deprecating the Śrāvaka and Solitary Realizer Vehicles by saying that they do not lead to liberation is a grave error, and doing this is a transgression of the fourteenth root downfall of the bodhisattva ethical code. The *Diamond Cutter Sūtra (Vajracchedikā)* agrees:<sup>85</sup>

[Buddha], “Subhūti, does a stream-enterer think, ‘I have attained the fruit of stream-enterer?’”

Subhūti replied, “Bhagavan, no, it is not so. Why? Bhagavan, because one does not enter into anything whatsoever; therefore, one is called stream-enterer. . . . Bhagavan, if that stream-enterer thinks ‘I have attained the result of stream-enterer,’ that itself would be grasping a self, a sentient being, a soul, a person.”

Subhūti responds similarly when the same question is asked about a once-returner, nonreturner, and arhat. Since someone who has directly realized the emptiness of inherent existence does not grasp the self of persons and phenomena, Fundamental Vehicle āryas have definitely realized the emptiness of the person (themselves as the attainers of stream-entry and so forth) and the emptiness of phenomena (the four truths, the fruit of stream-entry, and so forth). The emptiness and the two selflessnesses they realize are the same as those of Mahāyāna practitioners.

Furthermore, in his *Autocommentary on the Supplement* and in *Clear Words*, Candrakīrti sets forth more reasons to support his assertion that śrāvakas and solitary realizers meditate on and realize the emptiness of inherent existence. The *Sūtra of the Ten Grounds (Daśabhūmika Sūtra)* says that bodhisattvas outshine śrāvakas and solitary-realizer āryas by the power of their wisdom on the seventh bodhisattva ground.<sup>86</sup> If Fundamental Vehicle āryas did not realize the emptiness of inherent existence, bodhisattvas would outshine them on the first ground. However, first-grounders only outshine śrāvaka and solitary-realizer āryas in terms of their lineage.

Also, Nāgārjuna says in the *Precious Garland* (RA 35) that as long as there is grasping at the aggregates as truly existent, grasping at the person as truly existent remains. Since śrāvaka and solitary-realizer practitioners attain liberation, they must have realized the emptiness of true existence of the aggregates. The *Perfection of Wisdom Sūtra in 8,000 Lines* (*Aṣṭasāhasrikā Prajñāpāramitā Sūtra*) says that those seeking śrāvakas', solitary realizers', and bodhisattvas' awakening should be trained in the perfection of wisdom.<sup>87</sup>

In short, all āryas of the three vehicles realize the same emptiness of inherent existence of persons and phenomena and eliminate the same self-grasping ignorance and the afflictions based on it. All of them realize the subtle four truths.

How do Fundamental Vehicle practitioners realize the subtle four truths and the selflessness of both persons and phenomena if their tenet systems assert that realizing the coarse selflessness of persons is sufficient to attain liberation? To support his position that practitioners of the Fundamental Vehicle realize the same subtle emptiness as the holders of Mahāyāna tenets, Candrakīrti explains that it is important to distinguish a proponent of a Fundamental Vehicle tenet system from a practitioner of the Fundamental Vehicle. Proponents of the Vaibhāṣika and Sautrāntika systems do not realize the emptiness of inherent existence because they accept the inherent existence of all phenomena. However, śrāvaka and solitary-realizer arhats have necessarily realized the emptiness of inherent existence as asserted by the Prāsaṅgikas.<sup>88</sup> This is because some sūtras in the Pāli canon speak of the emptiness of inherent existence. Penetrating the meaning of these passages, śrāvakas and solitary realizers realize suchness and attain liberation. We will examine some of these passages in *Realizing the Profound View*, volume 8 of the *Library of Wisdom and Compassion*.

## *The Fundamental Vehicle and the Universal Vehicle*

Bhāvaviveka says that if the selflessness of phenomena were taught in the Śrāvaka Vehicle, the teachings of the Universal Vehicle would be redundant and therefore useless. However, that doesn't mean he thinks all the Mahāyāna teachings would be senseless. As a scholar-adept, he knows that the Mahāyāna scriptures include much more than discussion of the selflessness of phenomena. They also explain

great compassion, the methods to cultivate bodhicitta, bodhisattvas' aspirations, bodhisattva grounds, perfections, the collections of merit and wisdom, the abilities of the Buddha's truth body and form body, and many other topics. To attain the full awakening of a buddha, studying, practicing, and actualizing the complete Mahāyāna teachings and practices are indispensable.

Nor does this mean that Bhāvaviveka thinks it would be useless for Mahāyāna scriptures to teach the selflessness of phenomena if it were taught in the Fundamental Vehicle. What then does he mean? Nāgārjuna says in *Praise to the World Transcendent* (LS 25):

Without entering signlessness  
there is no liberation, you have declared;  
so you presented this [signlessness]  
in its entirety in the Universal Vehicle [sūtras].

Signlessness—the emptiness of inherent existence, suchness—must be realized to attain liberation. Since śrāvakas and solitary realizers attain liberation, they must have this realization. But in the last two lines, by saying the Buddha presented signlessness in its entirety in the Mahāyāna sūtras, Nāgārjuna implies that it is taught briefly in the Fundamental Vehicle scriptures. What does he mean by this?

First, let's look at what Nāgārjuna does not mean: By saying “in its entirety,” he does not mean that bodhisattvas realize the emptiness of all phenomena but śrāvakas and solitary realizers realize the emptiness of only some phenomena. Like bodhisattvas, they cognize the emptiness of all phenomena.

In the Mahāyāna scriptures, the Buddha explains the selflessness of phenomena using numerous reasonings and approaches, such as those Nāgārjuna set out in his *Treatise on the Middle Way*. However, because of the different aptitudes of his followers, the Buddha did not use extensive reasonings to explain emptiness in the Fundamental Vehicle scriptures. Bodhisattvas want to benefit all sentient beings, so they must know and meditate on many and varied reasonings proving non-inherent existence, causing their minds to become very broad with respect to emptiness. The depth and force of a bodhisattva's realization of emptiness is greater due to the way they meditate on emptiness on the path.

Furthermore, owing to the difference in their spiritual goals, bodhisattvas cultivate the realization of the selflessness of phenomena fully while the śrāvakas

and solitary realizers do not. Here “fully” means that bodhisattvas’ realization of emptiness has the power to eliminate both afflictive obscurations and cognitive obscurations, resulting in their attainment of buddhahood. Because śrāvakas and solitary realizers seek to abandon only afflictive obscurations, meditation on the succinct meaning of the selflessness of phenomena is sufficient to meet their goal of liberation.

## *Examining Our Absolutist Beliefs*

When subjecting views and beliefs to critical analysis, we must remember that our purpose is to understand the ultimate nature, not to criticize or demean the people who hold these views. To do so would contradict the great love, great compassion, and bodhicitta that we practice on the method side of the path.

For many years I have studied, contemplated, and meditated on the Buddha’s teachings. I consider myself a staunch Buddhist because my confidence in the Buddha’s teachings derives not from blind faith but from reason. At the same time, I respect all spiritual and religious traditions, even though the authors of some Buddhist texts point out contradictions in their philosophies or practices. Over the years I have visited many mosques, churches, synagogues, and Hindu temples and become friends with a wide range of religious leaders and practitioners. By speaking to them as one human being to another, I can genuinely say that their teachings benefit them and their followers. I have felt deeply moved visiting the holy sites of other religions. From my own experience, I know it is possible to have strong and reasoned faith in one’s own spiritual tradition and still respect and appreciate other traditions.

When discussing and debating the nature of reality, our purpose is to examine our own deeply held beliefs and assumptions and to discern if they are accurate. We are challenging not only our personal beliefs but also the innate way we apprehend things and our innate feeling of who we are. The purpose of doing this is to free ourselves from duḥkha. It has nothing to do with proclaiming “I’m right and you’re wrong” or “My religion is best.” In fact, dogmatically clinging to our opinions indicates that our grasping inherent existence is quite strong!

The fundamental and most important theme in Buddhism is dependent arising. If we claim to follow the Buddha’s teachings, it is important that our

worldview is one in which our own existence as well as the origin of the universe is based on the principle of dependent arising. Inquiring into the origin of the world and the sentient beings in it without positing a permanent transcendent creator has been a prominent part of our Buddhist heritage stemming from ancient India.

Generally speaking, the diversity of world religions falls into two broad camps. One is theistic religions, in which the belief in a creator forms the primary foundation. The other is non-theistic religions, in which the concept of a creator does not form the foundation of the faith. Among non-theistic religions are Buddhism, Jainism, and one branch of the ancient Indian tradition, Sāṃkhya.

Within non-theistic religions, there are again two categories. The first are faiths that deny the concept of an all-mighty creator but accept the notion of an eternal self or soul, which is the True Self and is permanent, unitary, and independent of causes. The second are faiths that deny the existence of such a self or soul. Buddhism is the sole example of this, and this is the principal factor distinguishing Buddhism from other religions and philosophies.

Another way of classifying spiritual traditions is into those that accept liberation (*mokṣa*) and those that do not. Buddhism belongs to the first group. Within the spiritual traditions that accept liberation or salvation, there are those that consider liberation or spiritual freedom to be existence in an externally blissful heaven and those that understand liberation to be a mental state. Here Buddhism belongs to the second group, in which liberation is understood as the actualization of a state of mind that is free from all afflictive obscurations and is no longer reborn under their control.

As we examine some of the diverse philosophical and religious beliefs, please note that I do not hold a foregone conclusion that Buddhism is the best faith or that everyone should become Buddhist. As you know, I have always been a proponent of interfaith dialogue, harmony, and cooperation. Some of the beliefs we will examine exist in multiple religions and tenet systems. We will focus just on the absolutist beliefs without explaining the entire philosophical basis, path, and result of each religion or tenet systems that espouses them.

While doing this investigation, remember that “permanent” means something doesn’t change from moment to moment—it doesn’t mean that something exists eternally. Also, in all Buddhist systems except the Vaibhāṣika, a

functioning thing—sometimes called simply “thing”—is equivalent to product and is produced by causes and conditions.<sup>89</sup>

Something else to keep in mind during our examination are the three principles Asaṅga explained concerning causal dependent arising:

1. Conditioned, compounded phenomena must arise from causes and conditions; they cannot arise without them. Thus the world and the beings in it didn't come into being as a result of a prior intelligence or an external creator that exist outside the interplay of causes and conditions. Anything existing in that way cannot interact with other factors to produce something new. This reasoning will be explained below.
2. The world and the beings in it did not arise from a permanent cause. Not only do conditioned things depend on causes and conditions, but the causes and conditions must also be impermanent. A permanent cause cannot produce results because causes must undergo change in order to produce their results.
3. The world and the beings in it did not arise from a discordant cause. Not only are causes impermanent, but they must also produce concordant results. A result can be produced only by causes that have the potential to produce it, and a cause can produce only results that it has the capacity to produce. Spinach seeds produce spinach, not daisies; tulips grow from tulip bulbs, not from light bulbs. Because the potential to produce a certain result exists within a cause, a cause cannot produce just anything in a random fashion. Similarly, a result cannot be produced by just any cause; its production requires its specific causes and conditions.

Many Buddhist sages throughout the centuries have refuted a permanent creator; prior intelligence; a permanent, unitary, independent self or soul; a permanent primal substance out of which everything is created; directionally partless particles; and other absolutist notions. All these ideas rely on the premise that all phenomena must have a stable and permanent basis, otherwise they could neither exist nor function. Buddhist sages state just the opposite: that anything that is permanent, partless, and independent of causes and conditions cannot function; it cannot interact with other things or be influenced by them.

## *A Creator or Prior Intelligence*

In ancient India, as in contemporary times, various views regarding an external, independent creator existed. From the Buddhist viewpoint, many contradictions arise by asserting such a creator. However, from the viewpoint of those accepting a creator, the creator exists even though Buddhists do not accept it. Similarly, Buddhists accept karma and its results even though others may not think this is correct. If we approach a non-believer, she may say neither a creator nor karma exists! Different assertions appeal to different people, and given this situation, it is important to be tolerant and accepting of these differences. Belief in a creator can benefit the followers of theistic religions by encouraging them to keep good ethical conduct, develop love and compassion for others, and practice generosity and forgiveness. However, as Buddhists we must use reason when discerning our own beliefs; we can't say that something exists just because we believe in it.

Some topics such as subtle impermanence or emptiness can be accepted by believers and non-believers, scientists, and those of other faiths. However, some people find it uncomfortable to apply the implications of subtle impermanence and emptiness to their spiritual beliefs. But participants in debates on such topics in ancient India were eager and willing to examine these issues. They were open to change their assertions and beliefs if they were disproven. The arguments below were addressed to such people as well as to Buddhist practitioners. The Buddha and his followers refuted ideas such as an independent creator because they contradict dependent arising, impermanence, and emptiness.

The Buddha encourages us to take responsibility for the state of our mind and the actions we engage in. The Buddhist path is not about worshiping or propitiating external beings, but about cleansing our minds of wrong beliefs and cultivating more realistic and beneficial beliefs and mental states.

Religious systems that accept an external creator do not seem to be based on a detailed analysis of whether or not there is independent existence. Rather, the idea of a creator is an attempt to explain the origin and functioning of the world and the experiences of sentient beings. Since the universe is extensive and causal relations are complex, people think that only a preceding magnificent intelligence could have created it. Dharmakīrti formulated what he considered to be the reasons some spiritual traditions at his time asserted a creator. To express it in the form of a syllogism: consider the external world and the sentient beings in it; they

were created by a preceding intelligence because (1) things function in an orderly manner, (2) they have forms, and (3) they bring effects.

Some believe that the universe and sentient beings are an effect of a well-planned act, the product of an external agent, creator, or prior intelligence. This creator is said to be permanent and doesn't change moment by moment, it is self-arisen and doesn't depend on causes and conditions, and it is omnipotent (all-powerful) and omniscient (all-knowing). Buddhist sages respond to such beliefs with the following rebuttals:

- A permanent being cannot create because for creation of something new to occur, the cause must cease for the result to arise.
- A permanent being cannot be omniscient because it perceives different objects in each moment. If the cognized objects change moment by moment, so too must the being or the mind knowing them. An unchanging mental state cannot perceive different objects.
- A creator who is self-arisen and has come into being without causes cannot exist because nothing can arise without causes. A creator that does not depend on causes cannot exist because it would be permanent and subject to the faults above.
- If nothing existed before creation, what caused creation to occur? From nothing, how can something arise? Causeless production does not exist.
- The creator would be both the cause of rice growing in a rice paddy and the non-cause—that which does not generate a result—of rice growing in that same rice paddy when it lay dormant. If rice grew, the creator would be its cause; if the rice did not grow, the creator would be responsible for that too. That means the creator would change from being a cause to being a non-cause, which contradicts the assertion that the creator is permanent.
- Once the creator made something, that object could not change or cease. Since the creator is permanent, its creations would also be permanent. The creator created human beings, but those beings would be permanent and unchanging.
- A permanent creator could not stop creating. It would create the first moment of the table, the second moment of the table, and so on. Since a

- permanent creator could not stop creating the next moment of the table, the table would exist forever.
- Some people may say that from the beginning everything existed in the creator in a fully developed form and that the process of creation simply made it manifest. This is similar to the belief of the Sāṃkhya, who assert that even at the time of a cause (the primal substance and the creator), the result (the universe and sentient beings) exists, but we do not see the result at that time because it has yet to manifest. This assertion leads to many contradictions—for example, that cause and result would exist at the same time. But results cannot exist at the same time as their causes, and causes must cease for their results to arise.
  - If a creator existed independently, under its own power, it would exist inherently. In that case, we should be able to find the creator when we search with reasoning analyzing the ultimate. But if we try to identify exactly what this creator is, what can we point to? Nothing exists under its own power. Everything exists dependently, by being merely designated by mind.

To sidestep the above difficulties, some people assert the creator or prior intelligence is impermanent. Buddhists respond:

- If the creator is impermanent, it must have been created by causes. What were the causes of such a creator or intelligence? Who or what created it?
- A creator that depends on causes and conditions is not all-powerful because it cannot control all causes and conditions; it is under the control of causes and conditions.
- A creator that is dependent on causes would have an intention or motivation that would cause it to create. What intention motivated it to create the world and sentient beings? What internal or external factor provoked the creator to change from an inactive state to one that actively creates the world and sentient beings?
- If an independent and perfect being exists, why did it create the world and the sentient beings in it? Why would a perfect and all-powerful being create a world with turbulence and suffering?

- What proof is there that the creator was omniscient from the beginning? If you say the complexity of the world and the human body could only have been created by an omniscient and omnipotent creator, you are assuming that such things could only arise due to the conscious, intentional effort of a creator or prior intelligence to create them. However, other systems of causality—biology, physics, chemistry, karma and its effects, and so on—could account for that.

In *Engaging in the Bodhisattvas' Deeds*, the eighth-century sage Śāntideva adamantly refuted the possibility of a permanent creator. He asked: If the creator were unchanging and independent, what could make it produce anything? If nothing existed before the creator made the world and all phenomena were created by the creator, what spurred the creator to create the world? If there were other causes and conditions, they would be the cause of the world. This is so because once those conditions came together, creation would occur and the creator would have no power to stop it.

But if there were no other conditions sparking creation, the creator would have no power to produce effects. If the creator's desire to create sparked creation, then the creator is not independent because it is under the power of its desires. Śāntideva repeatedly brings us back to the same fundamental points: functioning things arise due to causes and conditions; these causes and conditions are impermanent and have to cease to produce their effects; effects arise due to concordant causes—not just anything can produce anything.

Personally speaking, I believe that the notion of a creator came about primarily to promote human beings' good qualities. Because many people feel comfortable with the idea of a creator in whose hands their fate rests and to whom they can appeal for aid, that belief continues.

Believers see the creator and their relationship with it in a variety of ways. Some people say everything is in God's hands and happens according to his will. They must simply surrender to him. Others believe human beings must also help by acting morally. Salvation will come to those who properly follow God's teachings.

Some Jews explained to me that God is ultimate reality, but each individual also has responsibility to conduct themselves in a moral way. These Jews and Christians do not believe that absolutely everything is up to God. Rather, God

created human beings, but human beings have the responsibility to create a happier world. A co-partnership between God and human beings exists. So in that sense, they may say human beings are a “small creator”!

---

## REFLECTION

1. Review Asaṅga’s three principles of causal dependence.
  2. Make examples of the three principles in your life.
  3. Apply these principles to the idea of an independent creator and contemplate the refutations of such a creator.
  4. How does this influence your ideas about yourself and the universe?
- 

## *The Origin of the Universe*

Many philosophies and cultures have proposed ideas about the origin of the universe. Here we will briefly touch on two: that of the Sāṃkhyas, one of the oldest schools of Indian philosophy, and that of modern scientists.

The Sāṃkhya system states that the physical world is a manifestation of primal matter (*pradhāna*), which is the subtle undifferentiated total of all material elements in their unmanifest state. When it manifests as various objects, it is called the “material principle” (*prakṛti*). This primal nature has six characteristics: it is the agent of actions; it is unborn and permanent; it is unitary and partless; it is only an object and is not consciousness; it pervades all objects be they animate or inanimate; and it is unmanifest and is a balance of three qualities—activity, which allows things to arise; lightness, which makes them increase and endure; and darkness, which causes them to disintegrate and cease. Some Sāṃkhyas are nontheistic, whereas others say that when the primal matter is spurred by the god Īśvara, it gives rise to the world.

The notion of primal matter resembles what some people today call a cosmic substance or a cosmic radiance from which everything manifests. They say it is a

positive phenomenon that exists independent of all else, but from which the world is created.

Examining the idea of the primordial nature without going into the details of the Sāṃkhya system, we can see logical inconsistencies. Something that is permanent is not a cause and therefore cannot act; something that is partless can't give rise to the diversity of phenomena. In the contemporary view of everything arising from a cosmic substance, similar contradictions arise: If the cosmic substance is permanent, it cannot produce all phenomena; if it is impermanent, what triggers it to manifest the diversity of phenomena? And what determines what phenomenon it becomes?

According to Asaṅga's three points regarding causal dependence, searching for an absolute beginning before which nothing whatsoever existed is futile, and positing an external, absolute creator as the origin of the universe is untenable.

Alternatively, many contemporary scientists propose that a Big Bang marked the origin of the universe. Buddhism shares with science the appreciation for empirical evidence and reason to prove theories. Most Buddhists are willing to accept valid scientific discoveries about the origin of this universe. However, if the Big Bang is regarded as an absolute beginning to the universe before which nothing existed, such an assertion presents logical difficulties because nothingness cannot act as a cause from which conditioned things arise.

Similarly, should someone assert a permanent substance out of which the universe was created when the Big Bang occurred, there are also logical contradictions. Permanent phenomena do not come into existence dependent on causes, they are not affected by conditions, and they cannot produce results. If such a permanent substance existed, nothing—not even the Big Bang—could affect it, and thus it could not produce the elements of our universe.

However, if the Big Bang is not posited as an absolute beginning and if a permanent substance is not posited as the cause of the universe, then there is the opportunity to investigate what could have existed before the Big Bang that acted as conditions for the Big Bang to occur. The view of causal dependence opens the door to the arising of the universe due to impermanent causes that are concordant with the resultant universe that has come into being.

Ancient Buddhist scriptures speak of the existence of many universes. Each universe goes through four periods, each lasting for twenty eons: the periods of its evolution, abiding, destruction, and vacuity. While one universe may be evolving,

others are abiding, others are being destroyed, and in place of some is a dormant, vacuous state before evolution begins anew. It would be interesting to see if scientific investigation came to the same conclusion.

## *Self and Soul*

Many religions espouse the existence of an indestructible soul that is the essence of a person. Because it is permanent, not made of parts, and not created by causes, this self or soul does not cease and remains unchanging forever. It is the person—what the word “I” ultimately refers to; it is what a person really is. The soul goes from life to life, or goes from this life to heaven or hell, depending on the beliefs of a particular religion. For non-Buddhist religions that accept the law of karma and its effects, a permanent soul is the stable basis that carries karmic seeds from one life to the next. The thought of such an everlasting soul brings a feeling of security and stability to those who fear the I becoming nonexistent at death.

In ancient India, all non-Buddhists asserted the existence of the ātman, whereas the Buddha, by analyzing what this self could be if it existed, concluded that its existence was not possible. He investigated:

- A permanent person could not be born in saṃsāra. The person could not attain nirvāṇa or awakening because that would involve the person changing from a sentient being to a liberated one.
- If the I were a fixed and permanent soul, a person would be unable to change; everything about them would remain the same. However, we see that people change. Learning from our experiences entails change, as does experiencing pain and pleasure.
- If the person were permanent, mental and emotional growth could not occur, and we would be unaffected by helpful or harmful influences.
- A permanent person could not act because action involves change. This would make preparing for future lives and liberation impossible, because creating their causes could not occur.
- If the soul were unaffected by causes and conditions, then destructive actions would not bring suffering and constructive actions would not

bring happiness. Furthermore, purification practices would have no effect.

Looking at the second quality of a self, being a partless unity, that too can be negated by reasoning.

- If the person were partless, we wouldn't have two components—a body and a mind.
- We could not say, "One part of me wants to vent my anger but another part of me doesn't want to harm myself and others."
- An infant who grew into a toddler, child, adolescent, adult, and senior citizen could not be referred to by the same name or be considered the same person because that would entail having parts.

Regarding the third quality, being independent of causes:

- Someone would experience suffering and happiness randomly or without any cause.
- There would be no cause for someone to be born.
- Once born, neither illness nor severe injury could cause death.

Some non-Buddhists in ancient India asserted that the self was a permanent, functioning thing—that is, the self is permanent but the body and mind are impermanent. Sometimes we may think that we have an unchanging essence but superficially we change and are influenced by causes and conditions. That is, we feel that we have a solid, permanent core, but we are also influenced by the circumstances around us. Our mind changes and the body ages, but inside we are a permanent self. In that case:

- Nothing can be both permanent and impermanent at the same time because those two qualities are contradictory.
  - A person would have two opposite natures or would be two people—one that doesn't change and the other that does.
  - If the person were permanent, the body and mind would also have to be permanent because they are the component parts of an unchanging I.
-

## REFLECTION

1. Contemplate the various statements that refute a permanent soul and a fixed origin of the universe.
  2. Can you disprove any of those statements?
- 

### *Misunderstanding Buddha Nature*

The Mahāyāna teaches that each sentient being has the buddha nature (*gotra*), an aspect of the person that can never be removed and is the potential enabling them to become fully awakened buddhas. Some people may misconstrue this to be a soul or self—a permanent essence of a person, or an inherent purity that exists independent of any other factors. They may think of the buddha nature as a truly existent, already awakened essence that they simply have to realize has always been there. For people raised in a theistic religion, this idea may be especially appealing due to its familiarity.

However, this view of buddha nature contains logical inconsistencies. Asserting a truly existent awakened essence would contradict several Buddhist principles: being independent of all other factors, it would not exist by being merely designated by mind. In addition, people could mistakenly think that because they have an inherently pure essence that they are already buddhas but haven't yet awoken to that fact. But if that were the case, we would be ignorant buddhas, which is an oxymoron. An ignorant buddha cannot exist because buddhas have eliminated the two obscurations. Furthermore, if we were already buddhas, we wouldn't need to practice the Dharma in order to gain realizations because we would already have them.

Why, then, do some Buddhist masters say that we are already buddhas? This may be a skillful method that speaks to some people and encourages them to practice the Dharma. It gives a sense of self-confidence and increases enthusiasm on the path. However, such a statement should not be taken literally.

According to Maitreya, the author of *Sublime Continuum* (*Ratnagotravibhāga, Uttaratantra*), and Asaṅga, who composed a commentary on it,<sup>90</sup> our buddha nature has two aspects: (1) The *natural buddha nature* is the

emptiness of our mind. This emptiness is permanent and is a nonaffirming negative. (2) The *transforming buddha nature* includes all those aspects of mind whose continuity will go on to full awakening—for example, our compassion and the clear and cognizant nature of mind. This is impermanent and is developed and refined by Dharma practice.

In the contemporary spiritual marketplace, some people speak of our “higher self” or “true self.” The description is rather amorphous, but it seems that this higher self is a pure essence that is our true nature. It has always been within us and we just need to discover it. This idea is similar to a mistaken view of buddha nature. Although people may espouse this idea as a way of encouraging others to feel they have an innately good essence, such a personal essence would be permanent and truly existent—qualities that have already been refuted.

Care must be taken not to be enchanted by mystical-sounding words that no one actually understands or can define. Try to correctly identify the root of *duḥkha*—self-grasping ignorance—and its conceived object—true existence—by relying on definitive sūtras such as the Perfection of Wisdom sūtras and commentaries by Nāgārjuna, Candrakīrti, and others. Then cultivate the wisdom realizing the emptiness of true existence and employ it to counteract self-grasping ignorance. By proving to ourselves that true existence cannot possibly exist, our ignorance, and consequently our *saṃsāra*, will cease.

Some people develop the above misunderstanding about buddha nature further, saying a buddha who is already inside us is replete with the signs and marks of a buddha. They claim a buddha’s nonmistaken mind that knows reality is already within each of us. It is independent and wasn’t created by causes and conditions; it has existed from beginningless time and is naturally awakened. It is the ultimate truth and an independent, positive phenomenon that truly exists. They conclude that to cut the root of *duḥkha* it is not necessary to eliminate the elaborations of true existence by realizing emptiness. Realizing and perceiving this truly existent ultimate truth is the way to end *saṃsāra*. This, too, is an absolutist view in which true-grasping is left comfortably alone.

Prāsaṅgikas counter that meditating on a positive, truly existent phenomenon does not eliminate the ignorance grasping true existence. Thinking that such meditation is the key to cutting the root of *duḥkha* is like a person who is afraid of a poisonous snake in the east saying to himself, “There is a tree in the west.” This does nothing to eliminate his false idea or his fear. Knowing what the

snake would look like if it existed, he must search in the east and discover that no snake is there. Only then will his fear be extinguished.

Prāsaṅgikas explain that the ultimate truth, emptiness, is a nonaffirming negative; it is the absence of true existence. Nothing else is affirmed. Emptiness is realized by negating true existence on its bases—conventionally existing objects. Emptiness, too, does not exist from its own side. It is a dependent phenomenon and relies on its bases, phenomena that are empty. It too exists by being merely designated.

### *Causes and Effects, Permanent and Impermanent*

Buddhist philosophy firmly supports Asaṅga's three principles of causality. However, some ancient Indian schools disagree. The Vaiśeṣikas assert smallest particles that are the building blocks of the universe. These particles are not produced, but themselves join together to produce other objects. This idea is similar to that of some scientists who search for the smallest subatomic particle that is permanent (which means it must be unproduced) and forms the basis for all other atoms. Vaiśeṣikas say these smallest particles are permanent even though they are causes but not effects. Buddhists respond that these particles must undergo change to produce larger objects. Anything that changes must be impermanent, and whatever is impermanent is the result of causes and conditions.

Vaiśeṣikas also claim that the smallest particles are directionally partless, to which Buddhists reply: How can they coalesce to form larger objects? If they have no sides, then when two particles meet, they would merge into each other and could not produce something larger. If they joined one next to the other, then they would have parts—one side connected to the particle on its left, the other side connected to the particle on its right. If a particle didn't have a left side, right side, and middle, it would be invisible and couldn't join to any other particles.

Vaidāntikas say time is a cause but not an effect. It is a cause because depending on the season (time), a seed will either grow or not grow into a sprout. Time is the key factor allowing the seed, water, and fertilizer to produce a sprout. Buddhists respond that time must also be an effect because without there being

an effect, we cannot establish something as a cause. Something being a cause depends on it having the possibility of producing an effect. If not, tomato seeds would not be the cause of tomato plants.

Questioning your deeply held beliefs or intuitions may not be an activity that you are accustomed to doing, and it may initially be uncomfortable. Nevertheless, clearing away confusion and establishing the truth brings confidence and mental peace. Challenging the incorrect acquired views you have learned is a first necessary step that prepares you to challenge the innate erroneous views that are the real source of saṃsāra. Although many of the arguments above do not focus on refuting inherent existence, they lay the foundation for doing so. Without these foundational understandings, the refutations of inherent existence will be difficult to comprehend.

In short, repeatedly contemplate Asaṅga's three principles for causality and observe how they apply to your life and what you see around you. Also contemplate these points: a permanent phenomenon cannot produce anything; causes must cease for their results to arise; permanent functioning things cannot exist; and any impermanent thing is both an effect of its cause and the cause for a future effect in that it has the potential to give rise to an effect. Āryadeva reminds us that anything that functions—be it a person, a tree, a cause, or an effect—cannot be permanent, unitary, and independent (CŚ 202):

There is not anywhere any [functioning] thing  
that ever exists without depending.  
Thus never is there anywhere  
anything that is permanent.

Philosophical texts often use the example of seeds and sprouts to explain causality and the lack of inherent existence, because they are easy to understand. As your comprehension increases, apply these principles of causality to other topics such as your body, mind, feelings, emotions, situations you encounter, and so on. Doing this will encourage the habit of questioning assumptions. Use them to deepen your understanding of the twelve links of dependent origination. When meditating on emptiness, do not leave your usual beliefs and sensibilities to one side and meditate on some external, exotic nothingness that is unrelated to how you perceive and conceive of yourself and the people and things around you.

Rather, become aware of your subtle, long-held beliefs and with rigor and honesty examine if they are correct or not.

## *Buddhism and Other Religions*

At the initial level of spiritual practice, the teachings of all religions are similar. They stress reducing anger and increasing love, compassion, and forgiveness, abandoning actions that harm others, and cultivating self-discipline, ethical conduct, and contentment. Although each faith has a slightly different approach to cultivate these qualities, the goal of developing them is the same. For this reason, I think that beginning practitioners can be half Christian and half Buddhist, or half Jewish, Muslim, or Hindu and half Buddhist. But just as all students learn to read and write at the beginning of their education and later specialize in a particular field, so too spiritual practitioners may initially do a general practice but later must clarify their beliefs so they can go deeper in one path. Although someone may initially practice another religion together with some aspects of Buddhism, when the view of the ultimate nature of reality becomes more important in their practice, they must investigate and decide which view seems more reasonable to them.

Each religion must retain its distinctive qualities. Because human beings have a variety of dispositions, the existence of many religions serves an important purpose in that it enables individuals to find a path that is suitable for them. The question is not “Which religion is best?” but “Which religion is most suitable for me?” The value of a particular medicine is determined by its effectiveness in curing one’s own particular illness. An antibiotic is best for someone suffering from a bacterial infection, but it doesn’t help a person with a broken foot. Therefore, instead of proclaiming one or another religion as best for everyone, we should identify the one that is most fitting for our disposition and interests.

Religious harmony does not and should not depend on saying that the theory and goal of all religions are the same. When we haven’t even accomplished the final aim of our own faith, how can we say the goals of other faiths are the same? We should explore the richness of diverse philosophies, notice their similarities and differences, and respect the practitioners of all of them.

Several decades ago, I visited Montserrat, the home of the Black Madonna, near Barcelona. There I met a Catholic monk who so far had spent five years as a hermit in the mountains behind the monastery. He consumed only bread and water, and when I asked him what he had been practicing, he responded, “Meditation on love.” As he said this, his eyes sparkled with joy, and when I looked into his eyes, there was some special feeling there. I admire and respect him greatly.

A few years after that, I (Chodron) visited Montserrat and with two or three friends found our way to this hermit’s abode. We arrived completely unexpectedly, and he welcomed us in. On an altar in the center of the room was a kata (a Tibetan ceremonial scarf) and an image of One-Thousand Armed Chenrezig. We meditated in silence with him for a while before departing. It was clear that his meditation practice was profound and that he and His Holiness had a strong spiritual connection.

Many years ago, I (Dalai Lama) was with Father John Main, a Catholic priest who was my friend. We were sitting together in a room in Canada—Father John, a musician, another person, my translator, and me. Father John prayed and chanted as the musician played spiritual hymns, and tears began to roll down his cheeks. He was having a very powerful experience that arose from his extremely strong faith.

Someone with strong single-pointed faith and belief can have a vision of the divine being of their faith. From a Buddhist perspective, this divine being could be an emanation of a highly realized bodhisattva or buddha. To benefit particular people, a buddha or bodhisattva may teach about another divine being because that doctrine is suitable for the dispositions of those particular people. A buddha or bodhisattva may even emanate as a religious figure of another faith, and a follower of that faith could have a vision of that figure.

Buddhist scriptures contain accounts of the Buddha manifesting in different forms to benefit particular sentient beings. To tame an arrogant musician, he manifested as a violinist who played sublimely. To give a practitioner the opportunity to overcome prejudice arising from attachment to appearances, he manifested as a leper who needed help crossing a river. Because the Buddha’s purpose is to benefit sentient beings and gradually lead all of them to full awakening, he may emanate as the teacher of a non-Buddhist path to instruct a person who is a proper vessel for that teaching. Through such skillful means, the

Buddha leads others by teaching them a doctrine that suits them most at that moment, even if it is not the Buddha's ultimate thought or his ultimate teaching.

## *Awakening and Other Spiritual Traditions*

Is it possible to attain awakening by following other religions? This depends on the tenets of that faith and how it sets forth the basis, path, and result. How does it define duḥkha, its cause, the final goal, and the path to that goal? According to the Buddhadharmā, attaining liberation and awakening depend on eliminating the cause of duḥkha, the ignorance grasping inherent existence, by cultivating the correct view of emptiness and the nonconceptual wisdom that realizes it. If other spiritual paths identify the cause of duḥkha as ignorance grasping inherent existence and have the correct view of emptiness that is taught as the antidote to it, then that path will lead to liberation and awakening. But if a spiritual tradition does not correctly point out the conceived object of the self-grasping ignorance and cannot explain the correct view of emptiness that disproves it, it would be extremely difficult to attain liberation and awakening by practicing that path.

Proponents of many religions and philosophies, as well as proponents of many Buddhist tenet systems, accept inherent existence. Meditation according to those systems does not overcome subtle ignorance and therefore cannot lead to liberation or awakening because the view of selflessness is incomplete. Similarly, people who accept an independent soul and a permanent creator will resist the idea of the emptiness of inherent existence. As long as they hold their present views, they will be unable to gain a correct inference of emptiness let alone a direct realization of it.

Take the case of a Yogācārin who holds the strong philosophical view that other-powered phenomena and thoroughly established phenomena exist inherently. He may meditate on selflessness according to that view, but he could not realize emptiness as described by the Prāsaṅgikas. Although understanding the Yogācāra view of emptiness can be a helpful step in the right direction, that person will first need to relinquish the Yogācāra view in order to gain the correct view of emptiness as explained by the Prāsaṅgikas. If this is the case for Buddhists who hold the tenets of lower systems, needless to say it would be so for those

holding the views of non-Buddhist paths that accept a permanent, external creator or an inherently existent substance from which everything arises.

Can heaven as described in Christian teachings be attained through Buddhist practice? I don't think so. When the goal of practice is different, the method to attain it will also differ. Nevertheless, both religions encourage ethical behavior and encourage followers to engage in virtuous actions that lead to happy results.

Our conceptual framework and worldview greatly influence what we experience in meditation. If we believe in a creator, realizing emptiness will be difficult, because the qualities of a creator—permanence, omnipotence, independence of causes and conditions—are antithetical to the doctrine of emptiness. Similarly, doing a meditation technique that originated in Buddhism while holding the beliefs of another religion will not bring insights that accord with the Buddha's teachings. I (Chodron) heard of a rabbi who practiced Zazen in a retreat. The principal conclusion he reached from his meditation was that God existed. Although that benefited him in practicing his own religion, it was not the same conclusion someone doing Zazen within a Buddhist framework would come to.

Nowadays many people are interested in Buddhist meditation. Catholic monks teach Zazen, and scientists and therapists teach mindfulness meditation. Although this benefits people, it is highly unlikely that these people will gain realizations of the Buddhist path by doing these practices, since their worldview includes notions of a permanent creator or lacks any notion of selflessness. In addition, the meditation techniques themselves have been changed to accommodate a secular perspective. It's wonderful that non-Buddhists benefit from those meditation practices, but the results will differ from meditation techniques taught by the Buddha and Buddhist masters.

When the Buddha was alive, he talked about spiritual practice and philosophy with a wide diversity of people who had an equally broad diversity of views. As many sūtras in the Pāli Nikāyas show, the Buddha went to great lengths to point out distorted views and describe right views. In the eightfold path of the āryas, right view comes first, followed by right intention. This order emphasizes the importance of finding the right view of both the law of karma and its effects and of selflessness, and cultivating the right intention to attain the results of the path taught by the Buddha.

Can someone who is unfamiliar with the doctrine of emptiness nevertheless realize it quickly and easily? There are accounts of a few exceptional practitioners realizing the ultimate nature during a teaching on emptiness by a high lama and a few stories of practitioners attaining liberation shortly after realizing emptiness, but this is extremely rare. King Indrabhūti (Indrabodhi) from Oḍḍiyāna is one such example; he realized emptiness and was liberated simultaneously. However, he was not an ordinary person. He had cultivated the path and experienced the wisdoms arising from hearing, contemplation, and meditation in many previous lifetimes.

---

## REFLECTION

1. All religions are designed to benefit sentient beings by teaching ethical conduct, love, compassion, forgiveness, and so forth; thus it is important to respect all faiths.
  2. One religion will not fulfill the needs of all sentient beings. People must choose a faith that helps them the most. Thus it is important to respect all religious practitioners as well as all non-believers.
  3. Although we respect other religions and their practitioners, we can still discuss and debate our beliefs with a friendly attitude.
- 

## *Free Will and Predetermination*

The issue of free will and predetermination has plagued Western philosophers for centuries. Do we have choice or are the events in our lives predetermined? Interestingly, this topic was not among the topics of interest that Indian and Tibetan Buddhist sages debated. There is no mention of this issue in scriptures that I know of. Perhaps that is because the theme of dependent arising permeates the Buddha's teachings, deflecting such questions early on.

The potential to make choices is always present. Our taking a fortunate or unfortunate rebirth is in our hands. Although ignorance prevents us ordinary beings from choosing the specific body we will take in our next rebirth, we make

conscious choices during our lives to engage in constructive or destructive actions, which are the principal causes of the type of rebirth we will have.

Actions done in our previous lives influence the type of body we are reborn into: that of a human being, animal, and so forth. The rebirth we take gives us some options, but circumscribes other choices: as human beings we have the potential to engage in complex intellectual pursuits that are not available to someone born as an animal. On the other hand, birds can flap their wings and fly, whereas humans cannot. Our previous karma may cause us to be reborn with a healthy body or one prone to illness, and these physical circumstances will limit our choices to some extent. Our previously created karma causes us to be reborn in one country rather than another; then the ongoing conditioning of this life takes over as the culture of the country where we grow up influences the way we think, our opportunities as a man or woman, and the religion we encounter and follow.

The habitual emotional and thought patterns cultivated in previous lives influence the ones we have today. They also condition our inclinations, interests, likes, and dislikes. None of these things are predetermined in the sense of being fixed and inflexible. On the other hand, past actions and thoughts influence present ones. Some children are naturally compassionate toward their playmates and animals from a young age, whereas other children are chronically unhappy and disgruntled. Of course, their upbringing, education, and societal conditioning in this life can alter these tendencies, either increasing or decreasing their strength.

We lack total freedom to do anything we want at any particular moment. Although it would be helpful to speak Chinese, I cannot choose to speak it fluently five minutes from now because I haven't created the causes to be able to do that.

While the conditions we are born into may circumscribe our choices, the key lies in how we respond to those conditions. This is where our choice lies. While a difficult situation may be the result of the ripening of previous destructive karma, we still have the choice to respond to it with fear, indignation, and anger, or with acceptance, compassion, and wisdom. As we practice the mind-training teachings and the meditations on the stages of the path, our worldview will broaden, and we will see that our emotional states and physical and verbal responses to situations are not fixed. We don't have to react to every criticism by becoming

defensive. It is not compulsory that we become jealous whenever someone has something we want. Take, for example, a situation described in *The Thirty-Seven Practices of Bodhisattvas* (VV 14):

Even if someone broadcasts all kinds of unpleasant remarks  
about you throughout the three thousand worlds,  
in return, with a loving mind,  
speak of his good qualities—  
this is the practice of bodhisattvas.

We may have a habitual response to criticism, one coming from previous lives and nourished in this life, to retaliate when someone broadcasts unpleasant remarks about us to many people. But a choice exists. Do we criticize, humiliate, or ruin the reputation of the other person? Or do we contemplate that being criticized is not the end of the world and could have some benefits that we don't see now? Do we understand that the other person is suffering and behave in a kind manner with him? Depending on the choice we make, we will experience either happiness or suffering now and in future lives.

The critical point is whether we realize that we have choice and choose to exercise it. Mindfulness and introspective awareness help us to slow down and become more observant of our thoughts and feelings and to cultivate new habits of choosing our emotional, verbal, and physical responses to situations.

The Buddha knows that the outcome of harsh speech will be unpleasant. He also knows that the karmic seed from insulting or ridiculing others can be purified and instructs us in the four opponent powers for purification. The choice of whether to engage in these four and purify the karmic seed lies with us.

It is said that the Buddha sees the future. Must the future be predetermined for him to do so? No, it does not. The future is what has the potential to arise but has not yet arisen. Present circumstances influence future possibilities. But if present causes and conditions change, what happens in the future will change as well. It may seem to our limited knowledge that all the conditions point to a specific future outcome, but conditions may arise that we don't know about now. In short, we don't know the future until it happens.

That the Buddha has the clarity of mind to see the complex interaction of causes and conditions in the future does not mean future events are

predetermined or independent of other factors. We know the sun will bring daylight to the Earth tomorrow, but that does not mean it is predetermined. It depends on the rotation of the Earth, the cloud cover, weather patterns, and so forth.

# 11 | Pāli Tradition: Abandoning the Two Extremes

## *Wisdom*

The higher training in wisdom is the third of the three higher trainings, the first two being ethical conduct (*śīla*) and concentration (*samādhi*). Although there are many types of wisdom (*prajñā, paññā*), here our concern is with the wisdom that directly leads to nirvāṇa.<sup>91</sup> The Pāli commentarial tradition distinguishes two types of wisdom involved in the attainment of nirvāṇa: insight wisdom (P. *vipassanā-paññā*) and path wisdom (P. *magga-paññā*). Insight wisdom understands the three characteristics. It is cultivated gradually and leads to path wisdom. Path wisdom realizes nirvāṇa and comes with a clear realization seeing the deathless, nirvāṇa.<sup>92</sup> Insight wisdom is considered mundane because it has to do with analyzing the three characteristics of conditioned phenomena that are polluted, whereas path wisdom is supramundane because it is focused on the unconditioned, nirvāṇa.

In the context of the eightfold path, wisdom is right view. Because there are two types of right view—right view that is based purely on intellectual understanding and right view based on direct experience of the four noble truths—there are also two corresponding forms of wisdom. Intellectual wisdom is cultivated by listening to teachings and thinking deeply about them in order to arrive at the correct understanding of them. Although this wisdom is conceptual, it is very powerful. Experiential wisdom is direct penetration of the truth—nirvāṇa and the four truths—in our own experience.

Both forms of wisdom are important because experiential wisdom arises on the basis of a correct conceptual understanding. We must cultivate and employ correct discrimination, investigation, and analysis on the conceptual level to shatter false conceptions before experiential wisdom knowing the truth can arise. Some of these false conceptions are so much a part of our ordinary outlook that

we do not recognize them as false and simply accept them unquestioningly. By studying and reflecting on the Buddha's teachings, we must learn to identify these false conceptions and develop correct conceptions.

This point is important, because some people mistakenly believe that all conceptual processes are useless and that wisdom is an intuitive experience that arises suddenly, seemingly without cause. This, however, is not the case. Cultivation and practice are necessary. Many intuitions and experiences in meditation may occur, but we lack any reliable means to check if they are trustworthy. This underlines the importance of practicing under the guidance of a wise and experienced teacher and of having a conceptual understanding of the path derived through study of the sūtras and other scriptures.

An experience in meditation is one thing; what we think it was after we arise from meditation is another. After the meditation session, our conceptual mind is functioning; it interprets and imputes meaning to the experience. If this is done incorrectly, harmful consequences may ensue. We may become arrogant, thinking we have attained something we have not. Or we may be disappointed, wondering why the wonderful experience cannot be replicated in future meditations. Or we may be frustrated because we thought this experience should have eliminated certain afflictions and problems in our lives only to discover that they remain. These difficulties arise not because of the meditation experience but because of our mistaken interpretation of it afterward. For these reasons, having correct conceptions and proper guidance from experienced teachers is important to prevent going astray.

## *Penetrating the Four Truths*

Penetrating and seeing the four truths comes about through the development of wisdom, which is based on concentration. First the mind must be focused and brought to a state of unification with single-pointed concentration. Such concentration makes the mind a powerful tool for investigating the nature of our experiences and existence.

Theravādin masters have diverse ideas on the degree of concentration needed to do insight meditation. Some say the attainment of full samādhi is not necessary, that even a relatively new practitioner can begin doing insight

meditation.<sup>93</sup> Others say that one of the dhyānas is necessary for insight meditation. Still others say that some concentration must be cultivated, even if it is not full dhyāna. They direct their students to begin by practicing mindfulness to make the mind more focused until eventually it can remain without distraction on the constantly changing series of ever-changing moments of body and mind. Although they do not develop mindfulness that leads to the appearance of the sign (P. *nimitta*)—a mental image that arises in stabilizing meditation and is then used as the meditation object to attain single-pointed concentration—their concentration is sufficient to begin insight meditation.<sup>94</sup>

Insight wisdom practiced with a mind of samādhi examines the five aggregates that compose the person—the body, feelings, discriminations, miscellaneous factors, and consciousness.<sup>95</sup> This wisdom comes to see and to experience that this seemingly solid, monolithic body is actually a stream of material events that are arising and ceasing in each moment. Insight wisdom is directed to feelings, discriminations, and miscellaneous factors and experiences them as continuously arising and passing away. As insight deepens, experiencing everything in the first four aggregates as arising and passing away is superseded by perception of everything in the body and mind as disintegrating and dissolving moment by moment.

Insight then proceeds to investigate consciousness, where ignorance hides in its most subtle forms. When wisdom investigates consciousness, it too is revealed as nothing more than impersonal moments of mind that continuously arise and vanish. As the mind becomes more fine-tuned to impermanence, all five aggregates are seen as disintegrating, dissolving, and vanishing in each moment. Nothing substantial remains in the collection of aggregates.

Since the five aggregates are continuously ceasing, they are known as unable to bring lasting happiness and are therefore unsatisfactory. Being impermanent and unsatisfactory, they are unsuitable to be an everlasting blissful self. There is nothing in them to grasp as being I, mine, or my self.

In the *Mindfulness of Breathing Sutta* (*Ānāpānasati Sūtra*, MN 118), the last four aspects illustrate the path preceding and leading up to the breakthrough to the unconditioned. These four are contemplating impermanence, contemplating fading away, contemplating cessation, and contemplating relinquishment. When contemplating impermanence, meditators observe changes in the rhythm, frequency, and texture of the breath. Going deeper, they see that each phase of

the breath—the beginning, middle, and end of the in-breath and the out-breath—changes continuously. Wisdom then examines the rest of the body, seeing that it, too, is in constant, unstoppable flux. Similarly, feelings, discriminations, primary consciousnesses, and mental factors arise and pass away in each moment. As wisdom and concentration become more refined, the process of arising and passing away is seen directly, more subtly, and more rapidly.

As meditation continues, the phase of arising recedes into the background, and the phase of disintegrating becomes more prominent. In evermore tiny microseconds the five aggregates are seen as disintegrating. This progresses to simply being aware of their cessation, the continuous stream of cessations of the body-mind complex in all of its aspects. The last stage, relinquishment, is giving up attachment to and identification with the five aggregates as a self. What we cling to as I and mine is just a collection of impermanent, impersonal factors that are continuously ceasing. There is nothing within or among them to be grasped as I or mine.

The meditator continues contemplating the five aggregates as impermanent, unsatisfactory, and not-self, making the mind more and more familiar with these truths. As insight deepens, it comes to a point where wisdom presses up against the boundaries of the conditioned and then breaks through the façade of conditioned phenomena. At this time, the meditator attains realization of the unconditioned, *nirvāṇa*. Penetration into the four truths in the path moments occurs in a sudden flash, a single breakthrough into all four truths simultaneously. However, this does not mean that all four truths are perceived simultaneously. According to the commentaries, the supramundane path and fruit take *nirvāṇa* (true cessation) as their object, not the other three truths. However, the path-consciousness is said to penetrate all four truths simultaneously. While it directly perceives only its object, the third truth, it penetrates the other three truths in terms of its function.

After arising from the experience of the path and fruition, meditators experience the five aggregates in a totally different way. Not clinging to the aggregates as I and mine, they fully understand the first noble truth—that the five aggregates are unsatisfactory in nature. They have lessened ignorance and craving to some extent, thus abandoning a portion of the true origin of *duḥkha*. Because the *āryan* eight path factors were present when realizing the third truth, they know the true path, the fourth truth.

Just for a moment the clouds of ignorance disperse, supramundane wisdom shines forth, and the third truth—true cessation of duḥkha and its origins—is seen clearly. Simultaneous with seeing true cessation, the other three noble truths are also seen and understood as being just empty, insubstantial, impermanent phenomena. Wisdom understands that ignorance and craving keep us bound in saṃsāra and that the path of wisdom leads to the cessation of duḥkha and its origin—this is the unconditioned, nirvāṇa. This breakthrough, which lasts only a short while, in which all four truths are known directly and simultaneously as they really are, establishes one as a stream-enterer. Meditators then continue to practice, gradually eradicating defilements, and experience nirvāṇa more deeply, passing through the stages of once-returner and nonreturner until arhatship is attained.

## *Subduing Defilements*

Afflictions have plagued us and caused us misery since beginningless time. Although it would be wonderful if they would disappear by themselves, this is not possible. Just like a shrewd enemy, they hide where we do not expect them to and appear at times when we thought they would not. To overcome them, we must be more clever than they are. To do this, we must study them well, know their habits, detect their weak points, and then, with wisdom, destroy them.

Defilements—afflictions, hindrances, fetters, and so on—have different degrees of strength and intensity at different times. For this reason, certain antidotes are more appropriate according to the strength of the defilement, and different degrees of abandonment are brought about by these antidotes. By being aware of this, we will understand why the three higher trainings and the insight wisdom and path wisdom they develop are essential for liberation.

The three general degrees or stages of defilements, going from coarse to subtle, are:

(1) *Expressed defilements* are motivating forces for our physical and verbal behavior and are expressed through the actions of our body and speech. The coarsest level of defilements, expressed defilements, are usually strong and contribute to the creation of nonvirtuous karma. Living with ethical conduct—specifically taking and keeping precepts—restraining the senses, and practicing

the seven virtuous actions of body and speech are effective ways to counter these defilements. For example, to impress others, Sam lies about his abilities. Attachment to reputation is the defiled motivation expressed through his verbal destructive action. Recognizing the disadvantages of uncontrolled speech and wanting to prevent it in the future, Sam takes the precept to avoid lying. Should a similar situation arise in the future, keeping this precept will deter him from lying. Observing precepts is *specific factor abandonment*.

Alternatively, Sam could remember that lying is nonvirtuous and stop himself from doing it because he aspires for a good rebirth. He could also practice sense restraint by not paying so much attention to gossip in the office. This level of abandonment is useful but is not stable because afflictions easily arise and overwhelm the mind, motivating us to express the defilements in our mind through speech and action.

(2) *Manifest and active defilements* are those present in the mind that haven't yet erupted into nonvirtuous physical or verbal actions. These are the defilements that were present when Sam was worrying about his reputation and seeking to impress others. Reflecting on one of the antidotes to attachment, such as mindfulness of death, will temporarily relax the attachment. This is a rudimentary form of abandonment called "factor substitution." Actual abandonment by factor substitution is substituting the defilement with insight knowledge that directly opposes the defilement. This is likened to abandoning darkness by turning on a light. Grasping permanence is abandoned by understanding impermanence; wrong views about karma and its effects are abandoned by meditation on conditionality.

Another way to prevent attachment from manifesting and being active in the mind is through cultivating deep states of concentration, such as access concentration or one of the dhyānas. Such deep concentration temporarily suppresses, but does not eradicate, the hindrances. The underlying tendencies still remain and, once the person comes out of meditation, manifest afflictions may arise. They don't necessarily arise again in the same life; skilled yogis can suppress the defilements so they don't arise, but they remain operative at the level of underlying tendencies (*anusāya, anusaya*). Nevertheless, *suppression abandonment* gives the mind some repose and prevents coarse afflictive emotions from disturbing the mind.

(3) *Latent defilements* are underlying tendencies (*P. anusaya*) that are ingrained and innate. Only wisdom has the ability to cut the continuity of the underlying tendencies of afflictions. This wisdom is of two types. The first is insight wisdom, which is cultivated while meditating on the three characteristics. It weakens, but does not eliminate, the underlying tendencies. However, when all the conditions come together and a practitioner's faculties are mature,<sup>96</sup> the wisdom of clear realization arises and eradicates the defilements in such a way that even traces of them no longer exist in the mind. *Eradication abandonment* is the abandoning of defilements that are the true origin of *duḥkha* by destroying them completely so that they can never occur again. This is accomplished by the four supramundane paths and occurs in the mental continuums of the four types of āryas.<sup>97</sup>

#### DEFILEMENTS, ANTIDOTES, AND TYPES OF ABANDONMENT

LEVEL OR DEGREE OF DEFILEMENT	MINIMAL ANTIDOTE	ABANDONMENT
<b>Expressed defilements</b> are expressed by bodily or verbal action.	Ethical conduct: precepts, sense restraint, practicing virtue, etc.	Specific factor: observing a precept stops the expression of a defilement in our actions.
<b>Active or manifest defilements</b> are active as thoughts and emotions in the mind.	1. Factor substitution 2. Concentration: access-concentration or full dhyāna concentration	1. Specific factor: using a particular antidote to deal with a particular hindrance 2. Suppression abandonment: using dhyāna concentration to suppress all hindrances
<b>Latent defilements or underlying tendencies</b> are defilements lying dormant deep within the mind, ready to become manifest when stimulated.	Wisdom: 1. insight wisdom weakens the latent tendencies 2. wisdom of clear realization (path wisdom) eradicates them	1. Specific factor abandonment occurs through insight wisdom 2. Eradication abandonment occurs through the wisdom of clear realization.

Just as a child does not begin her schooling in university, we do not begin the path by generating insight wisdom or path wisdom. Starting at the beginning by adhering to precepts and ethical values is a practical and effective method to stop the physical and verbal expression of defilements. From there we progress to generating concentration as the way to suppress manifest defilements. Continuing to practice, we generate path wisdom that is capable of uprooting them completely. To whatever degree we are capable of abandoning defilements, to that degree our mind will be more peaceful.

---

## REFLECTION

1. Make examples of expressed defilements in your life. What is the minimal antidote to apply to them? Imagine applying those antidotes to calm your mind.
  2. Do this for active (manifest) defilements and latent defilements (underlying tendencies).
  3. What are the three abandonments? How can you develop them?
- 

## *The Importance of Realizing Selflessness*

The importance of realizing selflessness to attain nirvāṇa becomes evident as we examine the four truths. When asked what constitutes the truth of duḥkha, we point to the five aggregates that are called *sakkāya* (S. *satkāya*), the collection of aggregates subject to clinging. Our psychophysical aggregates are not free from clinging and are under the control of clinging.<sup>98</sup> *Sakkāya* is often translated as personality or personal identity. In the Tibetan term *'jig tshogs*, *'jig* means to perish or decay, and *tshogs* means collection and refers to the collection of perishing aggregates.

Our life is an interplay of the five aggregates. Through the sense faculties in the body meeting sense objects, consciousness of the world arises together with contact, discrimination, feeling, intention, and other mental factors, all of which are true duḥkha. How do these five aggregates that constitute the person come into being? What is their origin? Craving is the chief source. Normally we think

that first we exist, then we crave. Although from one perspective that is true, from another perspective because craving exists, the five aggregates come into being and we exist. In the *Discourse on the Six Sets of Six*, the Buddha says that the origin of the five aggregates is regarding any of the aggregates as “this is mine; this I am; this is my self”—three sentences that appear frequently in the sūtras. The conception or grasping that any part of this body-mind complex is mine, I, or my self is a decisive cause that perpetuates saṃsāra. We usually don’t think that thoughts have such power, but they do. The thoughts grasping the ideas of “mine,” “I,” and “my self” have the ability to propel this cycle of rebirth.

Three graspings (*grāha*, *gāha*) lie behind these three afflictive thoughts: craving, conceit, and wrong views. In particular, craving supports the thought “this is mine,” because craving wants to possess the aggregates or whatever else it sees as desirable. Conceit lies behind the thought “this I am,” because conceit holds the I to be a solid and independent entity.<sup>99</sup> Wrong views underlie the idea “this is my self,” because views formulate philosophical stances of what I truly am and what my real nature is, thus constructing a view of the self. The three graspings drive this round of existence from life to life. The perishing aggregates are true duḥkha, and these three graspings are true origins.

Because we do not understand the five aggregates as they are—as impermanent, unsatisfactory, and selfless—ignorance and craving continue and much misery is experienced. When we do not understand the six sense objects (the external sources), the six sense faculties (the internal sources), consciousness, contact, and feeling, we become enmeshed in craving for all these factors that play a role in cognition and experience. For example, we meet a person and experience pleasure being with him. Immediately the mind becomes attached to the sights, sounds, fragrances, tastes, tactile sensations, and mental images of that person. Attachment also arises for our sense faculties—the eye, ear, nose, tongue, tactile, and mental faculties—that enable consciousness to perceive him after contact has occurred. Attachment arises not only for those consciousnesses and contacts but also for the pleasant feelings. Not seeing feeling as it actually is becomes particularly disturbing to our well-being because craving and other afflictions arise in direct response to feelings. Experiencing pleasure, we want more and better. This craving propels us to do this and that, go here and there, continually looking for happiness from external people and objects. In the *Great Sixfold Base Sūtra*, the Buddha warns (MN 149.4):

When one abides inflamed by sensual desire, fettered, infatuated, contemplating gratification [that we hope to receive from external people and things], then the five aggregates subject to clinging are built up for oneself in the future; and one's craving—which brings renewal of being (rebirth in saṃsāra), is accompanied by delight and sensual desire, and delights in this and that—increases. One's physical and mental troubles increase, one's physical and mental torments increase, one's physical and mental fevers (longing) increase, and one experiences physical and mental suffering.

Craving fixates on all the factors involved in producing feeling, and we find ourselves in the grip of attachment, bound by attachment, confused in our infatuation, and continually thinking of the gratifying pleasure we hope to receive from objects of the senses. When we do not receive the pleasure we crave, unhappiness and anger set in. A restless mental state, disturbed by either longing or animosity, can affect our physical health. This is suffering we experience here and now as a result of craving. In addition, craving perpetuates saṃsāra by propelling a new set of aggregates to arise in the future birth. That future birth, in turn, is the basis for the arising of further craving for the objects of the senses, sense faculties, consciousnesses, contacts, and feelings that manifest in that lifetime.

Meditation on the above explanation is effective for energizing our Dharma practice. Do this by considering many examples of this process as it occurs in your own life. The clearer you see the reality of your situation in saṃsāra, the greater will be your determination to be free from it. In addition, understanding the dependent arising of objects, sense faculties, consciousness, contact, and feeling in your daily experiences sets the stage for insight meditation.

To disband these five aggregates and attain liberation, we must challenge the three afflictive thoughts “This is mine. This I am. This is my self.” This is done by seeing all factors of the body-mind complex as they really are—that is, by regarding them as “this is not mine; I am not this; this is not my self.” The eightfold path converges on this meditation in which right view is applied to all factors of our saṃsāric existence, which are subsumed in the five aggregates and the twelve sources.<sup>100</sup> When we know with right insight that they are not mine, not I, and not my self, it becomes possible to stop certain defilements from arising

in active form. Seeing the impermanence, unsatisfactory nature, dependent existence, and selflessness of these factors prevents craving for pleasure, craving to be free from pain, and craving for neutral feelings not to subside.<sup>101</sup>

Meditation on all the various parts of the aggregates as “this is not mine; this I am not; this is not my self” is another way of formulating the true path. To see the three characteristics entails the cultivation of insight wisdom. As insight wisdom gradually becomes stronger and more penetrative, the path wisdom of an ārya arises, and one catches a glimpse of nirvāṇa. Through path wisdom and direct knowledge, the fetters and pollutants are eliminated step by step on the ārya path, until ignorance is completely eradicated and the four truths are fully seen as they are. The eradication of these three distorted conceptions, the three graspings that lie behind them, and the five aggregates that result from them is true cessation. The meditation bringing about this cessation is the true path.

---

## REFLECTION

Observe the three graspings in your own experience.

1. Craving supports the thought “this is mine.” Notice how craving wants to possess the aggregates, possessions, people, reputation, and so on. It divides the world into what is desirable and what isn’t. How does craving influence your life?
2. Conceit lies behind the thought “this I am.” Notice how there is conceit even when thinking “I”—there is pride just in existing.
3. Wrong views underlie the thought “this is my self.” Do you get tangled up in a proliferation of thoughts about what you are and what your real nature is?

---

## *Cultivating Wisdom and Gaining Realization*

Wisdom is cultivated in stages, first by restraining the natural tendencies to react to pleasant feelings with attachment, to respond to painful ones with aversion, and to remain ignorant about the nature of neutral feelings. With this background, practitioners observe the nature of feelings, and after doing that over time, they will be able to penetrate their nature more deeply and clearly. Through

this process, the underlying tendencies—latent dispositions that enable manifest afflictions to arise when the causes and conditions are present—are gradually weakened, until the point is reached when insight is strong and profound enough to cut off those tendencies altogether.

What does it mean to penetrate or understand the nature of feelings? Here feelings are used as an example of the many things to penetrate and understand, such as the five aggregates, six sources, the constituents, and so forth.

First we cultivate mindfulness and train in identifying the feelings in our own experience. Through training in mindfulness, we become able to identify even subtle happy and unhappy feelings when they arise. The following schema of gratification, danger, and escape is often applied to mindfulness of the five aggregates, six sources, and the elements as well. We first become aware of the gratification or pleasure we receive from contact with sense objects. Then we contemplate the danger of being attached to these feelings and how that perpetuates our saṃsāra. Upon realizing how this traps us in saṃsāra, we generate the wish to escape from attachment to feelings.

The *origin* (P. *samudaya*) of feelings is their causes and conditions. This is understood by tracing the causal process of contact occurring through the meeting of consciousness and the object by means of the sense faculty, and contact then leading to the generation of feelings. The *disappearance* (P. *atthangama*) of feelings is their cessation when their conditioning factors cease. When contact does not occur, feelings do not arise.

*Gratification* (P. *assāda*) refers to the pleasure and joy we derive from feelings, even when this involves the creation of misery. For example, we sometimes indulge in unhappy feelings because that gives us the “pleasure” of feeling sorry for ourselves. We delight in pleasant feelings because they anesthetize our deep-rooted dissatisfaction, in the same way that an alcoholic delights in the next drink that masks—and perpetuates—his unhappiness.

The *danger* or *drawbacks* (P. *ādinava*) of feelings is that they are impermanent, unsatisfactory, and subject to change. Feelings are dangerous when we ignorantly react to them, perpetuating bondage in saṃsāra. Pleasant feelings bring attachment, unpleasant feelings breed anger, and neutral feelings lead to apathy and confusion. These disturbing emotions continue to run our lives, create destructive karma, and ensure rebirth in saṃsāra.

*Escape* (P. *nissaraṇa*) entails relinquishing attachment and desire for these feelings, which is accomplished through mindfulness and wisdom. Escape is the antidote that remedies the danger, and at its fullest is nirvāṇa.

When the sense faculties, objects, consciousnesses, contacts, and feelings are known as they really are, we are not inflamed with sensual desire. That allows for space to contemplate their danger and disadvantages—in particular their being impermanent, unsatisfactory, and subject to change. Such contemplation leads to the vanishing of physical and mental troubles and the arising of physical and mental bliss. Knowing and seeing things as they really are is the practice of wisdom and brings about the ending of craving, the cessation of the five aggregates subject to clinging, and liberation from saṃsāra.

This practice embodies the entire eightfold path. A practitioner who has contemplated the three characteristics and knows and sees things as they are has right view. Her intention—her motivation and purpose—is right intention. The effort she makes in that contemplation is right effort. Her mindfulness of the sense object, sense faculty, consciousness, contact, and feeling arising from contact as they really are—as impermanent, unsatisfactory, and selfless—is right mindfulness. The absorption of mind in that contemplation is right concentration. At the highest level of insight wisdom, just before she attains the ārya path, these five factors of the eightfold path are active. The other three factors—right speech, right action, and right livelihood—have been purified before entering into insight meditation and do not need further development at this moment. When the practitioner breaks through to the supramundane path and becomes an ārya, all eight path factors are present simultaneously, each playing its own role in eradicating the defilements. As the practitioner continues to develop the eightfold path of the āryas, all the other factors of the thirty-seven harmonies with awakening simultaneously come to fulfillment.

## *Calming Reactivity to Feelings*

Reactivity to physical and mental feelings of pleasure, pain, and neutrality creates disturbance in our lives here and now and interferes with the cultivation of serenity and insight. We cannot endure discomfort, let alone pain, and constantly seek pleasure and comfort. Such attachment and aversion dominate our lives.

Learning to calm these reactions and maintain equanimity toward whatever feeling arises in our mind is a necessary step to cultivate both serenity and insight.

To do this, followers of many religions are encouraged to adopt some form of ascetic practice. But how useful are such practices for purifying the mind and progressing on the path? The Buddha noted that when someone who is undeveloped in body experiences a pleasant feeling, she enjoys the pleasure with attachment and craves more. When someone who is undeveloped in mind experiences a painful feeling, it invades the mind and persists, the mind becoming overwhelmed with aversion toward that feeling. However, when someone who is developed in body experiences a pleasant feeling, the mind does not become obsessed with it and does not crave more, and when someone who is developed in mind experiences a painful feeling, the mind does not become overwhelmed with aversion toward that feeling.

*Development of body* means that the person has developed insight. With insight, she understands that any pleasant feeling is impermanent, unsatisfactory, and not-self. With this wisdom she loses interest in these feelings. *Development of mind* indicates samādhi: when deep concentration is present, painful feelings cannot invade and overwhelm the mind because the practitioner is able to withdraw the mind from those feelings.

The Buddha's life story tells us that after his renunciation he engaged in ascetic practices for six years. The *Greater Discourse to Saccaka* (MN 36) relates that during that time three similes occurred to him. First, fire cannot arise from a wet, sappy stick in water. Similarly, practitioners who do not live physically withdrawn from sense pleasures cannot internally suppress their attachment to them. When they experience pain, they also are not able to gain realizations because the pain and their aversion to it overwhelm the mind, rendering them unable to concentrate or reflect on the Dharma. Even when they do not experience pain, they are still incapable of knowledge and vision because they are overwhelmed by distraction.

The stick lying in water symbolizes enjoying sense pleasures while seeking awakening. The stick being wet and sappy inside is analogous to the sensual desire that has not been internally subdued by samādhi. These practitioners cannot attain awakening, no matter whether they engage in ascetic practices or not. They suffer from two obstructions: physically they are immersed in sense pleasures and

internally their desire has not been stilled. Thus for them, ascetic practices are futile.

In the second simile, the wet, sappy wood is on dry land; however, it still cannot produce fire. This is analogous to practitioners who live physically withdrawn from sense pleasures but whose desire for these pleasures has been neither abandoned nor suppressed internally. When they experience painful feelings by engaging in ascetic practices, they are incapable of knowledge and vision and supreme awakening. Even when they do not experience painful feelings, they are incapable of awakening. These people have met one condition by living physically withdrawn from sense pleasure, but their sensual desire is not stilled because they do not know how to train the mind, or if they do know, they do not practice it. In this case, too, whether or not they do ascetic practices, they cannot attain awakening.

The third simile is a dry sapless stick on dry land; this stick is capable of producing fire. Similarly, practitioners who are physically withdrawn from sense pleasures and have internally suppressed sensual desire are capable of attaining awakening whether or not they experience painful feelings. They have met both conditions: they are physically withdrawn from sense objects and their minds are stilled. So whether or not they engage in ascetic practices, they will be able to attain awakening.

From this we may conclude that engaging in ascetic practices is not the key to attaining awakening. Physically distancing ourselves from sense pleasures by living a modest lifestyle and mentally removing our mind from sensual desire by cultivating samādhi will benefit us. Samādhi is the basis for insight to arise, and insight uproots the deep tendencies in our mind for sensual craving. Samādhi enables a practitioner to temporarily abandon or to suppress afflictions by means of entering deep states of concentration. Insight gives the ability to abandon afflictions so they will never return.

Those non-Buddhists who engage in painful ascetic practices seek to tame their attachment and aversion. However, the method they employ does not work. Other non-Buddhists are instructed by their teachers not to see forms with their eyes, nor hear sounds with their ears, and so forth (MN 152). If not seeing, not hearing, and so forth were the way to avoid responding to sense objects with attachment, aversion, and apathy, the Buddha commented that then the blind and deaf would have excelled in developing their mental faculties.

At this point in the sūtra, Ānanda requests the Buddha to explain the supreme development of the faculties—the development of the mind—in the āryas’ discipline. In his reply, the Buddha assumes that practitioners are already practicing restraint of the sense faculties (P. *indriyasamvara*) by restricting contact with sense objects so that the mind doesn’t get carried away by its reactions to them. The next step in developing the faculties is to establish insight while perceiving the object. This is done by understanding (MN 152.4):

There has arisen in me what is agreeable, there has arisen what is disagreeable, there has arisen what is both agreeable and disagreeable. But that is conditioned, gross, dependently arisen; this is peaceful, this is sublime, namely equanimity.

Here practitioners notice that liking, disliking, or apathy has arisen toward the perceived object and counteract that by focusing on other attributes of the object—the fact that it is conditioned, gross, and dependently arisen. Through this, the equanimity of insight is established and, by dwelling in that, they release attraction, aversion, and apathy. This is the supreme development of the faculties in āryas’ discipline.

When seeing a form, hearing a sound, and so forth (up to cognizing a mental object), how does a disciple in higher training (someone who has entered the path) practice? If liking, disliking, or apathy arise in her mind, she recognizes it as a hindrance and, turning her mind away from these reactions, she reestablishes the equanimity of insight.

The Buddha proceeds by explaining how arhats practice when agreeable, disagreeable, or neutral feelings arise when contacting sense objects. Note that here he speaks of arhats who have perfected these methods. In other instances, the Buddha teaches them to ordinary practitioners as methods to abandon attachment, anger, and ignorance in training. These are:

(1) Perceiving the unrepulsive in the repulsive is to meditate on love toward a person we find disagreeable or to contemplate a person or object as simply a collection of impersonal parts or elements. Doing this brings the mind to a neutral state that is open, receptive, and has arisen through implementing a virtuous Dharma method.

(2) Perceiving the repulsive in the unrepulsive is to contemplate the body of an attractive person as foul or to understand an attractive object as impermanent.

(3) Perceiving the unrepulsive in both the repulsive and the unrepulsive is to apply the first two methods to both repulsive and unrepulsive objects.

(4) Perceiving the repulsive in both the unrepulsive and the repulsive is to apply the first two methods to both repulsive and unrepulsive objects.

(5) By avoiding both the repulsive and unrepulsive, abide in equanimity, mindful and fully aware. This abandons joy and sorrow in reaction to objects of the six senses and allows us to abide in equanimity.

The Buddha closes this sūtra with heartfelt encouragement (MN 152.18):

What should be done for his disciples out of compassion by a Teacher who seeks their welfare and has compassion for them, that I have done for you, Ānanda. There are these roots of trees, these empty huts. Meditate, Ānanda, do not delay, or else you will regret it later. This is my instruction to you.

By teaching us with compassion, the Buddha has done what he could to lead us out of saṃsāra and to nirvāṇa. Now we must practice. Since we do not know when death will come, we should not delay, because dallying on the path will only bring regret and pain later on.

## *Unique Qualities of the Buddha's Teaching*

The teachings on conditionality (causal dependence) and selflessness are unique aspects of the Buddha's doctrine. In the *Shorter Sutta on the Lion's Roar* (MN 11), the Buddha emphasizes the necessity of uprooting all views of self, especially the views of existence (absolutism, P. *bhavadiṭṭhi*) and of nonexistence (nihilism, P. *vibhavadiṭṭhi*). Only by the thorough cultivation of true knowledge (*vijjā*) are ignorance (*avijjā*) and all forms of clinging eliminated, resulting in the attainment of nirvāṇa.

The *Held by Views Sūtra* discusses the views of existence and nonexistence (Iti 2.22).

Held by two kinds of views, some devas and human beings hold back and some overreach; only those with vision see.

And how, monastics, do some hold back? Devas and humans enjoy existence, delight in existence, are satisfied with existence. When Dhamma is taught to them for liberation from existence, their minds do not enter into it or acquire confidence in it or settle upon it or become resolved upon it. It is in this way, monastics, that some hold back.

How, monastics, do some overreach? Now some are troubled, ashamed, and disgusted by this very same existence and they rejoice in [the idea of] nonexistence, asserting: “In as much as this self, good sirs, when the body perishes at death, is annihilated and destroyed and does not exist after death—this is peaceful, this is excellent, this is the real!” It is in this way, monastics, that some overreach.

How, monastics, do those with vision see? Herein a monastic sees what has come to be as having come to be. Having seen it thus, he practices the way for disenchantment, for dispassion, for the cessation of what has come to be. It is in this way, monastics, that those with vision see.

Here the Buddha speaks of three types of people. The first, those who hold back, are confined and limited by their wrong views. Not knowing any other type of existence, they enjoy saṃsāra and delight in its pleasures. Some people who crave for saṃsāric existence develop a view of it that gives intellectual support to their craving. Other people just assume there is a permanent soul or a substantial self that continues after death; they want to go on existing forever. Some seek rebirth specifically as a deva or human being with great wealth, reputation, family, and power.

The second are people overreach. Some are disgusted with life, are in great pain, or despair about the state of the world. At the time of death, they crave for nonexistence in order to terminate their misery. Others enjoy life but think that the mind is just a property of the brain and that the self ceases at the time of death. Both of these ideas assume that when the body dies the consciousness and the person become nonexistent. They see the cessation of all existence at the time of death as peaceful and do not consider or prepare for future lives.

The third alternative is the one the Buddha presents; these people see with correct vision of wisdom and insight. They see “what has come to be as having come to be”—they see that five aggregates have arisen through conditions. Because the five aggregates are controlled by ignorance and karma, they become disenchanted with them, cease to crave them, and attain freedom from them by overcoming their causes. This cessation is not the absolutism of those who hold back or the nihilism of those who overreach, but is the Middle Way of the Buddha that upholds dependent origination in saṃsāra and its cessation.

---

## REFLECTION

1. Some people hold back from the Dharma because they are completely wrapped up and infatuated with this life and the external world with its desirable people and attractive experiences. They find Dharma uninteresting.
  2. Some people overreach because they cannot find harmony with people and the world. They are depressed and discouraged and see death or nonexistence as the peace they seek. They are unable to make effort in the Dharma or dislike doing so.
  3. Those who see with vision see the world and beings in it with wisdom, as they are, and seek liberation.
- 

## *Relinquishing Wrong Views*

Wrong views must be relinquished to generate correct views. Many wrong views are based on philosophical machinations, and clinging to them brings misery here and now and impedes the ability to think clearly. In the *Net of Brahmā Sūtra* (DN 1), the Buddha outlines sixty-two wrong views to renounce. In the *Shorter Series of Questions and Answers* (MN 44), Bhikkhunī Dhammadinnā outlines twenty wrong views of self to be given up. In the *Discourse on the Simile of the Snake*, the Buddha talks about various views of permanence, pointing out their disadvantages; for example (MN 22.18):

. . . someone thinks thus: “Alas, I had it! Alas, I have it no longer! Alas, may I have it! Alas, I do not get it!” Then he sorrows, grieves,

and laments; he weeps, beating his breast, and becomes distraught.

Holding this view, we think our possessions are permanent, everlasting, and not subject to change. When we later lose a cherished possession or relationship, we exclaim in distress, “Alas, I had it! Alas, I have it no longer!” and are distraught with grief and often with anger or depression as well. The mind vacillates, being attached to those things when we have them and lamenting when we lose them. Or, as indicated by thinking “Alas, may I have it! Alas, I do not get it!” we crave desirable things we don’t have, and when our wishes or longing are stifled, we mourn in distress. On the other hand, someone who does not hold a view of permanent possessions, status, or relationships is not subjected to these emotional vacillations that are rooted in craving.

Someone may hold an extreme absolutist view thinking that at death our individual self will continue on unchanged and exist eternally, or thinking our soul will merge with the universe and in that way be permanent and everlasting. When people who cling to such views encounter the Buddha’s teachings, they easily misinterpret them, thinking the Buddha is saying that at death they will be annihilated and cease to exist altogether. They then become terrified and agitated and reject the Dharma. Clinging to this wrong view has obscured their wisdom.

Is it possible to hold any doctrine of self without experiencing unfortunate repercussions? The Buddha challenges the monastics (MN 22.23):

Monastics, you may well cling to that doctrine of self that would not arouse sorrow, lamentation, pain, grief, and despair in one who clings to it. But do you see any such doctrine of self?

After the monastics reply that they do not, the Buddha agrees. Although not said directly, the implication is that holding any wrong view leads to clinging to that view, and when a wrong view is clung to and cherished, misfortune will eventually come. That misfortune may not arise immediately or in an obvious way. In fact, some people may derive satisfaction and security from their wrong views, and other people may restrain from destructive behavior due to them. However, in the long term these views will lead to disappointment, justification for harmful actions, rejection of correct views, and continued existence in saṃsāra.

Several sūtras in the *Suttanipāta* contain passages about giving up even the subtlest clinging to views.

Those who hold rules (precepts) to be the highest thing,  
thinking purity comes from [practice of] self-restraint,  
take up rites and observe them [dutifully],  
[thinking] “if we learn this, then we’ll learn purity”—  
[these] self-proclaimed experts are bound for rebirth.

When someone is deficient in rules and rituals,  
having failed to perform some act, he trembles,  
he yearns and longs for purity here,  
like one who has left home [but] lost the caravan.

So renounce rules and rituals,  
all actions that bring praise and blame;  
without yearning [for] “purity, impurity!”  
[a person] should live free, not grasping at peace.

When a person in the world, abiding in views,  
esteems something especially “the highest,”  
then he says that all others are inferior;  
in this way he is not beyond disputes.

The person who holds opinions, defining [things] for himself,  
comes to further quarrels in the world;  
[only] when a person renounces all opinions  
does he make no quarrel with the world.<sup>102</sup>

Clinging to views—be they views concerning precepts, rituals, or philosophical topics—takes us far from the purpose of the Dharma into egotistic thinking. Arrogance flares up and we are lost in comparing ourselves with others, thinking we are best because we hold the correct views and others are inferior because they hold foolish views. We find ourselves in disputes with others, desperately endeavoring to be victorious in debates in a frantic attempt to prop up our self-esteem. This is not the path to nirvāṇa.

Relinquishing clinging to views doesn’t mean we don’t believe in anything, are afraid to join a discussion, or ignorantly vacillate between views. We need to

learn to think clearly without attachment or confusion. Right views in the eightfold path can be supported by reason.

The *Sutta to Pasūra* speaks of the disadvantages of clinging to views and discourages doing so. It also advises how to reply to someone who is intent on arguing about views for the sake of praise and recognition (Sn 4.8):

“Only here is there purity”—that’s what they say. “No other doctrines are pure”—so they say. Insisting that what they depend on is good, they are deeply entrenched in their personal truths.

Seeking controversy, they plunge into an assembly, regarding one another as fools. Relying on others’ authority, they speak in debate. Desiring praise, they claim to be skilled. . . .

Those who, grasping at views, argue and say “Only this is truth,” to them you should say when talk begins, “There are none here to reply to you in strife.”

Among those who live above confrontation, not pitting view against view, whom would you gain as opponent, Pasūra, among those here who are grasping no more?

The *Aṭṭhakavagga* and the *Pārāyanavagga*, small collections of some of the earliest sūtras, are found in the *Suttanipāta*. These sūtras seem to anticipate Nāgārjuna’s emphasis on not clinging to precepts and practices and even to the most cherished philosophical views that we are certain will lead us to awakening. Nāgārjuna’s instruction isn’t simply to abandon clinging to views in the sense of not demanding “my view is right, yours is wrong,” but to release clinging to the view of grasping inherent existence. He warns us against holding the reified extreme of absolutism that grasps inherent existence as well as the annihilating view of nihilism that negates what in fact exists.

Unwilling to assent to any view of inherent existence, Nāgārjuna says that the emptiness of inherent existence itself is also empty. In place of the wrong views of absolutism and nihilism, he asserts that although all phenomena—even emptiness itself and his own views—lack inherent existence, they still exist and function, and therefore adopting the correct view is important. In the culminating verse of *Treatise on the Middle Way*, he says (MMK 27.30):

I prostrate to Gautama,

who, through great compassion,  
taught the exalted Dharma  
that leads to the relinquishing of all views.

Some people have misinterpreted Nāgārjuna's words, thinking that Mādhyamikas only refute others' views but do not have any of their own. This is not correct; Mādhyamikas have positions and make assertions. Nāgārjuna explains that Mādhyamikas' assertions as well as refutations of wrong views are empty of inherent existence, yet exist dependently.

Although there are some similarities between Madhyamaka and some passages in the *Suttanipāta*, they are not the same. Nāgārjuna explains in detail how to realize emptiness, which is the antidote to all views, whereas the *Suttanipāta* does not. However, as a collection of short sūtras it gives us points to contemplate, and some of its sūtras speak of emptiness or of non-grasping. In the *Sutta on Violence*, the Buddha instructs (Sn 4.15.949–51):

Dry out that which is past,  
let there be nothing for you in the future.  
If you do not grasp at anything in the present,  
you will go about at peace.

One who, in regard to this entire mind-body complex,  
has no cherishing of it as “mine,”  
who does not grieve for what is nonexistent,  
truly suffers no loss in the world.

For him there is no thought of anything as  
“This is mine” or “This is another’s.”  
Not finding any state of ownership,  
and realizing “nothing is mine,” he does not grieve.

In short, not clinging to anything in saṃsāra, be it sense objects, people, or views, is the key to liberation. Whether someone asserts grasping a self-sufficient substantially existent person or grasping inherently existent phenomena as the

final grasping to be relinquished, everyone agrees that embellishing reality with our wrong conceptions leads to duḥkha.

## 12 | Pāli Tradition: Cultivating Insight Knowledge

THE PĀLI AND SANSKRIT TRADITIONS share many of the same analytical methods to realize selflessness. Some differences in approach exist too. According to the Pāli tradition, the realization of the three characteristics of conditioned phenomena—impermanence, duḥkha, and selflessness or not-self—is worldly insight knowledge because these three are characteristics of true duḥkha, the phenomena of saṃsāra. Realization of the three characteristics is prerequisite to penetrating nirvāṇa—the unconditioned, the ultimate. The supramundane wisdom that knows nirvāṇa is employed over the ārya stages of stream-enterer, once-returner, and nonreturner, and culminates in arhatship.

In the Sanskrit tradition, understanding impermanence and duḥkha is accomplished by conventional reliable cognizers. The various tenet systems have different views of what selflessness is, according to how they describe the object of negation. In the Prāsaṅgika system, selflessness is equivalent to emptiness; it applies to all persons and phenomena, and direct, nonconceptual realization of selflessness is an ārya path that, when fully developed, leads to liberation or full awakening.

In both traditions, wisdom is praised for unlocking the door to nirvāṇa, the state of actual peace. Therefore, the Buddha and Buddhist sages encourage us to treasure wisdom and do our best to cultivate it. The Buddha counsels (AN 1.77–81):

Insignificant, monastics, is the loss of relatives, wealth, and fame; the loss of wisdom is the greatest loss.

Insignificant, monastics, is the increase of relatives, wealth, and fame; the increase of wisdom is the greatest.

Therefore, monastics, you should train yourselves thus, “We will increase in wisdom.”

Cultivating insight wisdom entails understanding our experiences and ourselves, the person experiencing them. To understand ourselves, it is necessary to understand the five aggregates that compose the person, and this is done by comprehending their common characteristics—impermanence (*anitya, anicca*), unsatisfactoriness (*duḥkhatā, dukkhatā*), and selflessness, or not-self (*anātman, anattā*)—and comprehending how the aggregates relate to the self who is experiencing and clinging to them. Mindful observation of the aggregates sets the stage for insight analyzing their nature and the nature of the person.

### *Schemas to Use and Phenomena to Examine*

In the sūtras the Buddha repeatedly uses certain schemas of phenomena as the objects on which to develop insight wisdom and path wisdom. These include, but are not limited to, the three characteristics; the four truths; dependent origination; gratification, danger, and escape; and disenchantment (*nibbidā*), dispassion (*virāga*), and liberation (*vimutti*).

The principal schema to cultivate insight wisdom is the three characteristics of conditioned phenomena in saṃsāra: impermanence, duḥkha, and selflessness. The Buddha often uses these three to help disciples come to three conclusions about conditioned phenomena: they are not mine, they are not I, and they are not my self.

The schema of the four truths is employed to examine each phenomenon in terms of its specific nature, its arising, its cessation, and the path to its cessation. This is also the pattern used to contemplate dependent origination. In one sūtra, Śāriputra describes each of the twelve links of dependent origination, the conditions for its arising, and the conditions for its cessation, and prescribes the eightfold path as the means to cease saṃsāra. This schema highlights the conditioned nature of things—that nothing is an isolated event, separate from other things. Rather our life is part of a complex interconnected web in which one thing conditions another, which, in turn, conditions another. Understanding this opposes the misconception of independent existence and impacts the way we view ourselves and our relationship to people and things.<sup>103</sup>

While analyzing the arising and ceasing of each link, it comes to light that the process of rebirth continues without a substantial self that is reborn.

Conditionality *itself* is what makes the continuity from one life to the next occur: no soul, independent self, or controlling self is required. For example, New York City exists, and whether we think about it or experience it directly, it appears to us to be one city. Yet upon examination, we find many neighborhoods, buildings, people, and activities there. From one day to the next, each of these different elements continues on, becoming something new in each passing day. Do any of these constantly changing elements that constitute the city need a real, findable New York City to make them continue? No. Is there a findable thing that is New York in any of these elements individually or in their collection? No. If the name “New York” were removed, would everything fall apart? No. Similarly, the flow of the aggregates continues without there being a findable self that makes all these parts cohere.

Another schema the Buddha employs is that of gratification, danger, and escape. Gratification refers to the attraction sentient beings have for polluted objects and the enjoyment they derive from them, danger refers to the unpleasant consequences stemming from afflicted involvement with them, and escape refers to the peace of nirvāṇa that is free from them.

In addition, the Buddha employs the schema of disenchantment, dispassion, and liberation with respect to each conditioned thing in saṃsāra. Disenchantment is the sense of revulsion toward saṃsāra, dispassion is the fading away of desire for polluted objects, and liberation is attaining the path and experiencing nirvāṇa. Alternatively, disenchantment is the last stage of insight, dispassion is the attainment of the supramundane path, and liberation is the fruit of the path.

Other schemas can be used to examine the phenomena that compose the five aggregates. These include the twelve sources and eighteen constituents,<sup>104</sup> as well as the six types of consciousness, six contacts, six feelings, and six cravings taken together. The six elements—earth, water, fire, wind (air), space, and consciousness—are another formulation of phenomena included in the five aggregates.

Why are there so many ways to classify phenomena and so many schemas through which to examine them? Our ignorance is deep and approaching the same thing from different angles brings a more robust understanding. In addition, because people have different dispositions, an individual may find one or another schema or one or another way of grouping phenomena to be more useful for their meditation. In the next volume of the *Library of Wisdom and Compassion* you

will see different schemas applied to various topics and objects. Here we'll begin with the three characteristics.

## *The Three Characteristics*

Cultivating insight into the three characteristics enables us to look at the components of our being in a realistic way and thus is a central element of the path to liberation. It is recommended to meditate on these three on the basis of a general understanding of some of the prominent themes in the Buddha's teachings: conditionality, dependence, and how they pertain to the twelve links of dependent origination. This background prepares us to investigate each conditioned and dependent factor of our saṃsāric existence and to understand that all of them share three characteristics: they are impermanent, unsatisfactory, and selfless. Although they have these characteristics, ignorance clouds our mind and we see conditioned things as permanent, satisfactory, and having a self.

Ignorance functions in two ways. First, as mental darkness, it conceals and obscures the true nature of phenomena. Second, it creates false appearances or distortions in the mind so that we see things in a way that is opposite to what they actually are. The distortions operate on three levels: in our perceptions, thoughts, and understanding or views.

First, we *perceive* things incorrectly. Based on these incorrect perceptions, we *think* about them in a wrong way. Drawing our thoughts together, we create a narrative that interprets and *understands* our experience incorrectly. This results in constructing a philosophy that we then cling to, identify with, and defend. Needless to say, this has brought incredible misery to sentient beings throughout history. For example, Alfred perceives himself as a substantial being. When a colleague gives him some feedback about his work, he thinks the colleague is criticizing him. Ruminating on this, he understands that his job may be in danger if his boss hears about this criticism. He also notes that the colleague is from a particular country. Remembering incorrect information about that country that he heard as a child, he creates an "us versus them" philosophy whereby his country seems endangered by immigrants from the other country. Alfred then pledges to stop immigrants from entering his country by joining a vigilante group

that polices the border. Meanwhile, others who heard the feedback the colleague gave Alfred saw it as a helpful tip, not as criticism.

The Buddha spoke of four distortions, each of which occurs at the three levels above. These four are: (1) regarding what is foul as attractive, (2) regarding what is impermanent as permanent, (3) regarding what is unsatisfactory as the source of true happiness, and (4) regarding what is not self as self.

In a mind obscured by ignorance and confused by these four distortions, clinging, attachment, and other afflictions continuously operate. Ignorance gives rise to craving, which seeks to expand the territory of this supposed self so that it can control everything. We want this imagined self to continue in the future and be immortal. The four distortions sustain saṃsāra, distracting us by the lure of happiness in the world. The mind is caught up in illusions, which give rise to craving, conceit, and wrong views. In the meantime we frantically seek confirmation of our selfhood and remain perpetually frustrated as this eludes us. Only by turning the mind inward to investigate our experience with mindfulness and wisdom can these corroding activities and the duḥkha they bring be ceased.

The way to liberation lies in seeing that the three characteristics are the nature of all phenomena that constitute our body and mind. This leads us to stop identifying the aggregates as a substantial self—to see that they are not mine, not I, and not my self. By knowing the selflessness of these phenomena with correct wisdom and releasing the identification of the five aggregates as a self, craving and clinging cease as the mind becomes disenchanted, dispassionate, and liberated.

The first distortion—seeing what is foul as attractive and pure—applies particularly to the body. Although the body is a collection of elements and organs that are foul, we project attractiveness onto it. The antidote to this is meditation on the thirty-two parts of the body.

The antidote to the next three distortions is understanding the three characteristics of impermanence, duḥkha, and selflessness. The Buddha encourages us to understand the three characteristics by explaining six advantages of comprehending each of the three (AN 6:102–4):

When a monastic sees six advantages, it is enough for him to establish unlimited perception of impermanence in all conditioned things. What six? All conditioned things will appear to me as transient. My mind will not delight in anything worldly. My mind

will emerge from the entire world. My mind will incline to nibbāna. My fetters will be abandoned. And I come to possess supreme asceticism. . . .

When a monastic sees six advantages, it is enough for him to establish unlimited perception of dukkha in all conditioned things. What six? A perception of disenchantment will be established in me toward all conditioned things, as toward a murderer with uplifted dagger. My mind will emerge from the entire world, I will see nibbāna as peaceful. The underlying tendencies will be uprooted. I shall be one who has completed his task. And I shall have served the Teacher with loving-kindness.

When a monastic sees six advantages, it should be enough for him to establish unlimited perception of not-self in all conditioned things. What six? I shall be without identification (craving and views) in the entire world. Notions of “I” will cease in me. Notions of “mine” will cease in me. I shall possess knowledge not shared [with worldlings]. I shall clearly understand causes and the phenomena that arise from them. And I shall have clearly seen causally arisen phenomena.

When those who sincerely aspire to be free from saṃsāra contemplate these advantages, it will inspire and energize them to contemplate the three characteristics. But for those who are not yet convinced that lasting happiness is not to be found in saṃsāra, these advantages will appear uninteresting. To develop their minds, they should reflect again on the disadvantages of saṃsāra in terms of their own experience. In that way, a wish to be free from saṃsāra will arise and increase.

The three characteristics are intricately related to one another, and realizing them leads to the clear realization of a stream-enterer who directly knows nirvāṇa. The Buddha questioned his disciples regarding the three characteristics in *The Simile of the Snake Sūtra* (MN 22.26):

“Monastics, what do you think? Is material form permanent or impermanent?” “Impermanent, Venerable Sir.” “Is what is impermanent unsatisfactory or happiness?” “Unsatisfactory, Venerable Sir.” “Is what is impermanent, unsatisfactory, and subject

to change fit to be regarded thus: ‘This is mine, this I am, this is my self’?’—“No, Venerable Sir.”

The Buddha then continued to ask the same series of questions concerning feeling, discrimination, miscellaneous factors, and consciousness, to which the monastics gave the same reply. He then said that any kind of material form, feeling, discrimination, miscellaneous factor, or consciousness whatsoever—“past, present, or future, gross or subtle, inferior or superior, far or near—should be seen as it actually is with proper wisdom thus: ‘This is not mine, this I am not, this is not my self.’”

The same argument appears many times in the sūtras, especially in the *Book of Aggregates* in the *Connected Discourses* (SN 22–24). While the body is often used as an example because it comes first in the list of five aggregates, the same arguments should be applied to feelings, discriminations, miscellaneous factors such as emotions and attitudes, and consciousnesses.

---

## REFLECTION

1. Contemplate the six advantages of understanding impermanence: All conditioned things will appear as transient. Your mind will not delight in anything worldly. Your mind will emerge from worldly worries. Your mind will incline toward nirvāṇa. You will abandon all fetters and you will come to possess supreme asceticism.
2. Contemplate the six advantages of understanding duḥkha: You will not be hooked or swept away by conditioned things. Your mind will emerge from the world and will see nirvāṇa as peaceful. The underlying tendencies will be uprooted. You will complete the task of attaining liberation and will have served the Teacher with loving-kindness.
3. Contemplate the six advantages of understanding not-self: You will be without craving and views. Notions of “I” will cease; notions of “mine” will cease. You will possess knowledge not shared with worldly people; you will clearly understand causes and the phenomena that arise from them. And you will clearly see causally arisen phenomena.

---

### *Impermanence*

The Buddha describes subtle impermanence as “arising and passing away” or as “origination and disintegration.” Understanding arising or origination dispels the

misconception of nihilism, which believes that either things do not exist at all or the person completely discontinues after death, so that there is no continuity of karma and its effects. Understanding passing away or disintegration dispels the misconception of absolutism, according to which people and things have a substantial, permanent, eternal reality.

Occasionally, the sūtras speak about knowing feelings, discriminations, and thoughts “as they arise, as they are present, as they disappear” (MN 123.23), outlining three characteristics of the conditioned: arising, changing while abiding, and passing away. The Abhidharma formalizes this into the theory that at the micro level any conditioned phenomenon has three phases: the phases of arising, presence, and dissolution. These three points are without temporal duration. Change occurs not from the actual change of a persisting thing, but from the successive arisings of discrete phenomena in an unbroken sequence with imperceptible rapidity.

In meditation, it is more helpful to focus on the sūtra presentation of arising and passing away, and within those two, especially on dissolution or passing away, as that highlights impermanence in a very forceful way.

By beginning with the analysis of form’s impermanence, the Buddha appeals to the direct experience of our body. We know our body is constantly changing; we know it is aging and will eventually cease to exist. This is a comparatively gross form of impermanence, whereas the understanding of subtle impermanence frees us from the illusion of the body being permanent.

Subtle impermanence is more difficult to understand. Scientists tell us of the constant changes in subatomic particles, but since these are not visible to our ordinary perceptions and the physical objects around us seem to be stable, we assume that our five aggregates and the world around us are immutable and fixed. In fact, our body, feelings, and so on are dynamic processes in which every aspect of them is arising and passing away in each moment. Nothing is static, even though it may appear to be firm and unchanging because our perception is not sharp enough to detect the subtle changes occurring in each moment. The obscured mind puts together these unique moments of ever-changing existence and sees them as solid objects so that the ignorant mind can deal with the world. A stable, solid body is a mental image superimposed onto a stream of events in the same way that a spinning propeller is seen as a circle. The constant succession

of discrete acts of cognition or feeling appears as a monolithic event, just as the rapid change of frames in a film appears as a smooth continuum.

By practicing mindfulness and paying careful attention to the body and mental processes, we will gradually see that what appear as unified objects or events are momentary phenomena that are arising and passing away in a fraction of a nanosecond. This constant change occurs due to causes and conditions, which themselves are in constant flux. Similarly the elements that compose the body are actually dynamic processes that arise and cease in each moment. As mindfulness deepens, subtle impermanence is seen clearly, not in an intellectual or conceptual manner, but as direct experience.

To approach subtle impermanence, begin by examining your body. Is it the same from one year to the next? Is it the same from one month, week, day, hour, minute, and second to the next? Is it the same from one split-second to the next? Questioning in this way makes it clear that our body changes from split-second to split-second. Similarly, each part of our body and each atom of our body changes from one split-second to the next. Feelings, discriminations, miscellaneous factors, and consciousnesses also do not remain the same from one nanosecond to the next. Everything comes into existence, persists for the tiniest fraction of a moment, and then ceases; in fact, even in that split-second while it persists, it is changing. This is followed by something new that arises, persists for a changing fraction of a moment, and disintegrates. There is no way to stop this process: change is in the very nature of conditioned things.

The experience of a pleasant feeling is dependent on an object, the sense faculty, consciousness, and contact, but once the feeling arises, could it be permanent during the time it endures? Bhikkhu Nandaka, when instructing a group of five hundred bhikṣuṇīs, asked (MN 146.9):

Monastics, suppose an oil lamp is burning: its oil is impermanent and subject to change, its wick is impermanent and subject to change, its flame is impermanent and subject to change, and its radiance is impermanent and subject to change. Now would anyone be speaking rightly who spoke thus: “While this oil lamp is burning, its oil, wick, and flame are impermanent and subject to change, but its radiance is permanent, everlasting, eternal, not subject to change?”

To this the bhikṣuṇīs responded that such permanence is not possible. Anything that arises dependent on causes and conditions—even if it endures for a period of time—cannot itself be permanent and unchanging. It too perishes, and something new arises in each split-second of its continuity.

Our ordinary consciousness sees feelings as solid and substantial, but by directing our attention inward to our moment-to-moment experience, it is possible to realize the arising and ceasing of contact—the cause of feeling—in each split-second. As contact is seen—and it too is momentary and transient—so is the ceasing of each moment of feeling that has arisen based on that contact. By not understanding pleasant feelings as impermanent, sensual desire is ignited; by not understanding unpleasant feelings as impermanent, anger flares; and by not understanding neutral feelings as impermanent, confusion is activated. For this reason, the Buddha emphasizes understanding feelings with correct wisdom, because doing so prevents the arising of these afflictions and will eventually lead to their total eradication.

By increasing our mindfulness of each of the five aggregates, insight knowledge will arise that directly knows subtle impermanence. When this happens, it almost seems as if nothing is there, because whatever arises is gone in the next moment. The present cannot be stopped.

### *Unsatisfactoriness*

The *Path of Purification* says that duḥkha has the meaning of “oppression by rising and passing away.” In the passage from the *Simile of the Snake Sūtra* above, the Buddha points to the connection between impermanence and duḥkha by asking, “Is what is impermanent suffering or happiness?” Given that the five aggregates are transient and do not endure a second moment, they are unsatisfactory in nature; they are not secure, predictable, or dependable. The body may experience some temporary pleasure, but it is incapable of providing lasting, stable happiness that is invulnerable to changes in circumstances. Since our health and physical energy decline as we age, the body cannot be a source of true happiness.

Similarly, feelings are unsatisfactory by nature. Feelings are unstable—they are pleasant, then unpleasant; happy, then unhappy. The same unsatisfactoriness is found with discriminations, miscellaneous factors, and consciousnesses. In short, because the aggregates are under the control of afflictions and karma, they

are not beyond duḥkha. By releasing false assumptions about each of the five aggregates, we see that they have the nature of duḥkha and our false expectations and clinging to them cease.

### *Selflessness*

Selflessness (not-self) is the most difficult to glean of the three characteristics. To understand it, follow up on the first two characteristics and ask: Is what is impermanent and unsatisfactory fit to be regarded as “this is mine; this I am, this is my self”?

Underlying the answer is the ancient Indian idea of what is fitting to be regarded as I, mine, and my self, as well as our basic human notion of what we assume our true self to be. The ancient Indian conception of the self is a permanent, eternal, and intrinsically blissful self. The self is the master of the aggregates, able to accomplish what it wishes without depending on anything else. Clearly a self that is transient and under the influence of afflictions and polluted karma does not meet this description.

As for what we take to be our true self, impermanent things such as our five polluted aggregates that are bound up with duḥkha will not meet the mark because the self does not have ultimate mastery over these. Certainly we do not want to identify the polluted aggregates as being truly ours, truly what we are, or our true selves. Not finding something we can point to as our true selves puts in question the entire notion of whether such a true self exists.

The Buddha does not deny the conventional existence of the self. He used the word “I” when communicating with people. Conventionally and appropriately, the words “I,” “you,” “they,” and so forth are used to distinguish different people. The doctrine of not-self does not negate the existence of persons or of the designations used to refer to them. What is being refuted is a substantial ego entity, a permanent subject existing at the core of the psychophysical aggregates. The doctrine of not-self does not deny the existence of a person designated in dependence on the body-mind complex. It denies that the person exists as a self, as an enduring, substantial, independent entity. Saying the person exists is to say the five aggregates are present. Saying the person is selfless or that there is no self means the aggregates cannot be identified as self and do not contain a self. No

inner nucleus of selfhood can be found within or behind the conventional person composed of the five aggregates.

This is contrary to our ordinary way of thinking of ourselves. We think and feel that we are a self. We identify the body or mind as self or think a self stands behind the aggregates. According to our ingrained notion of “self,” the self has certain qualities. First, it appears to be an entity that endures through time. It might endure temporarily, coming into existence at birth and ceasing to exist at death. Or it might endure eternally, without ever ceasing after death. Second, the self is conceived to be one unified, indivisible whole that does not have parts. Third, the self seems to be self-sufficient and not dependent on causes and conditions. Fourth, it controls the aggregates. The self that is seen as our essence has mastery over itself. There should be no conflict between what we want ourselves to be and what we are.

Let’s examine the five aggregates and see if any of them fits this description of self. If such a self exists, we should be able to apply analysis to pin it down and find what it is. Conceiving a self can only be done in relationship to what is experienced, the five aggregates. While a number of different relationships between the self and the aggregates are possible, they can be subsumed in two. A real self should be either (1) the same as the aggregates—the self should be identifiable with some aspect of the body-mind complex—or (2) different from the aggregates—the self is separate from the aggregates and can be found as a distinct entity either inside the collection of the aggregates, behind them, or as their invisible owner.

In the *first option*, the aggregates would be the self. But do any of the aggregates have the four attributes that befits a real self?

- We think the self should be permanent, but the aggregates are impermanent. The body is a mass of physical processes, arising and passing away. The mind is a series of momentary events of awareness.
- We believe the self to be an indivisible whole, but there are five aggregates. Each of these aggregates in turn consists of a multiplicity of elements and events. Which one of the parts of the body would be the self? Which one of the moments of any of the four mental aggregates could be a single, unified self?

- We think the self is self-sufficient and independent of causes and conditions, yet the aggregates are conditioned and dependent on causes and conditions. The body arises from the sperm and egg of our parents, and it continues by depending on the nourishment provided by food. The mental processes arise from their own previous moments; they are influenced by the state of the body and arise reliant on the various sense faculties.
- We expect the self to be in control, but the aggregates are simply processes with no supervisor overseeing them. There is no one behind the mental processes controlling them or making them be a certain way. If there were a true essence, it should be able to bring the aggregates under its domination. But the five aggregates are not under the control of a findable self. If they were, then since the self doesn't want to suffer, it would be able to stop the body from aging and dying and stop the mind from experiencing painful feelings or having nonvirtuous intentions.

Although a true self should have these four attributes, the aggregates have none of them and in fact have four opposite attributes. The aggregates are insubstantial. The body is like a ball of foam, lacking any substance. Feelings are like bubbles, arising and breaking up very quickly. Discriminations are like a mirage, appearing but not being found when searched for. Miscellaneous factors are hollow like the trunk of a plantain tree. Consciousness is like a magical illusion, appearing but lacking any substance. There is no core in any of the aggregates. They are empty of any independent, substantial, or findable essence.

Similarly, the collection of the aggregates cannot be a self. If a self cannot be found in each aggregate individually, how could it be found in the collection of aggregates? For example, if a house has five rooms and there isn't a table in any of the rooms, a table certainly couldn't be found in the collection of the five rooms.

Nothing can be identified as self. Everything we take to be our self—any of the aggregates that we grasp to be I or mine—is not self. This fact contradicts our ingrained thought that centers around notions of “I,” “mine,” and “my self.” These notions are the source of *duḥkha*; cultivating insight wisdom enables us to break out of clinging to ideas of self.

According to the *second option*, the self would be findable distinct from the aggregates but would be contained within them or lying behind them. But when

we try to identify anything that the self does, such as walking or thinking, we can only see the aggregates doing those actions. There is no separate, substantial self to be found.

In short, when we analyze each aggregate, we find that it is impermanent, changing in every moment; it is in the nature of *duḥkha*, unable to bring stable happiness or security; it is not a substantial self, independent of causes and conditions; it is neither a controller self nor something controlled by such a self. Therefore, none of the aggregates are suitable to be considered “this is mine, this I am, this is my self.” The seeming presence of a self is an illusion.

That each aggregate is not mine, not I, and not my self counteracts three obsessions or graspings—craving, conceit, and wrong views—respectively. Understanding that the aggregates are not mine eliminates the obsession of craving, because craving thinks “this is mine” or “I want to make this mine.” The body, feelings, discriminations, miscellaneous factors, and consciousnesses are not the property of a substantial self. They are impersonal factors, each performing its own function without the help of a supervisory self. Since such a self does not exist, thinking that anything belongs to it is foolishness. Thus craving is relaxed.

Seeing that the aggregates are not I counteracts the fundamental conceit, the conceit “I am.” Based on the thought “I am,” other types of conceit and comparison manifest: I am superior to this person; I am equal to that one; I am inferior to this one. I am someone with such-and-such a position, therefore others should treat me with respect. My race, gender, nationality, socioeconomic class, or so on is higher than the others. Since the aggregates cannot be identified as I, how can we justify holding the conceit “I am”? Thus conceit is deflated.

So many views are based on the five aggregates—thinking the aggregates are the self, as in “my body is me, my feelings are me,” or thinking “I am the aggregates,” as in “I am my emotions, I am my thoughts, I am the thinker, the perceiver, the cognizer.” The Buddha described twenty types of view of a personal identity that lay out different relationships of the self and the aggregates that the confused mind interpolates. But seeing that the five aggregates are not our self neutralizes the multitude of wrong views. By understanding selflessness, we see that the aggregates are neither an independent self nor the possessions of such a self. In fact, the aggregates themselves are not independent things.

Knowing the aggregates in this way, as they actually are—as not I, mine, or my self—is seeing them with proper wisdom. The Buddha says (MN 22.28–29):

Seeing thus, monastics, a well-taught ariya disciple becomes disenchanted with material form, disenchanted with feelings, disenchanted with discriminations, disenchanted with miscellaneous factors, disenchanted with consciousness.

Being disenchanted, he becomes dispassionate. Through dispassion [his mind] is liberated. When it is liberated there comes the knowledge: “It is liberated.” He understands, “Birth is destroyed, the holy life (*brahmacarya*, *brahmacariya*) has been lived, what had to be done has been done, there is no more coming to any state of being.”

The knowledge and vision of things as they really are includes knowing the five aggregates in terms of all three characteristics. One who has done that has reached the final stages of insight meditation and becomes *disenchanted* with the aggregates. She sees through their appearance of being stable, bringing happiness, and being a self and thus loses fascination with them. She then attains the supramundane path and becomes *dispassionate* with respect to the aggregates, releasing the deep attachment to them. Through releasing clinging to the aggregates, the yogi attains the fruit of *liberation* and is now forever free from the pollutants—the primordial defilements of sensual desire, attachment to saṃsāric existence, and ignorance that have kept her trapped in saṃsāra since beginningless time. Emerging from meditation, the reviewing knowledge (*paccavekkhaṇañāṇa*) confirms that she has completed her mission and is now free from the cycle of rebirth. This is the knowledge and vision of liberation, the assurance that what had to be done has been done.

---

## REFLECTION

1. Contemplate each of the five aggregates one by one as being impermanent, duḥkha, and not-self, as described above. Become disenchanted with them. Relinquish fascination with them and turn your mind to the Dharma.
2. Imagine attaining the supramundane path and becoming dispassionate toward the aggregates. Put your energy and attention toward perception of nirvāṇa.

3. Imagine escaping from saṃsāra and attaining liberation, freedom from rebirth under the control of afflictions and karma.
- 

## *Abandon What Is Not Yours*

After instructing his disciples to analyze the three characteristics and refute a true I and mine, the Buddha teaches a swift method for releasing grasping. In the *Discourse on the Simile of the Snake*, he advises (MN 22.40–41):

Therefore, monastics, whatever is not yours, abandon it; when you have abandoned it, that will lead to your welfare and happiness for a long time. What is it that is not yours? Material form is not yours. Abandon it . . . long time. Feeling is not yours. Abandon it . . . long time. Discrimination is not yours. Abandon it . . . long time. Miscellaneous factors are not yours. Abandon it . . . long time. Consciousness is not yours. Abandon it. When you have abandoned it, that will lead to your welfare and happiness for a long time.

Monastics, what do you think? If people carried off the grass, sticks, branches, and leaves in this Jeta Grove, or burned them, or did what they liked with them, would you think: “People are carrying us off or burning us or doing what they like with us?”

(Monastics): No, venerable sir. Why not? Because that is neither our self nor what belongs to our self.

(Buddha): So, too, monastics whatever is not yours, abandon it. When you have abandoned it, that will lead to your welfare and happiness for a long time.

Craving and clinging want to make almost everything into I or mine; we want to control and possess whatever is possible. Here the Buddha recommends abandoning grasping for what is not ours. Since there is no findable self, how could there be an established mine that possesses things? There is no [substantial] I that is the aggregates or that owns the aggregates. When craving and clinging for what is not ours—our body, feelings, discriminations, opinions, ideas, emotions, attitudes, plans, consciousnesses, and innermost sources of awareness—

have been relinquished, the mind abides in peace. This is a powerful teaching to remember at times when grasping I and mine afflicts us. Applying it brings instant relief.

---

## REFLECTION

1. Think of a time when attachment to your body arose strongly—for example, you were sick and afraid of death, lying in the warm sunshine on the beach, injured and fearful of pain, or blissfully having a massage at a spa.
  2. Ask yourself, “Is this body I’m so attached to mine? Is it I? Is it my self?” Who possesses this body?
  3. When you can’t identify an I that owns the body, an I that is the body, and a self that is the body, relinquish the attachment to the body and feel freedom from craving.
  4. If your mind resists doing this or gets stuck while investigating, examine that defensiveness in the mind.
  5. Do this reflection for your feelings, discriminations, various emotions, and types of consciousness to see if you can locate mine, I, or myself.
- 

## *Insight Knowledge*

Insight knowledge (P. *vipassanā-ñāṇa*), which is equivalent to insight wisdom (P. *vipassanā-paññā*), is an essential step to liberation, one that must be cultivated carefully and correctly. The general procedure for meditation on the three characteristics that leads to insight was described earlier in this chapter. Direct seeing of the three characteristics is the knowledge and vision of things as they really are (*yathā-bhūta-ñāṇa-dassana*), a concentrated mind knowing the reality of things that leads to disenchantment, dispassion, and liberation.<sup>105</sup>

Many different objects can be investigated in a variety of ways with insight, but they can be synthesized into examining phenomena as dependently arisen and conditioned and thus seeing them as impermanent, *duḥkha*, and no-self. Because the nature of the aggregates and other phenomena is impermanent, unsatisfactory, and insubstantial, they cannot be a substantial self. Here a

meditator is not only negating a self-existing self but also changing the way she views the aggregates and phenomena in general. It is not the case that she leaves her ordinary perception of phenomena alone, accepting it as true. Rather, she comes to see that it is erroneous—what appears to be permanent, or to be one unified whole, or to exist independent of causes and conditions does not exist in those ways. Through seeing that the aggregates do not exist in the way she thought, she then negates their being a person who is truly there.

Now we will look at some of the methods the Buddha outlined in the sūtras that incorporate analysis of the three characteristics and cultivate insight. First is the method described in the *Discourse on the Six Sets of Six*, in which the six internal sources, six external sources, six classes of consciousness, six types of contact, six classes of feelings, and six kinds of craving are analyzed with insight. Because these arise and cease, the self that depends on them must also arise and cease. Since this is discordant with our conception of a substantial self, the existence of such a self is refuted.

Cultivating insight through analysis of the four great elements and the forms derived from them as taught in the *Greater Discourse on the Simile of the Elephant's Footprint* (MN 28) is another method, one that powerfully severs our identification with the body. The analysis of the derivative forms is especially interesting because Śāriputra ties all five aggregates together in the process of cognition, dissecting an instance of cognition into the five aggregates to show their dependent nature, conditionality, and selflessness.

In the *Greater Discourse to Mālunkyāputta* (MN 64), the Buddha analyzes the meditative absorptions in terms of the five aggregates, demonstrating how they too are impermanent, unsatisfactory, and selfless. In the *Discourse to the Man from Atthakanāgara* (MN 52), Ānanda investigates the meditative absorptions of the form and formless realms, showing them to be mentally conditioned and intentionally produced, and thereby not the self.

## *The Six Sets of Six*

In the *Discourse on the Six Sets of Six* (MN 148), the Buddha examines the components of the person to determine if they are a self and to develop the insight wisdom that leads to full realization.<sup>106</sup> He begins by setting out the

phenomena to be analyzed—the six sets of six phenomena or thirty-six factors: the six internal sources (six sense faculties), six external sources (six objects), six classes of consciousness, six types of contact, six classes of feeling, and six kinds of craving.

*The six internal sources* are the sense faculties—the eye, ear, nose, tongue, body, and mind—that are the source or base for the arising of consciousness. The Buddha was not concerned with looking at the sense faculties anatomically or physiologically; his interest was in the conscious experience of sentient beings and how the faculties relate to the object and function to produce consciousness.

According to the Abhidharma, the five physical sense faculties are subtle material housed in the gross organs of the eye, ear, nose, tongue, and body. This subtle material is sensitive and responsive to its respective object—the eye to visible form, the ear to sounds, and so forth. The mental source is the mind as a sense faculty; the *bhavaṅga* or subliminal consciousness is at work here.<sup>107</sup> The mental faculty is not a physical organ such as the brain. At the time of the Buddha, there was no thought of there being a physical basis for the mind; only in modern times is brain activity seen as related to mental activity. These six sources are said to be internal because they belong to the continuum of the person. As part of the psychophysical organism, they are the doors through which objects and consciousness come together.<sup>108</sup>

*The six external sources* are external objects such as visible forms, sounds, smells, tastes, tactile sensations, and mental phenomena that are known by the six consciousnesses via the six internal sources.

*The six classes of consciousness* are the visual consciousness, auditory consciousness, olfactory consciousness, gustatory consciousness, tactile consciousness, and mental consciousness. Each consciousness arises dependent on its respective external and internal sources. The first five types of consciousness cognize raw sensory data, without necessarily understanding their meaning. For example, the eye sense source enables the visual consciousness to perceive red and white, but it does not know that the object is a stop sign. The mental faculty transmits the sensory data to the mental consciousness, which synthesizes the various moments of seeing red and white shapes and, drawing on past experiences, forms the idea and meaning of a stop sign. The activities of identifying objects, labeling them, and knowing their meaning are done by the mental consciousness.

Our experience seems to be one seamless whole, but with refined mindfulness, we will gradually see that it is made of individual moments of consciousness. Sometimes one of the six consciousnesses is more prominent, and a moment later another is. Sometimes a consciousness perceives one object, and a moment later it perceives another. Even when a consciousness appears to be seeing the same object for a period of time, there are actually fleeting mind-moments arising and passing away. The sense faculty and its object are likewise arising and passing away in each moment, although they too appear to be one thing.

As mindfulness becomes more refined, it is possible to distinguish the successive moments of hearing a sound followed by the mental cognition of it. Refined mindfulness brings the ability to distinguish between the moment of tasting at the bare sensory level and the mental consciousness that recognizes the taste as sweet. The precise moments of enjoying the taste and of wanting more of it also appear clearly to a mindful and concentrated mind. In this way, the flow of experience is known to be a series of moments arising and passing away.

Such awareness helps us distinguish the information that is actually entering through our senses from our mental elaborations of that raw data. This mindfulness notices the liking and disliking, the favoring and opposing, the grasping at I, mine, and my self—multiple elaborations of the conceptual mind that is distorted by underlying tendencies such as attachment, hostility, and ignorance.

*The six types of contact* are the meeting of the six consciousnesses with their respective objects by means of their respective sense faculties. Contact is simply the coming together of the nose faculty, a smell, and the olfactory consciousness, for example. Their coming together does not mean that they mix together, but that the object is known by the consciousness due to the functioning of the sense faculty. Contact is very brief and it instantly gives way to feeling, discrimination, and so forth. Then thoughts about the object pop into the mind, as do various emotions that trigger karmic actions.

Each of the six contacts can be of three types—contact bringing a pleasant, unpleasant, or neutral feeling. Although contact itself does not experience the object as pleasant, unpleasant, or neutral—that is the function of feeling—it is differentiated in terms of the feeling it will produce.

*The six classes of feeling* arise from the six types of contact that occur when the six consciousnesses meet the six objects by means of the six sources. Occurring with each moment of consciousness, feeling is the experience of the object as pleasurable, painful, or neutral. The transition from contact to feeling occurs so quickly that we ordinary beings do not perceive it.

*The six kinds of craving* are the thirst for the sense object that has arisen from the six feelings that came from the six types of contact of the six consciousnesses with the six objects by means of the six internal sources. The Buddha laid out the sequence (MN 148.9):

Dependent on the eye and forms, visual consciousness arises; the meeting of the three is contact. With contact as condition, there is feeling, with feeling as condition, there is craving.

He then spelled out the other five kinds of craving in a similar way, showing that the six sets of six all culminate in craving.

To break this chain, we must first understand how craving originates. In this context, the Buddha explains it slightly differently than in the presentation of the twelve links of dependent origination, although factors in the two presentations overlap. Dependent origination is not a fixed formula that always progresses in a predetermined order. It is a complex process with streams of causation working in different directions, intersecting one another. The twelve links show the progressive chain of links through which rebirth in saṃsāra occurs over a series of lifetimes. The presentation of the six sets of six shows the dependent origination of craving as it occurs in daily life, once a lifetime is already in process. Through this, we begin to see that the daily experiences we take for granted are the fuel for craving. By repeatedly welcoming craving into our minds and yielding to its seductive power, we suffer here and now and perpetuate our existence in saṃsāra as well.

Bill wakes up in the morning and smells freshly baked muffins in the kitchen. The nose faculty connects the aroma of the muffins with the olfactory consciousness and with contact, he smells the sweet fragrance. A pleasant feeling arises, and the mental consciousness discerns: “Yum, there are freshly baked muffins.” Craving rears its head, and the thought “I haven’t eaten freshly baked muffins in ages and want to eat these!” instantly arises. With a mental image of how delicious the muffins will taste, he goes to the kitchen and starts eating, but

his spouse tells him the muffins are for guests coming that evening. Disappointed because his desire has been frustrated, Bill gives in to a grouchy mood that sets him up to quarrel with his spouse.

In the process leading to the arising of craving, some links occur without choice: Dependent on the nose faculty and aromas, the olfactory consciousness arises. The meeting of these three is contact. All this happens in a continuous flow. When the sense source, object, and consciousness come together, we cannot stop contact. With contact as a condition, feeling automatically arises. Choice is present now—we decide how to respond to the feeling. When mindfulness is lacking, craving easily flows on from feeling. But when mindfulness, introspective awareness, concentration, and wisdom function even to a small degree, it is possible to interrupt this process and stop the arising of craving and its companions—anger, arrogance, jealousy, and so on.

In this life, craving leaves us dissatisfied, frustrated, and longing for something to fill the psychological void inside. Craving also motivates actions, which in turn lead to rebirth. Following rebirth comes the inevitability of aging and death, as well as sorrow, lamentation, pain, grief, despair, and the whole mass of *duḥkha*.

Propelled by craving, the mind continually looks for excitement by contacting objects with the six senses. Craving operates in the mind to hold the sense faculties to the external objects, producing more contact. In discussing whether the sense faculties are the fetters for their respective objects or the objects are the fetters for their respective sense faculties, Śāriputra asks Koṭṭhita (SN 35.232):

Suppose, friend, a black ox and a white ox were yoked together by a single harness or yoke. Would one be speaking rightly if one were to say: “The black ox is the fetter of the white ox, the white ox is the fetter of the black ox?”

(Koṭṭhita): No, friend. The black ox is not the fetter of the white ox, nor is the white ox the fetter of the black ox. Rather the single harness or yoke by which the two are yoked together; that is the fetter there.

(Śāriputra): So too friend, the eye is not the fetter of forms nor are forms the fetter of the eye. Rather the desire and sensual

attachment that arise there in dependence on both; that is the fetter there.

Śāriputra then says the same regarding each sense source and its object. In other words, the fetter, yoke, and rope that tie sense faculty and object together is craving. Ārya wisdom, which is a product of the seven awakening factors, is the main tool to cut this craving. When it does, the sense faculties and their objects are still there; cognition and feeling occur but craving is no longer. Arhats still have eyes, ears, and so forth, and objects still exist. Arhats cognize these objects, but the delight and sensual desire that bind the mind to them through the sense faculties do not arise.

However, when unopposed, craving induces clinging and grasping. Grasping holds the five aggregates as “this is mine; this I am; this is my self.” What sustains craving, enabling it to wreak havoc in our lives? Ignorance. Wisdom is the antidote to ignorance, and the selfless nature of all phenomena that we ordinarily identify as mine, I, or my self is the object to be realized by wisdom. By seeing the aggregates as “this is not mine; this I am not; this is not my self,” wisdom stops craving.

In the sūtra, the Buddha proceeds to demonstrate how none of the thirty-six factors are mine, I, or my self. In doing so, he is not asserting that there is no self whatsoever, as the translation “no-self” may imply. Nor, by saying that these thirty-six factors are not the self, is he implying that something else is the self or that a subtle self exists behind or within the aggregates. Rather his aim is to break the identification of any of the aggregates or any part of one aggregate as the self.

The Buddha uses the word “self” as a valid conventional notion when referring to the person as the one who creates karma and experiences its result. He encourages people to purify themselves and to be responsible for their own actions. Speaking of the self in this way is not problematic; only when the self becomes an object of grasping or of metaphysical speculation must we question: What is this self?

### *Analysis of the Thirty-Six Factors as Not-Self*

Throughout history elaborate theories and philosophies about the self have been concocted. Some people assert “the self is ineffable and blissful,” “the self is love,” or “an eternal unitary self is reborn and attains liberation.” Other people who don’t examine or develop theories about the self simply have a natural grasping, “this is mine; this I am; this is my self,” based on the aggregates. Whenever anyone approached the Buddha with a theory about the true self and said that he had a self, the Buddha would ask the person what they identified as that self. The Buddha then inquired if that thing they are taking to be the self is permanent or impermanent. Once the person saw that it is impermanent, the Buddha led them to realize that what is impermanent is *duḥkha* by nature and cannot be a self.

Beginning with the first of the thirty-six factors and then using the same argument for each of the others, the Buddha says (MN 148.10):

If anyone says “The eye is self,” that is not tenable. The rise and fall of the eye are discerned, and since its rise and fall are discerned, it would follow: “My self rises and falls.” That is why it is not tenable for anyone to say “The eye is self.” Thus the eye is not self.

Very few people would actually think the eye source was the self. However, it is likely that we take the collection of the aggregates or the mental consciousness as the self. In any case, the structure of the argument presented for the eye is the same for all the other factors.

To review, before understanding why the eye and so forth are not the self, we have to know what is meant by “self.” What kind of self are we looking for? According to Indian thought at the time of the Buddha, the self was something everlasting, with stable and continual existence; it was what went from one life to the next, bringing karmic seeds along with it. Indian metaphysics aside, ordinary people have the sense of an I that is continual and enduring—a self that retains the same identity over time; a secure, reliable, continuous self, something that is truly me.

We don’t think of our self as coming into existence and going out of existence in every split-second, but that is exactly what a substantial self would have to do if the eye or any other factor in the five aggregates were the self. Why? If the eye were the self, the eye and the self would have the same characteristics. One characteristic of the eye is that it is composed of individual moments of the eye that are constantly coming into and going out of existence. In each split-second,

brief moments of the eye arise and pass away many times, producing new moments of the eye that similarly arise and pass away. If the eye were arising and passing away billions of times in each split-second, the self would have to be changing that quickly as well. However, such a transient self does not fit our feeling of a stable, enduring, everlasting self. Therefore the eye cannot be the self. Do this investigation with the mental consciousness or the collection of aggregates as the self, as these notions more typically arise in our mind.

If we insist that the mental consciousness is the self, which moment of mental consciousness is the self? The mental consciousness that exists at 6:00 is not the same as the mental consciousness that exists at 6:01, which in turn is different from the mental consciousness at 6:02 and 6:03. Which one of these mental consciousnesses would be the self? If one moment of the mental consciousness were the self, then when it ceases in the next split-second, the self would similarly cease. And just as a new mental consciousness arises in the next moment, a new self would also come into existence in each moment. A different self would exist in each fleeting moment. None of these options is possible if the self were permanent, everlasting, and maintained the same identity throughout time.

In short, to identify something as the self, it would have to be permanent and unchanging. Insight directly perceives that each of the thirty-six factors is impermanent. Therefore, none of them is the self. In other words, the thirty-six factors are not the self because they are characterized by subtle impermanence, whereas a self must be permanent.

In meditation, a practitioner takes each of the thirty-six factors and examines it, seeing if it could be a continuous self that retains its identity from one moment to the next. It is important to examine each factor individually. Simply understanding the argument for one factor and then jumping to the conclusion that none of the factors can be a self will not bring true insight. We need to analyze and investigate with careful and precise attention, deeply examining if anything can be identified as the self that we so deeply believe exists.

Directly seeing the subtle impermanence of any of the thirty-six factors requires mindfulness, concentration, and insight. Of course, we can get a sense of the impermanence of the eye or the mental consciousness by reflecting on their gross impermanence. We may also use reasoning to become familiar with their transient nature, or reflect on the constantly changing nature of subatomic particles based on scientific evidence. According to some physicists, many

subatomic particles are flashes of energy that appear and disappear. However, to arrive at a deeper level of understanding, deep mindfulness and concentration are needed to observe the arising and passing away of the aggregates and all their parts in progressively shorter periods of time. Meditators with strong mindfulness and deep samādhi perceive this as clearly as we see a pearl in the palm of our hand.

If a person identifies their body as the self, they must dissect the body mentally and investigate: Is the color of the body my self? Is the sound, smell, taste, tactile sensation, or mental image of the body who I am? Examining external objects is a way to investigate the concept of “mine.” We may think that this object is *mine* and want to retain continuous, permanent possession of it. But these external items also arise and disintegrate in each moment, and eventually even their continuum will cease. In that case, how could anything ultimately be mine? Everything that we cling to and take to be mine not only perishes in each split-second but eventually will be struck by gross impermanence. A treasured photograph changes in each moment and one day will crumble into bits or be destroyed by fire, water, or other means. What can truly be mine about such a passing phenomenon?

Similarly, if someone says that the eye consciousness is the self, that too is not tenable because that consciousness arises and passes away in each moment. Eye contact too occurs so quickly that it is unlikely that anyone would think that is their abiding self. Is the feeling generated through eye contact the self? This is not possible, because like all previous factors, a feeling does not endure as exactly the same thing in the second moment. Any and all feelings of pleasure, pain, or neutrality arise dependent on their conditions. Because the sense source, object, consciousness, and contact that were the causes for a particular feeling are also momentarily changing, so too is the feeling that is dependent on them.

Could craving be the self? To the extent that we enjoy craving and take it as the source of enjoyment, we might think craving is our true self. Some philosophers think that the will to live is our true identity; it is the self. But that will to live is just another name for craving, because we crave saṃsāric embodiment. But craving arises and passes away in each brief moment, making it unsuitable to be a secure, constant self.

While observing in meditation the arising and ceasing of the internal and external sources, consciousness, contact, feeling, and craving, turn your attention

to the meditating consciousness—the consciousness that is observing these momentary phenomena. Is that your self? It arises and passes away in the briefest of moments; there is nothing there that can be a true self or identity. When you analyze what you usually identify as self—the five aggregates or some part of them—you discover that it arises and ceases in each split-second. Because it is transient, it is not a basis for secure and true happiness; it is unsatisfactory by nature. Something that is impermanent and unsatisfactory is not suitable to hold as a self—a true, substantial, enduring basis of individual identity. The only possible conclusion from this analysis is that none of the aggregates is the self and that such a permanent, partless, substantial self that is a controller does not exist.

The Buddha repeatedly asked if any of these phenomena are the self to encourage us to investigate phenomena and to examine our notion of self. He didn't just say, "There is no self." Such a statement presents a foregone conclusion and stifles the inquirer from researching the issue themselves and reaching their own conclusion. The Buddha did not present selflessness as a metaphysical position that cannot be tested. Instead he explained the field of grasping—the five aggregates—and said these are what ignorance clings to as the self. He then encouraged us to search for and try to find anything that could plausibly be a substantial, everlasting self.

Through the above investigation, we see that impermanence is the foundation for understanding selflessness. With refined meditation, sharp-faculty meditators can see subtle impermanence and move directly to understanding selflessness. For other people, the Buddha used the fact of *duḥkha* to help them release their grasping at mine, I, and my self and to realize selflessness. Seeing that the aggregates have the characteristic of subtle impermanence and that whatever is impermanent is unsatisfactory, unpredictable, and bound up with *duḥkha*, they then reflect: Is it worthwhile to continue holding what is *duḥkha* in nature and bound up with suffering as I, mine, or my self? Or is this grasping to be relinquished in order to attain lasting happiness?

### *Understanding Selflessness by Means of the Elements*

In the *Greater Discourse of the Simile of the Elephant's Footprint* (MN 28), Śāriputra, the Buddha's disciple who was foremost in wisdom, explains not-self

with respect to material form. In doing so, he bases his analysis on the accepted outlook of his time in which material form was composed of the four primary or great elements (earth, water, fire, and wind) and forms derived from them (the six sense faculties and their objects). Understanding how form is related to the arising of consciousness, feeling, clinging, bondage, and liberation is conducive for realizing nirvāṇa.

In general, “form” refers to any material form, but in many contexts it refers to the body. The body is one of the five aggregates subject to clinging. It is the object of clinging, and it came into existence as a result of clinging. The form aggregate, as are the other four aggregates, is included in the first truth, true duḥkha. The form aggregate is of two types: the four primary elements and material form derived from them. Although the sūtras speak about the four primary elements, they mention derived forms but do not explain them in depth. That is done in the Abhidharma, where derived forms include the five sense faculties and the four objects—color, sound, smell, and taste. Tangibles are the four primary elements themselves.

The four coarse elements should not be thought of as things such as the ground, the ocean, a campfire, and the breeze on a windy day—but as four properties or aspects of material form. The earth element is the aspect of hardness, resistance, and mass. The water element is the aspect of fluidity and cohesion because things that are damp stick together easily. The fire element is the property of heat and maturation because warmth makes plants grow and fruit mature, and the wind element is the aspect of expansion, contraction, pressure, and movement. The four elements are conditions for one another and are inseparably bound together. They exist in dependence on one another.

Although all material things are a combination of all four elements, one among the four is usually predominant in a specific object. In the space around us, the wind element is predominant, but there are also particles of dust in the air. The earth element is stronger in the dust; however, there is a certain amount of water in it too. The water causes smaller particles to coalesce to form a dust mote. Blood is mostly the water element, but the cells in it contain the earth and fire elements; blood moves, indicating the presence of the wind element.

Understanding selflessness by means of the four elements involves reflecting on each element in detail by analyzing the internal and external elements to determine if they are mine, I, or my self, and seeing their subtle impermanence.

To use the earth element as an example: The earth element may be internal or external. The internal earth element includes parts of the body in which hardness and resistance are dominant qualities. In the list of thirty-two parts of the body found in the establishment of mindfulness of the body, the hair, nails, teeth, skin, muscles, bones, spleen, lungs, intestines, liver, and feces are among the parts of the body in which the earth element is predominant. The external earth element is found in things in others' bodies and in the environment that are characterized by hardness and resistance—vegetables, fruit, trees, buildings, an insect's body, and so on.

Both the internal and external earth elements are just earth element. When we think about it, there is not much difference between the two. We usually think “this body is mine,” or when we're in pain or need surgery, we think “this body is me.” In our mind there is a clear delineation between what is outside and therefore is not me, and what is inside and therefore me or mine. But the quality of hardness and resistance is the same in both places.

The distinction between the internal and external earth elements is not so clear. Our hair consists predominantly of the internal earth element, and we consider it part of us. But after cutting it, we throw it away and it becomes the external earth element. We no longer think of it as mine. Vegetables are the external earth element; they are not us or part of us. But after we eat them, they become part of the internal earth element of our body, and they are seen as mine or as part of me. When portions of the vegetables are eliminated as feces, we again consider that as the external earth element that is other than us.

In this way an interplay between the internal and external earth elements continuously occurs. Everything in our body that is hard and resistant began as the external earth element and later became the internal earth element of our body that we cherish and cling to. Then when the body dies, it is buried or cremated and the internal earth element is recycled in nature, becoming the external earth element. What we eat is made up of the earth element that used to be part of the bodies of sentient beings who lived on the planet millions of years before us.

Because of strong habit, mental fabrications, and grasping, the sense of I, me, mine, and my self become focused on the body. We judge people based on their body—their skin color, the shape of their eyes, their gender—and because of this some people are oppressed and others are privileged; some receive an education

and others do not. Human beings fight, torture, rape, and kill others due to grasping at the body as mine, me, and my self and holding others' bodies as other, different, and therefore suspect. In fact, all bodies are made of the same earth element, as are so many things in our environment. Which earth element is me and mine? Which is other? Which is impersonal in nature? Through deep analysis, we conclude that there is nothing in the body to cling to as being a person; there is nothing in the body that is I, mine, my self, or you, yours, your self. Proper wisdom understands this clearly. Śāriputra makes the point (MN 28.6):

Now both the internal earth element and the external earth element are simply earth element. And that should be seen as it actually is with proper wisdom thus: “This is not mine, this I am not, this is not my self.” When one sees it thus as it actually is with proper wisdom, one becomes disenchanted with the earth element and makes the mind dispassionate toward the earth element.

There is a useful distinction between what is conventionally considered oneself and what is external to oneself. Your arm is not the same as a stone. However, this does not imply the existence of a substantial self. The body is not the property of a substantial self.

Once we see both the internal and external earth elements for what they are and understand that the earth element is not mine, not I, not my self, disenchantment with the earth element and the body arises. There isn't anything spectacular about the earth element, is there? There isn't anything to be attached to in the qualities of hardness and resistance. Nothing about the earth element is me, mine, or my self. Being disenchanted, we become dispassionate and relinquish clinging to the earth element and the body; we cease to identify the body with the self.

---

## REFLECTION

1. Be aware of and experience the inner earth element—the bones, muscles, inner organs, and so on in your body.

2. Be aware of the outer earth element—the ground, buildings, animals, and vegetation around you.
  3. Consider that the same earth element composes both your body, others' bodies, and things in your environment.
  4. Observe that when you eat, what was the outer earth element becomes the inner earth element as it assimilates into and forms your body. Watch the mind begin to consider what was the outer earth element and is now the inner earth element to be mine, I, or my self. Is it reasonable to consider it in this way?
  5. Observe that when you have a bowel movement, some inner earth element becomes outer earth element that you consider unrelated to you and even disgusting. But isn't it the same earth element? Is it now I, mine, or my self?
  6. What is I, mine, and my self?
- 

A second way to break down identification with the body and grasping the body as I and mine is to reflect on the impermanent nature of the earth element. According to ancient Indian cosmology, a universe evolves, exists, dissolves, and becomes nothing. This happens due to imbalance in the four elements. For example, there will be a time at the end of an eon when water swallows up the external earth element, which then vanishes under it. Since the great earth element, which seems so reliable, stable, and permanent, will end one day, what can be said about this body, which exists only for a comparatively short time? This body is always disintegrating and most unreliable. What in it could possibly be I, mine, or my self? Remember: in asking these questions, we are checking to see if the body can be a substantial I that is permanent, pleasurable, independent of causes and conditions, and the controller of the aggregates.

The two meditations above—seeing the internal and external earth element as they actually are with proper wisdom and seeing their subtle impermanence—should be applied to the other three elements—water, fire, and wind. In the body, the water element is prominent in bile, phlegm, pus, blood, sweat, tears, spit, mucus, urine, and other bodily fluids. The water element is found in liquids in the environment as well—in ponds, rivers, rain, aquifers, and oceans. When these liquids are drunk they become part of our body, and when they are expelled, the internal water element in our body is recycled and becomes part of the external water element.

According to Indian cosmology, at the end of an eon the external water element evaporates completely. Since this is the case, how much more so is the internal water element in our body short-lived and unreliable? Whether external or internal, the water element is impersonal, with nothing in it suitable to be considered mine, I, or my self.

The fire element is the heat in the body. Active in digestion and metabolism, the fire element promotes aging of the body. The external fire element heats our homes and burns them down. The internal wind element is apparent in the breath as well as in the subtle winds or qi that course through the limbs, causing them to move. According to Indian physiology, thought and intention activate the wind element, which is transmitted to the limbs, stimulating them to move. (The contemporary equivalent may be nerve currents.) The external wind element enables all movement—of clouds, ocean waves, and earthquakes. The internal and external elements of fire and wind are simply the impersonal fire element and the impersonal wind element. They are not suitable to be considered as I, mine, or my self.

Śāriputra clinches the argument concerning the selfless nature of the body by saying (MN 28.26):

Friends, just as when a space is enclosed by timber and creepers, grass and clay, it comes to be termed “house,” so too, when a space is enclosed by bones and sinews, flesh and skin, it comes to be termed “body.”

What we see as our body is nothing more than a space with bones as its structure; muscles, internal organs, and tissue filling it in; and skin holding it together. There is nothing in this collection of elements or in any part of it that is a real body. This being the case, there is nothing in it that could be a self or person.<sup>109</sup>

When meditating on the establishment of mindfulness on the body, in addition to scrutinizing all parts and aspects of the body with wisdom, bear in mind that it is composed simply of impersonal elements. Including the above explanation in your meditation will strengthen your understanding of the body and of not-self.

## *Understanding Selflessness by Means of Derived Forms*

In addition to the meditation on the four primary elements to realize selflessness, Śāriputra taught a meditation on the conditioned and dependent nature of forms derived from these elements. This meditation too is for the purpose of realizing the four truths and nirvāṇa. The eye faculty is used as an example, the argument being applicable to the other senses as well.

For a full visual cognition to arise, several factors must be intact—there must be the eye faculty, a visible form in range of the eye, and the mind placing attention on and engaging with that object. If any of these are lacking, a fully conscious visual cognition will not arise. The various aspects of a full visual cognition can be subsumed in the five aggregates. The visible form (the red color of a blossom), the eye faculty, and the person's body that houses that sense faculty are included in the form aggregate. The feeling aspect arising from that cognition (probably a pleasant feeling) is included in the feeling aggregate. Identifying the flower is the aspect of discrimination in that cognition; it is part of the aggregate of discrimination. Mental factors such as intention, attention, contact, mindfulness, and concentration that arise with that full visual cognition are included in the aggregate of miscellaneous factors. The visual consciousness (the basic entity that sees the flower) is included in the aggregate of consciousness. In this way, all five aggregates are present, functioning, and intertwined in this one act of cognition of the red color of a blossom.<sup>110</sup> Having explained this, Śāriputra then makes one of the most famous statements in the early sūtras (MN 28.38):<sup>111</sup>

Now this has been said by the Blessed One (the Buddha): “One who sees dependent arising sees the Dhamma; one who sees the Dhamma sees dependent arising.”

This statement underscores that understanding dependent arising is the key to understanding the entire Buddhist doctrine; it is the cardinal point to realize reality and the four truths; it is the most important factor to attain nirvāṇa. These five aggregates subject to clinging are dependently arisen: they repeatedly arise in dependence on the sense faculties being intact, a form being in range of the faculties, and the mind placing attention on that form. Depending on those

conditions, a cognition arises and together with it arise factors of all five aggregates.<sup>112</sup>

These five aggregates subject to clinging are the first truth, true duḥkha. The deeper significance of duḥkha is the fact that the five aggregates come into being through polluted conditions stemming from ignorance. Our internal world of experience and the external world that we apprehend and engage with all originate due to such polluted conditions. They are not reliable and stable; moreover, they are not mine, I, or my self.

Craving is one of the principal factors that bring the five aggregates into existence. Ordinary beings crave experiences through the five aggregates. Craving and clinging—elements that themselves are part of the five aggregates—perpetuate the arising of the five aggregates in one birth after another. In one life after the next, a new set of aggregates arises that, in turn, has all the elements necessary to create more sets of aggregates in future lives.

How do we bring this process to an end? Since the aggregates are dependent on conditions, when those conditions cease, compulsive rebirth also ceases. Because the origin of duḥkha is impermanent and conditioned, when these conditions are destroyed, the duḥkha that results from them cannot arise. The āryas' eightfold path that damages and eventually eradicates the origins of duḥkha is also conditioned, so it can be practiced and cultivated. Cultivating the path will eradicate the origin of duḥkha, leading us to the unconditioned, nirvāṇa, at which time true peace is found.

In this volume of the *Library of Wisdom and Compassion*, we have plunged into the topics of selflessness and emptiness that were mentioned in earlier volumes. We have learned some of the fundamental concepts regarding the ultimate nature and how it can be approached through the understanding of dependent arising. We have also begun to learn some of the reasonings and meditation methods employed to realize the ultimate nature. The next volume will delve into some of these numerous reasonings and meditation methods that lead to this realization.

By investigating both the Pāli tradition's and Sanskrit tradition's approach to the ultimate nature, we discover a basic unity in that both emphasize the analytical method and dependent arising as an important topic to analyze. We have also seen divergent views, specifically the Sanskrit tradition's explanation of the selflessness of phenomena in addition to the selflessness of persons explained

in the Pāli tradition, and the different levels of the object of negation in the meditation of the selflessness of persons.

Both the commonalities and differences point to the Buddha's skill as a teacher who makes his teachings suitable for a wide variety of disciples. We are incredibly fortunate to have encountered these teachings, to have the opportunity to learn and practice them, and to have the receptivity to trust and have faith in them. May all merit from our efforts be dedicated to the full awakening of all sentient beings.

## Coda: The Pāli Abhidharma

ONE PURPOSE OF the *Library of Wisdom and Compassion* is to familiarize Buddhists with the doctrine of other Buddhist traditions. Along this line, this coda will explain a few aspects of the Abhidharma as taught in the Pāli tradition. The Pāli explications of the dharmas that compose material objects are briefly presented so that people who are interested in tenet systems and who have studied Buddhist tenets can expand their knowledge.<sup>113</sup> Many Tibetans believe the Pāli tradition to be equivalent to the Vaibhāṣika or Sautrāntika tenet systems. Although it does share some similarities with these, there are some important differences.

Due to geographical distances and doctrinal issues, eighteen schools developed after the Buddha's parinirvāṇa. It seems that most of these had their own systems of Abhidharma. The Pāli Abhidharma developed in south India, Sri Lanka, and other Theravāda countries. The Sarvāstivāda Abhidharma developed in Kashmir and northern India. There were other Abhidharma systems as well among the eighteen early schools, but only texts from the Theravāda, Sarvāstivāda, and Dharmaguptaka schools are extant today.<sup>114</sup> Later masters in countries following the Pāli or Sanskrit tradition wrote subsequent Abhidharma texts.<sup>115</sup>

Although both the Pāli and Sarvāstivāda Abhidharma Piṭakas have seven canonical Abhidharma treatises, these seven are not the same. The themes in these two sets of seven treatises overlap to some extent, but in some instances their interpretations differ. Present-day Theravāda follows the Pāli Abhidharma, whereas the Abhidharma texts known in Tibetan Buddhism descend from the Sarvāstivāda and Mūlasarvāstivāda Abhidharmas.

The early Abhidharmikas who lived just after the Buddha probably shared similar ideas. In the third century BCE, Buddhism spread to Sri Lanka, where the Pāli Abhidharma developed. Sri Lanka is far from northern India where the Sarvāstivāda Abhidharma evolved. As time went on, some terms that were common to both Abhidharmas came to have slightly different meanings. For

example, the word “ultimate” (*paramārtha*, *paramattha*) was used by the early commentators in one way but it came to have a different meaning in the early Abhidharma, and even other diverse meanings in the Yogācāra and Madhyamaka tenet systems. Furthermore, the Sarvāstivāda and Pāli Abhidharmas differed in what they considered ultimate.

Unless otherwise mentioned, the views below are those of the Pāli Abhidharmikas. As we reflect on them, we will see that the Vaibhāṣika doctrine that arose from the Sarvāstivāda school differs from the Pāli system. In general, the Sarvāstivāda system tends more toward substantialist assertions than does the Pāli system. Please note that, as will be seen below, the notion that modern-day Theravādins hold Vaibhāṣika or Sautrāntika tenets is incorrect, although they do share some similar views.

## *Formulating a Philosophy Rooted in the Buddha’s Teachings*

When the Buddha taught the sūtras that were later systematized to form the Pāli canon, his teachings were practice oriented. He instructed people of diverse backgrounds, spiritual dispositions, and interests to live a good life in the present, to create the causes for good rebirths by observing the law of karma and its effects, and to attain liberation by practicing the three higher trainings. At that time, his teachings were not an organized theory about diverse phenomena or their mode of existence. Formulating such a philosophy from the Buddha’s teachings was the work of future generations, beginning with the Abhidharmikas.

The Abhidharma is one of the three baskets of the Buddha’s teachings. “Abhidharma” indicates a discipline or study of the Dharma. The word “dharma” has multiple meanings, including phenomena, the Buddha’s teachings, and the physical and mental elements into which all phenomena can be resolved. Of the three higher trainings, the Abhidharma is associated with the higher training in wisdom.

Theravāda scholars and practitioners have varying views regarding the origins of the Abhidharma: Some say it was first spoken by the Buddha and later related by Śāriputra. Others say it was composed by arhats and sages. However, all agree that the Abhidharma developed and was systematized after the Buddha’s

parinirvāṇa. The aim of the early Abhidharmikas was to discuss the underlying structure of the Buddha's teachings in a systematic way that would apply in all circumstances and help practitioners in their meditative practice, so they would attain awakening.

One way they did this was by forming lists of phenomena and matrixes to point out the unique characteristics of each phenomenon as well as its relationships with other phenomena. By doing this, they emphasized the Buddha's aim of helping us to understand that the world and the beings in it are not how we commonly think of them. Things are not permanent, pleasant, arising from an underlying metaphysical substance, or governed by a findable, real self. They are processes, not isolated objects. The people and objects we encounter in our daily life arise dependently and are interconnected and interlocking physical and mental phenomena, arising and ceasing in every instant due to their causes and conditions. By dissecting things into their components, the Abhidharmikas highlighted that a real self cannot be found.

While teachings on selflessness and emptiness in present-day Buddhist traditions began with the Buddha's sūtras, they were further elaborated by the Abhidharmikas. The theories and structures they developed, in turn, were later influenced by the philosophies of non-Buddhist schools as well as by Abhidharmikas from the other Buddhist schools. This led to new Abhidharma writings as well as to other treatises on wisdom and the nature of reality by later Indian sages such as Nāgārjuna and Dharmakīrti. There has been a great deal of interchange, debate, revision, and amplification of various theories articulated by the early Abhidharmikas. This history is not easy to untangle since not all the relevant texts are extant today. However, a cursory look will help us understand the evolution of the philosophies of today's Buddhist traditions.

For people who have studied in the Tibetan tradition, some of what you read below may not accord with the tenets texts that you have studied. Furthermore, within the Tibetan tradition, various subschools describe the assertions of ancient Indian philosophical schools differently. The willingness to hear other approaches is crucial.

## *The Early Abhidharmikas*

While deconstructive analysis has consistently been valued in Buddhism, in the early years it did not focus on the ontological status of objects, but on distinguishing the constituents of phenomena and their relationships with one another. As one of the seven awakening factors, the discrimination of states (*dharmapravicaya*, *dhammavicaya*) was highly valued in meditation and was used to develop right view, insight, and wisdom for the purpose of attaining awakening. It was employed to evaluate various mental states and practices and differentiate the virtuous ones to cultivate from the nonvirtuous ones to abandon. In this way, practitioners would live ethically and develop deep concentration.

Discrimination was also used to identify the actual constituents and structures of commonplace objects in order to eliminate attachment and animosity toward them. Furthermore, discrimination helped practitioners to see the interdependence among phenomena, which aided in realizing selflessness. In this way, they emphasized that the teachings on dependent arising are essential to attain liberation.

To fulfill these purposes, the Abhidharmikas drew on lists found in the sūtras. They examined questions such as “What are the afflictions, the pollutants, the auxiliary afflictions? In which of the three realms of existence—desire, form, and formless—are they found? Which ones are virtuous, nonvirtuous, or neutral?” This led to comprehensive analysis of mental states—the principal topic of the first chapter of the *Enumeration of Factors* (*Dhammasaṅgani*), the first book of the Pāli Abhidharma. The analysis of virtue and nonvirtue led to in-depth discussions on karma. The thirty-seven harmonies with awakening were analyzed to reveal the way to practice the path. As time went on, Abhidharma commentators spelled out the paths and stages of awakening and related them to various defilements that were reduced or eradicated on each path and at each stage.

The theories of the early Abhidharmikas who appeared just after the Buddha’s parinirvāṇa were rooted in three principal doctrines that the Buddha expounded:

1. Momentary impermanence. All conditioned phenomena arise and pass away each moment due to their causes and conditions.
2. Selflessness. There is no substantiality to either the person or the five aggregates that compose the person.

3. Dependent origination. Phenomena arise in dependence on other phenomena—their causes and conditions—and they exist in relation to other phenomena. There is no underlying substance out of which phenomena appear or are formed. Nor is there an absolute, external creator that created mind and matter.

By describing and analyzing phenomena, the Abhidharmikas engaged in two important activities: first, they analyzed phenomena in depth, clearly describing the unique character of each phenomenon; second, by analyzing phenomena into their component parts, they created more detailed lists of classifications of phenomena, and the relationships among these phenomena developed into what is called the “dharma theory.”

Beginning with categories of phenomena in the sūtras—the five aggregates, the twelve sources, the eighteen constituents—they analyzed each one and described its relationships to the others. They investigated how the five aggregates correspond to the twelve sources and eighteen constituents and which sources and constituents are included in each aggregate.

By analyzing phenomena into their smallest constituents, practitioners see that there is no underlying substance from which everything was created. This contradicts the assertions of non-Buddhist schools such as the Sāṃkhyas who say that all manifest objects are transformations of the fundamental nature (primal substance, *prakṛti*, *pakati*). It also invalidates the beliefs that everything is created from one unifying cosmic substance, that one universal mind underlies all that exists, and that everything is created by and will dissolve back into a permanent and absolute creator. By stating that everything in the world appears, changes, and ceases due to causes and conditions, Buddhism disproves theories of fatalistic predetermination or causeless, random arising.

By showing that the constituent parts of phenomena do not exist in isolation unrelated to anything else, Abhidharmikas emphasized causal relationships. Things have direct causes and cooperative conditions: wood is the direct cause of a table and the carpenter is its cooperative condition. Some phenomena are “co-nascent conditions” in that they arise together and mutually condition each other. In other words, if one is present, so is the other.

In the process of selecting the topics to discuss, the early Abhidharmikas also pointed out the major topics and teachings for Buddhists to explore and

understand. In this way, attention was drawn to our states of mind, the material world, realms of existence, karma and its results, the paths to and fruits of awakening, time, motion, and so on.

## *The Dharma Theory*

The dharma theory arose as a way to understand what is known and experienced in meditation and to point out to practitioners what to observe when they do practices such as the four establishments of mindfulness.<sup>116</sup> Since practitioners seek nirvāṇa and the path to nirvāṇa entails insight into the nature of the self, analysis of the components of the self is important. To see the world—our internal experience and external objects—correctly involves seeing the bare phenomena of which we and our world are composed.

The dharma theory centers around identifying the building blocks of our experience, the bare phenomena that compose our being and the world. These are conditioned phenomena that arise and cease in each moment. Describing how they interrelate to form other phenomena and later recombine to form yet other phenomena, the dharma theory shows that our belief that our mental states and the world around us consist of unified, “solid” phenomena is erroneous.

In particular the Abhidharma analysis demonstrates that what appears to be a continuous flow of consciousness is actually composed of different moments of mind, each of which consists of a primary mind and its concomitant mental factors. This marks the beginning of the systematization of Buddhist psychology, a psychology directed toward awakening and thus concerned with discerning defiled and undefiled mental states. The Abhidharma matrixes also illustrate that one mental factor can appear in different forms and with different names in various lists. We begin to investigate, for example, how malice, as one of the three nonvirtues, relates to anger, which is one of the three roots, and how anger relates to resentment, wrath, and so forth. Similarly, we understand mindfulness in an expansive way as the establishment of mindfulness, faculty of mindfulness, power of mindfulness, awakening factor of mindfulness, and right mindfulness.

The dharma theory evolved over time as new questions arose, as implications of the existing theory were examined, and as contradictions were discovered or resolved. In the Pāli tradition, this resulted in a series of Abhidharma texts,

lengthy commentaries, and subcommentaries that were later summarized into shorter texts. After that, more commentaries were written on these shorter texts.

The dharma theory is presupposed, although not clearly set forth, in the canonical Abhidharma texts. It is more fully developed in the commentaries that explore its implications. As more questions arose, other theories, such as the two truths and the division into substantial and imputed existence, were developed in response.

In the sūtras the Buddha proposed five groups into which phenomena, particularly those related to the self, could be analyzed: (1) body and mind (P. *nāma-rūpa*); (2) five aggregates (*skandha, khandha*); (3) six elements (*dhātu, dhātu*) of earth, water, fire, wind, space, and consciousness; (4) twelve sense sources (*āyatana, āyatana*); and (5) eighteen constituents (*dhātu, dhātu*).

The Buddha had a reason for speaking of each of these sets. Categorizing things into the five aggregates clearly differentiates between material (body) and mind. Meditation on the five aggregates enables practitioners to discover that there is no independent self to be found either within the aggregates or separate from them. The Buddha repeatedly says, “This is not mine; this I am not; this is not my self.” That is, none of the aggregates belongs to me, they do not correspond to I, and they are not my self. There are only impersonal physical and mental parts.

Classifying those same phenomena into twelve sense sources and eighteen constituents emphasizes the conditions necessary for perception and cognition to occur. Discriminating them in this way brings home the point that the mind is not a soul or an independent phenomenon, but is produced by causes and conditions.

These five sets are not distinct from one another; they overlap. Body and mind can be expanded to become the five aggregates—the body is the form aggregate and the mind consists of the four remaining aggregates. Body and mind and the five aggregates can be expanded into the six elements, with the body/physical aggregate including the elements of earth, water, fire, wind, and space, and mind (four mental aggregates) being condensed into the sixth element, consciousness. The five aggregates can be expanded to form the twelve sources, which can be further expanded into the eighteen constituents. None of these sets forms the final mode of analysis because each can be broken down into smaller parts.<sup>117</sup>

The dharma theory facilitates even more refined analysis when each dharma is seen as the smallest factor that can be identified. However, identifying the smallest particles of matter does not imply that these particles or dharmas are partless. There is no discussion of phenomena being composed of partless particles in the Pāli Abhidharma.<sup>118</sup> Rather, these dharmas are simply the smallest material units that can be identified. In this case, the form aggregate is broken down into twenty-eight form dharmas.

The Abhidharma focuses primarily on the mental factors that compose various types of consciousnesses. The primary consciousnesses and mental factors are important factors to examine to realize selflessness. In addition, knowing the various states of mind aids meditators when they cultivate concentration to gain meditative absorptions of the form and formless realms. These mental dharmas are more numerous than the material ones: the aggregates of feeling, discrimination, and miscellaneous factors together are composed of fifty-two mental factors (*caitta, cetasika*). The last aggregate, consciousness, is comprised of eighty-nine types.

In summary, the canonical Abhidharma defines, classifies, and shows the relationships among the dharmas. Consisting of many lists and matrixes, it aids practitioners to identify and understand the dharmas in their meditation. Abhidharma entails not only analysis to identify each dharma but also synthesis to show their interconnections. For example, the first book of the Pāli Abhidharma, the *Enumeration of Factors (Dhammasaṅgani)*, defines and classifies the mental factors among other things, whereas the last book, the *Foundational Conditions or Relations (Paṭṭhāna)*, lists the various types of conditional relationships among the dharmas. Analysis deconstructs phenomena to show there is no self and no underlying, primal, or fundamental substance (*prakṛti*) from which everything originates. Synthesis complements this, illustrating that the dharmas are not separate, isolated entities, but are dependent—the classifications and precise definitions are artificial categories delineated only for the sake of identifying and describing the dharmas. Our experience is in fact a complex web of interconnected relationships of dharmas.

According to the Pāli tradition, the material dharmas are elements of experience. They are spoken of as characteristics and functions, but not as particles. For example, the earth element is the property of solidity. It is the characteristic of hardness, and its function is to serve as a support or basis for the

other elements. The water element is the property of cohesion. It has the characteristic of flowing or fluidity, and it functions to bind other dharmas together.

The dharma theory of the Pāli Abhidharma is not based on a dichotomy between substance and qualities, for such a dichotomy could easily lead to the assumption of a substantial self (P. *attavāda*), which the Buddha emphatically denies. That is, a dharma is not an inherent quality of another dharma, and a dharma is not the substrata or substance out of which another dharma is produced. The dharmas themselves are conditions for other dharmas, as described by the set of twenty-four conditions that show the dependent arising of all dharmas both in terms of their temporal and spatial relationships.

The Sarvāstivāda Abhidharma speaks of the dharmas in a different way. They are isolated, partless particles, with their own-nature (*svabhāva, sabhāva*). This results in the Sarvāstivādin's assertion that the dharmas exist as ultimate and discrete entities in all three times—the past, present, and future—a position refuted by Nāgārjuna and later Mādhyamikas.

## *The Development of the Dharma Theory*

Doctrinal questions and controversies influenced the development of the dharma theory over time. According to the canonical Abhidharma, there was no enduring essence that was the person either inside the aggregates—and by extension inside the dharmas that compose the aggregates—or totally separate from the aggregates and the dharmas. However, some Buddhists—specifically the Puggalavādins—questioned how rebirth could occur and karma continue into future lives if there is no self. To resolve this conundrum, the Puggalavādins asserted that the person is real and ultimate. This was refuted in *Points of Controversy* (*Kathāvatthu*), one of the seven canonical Abhidharma texts that was said to have been written by Moggaliputta Tissa in the third century BCE.

When refuting that the person is real and ultimate, these later Abhidharmikas said that the dharmas and aggregates that compose the person are real and ultimate. But “real and ultimate” does not mean that they were distinct and absolute entities existing in their own right. Rather *ultimate* means that the dharmas are the final limit of our experience in that they cannot be further

reduced. However, there is no absolute substance that underlies them, no metaphysical entity from which they manifest and into which they later dissolve. Their being called “ultimate” does not contradict the early Abhidharma’s insistence that all things are impermanent and arise dependently due to causes and conditions. The dharmas are said to be *real*—meaning that they occur when their causes and conditions are present.

This makes evident that there are two levels of existents: Some, like the person, can be analyzed into their constituent parts. Others, like the dharmas, cannot be further analyzed because they are the elementary constituents of phenomena.

To understand the evolution of some of the ideas in the Abhidharma, it is helpful to look at a later Abhidharma text, the *Abhidhammattha Sangaha* by Anuruddhācariya, which has been widely used from the twelfth century onward, and see the way it categorizes phenomena and the reasons behind it. This text states that there are two kinds of realities: conventional (P. *sammuti*) and ultimate (P. *paramattha*).<sup>119</sup> They are differentiated based on whether they are referents of conceptual thought (P. *paññatti*) and conventional terms or have their own-nature (P. *sabhāva*). Conventional realities are referents of concepts and terms. Some examples of conventional realities are persons, human beings, animals, cups, tables, and trees. As designated objects and products of mental construction, they exist due to conception, are without own-nature, and are not irreducible components of existence.

Ultimate realities, on the other hand, have their own-nature and are the final, ultimate constituents of existence. When conventional realities are analyzed into their components, we discover the ultimate realities—the dharmas—that cannot be further reduced. For example, a person appears to be an ultimate reality, but when analyzed we find only the person’s components—the five aggregates. As a collection of impermanent mental and physical processes, a person is a conventional thing that exists only due to terms and concepts. While “person” is a conceptual construct that cannot be found when searched for, the dharmas, which are a person’s most elementary impermanent components, cannot be further reduced. Thus ontologically the dharmas are ultimate realities because they have their own-nature, and epistemologically they are the final objects of correct knowledge.

The meaning of the five aggregates being ultimate realities requires clarification. The coarse body, for example, is not an ultimate reality, for it can be reduced to the four primary elements. The primary elements, however, cannot be further reduced. They are subtle, and it is difficult for us ordinary people to actually perceive them. We have to investigate with mindfulness and appropriate attention to perceive the ultimate realities such as the four great elements. Because they are directly known with a subtler meditative consciousness, which is considered an ultimate or supreme knower, they are called “ultimate” or “supreme objects.”

Ultimate existents (ultimate realities) are of four types:

1. Mind (*citta, citta*) corresponds to the aggregate of consciousness. Included in mind are the minds of the desire, form, and formless realms. Mind is defined in three ways: an agent that cognizes an object, the instrument by means of which the mental factors cognize an object, and the activity of cognition. The first two definitions imply that mind is one thing and the action of cognizing is another. These definitions are given to overcome the distorted view that there is a permanent self or soul that is the agent or instrument of cognition. The third definition is the most accurate: mind is the process of cognizing and cannot be known apart from the action of cognizing; it is nothing other than the act of cognizing.
2. The mental factors include the aggregates of feeling, discrimination, and miscellaneous factors. The Abhidhamma lists fifty-two mental factors, which occur together with mind and perform diverse functions. The aggregates of feeling and discrimination are two of the mental factors. The other fifty are found in the aggregate of miscellaneous factors, which includes emotions, views, attitudes, moods, and other mental functions. The mental factors that accompany any mind arise and cease together with that mind, have the same object, and arise due to the same sense source.
3. Matter or form (*rūpa*) refers to the material dharmas and is the same in both the Abhidhamma scheme and the scheme of the five aggregates.
4. Nirvāṇa, the cessation of duḥkha and its causes, is the only unconditioned dharma. Neither created nor destroyed, nirvāṇa is

deathless and completely beyond the conditioned world and the bonds of time and space. Nirvāṇa is said to have its own-nature (Vism 16:72) because it is a dharma—it is not a designation and does not depend on conceptual constructs.

Of these four ultimate realities, the first three comprise all impermanent, conditioned things. The five aggregates can be subsumed in these first three—the form aggregate being matter, the aggregates of feeling, discrimination, and miscellaneous factors being mental factors, and the consciousness aggregate being mind. The fourth ultimate reality, nirvāṇa, is the unconditioned.

Here the aggregate of form does not mean the coarse body, which is a conventional reality, but the components of the body into which it is ultimately analyzed—the dharmas. Similarly, the aggregate of consciousness does not refer to the mind in general, which is a conventional reality, but to the fleeting moments of consciousness of which the mind is composed. Discerning the difference between the person, which is a conventional reality, and the five aggregates, which are ultimate realities, is an essential part of cultivating the wisdom of selflessness in the Pāli tradition. Understanding this is the goal of insight meditation and is an important step toward the realization of nirvāṇa.

## *Substance and Own-Nature*

The *Śāriputrābhidharma Śāstra*<sup>120</sup> appears to be the first Abhidharma text to use the expressions own-nature (self-nature) and other-nature. It says, “Self-nature contains self-nature; other-nature does not contain self-nature. Self-nature associates with self-nature; self-nature does not associate with other-nature.” This indicates that things with the same attributes belong to a self-nature group and those with different attributes belong to an other-nature group. Here this term delineates between different groups and has nothing to do with phenomena’s mode of existence.

In later Abhidharma śāstras self-nature gradually came to mean inherent nature. This connotation first appears in the *Abhidharma-vibhāṣā-śāstra* of the Sarvāstivāda school. It divides things into seventy-five basic constituents and regards these as the real essence of all things. They are indivisible, endowed with

their own unique nature, and real, while composites made from them are unreal. For example, the person is unreal, but its basic constituents are real—that is, they are substantially existent. The person, meanwhile, is imputedly existent and less real than the basic constituents. While the Sarvāstivādins believed they correctly understood the Buddha’s teachings on selflessness, in fact they established a Buddhist realism that contradicts the Buddha’s core teachings on no-self and emptiness. It seems their notion of substantial existence was the main target of Nāgārjuna’s Madhyamaka approach.

This doctrinal controversy, which also influenced the Theravāda dharma theory, centered around the Sarvāstivādin assertion that phenomena exist in the three times. It arose from the questions: Since things only exist in the present, how could a cause that is not existent (because it has already ceased in order to give rise to a result) produce a result? How could a result that is not existent (because it has not yet arisen) be produced by a cause that exists? To resolve this quandary, the Sarvāstivādins posited that phenomena substantially exist in the past, present, and future. This suddenly gave an ontological twist to the dharma theory, which until then had simply been a descriptive account of empirical experience. From the Theravāda viewpoint, this Sarvāstivāda assertion accorded an unnecessary, inherent nature to the dharmas.

Although the Pāli tradition rejected this assertion of own-nature and its implications, it still impacted the dharma theory as explained in Sri Lankan commentaries. Whereas the canonical Abhidharma did not give a formal definition of “dharma,” Sri Lankan Abhidharma commentators defined a dharma as that which holds or bears its own-nature. This does not, however, imply a duality between a dharma and its nature; a dharma is not a separate agent that holds its own-nature as an underlying substance. Rather, “own-nature” is used to mean “that which is not held in common by others”: each dharma is a fact of empirical existence that is not the same as other empirically discerned facts. “Own-nature” simply indicates the mere fact of being a dharma. It does not mean that there is an enduring substance supporting a dharma. If anything, equating dharma and own-nature means that there is only the constantly changing arising and ceasing of mental and material phenomena, each of which has its own unique characteristics.

An earlier Pāli canonical text, the *Path of Discrimination* (*Paṭisambhidāmagga*), found in the Khuddaka Nikāya and ascribed to Śāriputra,

says that the five aggregates are empty of own-nature (P. *sabhāvena-suñña*). If the aggregates lack own-nature, then surely the parts into which they can be analyzed must also lack own-nature. To reconcile this statement and the new definition of dharma as “that which bears its own-nature” without suggesting that dharmas exist in their own right, Pāli commentators supplemented the above definition with a new one: a dharma is that which is borne by its own conditions. That is, a dharma is not an autonomous agent but is something that depends on its conditions and is supported by its conditions. This definition emphasizes that dharmas do *not* exist in their own right and that “own-nature” does not mean inherent substance.<sup>121</sup> Dharmas occur due to appropriate conditions. Here we see that although the word “sabhāva” was incorporated into Theravāda Abhidharma thought, it was not interpreted to mean a substantial mode of being. Rather, it was the conditionally dependent nature of things.

### *Own-Characteristic*

Similarly, saying that a dharma is that which bears its own-characteristic (*svalakṣaṇa, salakkhaṇa*) does not mean that there is duality between a dharma and its characteristics. Definitions (characteristics) and definiendums (what is being characterized) are used for convenience in expression; they do not have ultimate meaning. Each dharma has its own distinguishing characteristics. For example, visibility is the specific characteristic of color. Saying the earth element is that which has the characteristic of solidity is provisional, not ultimate. In fact, solidity is the earth element.

Commenting on the title of the *Discourse on the Root of All Things*, the subcommentary explains the meaning of “things” (*dharma*):<sup>122</sup>

“They bear their own characteristics”: Although there are no dhammas devoid of their own characteristics, this is still said for the purpose of showing that these are mere dhammas endowed with their specific natures devoid of such attributions as that of a “being,” etc. Whereas such entities as self, beauty, pleasurable, and permanence, etc., or [fundamental] nature, substance, soul, body, etc., which are mere misconstructions due to craving and views, or

such entities as sky-flower, etc., which are mere expressions of conventional discourse, cannot be discovered as ultimately real actualities (P. *saccikatṭhaparamatthato*), these dhammas (those endowed with a specific nature) can. These dhammas are discovered as ultimately real actualities. Although there is no real distinction (between these dhammas and their characteristics), still, in order to facilitate understanding, the exposition makes a distinction as a mere metaphorical device. Or else they are borne, they are discerned, known, according to their specific nature, thus they are dhammas.

Saying dharmas have their own characteristics is done to show they have a specific nature and to distinguish them from distorted conceptions such as seeing that which lacks self as having self, seeing the foul as beautiful, seeing what is unsatisfactory in nature as pleasurable, and seeing what is impermanent as permanent. Having their own characteristics also indicates they are not created out of a primal substance or other metaphysical entities that are fabricated due to craving and views. Because they have their own characteristics, dharmas are different from sky-flowers and other such nonexistents that we imagine. This, then, is the meaning of saying that they are ultimately real actualities. It does not mean they exist by their own characteristics.

The basic characteristic of a dharma is not altered over time and cannot be transferred to another dharma. Even when it is in association with other dharmas, each dharma retains its own characteristic. Solidity or earth element remains solidity, even when associated with water or other elements.

Own-characteristics or specific characteristics are those unique to each dharma; they are the dharmas. The dharmas are the final limits of subtle analysis. They cannot be known individually with our senses. A group of them or a continuum of moments in the case of feelings and so forth is needed for cognition to occur. Likewise, specific characteristics are not directly cognized, although a group of them can be directly perceived as a conceptual object.

General characteristics (*sāmānya-lakṣaṇa*, *sāmañña-lakkhaṇa*) are characteristics, such as impermanence, unsatisfactoriness, and not-self, that are common to all mundane dharmas. General characteristics are mental constructs imputed by mind to dharmas. Superimposed on the ultimate data of empirical

existence, general characteristics are known by inference. When yogis perceive a general characteristic such as impermanence, their yogic direct perceiver cognizes the dharmas that arise and cease. They know their impermanence indirectly. The sūtras speak of three general characteristics of conditioned things. These three general characteristics are not dharmas or discrete entities. They are mental constructs imputed on groups of phenomena: (1) arising: production (*utpāda*, *uppāda*), (2) passing away: ceasing (*vyaya*, *vyaya*), and (3) aging: alteration of that which exists (*sthityanyathatva*, *ṭhitassa aññathatta*).

A cup, for example, is an imputed object, a mental construct, that is nothing more than the collection of dharmas—solidity, cohesion, temperature, and so forth—of which it is composed. Our senses directly perceive white, solidity, smoothness, and by these means we know “here is a cup.” The dharmas are ultimate in that they can actually be experienced and perceived directly; they are sense data. Our mind puts the sense data together, creates a mental construct, and designates “cup.”

In general, “ultimate” means that which has reached the highest or the last. In this case, dharmas are ultimate in the sense that they cannot be further reduced through analysis, unlike the person, which is not real and ultimate. Dharmas came to be called not only “own-nature” but also “ultimate nature” (P. *paramattha-sabhāva*). For the Pāli tradition, these terms do not have substantialist implications. Rather, they emphasize that mental and material dharmas are elements of present experience; they are not seen as having a real nature that persists through the past, present, and future, as asserted by the Sarvāstivādins.

Similarly, saying that the dharmas have ultimate or objective existence (P. *paramatthato vijjamānatā*) means that they are the irreducible components of empirical experience. Saying that the dharmas are ultimately cognizable indicates that the contents of our cognition can be analyzed into these irreducible elements.

Both dharmas and designated objects (*prajñapti*, *paññatti*) are objects of knowledge. Even though imputed objects are artificially created by the mind and lack objective counterparts that are directly known by the senses, they are still knowable and thus are knowable objects. Here we come upon another meaning of the term “dharma” that is also found in the Abhidharma: phenomena,

existents. In this sense, all phenomena—both those that are ultimate realities and those that are mental constructs—are considered dharmas.

Two other traits also apply to dharmas: inseparability and conditioned origination. *Inseparability* means that in any given instance of material or mind, the dharmas of which it is composed are not separable from one another. In association like this, the dharmas form a unity. The primary mind and mental factors that are concomitant with it are inseparable in that neither can occur without the other. Together they form one cognizer. Similarly, the color, taste, smell, and hardness of an apple cannot be physically separated but occur together.

Although the dharmas are inseparable, they are distinguishable and can be cognized as if they were separate. Although the color, taste, smell, and texture of an apple are inseparable, these qualities are distinguished separately by the different sense cognizers. Mental dharmas, however, are much more difficult to distinguish separately. It is hard to differentiate feeling, intention, attention, and so forth in our experience.

Like inseparability, *conditioned origination* describes dharmas in terms of their associations with one another. There are five axioms of conditioned origination that are stated either explicitly or implicitly:

1. There is no absolute original cause or beginning of anything. There is simply the continuity of ever-changing, conditioned things.
2. Things only arise from their concordant causes; they cannot arise from causes and conditions that lack the ability to produce them.
3. Things do not arise from a single cause such as an absolute creator or a primal substance.
4. Things do not arise as isolated phenomena. Whenever change occurs due to causes, the effects are multiple.
5. Several causes and conditions produce several results. Many dharmas produce many other dharmas.

Dharmas arise in association with and at the same time as other dharmas. For example, a primary mind and its seven omnipresent mental factors<sup>123</sup>—contact, feeling, discrimination, intention, attention, one-pointedness, and psychic life—arise together. None of these—either the primary mind or any of the

concomitant mental factors—can arise alone without the others. Even one moment of mind is a complex phenomenon with many components.

Similarly, the smallest unit of matter is a cluster (P. *kalāpa*), a combination of eight material dharmas—the four primary elements of solidity (earth), cohesion (water), temperature (fire), and motility (air) and the four secondary elements of color, odor, taste, and nutritive essence (the ability to sustain life). Sound is not considered an inseparable secondary element because things do not continuously produce sound.

None of these eight can arise separate from the others. They are not located in different physical areas or at different times. The fact that the dharmas are inseparable and arise in combination with one another and yet are distinguishable as having their own unique characteristics illustrates the analytical and synthesizing approaches of the Abhidharma. Through analysis they are individually discerned, through synthesis they are seen as co-arising.

## *Designations and Concepts*

The dharma theory also enables us to distinguish distinct empirical entities from cognizing minds and imputed phenomena that are created by the conceptual mind. It helps us to understand the relationship between the dharmas and the objects we perceive in our daily lives. It also brings into question the extent to which objects correspond to the terms that refer to them.

Designations or imputations were first mentioned in the *Dhammasaṅgāṇi*, where the designation itself is the *paññatti* (S. *prajñapti*), and all dharmas (in the broad sense of all things) are the “pathway of designations”—that is, they are what is designated. Paññatti are the names, terms, and designations that express both ultimate existents—the dharmas—and the larger objects that are combinations of dharmas. Later commentators included in paññatti not only the names of things—be they objects real or nominal—but also the objects and meanings that correspond to them. This does not imply, however, that dharmas exist in dependence on designation and conceptualization by mind. The theory of paññatti was implied by the sūtras but was developed by the Abhidharmikas. “Person” became known as the conventional designation given to the collection of the dependently arisen, impermanent psychophysical aggregates. Similarly,

“cart” was the conventional name given to the collection of parts that formed a vehicle. However, the early Buddhist idea of conventional designation was not explained in contrast to ultimate or real existents such as the dharmas. This was done later by the Abhidharmikas in the Abhidharma Piṭaka.

There are two types of designations: (1) *Term-designations* (P. *nāma-paññatti*) are the names, words, or symbols that designate real or unreal things. These are established by worldly usage. An example is the word “cup.” (2) *Designated objects* (P. *attha-paññatti*) are the designated or conceptualized objects and meanings that correspond to the names, words, and symbols. These objects are mental constructs that come into being by the mind’s interpreting the appearances of the real elements in certain arrangements. An example is the cup.

Term-designations and object-designations are interdependent and refer to the same thing seen from two different angles: the verbalization that makes things known and what is made known (what is constructed by thought). It is important to note the difference between object-designations and dharmas. While dharmas can be conceptualized and made known by names and symbols, their existence is not dependent on them. Object-designations, on the other hand, do not exist unless conceptualization is involved.

The later commentaries explain designations in more depth. Designations lack corresponding reality and are things without their own-nature; this differentiates them from dharmas, which are the objective elements of existence. Designations are not ultimate existents and lack the attributes of arising, abiding, and disintegrating. They are not produced by causes and conditions; they do not have own-nature that is displayed while they are present. Whereas temporal distinctions such as past, present, and future apply to dharmas, they do not apply to designations. Designations are not included in the five aggregates, and they are neither conditioned (P. *saṅkhata*) nor unconditioned (P. *asaṅkhata*). Although they exist, designations are unreal and abstract. They lack objective existence and are “mind-dependent,” whereas dharmas exist by their own-nature (*svabhāvasiddhi*, *sabhāvasiddha*) and have their own distinct characteristics. Designations are conceptualized and exist only due to thought (P. *parikappasiddha*). As mental constructs superimposed on reality, designations give the illusion of being one object to things that are in fact complex assemblies of dharmas.

When wheels, axles, and planks are arranged in a certain fashion, “cart” is designated to them and they are conventionally known as a cart. But when analyzed into dharmas—their ultimate and irreducible components—there is no cart. When roots, trunk, branches, and leaves are arranged in a particular manner, they are commonly called “tree,” but when each part is examined there is no tree there. Similarly, together the five aggregates are called “person,” “I,” or “being,” but when analyzed into their ultimate components, there is no person there at all.

## *The Two Truths*

The ancient non-Buddhist Indian traditions that adhered to the notions of a “soul” or “Self” (*ātman*, *attan*) had a substantialist view of existence and saw time and space as absolutes. The Buddha and the Abhidharmikas refuted these views. To form a cohesive philosophy that could explain all existents free from the erroneous philosophical assumptions of non-Buddhists, the Abhidharmikas formulated the doctrine of the two truths. This doctrine was also influenced by the discussion of designations and concepts that developed as a result of the dharma theory.

While the doctrine of the two truths—conventional and ultimate truths—is first discussed by Abhidharmikas, not in the sūtras themselves, the distinction made in the sūtras between definitive (*nītārtha*, *nītattha*) and interpretable (*neyārtha*, *neyyattha*) sūtras appears to be a relevant antecedent. A sūtra in the Aṅguttara Nikāya says (AN 2.24):

Monastics, these two misrepresent the Tathāgata. Which two? One who explains a discourse whose meaning requires interpretation as a discourse whose meaning is definitive, and one who explains a discourse whose meaning is definitive as a discourse whose meaning requires interpretation.

The meaning of definitive statements has been drawn out and made clear. They express their meaning explicitly and can be taken as they are. Interpretable statements are indirect and their true meanings must be drawn out and revealed.<sup>124</sup> Buddhaghosa establishes a connection between definitive and

interpretable meanings and the two truths.<sup>125</sup> Here, it seems that the initial notion of the “two truths,” as well as the notion of “definitive and interpretable discourses,” served to help early Buddhists reconcile scriptural passages that appeared to be contradictory. As time went on, the doctrine of the two truths became a way of categorizing phenomena. The commentary to the *Kathāvatthu* states:<sup>126</sup>

The Awakened One, the best of all teachers, propounded two truths, conventional and ultimate; we do not see a third. A statement governed [purely] by agreement is true because of the world’s conventions. An ultimate statement is true in that it characterizes things as they are.

The two truths are conventional (P. *sammuti-sacca*) and ultimate (P. *paramattha-sacca*). *Sammuti* refers to convention and general agreement, so conventional truths are truths based on general agreement and societal conventions. Ultimate truths are explanations that use terms indicative of the real elements of existence—the dharmas—which do not depend on mental construction. Statements about ultimates are ultimate truths. Although the dharmas are said to be ultimate realities, they are not ultimate truths. Only dharmas are real, and what is not a dharma is not real. Both conventional and ultimate truths are paññattis, designations, because they must be conveyed through the symbolic medium of language.

In early Buddhism, there was no formulated doctrine of real existence. What was analyzed (the person, for example) was called “conventional,” but what it was analyzed into—the dharmas—were not called “ultimate.” Ultimate was used only to refer to the “supreme goal, supreme good,” nirvāṇa. Later paramattha acquired the meaning of “supreme meaning,” and then “ultimately existent.”

Later, in the Abhidharma, ultimate came to have the ontological meaning of that which really exists. In this way, the meaning of “ultimate” was expanded to include the dharmas. That is, “ultimate” came to denote real existence, the dharmas that have their own-nature. However, there is no mention of the dharmas being ultimate truths.

Thus it seems that the meaning of “ultimate” and “ultimate truth” changed over time with the addition of the Abhidharma and its commentaries. In the

sūtras, nirvāṇa is the supreme or ultimate truth because its nature is undeceptive. The Buddha says in the *Sūtra on the Exposition of the Elements* (MN 140.26):

For that is false, monastics, which has a deceptive nature, and that is true which has an undeceptive nature—nibbāna. For this, monastics, is the supreme [ultimate] truth of the ariyas, namely, nibbāna, which has an undeceptive nature.

The Abhidharma distinguishes between what is mentally constructed and what has its own-nature. Conventionally based things (P. *sanketa*) are things that come into being due to designations; they depend on mental interpretations that are superimposed on collections of dharmas. But dharmas are ultimate because they are real existents that can be directly known. A table, for example, is conventional because “table” is designated on the multitude of dharmas that are its components. “Table” does not refer to an objective phenomenon that corresponds to the term but is designated when the mind interprets a collection of dharmas in a certain way. The mind superimposes “table” on this collection; thus the table is a convention, a designation. Although the table is not an entity separate from its component dharmas, it is said to exist because according to our social conventions and agreements, it is regarded as a separate entity. The dharmas that compose it, however, have their own-nature that does not depend on convention; the dharmas are empirical reality. They exist dependent on causes and conditions but are not dependent on mental designation.

Some people mistakenly believe the Pāli tradition values ultimate truths more highly than conventional truths. To the contrary, Pāli scriptures explain that to sentient beings who could be guided to nirvāṇa by means of speech regarding the conventional, the Buddha spoke of the conventional. To sentient beings who could be led to nirvāṇa by means of speaking of the ultimate, he spoke of the ultimate. And to those who required a combination of the two, he spoke of both. Just as a person who is multilingual speaks to another person in the other’s native tongue to facilitate that person understanding his meaning, so too does the Buddha speak of conventions, ultimates, and both according to the most expedient method for guiding a particular being to arhatship. Neither method is superior to the other.

Furthermore, the commentary to the Aṅguttara Nikāya explains that whatever the Buddha says is true. For example, saying “The person exists” is true

speech regarding the conventional. Only if someone thinks there is a substantially existent person in the aggregates does this statement become false. If we try too hard to speak in terms of the ultimate, such as saying “The dharmas composing the five aggregates are walking down the street,” we fail to communicate well because we have disregarded the conventional usages of words. Both conventional and ultimate truths exist and are useful, and speech regarding the conventional and the ultimate likewise are useful. It is not necessary to rank one higher than the other. In fact, we could say that the two truths are two ways of presenting the truth, two ways of talking about our experience.

## *The Theory of Form*

While the principles outlined above apply equally to the mental and material dharmas, here we’ll look more closely at form (*rūpa, rūpa*), which is also referred to as material or matter.

The Pāli Abhidharma defines form as that which has the characteristic of being subject to physical change and disintegration. According to the Abhidharma theory of momentariness, one moment of material gives way to another. One moment of form disappears and another appears. The succeeding material is not the same as the immediately preceding material, principally due to the influence of infinitesimal changes in temperature.

The Sarvāstivāda Abhidharma, in contrast, defines form as having the characteristic of resistance or impenetrability. This emphasizes that form is located within space and can exist only where another form does not exist.

In the Pāli Abhidharma, four primary elements of form are delineated. Although these are called “earth, water, fire, and air,” they actually indicate qualities of material. To review, the earth element is solidity and resistance. The water element is fluidity and cohesion that binds the other elements together. Cohesion forms solidity into recognizable objects such as tables and trees. The fire element is heat. Cold is merely the absence of heat; it is not a distinct quality by itself. The air element is mobility, expansion and contraction, and fluctuation. These four are the natural forces of which material is composed. Being spatially and temporally inseparable, these four exist at the same time and in the same place, whether they are the smallest units of matter or components of huge

mountains. Thus every instance of form has some solidity, cohesion, heat, and mobility. Although these four are inseparable, they can be distinguished. But the fact that they can be spoken of differently does not mean they exist independently, unrelated to anything else. The interplay of the elements becomes the material objects we recognize.

The four elements have different characteristics, functions, and manifestations. Each one is influenced by the others but does not lose its individual characteristic. They can neither be condensed into one substance nor transformed into another element. The four primary elements arise and exist together; they are mutually co-arising and co-conditioning. *The Path of Purification* explains (Vism 11.109):

The earth element, which is held together by water, maintained by fire, and distended by air, is a condition for the other three primary elements by acting as their foundation. The water element, which is founded on earth, maintained by fire, and distended by air is a condition for the other three primary elements by acting as their cohesion. The fire element, which is founded on earth, held together by water, and distended by air is a condition for the other three primary elements by acting as their maintaining. The air element, which is founded on earth, held together by water, and maintained by fire is a condition for the other three primary elements by acting as their distension.

Each element is present in every instance of material. What differentiates various material objects is not the quantity of each element that composes it but its intensity. For example, although all four primary material elements are present in both metal and milk, the element of solidity is more intense in the metal and the element of fluidity more intense in milk.

Our tactile sense does not necessarily know all the elements simultaneously. This often has to do with what we pay attention to. If we put our hand in hot water, the experience of heat is foremost, although fluidity is certainly present. What our tactile sense perceives may depend on which element is prominent; if we step on a nail, solidity is prominent and becomes the object of mind, although the other three elements are also present.

Interestingly, the Pāli Abhidharma does not consider the water element to be a tactile object but an object of mind (P. *dharmāyatana*). When we touch water, its softness is due to the earth element and its temperature is due to the fire element. We cannot touch cohesion or fluidity directly. While Theravādins do not consider cold as a characteristic of the water element, the Sarvāstivādins do. Thus Sarvāstivādins consider the water element to be a tactile object because when touching it, we can experience its coolness.

The primary elements depend on one another to arise, whereas the secondary elements depend on and are supported by the primary ones, although they arise simultaneously with them. It is for this reason that they are considered secondary.

In the canonical Abhidharma, many types of form are mentioned. These are coalesced into fourteen secondary types of form in the commentaries:

- (1–5) The five physical sense organs or faculties—the organs of sight, sound, smell, taste, and touch. These are not the coarse organs, such as the eyeball or the ear, but a type of subtle, translucent matter located in these physical organs. Each faculty has its own field of perception: the eye faculty perceives colors, not sounds, and so forth.
- (6–9) The four types of sense data: color, sound, smell, and taste. Tactile objects are omitted because they consist of three of the four primary elements (solidity, temperature, and mobility). Only earth, temperature, and mobility are tactile objects. The water-element represents fluidity and viscosity and is not directly cognized by the sense of touch; it is known through a process of inference. This idea is limited to the Theravāda Abhidharma. Other Buddhist schools say that all the four great elements are objects of touch.<sup>127</sup>

In the canonical Pāli Abhidharma as well as in the Sarvāstivāda Abhidharma, both color and shape are considered objects of sight. However, in the Pāli Abhidharma formulated in Sri Lanka, only color is an object of sight. Shape cannot be directly perceived; we see a shape in dependence upon seeing the location of color. Therefore, shape is considered a mental construct that lacks an

objective counterpart. There are two views regarding sound, one of which says that it travels like waves in a series.

- (10–11) The two faculties of sex, which are subtle matter that differentiate male and female.
- (12) The material faculty of life, which maintains and stabilizes the sense faculties, the sexual faculties, and the physical basis of mind.
- (13) The nutritive quality of matter, the ability to nourish the biological form and to sustain life.
- (14) The physical basis of mind. This is not mentioned in the sūtras but is found in the *Paṭṭhāna*, the last book in the Pāli Abhidharma Piṭaka. It is a form that is the physical basis for the mind-source and the mental consciousness constituent. However, what it is precisely is not specified, although later commentators identified it with the heart (*hṛdaya*, *hadaya*). This refers not to the physical heart, but to a subtle matter located in or near it. Interestingly, while the other five physical sense faculties are also considered controlling faculties (*indriya*, *indriya*), the mental consciousness is not.

These fourteen plus the four primary elements are the eighteen concrete material elements that constitute actually existent material dhammas in the Pāli Abhidharma. An additional ten material elements are modes or stages of those eighteen. Some of these exist both internally and externally, as parts of living beings as well as in the inanimate environment. Others—the five physical sense faculties, the two faculties of sex, the material faculty of life, and the physical basis of mental activity—are only found in conjunction with living beings. Here we see that the Abhidharma examines both the physical components of living beings as well as their external environment, seeing all of them as dependently arisen, impermanent phenomena that lack a self or primal substance as their controller.

### *The Theory of Smallest Particles*

There is a lot of discussion about smallest particles of matter by both contemporary scientists and ancient Abhidharma scholars. However, this

discussion is absent in the Pāli canon; it was developed later in Sri Lanka and seems to have been influenced by the Buddhist schools in India, in particular the Sarvāstivāda and Vaibhāṣika schools.<sup>128</sup>

According to the Sarvāstivādas and Vaibhāṣikas, the *paramāṇu* (S. *paramāṇu*) is the smallest unit of material. It is without parts and has no spatial dimensions. The Vaibhāṣika master Saṅghabhadra says:<sup>129</sup>

Among the material elements susceptible to resistance, the smallest unit, which is not further amenable to division either by another material thing or by mind, is called the *paramāṇu*. Because it has no parts, it is called the smallest, just as the *kṣaṇa* (moment, instant) is considered the smallest unit of time, as it is not further divisible into semi-*kṣaṇas*.

A *paramāṇu* always arises and exists together with other *paramāṇus*, forming a unity or an aggregate called a *saṃghāta*. The *saṃghāta* is made of the four primary elements and four of the secondary elements. A *paramāṇu* is partless and lacks resistance because particles without spatial dimensions cannot have resistance.

According to Theravāda scholarship, the Sautrāntikas took issue with this, saying that the smallest particle cannot be without parts and resistance.<sup>130</sup> The Vaibhāṣikas replied that while a smallest particle lacks parts and resistance, since they don't occur in isolation but in combination with other smallest particles, when they form an aggregation they have resistance. The Sautrāntikas pointed out the fallacy in this, saying that if the smallest particle is partless and lacks resistance, then an aggregation must also be partless and lack resistance, for how could many things that individually lack resistance come to have resistance when they come together?

The Sautrāntikas also questioned how these partless particles can join together to form an aggregate. Do they touch one another or not? If they touch one another, then since they lack parts and spatial dimensions (for example, directional parts such as east, south, and so on) and resistance, then they should merge into one, in which case there would never be any coarse forms. If they touch one another partially, then they must have parts and directions, which contradicts the Vaibhāṣikas' own assertion. Furthermore, if partless particles

touched, they should exist for two moments, one in which they arise and the second during which they touch. This contradicts the commonly accepted assertion that all dharmas are momentary.

In response to this, the Vaibhāṣikas say that partless particles do not come into contact with one another but there is infinitesimal intervening space between them. The particles stay joined together due to the influence of the air element. But the Sautrāntikas questioned this as well: How could partless particles join together with space between them? They would have to have parts and resistance to do so.

The Theravādins say a paramāṇu is an infinitesimally small unit of material. Unlike the Vaibhāṣikas, they do not say this is the smallest unit of each of the primary elements. Instead, a paramāṇu refers to the smallest cluster that consists of the four primary and four secondary elements. To emphasize the smallness of this particle, one Pāli commentary said it is like “a particle of space.” The paramāṇu is called a “material cluster” (P. *rūpa-kalāpa*) to show that although it is infinitesimally tiny, it is an aggregation of material elements.

Theravādins speak of *kalāpaṅga*—a “limb of the group”—that is, a constituent material element of a *kalāpa* (smallest particle).<sup>131</sup> While the Vaibhāṣikas say the smallest particle is an instance of a primary element, according to the Theravādins the smallest particle is a conglomerate (*kalāpa*) of the four primary and four secondary elements. While logically one could say that the *kalāpaṅgas* were smaller than the *kalāpa*, since no *kalāpaṅga* exists in isolation, it is not said to be the smallest instance of a material. The *kalāpaṅgas* and *kalāpas* both have spatial dimensions—there is no talk of partless particles in the Pāli Abhidharma. The *Visuddhimargasannaya* of King Parakaramabahu II says:<sup>132</sup>

The intervening space between two smallest particles (*kalāpa*) has the function of delimiting the atom as “this is the lower side of the smallest particle and that is the upper side of the smallest particle.”

Theravādins assert that each smallest particle of material (*rūpa-kalāpa*) is separated from other smallest particles by an infinitesimally small space. Thus the smallest particles do not touch one another. The reason they cannot touch is that if they did, then they would have to be spatially inseparable like the *kalāpaṅgas*.

In that case two smallest particles would merge to form a bigger particle. If this continued, with more and more particles merging, the world would be one huge rūpa-kalāpa. So while the Vaibhāṣikas say the smallest particles cannot touch because they would merge and become one infinitesimally small particle, the Theravādins say they cannot touch because they would become one infinitesimally huge particle!

### *The Theory of Momentariness (Instantaneous Being)*

Parallel to a theory of the smallest unit of material is the theory of the smallest unit of time (*kṣaṇa*, *khaṇa*), a moment. While the rudiments of this theory can be traced to the canonical Abhidharma, it was fully developed in the Sri Lankan Abhidharma literature. As mentioned above, the sūtras spoke of three characteristics of the conditioned (AN 3.47): arising, passing away, and aging (arising, vanishing, and alteration while persisting), which are general characteristics. Later these three submoments of experience were called “arising,” “abiding,” and “disintegrating.”

Sarvāstivādins also had a theory of momentariness, which reflects this school’s substantialist tendencies. It was the first school to mention four characteristic marks of every mental and material dharma: arising, abiding, modification (*jarata*, *jaratā*), and passing away. They define a moment as the time in which all four of these accomplish their activities. A moment is the length of time it takes to cut a silk thread with a sharp knife, and sixty-four moments constitute the length of time of a finger snap.

Again, from the Theravāda perspective, Sautrāntikas refute this, saying that if these four occur serially, then a moment has four distinct phases, and therefore it is divisible and cannot be the smallest unit of time. But if these four occur simultaneously in one moment, then they would cancel each other out. The four characteristics cannot apply to a single momentary dharma, only to a series of momentary dharmas, which is an empirically observable thing. The Sautrāntikas assert that the four characteristics are a series, which itself is called “subsistence.” Something that is momentary cannot subsist or be modified because whatever arises perishes; there is no time for it to subsist or be modified.

Within Theravāda, there are diverse ideas about this. The sūtras often present two phases: arising and ceasing. Once a dharma arises, it is perishing; there is no time for it to abide.<sup>133</sup> Arising dispels nihilism, which says either that the person does not exist or that it ceases at death with no continuity. Ceasing dispels absolutism, which holds that things have a substantial permanent reality. This view harmonizes with meditative experience, especially when the phase of dissolution is emphasized to bring home the impermanence of conditioned phenomena.

Some Theravādins said that although something that arises will cease, there is an intermediate moment when that thing turns toward its own cessation. This moment, when it is faced with its own perishing, is called “abiding.” This moment of existence is necessary, for something cannot do two opposite activities—arise and cease—in the same moment.

However, some sūtras, such as the *Sutta of the Wonderful and Marvelous* (MN 123.23), speak of knowing things such as feelings, discriminations, and thoughts “as they arise, as they are present, as they disappear.” The Abhidharmikas formalized this to become the theory that conditioned dharmas arise, abide, and disintegrate. That is, each mental and physical dharma goes through three moments: a moment of origination, a moment of existence, and a moment of cessation. These are not three dharmas but one dharma that goes through three phases, arising in the first moment, abiding in the second, and ceasing in the third.

In ancient times there was much discussion about the theory of change. There are only two ways in which change can occur: partially or totally. Partial change means that while the entity remains the same, some qualities or parts of it change. This is counter to Buddhist ideas, for something cannot be both permanent and impermanent. There is no duality between substance and quality such that the former can remain static while the qualities arise and cease.

On the other hand, if there is total change, then the new thing is completely different. If something arises and then changes totally before it ceases, we cannot say that the same thing that arises also ceases, for a totally different thing would cease.<sup>134</sup>

This quandary led to the redefinition of change. Instead of change being the transformation of the same element from one stage to another, change was now seen as the replacement of one momentary dharma by another. Change is the

cessation of one element and the arising of another in its place. This is in contrast to the non-Buddhist substantialist view of there being a permanent underlying substance that remains the same in its subsequent moments but superficially changes.

The theory of momentariness caused the redefinition of change, and it also brought about the definition of motion. Just as a momentary dharma has no time to change but ceases immediately, similarly it has no time to move to another place. Movement is not one thing going from one place to another but a new momentary thing appearing in an adjacent place. Although we say a green pepper was moved from the cutting board to the frying pan, in fact it did not move. Rather a new instance of green pepper appeared at each moment in each infinitesimally small location along the route from the cutting board to the frying pan.<sup>135</sup>

## *The Theory of Time*

Just as Buddhism refutes the notion of an underlying primal substance, it also denies the existence of absolute time—that is, time as a real, all-pervading substance or container in which things exist and events occur. The Buddhist perspective is that time is a designation imputed by the conceptual mind in dependence on changes in arising and perishing dharmas. Past, present, and future are posited in relation to dharmas—in reference to a specific dharma, the past is what has arisen and ceased, the present is what has arisen but not yet ceased, and the future is the not yet arisen. Buddhaghosa says:<sup>136</sup>

Chronological time denoted by reference to this or that event is merely a conventional expression.

There is no permanent or absolute moment of time. Specifically, a particular primary consciousness—which has no content per se—arises simultaneously with its attendant mental factors—which fill it out and supply its content. A moment of time is designated to the duration of the combination of mental factors that are concomitant with a primary mind. Seventeen moments of a mental dharma is the

length of time a form exists, the mind moments changing at a much faster rate than material particles.

## *The Theory of Space*

Just as absolute time is rejected, so too is absolute space. Only one Buddhist school<sup>137</sup> adheres to the idea of real space: it says that space is omnipresent, infinite, eternal, and non-obstructive in that it does not obstruct the matter that exists in it and it is not obstructed or pushed away by matter. This space isn't just the lack of obstruction but something positive—a real element or substance that is the container in which everything exists and moves.

According to the Pāli tradition, which refutes the above theory, although space is sometimes listed in conjunction with and just after the four primary elements of earth, water, fire, and air, that does not mean it too is a primary element of material. When space and consciousness appear after the four primary elements (*mahābhūta*, *mahābhūta*), the group of six is called “elements” (*dhātu*, *dhātu*). Thus space and consciousness are not considered additional primary elements of matter.

The first book of the Pāli Abhidharma Piṭaka lists space as a secondary material element. In doing so, it shows that space exists only in reference to form, and in that sense it is a derivative of form. Nevertheless, space lacks independent existence and exists only as a concept. The *Kathāvatthu* describes a debate about the reality of space. Someone says that space is real and visible, citing the space that can be seen between two trees or the space in a keyhole. The *Kathāvatthu* refutes this, saying that what we are actually seeing is the color of the two trees. In dependence on this, we impute that there is space between them. Similarly, we see the color of the surrounding material of the keyhole and give the designation “the space of a keyhole.” This space is known via a conceptual process, not by direct perception. Thus it is dependent on the conceptual processes of the mind.

The Sautrāntikas also reject space as something real and define it as “the mere nonexistence of form, which has the characteristic of impenetrability or lack of resistance.” Saying that it is the “mere nonexistence of matter . . .” emphasizes that it is a mere negation. Space is not a substance that is the opposite of form, but a mere absence of the obstructibility of form. They agree with the Pāli tradition

that space exists imputedly (P. *kappana-siddha*) and does not exist by its own-nature (P. *sabhāvasiddha*). This explains the Buddha's refusal to answer a question non-Buddhists often posed to him about whether space was infinite or finite. Because it is created by conception, it cannot be said to be either.

## *The Evolution of Abhidharma*

The early Abhidharmikas in the first two centuries after the Buddha's parinirvāṇa probably lived in areas not so distant from one another, so their theories were fairly similar. But once Buddhism began to spread far and wide in South Asia, there was little communication among the various Abhidharma commentators, and thus there was more diversity in their assertions. As time went on, new issues that occupied the later commentators arose because of contact with non-Buddhist influences. At that time many philosophers and renunciants in India were involved in studying and developing theories about epistemology, ontology, and language, among other topics. Philosophical schools such as the Sāṃkhya, Jain, and Vaiśeṣika promoted ideas that challenged the Buddhists and stimulated them to formulate responses that concurred with general Buddhist doctrine. It was within this milieu that the Sarvāstivāda Abhidharma developed.

In early Abhidharma, the dharmas were seen as dynamic processes and conditioned events. Later, non-Buddhist schools in India began to discuss existence (*bhāva, bhāva*), own-nature (*svabhāva, sabhāva*), substance (*dravya, dabba*), imputation and designation, own-characteristics or specific characteristics, and general characteristics. These terms came to have a variety of meanings, and new concepts arose, leading to much debate, not only between Buddhists and non-Buddhists but also among Buddhist traditions and even within different sects of one tradition. In addition, the meanings of these words were constantly changing even within one sect!

For example, the term *dravya*, which after the rise of the Madhyamaka was equated with inherent existence, was previously used by the non-Buddhist philosopher Patañjali to indicate an individual object or an aggregation of qualities. Then it was juxtaposed with *guṇa* (qualities), and the Sāṃkhya said *dravya* had both an unchanging substrate as well as properties that changed. The

Vaiśeṣika had yet another meaning for *dravya*, and the Jains defined it as existence (*S. sat*), which possessed arising, abiding, and passing away.

In addition to the sets of phenomena noted above, Abhidharmikas also began new modes of classification, such as the twenty-two faculties (*indriya, indriya*).<sup>138</sup> Later the Sarvāstivādins delineated a fivefold taxonomy of phenomena: form, primary minds, mental factors, abstract composites (*S. cittaviprayuktasamskāra*), and unconditioned or permanent phenomena (*S. asaṃskṛta*). Like the sūtras, this classification differentiates form and mind. However, now mental factors—which the Sarvāstivāda list as forty-six in number—are distinguished from primary minds and given their own category. In addition, there are new categories of phenomena—abstract composites and unconditioned phenomena—that were not initially listed in the five aggregates, twelve sense sources, and eighteen constituents. Abstract composites are impermanent phenomena that are neither form nor mind. Unconditioned phenomena include not only nirvāṇa and unconditioned space but also other unchanging phenomena.

It is hard to know to what extent people previously had conceptualized such groups, and to what extent these new categories were the result of questions and debates that arose after the Buddha's life. Viewed from a historical perspective, these new developments in understanding the Buddha's teachings led to the creation of new classes of phenomena. Although the previous classifications into the five aggregates and so forth were useful to realize that there is no self among the components of the person, later there was more concern with ontology. Also, because more people had engaged in analysis over the years, more dharmas, each with its own distinctive name and function, were identified.

Previously dharmas were seen as impermanent processes and events that mutually condition one another. Adding the category of unconditioned phenomena changed that because permanent phenomena were said to have a function, which distinguished them as existents and as dharmas. But unlike conditioned phenomena, their function was not to produce an effect. For example, the function of unconditioned space was to give material objects a place to occur. According to the Sarvāstivāda Abhidharma text the *Great Detailed Explanation* (*Mahāvibhāṣā Śāstra*), space was a real entity, a dharma, not a designation (*prajñaptita*). Furthermore, the Sarvāstivādins said that all phenomena, be they conditioned or unconditioned, had a fixed inherent nature

(*svabhāva*) and existed substantially as real entities (*S. dravyatā*) in all three times —past, present, and future.

Meanwhile, the word *svabhāva* continued to change. In the canonical texts, own-nature was juxtaposed to other-nature and said to be the criterion by which dharmas are included in one category or another. In other words, dharmas and categories are defined by their *svabhāva*; they do not possess a separate nature but are constituted of and determined by their *svabhāva*. The Sarvāstivādas began the transition of the meaning of *svabhāva* from phenomena having their own-nature to their having an inherent nature.

## *Some Reflections*

I (Chodron) would like to offer some reflections, rudimentary as they are, so that we see the Buddha's teachings in the context of the circumstances in which they blossomed and how the change in those circumstances influenced the explanations of the teachings by future generations. Too often some of us see the Buddhadharma we are taught as immune to external influences such as culture, politics, the economy, science, and so forth. While this topic is very broad, I will just mention a few points.

At the time of the early Abhidharmikas and the early Indian Buddhist pandits of the Nālandā tradition, India had many sects of renunciants, each with its own doctrine. Their panditas and teachers engaged in a lively culture of debate, whereby the disciples of those who could not maintain their assertions in the face of reasoning converted and became followers of those who could. At the same time as each party defended their own system, they were being challenged to explain various points in more depth, leading to the evolution of beliefs and the expansion of topics to debate. The Buddhism that has come to us now is a product of that. Although the true Dharma does not change, its outward expression and some of the topics it deems important change with time.

Topics that were of great importance in Tibet in the seventh century, the fifteenth century, and at present are not necessarily the same ones discussed by the early Abhidharmikas or the ones of interest in contemporary Theravāda studies. One reason for this is that questions and debates appeared gradually over time.

Another is that certain topics were of more or less interest to people in different places and cultures. Let's look at some instances of this.

The Pāli Abhidharma does not speak of partless particles, a topic that is still widely refuted in contemporary Tibetan studies. In the Pāli Abhidharma, the four great elements are not spoken of as particles, but as qualities, and the combination of the four great elements and the four secondary qualities are considered the smallest units of form. From this viewpoint, these smallest units of form are interdependent and arise and cease due to causes and conditions; they have parts. The Sarvāstivādins, on the other hand, assert partless particles. The Yogācāra and Madhyamaka refutations of partless particles, therefore, are in response to the Sarvāstivādins, not the Pāli Abhidharmikas.

In the canonical Pāli Abhidharma texts and the Indian and Sri Lankan commentaries, there is no mention of phenomena being truly existent or non-truly existent. It seems that the term “true existence” came into use later.<sup>139</sup> Early on *svabhāva*—own-nature or intrinsic nature—meant that dharmas have their own conventional entity. Different sects, both Buddhist and non-Buddhist, had their own meanings for that term, many of which were ambiguous. The expressions “inherently existent” and “existent by their own characteristics” were not used.

The same is true for the early Sarvāstivāda Abhidharma, but because of their substantialist assertion that dharmas substantially exist in all three times, it seems they were more inclined to accept reified ways of existence. Thus, the Madhyamaka negation of inherent existence and existing by its own characteristics is especially in response to the views of the Sarvāstivādins and Vaibhāsikas.

In the early Pāli Abhidharma as well as the early Sarvāstivāda Abhidharma, the terms “selflessness of persons” and “selflessness of phenomena” are not found. The Pāli commentators explicitly stated that the aggregates are not the self and are not objects of use of a self, and they assumed that everything—persons and phenomena—existed dependently. They refuted assertions of non-Buddhist schools that people and phenomena are created by an external creator or that they are produced from an absolute substance that is their substrata—ideas that future generations said were acquired and not innate afflictive views. Instead, Pāli Abhidharmikas said a person is a designation on a collection of impersonal material and mental dharmas.<sup>140</sup>

Looking from a historical perspective, I find the evolving meanings and usages of words fascinating. There was no mention of ultimate and conventional in the early Abhidharmas. When the term “ultimate” was introduced in the Pāli Abhidharma, it was ascribed to the dharmas, meaning that they are the basic things out of which minds and matter are composed. Similarly, the meaning of “own-nature,” “own-characteristics,” and “specific and general characteristics” evolved over the centuries within each tradition. Nor is the term “object of negation” found in either the sūtras or Pāli commentaries.

It would be very interesting to research the evolving meanings of some of the prominent terms now used when investigating the deeper mode of existence of phenomena and to explore the new philosophical terms that have arisen over the centuries. This would be a great topic for a doctoral dissertation.

The Abhidharma began in order to formulate the Buddha’s teachings into a philosophy and a system for the purpose of furthering the Buddhist practitioners’ aspiration for liberation. It was used as an aid to meditation on not-self in that it analyzed complex mental and material phenomena so that practitioners could see there is no findable person in the aggregates and no primal substance in material. Because the Abhidharmikas also emphasized synthesis of the dharmas, their explanations also aided practitioners in understanding dependent arising.

As time went on, ontological issues arose and became prominent, especially with the introduction of the term and concept of *svabhāva/sabhāva*. While this term was not used by the Buddha in the sūtras and is rarely found in the Pāli canon in general, it became an important concept in post-canonical times. Furthermore, later scholar-adepts drew out the epistemological implications of the early Abhidharma, expounding on the various types of cognizers and how objects are known by them. Add to this the ideas found in the Perfection of Wisdom sūtras, and there is an abundance of theories to debate and to employ in meditation.

Many texts and topics studied in contemporary Tibetan Buddhism, such as paths and grounds (T. *sa lam*), have their roots in the early Abhidharma works that described the stages of realization of disciples (śrāvakas and solitary realizers). To these were added descriptions of the bodhisattva grounds from Mahāyāna sūtras, such as the *Sūtra of the Ten Grounds*. Indian sages such as Maitreya and Asaṅga elaborated on the paths and grounds of the three vehicles, and from all this material Tibetan scholars later developed the genre of texts

known as Paths and Grounds describing the paths and grounds of the three vehicles from the Svātantrika as well as the Prāsaṅgika viewpoints. These are included in the current monastic curriculum.

The Collected Topics texts (*Dudra*) and Mind and Awareness (*Blo rig*) texts studied in contemporary Tibetan monasteries also have their origins in these early Abhidharma texts. The scheme in which all phenomena are categorized into permanent (*nitya, nicca*) and thing (*S. bhāva*), the subcategories of these two, the classifications of the various types of causes and effects, and the systematization of the types of minds and mental factors all originate in the Abhidharma. The interrelationships among the minds and mental factors and the causes of cognition likewise follow from the early Abhidharma texts.

Having a historical perspective on the development of ideas within Buddhism helps us to understand the various theories and the great Indian sages who were their proponents. It also illustrates why certain issues were and continue to be so important. As Buddhist doctrines encounter Western philosophy, new questions and topics of discussion will emerge. How will these be dealt with using the richness of the scriptural tradition as a resource? The question of free will and predetermination—so prominent in Western philosophy—was not examined by the great minds of India, Sri Lanka, China, and Tibet. Why was this topic so uninteresting that it didn't even occur to them? How can Buddhist tenets be applied to discuss it now? Similarly, the question of the interdependence of brain and mind—a non-issue in ancient cultures—is another area where Buddhist philosophy will develop in modern times.

### *The Abhidharmikas and Later Indian Philosophers*

Because the Middle Way is studied in depth before the Abhidharma in the Tibetan monastic curriculum, and because the historical development of ideas in Buddhism is not emphasized in their education, practitioners in the Tibetan tradition may not see the connection between the development of the Abhidharma and the Middle Way as taught by Nāgārjuna.

In the Pāli sūtras, the Buddha does not assert inherent existence, nor does he deny it. Sometimes when the Buddha talks of not-self in the Pāli sūtras, he negates the aggregates being a person. At other times it seems that he is negating

the aggregates having their own inherent nature, although he does not use that terminology. In Pāli sūtras, the Buddha explains how phenomena are subject to constant arising and passing away. Can someone who has clear meditative and experiential insight with deep mindfulness of the continuous/constant passing away of the aggregates still assert that they have an inherent essence that exists from one moment to the next?

Antecedents to Nāgārjuna's thoughts and writings exist in the Pāli tradition, as they surely did in all early schools. The format as well as the content of Nāgārjuna's famous tetralemma that rejects arising from self, other, both, and causelessly is found in the Pāli sūtras, when in the *Book of Causation* (SN 12.17) the naked ascetic Kassapa asks the Buddha if suffering is created by oneself, another, both oneself and another, or fortuitously. The Buddha responded, "It is not so" to each option.

The idea that some phenomena are mental constructs imputed by the mind was initially spelled out in the early Abhidharma literature. The implications of this idea were drawn out by Indian masters and their Tibetan descendants. For many Indian masters, mental constructs are juxtaposed with "real" phenomena (which each school defines slightly differently), so that various phenomena are said to have different degrees or types of existence. In his *Treatise on the Middle Way*, Nāgārjuna examines many of the same topics as the Abhidharmikas—causality; motion; the sense sources; aggregates; elements; arising, abiding, and ceasing; essence; time; and becoming and destruction—and concludes that there are not different degrees of existence but that all phenomena equally exist by mere imputation.

Many of the topics explored by early Sarvāstivāda Abhidharmikas and unpacked by later commentators became the basis of the Madhyamaka critique. Of the various early Buddhist schools, the Sarvāstivāda were very substantialist. The meanings of many terms—for example, "own-nature" and "own-characteristics"—took on different meanings for different people and schools. In addition, these meanings changed over time, and new philosophical terms became popular. The writings of Indian Mahāyāna panditas responded to these old and new words and their diverse meanings. For example, later scholar-adepts questioned: What is the difference between an object having its own-nature and existing by its own-nature? Can an object have its own characteristics but not exist by its own characteristics? The various philosophical schools that developed

in India have their own definitions of these terms and their own positions on these questions.

Because Nāgārjuna lived for some time in North India, where the Sarvāstivādins and the Vaibhāṣikas were strong, he likely had more contact with these schools. Thus his refutation of inherent existence and existence by its own characteristics was directed at their assertions when he clarified the meaning of the Middle Way free from the two extremes.

Many of the topics that are presently issues of debate or issues of great importance in the Tibetan Gelug understanding of emptiness were not considered by the Pāli tradition or other early schools. For example, the Pāli tradition assumed that people had a common conventional understanding of the word “mine” and did not go into lengthy discussions about the meaning of “mine” in view of a personal identity grasping I and mine. In the same vein, in the Pāli canon the Buddha does not state that phenomena exist inherently, nor does he say that there is only the selflessness of persons and no selflessness of phenomena. None of these terms were in common usage until later, and even then, their meaning evolved over time as the great Buddhist thinkers explored different areas.

Although my knowledge is just in its infancy, if we approach the Pāli sūtras with a fresh mind, we will see tantalizing hints of Nāgārjuna’s philosophy in them. Similarly, when we approach the Abhidharma texts of the various early schools, we will see the development of ideas that led to Nāgārjuna’s refutation of the inherent existence of all phenomena. Some of the ideas found in the canonical Abhidharma and its later commentaries are ones that Nāgārjuna refuted, whereas others supported his refutation of inherent existence.

## Notes

1. You'll find discussion of the Vinaya, samādhi, insight, and the thirty-seven harmonies with awakening in *Following in the Buddha's Footsteps*.
2. It seems that both these Sanskrit terms are not found in Buddhist Sanskrit literature.
3. This is according to the Prāsaṅgikas. For followers of the Tathāgatagarbha philosophy in China, "suchness" has a different meaning.
4. For more on the three turnings of the Dharma wheel, see chapter 9 of *Approaching the Buddhist Path*.
5. The three kinds of faith are admiring faith, aspiring faith, and believing faith. See chapter 9 of *Approaching the Buddhist Path*.
6. These are the three Perfection of Wisdom sūtras: the extensive sūtra in one hundred thousand lines (or verses), the middle-length sūtra in twenty-five thousand lines, and the condensed sūtra in eight thousand lines.
7. This refers to the three higher trainings in ethical conduct, concentration, and wisdom.
8. This refers to the initial, middle, and advanced levels of practitioners. See chapter 8 in *Approaching the Buddhist Path*.
9. Translated by the Venerable Geshe Lhakdor in Dharamsala, February 26, 2002; revised by Tenzin Wangdue, Nicholas Vreeland, and Jeremy Russell, December 2020.
10. Saying that someone is a student of Nāgārjuna doesn't mean that they met him directly during their lifetime, but that they followed his views.
11. For a full explanation of these, see chapter 3 of *In Praise of Great Compassion*.
12. Private correspondence, Geshe Dadul Namgyal, May 1, 2010.
13. In Gelug, the main tenet texts are *Great Exposition of Tenets* (*Grub mtha' chen mo*) by Jamyang Shepa; *Precious Garland of Tenets* (*Grub pa'i mtha'i rnam par bzhag pa rin po che'i phreng ba*) by Könchok Jigme Wongpo, Jamyang Shepa's incarnation; and *Ornament of the Mountain of Tenets* (*Grub mtha' lhun po'i mdzes rgyan*) by Changkya Rolpai Dorje. The main Nyingma tenet text, *Treasury of Tenets: Illuminating the Meaning of All Vehicles* (*Theg pa mtha' dag gi don gsal bar byed pa grub pa'i mtha' rin po che'i mdzod*), was written by Longchen Rabjam. Sakya Pandita's *Thorough Explanation of the Systems* (*Gzhung lugs legs par bshad pa*), also known as *Differentiation of Tenets* (*Grub mtha' rnam 'byed*), is the main Sakya tenet text, and Taktsang Sherab Rinchen, a Sakya scholar, wrote *Explanation of "Freedom from Extremes through Knowing All Tenets"* (*Grub mtha' kun shes nas mtha' bral grub pa zhes bya ba'i bstan bcos*). A popular Kagyu and Rime tenet text was written by Jamgon Kongtrul Lodro Taye and is included in his masterpiece, *Treasury of Knowledge* (*Shes bya kun la khyab pe mdzod*), *Book Six, Part Three: Frameworks of Buddhist Philosophy*.
14. For an excellent discussion of the purpose of the tenet schools in the Gelug tradition see Blumenthal, *Ornament of the Middle Way*, 227–32.
15. Please see chapter 4, "The Spread of the Buddhadharmā and Buddhist Canons," in *Approaching the Buddhist Path* for comments on the early meaning of the name Theravāda.

16. The other five treatises on emptiness that Nāgārjuna is said to have written are *Precious Garland of Advice for the King* (*Ratnāvalī*), *Refutations of Objections* (*Vigrahavyāvartanī*), *Seventy Stanzas on Emptiness* (*Śūnyatāsaptati*), *Sixty Stanzas of Reasoning* (*Yuktiṣaṣṭikākārikā*), and *Treatise Called the “Finely Woven”* (*Vaidalyasūtranāma*).
17. Nowadays the debate continues whether, according to the Prāsaṅgika system, a syllogism is necessary to generate the correct view.
18. Also called the “self-cognizing mind” (T. *rang rig*).
19. The two *Knowledges* are the *Treasury of Knowledge* by Vasubandhu and the *Compendium of Knowledge* by Asaṅga.
20. See Cozort and Preston, *Buddhist Philosophy*; Tenzin Yangzom, *Presentation of Buddhist Tenets by Jetsun Chokyi Gyaltzen: Tibetan, English, Mandarin*; Geshé Namgyal Wangchen, *Brief Presentation of the Fundamentals of Buddhist Tenets and Modern Science*.
21. Some translators have translated *’dzin* as “conception” and thus say “the conception of true existence.” This translation can be misleading because we usually consider conception a rather gross mind, whereas grasping true existence is an innate mind that is subtler.
22. Tibetan scholars say that all eighteen of the early Buddhist schools can be included under the heading of “Vaibhāṣika.” However, modern scholars and most Buddhists in other Asian countries do not agree. Many modern scholars believe that the Vaibhāṣikas were a branch of the Sarvāstivāda because the Vaibhāṣikas’ main text, the *Mahāvibhāṣā Śāstra* (*Great Detailed Explanation*), is a commentary on the final book of the Sarvāstivāda Abhidharma, the *Foundation of Knowledge* (*Jñānaprasthāna*).
23. The same is true of form in general. A car is an example of form. A car is a conventional truth and imputedly exists, but form in general is not because when form is physically or mentally broken into smaller pieces, form is still present.
24. “Imputedly existent” and “substantially existent” have different meanings according to the tenet system. They are being used here as follows:
  - Vaibhāṣikas: Something is imputedly existent because when it is broken into smaller pieces or moments of time, it can no longer be ascertained. Something is substantially existent when it can be identified even when broken into smaller pieces or moments of time.
  - Sautrāntikas up to Svātantrika Mādhyamikas: Something is imputedly existent when another object must be identified in order to identify it. It is substantially existent when it can be known directly, without another object being identified.
  - Prāsaṅgikas: All phenomena are imputedly existent because they exist by being merely imputed by term and concept. Substantial existence is equivalent to inherent existence and nothing exists in that way.

For a different description of substantial existent and imputed existent according to the Drepung Gomang *Collected Topics* text, see Perdue, *Debate in Tibetan Buddhism*, 758–71.

25. That the Vaibhāṣikas and Sautrāntikas don’t assert a selflessness of phenomena affects their tenets on other topics. For example, they accept that the five aggregates and the external environment truly exist and that the way they appear to direct perceivers is not erroneous—these things are truly existent as they appear to be. Since that is the case, the five aggregates and so forth are inherently polluted and can never be purified. Thus when arhats pass away and attain nirvāṇa without remainder, their polluted aggregates cease, as does the continuity of the person. For that reason, there are three final vehicles, and śrāvakas and solitary realizers will never enter the Mahāyāna and become buddhas. Since not everyone will become a buddha, their generating bodhicitta is not

necessary. Because the aggregates and environment are inherently polluted, the Buddha as well as highly realized yogis do not see them as pure. Because the continuity of the person and aggregates ends with the attainment of nirvāṇa without remainder, they do not accept the four buddha kāyas, which include the truth body, which is a buddha's omniscient mind, and the two form bodies through which buddhas benefit sentient beings and lead them on the path.

26. In describing this, Tsongkhapa quoted the ninth chapter of the *Autocommentary on the Treasury of Knowledge*.
27. According to Prāsaṅgikas, substantial existence comes to the same point as objective or inherent existence. Although Prāsaṅgikas accept that some things are imputed existents as described by Asaṅga, they assert many levels of imputation. The one described above is coarse, while the subtlest meaning of imputed existent is that all phenomena exist by being *merely* imputed by mind and term. “Merely” excludes it being inherently existent.
28. It is called “Yogācāra” because its followers practice four yogic grounds: the yogic grounds of realizing the selflessness of persons, observing mind only, observing suchness, and dwelling in nonappearance.
29. *Grounds of Yogic Practice (Yogācārabhūmi)*, *Compendium of Ascertainments (Nirṇayasamgraha)*, *Compendium of Bases (Vastusamgraha)*, *Compendium of Enumerations (Paryāyasamgraha)*, *Compendium of Explanations (Vyākhyānasamgrahaṇī)*. *Grounds of Yogic Practice* includes *Bodhisattva Grounds (Bodhisattvabhūmi)*, *Śrāvaka Grounds (Śrāvakabhūmi)*, and *Solitary Realizer Grounds (Pratyekabuddhabhūmi)*.
30. *Inquiry into Relations (Sambandhaparikṣā)*, *Ascertainment of Reliable Cognition (Pramānaviniścaya)*, *Commentary on Reliable Cognition (Pramānavārttika)*, *Drops of Reasoning (Nyāyabindu)*, *Drops of Logic (Hetubindu)*, *Proof of Other Minds (Saṃtānāntarasiddhi)*, and *Reasoning of Debate (Vādanyāya)*.
31. “Posit” can either have the meaning to designate, which is done by a conceptual consciousness, or to establish, which can be done by a conceptual or nonconceptual consciousness.
32. Apperception (*svasaṃvedana*, T. *rang rig*) is rejected by the Vaibhāṣikas, Sautrāntika-Svātantrikas, and Prāsaṅgikas because if it existed, the subject and object of a cognition would be confused. Furthermore, there would be an infinite regress of apperception. Some scholars say the Sautrāntika Scripture Proponents also reject apperception.
33. Jamyang Shepa (1648–1721/22) has a unique perspective on the self-sufficient substantially existent person, saying that there are both coarse and subtle versions. Unlike grasping the coarse self-sufficient substantially existent person, grasping a subtle self-sufficient substantially existent person views the person and the mind-body as related, but still sees the person as the boss and the mind and body as the employees that the person leads and directs. The I is in control and dominates the aggregates, bossing them around. Here the boss is a worker just like the employees, but is more important and powerful than them. We experience this object of negation when we feel that there is an I that is one of the aggregates; for example, when the mental consciousness appears to be the I that controls the other aggregates. Jamyang Shepa says that this is the object of negation in the meditation on the selflessness of persons for all non-Prāsaṅgika schools. Its nonexistence is the subtle selflessness of a self-sufficient substantially existent person.
34. The five Saṃmitiya subschools of the Vaibhāṣikas assert a self-sufficient substantially existent person.
35. Not all imaginaries are findable when we seek the object that their term refers to, because some imaginaries are nonexistent. However, as a class, imaginaries exist and are findable when the object to which the term “imaginary” is attributed is sought.

36. This applies to modest-faculty disciples. For sharp-faculty disciples, the Buddha may teach Prāsaṅgika tenets directly.
37. The sequence described in detail is: first the aggregates appear to inherently exist, and ignorance grasps them as inherently existent. This is self-grasping of phenomena. The I is designated on the basis of the aggregates, and it too appears inherently existent. Grasping the I as inherently existent follows. This is the self-grasping of persons. The aggregates and other items are seen as “mine,” which leads to attachment to *my* things. More afflictions ensue, polluted karma is created, and saṃsāra continues on.
38. Subtle afflictions that grasp inherent existence are a unique assertion of Prāsaṅgikas. Most of our daily life afflictions are coarse; they do not grasp inherent existence themselves but are supported by grasping a self-sufficient substantially existent person as well as grasping inherent existence.
39. In some cases the term “interpretable” is used, implying that we must interpret the meaning of a passage; at other times the word “provisional” is used, implying that the passage does not convey the final meaning. The Sanskrit term is the same in both cases.
40. MP 235.
41. See MP 268–69.
42. These Yogācārins say that when sharp-faculty disciples study the *Prajñāpāramitā Sūtras* of the second turning, they understand the Yogācāra explanation of the three natures and three non-natures without having to study sūtras of the third turning. However, modest-faculty Yogācāra disciples must study sūtras such as the *Sūtra Unraveling the Thought* to correctly understand the Yogācāra view of these topics.
43. See MP 315.
44. This argument is spelled out more elaborately in the first chapter in the section “Emptiness, Its Nature, Its Purpose, and Its Meaning.”
45. It seems this text is not available in Sanskrit or Tibetan, but exists in Chinese as a set of gāthās attributed to Nāgārjuna.
46. A rough example of the meaning here is saying “one” presupposes more than one. If we say there is one cup, someone knows there are not two cups.
47. See chapters 6 and 9 in *Following in the Buddha’s Footsteps* for more about objects of concentration in the Pāli and Sanskrit traditions.
48. For a more in-depth description of this process, see *Courageous Compassion*, chapters 8 onward.
49. The Sanskrit tradition would call this a direct perceiver of emptiness.
50. See *Courageous Compassion*, chapters 6 and 7, for more on the paths of the śrāvakas and solitary realizers.
51. See *The Foundation of Buddhist Practice*, 69–76.
52. Tsongkhapa, *The Great Exposition of Secret Mantra, Volume One: Tantra in Tibet*; commentary by the Dalai Lama; translation, editing, and explanatory material by Jeffrey Hopkins (Boulder, CO: Snow Lion, 2016), 214.
53. The observed or focal object can be understood in two ways: (1) It is the object that is the basis of observation of a particular characteristic. For example, for a mind perceiving the impermanence of a table, the table is the observed object and its impermanence is the aspected object (T. *rnam pa’i yul*). (2) It is the main object that the mind focuses on, such as the table.
54. The Yogācārins, however, consider consciousnesses that apprehend external objects or objects that are not the same nature as the consciousnesses perceiving them to be mistaken.

55. There are different opinions regarding this. Some people say that a single moon is the appearing object because it is what triggered the perception of a double moon, but other people say a single moon is not the appearing object because it is falsely perceived.
56. The observed object of this wisdom is the object whose mode of existence is analyzed and whose emptiness is realized. However, the observed object does not appear to that wisdom directly realizing emptiness; only emptiness itself appears and is apprehended by that wisdom. The wisdom directly realizing the emptiness of I and mine directly realizes the emptiness of all phenomena.
57. “Superimposition” (*samāropa*, T. *sgro btags*, *sgro ’dogs*) refers to imputing something that does not exist—for example, the self of persons or the self of phenomena. These superimpositions are objects of negation.
58. Candrakīrti says (MMA 1.3cd):

First, with the thought “I,” the beings cling to a self;  
then, with the thought “mine,” they become attached to things [such as the aggregates].

From Nāgārjuna’s verse in *Precious Garland*, it seems that grasping the aggregates as truly existent arises prior to grasping the I as truly existent, but Candrakīrti seems to be saying the opposite, that first grasping I arises, then grasping the aggregates and becoming attached to them as mine. How do we resolve this seeming contradiction?

Nāgārjuna is describing the process by which self-grasping I arises—it is underpinned by having grasped the aggregates as inherently existent. For example, based on grasping a sad feeling as truly existent, we say “I am sad” and grasp the I as truly existent. Candrakīrti is speaking of the view of a personal identity in which the observed object is I or mine, not the aggregates. He is not saying that the self-grasping of persons precedes the self-grasping of the aggregates, but that grasping the I as inherently existent precedes grasping mine as inherently existent. “Mine” is another way of looking at the person. Although the notion of “mine” is based on things such as the aggregates—we say “this body is mine”—it does not grasp them as inherently existent; it grasps the I that makes things mine as inherently existent.

59. This differs from flashbacks and panic attacks caused by previous trauma.
60. The word *rtog pa* is the Tibetan translation for two Sanskrit words. The first is *kalpanā*, which has the meaning of conceptuality as described here. The second is investigation (*vitarka*, *vitakka*), which is a mental factor that engages with its object in a coarse way. It is also helpful to distinguish *rtog pa* from *rtogs pa*, which means realization (*adbigama*).
61. The meaning of conceptual consciousness and conceptual appearance is discussed in *The Foundation of Buddhist Practice*, 69–76.
62. See *Samsāra, Nirvāṇa, and Buddha Nature*, 20–21 and 107–8, for more on distorted conceptions.
63. In the homage in *Commentary on (Dignāga’s) “Compendium of Reliable Cognition,”* Dharmakīrti pays homage to Buddha Śākyamuni by referring to him as “the one who has eliminated the net of conceptualizations.” Here conceptualizations can be interpreted in two ways—as distorted conceptualizations such as self-grasping, or as conceptualizations in general. In terms of the inferential realization of emptiness, a conceptual consciousness that is an asset on the path, as a meditator advances on the path, the veil of conceptuality gradually falls away and they see emptiness directly as it is. Such a nonconceptual realization has the power to eradicate afflictions completely. In the case of bodhicitta, it is said that a buddha’s bodhicitta is also nonconceptual.
64. In the Sakya tradition, the meaning of “mind-basis-of-all” is different than in the Yogācāra system.

65. In this context, the term “mind” is used in a general sense that covers all types of cognitive events, without distinguishing between *sems* (mind) and *rig pa* (pristine awareness).
66. Of the three, understanding emptiness by hearing, thinking, and meditating, His Holiness is referring to the latter. By repeatedly meditating with a correct understanding of emptiness, an experience of emptiness will naturally arise.
67. Some scholars say that when meditating on the ultimate nature of the I, the I and emptiness appear to the inferential realization, but only emptiness is apprehended, whereas others say the I does not appear to this mind.
68. The Tibetan word *snang ba* can be translated as both appear (appearance) and perceive (perception). Cognitive obscurations are qualities of the subject, the mind that is obscured. They are not the object that the mind perceives. The “appearance” of inherent existence is the object or content of the mind that continues to perceive phenomena as inherently existent.
69. Please see *Samsāra, Nirvāṇa, and Buddha Nature*, 259–61, for more explanation on the two obscurations, and chapter 5 for more about afflictions, their seeds, and their latencies.
70. From “Recognizing My Mother” by Changkya Rolpai Dorje in *Songs of Spiritual Experience*, trans. Thupten Jinpa and Jas Elsner (Boston: Shambhala Publications, 2000), 109.
71. For more on these three types of phenomena, see *The Foundation of Buddhist Practice*, 18.
72. For more about the valid sense of I, see Khensur Jampa Tegchok, *Insight into Emptiness*, ed. Thubten Chodron (Somerville, MA: Wisdom Publications, 2012), 86–92.
73. Jamyang Shepa says grasping a self-sufficient substantially existent person has two forms: (1) The coarse form grasps the person and the aggregates as having discordant characteristics. He says this is what the Svātantrika and below assert as the conceived object of innate self-grasping of persons. (2) The subtle form grasps the I and the aggregates as having concordant characteristics. He says grasping this self is the grasping that Candrakīrti says is extinguished on the fourth ground. For more about Jamyang Shepa’s presentation of the levels of the object of negation for the selflessness of persons and the type of self-sufficient substantially existent person refuted by the lower systems, see MP 651–54.
74. In the Gelug tradition, there is a debate about what “mine” refers to in the view of a personal identity. In both canonical and commentarial texts in the Pāli tradition, there does not seem to be a philosophical debate regarding the meaning of “mine.”
75. The meaning of “emptiness dawns as the meaning of dependent arising” will be explored in more depth in volume 8 of the *Library of Wisdom and Compassion*.
76. There is a subtler level of disparity in that the reflection itself mistakenly appears to exist from its own side. This is explained further in volume 9 of the *Library of Wisdom and Compassion*. However, now we are using the reflection of a face as an analogy.
77. Stream-enterers have the initial realization of selflessness and will become arhats within seven lives at the most. Once-returners will be reborn in the desire realm one more time before attaining arhatship, while nonreturners will not. Arhats (foe destroyers) have attained liberation. See chapter 1 in *Following in the Buddha’s Footsteps* and chapters 6 and 7 in *Courageous Compassion* for more on these four pairs of Saṅgha in the Fundamental Vehicle.
78. Of the 108 phenomena, fifty-three are from the afflictive class and fifty-five from the pure class. The fifty-three afflictive phenomena are: 1–5 five aggregates; 6–11 six sense faculties (eye, ear, nose, tongue, body, mental); 12–17 six consciousnesses that depend on the six sense faculties; 18–23 six objects of those six consciousnesses; 24–29 six contacts that arise due to the coming together of a sense faculty, consciousness, and object; 30–35 six feelings that arise dependent on the six contacts;

36–41 six elements (earth, water, fire, wind, space, consciousness); 42–53 twelve links of dependent origination.

The fifty-five phenomena of the pure class are: 1–6 six perfections; 7–24 eighteen emptinesses; 25 four establishments of mindfulness; 26 four supreme strivings; 27 four bases of spiritual power; 28 five faculties; 29 five powers; 30 seven awakening factors; 31 eightfold path of the āryas (note that 25–31 are the thirty-seven harmonies with awakening); 32 four truths of the āryas; 33 four dhyānas; 34 four immeasurables; 35 four formless absorptions; 36 eight liberations; 37 nine serial absorptions; 38 paths of insight (concentrations on the three doors of liberation); 39 five superknowledges; 40 four concentrations (going as a hero, sky treasury, stainless, and loftily looking lion); 41 four doors of retention (of patience, secret speech, words, meaning); 42 ten powers of a buddha; 43 four kinds of self-confidence (four fearlessnesses); 44 four sciences; 45 great love; 46 great compassion; 47 eighteen unshared qualities of a buddha; 48–52 five beings who actualize the paths (stream-enterers, once-returners, nonreturners, arhats, solitary realizers); 53–55 three knowers (knower of the base, knower of paths, exalted knower of all aspects).

79. See chapter 2 of *The Foundation of Buddhist Practice* for more about the importance of syllogisms and the three criteria.
80. See chapter 2 of *Approaching the Buddhist Path* and chapter 7 of *The Foundation of Buddhist Practice* for more about rebirth.
81. Truly existent assertions are assertions that the opponent claims exist truly.
82. India's classical period was approximately 320–543, during the Gupta Empire.
83. For more on the coarse and subtle four truths, see chapter 1 of *Samsāra, Nirvāṇa, and Buddha Nature*.
84. Chokyi Gyaltzen says impermanence, the first of the sixteen characteristics of the four truths, is momentariness. Because this is the same for all tenet systems, it cannot be divided into coarse and subtle, like the other fifteen attributes. Jamyang Shepa says there are both coarse and subtle impermanence.
85. <http://emahofoundation.org/images/documents/DiamondSutraText.pdf>, 4.
86. See chapter 9 of *Courageous Compassion*.
87. See Shenghai Li, “Candrakīrti's Āgama: A Study of the Concept and Uses of Scripture in Classical Indian Buddhism,” PhD diss., University of Wisconsin–Madison, 2012, 207–10.
88. Similarly, some Mahāyāna practitioners may hold Fundamental Vehicle tenets and not realize the emptiness of inherent existence, while others may hold Prāsaṅgika tenets and realize subtle emptiness.
89. Unlike other Buddhists, Vaibhāṣikas claim that functioning thing, existent, and knowable object are equivalent. They divide functioning things into those that are permanent and those that are impermanent. For them a functioning thing does not necessarily arise from a cause and produce a result. Unconditioned space is a permanent functioning thing because it performs the function of allowing movement to occur.
90. See chapters 12–14 of *Samsāra, Nirvāṇa, and Buddha Nature* for a more extensive explanation of buddha nature.
91. See chapter 11 in *Samsāra, Nirvāṇa, and Buddha Nature* for an explanation of nirvāṇa and its relationship to emptiness.
92. Nirvāṇa is called “the deathless” in the sense that once nirvāṇa has been attained, there is no more birth in saṃsāra, and without birth, there is no death.

93. For instructions on the development of concentration, serenity, and dhyāna, see chapters 4–10 in *Following in the Buddha's Footsteps*.
94. Because the level of concentration with which one embarks on insight meditation may differ, the level of concentration at the time of breakthrough to the unconditioned does as well. According to the *Visuddhimagga* and Abhidhamma, a meditator practices insight in a state of concentration that is not dhyāna. Other commentaries call this state *vipassanā-samādhi*. Then, when the meditator makes the breakthrough to the supramundane path, the mind naturally goes into a dhyānic state. For a meditator who proceeds by the path of “dry insight” (insight without prior attainment of dhyāna), the path and fruit will occur at the level of the first dhyāna, but if the meditator has previously attained dhyāna, the path and fruit will occur at the level of dhyāna attained (see *Vism* 21.112ff.).
95. This is predicated on meditation on the four establishments of mindfulness. For instruction on this practice, see chapters 12–14 in *Following in the Buddha's Footsteps*.
96. The expression “mature or ripe faculties” appears in both the Sanskrit and Pāli traditions, as does the differentiation of practitioners according to their faculties being either sharp or modest. In the Pāli tradition, faculties usually refer to the five faculties of faith, effort, mindfulness, concentration, and wisdom. In the living meditative tradition of the Theravāda, “mature faculties” often has the broader meaning of being ready to gain insight or realization or having enough pāramīs to attain realization. Here “pāramīs” refer to the merit created through the practice of the ten pāramīs of the Theravāda path, which everyone, not just those on the bodhisattva path, must fulfill to attain the clear realization of nirvāṇa.
97. In addition to the above three types of abandonment, there are two more. One is *subsiding abandonment*, which is the subsiding of the defilements at the four moments of fruition that follow the four supramundane paths; this abandonment occurs at the moment of becoming a stream-enterer, once-returner, nonreturner, and arhat. The second is *abandonment by escape*, which is nirvāṇa in which all conditioned phenomena have been abandoned.
98. In Tibetan these are referred to as the appropriated aggregates. I (Chodron) find the Pāli term more compelling.
99. The difference between the conceit “I am” and the view of the self is subtle. The view of self takes one or another of the five aggregates or the collection of the aggregates and grasps it to be the self. The subtle view of self arises in all beings, whether they know philosophy or not. Some people speculate on what the self really is and develop a variety of complex explanations that they grasp to be true. Developing philosophical stances is a coarser form of the view of self.  
The coarser form of conceit is pride, which can be based on the five aggregates, although it does not grasp them as our self. For example the pride thinking “I’m attractive” is based on the body, but it doesn’t grasp the body to be the self, and the pride thinking “I scored well on this test because I’m intelligent” is based on the mind, but doesn’t grasp the mind to be the self.  
The conceit “I am” is much subtler; it is the spontaneous idea that I exist. This idea “I exist” does not grasp one or another aggregate to be the self; it is simply the thought that a true, findable I exists. This idea arises even in stream-enterers, once-returners, and nonreturners who have eliminated the view of a personal identity. These āryas know the thought “I am” is false, whereas when an ordinary person thinks “I am,” they hold it as true and let it influence how they think and act.
100. The twelve sources consist of six external sense sources (forms, sounds, odors, tastes, tangible objects, and other phenomena) and six internal sense sources (eye, ear, nose, tongue, body, and mental sense faculties).

101. Sentient beings especially crave the neutral feeling in the meditative absorption of the fourth dhyāna and the four formless absorptions. This neutral feeling is so peaceful and satisfying that subtle attachment can arise for it, binding sentient beings in saṃsāra.
102. Steven Collins, *Selfless Persons* (Cambridge: Cambridge University Press, 1982), 129–30.
103. See chapters 7 and 8 in *Saṃsāra, Nirvāṇa, and Buddha Nature* for an explanation of the twelve links of dependent origination.
104. The eighteen constituents encompass all existents, both permanent and impermanent. The eighteen are the six objects, six sense faculties, and six consciousnesses.
105. Knowledge and vision of things as they really are is one of eighteen types of insight knowledge.
106. Based on the early sūtras in the Pāli canon and their commentaries, Buddhaghōṣa in the *Path of Purification* set out the stages of insight knowledge (*vipassanā-ñāṇa*) in detail. Beginning with the early Abhidhamma schools and continuing through the arising of Mahāyāna, each Buddhist tradition worked out the process of developing insight in its own way.
107. Spoken of in the commentaries and the Abhidhamma, but not the sūtras, the bhavaṅga is a passive, underlying stream of consciousness from which active consciousness arises. It occurs in the absence of any cognitive process and serves to connect all active states of consciousness; it is not a permanent consciousness or self. It is included in the mental source because due to it, active mental consciousness arises. At the microscopic level of individual mind moments in the waking state, the mind could be going in and out of the bhavaṅga so quickly that we do not notice it. During sleep, the mind is in bhavaṅga for a longer time, emerging to dream and then returning to dreamless sleep in the bhavaṅga. The bhavaṅga is also present when fainting.
108. Sometimes it is said that the consciousness “goes out to the object.” This is speaking metaphorically and indicates that the consciousness is receptive and cognizes the object. It does not mean the consciousness leaves the body and goes to the place where the sight or sound is. At other times it is said that the object comes into the consciousness through the sense doors. This, too, is metaphoric and indicates that cognition of object by the consciousness occurs.
109. Applying Madhyamaka philosophy, the quotation above emphasizes the dependent nature of the body and its being designated in dependence on the basis of designation, the collection of elements. This paragraph speaks of both the selflessness of phenomena (the body) and selflessness of persons.
110. This is one of the few places that shows how the five aggregates arise through the six sense sources. Usually these two sets—the aggregates and the sense sources—are discussed separately. In this case, Śāriputra brings them together in a way that demonstrates their interdependent and related natures.
111. Interestingly, this statement does not seem to be said by the Buddha in any of the Pāli sūtras. But not everything the Buddha said was necessarily recorded and transmitted in a complete form throughout the centuries due to human error.
112. This is one way of describing the dependent arising of the five aggregates. The forward sequence of the twelve links of dependent origination is another way to explain the dependent arising of the five aggregates. There are other ways as well.
113. The Pāli Abhidharma, extant in the Theravāda tradition, explains many more topics than mentioned here, including consciousness, mental factors, cognitive processes, realms of rebirth, karma, the process of death and rebirth, matter, defilements, dhyānas and formless absorptions, meditation objects, conditionality, paths and results, and purification. The material covered in this coda is only a very thin slice of the Pāli Abhidharma.
114. The title of an Abhidharma work from the Dharmaguptaka school preserved in Chinese translation is equivalent to the Śāriputra-Abhidharma-Śāstra in Sanskrit.

115. See chapter 4 of *Approaching the Buddhist Path* for more about the Buddhist canons and the three baskets of teachings, of which Abhidharma is the third.
116. See chapters 12 and 13 in *Following in the Buddha's Footsteps* for an explanation of the four establishments of mindfulness.
117. In Vasubandhu's *Treasury of Knowledge*, the twelve sources and eighteen constituents include permanent phenomena such as unconditioned space and nirvāṇa. In the Pāli Abhidharma, the twelve sources and eighteen constituents include nirvāṇa, but there are no other permanent dharmas.
118. Vaibhāṣikas and Sautrāntikas assert partless particles (T. *rdul phran cha med*), whereas Yogācārins and Mādhyamikas refute their existence.
119. See Bhikkhu Bodhi, *Comprehensive Manual of Abhidharma*, 25–26, for more discussion of ultimate reality.
120. Yinshun, a great Chinese scholar-adept in the twentieth century, says this text is a very early Abhidharma text of the Sthaviravāda school. Most Western scholars say it is a Dharmaguptaka text. The Dharmaguptakas were a branch of the Vibhajyavādins, which came under the division of the Sthavira branch of the early Saṅgha (as contrasted with the Mahāsāṅghika), so there is no contradiction between what Yinshun says and the view of Western scholars.
121. It seems that for the ancient Pāli commentators, *sabhāva* (“own-nature”) has multiple meanings, some acceptable, others not. The same point was made by Mādhyamikas as well, as will be explained in a future volume.
122. *The Discourse on the Root of Existence (Mūlapariyāya Sutta and Its Commentaries)*, trans. Bhikkhu Bodhi (Kandy: Buddhist Publication Society, 2006), 38.
123. Tibetan texts on Mind and Awareness (*Blo rig*) list five omnipresent mental factors.
124. The topic of definitive and interpretable (provisional) teachings is emphasized in Tibetan Buddhism as well. See Robert A. F. Thurman, *The Central Philosophy of Tibet: A Study and Translation of Jey Tsonkhapa's Essence of True Eloquence* (Princeton, NJ: Princeton University Press, 1991).
125. There is a parallel distinction in the explanation of the Prāsaṅgika-Mādhyamika. Emptiness of inherent existence, which is ultimate truth, is definitive, as are the scriptures that explain it. Conventional truths and the scriptures that explain them are interpretable or provisional.
126. The Cowherds, *Moonshadows: Conventional Truth in Buddhist Philosophy* (Oxford: Oxford University Press, 2001), 6.
127. The non-Theravāda schools consider cold as an attribute of water-element, but according to the Theravāda, cold is the relative absence of heat, which is represented by the temperature-element.
128. In general, scholars of history say the Vaibhāṣika was a later branch that developed out of the Sarvāstivāda school.
129. Y. Karunadasa, *The Buddhist Theory of Matter as Presented in the Theravāda Buddhism with Special Reference to the Abhidhamma*, PhD diss., University of London, 1963, 344–45.
130. According to the tenet systems presented in the Gelug branch of Tibetan Buddhism, Vaibhāṣikas and Sautrāntikas accepted partless particles, whereas Yogācārins and Mādhyamikas refuted their existence. However, some Gelug scholars say that one branch of the Sautrāntika do not accept partless particles.
131. Paramāṇu and kalāpa are the same thing. It is called *paramāṇu*, or atom, because it is the smallest. It is called *kalāpa*, or cluster, because although it is the smallest, it is a cluster or group of material elements.

132. Karunadasa, *Buddhist Theory of Matter*, 368–69.
133. This view is shared by the Yogācārins and Mādhyamikas. Whatever arises is perishing; there is no need for an external force to operate on it to cause its cessation. Arising due to causes and conditions alone is enough to ensure its immediate cessation. According to the Gelug tradition, the Sautrāntikas, Yogācārins, and Mādhyamikas say that the characteristics of a thing include three activities: the activities of arising, of abiding or persisting, and of ceasing. Vaibhāṣikas say they are separate agents that act on forms and so forth, causing them to arise, abide, and cease. Prāsaṅgikas assert that the arising, abiding, and ceasing of impermanent things occur simultaneously. A thing's arising is its being the new creation of what didn't exist; its abiding is its similarity to what preceded it; its aging is its being a different entity from the previous moment, and its ceasing (disintegrating) is its not lasting another moment.
134. These are the kind of conundrums that arise when we see phenomena as inherently existent. Prāsaṅgikas use them to refute inherent existence. See chapters 11 and 15 of Āryadeva's *The Four Hundred* for examples of this.
135. See MMK chapter 2 on "Coming and Going" for another perspective on movement. Tsongkhapa's commentary, *Ocean of Reasoning*, helps to explicate this.
136. In Y. Karunadasa, *The Theravāda Abhidhamma: Inquiry into the Nature of Conditioned Existence* (Boston: Wisdom Publications, 2019), 274.
137. Some Theravādins identify this school as the Kashmiri Vaibhāṣikas.
138. The term *indriya* is also used to refer to the five sense faculties as well as the group of five faculties in the thirty-seven harmonies with awakening.
139. I asked Bhikkhu Bodhi about this and in private correspondence, May 5, 2010, he wrote, "Interestingly, I just did a search for *saccasiddhi* (the Pāli equivalent of the Sanskrit term *satyasiddhi*, or true existence) in the Sixth Council Tripiṭaka CD. It shows three results. They all refer to the same passage in three different subcommentaries. But the meaning is quite different from *satyasiddhi* as 'true existence.' Here the meaning is 'success through truthfulness.' The text is explaining the order of the ten pāramīs in the Theravāda tradition and says that 'determination comes immediately after truthfulness because there is the success of truthfulness through determination. . . .When one is bound to truthfulness, one remains unshakable in accord with one's precepts regarding generosity, and so forth.'"
140. This differs from Prāsaṅgikas, who say that a person is *imputed in dependence on* the collection of aggregates. Did the ancient scholars think of the difference between "dependent on" and "in dependence on"? It seems such issues arose much later, as debaters asked more and more questions.

## Glossary

*absolutism* (eternalism or permanence, *śāśvatānta*, *sassata*). The belief that phenomena inherently exist.

*abstract composites* (*viprayukta-saṃskāra*). Impermanent phenomena that are neither forms nor consciousnesses.

*access concentration* (P. *upacāra samādhi*). The preparatory stage of the first dhyāna. Here the five hindrances have been suppressed but the five absorption factors are not yet firm.

*acquired afflictions* (*parikalpita*, T. *kun btags*). Afflictions learned in this life through contact with false philosophies and psychologies.

*acquisition* (*prāpti*, T. *'thob pa*). Asserted by Vaibhāṣikas, it is like a rope that ensures karma will go from one life to the next.

*affirming negation* (*paryudāsapratiṣedha*, T. *ma yin dgag*). A negation that is realized upon explicitly eliminating an object of negation and that projects another phenomenon in the wake of that negation.

*afflictions* (*kleśa*). Mental factors that disturb the tranquility of the mind. These include disturbing emotions and wrong views.

*afflictive obscurations* (*kleśāvaraṇa*, T. *nyon mongs kyi sgrib pa*). Obscurations that mainly prevent liberation; afflictions and their seeds.

*aging* (*sthityanyathatva*, *thitassa annathatta*). Alteration of that which exists.

*aggregates* (*skandha*, *khandha*). The four or five components that make up a living being: form (except for beings born in the formless realm), feelings, discriminations, miscellaneous factors, and consciousnesses.

*analysis* (*vicāra*, T. *dpyod pa*). A mental factor that examines an object in detail.

*analytical meditation* (*vicārabhāvanā*, T. *dpyad sgom*). Meditation done to understand an object.

*appearing object* (*pratibhāsa-viṣaya*, T. *snang yul*). The object that actually appears to a consciousness. The appearing object of a conceptual consciousness is a conceptual appearance of something.

*apperception* (*svasamvedana*, T. *rang rig*): a “secondary” consciousness that knows the main consciousness itself directly and nondualistically. Asserted by some tenet systems, it is negated by Prāsaṅgikas and others.

*apprehended object* (engaged object, *muṣṭibandhaviṣaya*, T. *'dzin stangs kyi yul*). The main object with which the mind is concerned—that is, the object that the mind is getting at or understands.

*arhat* (P. *arahant*, T. *dgra bcom pa*). Someone who has eliminated all afflictive obscurations and attained liberation.

*arising/production* (*utpāda*, *uppāda*, T. *skye ba*). The coming into being of an impermanent phenomenon that wasn't present before.

*ārya* (P. *ariya*). Someone who has directly and nonconceptually realized the emptiness of inherent existence.

*autonomous syllogism* (*svatantra-prayoga*, T. *rang rgyud kyi sbyor ba*). A syllogism in which the parties involved agree that all parts of the syllogism inherently exist; Svātantrikas' preferred form of reasoning.

*basis of designation* (basis of imputation, T. *gdags gzhi*). The collection of parts or factors in dependence on which an object is designated or imputed.

*bhavaṅga*. A passive stream of subliminal consciousness that exists during all occasions when a clearly cognizing consciousness is not present. It is described in the Pāli commentaries and Abhidharma but not in the sūtras.

*bodhicitta*. A main mental consciousness induced by an aspiration to bring about the welfare of others and accompanied by an aspiration to attain full awakening oneself.

*bodhisattva*. Someone who has spontaneous bodhicitta and is training to become a buddha.

*bodhisattva ground*. A consciousness in the continuum of an ārya bodhisattva characterized by wisdom and compassion. It is the basis for the development of good qualities and the basis for the eradication of ignorance and mistaken appearances.

*brahmacarya*. Pure conduct, especially sexual abstinence.

*character natureless* (*lakṣaṇa-niḥsvabhāvatā*, T. *mtshan nyid ngo bo nyid med pa*). A quality of imaginaries that do not exist by their own characteristics.

*characteristics* (*lakṣaṇa*, T. *mtshan nyid*). Attributes or features of an object.

*coarse afflictions*. Afflictions stemming from grasping a self-sufficient substantially existent person, as contrasted with subtle afflictions.

*cognitive faculty/sensory faculty* (*indriya*). The subtle material in the gross sense organ that enables perception of sense objects; for the mental consciousness, it is the previous moment of any of the six consciousnesses.

*cognitive obscurations* (*jñeyāvaraṇa*, T. *shes bya'i sgrib pa*). Obscurations that mainly prevent full awakening; the latencies of ignorance and the subtle dualistic view that they give rise to.

*collection of merit* (*puṇyasamḥāra*). A virtuous action motivated by bodhicitta that is a main cause of attaining the form body of a buddha.

*collection of wisdom* (*jñānasamḥāra*). A virtuous mental action motivated by bodhicitta that is a main cause of attaining the truth body of a buddha.

*common four truths.* The four truths accepted in common by the four Buddhist tenet systems. These center around coarse afflictions.

*comprehended object* (*prameya*, T. *gzhal bya*). That which is the object known or cognized by a reliable cognizer.

*conceived object* (*adhyavasāya-viṣaya*, T. *zhen yul*). The object conceived by a conceptual consciousness; it is the apprehended or engaged object of a conceptual consciousness.

*concentration* (*samādhi*). A mental factor that has the potential to dwell single-pointedly for a sustained period of time on one object; a state of deep meditative absorption; single-pointed concentration that is free from discursive thought.

*conceptual appearance* (*artha-sāmānya*, T. *don spyi*). A mental image of an object that appears to a conceptual consciousness.

*conceptual consciousness* (*kalpanā*, T. *rtog pa'i shes pa*). A consciousness that knows its object by means of a conceptual appearance.

*conceptual fabrications.* False modes of existence and false ideas imputed by a conceptual consciousness.

*conceptuality* (*kalpanā*, T. *rtog pa*). Thought.

*conceptualizations* (*vikalpa viparyāsa*, T. *rnam rtog*). Distorted thoughts that range from exaggerating the desirability or beauty of an object to grasping impermanent things as permanent, and so forth.

*concomitant* (T. *mtshungs ldan*). Accompanying or occurring together in the same mental state.

*conditionality* (causal dependence). Dependence on causes and conditions.

*confusion* (*moha*, T. *gti mug*). Ignorance.

*consciousness* (*vijñāna*, *viññāna*, T. *rnam shes*). That which is clear and cognizant.

*consequence* (*prasaṅga*, T. *thal 'gyur*). A form of reasoning that shows the other party the inconsistencies in their assertions; the form of reasoning widely used by the Prāsaṅgikas.

*conventional existence* (*saṃvṛtisat*). Existence.

*conventional truths* (veiled truth, *saṃvṛtisatya*, *sammuti-sacca*, T. *kun rdzob bden pa*). That which is true only from the perspective of ignorance. This includes all phenomena except ultimate truths.

*death* (*maraṇabhava*). The last moment of a lifetime when the subtlest clear light mind manifests.

*defilement* (*mala*, T. *dri ma*). Either an afflictive obscuration or a cognitive obscuration.

*definitive* (*nītārtha*, *nītattha*, T. *nges don*). Prāsaṅgikas: A sūtra or statement that mainly and explicitly teaches ultimate truths.

*dependent arising* (*pratītyasamutpāda*). This is of three types: (1) causal dependence—things arising due to causes and conditions, (2) mutual dependence—phenomena existing in relation to other phenomena, and (3) dependent designation—phenomena existing by being merely designated by terms and concepts.

*designation* (*prajñapti*, *paññatti*, T. *btags pa*). The object designated by term and concept in dependence on its basis of designation.

*desire realm* (*kāmadhātu*). One of the three realms of cyclic existence, where sentient beings are overwhelmed by attraction to and desire for sense objects.

*dhyāna* (P. *jhāna*). A meditative stabilization of the form realm.

*different* (*nānātva*, T. *tha dad*). Phenomena that are diverse; phenomena that are not identical.

*different nature*. Two things can exist at different times and different places.

*direct perceiver* (*pratyakṣa*, T. *mgon sum*). A nonmistaken awareness that is free from conceptuality. According to Prāsaṅgika: an awareness that is free from conceptuality.

*direct reliable cognizer* (*pratyakṣa-pramāṇa*). A new nondeceptive nonmistaken awareness that is free from conceptuality. According to Prāsaṅgikas, it is a nondeceptive awareness that knows its object without depending on a reason.

*discordant characteristics*. The characteristics of two objects that are not the same. For example, one object is permanent while the other is impermanent.

*distorted conception* (inappropriate attention, *ayoniśo-manaskāra*, T. *tshul bzhin ma yin pa'i yid la byed pa*). Distorted thoughts that project exaggerations and erroneous qualities on objects, leading to the arising of afflictions.

*dualistic appearance* (T. *gnyis snang*). The appearance of subject and object as separate or the appearance of inherent existence.

*duḥkha* (P. *dukkha*). The unsatisfactory experiences of cyclic existence.

*Dzogchen*. A tantric practice emphasizing meditation on the nature of mind, practiced primarily in the Nyingma tradition.

*eight worldly concerns* (*aṣṭalokadharmā*). Attachment to material gain, fame, praise, and pleasure and aversion to loss, disrepute, blame, and pain.

*eighteen constituents* (*dhātu*, T. *khams*). These are the six objects, six sense faculties, and six consciousnesses.

*elaborations* (proliferations, *prapañca*, *papañca*, T. *spros pa*). Ignorance and other mental fabrications that obscure the ultimate nature of phenomena, their emptiness.

*emptiness* (*śūnyatā*, T. *stong pa nyid*). The lack of inherent existence and true existence.

*engaged object* (apprehended object, *pravṛtti-viṣaya*, T. 'jug yul). The main object with which the mind is concerned.

*erroneous* (*viparyāsa*, T. *phyin ci log pa*). Wrong, incorrect, perverted.

*essentialists* (proponents of true existence, T. *dn̄gos por smra ba*). Buddhist and non-Buddhist philosophers following a non-Madhyamaka tenet system who assert that the person and aggregates truly exist.

*exalted knower* (*jñāna*, T. *mkhyen pa*). A realization in the continuum of someone who has entered a path. It exists from the path of accumulation to the buddha ground. Exalted knower, path, ground, pristine wisdom, and clear realization are mutually inclusive.

*existence by its own characteristics* (*svalakṣaṇa*, T. *rang gi mtshan nyid kyis grub pa*). Existence from its own side.

*existent* (*sat*). That which is perceivable by mind.

*fetters* (*saṃyojana*). Factors that keep us bound to cyclic existence and impede the attainment of liberation. The five lower fetters—view of a personal identity, deluded doubt, view of rules and practices, sensual desire, and malice—bind us to rebirth in the desire realm. The five higher fetters—desire for existence in the form realm, desire for existence in the formless realm, arrogance, restlessness, and ignorance—prevent nonreturners from becoming arhats.

*focal object* (*viṣaya*, T. *dmigs pa*). The main object the mind refers to or focuses on.

*form body* (*rūpakāya*). The buddha body in which a buddha appears to sentient beings; it includes the emanation and enjoyment bodies.

*form realm* (*rūpadhātu*). The saṃsāric realm in which beings have bodies made of subtle material; they are born there due to having attained various states of concentration.

*formless realm* (*ārūpyadhātu*). The saṃsāric realm in which sentient beings do not have a material body; they are born there due to having attained various states

of meditative absorption.

*foundation consciousness* (*ālayavijñāna*, T. *kun gzhi rnam shes*). A storehouse consciousness where all latencies and karmic seeds are placed. It carries this from one life to the next and is the self according to Yogācāra Scripture Proponents.

*four truths of the āryas* (four noble truths, *catvāry āryasatyāni*). The truth of duḥkha, its origin, its cessation, and the path to that cessation.

*free from conceptuality* (*kalpanā-apoḍha*, T. *rtog bral*). Without any conceptual appearances.

*full awakening* (*samyaksambodhi*). Buddhahood; the state in which all obscurations have been abandoned and all good qualities have been developed limitlessly.

*Fundamental Vehicle*. The vehicle of śrāvakas and solitary realizers, the path that leads to liberation.

*general characteristics* (*sāmānya-lakṣaṇa*, *sāmañña-lakkhaṇa*, T. *spyi'i mtshan nyid*). Characteristics, such as impermanence, unsatisfactoriness, and not-self that are common to all functioning things.

*grasping inherent existence* (*svabhāvagraha*). Grasping persons and phenomena to exist truly or inherently. Synonymous with grasping true existence (Prāsaṅgika).

*grasping true existence* (true grasping, *satyagrāha*). Grasping persons and phenomena to exist with an intrinsic essence.

*hell being* (*nāraka*). A being born in one of the unfortunate classes of beings who suffer intense physical pain as a result of their strong destructive karma.

*hungry ghost* (*preta*). A being born in one of the unfortunate classes of beings who suffer from intense hunger and thirst.

*ignorance (avidyā)*. A mental factor that is obscured and grasps the opposite of what exists. There are two main types: ignorance regarding ultimate truth and ignorance regarding karma and its effects.

*illustration-isolate self* (T. *gang zag gzhi ldog*). What is found when the person is searched for.

*impermanence (anitya, anicca)*. Momentariness; not remaining in the next moment. Coarse impermanence is the ending of a continuum; subtle impermanence is something not remaining the same in the very next moment.

*imputedly existent (prajñaptisat, T. btags yod)*. (1) Vaibhāṣikas: Something that when it is broken into smaller pieces or moments of time can no longer be ascertained. (2) Sautrāntikas up to Svātantrikas: Something that can be identified only by identifying something else. (3) Prāsaṅgikas: Something that exists by being merely designated by term and concept.

*inappropriate attention*. See distorted conception.

*inference (anumāna, T. rjes su dpag pa)*. (1) A cognizer that knows its object through reasoning, (2) a conclusion reached through a syllogism on the basis of evidence and reasoning.

*inferential reliable cognizer (anumāna-pramāṇa)*. An awareness that knows its object—a slightly obscure phenomenon—nondeceptively, purely in dependence on a reason.

*inherent existence (svabhāvasiddhi, sabhāvasiddha, T. rang bzhin gyis grub pa)*. Existence without depending on any other factors; independent existence. For Prāsaṅgikas, to be negated both ultimately and conventionally.

*innate (sahaja, T. lhan skyes)*. Existing with the mind from beginningless time, something not acquired anew in this life.

*inner heat (candālī, T. gtum mo)*. A practice of highest yoga tantra to draw the winds inside.

*insight* (*vipaśyanā*, *vipassanā*, T. *lhag mthong*). A wisdom of thorough discrimination of phenomena conjoined with special pliancy induced by the power of analysis.

*insight knowledge* (P. *vipassanā-ñāṇa*). Mundane (*lokiya*) knowledge of the three characteristics gained through insight. It leads to supramundane (*lokuttara*) path knowledge that realizes the four truths and nirvāṇa.

*insight wisdom* (P. *vipassanā-paññā*). Knowledge of the three characteristics gained through insight and leading to stream-entry.

*interpretable* (*neyārtha*, *neyyattha*, T. *drang don*). A scripture or statement that speaks about the variety of phenomena and/or cannot be taken literally.

*investigation* (*vitarka*, *vitarka*, T. *rtog pa*). A mental factor that seeks a rough idea about an object.

*karma*. Intentional action of body, speech, or mind.

*karmic seeds*. The potency from previously created actions that will bring their results.

*knowable object* (*jñeya*, T. *shes bya*). That which is suitable to serve as an object of an awareness.

*latencies* (*vāsanā*). Predispositions, imprints, or tendencies.

*liberated path* (*vimuktimārga*, T. *rnam grol lam*). A wisdom directly realizing emptiness that has completely eradicated its corresponding portion of defilements.

*liberation* (*mokṣa*, T. *thar pa*). A true cessation that is the complete abandonment of all afflictive obscurations; nirvāṇa, the state of freedom from cyclic existence.

*liberation* (*vimukti*, *vimutti*, T. *rnam grol*). Sanskrit tradition: Complete freedom from saṃsāra; Pāli tradition: a conditioned event that brings nirvāṇa.

*Madhyamaka*: A Mahāyāna tenet system that refutes true existence.

*Mahāmudrā*. A type of meditation that focuses on the conventional and ultimate natures of the mind.

*manifest afflictions*. Afflictions active in the mind at the present moment (contrasted with seeds of afflictions).

*meditative equipoise on emptiness*. An ārya's mind focused single-pointedly on the emptiness of inherent existence.

*mental consciousness (mano-vijñāna)*. A primary consciousness that knows mental phenomena in contradistinction to sense primary consciousnesses that know physical objects.

*mental factor (caitta)*. An aspect of mind that accompanies a primary consciousness and fills out the cognition, apprehending particular attributes of the object or performing a specific function.

*mind (citta)*. The part of living beings that cognizes, experiences, thinks, feels, and so on. In some contexts it is equivalent to primary consciousness.

*mindfulness (smṛti, sati)*. A mental factor that brings to mind a phenomenon of previous acquaintance without forgetting it and prevents distraction to other objects.

*mindstream (cittasamṫāna)*. The continuity of mind.

*mistaken awareness*. An awareness that is mistaken in terms of its appearing object.

*momentary (kṣaṇika)*. Not enduring in the next moment without changing.

*monastic*. Someone who has received monastic ordination; a monk or nun.

*nature truth body (svabhāvika dharmakāya)*. The buddha body that is either the emptiness of a buddha's mind or the true cessations in that buddha's continuum.

*naturelessness* (*niḥsvabhāva*, T. *ngo bo nyid med pa*). The lack of a certain nature.

*negative* (*pratiṣedha*, T. *dgag pa*). An object (1) whose name eliminates an object of negation, or (2) that explicitly appears in a way that an object of negation has been negated. Equivalent with exclusion (*apoha*, T. *sel ba*), other exclusion (*anyāpoha*, T. *gzhan sel*), and isolate (*vyatireka*, *ldog pa*).

*nihilism* (*ucchedānta*, *vibhavadiṭṭhi*). The belief that our actions have no ethical dimension; the belief that nothing exists.

*Nirgranthas*. Jains; followers of Mahāvira, a contemporary of the Buddha.

*nirvāṇa*. The state of liberation of an arhat; the emptiness of a mind that has been totally cleansed of afflictive obscurations.

*nominal truths* (*vyavahārasatya*, T. *tha snyad bden pa*). See conventional truths.

*nominally different*. Two phenomena are nominally different when they are not the same thing and can be distinguished by conception.

*nonabiding nirvāṇa* (*apraṭiṣṭha-nirvāṇa*). A buddha's nirvāṇa that does not abide in either the extreme of cyclic existence or in the extreme of personal liberation.

*nonaffirming negative* (*prasajyapraṭiṣedha*, T. *med dgag*). A negative phenomenon in which, upon the explicit elimination of the object of negation by an awareness, another phenomenon is not suggested or established. A phenomenon that is the mere absence of an object of negation.

*nonconceptual consciousness* (*nirvikalpaka*, T. *rtog med shes pa*). A consciousness that knows its object directly, not by means of a conceptual appearance.

*nondeceptive* (*avisamvādi*, T. *mi slu ba*). Incontrovertible, correct; the way it appears to a reliable cognizer directly realizing it is in accord with the way it exists.

*nonduality*. The nonappearance of subject and object, of inherent existence, of conventional truths, and/or of conceptual appearances in an ārya's meditative equipoise on emptiness.

*nonerroneous* (*aviparīta*, T. *phyin ci ma log pa*). Correct, right.

*nonexistent* (*asat*). That which is not perceivable by mind.

*nonmistaken* (*abhrānta*, T. *ma 'khrul ba*). (1) Sautrāntikas: not mistaken with respect to a consciousness's appearing object. (2) Prāsaṅgikas: a consciousness without the appearance of inherent existence.

*non-thing* (*abhāva*, T. *dnegos med*). (1) Permanent phenomena; (2) phenomena that cannot perform a function.

*non-wastage* (*avipranāśa*, T. *chud mi za ba*). Asserted by Vaibhāṣikas, it is likened to an IOU, voucher, or seal that ensures karma will go from one life to the next.

*object* (*viśaya*, T. *yul*). That which is known by an awareness.

*object of negation* (*pratiśedhya* or *niśedhya*, T. *dgag bya*). What is negated or refuted.

*observed object* (*ālambana*, *ārammaṇa*, T. *dmigs yul*). The basic object that the mind refers to or focuses on while apprehending certain aspects of that object.

*one* (*ekatva*, T. *gcig*). A singular phenomenon; a phenomenon that is not diverse; identical.

*one nature*. Two phenomena that exist at the same time and do not appear separate to direct perception are one nature.

*ordinary being* (*prthagjana*, *puthujjana*, T. *so so skye bo*). Someone who is not an ārya.

*own-characteristics/specific characteristics* (*svalakṣaṇa, salakkhaṇa, T. rang mtshan, rang gi mtshan nyid*). The specific characteristics unique to each phenomenon. Things have their own characteristics, but they do not exist by their own characteristics.

*passing away* (*vyaya, vaya, T. 'jig pa*). Ceasing, disintegrating.

*path* (*mārga, magga, T. lam*). An exalted knower that is conjoined with uncontrived renunciation.

*path knowledge* (P. *magga-ñāṇa*). A supramundane path that knows the four truths and nirvāṇa.

*path of accumulation* (*sambhāramārga, T. tshogs lam*). First of the five paths. In the Śrāvaka or Solitary Realizer Vehicle, it begins when one aspires for liberation day and night; in the Mahāyāna, it begins when one has spontaneous bodhicitta.

*path of meditation* (*bhāvanāmārga, T. sgom lam*). The fourth of the five paths. This begins when a meditator begins to eradicate innate afflictions from the root.

*path of no-more-learning* (*aśaikṣamārga, T. mi slob lam*). The last of the five paths; arhatship or buddhahood.

*path of preparation* (*prayogamārga, T. sbyor lam*) The second of the five paths. It begins when a meditator attains the union of serenity and insight on emptiness.

*path of seeing* (*darśanamārga, T. mthong lam*). Third of the five paths. It begins when a meditator first has direct, nonconceptual realization of the emptiness of inherent existence.

*permanent* (*nitya, nicca, T. rtag pa*). Unchanging, static, not momentarily changing. It does not mean eternal.

*permanent, unitary, independent self.* A soul or self (*ātman*) asserted by non-Buddhists.

*person* (*pudgala*, T. *skya bo*). A living being designated in dependence on its four or five aggregates.

*pollutant* (*āsrava, āsava*). A set of three or four deeply rooted defilements: sensual desire, existence (craving to exist in a *samsāric* form), and ignorance. Some lists add view.

*polluted* (P. *āsava*). Under the influence of ignorance or its latencies.

*posit* (*vyavasthāna*, T. *bzhag pa*). To establish, determine, or postulate an object; to designate.

*positive* (affirmative, *vidhi*, T. *sgrub pa*). A phenomenon that is not realized by the conceptual consciousness apprehending it by explicitly eliminating an object of negation.

*Prāsaṅgika Madhyamaka.* A Mahāyāna tenet system that asserts that all phenomena lack inherent existence both conventionally and ultimately.

*prātimokṣa.* The different sets of ethical precepts for monastics and lay followers that assist in attaining liberation.

*primal substance* (fundamental nature, *prakṛti, pakati*, T. *rang bzhin*). A truly existent substance out of which everything is created, asserted by the non-Buddhist Sāṃkhya school.

*primary consciousness* (*vijñāna*). A consciousness that apprehends the presence or basic entity of an object; there are six types of primary consciousnesses: visual, auditory, olfactory, gustatory, tactile, and mental.

*pristine wisdom* (*jñāna*, T. *ye shes*). A realization in the continuum of someone who has entered a path.

*probing awareness* (reasoning consciousness, *yuktijñāna*, T. *rigs shes*). A consciousness using or having used reasoning to analyze the ultimate nature of an object. It can be either conceptual or nonconceptual.

*production natureless* (*utpatti-niḥsvabhāvatā*, T. *skye ba ngo bo nyid med pa*). A quality of dependent natures: they arise from causes that are a different nature than themselves and do not arise from causes that are the same nature as themselves.

*pure lands*. Places created by the unshakable resolve and merit of buddhas where all external conditions are conducive for Dharma practice.

*realization* (*adhigama*, T. *rtogs pa*). An awareness that eliminates superimpositions on an object and is able to induce ascertainment of a phenomenon. It may be either inferential or direct.

*reliable cognizer* (*pramāṇa*). A nondeceptive awareness that is incontrovertible with respect to its apprehended object and that enables us to accomplish our purpose.

*reviewing knowledge* (P. *paccavekkhaṇañāṇa*). In stream-enterers, once-returners, and nonreturners, it is a knowledge in post-meditation time that reviews the path, its fruition, the defilements abandoned, the defilements that remain, and nirvāṇa. Arhats have no reviewing knowledge of defilements that remain.

*samādhi*. See concentration.

*Sāṃkhya*. A school of Hindu philosophy that asserts a primal substance and that says effects exist in a nonmanifest state in their causes.

*samsāra*. The cycle of rebirth that occurs under the control of afflictions and karma.

*Sautrāntika*. A Fundamental Vehicle tenet system that asserts that functional things are ultimate truths and that phenomena that exist by being imputed by thought are conventional truths.

*Sautrāntika-Svātantrika Madhyamaka*. A Mahāyāna tenet system that accepts external objects and refutes inherent existence ultimately but not conventionally.

*self* (*ātman*, *attan*, T. *bdag*). (1) A person, (2) inherent existence, or (3) a permanent, unitary independent soul or self.

*self-grasping* (*ātmagrāha*). Grasping inherent existence.

*self-isolate person* (T. *gang zag rang ldog*). The general person, the imputedly existent person.

*selflessness of persons* (*puḍgalanairātmya*, T. *gang zag gi bdag med*). Prāsaṅgikas: the nonexistence of a self-sufficient substantially existent person is the coarse selflessness of persons, and the nonexistence of an inherently existent person is the subtle selflessness of persons.

*selflessness of phenomena* (*dharmanairātmya*, T. *chos kyī bdag med pa*). Prāsaṅgikas: the nonexistence of inherently existent phenomena other than persons.

*self-sufficient substantially existent person* (T. *gang zag rang rkya thub pa'i rdzas yod*). A person that can be identified without identifying its aggregates; a self that is the controller of the body and mind. Such a self does not exist.

*self-sufficient* (T. *rang rkya ba*). Being a different entity from its parts.

*sense direct reliable cognizers*. Incontrovertible awarenesses that know their objects—sights, sounds, smells, tastes, and tangible objects—directly by depending on a physical cognitive faculty.

*sentient being* (*sattva*). Any being with a mind, except for a buddha.

*serenity* (*śamatha*, *samatha*). Sanskrit tradition: concentration arisen from meditation that is accompanied by the bliss of mental and physical pliancy in which the mind abides effortlessly without fluctuation for as long as one wishes on whatever virtuous object the mind has been placed. Pāli tradition:

one-pointedness of mind; the eight attainments (meditative absorptions) that are the basis for insight.

*sign (nimitta)*. A mental image that arises in stabilizing meditation and is used to attain single-pointed concentration.

*signlessness (ānimitta, T. mtshan ma med pa)*. The emptiness that is the absence of inherent existence of the cause of any phenomenon.

*six perfections (ṣaḍpāramitā)*. The practices of generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom that are motivated by bodhicitta.

*slightly obscure phenomena (parokṣa)*. Phenomena that ordinary beings can initially know only through factual inference.

*solitary realizer (pratyekabuddha)*. A person following the Fundamental Vehicle who seeks liberation and emphasizes understanding the twelve links of dependent arising.

*śrāvaka (hearer, P. sāvaka)*. Someone who practices the Fundamental Vehicle path leading to arhatship and who emphasizes meditation on the four truths.

*stabilizing meditation (sthāpyabhāvanā, T. 'jog sgom)*. Meditation to focus and concentrate the mind on an object.

*substantial cause (upādāna-kāraṇa)*. The cause that becomes the result, as opposed to cooperative causes that aid the substantial cause in becoming the result.

*substantially existent (dravyasat, dabbasat, T. rdzas yod)*. (1) Vaibhāṣikas: An object that can be identified even when broken into smaller pieces or moments of time. (2) Sautrāntikas up to Svātantrikas: An object that can be known directly, without another object being identified. (3) Prāsaṅgikas: inherently existent.

*suchness (tattva, T. de kho na nyid)*. Emptiness, the way things really are.

*superimposition* (*samāropa*, T. *sgro btags*, *sgro 'dogs*). The imputing or projecting of something that does not exist—for example, a self of persons.

*supramundane* (transcendental, *lokottara*, *lokuttara*). Pertaining to the elimination of fetters and afflictions; pertaining to āryas.

*subtle afflictions*. Afflictions stemming from grasping inherent existence (contrasted with coarse afflictions).

*Svātantrika Madhyamaka*. A Mahāyāna tenet system that asserts that phenomena do not exist inherently on the ultimate level but do exist inherently on the conventional level.

*syllogism* (*prayoga*). A statement consisting of a subject, predicate, and reason, and in many cases, an example.

*tathāgata*. A buddha.

*tenet* (*siddhānta*, T. *grub mtha'*). A philosophical assertion or belief.

*tenet system/school*. A set of philosophical assertions regarding the basis, path, and result that is shared by a group of people.

*thesis* (*pratijñā*). What is to be proven—the combination of the subject and the predicate—in a syllogism.

*thing* (*bhāva*, T. *dngos po*). (1) Something that can perform a function, synonymous with product; (2) inherent existence.

*thought* (*kalpanā*). Conceptual consciousness.

*three characteristics*. Three qualities of conditioned phenomena: impermanence, *duḥkha*, and selfless (not-self).

*three criteria for existent phenomena*. It is known to a conventional consciousness; its existence is not invalidated by another conventional reliable cognizer; it is not invalidated by a mind analyzing emptiness.

*three criteria of a correct inference or syllogism.* Presence of the reason in the subject, pervasion or entailment, and counterpervasion.

*three realms (tridhātuka, tedhātuka).* Desire, form, and formless realms.

*true cessation (nirodhasatya).* The cessation of a portion of afflictions or all afflictions; the cessation of a portion of cognitive obscurations or all cognitive obscurations.

*true existence (satyasat).* Existence having its own mode of being; existence having its own reality.

*true grasping.* See grasping true existence.

*truth body (dharmakāya).* The buddha body that includes the nature truth body and the wisdom truth body.

*twelve links of dependent origination (dvādaśāṅga-pratītyasamutpāda).* A system of twelve factors that explains how we take rebirth in saṃsāra and how we can be liberated from it.

*twelve sources (āyatana, T. skye mched).* That which opens or increases the arising of consciousness. They consist of six external sense sources (forms, sounds, odors, tastes, tangible object, and other phenomena) and six internal sense sources (eye, ear, nose, tongue, body, and mental sense faculties).

*two truths (satyadvaya).* Ultimate truths and veiled (conventional) truths.

*ultimate analysis (T. don dam pa'i dpyod pa).* Analysis that examines what an object really is and its deeper mode of existence.

*ultimate natureless (paramārtha-niḥsvabhāvata).* A quality of consummate natures; the ultimate nature of phenomena that is perceived by the ultimate purifying consciousnesses.

*ultimate truth (paramārthasatya, paramatthasacca, T. don dam bden pa).* The ultimate mode of existence of all persons and phenomena; emptiness; objects

that are true and appear true to their main cognizer, a wisdom nonconceptually and directly realizing emptiness.

*uncommon four truths.* The four truths accepted only by Prāsaṅgika-Mādhyamikas. These center around subtle afflictions.

*underlying tendencies (anuśaya, anusaya).* Latent dispositions on the mind that enable manifest afflictions to arise when the appropriate causes and conditions are present. These are attachment to sensuality, anger, views, deluded doubt, arrogance, existence (in the three realms), and ignorance.

*unfortunate states (apāya).* Unfortunate states of rebirth as a hell being, hungry ghost, or animal.

*uninterrupted path (ānantaryamārga, T. bar ched med lam).* A wisdom directly realizing emptiness that is in the process of eliminating its corresponding portion of defilements.

*union of serenity and insight.* A path that consists of both serenity and insight and in which the bliss of mental and physical pliancy has been induced by analysis.

*unpolluted (anāsrava).* Not under the influence of ignorance.

*Vaibhāṣika.* A Fundamental Vehicle tenet system that accepts directionally partless particles and temporally partless moments of consciousness as ultimate truths and asserts truly established external objects.

*veiled truths (conventional truths, samvṛtisatya).* Objects that are true only to ignorance; objects that appear to exist inherently to their main cognizer, ignorance.

*view of a personal identity (view of the transitory collection, satkāyadrṣṭi, sakkāyaditṭhi).* Grasping an inherently existent I or mine (according to the Prāsaṅgika system).

*view of a personal identity grasping I* (*ahamkāra*, T. *ngar 'dzin gyi 'jig lta*). An afflictive view that holds the I to be inherently existent.

*view of a personal identity grasping mine* (*mamakāra*, T. *nga yi bar 'dzin pa'i 'jig lta*). An afflictive view holding what makes things mine as inherently existent.

*Vinaya*. Monastic discipline.

*wind* (*prāṇa*, T. *rlung*). One of the four elements; energy in the body that influences bodily functions; subtle energy on which levels of consciousness ride.

*wisdom truth body* (*jñāna dharmakāya*). The buddha body that is a buddha's omniscient mind.

*wishlessness* (*apraṇihita*, T. *smon pa med pa*). The ultimate nature of the effects of things.

*wrong or erroneous awareness* (*viparyaya jñāna*). A mind that is erroneous with respect to its apprehended object.

*Yogācāra* (*Cittamātra*). A Mahāyāna tenet system that accepts eight consciousnesses, including a foundation consciousness and an afflictive consciousness, and asserts the true existence of other-powered (dependent) phenomena but does not assert external objects.

*Yogācāra-Svātantrika Madhyamaka*. A Mahāyāna tenet system that does not assert external objects, asserts six consciousnesses, and refutes inherent existence ultimately but not conventionally.

*yogi/yoginī*. A meditator on suchness.

*yogic direct reliable cognizers*. Nondeceptive mental consciousnesses that know their objects by depending on a union of serenity and insight.

## About the Authors

THE DALAI LAMA is the spiritual leader of the Tibetan people, a Nobel Peace Prize recipient, and an advocate for compassion and peace throughout the world. He promotes harmony among the world's religions and engages in dialogue with leading scientists. Ordained as a Buddhist monk when he was a child, he completed the traditional monastic studies and earned his geshe degree (equivalent to a PhD). Renowned for his erudite and open-minded scholarship, his meditative attainments, and his humility, Bhikṣu Tenzin Gyatso says, "I am a simple Buddhist monk."

Peter Atkinson

BHIKṢUṆĪ THUBTEN CHODRON has been a Buddhist nun since 1977. Growing up in Los Angeles, she graduated with honors in history from the University of California at Los Angeles and did graduate work in education at the University of Southern California. After years studying and teaching Buddhism in Asia, Europe, and the United States, she became the founder and abbess of Sravasti Abbey in Washington State. A popular speaker for her practical explanations of

how to apply Buddhist teachings in daily life, she is the author of several books on Buddhism, including *Buddhism for Beginners*. She is the editor of Khensur Jampa Tegchok's *Insight into Emptiness*. For more information, visit [sravastiabbey.org](http://sravastiabbey.org) and [thubtenchodron.org](http://thubtenchodron.org).

## ENERGIZE YOUR PRACTICE WITH THE POTENT ENERGY OF MANTRA.

**I**N THIS BOOK, beloved teacher Lama Zopa Rinpoche guides us through the most popular mantras in Tibetan Buddhism: Shakyamuni Buddha, Chenrezig, Manjushri, Tara, Medicine Buddha, Vajrasattva, and more.

A mantra—literally “that which protects the mind”—is a series of Sanskrit syllables that evoke the energy of a particular buddha or bodhisattva. It works as a sacred sound that brings blessings to oneself and others, and as a tool to transform our mind into one that is more compassionate and wise.

In clear and succinct teachings, Lama Zopa shows us why we need different mantras and how each mantra works. He also explains their importance and power, giving specific instructions for practicing them. The exquisite, full-color illustrations of the deities that accompany the text make this book a beautiful guide, one suitable for both beginners and experienced practitioners.

The *Wisdom Culture Series* is published by Wisdom Publications in association with the Foundation for the Preservation of the Mahayana Tradition (FPMT). Under the guidance of Lama Zopa Rinpoche, the series provides English-language readers with key works for the study and cultivation of the Mahayana Buddhist path, especially works of masters within the lineage of Lama Tsongkhapa and the Geluk school of Tibetan Buddhism. “Wisdom culture,” an expression frequently used by Lama Yeshe, is a Dharma culture rooted in wisdom and compassion. The *Wisdom Culture Series* is intended to support this vision by transmitting the timeless wisdom of the Dharma through authoritative and accessible publications.

About the Author

## EDITOR'S PREFACE

---

TWO AND A HALF thousand years ago, a man became enlightened. Prince Gautama, Siddhartha, the son of the king the Shakyas, became Shakyamuni, the “conqueror of the Shakyas,” usually just known as the Buddha, the Awakened One.

Read one way, the story of the Buddha is of a person like us and his search for the truth, which culminated in his enlightenment under the bodhi tree. Read another way, the Mahayana way, he was already enlightened, and his life was a teaching, showing us exactly what we must do to become like him. Both readings are the truth. How that is so is a quest we ourselves must undertake to discover what it means for us.

And that is the same with the countless buddhas there are in Tibetan Buddhism. Why not just one Buddha, Shakyamuni? What does the plethora of buddhas mean? What exactly are they and how do they relate to our spiritual journey? I remember, in France in the 1990s, a student asked one of the great lamas, “Are the buddhas real or imaginary?” In a wonderfully enigmatic answer, the lama replied, “Yes.” Which I took to mean that it’s up to us to work it out.

Buddha, deity, meditational deity, *yidam*—the terms are synonymous, all referring to the enlightened mind manifesting in a particular way to best benefit sentient beings. Thus, Chenrezig is the manifestation of the buddhas’ compassion, Tara is the manifestation of the buddhas’ enlightened activities, and so forth.

The many buddhas manifest according to the different propensities of different people. They are there to help us in whatever way we need, if we are able to open to them. Sometimes we need more compassion than wisdom; sometimes we need a more wrathful approach, other times a more peaceful one. We have a natural affinity for one or many buddhas. That does not mean

that one buddha is better than the others, but that one will resonate with us more.

Each buddha has a mantra. A mantra is a series of Sanskrit syllables that evoke the energy of that particular buddha. All sound has energy. It is said that every Sanskrit syllable creates a sacred vibration in the mind, and so each syllable of each mantra has the power to alter our psychic nervous system in subtly different ways. Some mantras run smoothly through the mind and invoke peace and contentment, some seem difficult to pronounce and have a markedly different effect. A mantra works in two ways: externally as a sacred sound that carries a blessing, and internally as a tool to transform our mind into one that is more compassionate and wise.

When we take an initiation into a particular deity, we are generally given a mantra commitment, such as saying a certain number of mantras of that deity every day. Although to our Westernized, individualistic mind, this might seem like an imposition at first, in fact it is the gift of liberation. If we get into the habit of saying mantras whenever the mind slips into a dull neutrality or into emotive overdrive—not only when we are doing a daily meditation practice but whenever we are going about our business—we can bring ourselves back to a peace and spaciousness that guards our mind from negativity. It is probably the most valuable mental tool we can have.

Generally, to practice a deity and say their mantra, we need an initiation given by a qualified teacher who is part of an unbroken lineage. There are some deities, however, who are so popular that their mantras are widely said by people whether they have had an initiation or not. Furthermore, even without an initiation, it is often permissible (and very beneficial) to do a simple version of that deity's practice. In such cases, it is generally said that rather than imagining yourself becoming the deity, as is often taught after initiation—you simply imagine them in front of you, and you receive the blessings of the deity.

By far the most popular mantra is that of Chenrezig (Avalokiteshvara in Sanskrit). There seems to be hardly a Tibetan person who doesn't constantly have OM MANI PADME HUM on their lips, and with non-Tibetans too, this is very popular. Chenrezig is compassion, which we all desperately need, so chanting his mantra is incredibly worthwhile.

Over the decades, Lama Zopa Rinpoche has given countless initiations and instructed his students to say many different mantras. For specific situations,

he gives very specific instructions, telling us which mantra will best protect or help us. For instance, for the recent coronavirus pandemic, to protect themselves and others from the virus, he requested his students to chant the Vajra Armor mantra, a powerful healing practice.

This book is a distillation of what Rinpoche has said of the most accessible deities and their mantras. These are the ones students of Tibetan Buddhism usually encounter first and practice longest, starting with Shakyamuni Buddha, the historical Buddha, the one who gave us the whole of Buddhism. Then, there is Chenrezig, the embodiment of compassion, Tibet's most beloved deity and closely associated with his Holiness the Dalai Lama, and Manjushri, the embodiment of wisdom. The entire path to enlightenment is encapsulated in compassion and wisdom, and so these two buddhas are extremely important. So too is Tara, embodying the buddhas' compassionate action. Then, after Medicine Buddha, the healing buddha, there are the mantras of the most effective purification practices, Vajrasattva and the Thirty-Five Confession Buddhas, and finally, the five powerful mantras Rinpoche often advises us to recite. Hopefully, this book will give you a feeling for the different deities and an appreciation of the power of the mantras—as well as the wish to use those mantras to transform your mind.

You might notice that there is not complete consistency in the way Tibetan terms are dealt with. Generally, Wisdom uses a simplified phonetic transcription that corresponds to the way the word sounds. However, because we have often used prayers from practices from Rinpoche's Foundation for the Preservation of the Mahayana Tradition, such as the prayers to the Twenty-One Taras, in those instances we have kept with the FPMT's system. Similarly, we write the Sanskrit terms without diacritics, except in one appendix, where Lama Zopa explains the differences in the sounds of the mantras in detail. When Sanskrit and/or Tibetan terms appear in brackets, we have not specified which is which, because the two languages look quite different, but generally if both languages are together, the Sanskrit comes first.

To compile this book I have used teachings stored in the Lama Yeshe Wisdom Archive that have been lovingly recorded, transcribed, and checked by a vast number of people, as well as the incredible books, booklets, and practices that have been created over the decades by the FPMT's Education Services, carefully following Lama Zopa's wishes so his students can practice the

authentic Dharma. I would like to thank Tom Truty of Education Services for his invaluable help in checking the mantras and practices within the book, offering more recent alternatives, and giving permission for us to adapt and use the appropriate practices that we have taken from the FPMT's vast treasure house. I would also like to thank everybody who contributed to this book, those at the LYWA, the FPMT, and the many at Wisdom Publications, all of whom are an inspiration to work with. One person I especially want to thank is Peter Iseli. When we decided this book deserved the most beautiful buddha images to enhance it, we turned to Peter, who has been creating beautiful images for Rinpoche and other Tibetan masters for decades, and Peter not only freely offered his superb paintings but even created two new ones for the book. I think you will agree, the result is wonderful.

I apologize for any errors found in this book; they are 100 percent mine. May this book be a tool to allow people to develop their positive qualities to the maximum degree in order to help others. May whatever merits gained from the creation of this book be dedicated to peace in this troubled world; to the long life, well-being, and fulfillment of the wishes of all our holy teachers, especially His Holiness the Dalai Lama and Lama Zopa Rinpoche; and to the flourishing of the Foundation for the Preservation of the Mahayana Tradition and of the Dharma throughout the world.

# INTRODUCTION: THE POWER TO TRANSFORM THE MIND

---

## THE POWER OF MANTRAS

The Sanskrit word *mantra* (which is *ngag* in Tibetan) has two syllables: *man*, which means “mind,” and *tra*, which means “protect,” so a mantra is something that protects our mind.

The benefits of mantra recitation are vast. There are many stories about terrible diseases such as cancer being cured by mantras, or people or animals being helped to have a peaceful death and a positive rebirth through mantras being recited to them. But the supreme benefit of a mantra is its ability to transform our mind. When we recite a mantra such as Shakyamuni’s mantra, we are recalling the Buddha’s name over and over, helping us increase our closeness and devotion to the Buddha, and devotion is our real protection from suffering. By transforming our mind, it has the power to break negative habits and develop positive ones. As our mind changes, our ability to help others increases, so we are reciting mantras for others as well.

By linking us to the omniscient mind—the wisdom and compassion of the Buddha and all the enlightened beings—reciting a mantra invokes that great power, leading us from nonvirtue to virtue. The Buddha said,

Do not commit any nonvirtuous actions,  
perform only perfect virtuous actions,  
subdue your mind thoroughly—  
this is the teaching of the Buddha.<sup>1</sup>

The whole Buddhist path comes down to these two pieces of advice—to not harm others and to benefit them. In order to do that, we must subdue the mind, which means both collecting merit through doing only virtuous actions

and purifying any negative imprints on our mindstream from negative actions we have done in the past.

Reciting a mantra such as OM MANI PADME HUM, the mantra of Chenrezig,<sup>2</sup> is not only the most unbelievable purification—purifying defilements and negative karmas collected from not just this life but from beginningless rebirths—it also collects extensive merits.

In the West, when soccer players win, they throw their arms up in the air and run around. It's very intense. When I first saw this, I thought they were very angry because of the strong emotion. If they feel that strongly about winning a match, we should feel a billion times more strongly about being able to purify all that negative karma and accumulate all that merit, simply by reciting a mantra.

Westerners have asked me many times to explain how mantras work. This is a question that comes from the Western mind; it's not asked in Asia, certainly not among the Tibetans, because they have faith. When there is water, what does water do? It makes things wet; that is its nature. Fire has its own nature; its nature is to burn. Everything has its own nature. Mantras too have their own nature; their nature is to transform the mind. Any word we say affects another person's mind, making them happy or sad or angry or whatever. The power of the mantra comes from the sound, and that sound has the power to transform the mind into one of virtue.<sup>3</sup>

Thinking of mantras as just some Sanskrit sounds to be chanted is an extremely limited view of what they are; they are much more than that. The sound of a mantra has the power to protect us, holding our mind from nonvirtuous thoughts and fostering virtuous ones, thus allowing us to develop toward enlightenment. In the same way that the Dharma in general holds us, protecting us from suffering—*Dharma* literally means “that which holds”—mantras are mind protection. In *A Guide to the Bodhisattva's Way of Life*, the great being Shantideva said,

Therefore, I should focus my mind correctly,  
and keep a careful watch over it.  
What good will it do to keep many vows,  
if one neglects the vow of watching over the mind?<sup>4</sup>

It is vital to remember Shantideva's advice. If we forget to protect our mind, what is the use of any traditional form of discipline? Even though we may do hundreds of other things, if we leave out this most important practice and leave the mind unprotected, we cannot stop our problems and achieve happiness, especially ultimate happiness. Everything comes from the mind; it is the source of all our suffering and all our happiness, so if we neglect to protect our mind, we cannot close the door to suffering or open it to happiness.

In the West, there are so many external rules: you can't do this, you can't do that. Sometimes I think there are too many rules. When we rely on external discipline, we can never solve our problems. The discipline has to come from our own mind. As a Buddhist, we might take certain vows to protect ourselves from committing any of the ten nonvirtuous actions,<sup>5</sup> but unless we protect our mind, those vows will be impossible to keep. As Shantideva said, what good will having vows be if we can't watch over our mind?

Modern Western life is full of distractions. Everywhere are objects of the senses to keep our mind busy, enticing us away from the Dharma. If you check you will see this is true. Being preoccupied with working for this worldly life, as so many people are, makes it extremely difficult to remember the necessity of Dharma practice and to find the time to practice it. Buddhism has many methods to overcome a distracted mind, such as meditating on impermanence and death<sup>6</sup> or on the disadvantages of the self-cherishing mind. When we are not meditating, however, what is the best method? Reciting mantras will keep our mind in virtue and protect it from nonvirtue.

## THE WAY MANTRAS SAVE US

We *must* at least recite mantras when we have the chance. I often say, If you have a mouth, you must use it for that. (Of course, if you don't have a mouth, that's okay.) That is the minimum practice. We must *at least* recite OM MANI PADME HUM to develop compassion toward all living beings. Even if we have little understanding of karma and can't see how the mind is affected by mantras, we should have faith in the benefits of reciting them, benefits like the limitless sky. Reciting mantras really does protect our mind.

Mantras are there to protect us in everything we do. If we have a daily meditation practice, there are mantras to be said with the preliminary practices before the main meditation. Specifically, when we set up the altar, in order to dispel obstacles that can cloud our mind, we must recite OM AH HUM as we fill the offering bowls with water and offer flowers.

There are mantras we should say at the beginning of the day, such as mantras for blessing our speech, our mala, and our feet to protect any beings we might step on. There are also multiplying mantras that increase the power of our recitation when we recite them.<sup>7</sup>

### *Mantras That Heal*

All mantras are mind protection; they heal our mind. By purifying the mind, by making the mind healthy, we can enjoy whatever success and happiness we want, now and in the future. There are some mantras, however, that are especially effective in healing sickness.

Probably the most common mantra is Chenrezig's OM MANI PADME HUM. We will later look at the Chenrezig mantra and how we can generate all-important compassion through it, but it is also extremely powerful for healing ourselves and others by transforming our minds into compassion toward all others, without distinction of race, nationality, gender, and so forth. We develop compassion without any barrier. Whether somebody likes us or not, whatever their beliefs, we only want them to have happiness and its causes and to be free from suffering and its causes. When we can take the full responsibility to ensure all others' happiness in this way, that is called great compassion and is the prerequisite to bodhichitta. Because our mind is free from the agitation of disturbing thoughts, we are naturally healthier in body and mind.

Another healing mantra is the mantra of Medicine Buddha: TADYATHA OM BHAISHAJYE BHAISHAJYE MAHA BHAISHAJYE BHAISHAJYE RAJA SAMUDGATE SVAHA. When we recite this mantra, we imagine that Medicine Buddha, the buddha of healing, is absorbed into us and into all living beings, and we receive all the blessings and power of Medicine Buddha's holy body, holy speech, and holy mind, all the qualities that enable us to help others. It heals our mind from all the disturbing emotional thoughts and makes it healthy—free, peaceful,

contented, and fulfilled. Medicine Buddha's mantra does much more than heal us of our sicknesses; it enables us to serve all others in all our future lives, bringing them perfect happiness, and, as a side effect, bringing ourselves perfect happiness.

The texts explain that a being we might have inadvertently killed, like an ant we stepped on, can be saved from the lower realms and can obtain a good rebirth if we simply recite Medicine Buddha's mantra over the body. It seems hard to believe. So, how does it work?

Since things are dependent arisings, everything depends on causes and conditions. If we think about it, we can see that the power of mantra comes from the inconceivable qualities and power of the Buddha, from his holy mind that is completely trained in compassion and embraces all sentient beings without exception. The Buddha has infinite times more compassion and love for us than we have for ourselves, and the power of the mantra comes through the power of Buddha's omniscient mind.

The power of the mantra also comes from the power of the mind of the person who recites it. Of course, if we have some realization, there is much more power in whatever activity we do for other sentient beings; it is much more meaningful. However, even if we are still very far from attaining any realization, reciting the mantra can still be effective depending on how much compassion and love we have toward that sentient being, as well as how much devotion we have in the mantra, the guru, and the Three Rare Sublime Ones: the Buddha, Dharma, and Sangha.

Finally, there have to be conditions to do with the being itself: the dead or dying insect or animal. Not every sentient being has the karma to have somebody recite a mantra and blow over their body as they are dying so they can receive a good rebirth. When you think of the number of animals, worms, insects, and countless other forms of sentient beings who die all the time, the number who have the good karma to have somebody recite a mantra over them is incredibly rare, like stars in the daytime. Therefore, at that moment some very special positive karma is ripening, and it can definitely help them have a good rebirth.

Tara's mantra, OM TARE TUTTARE TURE SVAHA, is another very powerful mantra relied on by many people, including many healers and great meditators. Her mantra is effective to help us gain success very quickly in

whatever we want to do, allowing us to overcome our problems and heal ourselves and others.

There are many other mantras that have the power to heal sicknesses, such as the mantra of Vajrapani: OM VAJRAPANI HAYAGRIVA GARUDA HUM PHAT. This was the first mantra I gave to a cancer patient, and they completely recovered, showing how powerful that mantra is.

When we do practices to help heal others, we should use the practice of a deity<sup>8</sup> we have a strong karmic connection with, because our close relationship with the deity will bring success more quickly. We should feel that the deity has *omniscience*, infinite *compassion* for us and all other living beings, and perfect *power* to guide us. The healing power comes more from our faith than from visualizing the deity clearly or reciting the mantra correctly. This is the essence of the practice. Wisdom and compassion are important in all practices, but in healing practices involving deity meditation and mantra recitation, generating strong faith is paramount. This mind is the actual healer.

### *The Importance of Mantras at the Time of Death*

Because people in the West are usually very competitive, maybe we should make a competition between science and Buddhism. Which can help the most? The West has developed such incredible technologies. Now we can fly to the moon or send messages instantly all over the world, and we have limitless gadgets to make our lives more comfortable. There are huge advances in medicine, and many diseases that were fatal a few decades ago can now be cured. We can have a new heart if we want one, or even a new face.

None of these wonderful scientific advancements is at all capable, however, of helping us at the time of death. Nothing in science can save us from what awaits us after death. There has never been a machine made or a drug developed that has even slightly helped one person escape the terrible suffering of the lower realms. On the other hand, through putting into practice what we have studied of Buddhist philosophy, we can be ensured a rebirth in one of the fortunate realms, as a human or a god.

Similarly, when we are dying, if we just hear or remember the name of the Buddha—or of Vajrasattva, Chenrezig, Tara, or any of the other buddhas—let alone recite their mantras, we will be saved from the lower realms. Therefore

there is no question that if we remember the various subjects of the graduated path to enlightenment, the *lamrim*,<sup>9</sup> such as renunciation of samsara, the ultimate good heart of bodhichitta, and the right view of emptiness—if we can transform our mind into the Dharma—then a fortunate rebirth is assured.

Of course, if we have lived with a good heart, benefiting others with tolerance, patience, compassion, and loving-kindness, at the time of death—at *that* very important time, that important day, that important hour—the virtuous thoughts that we had during our life will help a great deal.

Unfortunately, because of fear and loss of capability, it is often very difficult to remember the Buddha or a mantra at the very moment of death. We are therefore very fortunate if we have a friend who can help us, someone to recite the mantra of whatever buddha we have an affinity with very loudly in our ear. For instance, say we have devotion to Tara. When our friend recites Tara's mantra, OM TARE TUTTARE TURE SVAHA, loudly in our ear, although our hearing faculty might almost be gone, something is absorbed, something goes inside. Our devotion to Tara fills our mind, making it very positive. In this way we are saved from the lower realms.

Even when the person who is dying has no knowledge of Buddhism, reciting a mantra and blowing in their ear is a great help. This is due to the power of the mantra. Besides reciting mantras, we should also pray with a bodhichitta motivation that they are never reborn in the lower realms but attain a perfect human rebirth<sup>10</sup> where they are able to meet the Dharma and progress along the path to enlightenment.

We can do this not just for dying human beings, but for animals as well: dogs, birds, flies—any being. Reciting a mantra such as Chenrezig's mantra and blowing in their ear has incredible power. It can even benefit a being already born in the lower realms, causing it to experience that state for the briefest period before being reborn in the upper realms.

## THE IMPORTANCE OF THE MOTIVATION

Each deity has a mantra, and which deity practice is best for us is determined by our individual karma and should be checked with a qualified lama. We should then receive the initiation into that deity practice or permission to

practice that deity,<sup>11</sup> which also includes an oral transmission<sup>12</sup> of the deity's mantra.

Because the transmission of the mantra comes down in an unbroken lineage, it carries the blessings of the deity and of all the highly qualified lineage lamas through to the guru we received the lineage from. The purpose of receiving the lineage of the blessing is to give more power to the meditation on the deity and the recitation of the deity's mantra.

Whatever the purpose of reciting the mantra—to heal another person or help them gain a good rebirth, to stop (or start) rain, to have success in our life, or any other reason—its success depends on our motivation. Of course, the additional factors of visualizing holy objects and reciting the mantras correctly increase the power of the practice, but they are secondary to the motivation we have.

When we say a mantra for just some mundane happiness, such as saying a White Tara mantra to ensure our health, the mantra can be effective, but because that action is only for the happiness of this life it is not a virtuous action. Because the motivation is nonvirtuous, the mantra recitation is nonvirtuous, whether it helps in the short term or not.

In *Precious Garland*, the great Indian scholar Nagarjuna said,

Desire, hatred, and ignorance, and the actions they generate are nonvirtues. Non-desire, non-hatred, and non-ignorance, and the actions they generate are virtues.<sup>13</sup>

Furthermore, Lama Atisha said:

If the root is poisonous, the branches and leaves will also be poisonous. If the root is medicinal, the branches and leaves are also medicinal. Similarly, if the root is attachment, hostility, or benighted ignorance, whatever one does will be nonvirtuous.<sup>14</sup>

While there are still benefits from reciting a mantra with a nonvirtuous motivation, there is a great difference when we do it with a positive motivation. When we dedicate each mantra recitation or each prostration to others, we collect merit like the limitless sky.

Therefore our motivation should be as vast as possible. Perhaps we say the mantra with the motivation to be saved from rebirth in the lower realms. Even though it is a Dharma motivation, because we are only working for the happiness of our next life, that attitude is very limited.

The motivation we should strive for is bodhichitta: we should recite the mantra to become enlightened in order to lead all other beings to enlightenment. To recite it with bodhichitta combined with a realization of emptiness is even better. In fact, when we have attained each of the three principal aspects of the path—concentration, wisdom, and bodhichitta—then we can effortlessly benefit sentient beings. But even without these realizations,<sup>15</sup> if we can live in pure morality as much as we are able to, when we attempt to benefit other beings, we will be successful.

Therefore, when we recite one Vajrasattva mantra or one *mala*<sup>16</sup> of OM MANI PADME HUM, we should feel in our heart that this is all for the benefit of other sentient beings. When we can do this with bodhichitta as our motivation—with the mind that wishes to attain enlightenment in order to lead all sentient beings to that state—each mantra we do has the same benefit as reciting one hundred thousand mantras. The purpose of emphasizing the bodhichitta motivation at the beginning of every meditation session, and repeating it again and again, is to remind ourselves to generate bodhichitta and therefore make the most of every mantra we recite.

Besides a positive motivation, having devotion is an important factor in the effectiveness of mantra recitation. Different Tibetan texts can spell mantras slightly differently. Some versions have a few extra syllables, some less. The great translator Lotsawa Paltsig wrote a short book about how to read Sanskrit, which many Tibetan lamas follow in order to pronounce mantras correctly. This book says that you create much negative karma if you recite Sanskrit mantras incorrectly. However, the benefits of reciting mantras are not entirely dependent on correct pronunciation. Although it is good to try to say the mantra as accurately as possible, the power of mantra comes more from faith than from how we recite it. When there is strong faith in the mantra, it will be effective, whether we say it correctly or not.

There is a story about a woman in a time of great famine who used to recite OM BALE BULE BUNDE SOHA to cook and eat stones. One day her son, a novice monk, overheard his mother reciting the mantra and told her that the

correct way to pronounce it was OM TSALE TSULE TSUNDE SVAHA. However, when his mother recited the mantra correctly, she could no longer cook the stones. Only when she reverted to her original recitation was she able to cook them again.

His Holiness Zong Rinpoche's previous incarnation told a story about someone with a big nose who came to ask for teachings from a lama in Kham. Busy, the lama brushed him off with "Your nose is like *rudraksha*." The monk must have had a big, rough nose like the big, rough beads of the malas that *sadhus*, Indian ascetic meditators, wear, which are made from rudraksha seeds. The monk, who didn't understand what the lama said, thought that he had received a mantra and faithfully recited every day, "Your nose is like rudraksha. Your nose is like rudraksha." Eventually he became able to heal many people by reciting this "mantra." Some years later when the lama had an infection in his throat, his attendant told him that there was a famous healer in the area, one who had helped many people, and the lama agreed to see him. When the monk came to see the lama, he recited, "Your nose is like rudraksha." Remembering what he had said in the past, the lama laughed so much that the infection burst and the pus came out, due to which he got better. That the monk became a famous healer by reciting "Your nose is like rudraksha" shows that his power to heal people mainly depended on his faith. It came from believing he had received a mantra from the lama, even though the lama had just said that to him as a joke.

## THE DIFFERENT DEITIES IN TIBETAN BUDDHISM

Some people may wonder why there are so many buddhas in Tibetan Buddhism, besides the historical Buddha. Shakyamuni Buddha is just one manifestation of the primordial enlightened energy, or *dharmakaya*—just another name, in the same way that one person can have many names or designations during a lifetime. Perhaps you had a name given to you by your parents, another by your friends—your nickname—another if you got married, and maybe another when your guru gave you an ordination name. These different identities are all you, but different aspects of you.

Similarly, there are many different aspects of the Buddha, wrathful and peaceful, male and female. When we achieve the holy omniscient mind, we achieve all the buddhas, all the enlightened holy beings. “Shakyamuni” is just a different name, given to distinguish one particular aspect of the enlightened mind from another.

At first it might seem confusing to have many different buddhas rather than just the historical Buddha. Why can't there just be one buddha, the Buddha? If we look at how our society works, we can easily see that we need different people with different abilities and qualifications to ensure its smooth running. If we want to help others by healing their bodies, we need to train as a doctor; if we want to heal their minds, we need to train as a psychiatrist or psychologist. When we have that qualification, people will trust us and come to us for help.

In sort of the same way, the different buddhas, which are all different aspects of the enlightened mind, are there to perform different functions and fulfill the manifold needs of sentient beings—one aspect alone is not enough. There are numberless sentient beings, and even to fulfill the wish of one of them requires more than one particular aspect.

Chenrezig is the embodiment of the Buddha's compassion, and to take refuge in Chenrezig is to take refuge in the Buddha. In the same way, Tara is the embodiment of the Buddha's enlightened compassionate activities, and there is no contradiction in taking refuge in Tara and taking refuge in the Buddha. Tara is incredibly beloved by the Tibetan people and there are many stories of people being saved from death by taking refuge in her, by calling her name when they were in great danger. One aspect of Tara, White Tara, is evoked for long life.

With all these particular aspects of the buddhas, the main purpose is to bring sentient beings to the highest state, the sublime happiness of enlightenment. Of course, from our side, we must do everything we can to develop wisdom and compassion and progress along the path by extensively listening, reflecting, and meditating on the path.

# 1. SHAKYAMUNI BUDDHA

---

**A**S A YOUNG PRINCE, Siddhartha's life was as perfect as a life in samsara could be. His father, the king, received a prophecy that his son would either be a great king or a great sage, and because he was determined that Siddhartha would become king, he hid all suffering from him and totally immersed him in sense pleasures.

Despite his father trying to shield him from all suffering, there came a time as a young man when he saw four things in quick succession, one at each of the gates of the palace. First he saw an old person and he realized that we all have to age. Next he saw a sick person, something he had never seen before. Then he saw a dead body, and he understood that death comes to us all. This was a terrible revelation for a young man who had never seen the slightest suffering. At the fourth gate he saw a poor monk, a person who had none of the luxuries that Siddhartha had but nonetheless seemed incredibly happy. This was a like a light going on in a dark place for the prince. He saw all his palace life for the empty thing it was, and he knew that samsaric happiness was meaningless, something that only ever led to old age, sickness, and death. But he also knew there was a way out of this trap, if it could be found, and that it had something to do with the monk. This was the start of his spiritual quest.

Siddhartha chose the life of the ascetic, practicing with hardly any food in the most trying circumstances. He practiced concentration without moving, his whole body becoming like a tree, as if carved from wood, so much so that ants and insects made nests in his ears. After doing this for six years, he realized that austerity was as harmful as indulgence. When he was given milk and rice by a young girl, Sujata, his energy returned, and he went to the bodhi tree nearby to meditate. This led to that amazing night when he attained full enlightenment. Then he sought the companions from his ascetic days, finding them in Sarnath, near Varanasi in north India, where he gave his first teaching, the first turning of the Dharma wheel, on the four noble truths.<sup>17</sup> Then, for

over forty years he gave over 84,000 teachings and formed a great sangha around him, before passing away at Kushinagar.

The death of the Buddha was his last teaching to us, a lesson on impermanence. When it was time to die, he took off his robes, lay down, and said,

All causative phenomena are impermanent.

Work out your salvation with diligence.

This is the last teaching of the tathagata.<sup>18</sup>

Everything is transient, subject to change, not just on a gross level but moment by moment. And every impermanent phenomenon is unsatisfactory; it is suffering by nature. Therefore why should we be attached to something that by its very nature will only bring us dissatisfaction and suffering? This is the most important lesson the Buddha could leave us. Then he passed away, entering parinirvana.

After that, all the arhats assembled and wrote down what they had learned by heart of his teachings and this became the core of the Buddhadharmas we have today. From India, Buddhism spread to the other Asian countries and to Tibet, where it brought light to a dark country, and great teachers such as Padmasambhava, Lama Atisha, and Lama Tsongkhapa<sup>19</sup> helped make Buddhism an essential part of the Tibetan people's lives. In the West, before the middle of the last century, the teachings of the Buddha were almost unheard of, and so the causes of happiness and suffering were virtually unknown. Now the Buddha's teachings are widely available, from the basic lamrim teachings to the most advanced tantric practices with which we can attain enlightenment in one brief lifetime. None of this would have been possible without the achievements of the founder, Guru Shakyamuni Buddha.<sup>20</sup>

For followers of the individual liberation vehicle,<sup>21</sup> such as those in the Theravada countries like Sri Lanka and Thailand, the Buddha was like us and, by enacting the twelve deeds,<sup>22</sup> he attained enlightenment. From the Mahayana perspective, he had already become enlightened eons ago and the life he led as Siddhartha was an enactment in order to perfectly teach us what we must do if we want to likewise attain enlightenment. Furthermore, in this

form, in the *nirmanakaya*, or emanation body, he was able to form the sangha around him and teach the holy Dharma to his followers for more than forty years.

We owe everything to the Dharma and the holy beings who came after the Buddha, who kept the teachings completely pure, and that means we owe everything to the holy being called Shakyamuni Buddha. The enlightened being he became arose from the bodhisattva who practiced for three countless great eons in myriad bodies, and that bodhisattva came from bodhichitta, which in turn grew from the compassion he felt for sentient beings. If, since we have met the Buddhadharma, our wisdom has grown enough to discriminate what is right and to be practiced from what is wrong and to be abandoned, all this comes from Buddha's compassion.

## VISUALIZING SHAKYAMUNI BUDDHA

It is very good to visualize Guru Shakyamuni Buddha as clearly as possible, whether you are reciting the Shakyamuni mantra, doing a short meditation practice, or even an extended Shakyamuni *puja*.<sup>23</sup> Even though you might find the visualization too complex at first, don't worry. With time and practice it will come. Gradually, as the mind becomes more purified, the visualization becomes clearer. Even if you just have some sense that Guru Shakyamuni Buddha is there in front of you, that is an excellent start.

Straight in front of you, at about the height of the forehead and about a body's length away, visualize Guru Shakyamuni Buddha sitting on a throne. Everything is in the nature of light.

First visualize the beautiful throne, very large and square and adorned with many jewels. The throne is raised up by eight white snow lions, two at each corner. The snow lions look a little like Chinese lions, but with white fur and a green mane and tail. These are not statues but living, breathing animals. They are in reality manifestations of bodhisattvas, the holy beings who have attained bodhichitta. They also signify the wisdom of the Buddha, because of all animals, snow lions are the only ones that have absolutely no fear at all. This is shown by the droopy ears. All other animals must keep their ears pricked for danger, but the snow lion has no such need.

On the throne is a large, beautiful, open lotus, upon which is a sun and moon seat. These are very radiant, very bright, with the colors of the sun and moon respectively, but flat, like disks or cushions. These three objects, the lotus, sun, and moon, represent the attainment of the three principal aspects of the path, renunciation (the lotus), emptiness (the sun), and bodhichitta (the moon).

Seated on this is the omniscient mind of all the buddhas, manifested as Guru Shakyamuni Buddha, who has attained these realizations. You can see the Buddha as the absolute guru. The Buddha is in the aspect of a monk. You

should not see his body as something solid, like a bronze or plaster statue, but made of radiant golden light, representing his holy mind. Light rays radiate out from it. He wears the saffron robes of a monk. The robes don't actually touch his body. Our clothes cling to our body and always feel sort of uncomfortable, even if just a little, whereas the Buddha's robes float just free from his holy body. This is the power of his wisdom.

He is seated in a vajra or full-lotus position with the feet resting on the opposite thighs, soles upward. The palm of his right hand rests on his right knee, the fingers extended down and touching the moon cushion. This is called the earth-controlling *mudra*,<sup>24</sup> signifying that he has great control and that he is in touch with reality.

His left hand is in his lap in the meditation *mudra*, holding a bowl filled with nectar. The nectar is medicine capable of curing all the disturbing emotions, traditionally called the *maras*. It has the power to control death as well as purify the mind and body aggregates, caused by karma and delusion, from which all suffering arises. This bowl of nectar is not there to purify Guru Shakyamuni Buddha's delusions—he is already entirely free from them—but to purify ours. It is medicine for us.

His face is very beautiful, with smiling, compassionate, elongated eyes and a gentle look, just like a loving father, gazing at you and at the same time at all sentient beings. It is a face you can never tire of looking at, no matter how much you look, you can always look more, it is just so beautiful and so magnificent. Just seeing it brings incredible bliss. His look seems to tell you, "My child, if you want to be free from suffering, I will guide you."

He has long ears and reddish lips, and his hair is blue-black, with each hair individually curled to the right. At his forehead, between his eyebrows, there is a curl. It is unique in that it can be stretched out and it naturally curls again, like rubber. Every feature has significance, each part of the thirty-two major signs and eighty minor exemplifications of an enlightened being.<sup>25</sup>

Rays of light emanate out from every pore of the Buddha's holy body, touching every part of the universe. These rays are actually countless tiny emanations of the Buddha, going out to help all sentient beings and then dissolving back into his body.

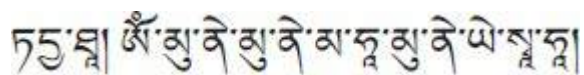

## THE MANTRA

### *The Meaning of the Mantra*

Shakyamuni Buddha's mantra is this:

TADYATHA OM MUNE MUNE MAHA MUNEYE SVAHA

The first word of the mantra is TADYATHA (pronounced *tie-yata*). This is the introduction to many mantras; it means “this contains,” and thus it tells us that what comes after contains the infinite knowledge of the Buddha's holy body, holy speech, and holy mind.

The second word, OM, contains the essence of all the Buddha's knowledge. By actualizing the paths of method and wisdom, all gross and subtle defilements cease, and our body, speech, and mind are purified, becoming the vajra holy body, vajra holy speech, and vajra holy mind of a buddha. This is signified by *a*, *o*, and *ma* respectively, the three syllables integrated into the one sound OM.

Next comes MUNE. Shakyamuni Buddha's name means “the subduer” (*muni*) of the Shakya clan and the word *muni* forms an important part of the Buddha's mantra. It used to be written in the mantra as “muni” but Kyabje Khunu Lama Rinpoche Tenzin Gyaltzen, the great bodhisattva His Holiness received many teachings from, clearly corrected this in a public teaching, saying it should be written and pronounced “mune.” He also said that the last MUNE, MUNEYE, should be pronounced “mun-i-ye.”<sup>26</sup>

MUNE is repeated three times, which relates to the graduated paths of the three capable beings—those of lower, middle, and higher capacity, who have the respective aims of a higher rebirth, nirvana, and enlightenment. This shows the route that the Buddha took over the three countless great eons until he became enlightened. It is the route we all must take.

The first MUNE, relating to the path of the lower capable being, signifies that the Buddha completely subdued attachment to this life's happiness. Through understanding subjects such as impermanence and karma, he was able to avoid rebirth in the lower realms and continue his spiritual journey.

The second MUNE relates to the path of the middle capable being; this is when the Buddha saw the shortcomings of the whole of samsara, even the highest attainment of the god realms, and having completely destroyed the false conception of the I, the principal ignorance that traps us in samsara, he attained liberation.

An arhat is free from samsara but not free from the dualistic mind and the subtle self-cherishing thought. MAHA MUNEYE, great control, the third MUNE, signifies the Buddha completely destroyed these and so overcame all duality between self and others and was able to fully see every single phenomenon. Like all the other bodhisattvas, when Guru Shakyamuni Buddha entered the Mahayana path by attaining bodhichitta, he worked ceaselessly for the happiness of others, overcoming even the most subtle of obscurations and becoming enlightened. This is the graduated path of the higher capable being.

Guru Shakyamuni Buddha's mantra contains the whole path, both the path of the individual liberation practitioner, which encompasses the paths of the lower and middle capable being, and the path of the bodhisattva (the Mahayana), which encompasses the path of the higher capable being. It also contains the result of the path, the two *kayas* or bodies of a buddha: the *dharmakaya*, or truth body—the result of the wisdom side of the path—and the *rupakaya*, or form body<sup>27</sup>—the result of the method side of the path.

Finally, SVAHA (pronounced *soha*) means “so it is,” the standard way to complete a mantra. It means basically, “May the blessings of Shakyamuni Buddha be rooted in my mind.” I'm not sure what the connotation of the word “blessing” is in the West, but be careful not to think of it as something bestowed on us from outside. It's a beautiful word, but to receive blessings means to attain the wisdom and compassion of the Buddha, something we must do for ourselves. SVAHA means establishing the root. That can be guru devotion or faith in refuge and in karma. From that root, everything else flows.

This mantra contains the entire Dharma, from guru devotion, the first teaching of the lamrim, to the most subtle explanations on emptiness. It is just a few syllables, but the meaning is as vast as space. Reciting this mantra has the power to purify thousands of eons of negative karma. It is that powerful. Therefore it is extremely good to recite it as much as possible, not only during a meditation session, but whenever possible. It can be done standing up, lying down, while walking, while waiting at a bus stop—anywhere, any time.

To be able to attain enlightenment quickly for the sake of all sentient beings, to free them from suffering as quickly as possible, depends on how quickly we can develop on the path, and that depends on the strength of our bodhichitta. To attain not just wishing bodhichitta but actual engaging bodhichitta—the mind that spontaneously, completely, and continuously works for the maximum benefit of all sentient beings—we need the most powerful and skillful means possible, and this mantra is a vital tool to obtaining this.

Don't think that reciting a mantra is something to do when there is nothing better to do. Even small actions can bring huge profit. Shopkeepers have thousands of things in their shop, big and small, expensive and cheap, but they value them all. They know that they might sell a big item occasionally, but they are always selling small things like candy. The tiny profit made from a bit of candy wouldn't even get a cup of tea, but by slow and constant accumulation they can make great profit from those small things. Similarly, we can make a big profit from reciting mantras every day, whereas we might only be able to go on a long retreat once every few years. And if we can recite the mantras with a bodhichitta motivation, we can make a *huge* profit out of even a few mantras.

### *The Benefits of the Mantra*

Reciting the Buddha's mantra has great benefits. Even if we have experienced many problems in this life, that does not mean that all of the nonvirtuous karma we have collected in all previous lifetimes has been used up and we no longer have to experience the suffering that is their result. Reciting this mantra, however, has the power to purify all that negative karma. Reciting it once has the power to purify the nonvirtuous karma produced by disturbing negative thoughts that we have collected in forty thousand previous lifetimes. If, by reciting it, we could stop even one negative karma ripening, making it impossible to bring a result, that would be wonderful, but here we are saying it purifies *all* negative karmas accumulated for forty thousand lifetimes!

What prevents us from attaining the ultimate happiness of nirvana and full enlightenment? We are blocked by our obscurations, triggered by our karma and delusions, so what we most need to do is eliminate those obscurations.

When we can do that, it becomes easy to attain all the realizations on the path. Because this was revealed by the Buddha, when we make a connection with him through reciting his mantra or his holy name (which we will look at with the Thirty-Five Buddhas), we establish within our mindstream the potential to destroy all our delusions.

Each time we recite the Buddha's mantra, it plants a seed, an imprint, which is left on the mental continuum, and which results, sooner or later, in being able to fully understand the teachings of the path. Understanding the full meaning of the mantra, we understand all the teachings of the Buddha. In that way, we are able to have the realizations of the path, and that gradually leads to enlightenment.

Even if we don't yet have realizations, with compassion we can use the Buddha's mantra to benefit ourselves or others. The fundamental thing is to have strong faith in whatever meditations or mantras we are using. Lama Tsongkhapa explained the essential importance of three factors: strong faith in the guru's instructions, some experience of emptiness, and the good heart, bodhichitta. To the extent that we have these qualities, we will be able to do whatever activities are needed to help and serve others.

Patients have recovered from heart attacks and other diseases by reciting Shakyamuni Buddha's mantra many thousands of times. A *geshe*<sup>28</sup> at one of our centers in Spain advised a student with serious heart problems to do this. The doctors thought she would die soon, but she recited the Buddha's mantra one or two hundred thousand times and visualized nectar coming and purifying her, and her heart returned to its normal size and she was cured.

Many problems can come from self-cherishing, attachment, and the other disturbing thoughts, which make actions become negative. For instance, when we harm other beings; they then become the conditions for harming us. The main cause of receiving harm, however, is our own ignorance, anger, and attachment, and the harmful actions we do to others because of these delusions. When we recite Guru Shakyamuni Buddha's mantra, we counteract all this.

HOW TO PRACTICE WITH SHAKYAMUNI BUDDHA'S MANTRA<sup>29</sup>

After sitting down and calming yourself with some breathing meditation, visualize Guru Shakyamuni Buddha in front of you (as described above).

Then, do some preliminary practices, such as saying the refuge prayer, the four immeasurable thoughts, and the seven-limb prayer.<sup>30</sup> You can also offer a mandala.<sup>31</sup>

Expand the visualization of the Buddha to include all sentient beings surrounding you.

Then think, “I have received this perfect human rebirth and have met both the infallible teachings and the infallible teachers who can lead me on the path to enlightenment, releasing me from all suffering and allowing me to attain ultimate happiness. This is not so with all these other kind mother sentient beings, who have been my mother countless times and have been so kind to me. In order to help them be free from their terrible suffering, I will do this meditation and attain the state of buddhahood myself.”

### *Purifying Delusions*

Request from your heart, “Please purify me and all sentient beings from the delusions, obscurations, sicknesses, and afflictions caused by external harmful spirits.”

Visualize a stream of *rays of white nectar* coming from Guru Shakyamuni Buddha’s heart, flowing into you, entering through the crown of your head. As it flows into you, repeat this prayer three times.

To the guru, founder, bhagavan, tathagata, arhat, perfectly completed buddha, glorious conqueror,<sup>32</sup> Shakyamuni Buddha, I prostrate, make offerings and go for refuge. Please grant me your blessings.

Now recite Guru Shakyamuni Buddha’s mantra, for one or more malas, or at least seven times.

TADYATHA OM MUNE MUNE MAHA MUNEYE SVAHA

As you recite the mantra, feel the radiant rays of white nectar slowly fill your body, completely purifying all your delusions. Feel they are pouring strongly into you, like when you stand under a strong shower. As soon as the rays touch and flow into your body, a sensation of infinite mental and physical bliss fills you.

Feel your body is completely full of radiant white light. Think, “All my delusions and sickness as well as all the afflictions caused by the external spirits are completely purified.”

### *Accumulating Merit*

Visualize a stream of *rays of golden nectar* coming from Guru Shakyamuni Buddha’s heart, flowing into you, entering through the crown of your head. This light is the essence of the Buddha’s holy body, holy speech, and holy mind. As your body fills with this light, feel infinitely blissful, mentally and physically. Again, say the mantra.

TADYATHA OM MUNE MUNE MAHA MUNEYE SVAHA

At the end of the mantra recitation, feel you are completely filled with the Buddha’s radiant golden light and you have attained the qualities of the Buddha’s holy body, holy speech, and holy mind.

Then, the snow lions dissolve into the throne, the throne dissolves into the lotus, and the lotus dissolves into the sun and moon. They dissolve into Guru Shakyamuni Buddha, who comes to the crown of your head, melts into light, and dissolves into your body. Feel that all wrong conceptions are completely destroyed, and everything becomes completely empty. Your mind becomes the blissful omniscient mind of the Buddha. Feel that you *are* the Buddha.

Light beams radiate from your holy body. At the tip of each light beam is a tiny Shakyamuni Buddha. All these Shakyamuni Buddhas enter and absorb into each and every sentient being, purifying all their sufferings and its causes,

delusion and negative karma. Then the light beams with Shakyamuni Buddhas at their tips return and absorb into you.

Rejoice by thinking, “How wonderful it is that I have enlightened all sentient beings.”

Finish by making this dedication.

By the merits of having done this meditation practice, may I attain the enlightened state of Guru Shakyamuni Buddha and lead all other sentient beings to that enlightened state.

## 2. CHENREZIG

---

IN THE BLISSFUL WESTERN realm called Having Lotus,<sup>33</sup> there was a kind wheel-turning king, King Supreme Goodness,<sup>34</sup> who didn't have a son. He dedicated everything in his life to the Dharma, including his great wealth and all his activities. Every day the king would make an offering of a lotus flower taken from a nearby lake to the Buddha, Dharma, and Sangha. One day the servant who went to pick the lotus saw growing from the lake a lotus stem with leaves as huge as an eagle's wings and an unopened bud in the center. When the servant reported this, the king said, "Inside that lotus bud there will definitely be a holy nirmanakaya that has taken spontaneous birth."<sup>35</sup>

King Supreme Goodness, his ministers, and the rest of his entourage went to the lake to see the lotus. When they opened the flower to check what was inside, they saw a sixteen-year-old youth with a radiant, white, holy body, adorned with the holy signs and exemplifications. He had a white scarf wrapped around his waist and an antelope skin over his left shoulder. (Antelopes are so compassionate that it is said an antelope will stand between a hunter and his prey and offer itself to the hunter in place of the other animal.) From his holy mouth, the youth exclaimed over and over, "How pitiful sentient beings in the six realms<sup>36</sup> are!" He kept repeating this.

The king and all his entourage prostrated to the youth, who was actually Chenrezig manifested in this form and taken birth in the lotus. The king then spread a special cloth on the ground, asked the boy to sit on it, and invited him to the palace, where he abided as an object of devotion for the king and all his family.

Thinking to benefit sentient beings, Chenrezig, in the aspect of this sixteen-year-old boy, generated bodhichitta. He then made requests to all the buddhas and bodhisattvas of the three times,<sup>37</sup> saying, "I will lead each and every single sentient being to peerless full enlightenment." He then added,

“Until I have done this, if any thought seeking my own happiness arises, may my head crack into ten pieces like an *azarka*.” (Perhaps this is some kind of fruit—the meaning is to crack into small pieces.)

When Chenrezig made this prayer, Amitabha, Buddha of Infinite Light, said, “I will help you accomplish your work for sentient beings.” Chenrezig’s holy body then emitted six beams, with one beam going to each of the six realms, where it worked to liberate sentient beings.

Later, Chenrezig went to the top of Mount Meru<sup>38</sup> and looked around with his wisdom eye. Even though he had liberated so many sentient beings from the six realms, when he looked, there still seemed to be the same number of them as before. So, he again sent beams to the six realms and liberated sentient beings. With his compassion and wisdom, Chenrezig liberated beings in this way three times, but still the sentient beings did not seem to become fewer in number. Chenrezig then thought, “It seems that this samsara has no end. Therefore I will abide in the blissful state of peace for myself.”

Because thinking this broke his bodhichitta commitment, Chenrezig’s head cracked into ten pieces. The pain was so unbearable that he screamed and wept. Amitabha then came and collected the pieces of Chenrezig’s shattered head from the ground, put the pieces together, and blessed them as eleven faces. (As you know, one form of Chenrezig has a thousand arms and eyes and eleven faces.) To end samsara, which is beginningless, Amitabha blessed all but one of the faces in a peaceful aspect to subdue sentient beings. For the sentient beings unable to be subdued by peaceful means, Amitabha blessed one face in a wrathful aspect. The face of Amitabha Buddha on the very top of the other heads signifies that Chenrezig achieved enlightenment by depending on the kindness of his guru, Amitabha, and even after enlightenment he still had great devotion for his guru.

After Amitabha Buddha had blessed him, Chenrezig prayed, “In order to work for sentient beings until samsara ends, may I have a thousand arms and a thousand eyes.” Right at that moment, the thousand arms and thousand eyes manifested. This is just one version of how Chenrezig came to have a thousand arms and a thousand eyes.<sup>39</sup>

Just as there are many manifestations of Chenrezig, there are many stories about him. In another one, Amitabha had a thought to benefit transmigratory beings. From his right eye, he sent a beam of white light, which transformed

into Chenrezig; and from his left eye, he sent a beam of blue light, which transformed into Tara.

## CHENREZIG LOOKS ON ALL SENTIENT BEINGS

In Tibet, we call the Buddha of Compassion *Chenrezig*, which is *Avalokiteshvara* in Sanskrit. For Tibetans, Chenrezig is in a male aspect, but that seems to be due to karma. A buddha will manifest in whatever way is most beneficial for sentient beings, as a male or a female, a child, an animal, a king, or a beggar. In China, the Buddha of Compassion is in the female aspect of Kuan Yin and in Japan she is called Kannon. Whatever the aspect, Chenrezig is the embodiment of the compassion of the numberless buddhas of the past, present, and future, here to guide and liberate us from all suffering and the causes of suffering, and to lead us to liberation and enlightenment.

Chenrezig is always guiding us. He is the special deity karmically connected to the people of the Snow Land, Tibet, and manifesting in the form of His Holiness the Dalai Lama. Guru Shakyamuni Buddha made predictions about the Dalai Lamas being Chenrezig and about how they would particularly guide sentient beings in Tibet, bringing them refuge and spreading the Dharma. Now, because His Holiness is vital to the people of the entire planet, Chenrezig is also the special deity for the whole world.

In the *White Lotus Sutra*, there is a story of a king called Golden Rim<sup>40</sup> who had a son named Unblinking Eyes.<sup>41</sup> Guru Shakyamuni Buddha predicted, “You, Unblinking Eyes, will pacify the delusions of sentient beings, liberating them from not only the lower realms but from samsara itself. Having generated the compassionate thought, you will achieve enlightenment and be called Chenrezig. You will draw many sentient beings into the Dharma and bring them to enlightenment. In particular, you will become the protector, the object of refuge, the savior, of the Snow Land. You will spread the Dharma like a shining sun in the Snow Land, this outlying land that no other buddha of the thousand buddhas of the fortunate eon<sup>42</sup> has been able to benefit.”

Chenrezig looks at all transmigratory beings with compassion and never gives up on anyone, no matter how evil they are. Because he is constantly looking at us and guiding us, he is given the particular name, *Chenrezig*, which

means “the one who continuously looks at the world with compassionate eyes.”<sup>43</sup>

King Songtsen Gampo and King Trisong Detsen of Tibet were manifestations of Chenrezig, as were the great scholars who translated the Dharma from Sanskrit into Tibetan. Showing unimaginable kindness, Chenrezig manifested in these various forms and then spread the Dharma in Tibet. Now that Tibetan Buddhism, which encompasses the entire Buddhadharma, has spread to the rest of the world, you can see that we are completely in the care of and completely guided by Compassion Buddha.

According to *The Flower Garland Sutra (Avatamsakasutra)*:

When the moon rises, numberless reflections appear wherever there is water in this world. That is how Chenrezig manifests. Effortlessly, naturally, Chenrezig manifests in all kinds of forms, even as medicine, a bridge, or water. Chenrezig, manifesting to sentient beings in whatever form benefits them, does inconceivable work for sentient beings.

There is only one moon, but when the moon rises, every body of water reflects it. The moon’s reflection comes effortlessly everywhere there is water, whether ocean, lake, river, or pond, even on a drop of dew. Since Chenrezig manifests as medicine, bridges, water, and other things, there is no doubt that Chenrezig manifests as our virtuous friend to guide us and give us the opportunity to learn Dharma. And Chenrezig manifests in the six syllables OM MANI PADME HUM to purify our negative karma and enable us to collect extensive merits, fulfilling all our wishes and bringing us to enlightenment in the quickest, easiest way.

## VISUALIZING CHENREZIG

### *The Many Different Aspects of Chenrezig*

A text by Gomo Rinpoche<sup>44</sup> begins with a verse of prostration to Chenrezig:

Your thousand arms signify a thousand wheel-turning kings;

Your thousand eyes signify the thousand buddhas of the fortunate  
eon;  
You manifest in whatever aspect is needed to subdue sentient beings:  
To you, pure Compassionate-Eyed One, I prostrate.<sup>45</sup>

While the four-arm Chenrezig is the simplest and most common form seen in Tibetan Buddhism, the thousand-arm, thousand-eye Chenrezig is also a very common aspect. But these two are not the only ones; there are many forms of Chenrezig within Tibetan Buddhism, such as the secret Chenrezig, Gyalwa Gyatso; or Chenrezig Singhanada, three-faced and two-armed, who protects from disease; Ganapati,<sup>46</sup> who protects from poverty; and Dzambhala, who grants wealth.

As the embodiment of all the buddhas' compassion, one aspect is simply not enough to lead all sentient beings—each with their different propensities and personalities—to enlightenment. Some beings are able to subdue their minds more quickly through the outer manifestations of Chenrezig with four arms, whereas for others the thousand-arm Chenrezig is more effective. It is said there are 108 names for Chenrezig, which means there are that many aspects. Depending on a sentient being's karma, the aspect that suits that being will manifest to help them generate compassion, wisdom, and all the other realizations of the path to enlightenment.

Chenrezig is special to so many sentient beings, and not only in countries where the Mahayana is the main form of Buddhism. Because compassion is the foremost attitude to develop, the Buddha of Compassion is naturally the most popular buddha, the one in most people's hearts. Whether they simply recite his mantra or undertake *nyungné* retreats,<sup>47</sup> through their connection with Chenrezig people are able to purify many eons of negative karma and accumulate a great deal of merit.

### *Four-Arm Chenrezig*

A form of Chenrezig we often see is white in color and has four arms. The first two arms are together at his heart, his hands in the prostration mudra and holding a wish-granting jewel; the second two arms are at the level of his shoulders, the right hand holding a crystal mala and the left a white lotus. His face is peaceful and smiling, and he gazes at us and all beings with infinite compassion. He wears exquisite silks and is beautified with jewel ornaments. He is seated in the vajra position on an open lotus and a white moon disk.

### *Thousand-Arm Chenrezig*

In a more complex manifestation of Chenrezig, he has a thousand arms, a thousand eyes, and eleven faces.

Unlike the four-arm Chenrezig, who is seated, the thousand-arm Chenrezig is standing on a lotus and moon disk. His two principal hands are together at his heart in the mudra of prostration, holding a wish-granting jewel. His next two right hands hold a crystal mala and a Dharma wheel, while the last one, without implement, is in the mudra of granting sublime realizations; his three left hands hold a lotus, a bow and arrow, and a vase. The other 992 hands are arranged in a circle around the body, all in the mudra of granting sublime realizations. In the palm of each of the thousand hands there is an eye.

He has eleven faces. The first three are white in the center, green on the right, and red on the left; the three above that are green in the center, red on the right, and white on the left; the three above that are red in the center, white on the right, and green on the left. Above that is a face in wrathful aspect, deep blue in color, and on the crown is Amitabha's beautiful holy face. The different colors of the faces signify the four actions of a buddha: pacifying (white), increasing (green), controlling (red), and wrathful (blue).

He is beautifully adorned with jewel ornaments and loose-fitting, divine clothes.

## THE MANTRA

There are different versions of the Chenrezig mantra, although the two you will mostly hear are the long mantra and the short, six-syllable mantra. The six-syllable mantra is very easy to recite. Even those not particularly interested in Buddhism, especially children, love to recite it. Because Chenrezig is the manifestation of all the buddhas' compassion, his mantra is everywhere in

free from all fears, and to fulfill all wishes.” Shakyamuni Buddha assented to his request.

Chenrezig then explained that in a former time, numberless eons before, a buddha called Kashyapa<sup>48</sup> descended in the world. After explaining the essence of this mantra of vast compassion, Kashyapa placed his golden-colored hand on Chenrezig’s crown and said, “Son of the buddhas, the essence of this mantra should be your mantra. Use it to bring great benefit and happiness to sentient beings in the future.”

If a sentient being who has much devotion to Chenrezig recites this mantra or always keeps it with them, at the time of their death, all the buddhas will come to wherever they are and guide them to whichever buddha’s pure realm they wish to be born in.

Chenrezig prayed,

If any sentient being who always recites this mantra is reborn in the realm of suffering transmigratory beings, may I never receive enlightenment.

If any sentient being who always recites this mantra is not born in a buddha’s pure land, may I never receive enlightenment.

If any sentient being who always recites this mantra does not achieve realizations of the various concentrations, may I never receive enlightenment.

If any sentient being who always recites this mantra does not have their wishes of this life fulfilled, may I never receive enlightenment.

If all the wishes of a person who always recites this mantra are not fulfilled, it cannot be called the heart mantra of the Great Compassionate One.

Chenrezig received enlightenment numberless eons ago, long before this world came into existence. Even though he prayed not to receive enlightenment if sentient beings who recited this mantra were born in the lower realms rather than the pure realms and so forth, he *did* receive enlightenment. That means the mantra does not betray—it has the power to bring all those benefits.

## *The Meaning of the Six-Syllable Mantra*

The six-syllable mantra of Compassion Buddha, OM MANI PADME HUM, contains the entire Buddhist path, including the paths of the four levels of tantra: kriya tantra, charya tantra, yoga tantra, and highest yoga tantra. These six syllables have the power to completely close the door of the six realms, meaning we will cease the continuity of taking birth in the six realms.

The main body of the mantra is MANI PADME. MANI, which means “jewel,” signifies the method side of the path to enlightenment—the development of bodhichitta, which is the jewel of our practice. PADME, which means “lotus,” signifies the wisdom side, the understanding of the nature of reality. Just as a lotus grows out of the mud yet is unstained by it, Chenrezig transcends the dualistic mind of ignorance, the concept of true existence, and directly perceived emptiness. In the illustrations of Chenrezig, you will see he holds a white lotus. Therefore these two syllables combined contain both the Hinayana and the Mahayana, with its two divisions of Paramitayana, or bodhisattva’s path, and Vajrayana, or tantric path.

Everything in Buddhism is contained within the base of the two truths: conventional truth and ultimate truth. MANI refers to conventional truth, which is also called all-obscuring truth because, although it is true on one level, it obscures the ultimate nature of reality, which is the ultimate truth. PADME refers to this ultimate truth.

So, MANI PADME contains the whole of the Buddhadharma: the base (the two truths), the path (method and wisdom), and the goal to be achieved (the rupakaya, or form body, and dharmakaya, or truth body of a buddha). MANI leads us to the rupakaya; PADME leads us to the dharmakaya.

The last syllable of the mantra is HUM. It establishes the root of the blessing in our heart and enables us to actualize the method and wisdom contained in MANI and PADME. It’s a bit like saying, “Hey!” when we are calling out to somebody, getting them to pay attention to us. By saying HUM, we are requesting the Buddha’s compassionate holy mind to pay attention to us and grant us this.

In our practice, we purify our ordinary body, speech, and mind, transforming them into the vajra holy body, the vajra holy speech, and the vajra holy mind of Compassion Buddha. This is signified by the OM, its three

sounds—*a*, *o*, and *ma*—signifying Compassion Buddha’s holy body, holy speech, and holy mind. In that way, we are able to do perfect work for all sentient beings. OM, which we have already looked at with Shakyamuni Buddha’s mantra, appears in many mantras and means just this.

Each of the six syllables has the power to stop us taking birth in any of the six realms: the hell, hungry ghost, animal, human, demigod, and god realms. Each of the six syllables destroys the continuity of the six root delusions: attachment, anger, ignorance, pride, doubt, and wrong view. Each creates the conditions to attain the six perfections of the bodhisattva: charity, morality, patience, perseverance, concentration, and wisdom.

Reciting the six-syllable mantra allows us to achieve the highest realizations and progress through the five paths necessary to attain enlightenment: the paths of merit, preparation, seeing, meditation, and no more learning, which is enlightenment.

This is just a fraction of what OM MANI PADME HUM means. It encompasses all the 84,000 teachings of the Buddha and integrates in one essence the intentions of all the buddhas of the ten directions.<sup>49</sup> It is the origin of all the collections of virtue and all the collections of happiness. Why? Because the particular benefit of reciting this mantra is to generate compassion for each and every sentient being whose mind is obscured and who is suffering. We not only wish them to be free from all their suffering and defilements, we take on that responsibility ourselves.

### *Everybody Needs the Chenrezig Mantra*

Compassion is not just for those with faith in the Buddha, Dharma, and Sangha. It is not just for those who are Buddhist, for those who seek enlightenment. Everyone needs compassion. No matter what style of life we have, the compassionate life is the best life. With that, our life is totally transformed. Before it was like kaka,<sup>50</sup> but now it is transformed into gold. Before there was just ego, the self-cherishing mind, but now there is compassion. Compassion brings a huge difference in our life, like the difference between the earth and the sky.

Everybody needs to recite OM MANI PADME HUM to develop compassion. We are so fortunate that with our human body we are able to communicate

and to chant Chenrezig's mantra. Ants need to recite it, whales need to, monkeys need to, but they can't.

In many areas in Tibet and Nepal, especially along trails, there are a lot of stupas<sup>51</sup> and stones carved with the Chenrezig mantra. You can see big piles of these stones, called "MANI stones," as you leave the airport at Lukla.<sup>52</sup> Sometimes a whole text, such as the *Heart Sutra*, is carved on a stone. One of my uncles, my teacher who first taught me the alphabet when I was four, carved MANI stones like this. Because of the mantra's great benefit, you can see it everywhere, adorning prayer flags and stones, and you can hear people reciting the mantra as they pass.

Just seeing mantras on stones purifies our obscurations by leaving impressions on the mind. As with prayer flags, when the wind touches these mantras and then touches a human being or animal, it purifies the negative karmas and obscurations of that sentient being.

Just like Westerners like to recite their mantra "Oh when can I be happy," Tibetans like to recite OM MANI PADME HUM. They recite it while they are working, cooking, or doing any of the chores they need to do. When they are not serving customers, shopkeepers recite OM MANI PADME HUM. As they walk, Tibetans will invariably have a small prayer wheel full of MANI mantras, which they spin clockwise as they recite.

Prayer wheels are my hobby; they offer so many benefits. The huge prayer wheels I ask the FPMT centers to build bless all the insects on the ground and in the area, besides all the people who turn them. They are such a great blessing for the area and a quick way to liberate sentient beings from the lower realms and enlighten them. Any person who circumambulates and turns the prayer wheel receives unbelievable purification. If a prayer wheel has one hundred million MANI's, one turn is equivalent to saying one hundred million OM MANI PADME HUM mantras.

And that is true even of the small, hand-held prayer wheels you always see Tibetans spinning as they walk. Because of methods such as microfiche printing, they can have millions of MANI's in a small wheel, so one turn creates incredible merit, no matter what they are doing. Reciting OM MANI PADME HUM makes the most mundane activity highly meaningful.

The old mothers in Solu Khumbu chant OM MANI PADME HUM so much. They have almost no intellectual understanding of the Dharma, and they can't even understand it if a lama comes to teach, because he teaches in Tibetan, not Sherpa, the only language they speak. Being illiterate, they can't even open a Dharma book and read it, and so they have no opportunity to learn the Dharma. But by reciting OM MANI PADME HUM, somehow their hearts become so much more compassionate. They may not understand why other beings are suffering so much, but they have a strong natural feeling of compassion for others and the wish to pray for them.

This was true of my mother, who would simply recite OM MANI PADME HUM when a lama was giving teachings. Because of reciting the MANI mantra, she had a hundred thousand times more compassion than I have. I can read all the texts but still my compassion is like clouds in the sky: utterly unstable, never lasting. Just before she passed away, she told me that for most of her life she recited fifty thousand MANI's a day, but as she became older she was no longer able to do that many. Still, I am certain the great power of her compassion came from reciting OM MANI PADME HUM. It gave her a happy, meaningful life and a happy, meaningful death.

There is a tantra called *Zung of the Eleven-Face Arya Avalokiteshvara*. In it Chenrezig is said to mention,

By reciting my heart mantra, sentient beings receive the bodhisattvas' holy deeds, the heart of all the Victors, called the heart of transcendental wisdom. In short, for sentient beings tormented by various sufferings, my heart mantra will abide and become a guide for them. Also, this heart mantra hooks the harm-givers, such as the flesh-eaters and other violent spirits, and causes them to generate loving-kindness and compassion. It then brings them to enlightenment.

Furthermore, he says,

Any sentient being who holds my name will abide in nonreturning. They will be completely liberated from all sicknesses and from all the defilements, all the vices collected with the body, speech, and mind.

“My name” here means the six-syllable mantra, and “nonreturning” means our life will never degenerate but always progress toward enlightenment.

When a doctor tells us we have cancer, what they are actually saying is that now is the time to cut all meaningless thoughts and only think about and practice the Dharma. We should understand such advice to mean just that, and we should do whatever is necessary to bring the Dharma into our life.

It is not enough just to be able to say the words of the mantra; we should first cultivate as positive a motivation as we can—and the bodhichitta motivation is the best—and then recite it. Whoever recites the mantra with a bodhichitta motivation is somebody who really knows how to recite it. It is said in the teachings that the greater devotion we have for Chenrezig, the more power and benefit the mantra has.

### *The Benefits of Reciting the Chenrezig Mantra*

Although there are innumerable benefits whether we recite the six-syllable Chenrezig mantra or the long one, if we can have a clear idea of what those benefits are, we will have more energy to recite it. The teachings often mention fifteen:

1. We will always be born in a country where there is a Dharma king, a ruler who works according to the Dharma.
2. We will always be born in a virtuous country, one where everybody has freedom to create virtue.
3. We will always be born in fortunate times.
4. We will always meet a virtuous friend. Here “virtuous friend” does not necessarily mean a teacher, but rather a Dharma friend, one who helps us in our Dharma practice. Their influence will help us to continue our Dharma practice.
5. We will receive a perfect body, having perfect limbs and senses.
6. Our actions will become subdued.
7. Our moral conduct will not degenerate. We will be able to increasingly keep our morality purely.
8. We will live in a good environment, surrounded by people we have a good relationship with.

9. Our material possessions will not be stolen by others.
10. We will always be respected by others and receive help from them. People will make offerings to us.
11. We will receive whatever possessions we need.
12. We will quickly attain whatever we wish for.
13. We will become a guide for others, an object of refuge for worldly gods, demigods, and the *nagas*.<sup>53</sup>
14. We will always be born in a country where a buddha is present. Just as those who were disciples of Shakyamuni Buddha are reborn in whatever country he manifests, many have the good fortune to always see His Holiness the Dalai Lama and receive teachings from him.
15. We will not only hear the teachings but also be able to realize the profound meaning of them.

Furthermore, a principal way the mantra benefits is by the protection it offers. The texts say if we recite a mala of the six-syllable mantra when we get up in the morning with the proper Dharma motivation, we will be protected in these ten ways:

1. We will never fall ill; our body will always be healthy.
2. We will always be protected by gods and buddhas.
3. We will never lack a means of living but will easily be able to gain material needs, such as wealth, food, clothing, and so forth.
4. We will have no fear of enemies because we will be able to subdue their minds.
5. We will never be disrespected, not only now but also in the future.
6. We will never fall into a lower caste, but always achieve a higher caste by living in ethics.
7. We will be free from the danger of poisons, spirit harm, and spirit possession.
8. We will never have an unpleasant odor; our body will always have a scented smell. This does not mean a scented smell from bought perfume but a natural fragrance coming from the body.

9. We will never encounter the enmity of others. Nobody will harbor bad thoughts about us or say hurtful or displeasing words. Everybody will be happy with us.
10. We will be free from chronic or contagious diseases and be liberated from untimely death.

### *The Chenrezig Mantra Purifies and Transforms Our Mind*

Reciting the Chenrezig mantra can bring all these incredible benefits because the act of reciting it with a strong, pure motivation has the power to transform our mind in two ways: by diminishing our negative minds and thus purifying our delusions, and by increasing our positive minds and thus accumulating great merit.

When we do even one prostration to Compassion Buddha or recite his name or his mantra even once, we collect the same amount of merit as having offered service to the buddhas equaling not just the number of grains of sand of the River Ganges but the number of grains of sand there would be in sixty-two River Ganges.

Any powerful delusions that arise, such as strong desire or hatred, are naturally pacified by chanting this mantra. By reciting it seven times, the negative karma accumulated from one hundred past lifetimes is purified. Reciting it twenty-one times purifies a thousand eons of negative karma. If we recite it 108 times, which means one mala, it has the power to purify forty thousand eons of negative karma. Of course, this depends on having strong faith in the benefit of the mantra and reciting it with a bodhichitta motivation, and so forth. The purer our motivation is, the greater the power of purification.

It is said that reciting it even once can purify the four root downfalls of a fully ordained monk or nun—killing a human being; telling great lies, such as boasting they have realizations when they don't; taking things not given to them; and having sexual intercourse—actions that bring about rebirth in the very lowest of the hot hells.

For both lay people and sangha, it purifies the five immediate negativities, the very heavy negative karmas that cause rebirth in the hell realm immediately after death. These are killing our mother; killing our father; killing an arhat, a

being who has achieved the arya path and who is free from samsara; maliciously drawing blood from a buddha; and causing disunity within the sangha. This last one carries the heaviest negative karma we can commit, along with heresy, holding incorrect views about the guru.

There are many stories of people who incurred different heavy negative karmas and were advised by Chenrezig to recite his mantra. Then, rather than going to the lower realms, where they were destined, they were able to be born in a pure land.

By purifying our mind with this mantra, we are able to solve all our own problems and to solve others' problems, bringing so much peace and happiness not only to our family and friends but to the whole world and all living beings, both human and nonhuman.

Generally, the motivation for what we do is self-cherishing, working only for the happiness of this life. It keeps our life so busy and causes us stress and anxiety, not to mention the attachment and anger it generates, which cause us to create nonvirtuous actions and harm ourselves and others. It is possible, however, to turn that attitude around and cherish others rather than ourselves, developing the powerful minds of loving-kindness and compassion.

When we see that all the problems in our life come from ego, from the self-cherishing mind, and that every happiness comes from a mind that cherishes others, we naturally look for a method that will bring that transformation about. The fundamental step in that is connecting with Compassion Buddha, Chenrezig, and we can easily do that by reciting his mantra.

If we were able to continuously recite the Chenrezig mantra, or even do ten malas a day, we would not only transform our own mind, but our mere presence would benefit others greatly. Those who saw or touched us, let alone spoke to us, would be somehow benefited, absorbing some of our positive energy. It is even said in the texts that, when we die and are cremated, the smoke from our burning body will have the power to purify those it touched.

Once, when I was in Malaysia, some people who worked in a hospice there told me they often felt dejected when the patient they were attending didn't have any reaction or didn't show any signs of getting better. I told them there was no reason to feel discouraged; even if there was no response, what they were doing was still very worthwhile, and I encouraged them to recite

Chenrezig's mantra to the patients as they were working. Being with a dying person after having recited the Chenrezig mantra is highly meaningful. They might not be able to see or hear us, but simply touching them, such as if we massage them, purifies their negative karma.

It is said in the tantric text *Padme Chöpen gyi Gyü* that if we recite ten malas of the mantra every day, our children, their children, and so on, up to seven generations, will never be reborn in the lower realms.<sup>54</sup> How is that possible? It is the power of the mantra. When we recite the Chenrezig mantra that many times every day, our body becomes a relic. The mantra blesses everything; everything becomes a relic, including the blood and sperm, which is passed from generation to generation.

If we recite six million OM MANI PADME HUM, even our spit has so much power. By spitting on something, or blowing on it, we are able to heal somebody so easily. For instance, if we spit or blow on some cream or butter and then rub it over a place of pain on the body, we will stop the pain. Whatever type of activity we do will be most beneficial. Whether it is a pacifying, increasing, controlling, or wrathful activity, it will be successful because of the power of the mantra. These things are not the main goal, however. The main goal is to achieve enlightenment in order to liberate sentient beings from suffering and bring them to enlightenment, but these other benefits come as a byproduct.

## HOW TO PRACTICE WITH CHENREZIG'S MANTRA<sup>55</sup>

Anyone can do this practice, called *The Welfare of Living Beings That Pervades Space* by the great yogi Thangtong Gyalpo. However, you are only permitted to generate yourself as Four-Arm Chenrezig if you have received a great initiation (*wang*) of any deity of performance (*charya*), yoga, or highest yoga tantra and the subsequent permission (*jenang*) of Four-Arm Chenrezig, or an action tantra great initiation of any deity of the tathagata or lotus families and the subsequent permission of Four-Arm Chenrezig. Otherwise, you should visualize Four-Arm Chenrezig above your head or in front of you.

I take refuge until I am enlightened

in the Buddha, the Dharma, and the Supreme Assembly.  
By my generosity and so forth,  
may I become a buddha in order to benefit living beings. (3x)

On the crowns of myself and all sentient beings pervading space  
is a white lotus and moon.

On top of it, from HRIH  arises the Supreme Arya Chenrezig,  
white and clear, radiating five-colored light rays;  
smiling and looking with eyes of compassion.

Of your four arms, the palms of the first two are joined  
and the lower two hold a crystal rosary and a white lotus.  
You are adorned with silk and precious jewelry  
and wear a deerskin upper garment.

Amitabha adorns your head.  
You are seated with your legs in the vajra posture.  
A stainless moon is your back rest.  
In nature, you encompass all objects of refuge.

Think that you and all sentient beings are making the following request as if in  
one voice:

Lord, your body is white in color, unsoiled by faults;  
a complete buddha adorns your head;  
you look at living beings with eyes of compassion;  
to you, Chenrezig, I prostrate.

Recite that request three times, seven times, and so forth—however many  
times you are able.

Through having made requests one-pointedly in that way,  
lights radiate from the body of the Arya  
and purify impure karmic appearances and mistaken minds.

The environment becomes Sukhavati Pure Land,  
and the body, speech, and mind of its inhabitants—living beings—  
become the body, speech, and mind of powerful Chenrezig—  
appearance, sound, and awareness, inseparable from emptiness.

Reflecting on the meaning of this, recite as many times as you can:

OM MANI PADME HUM

At the end, place your mind in equipoise on its own essence of the  
nonconceptualization of the three circles.<sup>56</sup>

The bodies of myself and others appear as bodies of the Arya,  
the resonance of sounds is the melody of the six syllables,  
and thoughts and conceptualizations are the expanse of great exalted  
wisdom.

Due to this virtue,  
may I quickly become powerful Chenrezig  
and lead all living beings  
without exception to that state.

### 3. MANJUSHRI

---

ONCE, A VERY LONG time ago, a pilgrim to Wutai Shan, the holy place of Manjushri in China, was asked to take a letter to a particular village and give it to a particular bodhisattva. When he reached the village and asked a pig farmer there about the bodhisattva, the man replied that there was no human bodhisattva there by that name but that he had a pig of that name.

The pilgrim then read the message to the pig, which said, “Your time to be in this world is now finished. It is time for you to benefit other sentient beings in another world.” As soon as the message was read, the pig made a huge noise and passed away. He was actually a bodhisattva pig, protecting all the other pigs. When leading the other pigs, he would always check ahead for danger, and when it was safe, he would let the other pigs go first; he was always the last pig.

The man who gave the pilgrim the letter was actually Manjushri. It is said that everybody who goes on pilgrimage to Wutai Shan sees Buddha Manjushri. They don't however necessarily see him in his usual aspect, with a sword and so forth, like in the paintings. To see Manjushri in the pure aspect of a buddha you must have a pure mind, and a pure mind is very rare, so most people see Manjushri as an ordinary person (or pig!). When you go to Wutai Shan you will definitely see Manjushri, but it doesn't mean you will recognize him.

I heard this story from Kirti Tsenshab Rinpoche,<sup>57</sup> the great lama who is one of my gurus. There are many other stories about Wutai Shan and how Manjushri emanates to benefit beings. Although we traditionally see Manjushri sitting in a vajra posture with a flaming sword—the manifestation of all the buddhas' wisdom—he appears in many aspects, as do all buddhas.

### MANIFESTATIONS OF MANJUSHRI

## *Manjushri and Shantideva*

Shantideva was born with the name Shantivarman in the eighth century in India, near Bodhgaya, where the Buddha was enlightened. He was highly intelligent. When he was six, he meditated on Manjushri and not only saw Manjushri but also had a realization of him. Manjushri himself gave the young Shantivarman many teachings, passing down the lineage of the profound path—the wisdom teachings—to him.

Because Shantivarman was a prince, he was obliged to become king when his father died, but the night before his enthronement he had a dream. Manjushri was sitting on the king's throne, and he said to Shantivarman, "The one son, this is my seat and I am your guru, leading you to enlightenment. We can't both sit on the same seat." When he awoke from the dream, he realized that he could not accept the crown, and so he escaped, going to Nalanda Monastery, where the abbot ordained him, naming him Shantideva.

Nalanda was a vast and wonderful place, the greatest seat of Buddhist knowledge in the world. Thousands of scholars studied, debated, and meditated there, and great pandits wrote incomparable treatises and developed incredible tenets on logic, as well as studied the sciences, art, medicine, and so forth.

Shantideva was a hidden yogi who already had great realizations, but he didn't reveal these in Nalanda at first. He had secretly composed two texts, *Condensed Advice* and *Compendium of Sutras*, but the other monks thought Shantideva was extremely lazy. It was only when they challenged him to recite a sutra, thinking this would shame him into leaving, that he recited the complete *Guide to the Bodhisattva's Way of Life*, his most famous work, like water pouring from a clear spring. The other monks immediately realized he was a great master.

## *Manjushri and Sakya Pandita*

When the great Tibetan yogi, Sakya Pandita,<sup>58</sup> was only twelve, his guru, Drakpa Gyaltsen, told him that, because he was the spiritual son of Lama Atisha and Lama Dromtönpa, he should study well and do a retreat on Manjushri. Because all the buddhas' wisdom is manifested in this special aspect, those who practice Manjushri can receive all seven wisdoms, which are

attainments such as *great wisdom* to comprehend and memorize both the meanings and the words of the extensive teachings, *clear wisdom* to be able to understand the subtle meaning of any subject, and *quick wisdom* to be able to immediately understand any difficult points and immediately eliminate wrong conceptions.<sup>59</sup>

Before Sakya Pandita was able to do the retreat his guru advised him to do, there were some hindrances. However, after six months, during a meditation session, he saw Manjushri sitting in front of him on a throne with two bodhisattvas beside him. Then, with his holy mouth, Manjushri gave him this short teaching on the four clingings:

- If you cling to this life you are not a Dharma practitioner.
- If you cling to the three realms of samsara that is not renunciation.
- If you cling to cherishing the self that is not bodhichitta.
- If you cling to the self as truly existing that is not right view.

Because Sakya Pandita realized that the importance of all the Buddha's teachings was contained in this advice, he kept it in his heart, meditating on it and putting it into practice.

### *Lama Tsongkhapa Is Manjushri*

Lama Tsongkhapa, the great fourteenth-century teacher who founded the Geluk tradition,<sup>60</sup> is said to be a manifestation of Manjushri. Very often, Lama Tsongkhapa is called Jamgon, which is one of the names for Manjushri, meaning the savior who has purified all obscurations. Tsongkhapa is the savior from Tsongkha in Amdo, the place he was born.

The story is that his mother gave birth to him on the road as she was leading her cows out to the mountains for the day. Because of her work, she had no choice but to leave the baby there on the road, though she was afraid he would be eaten by animals. But when she came back, she found he was protected, lying under the wings of ravens that had crowded around him. Happy, she took the baby back home alive. The blood that had come out during his birth covered the road, and at that place a sandalwood tree grew. On the leaves of the tree were images of Manjushri's vajra body and the syllable

DHI, Manjushri's seed syllable.<sup>61</sup> This is a sign that Lama Tsongkhapa is a manifestation of Manjushri. He is also the embodiment of Chenrezig, all the buddhas' compassion, and Vajrapani, all the buddhas' power. It was near that place that the Third Dalai Lama founded Kumbum monastery, where one hundred thousand statues of Manjushri have been built. Kumbum means "one hundred thousand enlightened bodies."

Manjushri often advised Lama Tsongkhapa, especially on how to quickly actualize the realizations of the graduated path to enlightenment. He told him, "To train your mind in the actual lamrim, you should purify your obscurations with a Vajrasattva practice and so forth and accumulate merit. Then, you should make a single-pointed request to the guru in order to receive the blessing within your heart. If you attempt to strongly and continuously practice in this way every day, realizations will come without any difficulty."

Because of his connection with Manjushri, Lama Tsongkhapa was able to check directly with him and clarify all the subtle and profound points within the sutra and tantra teachings, especially the Prasangika view of dependent arising and emptiness.

One day, while Lama Tsongkhapa was giving teachings to hundreds of disciples, offering several different teachings in a single day, Manjushri advised him to go into retreat immediately. Lama Tsongkhapa objected, saying he couldn't leave the teachings in the middle, but Manjushri asked him, "Don't you have to benefit numberless sentient beings?" The point of Manjushri's advice was that the people who were taking teachings from him at that time were limited in number, but sentient beings are numberless. By doing the practice he could complete the realizations on the path to enlightenment and, in that way, benefit more sentient beings. So, Lama Tsongkhapa stopped his teachings and went off to practice. Whatever work Lama Tsongkhapa had to do, whatever teachings he gave, he always asked Manjushri.

## THE SOFT GLORIFIED ONE

Manjushri is *Jampalyang* in Tibetan. The first part of the name, *manju* (*jam* in Tibetan), means "soft," "pacified," and *shri* (*pel* in Tibetan) means "glorified." So, Manjushri is the "soft glorified one." What does that mean? Manjushri's

holy mind has become soft or pacified by having eliminated all delusions, both the disturbing-thought obscurations (*nyöndrip*) that block liberation and the subtle obscurations to knowledge (*shedrib*) that block full enlightenment.

What are these subtle defilements? They are the subtle negative imprints left on the mental continuum by the concept of inherent existence. This concept is something we sentient beings hold until we become enlightened. When we become an arya being and are in meditative equipoise, single-pointedly concentrating on emptiness, these obscurations are not manifest, but when we arise from meditation, the dual view naturally reasserts itself. As an arya being, we have achieved nirvana, but we are still blocked from full enlightenment by these subtle obscurations. Therefore we need to combine the wisdom side that realizes emptiness with the method side of bodhichitta and enter the Mahayana, then work through the six perfections of a bodhisattva and achieve full enlightenment.

Only when we have eliminated all the subtle obscurations will we become fully enlightened, which is what the second part of Manjushri's name—*shri* or *pel*, “glorified”—refers to. Therefore *Manjushri*, and *Jampalyang*, refers to the holy mind that is free from all mistakes of the mind, all the defilements, and has completed all the realizations.

### *Visualizing Manjushri*

Like most deities, there are many aspects of Manjushri, such as Black Manjushri, a wrathful deity very powerful in preventing and curing illnesses, and Yamantaka, a particularly fearful deity. Usually, however, Manjushri is depicted as youthful, in the peaceful *sambhogakaya* or enjoyment body aspect,<sup>62</sup> orange in color, with one face and two hands. He is seated on a lotus and moon disk in a vajra posture, with his legs crossed. He looks at us and all sentient beings with eyes full of loving-kindness and with a compassionate smile. He is adorned with an underskirt and divine scarves and wears many ornaments.

His left hand is at his heart in the mudra of expounding the Dharma, with thumb and ring finger touching, and holds the stem of a lotus that blooms by his ear. The lotus has a *Prajnaparamita*, or *perfection of wisdom*, text resting in it, radiating light. His right hand holds a flaming sword of wisdom. You shouldn't think of Manjushri's sword as a physical one made of steel. Its nature is ultimate wisdom, the dharmakaya. Just as a material sword cuts the body, Manjushri's wisdom sword cuts through all delusions.

There is a prayer to Manjushri which describes him well.

Obeisance to my guru and protector Manjushri, who holds to his heart a scriptural text symbolic of his seeing all things as they are.

Whose intelligence shines forth as the sun, unclouded by delusion or trace of ignorance.

Who teaches in sixty ways, with the loving compassion of a father for his only son, all creatures caught in the prison of samsara, confused in the darkness of their ignorance, overwhelmed by their suffering.

You, whose dragon-thunder-like proclamation of Dharma arouses us from the stupor of our delusion and frees us from the iron chains of our karma, who wields the sword of wisdom hewing down suffering wherever its sprouts appear, clearing away the darkness of ignorance.

You, whose princely body is adorned with the one hundred and twelve marks of Buddha, who has completed the stages achieving the highest perfections of a bodhisattva. Who has been pure from the beginning, I bow down to you, O Manjushri.

You will often see images in Tibetan shrine rooms or read descriptions of what is called a “merit field.” This is a vast collection of buddhas, bodhisattvas, protectors, and so forth, grouped around a central figure, usually the Buddha or the guru. We can most easily collect the most extensive merit from meditating on this “field.” When you see an extensive merit field, such as for the Guru Puja,<sup>63</sup> you will notice there are different lineages depicted there. The Buddha’s entire teachings are often divided into two aspects, the *extensive conduct* (*zabmö tawa*) and *profound view* (*gyachen chö gyü*). The teachings of the steps of the extensive conduct, focusing on the method side of the path, were handed down from the Buddha to Maitreya Buddha and Asanga, whereas the teachings of the steps of the profound view, focusing on the wisdom side of the path, were handed down from the Buddha to Manjushri and from Manjushri to Nagarjuna and then to Aryadeva and the other pandits.<sup>64</sup> From this, we can see that Manjushri is the source of all the wisdom teachings of the Buddha.

## THE MANTRA

Manjushri's mantra is this:

OM AH RA PA CHA NA DHI

ཨོཾ་ཨ་ར་པ་ཙ་ན་ཧཱི།

For this reason, Manjushri in this more common aspect, is often called Arapatsana Manjushri. Manjushri's mantra is an especially quick way to attain wisdom and develop a sharp memory. If you recite this mantra many times, you will be able to memorize hundreds of pages of texts. It is said if you recite this mantra a hundred thousand times, you will be able to see Manjushri.

Because Manjushri is the embodiment of all the buddhas' wisdom, even the young monks and nuns in the monasteries recite the Manjushri mantra and do the Manjushri practice to purify defilements and receive wisdom. Many get up very early, around four or five o'clock, and memorize part of a text before going to the daily puja. They then chant the Manjushri mantra as they run outside, repeating the last syllable, DHI as many times as possible in one breath. You will hear them in monasteries like Kopan in Kathmandu, running to their breakfast, shouting DHI DHI DHI DHI DHI DHI! His Holiness the Dalai Lama said he used to do that, and it helped him to develop wisdom.

As you repeat the DHI, imagine Manjushri in front of you and his wisdom in the form of the flaming syllable DHI, like a blazing fire. This comes from Manjushri and absorbs into a similar DHI visualized at the back of your tongue. From this, wisdom flames arise, eliminating the darkness of ignorance. You can imagine the flame filling your whole body, fully developing your wisdom. Imagine all your pores completely fused with the syllable DHI, causing you to attain nonforgetfulness.

## HOW TO PRACTICE WITH MANJUSHRI'S MANTRA<sup>65</sup>

Having sat down and calmed yourself with some breathing meditation, visualize Manjushri in front of you (as described above). Visualize all sentient

beings in the form of human beings surrounding you.

Then, do some preliminary practices, such as saying the refuge prayer three times, the four immeasurable thoughts, and the seven-limb prayer.<sup>66</sup> You can also offer a mandala.

### *Visualization*

From the DHI ཨཱེ syllable at your heart, light radiates out and invokes from their natural abodes Arya Manjushri surrounded by the assembly of buddhas and bodhisattvas.

### *Praise*

I prostrate to Manjushri,  
who possesses the holy body of youth,  
who radiates the lamp of wisdom,  
and who dispels the darkness of the three worlds.

### *Mantra Recitation*

On top of the moon cushion at Manjushri's heart there appears a yellow wheel with six spokes. At the central hub is a syllable DHI and on the spokes are the six syllables of the root mantra. On the wheel's rim is the mantra of increasing wisdom.

Light radiates from the mantras, pouring into you and all sentient beings surrounding you, dispelling the darkness of ignorance of yourself and others. It hooks back all the wisdom of samsara and nirvana, which dissolves into you and all other beings.

With this visualization recite the mantras:

### *Mantra of Increasing Wisdom:*

NAMO MANJUSHRIYE KUMARA BHUTAYA BODHISATTVAYA  
MAHASATTVAYA MAHAKARUNIKAYA TADYATHA OM ARAJE BIRAJE

SHUDDHE VISHUDDHE SHODHAYA VISHODHAYA AMALE BIMALE  
NIRMALE JAYA VARE RUJALE HUM HUM HUM PHAT PHAT PHAT SVAHA

*Root mantra:*

OM AH RA PA CHA NA DHI

After the recitation of mantras, make offerings and praise as before and stabilize with the hundred-syllable Vajrasattva mantra, as follows:

*Offerings*

OM SARVA TATHAGATA ARYA MANJUSHRI SAPARIVARA ARGHAM  
[PADYAM, PUSHPE, DHUPE, ALOKE, GANDHE, NAIVIDYA] PRATICCHA YE  
SVAHA

OM SARVA TATHAGATA ARYA MANJUSHRI SAPARIVARA SHAPTA AH HUM  
SVAHA

*Praise*

I prostrate to Manjushri,  
who possesses the holy body of youth,  
who radiates the lamp of wisdom,  
and who dispels the darkness of the three worlds.

*Vajrasattva Mantra to Purify Mistakes*

OM VAJRASATTVA SAMAYA MANUPALAYA / VAJRASATTVA  
TVENOPATISHTHA / DRIDHO ME BHAVA / SUTOSHYO ME BHAVA /  
SUPOSHYO ME BHAVA / ANURAKTO ME BHAVA / SARVA SIDDHIM ME  
PRAYACCHA / SARVA KARMA SU CHAME / CHITTAM SHRIYAM KURU  
HUM / HA HA HA HA HO / BHAGAVAN SARVA TATHAGATA /

VAJRASATTVA MAME MUNCHA / VAJRA BHAVA MAHA SAMAYA SATTVA  
AH HUM PHAT

At the root of your tongue is a syllable DHI. The top of the DHI is facing down toward your windpipe. With this visualization, recite DHI 108 times in one breath. Visualize that the whole body turns into the syllable DHI.

### *Dedication*

Due to these merits,  
May I quickly attain the state of Arya Manjushri  
And place all migrating beings, without exception,  
In that very state.

May the day be auspicious  
May the night be auspicious  
May all the day and night be auspicious  
May there be the auspiciousness of the Three Jewels.

Then recite dedication prayers and auspicious verses.

## 4. TARA

---

**B**EFORE SHE BECAME ENLIGHTENED, Tara promised to liberate all migratory beings from the two extremes: the extreme of samsara and the extreme of peace, meaning the peace of lower nirvana. That means she promised to lead all beings to full enlightenment.

From the very beginning, before she even generated bodhichitta, she vowed to attain enlightenment in a woman's body.<sup>67</sup> So, here we are talking about women's liberation happening eons ago! Initially, she attained bodhichitta in a woman's body; in the middle, she attained the paths of merit, preparation, seeing, and meditation in a woman's body; and in the end, she also became fully enlightened in a woman's body.

I heard the story of Tara from one of my gurus, Pabongka Dechen Nyingpo. Inconceivable eons ago, during the time of the Drum Sound Buddha (Dundubhisvara, Ngé Dra),<sup>68</sup> there was a highly respected princess called Wisdom Moon (Jnanachandra, Yeshe Dawa). She studied the Dharma and made offerings to that Buddha for millions of years until she attained bodhichitta.

At that time, some fully ordained monks, knowing of her great merits, told her that she could do superb work for the Dharma if she attained a man's body. When they urged her to pray for this, she answered them by making this vow: "There are many who desire enlightenment in a man's body, but few who work for the benefit of sentient beings in the body of a woman. Therefore, until samsara is empty, I shall work for the benefit of sentient beings in a woman's body."

She then lived for millions of years in the king's palace, achieving the patience of the unborn Dharma and the concentration called the *all-liberating concentration*. With the power of that concentration, she vowed that each morning she would liberate millions of sentient beings from delusions and cause them to attain renunciation, and that she would not eat until she had

done that. Then, in the afternoon, she again led that many sentient beings on the path. Because her function was to give extensive benefits to sentient beings each day like this, she became known as Tara the Liberator.

In the eon called Perfect Victory (Vishuda, Nampar Gyalwa), she promised in front of the Buddha Amoghasiddhi that she would protect sentient beings from the eight fears. Then she entered in the meditative equipoise called the *concentration of destroying the harms*. For ninety-five eons, every day during that time, she led millions of sentient beings in the path of concentration, and every night she subdued millions of maras.

During the eon called Unobstructed (Apratibaddha, Thokpa Mäpa), all the buddhas initiated a monk called Glow of Immaculate Light (Vimala Jyotis Prabha, Drima Mäpa Ökyi Nangwa)<sup>69</sup> with a great beam that was the essence of all their compassion. That monk became Chenrezig. After that, he was again initiated by all the buddhas with a great beam that was the essence of all their transcendental wisdom. Those two beams became the father and mother, and the mixing of the two caused Tara to arise from Chenrezig's heart to fulfill the wishes of all the buddhas and continuously work for migratory beings.

Whenever and wherever pitiful sentient beings are in danger and afraid, if they pray to Tara, she immediately guides them from the eight external and internal fears, such as lions, fire, pride, and hatred. As soon as beings unable to obtain their wishes pray fervently to Tara, she appears. She takes infinite forms and performs inconceivable actions to fulfill the hopes and wishes of sentient beings.

Pabongka Dechen Nyingpo said that there are so many stories about Tara, it is impossible to recount them all.

## TARA THE LIBERATOR

*Tara* means “star” in Sanskrit, and hence “that which guides us.” Her Tibetan name, *Dolma*, means “she who saves” or “liberator.” Tara, the embodiment of all the buddhas’ compassionate actions, is the one who liberates us from all the inner and outer obstacles that cloud the development of our mind and guides us to successfully accomplish both our temporal and ultimate happiness.

Therefore, to succeed in actualizing the graduated path to enlightenment, we must rely upon a buddha such as Tara.

Many Indian yogis relied upon Tara. By taking refuge in Tara, they completed the path and did great works for the teachings and for living beings, leading uncountable numbers on the path. For example, the great pandit Lama Atisha attained the entire graduated path to enlightenment by relying upon Tara.

Atisha was invited by the religious king of Tibet, Yeshe Ö, to reestablish Buddhadharma in Tibet. At that time, many wrong views had spread, and the king didn't know what to do. When a minister mentioned Atisha's name, the hairs on the back of the king's neck stood up and tears came to his eyes. He had so much devotion for Atisha, just hearing his name. While he was collecting gold to offer Atisha to invite him to travel from Nalanda Monastery in India to Tibet, he was captured by an irreligious king who demanded his body weight in gold as a ransom. His nephew had almost collected enough—the weight of his head was still missing—when King Yeshe Ö told him to not use the gold for him but to use it instead to invite Atisha, saying he would give up his life for the Dharma.

When he received the invitation, Atisha consulted Tara, who told him going to Tibet would be very beneficial for the Dharma, but his life would be shortened by many years. After a long and dangerous journey, he reached Tibet. When he arrived at court, the king's nephew explained that Tibetans were an ignorant people and asked him to therefore write something simple for them.

Atisha wrote *Lamp for the Path to Enlightenment*, which was the very first lamrim text. By listening to it and reflecting and meditating on it, so many people have achieved enlightenment. The light of this lamrim teaching has dispelled so much ignorance, even in the minds of many thousands of people living in the West, because it integrates all the teachings of the Buddha into a step-by-step practice that allows anyone to achieve enlightenment.

Even though Lama Atisha passed away a long time ago in Tibet, he is still benefiting us by giving us the opportunity to understand the teachings of the graduated path to enlightenment. He was able to offer extensive benefit to living beings and the teachings through depending upon Tara. As many stories attest, throughout Lama Atisha's life, Tara always gave him advice.

That Tara is in female form is significant. Even though there are more and more female heads of state emerging these days, there are still far more male leaders, but that has no bearing on the qualities of women. There is no difference in the potential of either sex. If a man doesn't practice the Dharma, his mind is not transformed, and it is exactly the same for a woman. Conversely, when they practice the Dharma their minds are transformed. Both men and women can attain enlightenment in exactly the same way. Just as there have been innumerable male yogis who have gone on to attain enlightenment, there have also been innumerable female yoginis who have done the same thing.

Tara is probably the most prominent example of a person who attained enlightenment in a female aspect, but there are many others. It depends on our own motivation. If we see that we can benefit others more in a female body than a male one, we can ensure that we get one. And vice versa, of course.

The English nun Venerable Tenzin Palmo is a great inspiration. Like the wonderful stories we hear of French and Spanish Christian nuns living in isolated places, or the great Tibetan yoginis, for twelve years she lived in an extremely remote place, in a cave high in the Himalayas, sacrificing her life to practice the Dharma and facing great hardships.<sup>70</sup> We need inspiring stories like that. The main thing we must cultivate to get results from our practice is continual renunciation, so she is a wonderful example for us. Just as the places in India and Nepal where yogis and yoginis achieved the path hundreds of years ago are to this day places that inspire others to practice, by being a living example, she is an inspiration to the Western world.

### *Mother Tara*

The benefits of practicing Tara are uncountable. By reciting the *Praises to the Twenty-One Taras* with devotion, at dawn or dusk, and remembering Tara and reciting her mantra at any time of the day or night, we are protected from fear and danger, and all our wishes are fulfilled. If we pray to Tara, Tara will grant help quickly.

She is especially quick in granting us success in obtaining the ultimate happiness of enlightenment, but there are also many temporal benefits of reciting the Tara mantra or the *Praises to the Twenty-One Taras* prayer. Tara can

solve many problems in life: liberating us from untimely death, helping us recover from disease, bringing us success in business. Somebody with a serious problem, such as a life-threatening disease, who relies on Tara will very commonly be freed from that problem. For instance, His Holiness the Dalai Lama encouraged us to recite Tara's mantra as a protection for ourselves and others against the coronavirus COVID-19.

Pabongka Dechen Nyingpo tells a story of one of his students who didn't know much Dharma but had faith in Tara and so received help from her, but not as much as he might have. One day during his journey to Mongolia, while walking along reciting Tara prayers, he heard a dog barking and saw a tent. Because he needed some water to quench his thirst, he went there, where he saw a young girl, alone, tending many yaks. Seeing the monk was weak and hungry, she insisted he stay with her for a few days and she fed him. When it was time to leave, she gave him some *tsampa* and other food. Because he was completely lost, she gave him very explicit directions on how to get to his destination and, as he was leaving, she gave him a large bunch of grass. She explained that when he awoke each morning, he should drop some grass on the ground and head in whichever direction it fell.

He only had a little food, enough for a day or two, but each day, when he opened the sack, his food was never depleted. Following the directions the girl had given him, he managed to find his way to his destination. When he looked in his sack at the very end of his journey, there was not one speck of food left. He was so surprised with this that he sent a letter to his guru, Pabongka Rinpoche, in Lhasa. Rinpoche wrote back and said that it was a pity he hadn't followed the girl's instructions completely. If he had, he would have been in a pure realm already. That yak herder was a manifestation of Tara, but he was unable to see this. Tara manifests in many aspects, not just the green and white forms that are commonly depicted.

Tara is like our mother. Take my mother as an example. She did all the work while the rest of us—there were three of us—were useless. One day, she had to go into the forest to get the firewood. Because none of us could make food, we waited outside the door for her to return so we could eat. When she came back very late with a very heavy load of firewood, she could not make a fire because she was sick. She lay down next to the fireplace in so much pain. There was no fire in the stove and no food. She was screaming, calling for her

mother: “Ama! Ama!” (My grandmother, who was still alive at that time, lived quite near.) Because none of us could make one, there was no fire; we just sat and watched our mother. Even adults call for their mother when they have bad pain or a serious problem. However, Tara is much closer to us than a mother, and she is quick to grant us help and protect us from danger.

The best way we can become close to Tara, what pleases her the most, is when we fervently try to develop the mind of bodhichitta. The more we are able to practice bodhichitta and cherish others more than ourselves, the closer we will be to Tara, and the easier it will be for her to offer us help quickly.

The *Praises to the Twenty-One Taras* begins, “I prostrate to the noble transcendent liberator.” That means that Tara herself is completely liberated from the whole of samsara and the cause of samsara through having completed the both the method and wisdom sides of the practice. Not only that, by having overcome the two obscurations, gross and subtle, she is also free from being bound to lower nirvana. Liberated from both samsara and the peace of lower nirvana means she is fully enlightened. And because she in turn liberates all of us, allowing us to attain full enlightenment, she is called Tara the Liberator, the mother who liberates.

### *The Mother of the Victorious Ones*

Tara is also called Mother of the Victorious Ones because, just as a mother gives birth to her children, Tara gives birth to all the buddhas. The ultimate meaning of Tara is the transcendental wisdom of nondual bliss and emptiness, the culmination of both the method side of the path and the wisdom side, fused in one mind. This is synonymous with the clear light—the dharmakaya or truth body of the buddha. This transcendental wisdom is called “nondual bliss and emptiness” because it is characterized by three things: it has realized emptiness; it experiences great bliss; and it has the feeling of vastness or being empty. This is the omniscient mind that sees both the absolute and conventional truth of all existence simultaneously.

This dharmakaya is the absolute guru, the real meaning of “guru.” It is important we understand that the word “guru” means much more than a human being who teaches us. Even though the buddhas have different aspects and different names, they are all born from the dharmakaya. In reality, every

buddha is the embodiment of this absolute guru: one manifests in many forms; many manifest in one form. When this manifests in an ordinary aspect as the conventional guru, this is the absolute guru appearing as the lama we directly receive teachings from.

As Khedrup Sangye Yeshe<sup>71</sup> explained: “Before the guru, there is not even the name ‘Buddha.’” First we meet the guru externally and separately. After receiving teachings, we listen, reflect, and meditate on the path that is revealed by this guru. On the basis of correct devotion to the guru, we gradually actualize the complete path and remove our obscurations. When that happens, we meet the guru mentally. By gradually actualizing the path and achieving the dharmakaya, we achieve the absolute guru.

So, all the buddhas are born from the absolute guru, the dharmakaya, the transcendental wisdom of nondual bliss and emptiness, which is the actual meaning of “Mother.” This transcendental wisdom, this completely pure subtle mind, manifests in this female aspect that is labeled “Tara.”

## GREEN TARA

Although there are many different aspects of Tara, the one we most often see in images is Green Tara.<sup>72</sup> The extremely vivid green color of Tara's holy form symbolizes the granting of wishes and the symbolic purification of the defilements of envy and jealousy, as well as the purification of the ordinary impure aggregate of form. Of the five transcendental wisdoms,<sup>73</sup> hers is the all-accomplishing wisdom. Her green color also symbolizes success in action.

With one face and two arms, she is in the aspect of a very beautiful sixteen-year-old girl. Her face is very peaceful, with a slight smile. Her eyes are not opened widely but are fine and a little rounded, very loving and compassionate. When we look at Tara, her eyes express compassion toward us, like the look a loving mother gives her only child. Her hair is very dark, half down and half tied up. The center of her hair has an utpala flower<sup>74</sup> as a crown. A tiara fastened in her hair is adorned with jewels, the central one being a ruby, symbolizing Amitabha, the principal buddha of her buddha family, the padma or lotus family.

Her right hand rests on her right knee, palm outward, in the mudra of granting sublime realizations, indicating her ability to provide beings with whatever they desire. Her left hand, at her heart, holds the stem of an utpala flower, with her thumb and ring finger together, symbolizing the unification of method and wisdom, and the other three fingers raised, symbolizing the Buddha, Dharma, and Sangha.<sup>75</sup> In some depictions, the stem she holds has three utpala flowers—a bud, a flower that is opening, and a fully opened flower—indicating that Tara is the mother of all the buddhas: past, present, and future.

Tara has fully developed breasts, is dressed in the silken robes of royalty, and wears rainbow colored stockings, with a white half-blouse. She is adorned with a necklace, bracelets, armlets, anklets, and so forth, as well as various scarves and jewel garlands, symbolizing her attainment of the six perfections.

Her right leg is extended, showing she is always ready to rise up and come to the aid of those who need her, while her left leg is drawn up, showing her renunciation of worldly desire. She has a moon disk behind her. She is adorned with the complete holy signs and exemplifications of a buddha.

## THE MANTRA

Tara's mantra is this:

OM TARE TUTTARE TURE SVAHA

ॐ तरे तुतरे तुरे स्वाहा

There is no way to receive enlightenment without realizing the meaning of Tara's mantra. As with many mantras, Tara's mantra starts with OM and finishes with SVAHA (pronounced *soha*), with the main part of the mantra being TARE TUTTARE TURE.

### TARE *Liberates from Samsara*

TARE denotes liberating us from samsara, which means we are liberated from our five contaminated aggregates: the aggregates of form, feeling, discrimination, compositional factors, and consciousness. These aggregates are the basis on which the nominal sense of self, the I, is labeled. Because they are caused by the contaminated seed of karma and delusions, when we encounter desirable and undesirable objects, the different disturbing thoughts such as attachment and anger arise. Then, because of *that*, we again create karma. At the time of death, attachment to corporeal existence means our consciousness joins with the sperm and egg of our future parents and we take another samsaric life. Hence, the cycle of contaminated existence is perpetuated.

So, TARE shows that Mother Tara liberates living beings from true suffering, from the problems of samsara. The truth of suffering is the first of the four noble truths, the initial teaching of the Buddha after he became enlightened. We can relate this to the particular sufferings of human beings: birth, old age, sickness, death, meeting undesirable objects, not finding desirable objects, or finding them but gaining no satisfaction. No matter how much pleasure we enjoy, no matter how much we follow desire, there is no satisfaction at all. Furthermore, nothing in samsara is definite. We must leave the body again and again and take another body again and again.

Our present-life mother came from her mother, our grandmother; our grandmother came from another mother; and so on. It is the same with our father. We can see that this body we have now, which is a product of the conjoining of our parent's sperm and egg, is a collection of all the conjoinings of sperm and egg that have continued from parent to child for inconceivable generations since human beings began. Because of that, there is no essence to cling to; there is no reason to get attached to this body, this samsara.

Through all of these births, we experience problems again and again. If we have high status, we fall to low status. When we are born, we are born alone

without any companion; when we die, we also die alone, our consciousness leaving the dead body and taking another rebirth. All these are the problems of true suffering.

If we rely upon Tara, by taking refuge in her and doing Tara practices, when we recite her mantra, with TARE Tara liberates us from all these true sufferings.

### *TUTTARE Liberates from the Eight Fears*

If the first word, TARE, frees us from true suffering, the first of the four noble truths, the second word, TUTTARE, corresponds to the second noble truth in that it frees us from the true cause of suffering: karma and delusions.

We can all see how much the world is suffering now. There are more and more dangers. Glaciers are sliding into the ocean, causing the sea level to rise and endangering many coastal cities; there are more tsunamis and typhoons, more floods and fires. The dangers of the four elements of earth, fire, water, and air are increasing every year, with the potential to kill and harm millions of people. Just like the earthquake that ruined so much of Nepal years back, these disasters mean that people's survival is becoming more precarious. This is all a result of the mind. It is not a result of the subdued mind but the unsubdued mind, of the disturbing emotions such as greed, anger, ignorance, and so forth.

TUTTARE also frees us from the eight fears or dangers. There are eight fears related to external dangers from the elements, such as fire and water, and from such things as thieves and dangerous animals. However, the main dangers are not external but internal, coming from our delusions, such as ignorance and attachment. Relying on Tara liberates us from these eight internal dangers, these eight disturbing thoughts, and, as a consequence, frees us from the external dangers that arise from these disturbing thoughts. To guide us from these eight different fears, there are eight different aspects of Tara.

The eight external and internal fears:

1. fear of the danger of fire and fear of hatred
2. fear of the danger of water and fear of attachment
3. fear of the danger of lions and fear of pride
4. fear of the danger of elephants and fear of ignorance

5. fear of the danger of hungry ghosts and fear of doubt
6. fear of the danger of imprisonment and fear of miserliness
7. fear of the danger of thieves and fear of wrong views
8. fear of the danger of snakes and fear of jealousy

The first of the eight Taras<sup>76</sup> is the Tara who saves from the fear of the danger of fire and the fear of hatred. Hatred is the unsubdued mind that wishes to harm another being. Because it is such a violent, intense mind, it has the power to destroy all our virtue. It is compared to fire, which can destroy everything in its path.

Living with anger is like having a burning coal in the heart. Just as a tiny spark can set off a grass fire that can destroy a city, a spark of hatred can lead to creating harm that brings retaliation and then counterretaliation. In this way, it can destroy lives. Like a fire, hatred can rage through our life and kill our relationships and destroy any pleasure we might have. Anger can destroy everything, and therefore it is often referred to as the most destructive negative mind. By taking refuge in Tara, we can be protected from the danger of both hatred and the external fire element. It can be understood in both ways.

Then, there is the Tara who saves from the fear of the danger of water and the fear of attachment. Attachment is like water. Some dirt on a dry cloth can be brushed off easily, but when the cloth is wet, the dirt soaks right into it and it becomes incredibly difficult to clean. The wet cloth and the dirt sort of become inseparable. In the same way, it is almost impossible to separate the attached mind from the object of attachment. This Tara can protect us from all the outside dangers caused through water, such as floods and tsunamis, as well as the danger of attachment.

During the early Kopan courses, when we were still in the old tent, we would often do an all-night Tara practice,<sup>77</sup> which was a very powerful purification practice, extremely effective in developing wisdom and protecting from black magic and so forth. Very often, while we were doing the practice, it would start raining heavily.

There is also the Tara who saves from the fear of the danger of lions and of pride. The snow lion exemplifies pride because it lives in very high places and thinks itself the most powerful and magnificent of all the animals.

Then there is the Tara who saves from the fear of the danger of elephants and of ignorance. The elephant is used as an example of ignorance because when it is untamed, the harm it can do is enormous.

The next Tara is the one who saves from the fear of the danger of hungry ghosts and of doubt. This is also translated as spirits, meaning flesh-eating spirits. Just as they can consume us, so can doubt, making it impossible to make correct, virtuous choices.

Next is the Tara who saves from the fear of the danger of imprisonment or enchainment and of miserliness. Miserliness ties us to the object, making us cling to it. Further, it ties us to the whole of samsara through desire for the samsaric perfections we are attached to. Like a chain that imprisons us, where each link holds the next, our miserliness has us always grasping at one object of desire after the other.

There is also the Tara who saves from the fear of the danger of thieves and of wrong views or heresy. Whenever heresy arises toward the Three Rare Sublime Ones—the Buddha, Dharma, and Sangha—such as denying the teachings on karma and reincarnation, it robs us of the merits that have been collected within our mindstream for countless eons. Because heresy postpones for an incredible length of time the ripening of the result of even the merits we have dedicated, it is very dangerous.

Finally, there is the Tara who saves from the fear of the danger of snakes and of jealousy. Just as a snake can creep up on us unobserved and bite us, jealousy can bite into us and cause us such pain.

Because Tara is said to be able to save people from the eight fears, Tibetans naturally take refuge in her when they face any danger.

### *TURE Liberates from Disease*

TURE liberates us from disease and corresponds to the third noble truth, the cessation of suffering. Our fundamental disease is ignorance, not knowing the absolute nature of the I. Relying on Tara, we can realize emptiness easily, which frees us from the ignorance that keeps us trapped in samsara.

Before that, Tara can save us from all the disturbing thoughts that arise from that ignorance, all of our delusions, such as anger, jealousy, miserliness, and so forth. As we develop on the path, these deluded aspects of mind lessen

and then cease. This relates to the fourth noble truth, that of the path that leads to cessation.

In that way, TARE, which frees us from the truth of suffering, and TUTTARE, which frees us from the cause of suffering, relate to the method side of the path. TURE, corresponding to the cessation of suffering, relates to the wisdom side of the practice.

### *The Meaning of the Whole Mantra*

Tara, Mother of the Victorious Ones, guides us and other living beings from the danger of falling into both samsara and lower nirvana and leads us to the perfect state of enlightenment.

The rough meaning of TARE TUTTARE TURE is “To you, embodiment of all the buddhas’ actions, I always prostrate with my body, speech, and mind, no matter what my circumstances, happy or unhappy.”

All the *yanas* or paths are contained in TARE TUTTARE TURE: the Hinayana, the Mahayana Paramitayana, and the Mahayana Vajrayana. The cessation of both the gross and subtle obscurations is contained in TARE TUTTARE TURE. Relating to the lamrim, TARE is the graduated path of the lower capable being, TUTTARE of the middle capable being, and TURE of the higher capable being.

As we have seen, with the final word, SVAHA, we ask that the blessings of the deity are firmly rooted in us. In other words, by taking refuge in Tara, reciting her mantra, and doing her practice, we receive the blessings of Tara and establish the path of the three capable beings in our heart. Through this, we can purify all obscurations of our body, speech, and mind and achieve Tara’s pure vajra holy body, holy speech, and holy mind, which are signified by OM.

Whenever we recite or even just hear Tara’s mantra, because it contains the four noble truths and the path to enlightenment in its entirety, it leaves an imprint on our mental continuum to actualize the whole path. Then, sooner or later, this imprint will manifest. At that time, we will not only be able to meet the Dharma again, but to actualize the complete meaning of the mantra, which is nothing less than attaining all the realizations and becoming enlightened, allowing us to do perfect work for all sentient beings.

## THE TWENTY-ONE TARAS

Although there are innumerable aspects of Tara, there are twenty-one main ones, which are usually visualized as surrounding the central green Tara when we recite the *Praises to the Twenty-One Taras*. Each has a different function and can bring a particular benefit to sentient beings. Whether we are troubled with illness, poverty, an impending court case, or any other difficulty, there is one specific Tara we can address to help us with our problem.

The fact that so many holy beings have been able to offer extensive benefit to the world is due to Tara. The success that many common people enjoy is also due to Tara. In Tibet, it is very common to do a Tara puja for success or for overcoming obstacles such as sickness, where the *Praises to the Twenty-One Taras* is recited many times.

The first text I ever learned was the *Praises to the Twenty-One Taras*. There was an elder monk at Domo Geshe's monastery in Tibet who took care of me and helped me become a monk. Even though the *Twenty-One Taras* was all he ever taught me, when I asked Kirti Tsenshab Rinpoche whether I should regard him as my teacher, he said yes.

Every day we had to do pujas in peoples' homes. There were four or five monks, one who played cymbals, one who played the drum, and one who played the bell and *damaru*. Once I played the flute with him, copying what he did with his fingers. Sometimes we did all-night pujas, chanting the *Praises to the Twenty-One Taras*. My teacher had a long stick with a needle on top. There was a young monk who fell asleep and got the needle, right in the shoulder blades, but somehow I didn't get it. I don't know whether I slept or not.

The texts on Tara mention that it is very effective if we do the *Praises to the Twenty-One Taras* twice in the morning, three times around noon, and seven times in the evening, but, of course, even if we can only recite it once, that is very effective. Because we become closer to Tara and therefore more easily receive Tara's guidance, it helps us succeed in whatever we wish for. Naturally the best way to practice is with a bodhichitta motivation.

There are different traditions regarding the twenty-one Taras, so you might see images of them that differ slightly. There is one tradition, according to the great translator Phari Lotsawa, where there are peaceful-looking Taras and wrathful-looking ones, and some have many arms. There is also a tradition

from Lama Atisha where each only has one face and two arms, but some have different colors and one or two are wrathful. I will describe the twenty-one Taras found in Lama Atisha's tradition.

A simple way to visualize the twenty-one Taras as you recite the praises is to visualize Green Tara in the center with the twenty-one Taras surrounding her clockwise on a twenty-one-petaled lotus, each on a petal and moon disk. One tradition says that as you recite the praise to each Tara, you imagine that Tara sending out an emanation that absorbs into you, giving you that quality—in the case of Tara the Swift Lady of Glory, the first Tara, the ability to influence sentient beings. If you have taken a Tara initiation, you can visualize that you become that Tara; otherwise, you can just feel that you now have that Tara's qualities. Then, in the same way, as you say the next praise, the next Tara sends an emanation that absorbs into you, and you receive that quality, and so on for all the twenty-one Taras.

If you find it too difficult to imagine each Tara absorbing into you, you can just imagine the principal Tara sitting at the center of the lotus on a moon disk, and as you say the praises with your hands in the prostration mudra, you imagine purifying beams coming from the principal Tara's heart and entering your heart. Then, at the end, imagine that a replica of Tara absorbs into your heart and your body, speech, and mind become one with Tara's holy body, holy speech, and holy mind.

### *Visualizing the Twenty-One Taras*

According to the tradition of Lama Atisha, the color of each of the twenty-one Taras corresponds to the four types of enlightened activities of a buddha: white for pacifying; yellow for increasing positive qualities; red for power, such as the power to overcome external forces; and black for wrath, using forceful means to accomplish enlightened activities that cannot be accomplished by other means.

Each Tara has one face and two hands. In the palm of her right hand is a flask that accomplishes the activity of that Tara, while in her left hand is an utpala flower. Each sits on a throne of lotus and moon in the same position as the principal Tara—with right leg extended and left leg drawn up—and is adorned with silks and precious ornaments.

## 1. Swift Lady of Glory

Homage! Tara, swift, heroic!  
Eyes like lightning instantaneous!  
Sprung from op'ning stamens of the  
Lord of three world's tear-born lotus!<sup>78</sup>

On the first petal is Tara the Swift Lady of Glory (Nyumma Palmo),<sup>79</sup> red in color. She is the quick one, holding in her right palm a red flask for controlling. She grants the ability to influence sentient beings so that they will listen to you and you can lead them to the Dharma. Her mantra is this:

OM TARE TUTTARE TURE WASHAM KURU SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏྲཱ་རེ་ཏུ་རེ་ལྷ་ཤི་ཀུ་ཅ་སྐྱ་ཏྲཱ་

## 2. Lady of Supreme Peace

Homage! She whose face combines a  
Hundred autumn moons at fullest!  
Blazing with light rays resplendent  
As a thousand-star collection!

On the second petal is Tara, Lady of Supreme Peace (Shiwa Chenmo), white in color, holding a white flask containing nectar for pacifying disease. Her mantra is this:

OM TARE TUTTARE TURE SHANTIM KURU SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏྲཱ་རེ་ཏུ་རེ་ཤཱན་ཏིལ་ཀུ་ཅ་སྐྱ་ཏྲཱ་

## 3. Lady of Golden Yellow Color

Homage! Golden-blue one, lotus

Water born, in hand adorned!  
Giving, effort, calm, austerities,  
Patience, meditation her sphere!

On the third petal is Golden-Colored Tara, Giver of Supreme Virtue (Serdok Chen), yellow-gold in color, holding in her hand a yellow flask containing nectar for increasing life and fortune. Her mantra is this:

OM TARE TUTTARE TURE PUSHTIM KURU SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏྲཱ་རེ་ཏུ་རེ་ཕུ་ཤྲིཾ་ཀུ་རུ་སྐྱ་ཏྲཱ་

#### 4. Lady of Complete Victory, Embodying All Positive Qualities

Homage! Crown of tathagatas,  
Actions triumph without limit!  
Relied on by conquerors' children,  
Having reached ev'ry perfection!

On the fourth petal is Tara Completely Victorious, Embodying All Positive Qualities (Tsuktor Nampar Gyalma), yellow in color, holding a yellow flask containing nectar for increasing the lifespan. Her mantra is this:

OM TARE TUTTARE TURE AYUR-JYANA PUSHTIM KURU SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏྲཱ་རེ་ཏུ་རེ་ཨྲ་ཡུ་རྫྱ་ན་ཕུ་ཤྲིཾ་ཀུ་རུ་སྐྱ་ཏྲཱ་

#### 5. She Who Proclaims the Sound of Hum

Homage! Filling with TUTTARE,  
HUM, desire, direction, and space!  
Trampling with her feet the seven worlds,  
Able to draw forth all beings!

On the fifth petal is Tara Proclaiming the Sound of HUM (Hung Dradrokma), red-yellow in color, holding a red flask containing nectar with the function of enchanting other sentient beings, causing them to be attracted to you. Her manta is this:

OM TARE TUTTARE SHTRI AKARSHAYA HRIH SVAHA

ཨོྃ་རཱེ་ཏུ་རཱེ་ཏུ་རཱེ་མྱེ་ཤྱི་ཀཱ་རྩ་ཡ་མྱེ་ཞིང་སྐྱ་རྩཱ།

If there is somebody you need to influence, such as somebody who is extremely deluded and tries to harm you and others and to harm the Dharma, in order to help that person transform their mind into the Dharma, then you can recite this mantra and insert that person's name between the *tuttare shtri* and the *akarshaya*, so the mantra becomes OM TARE TUTTARE SHTRI [the name of the person] AKARSHAYA HRIH SVAHA.

## 6. She Who Is Completely Victorious Over the Three Worlds

Homage! Worshipped by the all-lords,  
Shakra, Agni, Brahma, Marut!  
Honored by the hosts of spirits,  
Corpse-raisers, gandharvas, yakshas!<sup>80</sup>

On the sixth petal is Tara Completely Victorious Over the Three Worlds (Jikten Sumle Nampar Gyalma), red-black in color, who is victorious over the three realms. She holds a blue flask containing nectar that intoxicates the spirits. Her mantra is this:

OM TARE TUTTARE TURE SHATRUN UCCHATAYA SVAHA

ཨོྃ་རཱེ་ཏུ་རཱེ་ཏུ་རཱེ་ཤ་ཏུ་རྩུ་བ་ཤྱེ་རྩུ་ལ་ཕྱེ་སྐྱ་རྩཱ།

By intoxicating the spirits, they become unable to function and so unable to cause harm to others. I guess it's a bit like taking a business client to dinner

and getting them drunk, making it a lot easier to get them to agree to any deal you have to make.

## 7. She Who Conquers Others

Homage! With her TRAD and PHAT sounds  
Destroying foes' magic diagrams!  
Her feet pressing, left out, right in,  
Blazing in a raging fire-blaze!

On the seventh petal is Tara Who Conquers Others (Shen Jom-Ma), black in color, destroying those possessing black magic. She has a slightly wrathful appearance—her forehead is wrinkled—and she holds a black flask containing nectar that averts mantras and black magic sent against you. Her mantra is this:

OM TARA TUTTARE TURE SARVA VIDYA APARA VARANAYA SVAHA

ཨོཾ་རྩ་རེ་རུ་རྩ་རེ་རུ་རེ་སྐྱེ་བའི་རྩ་ཨ་པ་ར་ལ་ར་རྩ་ཡ་སྐྱ་རྩ།

## 8. She Who Conquers Maras and Enemies

Homage! TURE, very dreadful!  
Destroyer of Mara's champion(s)!  
She with frowning lotus visage  
Who is slayer of all enemies!

On the eighth petal is Tara Who Conquers Maras and Enemies (Dru Dra Jom-Ma), red-black in color. Her right hand holds a red flask containing nectar whose function is to defeat maras and enemies. Her mantra is this:

OM TARE TUTTARE TURE SARVA MARA SHATRUN MARAYA PHAT SVAHA

ཨོཾ་རྩ་རེ་རུ་རྩ་རེ་རུ་རེ་སྐྱེ་བའི་རྩ་ཨ་པ་ར་ལ་ར་རྩ་ཡ་སྐྱ་རྩ།

## 9. She Who Protects from All Fears

Homage! At the heart her fingers,  
Adorn her with Three Jewel mudra!  
Light-ray masses all excited!  
All directions' wheels adorn her!

On the ninth petal is Tara Who Protects from All Fears (Jikpa Kunkyob Ma), white in color, her gesture signifying the Three Rare Sublime Ones. She holds a white flask containing nectar whose function is to protect all sentient beings from fear and dangers. Her mantra is this:

OM TARE TUTTARE TURE MAM UPAKRAMA RAKSHA RAKSHA SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏྲཱ་རེ་ཏུ་རེ་མུ་ཡུ་པ་གྲ་མ་ར་གྲ་ར་གྲ་སྐྱ་ཏྲཱ།

If there are dangers such as earthquakes, floods, typhoons, or the like, you can take strong refuge and recite this mantra, or visualize Tara in front of you.

## 10. She Who Brings Maras and the World Under Her Power

Homage! She so joyous, radiant,  
Crown emitting garlands of light!  
Mirthful, laughing with TUTTARE,  
Subjugating maras, devas!

On the tenth petal is Tara Who Brings Maras and the World Under Her Power (Dudang Jikten Wangdu Dema), red in color, holding a red flask containing nectar whose function is to destroy Mara and to control the world. Her mantra is this:

OM TARE TUTTARE SARVA MARA PRAMARDHANI SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏྲཱ་རེ་ཏུ་རེ་སའ་མ་ར་པ་མར་ན་ནི་སྐྱ་ཏྲཱ།

## 11. She Who Eradicates Poverty

Homage! She able to summon  
All earth-guardians' assembly!  
Shaking, frowning, with her HUM sign  
Saving from every misfortune!

On the eleventh petal is Tara Who Eradicates Poverty (Ponpa Selma), red-yellow in color, like refined gold. She holds a yellow flask containing nectar whose function is to eliminate poverty. Her mantra is this:

OM TARE TUTTARE TURE VASUDHARINI SVAHA

ཨོཾ་རྩ་རེ་ཏུ་རྩ་རེ་ཏུ་རེ་བླ་མ་རྩ་རེ་ཏི་སྣ་རྩ་

This is the Tara you use when you make a Tara wealth vase for prosperity. When you put a statue or drawing of this Tara in a wealth vase, to eliminate either your poverty or that of others, you take strong refuge and recite this mantra in front of the vase.

## 12. She Who Grants All That Is Auspicious

Homage! Crown adorned with crescent  
Moon, all ornaments most shining!  
Amitabha in her hair-knot  
Sending out much light eternal!

On the twelfth petal is Tara Who Grants All that Is Auspicious (Trashy Tamche Jinma), golden in color, performing auspicious activities. She holds a white flask containing nectar that performs auspicious actions. Her mantra is this:

OM TARE TUTTARE TURE MANGALAM SVAHA

ཨོཾ་རྩ་རེ་ཏུ་རྩ་རེ་ཏུ་རེ་མང་ལོ་སྣ་རྩ་

### 13. She Who Blazes Like Fire

Homage! She 'mid wreath ablaze like  
Eon-ending fire abiding!  
Right stretched, left bent, joy surrounds you  
Troops of enemies destroying!

On the thirteenth petal is Tara Who Blazes Like Fire (Metar Barma), red in color and blazing like fire. She holds a red flask containing nectar that destroys enemies and protects from obstacles. Her mantra is this:

OM TARE TUTTARE TURE BHAYA BHASMIM KURU SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏུ་རེ་ཏུ་རེ་རྣ་ཡ་རྣ་སྒྲི་ཀུ་ཏ་སྐྱ་ཏཱ།

There are wrathful actions you can do to destroy enemies, but whatever meditations or recitations you do, if you do them with anger, they don't become Dharma; they just become negative karma. It has to be done with the thought of bodhichitta—the wish to benefit other sentient beings, especially the harmful being, to stop them engaging in negativities.

### 14. She Who Is Frowning Wrathfully

Homage! She who strikes the ground with  
Her palm, and with her foot beats it!  
Scowling, with the letter HUM the  
Seven levels she does conquer!

On the fourteenth petal is Tara Who Is Frowning Wrathfully (Tronyer Chen), having a slightly wrathful appearance, black in color. She holds a dark blue flask containing nectar that controls and subdues interferences. Her mantra is this:

OM TARE TUTTARE TURE VAJRA MAHA PADA BHASMIM KURU SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏཱ་རེ་ཏུ་རེ་བཟོ་མ་ཏཱ་སྐྱ་ད་ལྷ་མོ་ཀུ་ཅ་སྐྱ་ཏཱ།

## 15. She of Supreme Peacefulness

Homage! Happy, virtuous, peaceful!  
She whose field is peace, nirvana!  
She endowed with OM and SVAHA,  
Destroyer of the great evil!

On the fifteenth petal is Tara the Supremely Peaceful One (Shiwa Chenmo), white in color. She holds a white flask containing nectar whose function is pacifying and purifying negative karma. Her mantra is this:

OM TARE TUTTARE TURE SARVA PAPAM PRASHAMANAYA SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏཱ་རེ་ཏུ་རེ་བཟོ་སྐྱ་པོ་སྐྱ་ཤ་མ་ཏཱ་ཡ་སྐྱ་ཏཱ།

Reciting her mantra pacifies sickness, spirit harm, obscurations, and negative karma.

## 16. Tara Who Arises from the HUM of Intrinsic Awareness

Homage! She with joy surrounded  
Tearing foes' bodies asunder,  
Frees with HUM and knowledge mantra,  
Arrangement of the ten letters!

On the sixteenth petal is Tara Who Arises from the HUM of Intrinsic Awareness (Rikpa Hungle Drölma), red in color. She holds a red-yellow flask containing nectar whose function is to increase wisdom. Her mantra is this:

OM TARE TUTTARE TURE SARVA DHARMAH PRATI-PARISHODHAYA  
SVAHA<sup>81</sup>

ཨོཾ་ཏཱ་རེ་ཏུ་ཏཱ་རེ་ཏུ་རེ་སའ་རྣ་མུང་མ་ཉི་པ་རི་ཤོ་རྣ་ཡ་སྐྱ་ཏཱ།

## 17. She Who Causes the Three Realms to Tremble

Homage! TURE! With seed letter  
Of the shape of syllable HUM!  
By foot stamping shakes the three worlds,  
Meru, Mandara, and Vindhya!<sup>82</sup>

On the seventeenth petal is Tara Who Causes the Three Realms to Tremble (Drölma Jikten Sumyowa), red-yellow in color. Pacifying maras and obstacles, shaking the triple world, she holds a yellow flask containing nectar whose function is to control the power of mantras, which means controlling those who try to harm you using mantras. Her mantra is this:

OM TARE TUTTARE TURE SARVA STAMBHANI TARE SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏཱ་རེ་ཏུ་རེ་སའ་སྐྱུ་འི་ཏཱ་རེ་སྐྱ་ཏཱ།

## 18. She Who Neutralizes Poison

Homage! Holding in her hand the  
Hare-marked moon of deva-lake form!  
With twice spoken TARA and PHAT,  
Totally dispelling poison!

On the eighteenth petal is Tara Who Neutralizes Poison (Dukselma), white in color. She holds a white flask containing nectar whose function is to eliminate all sicknesses and poison. Her mantra is this:

OM TARE TUTTARE TURE NAGA VISHA SHANTIM KURU SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏཱ་རེ་ཏུ་རེ་རྣ་ག་བི་ཤ་ཤུ་རྩི་ཀུ་རུ་སྐྱ་ཏཱ།

If somebody poisons you or you have taken some poison by mistake, this is the mantra you can chant to eliminate it.

## 19. She Who Alleviates All Suffering

Homage! She whom gods and their kings,  
And the kinnaras<sup>83</sup> do honor!  
Armored in all joyful splendor,  
She dispels bad dreams and conflicts!

On the nineteenth petal is Tara Who Alleviates All Suffering (Duk-Ngal Tamche Selwé Drölma), white in color. She holds a white flask containing nectar that eliminates disputes, bad dreams, and other suffering. Her mantra is this:

OM TARE TUTTARE TURE MOCANA SVAHA

ཨོཾ་རྩ་རེ་ཏུ་རྩ་རེ་ཏུ་རེ་མོ་ཙ་ན་སྐྱ་ཏུ།

Because this Tara eliminates quarrels and bad dreams, if you are having persistent nightmares or quarrels in the family or in the office, this is the mantra to recite.

## 20. She Who Removes Pestilence

Homage! She whose two eyes bright with  
Radiance of sun and full moon!  
With twice HARA and TUTTARA  
She dispels severe contagion!

On the twentieth petal is Tara Who Removes Pestilence (Rimne Selwé Drölma), red in color. She holds a red flask containing nectar whose function is to eliminate all epidemics and contagious diseases. Her mantra is this:

OM TARE TUTTARE TURE VISARATA SVAHA

## WHITE TARA

White Tara resembles Green Tara in most aspects, besides, of course, that her color is white, symbolizing having overcome the two obscurations. She has seven eyes: a third eye on her face in the middle of her forehead, and one on each of her palms and on the soles of her feet. These symbolize her realization of the three doors of liberation (emptiness, signlessness, and wishlessness)<sup>84</sup> and the realization of the four immeasurable thoughts (loving-kindness,

compassion, joy, and equanimity). Unlike Green Tara, who has her right leg extended, White Tara sits in the full vajra posture.<sup>85</sup>

White Tara's long-life mantra is this:

OM TARE TUTTARE TURE MAMA AYUR PUNYE JNANA PUSHTIM KURU  
SVAHA

ཨོཾ་ཏཱ་རེ་ཏུ་ཏཱ་རེ་ཏུ་རེ་མུ་མུ་ཞུ་ཡུར་པུ་ཉེ་རྣམ་པུ་ཉི་ཀུ་བ་སྐྱ་ཏཱ།

Although we all have a certain lifespan determined by the karma created in previous lives, that lifespan can be cut short through the ripening of negative imprints caused by having committed a heavy negative action motivated by self-cherishing or one of the other delusions. This creates an obstacle to our life, which can result in death.

Reciting the mantra of White Tara is especially effective for eliminating life obstacles, helping us to have a long life. It is also a powerful healing mantra. However, as I have mentioned, if the motivation is only for relief from this temporal suffering and to enjoy this life's pleasures, the recitation does not become virtuous, even though it may help alleviate the immediate problem.

Along with the practices of Namgyalma and others that help us have a long life, a White Tara practice is considered very effective when we liberate animals. Prolonging the lives of the animals by saving their lives naturally prolongs our own life. By planting a particular seed, we get a particular result. If we plant a potato, a potato grows; if we plant a chili seed, a chili plant grows. In the same way that the plant depends on the seed, the result depends on the cause, and a positive action that prolongs the life of another creates the cause for our own long life. We can not only liberate animals for our own long life, however; we can also dedicate the practice to members of our family or to other people. We can actually dedicate it to all living beings.

A very simple way to practice White Tara is to visualize the sick person you are trying to help in front of you with White Tara above them. You then visualize beams of white nectar entering the crown of their head, totally filling their body, purifying all their defilements and negative karmas, their sickness, and the threat of untimely death. As you do this, you can recite White Tara's

long-life mantra for them at least twenty-one times and then the Tara mantra, OM TARE TUTTARE TURE SVAHA.

Then, when you have finished the mantra recitation, really feel that their body is filled with white nectar like milk from White Tara and envision they have achieved all of Tara's qualities: perfect power, the ability to benefit sentient beings, great compassion, and especially immortality.

## HOW TO PRACTICE WITH GREEN TARA'S MANTRA<sup>86</sup>

There are many ways of practicing Tara—and many different aspects of Tara to practice—from a simple Green Tara sadhana<sup>87</sup> to the highest yoga tantra aspect of Chittamani Tara. Even if you don't do a formal practice, it is very good to visualize Tara when you recite her mantra.

Visualize Tara as described above in the space in front of you, level with your forehead, at a comfortable distance of about one body length. (If you wish, you can visualize Tara on your crown.)

First, think of the transcendental wisdom of nondual bliss and emptiness of all the buddhas, which fully sees all existence. This is the holy mind of the dharmakaya, the absolute guru. Just as sentient beings act under the control of anger and attachment, buddhas work for all living beings under the control of compassion. At this time, the holy mind of all the buddhas, the absolute guru, manifests in this particular female form of Tara.

On her forehead is a white OM , the essence of the vajra holy body; at her neck, a red AH , the essence of vajra holy speech; and at her heart, a blue HUM , the essence of the vajra holy mind.

From the OM at Tara's forehead, white nectar beams are emitted and enter you through your forehead, completely purifying all the obscurations and negative karmas you have accumulated with the body from beginningless rebirths until now. From the AH at Tara's throat, red nectar beams are emitted and enter through your throat, completely purifying all the obscurations and negative karmas accumulated with your speech from beginningless rebirths until now.

From the HUM at Tara's heart, blue nectar beams are emitted and enter your heart, completely purifying all the obscurations and negative karmas accumulated with your mind from beginningless rebirths until now. Out of compassion for you and all living beings, Mother Tara has purified you.

Concentrate on this as you recite the mantra:

OM TARE TUTTARE TURE SVAHA

When you finish the meditation, pray to Tara:

Without delay of even a second, may I become Tara and, in each second, free uncountable numbers of living beings from all their sufferings and lead them to full enlightenment.

Pray that, through generating bodhichitta, you will achieve your wish to achieve Tara for the sake of other living beings.

The essential Mahayana practices of loving-kindness, compassion, morality, and, ultimately, bodhichitta are the best offerings you can make to Tara; they are the practices that please her the most. They bring you closer to Tara, so that she quickly helps all your actions to succeed.

Because, rather than following the selfish mind, you are using your life to serve others—because of your attitude of bodhichitta—Tara is extremely pleased with you. She melts into green light, enters through your forehead, and absorbs into your heart.

Think:

My body, speech, and mind have been blessed to become Tara's  
vajra holy body, holy speech, and holy mind

By receiving the blessings of Tara with a calm, devoted mind, you plant the seed to develop your mind and actually achieve Tara.

After the absorption, if you wish, one-pointedly concentrate on the nature of Tara's holy mind. Then conclude your practice by dedicating the merits to the generation of bodhichitta and to your achievement of Tara, in order to lead every living being as quickly as possible to Tara's enlightenment. You can finish with the standard dedication prayers.

## 5. MEDICINE BUDDHA

---

WHEN THE MEDICINE BUDDHA was a bodhisattva called Stainless Star, one of the many prayers he made for us sentient beings was this:

When I become the Medicinal King, the King of Lapis Light, may any sentient being who recites my mantra or hears my name or sees, hears, touches, or remembers me, or does the recitation-meditation never have any sickness or harm. May they have a long life, the Dharma, and wealth.

There is no doubt that for any sentient being who makes a statue of Medicine Buddha or does concentration, or meditation, on Medicine Buddha, but even for somebody who doesn't concentrate on Medicine Buddha but simply expresses my name or even makes seven steps in my direction [which means toward a Medicine Buddha statue or to do a puja], the door to the evil-gone realms [which means the lower realms] and to samsara will be closed. May they be born in the higher realms, have all the seven qualities, and achieve peerless enlightenment.

May the power of my prayers be equal to that of all the buddhas of the fortunate eon, especially in regard to profundity, extensiveness, and power.<sup>88</sup>

The above prayer was just one that the Medicine Buddha made when he was a bodhisattva. He and all seven of the Medicine Buddhas did so many prayers for us sentient beings, that in these degenerated times—which is now—all our wishes might succeed.

Reciting the Medicine Buddha's mantra or the names of the seven Medicine Buddhas every day purifies whatever karma we have to be reborn in the lower realms. That was guaranteed by the main Medicine Buddha and the

other Medicine Buddhas when they made extensive prayers for the sentient beings of these degenerate times. They promised that if we do the Medicine Buddha practice, they will actualize our prayers, allowing us to quickly be able to accomplish everything we wish for.

THE SEVEN MEDICINE BUDDHAS

In the Medicine Buddha practices, such as the one called the *Wish-Fulfilling Jewel*,<sup>89</sup> there are seven Medicine Buddhas, but generally when we visualize the Medicine Buddha to recite the mantra, we visualize the main Medicine Buddha: Medicine Guru, King of Lapis Light.

In the center of a lotus is a white moon disk. Seated on the moon disk is the Medicine Buddha. He has one face and two arms. He is blue in color, like a very clear, very blue sky, radiating blue light from his body. In the past we translated *bendurya*, the color of the Medicine Buddha, as lapis lazuli, but that seems incorrect. Although there doesn't seem to be an exact translation in English, we can take it to be sapphire.

His right hand rests on his right knee, palm up, in the mudra of granting sublime realizations. He holds the stem of an arura plant between his thumb and index finger. Arura is the special plant that heals both the sickness of the mind and sickness of the body, destroying all suffering and its causes. His left hand is in the mudra of concentration. In it, he holds a lapis lazuli bowl filled with immortal nectar that destroys death and pacifies the chronic disease of the delusions.

He is seated in the full lotus position and is wearing the three red-colored robes of a monk. He has all the signs and holy exemplifications of a buddha.

Even though he appears to us as truly existent, every part of Medicine Buddha's holy body is merely labeled by the mind: the head, the hands, the legs, the begging bowl, the arura plant.

Besides the main Medicine Buddha, there are the other six Medicine Buddhas. Generally, we visualize them all above our head. From the top to the bottom they are like this:

The first buddha is Renowned Glorious King of Excellent Signs. He is golden in color and is making the mudra of granting refuge, his right hand at his heart, palm outward, and his left hand on his lap, palm upward, as in the meditation mudra.

Below him is King of Melodious Sounds, Brilliant Radiance of Skill, Adorned with Jewels, Moon, and Lotus. He is yellow in color and is making the mudra of granting the supreme, with his right hand on his right knee, palm outward, similar to Tara's mudra, and his left hand in the meditation mudra.

Then there is Stainless Excellent Gold, Great Jewel Who Accomplishes All Vows. He is golden in color and is making the Dharma teaching mudra, both hands at his heart, with his right palm outward and raised and his left palm inward and raised and partly in front of the right.

After that is Supreme Glory Free from Sorrow. He is light red in color and is making the mudra of meditative equipoise, with both hands on his lap, the right resting on the left and the thumbs touching.

Next there is Melodious Ocean of Proclaimed Dharma. He is pink in color and is making the Dharma teaching mudra.

Then there is Delightful King of Clear Knowing, Supreme Wisdom of an Ocean of Dharma. He is coral colored<sup>90</sup> and is making the mudra of granting the supreme.

The last of the seven Medicine Buddhas is Medicine Guru, King of Lapis Light. As we have seen, he is sapphire colored, with his right hand in the mudra of granting the supreme realizations and his left in the mudra of concentration.

All of these buddhas are sitting on a lotus and moon disk and wearing the three robes of a monk, as in the description of the main Medicine Buddha. The differences are their colors and their mudras.

## THE MANTRA

There is a long and a short Medicine Buddha mantra. The long one is this:

OM NAMO BHAGAVATE BHAISHAJYE / GURU BAIDURYA / PRABHA  
RAJAYA / TATHAGATAYA / ARHATE SAMYAKSAM BUDDHAYA / TADYATHA  
/ OM BHAISHAJYE BHAISHAJYE MAHA BHAISHAJYE [BHAISHAJYE] / RAJA  
SAMUDGATE SVAHA

ཨོཾ་མེ་ལྷ་ག་མ་ཏི་རྗེ་པ་ཏྲེ། ལུ་ཅུ་བཞུགས། བ་རྗེ་རུ་ངོ་ཡ། ཏ་ལྷ་ག་ཏ་ཡ།  
ཨཱ་ཏི་ལི་ཐུ་མི་བུ་རྒྱ་ཡ། ཏཏ་ལྷ། ཨོཾ་རྗེ་པ་ཏྲེ་རྗེ་པ་ཏྲེ་མ་རུ་རྗེ་པ་ཏྲེ་[རྗེ་པ་  
ཏྲེ། རུ་ངོ་ལ་ཐུ་རྗེ་ཏི་སྐ་རྗེ།

Common pronunciation:

*Om namo bagawatay bekanzay guru baidurya / praba radza ya /  
tatagataya / arhatay samyaksam buddhaya / ta ya ta / om bekanzay  
bekanzay maha bekanzay [bekanzay] / radza samudgatay soha*

The short Medicine Buddha mantra is this:

TADYATHA / OM BHAISHAJYE BHAISHAJYE MAHA BHAISHAJYE  
[BHAISHAJYE] / RAJA SAMUDGATE SVAHA

ཏད་ཡའ་ འོ་རྣམ་ཤེས་ལྷན་ལྷན་མ་རྒྱ་རྣམ་ཤེས་ལྷན་ལྷན་[རྣམ་ཤེས་]རྒྱ་ཇ་ས་སུང་གཏེ་སྐྱ་ཏྲེ།

Common pronunciation:

*Ta ya ta / om bekanzay bekanzay maha bekanzay [bekanzay] / radza  
samudgatay soha*

The bracketed BHAISHAJYE (*bekanzay*) is optional.

### *The Meaning of the Mantra*

In the Medicine Buddha mantra, BHAISHAJYE means the elimination of pain and MAHA BHAISHAJYE means the great elimination of pain. In one explanation of the mantra, the first BHAISHAJYE refers to eliminating the pain of true suffering, the pain not just of disease but of all the problems of body and mind. It also eliminates the pain of death and rebirth, that which is caused by karma and delusions.

The second BHAISHAJYE refers to eliminating all the true causes of suffering, which are not external but within the mind. This refers to the karma and delusions themselves, the inner causes that enable external factors to become conditions for disease.

The third BHAISHAJYE, MAHA BHAISHAJYE, or the great elimination of pain, refers to eliminating even the subtle imprints left on the consciousness by the delusions.

The fourth BHAISHAJYE is optional. Some texts have it, others don't, but His Holiness the Dalai Lama recites the mantra with the fourth BHAISHAJYE.

The Medicine Buddha mantra actually contains the remedy of the whole graduated path to enlightenment, from the beginning up to the peerless happiness of full enlightenment. The first BHAISHAJYE contains the graduated path of the lower capable being; the second BHAISHAJYE, the graduated path of the middle capable being; and MAHA BHAISHAJYE, the graduated path of the higher capable being. Reciting the mantra leaves imprints on our mind so that we are able to actualize the path contained in the mantra.

As we have seen, the initial word of the mantra, TADYATHA, means "this contains," and the OM, composed of *a*, *o*, and *ma*, signifies the pure holy body, holy speech, and holy mind of the buddha, here referring to those of the Medicine Buddha. Actualizing the whole path to enlightenment purifies our impure body, speech, and mind and transforms them into the Medicine Buddha's pure holy body, holy speech, and holy mind.

We can then become a perfect guide for living beings. With our omniscient mind, we are able to effortlessly, directly, and unmistakably see the level of mind of every living being and all the methods that fit them, in order to lead them to the peerless happiness of full enlightenment. We also have the perfect power to manifest in various forms to suit every living being and reveal the necessary methods to guide them, whether giving material help, secular education, or Dharma teachings. Whenever an imprint left by a sentient being's past positive actions ripens, without the delay of even a second, we can reveal the various means to guide them to enlightenment.

### *The Power of the Mantra in These Degenerate Times*

It is explained in the sutras that reciting the Medicine Buddha mantra, doing his practice, or making offerings to him are extremely effective ways to bring peace and success to a whole country, especially in these degenerate times. In a country where there is untimely rain, hailstorms destroying the crops, earthquakes, and various contagious diseases, the Medicine Buddha helps. Also, wherever there are wars, famines, and natural disasters, the texts say that if the king of the country, with a mind of loving-kindness, makes offerings to the Medicine Buddha, the crops will grow well, wars will cease, and the

sentient beings of that country will be happy and healthy, enjoying greater wealth, long life, and power.

When Manjushri, in the presence of all seven Medicine Buddhas and Shakyamuni Buddha, requested the Medicine Buddha to grant his mantra, they all in one voice granted it and explained its benefits. Because of that, when we recite this mantra, all the buddhas and bodhisattvas will pay attention to us and protect us.

The text called *Mengyu Rinchen Bumpa* says,

Reciting Medicine Buddha's name and mantra once equals having recited the names and mantras of all the tathagatas of the past, present, and future.

It also says,

Remembering, seeing, hearing, touching, or meditating on Medicine Buddha includes remembering, seeing, hearing, touching, or meditating on all the buddhas and bodhisattvas, all the Triple Gem. Therefore, Medicine Buddha's holy name is "All-Encompassing of Those Gone to Bliss."<sup>91</sup>

Reciting this mantra as a daily practice purifies all our negative karmas and quickly pacifies diseases and harm from spirits. Furthermore, just as a mother pays attention to her beloved child, all the buddhas and bodhisattvas always pay attention to us, guide us, and protect us. Because of that, the mantra has the power to immediately pacify all our inner sicknesses and harm from spirits. We will no longer be controlled by others, and all the harms and quarrels caused by our enemies will be pacified.

Because of the extensive prayers the seven Medicine Buddhas made when they were still bodhisattvas to actualize all the wishes of living beings when the teachings of Shakyamuni Buddha were in decline, whatever we wish for will happen when we rely on them. Therefore, of all the many different deities that can be practiced, to really progress quickly in the Dharma in these degenerate times, my suggestion is that everybody should practice the Medicine Buddha.

We are living in a time when the five degenerations are flourishing: the degenerations of mind, lifespan, sentient beings, time, and view. All the other

degenerations basically come from the first, the *degeneration of mind*. Because we sentient beings have not developed our minds in spiritual paths, ignorance, anger, desire, and other delusions have increased and become very gross. This has resulted in the *degeneration of lifespan*, with the average life expectancy becoming progressively shorter than when human beings first appeared in this world system.<sup>92</sup> It has also led to the *degeneration of sentient beings*, whose minds have become very stubborn and difficult to subdue. It is increasingly difficult for us to practice patience, loving-kindness, compassion, and so forth. The *degeneration of time* is shown by the escalation of wars and natural disasters such as earthquakes, droughts, famines, and epidemics. Finally, there is the *degeneration of view*, with fewer people believing the truth and more people believing lies and wrong explanations, such as believing that virtue is not the cause of happiness and nonvirtue is not the cause of suffering.

Just as Guru Padmasambhava predicted more than a thousand years ago, because of the flourishing of the five degenerations, new diseases are emerging all the time, doctors are becoming less able to recognize and treat them, and the power of medicine to cure them is decreasing. Food is becoming less nutritional and air and water pollution are causing more and more illnesses. Everything is degenerating, including success in both worldly concerns and the Dharma.

Because our minds are degenerating, practicing the Dharma is becoming harder and whatever practice we do seems to have less effect. Even our ability to connect to the power of most mantras has degenerated, which is why when we do a deity practice now, we generally have to recite many more mantras than in previous times.

On the other hand, because of the power of the promises made in the past by the Medicine Buddhas, the Medicine Buddha mantra actually becomes *more* powerful as times degenerate. So, you can see why it is important to recite the Medicine Buddha's mantra. By doing so, the wishes we have for our Dharma practice are quickly achieved, as well as, along the way, worldly matters such as success, health, and long life. The main success we should aim for, of course, is success on the path to enlightenment, to liberate ourselves from the oceans of samsaric suffering forever and achieve enlightenment so we can enlighten all sentient beings.

I often recommend that for anybody interested in Buddhist practice—in fact for anybody who wants happiness—the fundamental practice should not only be to recite OM MANI PADME HUM but also the mantra of the Medicine Buddha. I also recommend that centers do Medicine Buddha pujas in addition to their regular Tara pujas. If you normally do a Tara puja in the evening of the Tibetan eighth<sup>93</sup> as part of your center's activities, it is very good to do a Medicine Buddha puja in the morning before breakfast.

### *The Mantra That Saves from the Lower Realms*

When we recite the Medicine Buddha mantra, any being who hears us—not just humans but also animals, birds, and insects—will never be born in the lower realms again. In that way, not only do we take care of ourselves each day by reciting the Medicine Buddha mantra and doing the practice, we are also able to take care of others.

When the texts talk about the benefits of reciting the Medicine Buddha mantra and the names of the Medicine Buddhas, we can take these as definitive teachings, not interpretive. It's not that they say such-and-such, but we must try to understand that there is another meaning there. When the texts tell us that chanting the mantra saves from the lower realms, they mean exactly that. Therefore when I recite mantras for animals or human beings, one of the mantras I always recite is the Medicine Buddha mantra, to prevent them from ever being reborn in the lower realms. Whenever we meet somebody, we should do this.

If you have your own pets, you should recite the Medicine Buddha mantra to them every day. Really, the mantra is so short it takes almost no time to recite, so it would be a great loss if you didn't recite it. Of course, there are many benefits to reciting it silently with the intention of benefiting that person or that animal, but here I'm talking about reciting it out loud in the ear of the being, not just quietly mumbling it.

Just providing your pets with food and comfort is not enough. This is not their only life, so it is essential that you help them attain a better rebirth, one where they will have less suffering and more happiness. When you recite the mantra to them, you leave a positive imprint on their mindstream, meaning they will be able to meet the Dharma in all future lifetimes, to be quickly

liberated from the oceans of samsaric suffering, and to achieve enlightenment. That is the most important aim. To do anything less is kind of sad. Having a pet becomes more for your own selfish happiness.

Hearing or remembering the Medicine Buddha's mantra even purifies the five immediate negativities, karmas so heavy they cause one to immediately be born in the hell realm after death. It also says that even seeing, touching, or remembering the holy body of a statue of the Medicine Buddha completely purifies the pollution that comes from taking food and other things that people have offered with devotion to the sangha community. Here *pollution* does not refer to external pollution, as in the Western sense; this is mental pollution.

In *Liberation in the Palm of Your Hand*, when Pabongka Dechen Nyingpo talks about the refuge practice, he mentions various negative karmas collected in relation to the sangha that have to be purified, including stopping somebody from making offerings to the sangha, criticizing the sangha, and causing disunity among the sangha. These are all very heavy negative actions, but they can all be purified by reciting the Medicine Buddha mantra, as can all the negative karmas collected in relation to the Buddha, Dharma, and Sangha.

### *The Mantra That Heals*

The Medicine Buddha mantra is extremely effective at healing, whether we recite it for our own benefit or somebody else's. When we recite it 108 times and blow over the food, drink, or the medicine we are taking, the sickness will be pacified, we will have long and healthy life, and all our wishes will be fulfilled. By reciting the Medicine Buddha mantra, we can also increase the power of the medicine we are taking or giving to others.

Place the medicine in a bowl in front of you and visualize a moon disk above it. Standing on the moon disk is a blue OM surrounded by the syllables of the Medicine Buddha mantra, TADYATHA OM BHAISHAJYE BHAISHAJYE MAHA BHAISHAJYE BHAISHAJYE RAJA SAMUDGATE SVAHA, in a clockwise direction. As you recite the mantra, visualize that nectar flows down from all the syllables of the mantra and absorbs into the medicine. The syllables and the moon then dissolve into the medicine, which becomes very powerful and able to cure all

diseases and harm from spirits, as well as their causes: negative karma and delusions.

After Tibetan doctors have made medicine, they use Medicine Buddha meditation and mantras to bless it. The medicine is then more effective because, besides the power of all the medicinal plants and other substances it contains, it has additional power from their practice that can help bring purification of the mind and a quick recovery.

It is good for somebody who is a healer to do a Medicine Buddha retreat for one or two months, where the mantra and the Medicine Buddhas' names are recited every day. It is mentioned that if we do this, the medicinal goddesses and protectors will help us make correct diagnoses of our patients' illnesses and to prescribe the right treatments.

My relative Pemba is codirector of Chamtse Ling, the FPMT center in Hong Kong, with Esther Ngai, who helped to buy the place. Esther sometimes had unimaginable headaches and had to have major brain surgery. She usually recited one mala of Medicine Buddha mantras a day, and during the operation she was able to see the Medicine Buddha the whole time. That means the Medicine Buddha was guiding her, appearing to her during the operation when she needed help. There are so many stories I could mention about the healing abilities of reciting the Medicine Buddha mantra.

### *The Mantra That Benefits the Dying and Dead*

When somebody such as a family member is dying, we must remember to recite the Medicine Buddha mantra with a bodhichitta motivation, not quietly to ourselves, but loudly in the person's ear. Then, even if they are unconscious, because they will still absorb the sound of the mantra, they will be saved from rebirth in the lower realms and get a higher rebirth.

The Medicine Buddha practice can even purify those who have already died and liberate them from suffering, and that includes animals. Anybody who eats meat should make it beneficial for the animal that has been killed by reciting a purifying mantra before eating. Reciting one (or all) of the mantras of Medicine Buddha, Mitrukpa, or Milarepa,<sup>94</sup> as well as the special mantra to bless the meat, OM AH BIRA KHE CHARA HUM, and blowing upon the meat about

to be eaten purifies the being's karmic obscurations and allows it to be reborn in a pure land or in one of the upper realms, as a human or god.

This is even true of blowing on a dead body or old bones we find on the road. Even if the animal or human being died hundreds or even thousands of years ago and their consciousness is in the lower realms, reciting the Medicine Buddha mantra and blowing on their bones can transfer the consciousness to a pure land or an upper realm. At the very least, it will shorten the duration of their suffering in the lower realms.

By reciting the Medicine Buddha mantra, blowing over substances such as powder or sand grains, and then sprinkling that substance on the body of somebody who is dying or dead, we can benefit them. Although the texts specify sand grains, I usually mention powder or sesame seeds because people might find the thought of sprinkling sand over the head uncomfortable. If it is difficult to go to where the person is, the blessed substance can be sent there and somebody else can sprinkle the body for purification. I keep some black sesame seeds and some white powder for this purpose, and if there is somebody dying or dead, I do various mantras for them, including Medicine Buddha and Namgyalma, and then blow over these substances and sprinkle them on the body.

It is also very beneficial to do an elaborate Medicine Buddha puja, such as the *Wish-Fulfilling Jewel*, for those who are dying or have already died. The Medicine Buddha puja contains the dedicated purposes of each of the Medicine Buddhas and is often done for someone who is seriously ill.

There are many ways you can help somebody who is about to die.<sup>95</sup> One thing I would like to emphasize is that when you visit a dying person, the first thing you should do is recite the name of the Buddha Having a Jewel Ushnisha: Rinchen Tsugtor Chänla.<sup>96</sup> Because he is similar to the Medicine Buddha and Maitreya Buddha in that through the prayers he made, anybody who even hears his name will not be reborn in the lower realms, I would strongly recommend you recite the his name along with the mantras of the Medicine Buddha and Maitreya.

HOW TO PRACTICE WITH MEDICINE BUDDHA'S MANTRA<sup>97</sup>

When you do a practice for a sick or dying person or animal with all the seven Medicine Buddhas, you visualize them all piled up, one above the other, above the head of the being you are practicing for. Alternatively, for yourself or on behalf of the other being, you visualize them above your own head, as described here.

About four inches above the crown of your head is a lotus flower. In the center is a white moon disk, upon which is seated your root guru—the dharmakaya essence of all buddhas—in the form of the main Medicine Buddha.

Do some preliminary practices, such as saying the refuge prayer three times, the four immeasurable thoughts, and the seven-limb prayer.<sup>98</sup>

### *Request*

Then, make this request:

I beseech you, Bhagavan Medicine Guru, whose holy body signifies omniscient wisdom and compassion as vast as limitless space, please grant me your blessings.

I beseech you, compassionate Medicine Guru, holding in your right hand the king of medicines symbolizing your vow to help all pitiful sentient beings plagued by the 424 diseases, please grant me your blessings.

I beseech you, compassionate Medicine Guru, holding in your left hand a bowl of nectar symbolizing your vow to give the glorious undying nectar of the Dharma, which eliminates the degenerations of sickness, old age, and death, please grant me your blessings.

### *Visualization*

Above the crown of Guru Medicine Buddha is a wish-granting jewel, the essence of which is the Guru.

Above that is Buddha Delightful King of Clear Knowing, Supreme Wisdom of an Ocean of Dharma, whose body is coral-colored. His right hand is in the mudra of bestowing sublime realizations and his left hand is in the mudra of granting the supreme.

Above him is Buddha Melodious Ocean of Proclaimed Dharma, with a pink-colored body and hands in the mudra of teaching the Dharma.

Above him is Buddha Supreme Glory Free from Sorrow, light red in color, with both hands in the mudra of meditative equipoise.

Above him is Buddha Stainless Excellent Gold, Great Jewel Who Accomplishes All Vows, golden in color, with his right hand in the mudra of expounding the Dharma.

Above him is Buddha King of Melodious Sound, Brilliant Radiance of Skill, Adorned with Jewels, Moon, and Lotus, yellow in color, with his right hand in the mudra of bestowing sublime realizations and his left hand in the mudra of concentration.

Above him is Buddha Renowned Glorious King of Excellent Signs, golden in color, with his right hand in the mudra of granting refuge and his left hand in the mudra of concentration.

### *Request*

Repeat each verse seven times. After the seventh recitation, as you repeat “May your vow . . .,” the Medicine Buddha of that request absorbs into the one below.

To the bhagavan, tathagata, arhat, fully enlightened Buddha Renowned Glorious King of Excellent Signs I prostrate, offer, and go for refuge.

May your vow to benefit all sentient beings now ripen for myself and others.

To the bhagavan, tathagata, arhat, fully enlightened Buddha King of Melodious Sound, Brilliant Radiance of Skill, Adorned with Jewels, Moon, and Lotus I prostrate, offer, and go for refuge.

May your vow to benefit all sentient beings now ripen for myself and others.

To the bhagavan, tathagata, arhat, fully enlightened Buddha Stainless Excellent Gold, Great Jewel Who Accomplishes All Vows I prostrate, offer, and go for refuge.

May your vow to benefit all sentient beings now ripen for myself and others.

To the bhagavan, tathagata, arhat, fully enlightened Buddha Supreme Glory Free from Sorrow I prostrate, offer, and go for refuge.

May your vow to benefit all sentient beings now ripen for myself and others.

To the bhagavan, tathagata, arhat, fully enlightened Buddha Melodious Ocean of Proclaimed Dharma I prostrate, offer, and go for refuge.

May your vow to benefit all sentient beings now ripen for myself and others.

To the bhagavan, tathagata, arhat, fully enlightened Buddha Delightful King of Clear Knowing, Supreme Wisdom of an Ocean of Dharma I prostrate, offer, and go for refuge.

May your vow to benefit all sentient beings now ripen for myself and others.

To the bhagavan, tathagata, arhat, fully enlightened Buddha Medicine Guru King of Lapis Light I prostrate, offer, and go for

refuge.

May your vow to benefit all sentient beings now ripen for myself and others.

### *Visualization*

Granting your request, from the heart and holy body of Medicine Guru, infinite rays of white light pour down, completely filling your body from head to toe. They purify all your diseases and afflictions due to spirits and their causes, all your negative karma and mental obscurations. Your body becomes clean and clear as crystal.

The light rays pour down twice more, each time filling your body with blissful clean-clear light which you absorb. You become the essence of the Medicine Buddha's blissful and omniscient mind of wisdom and compassion.

At your heart appears a lotus and moon disk. Standing at the center of the moon disk is the blue seed syllable OM surrounded by the syllables of the mantra. As you recite the mantra, visualize rays of light radiating out in all directions from the syllable at your heart. The light rays pervade the sentient beings of the six realms, especially the being you are doing the practice for. Through your great love wishing them to have happiness, and through your great compassion wishing them to be free from suffering, they are purified of all diseases and afflictions due to spirits and their causes, all their negative karma and mental obscurations.

### *The Recitation of the Mantra*

The long mantra, as commonly pronounced:

*Om namo bagawatay bekanzay guru baidurya / praba radza ya /  
tatagataya / arhatay samyaksam buddhaya / ta ya ta / om bekanzay  
bekanzay maha bekanzay [bekanzay] / radza samudgatay soha*

The short mantra, as commonly pronounced:

*Ta ya ta / om bekanzay bekanzay maha bekanzay [bekanzay] / radza  
samudgatay soha*

Feel great joy and think: All sentient beings are transformed into the aspect of the Guru Medicine Buddha. How wonderful that I am now able to lead all sentient beings into the Medicine Buddha's enlightenment.

The Guru Medicine Buddha melts into light and absorbs into your heart. Your mind becomes completely one with the dharmakaya, the essence of all the buddhas.

Finish with dedications prayers.

When you have finished, imagine that there is not even an atom of negative karma left in your mental continuum. If you have done this practice for somebody and have been imagining the Medicine Buddhas absorbing into that being, imagine the same for them. As the last Medicine Buddha, King of Lapis Light, absorbs into that being, their body becomes calm and clear, like crystal, and their body, speech, and mind become one with the Medicine Buddha's holy body, speech, and mind.

When this practice is done with stable concentration and strong compassion, you can definitely help that being to avoid birth in the lower realms. You don't have to be physically in the presence of that person or animal. You can be home while they are in the hospital, for instance; it is still as effective.

## 6. VAJRASATTVA

---

**M**ANJUSHRI ADVISED LAMA TSONGKHAPA that meditation alone is not enough to quickly generate the realizations of the path. Just as a crop cannot grow in a rocky and barren field—the ground must be cleared and well watered before the seeds can grow into strong plants—so too the mind cannot develop on the path while it is clouded with negative thoughts and emotions. We must eliminate our negativities and actualize our positive potential to the fullest by not creating any more negative karma, accumulating positive karma, and purifying the negative karma we have in our mindstream. These three things are vital if we are to gain any realizations.

The sublime method to accumulate merit is the guru yoga practice within the Vajrayana, where we see our guru as inseparable from the deity we are practicing. The sublime method to purify the negative karma and obscurations that cloud our mind is the Vajrasattva practice. If we do a daily tantric practice, at the beginning of a higher tantric sadhana there are invariably the twin preliminaries of a guru yoga practice and a Vajrasattva meditation in order to create the cause for success in the main part of the practice.

At present, we have mental blocks that hinder our Dharma practice, obstacles that obstruct us and prevent us from generating realizations on the path. Unless we can remove those blocks, we will be unable to develop the mind. Our mind—our sleeping, ignorant mind—won't awaken. The practice of purification is therefore vital because it creates the space that allows the mind to have realizations. I would say that purification practice is *the* essential practice we can do.

There are many means of purifying the mind, many purification practices, but the Vajrasattva practice is one of the most powerful; it is the one that has the power to purify even the heaviest negative karma. It is common to all schools of Tibetan Buddhism and is a crucial element of any *ngöndro*, the series

of preliminary practices that are undertaken before beginning a long tantric retreat.

You might have seen that there are two main forms of Vajrasattva. One form is simpler and is just Vajrasattva on his own, whereas in another he is sitting in union with the wisdom mother. This form is often referred to as “with consort” or *yab-yum* or “father and mother.”<sup>99</sup> This representation of a deity in union with the wisdom mother is common in highest yoga tantra and it is symbolic.

In reality it is one being, but its manifestation as father and mother signifies the unification of method and wisdom—the dharmakaya.

Vajrasattva without a wisdom mother is white, with one face and two hands; he is in the aspect of a youth of sixteen. Half of his black hair is gathered on top of his head, the rest curls down his back. He is seated on a moon disk on a white lotus, his legs crossed in the vajra position. In his right hand he holds a gold vajra (*dorjé*) to his heart, symbolizing bliss, and in his left, at his hip, he holds an upturned bell, symbolizing emptiness.<sup>100</sup> He is dressed in lavish garments and adorned with gold and jewels, ornaments, earrings, bracelets, and so forth. His face is gentle and loving.

When we visualize Vajrasattva with the wisdom mother, both their bodies are white; each has one face and two arms. He holds a vajra and bell at his heart, she a curved knife and skull cup.<sup>101</sup> They are embracing each other. The father is adorned with six mudras, the mother with five.<sup>102</sup> He sits in the vajra posture, she in the lotus posture.<sup>103</sup>

The Vajrasattva mantra is effective no matter who does it, but it will be even more effective if we have taken a Vajrasattva initiation, either a great initiation in the lower kriya tantra<sup>104</sup> or a highest yoga tantra initiation. With the highest yoga tantra, we are empowered to do all the meditations, visualizing ourselves alone or with consort.

However, it is not that we can only visualize Vajrasattva with the wisdom mother after we have taken a highest yoga tantra initiation. As long as we have faith and we feel the need to purify, we can do the meditation, even visualizing the highest yoga tantra aspect.

There is nothing that cannot be purified with the Vajrasattva practice. Because Vajrasattva without the wisdom mother is a kriya tantra deity, reciting the mantra while visualizing him purifies broken *pratimoksha*, or individual liberation, vows, and bodhisattva vows. When we do the practice as a highest yoga tantra, with the aspect of Vajrasattva with wisdom mother, that purifies everything, including the heaviest karma of breaking the root tantric vows.

## THE MANTRA

The long, hundred-syllable mantra is this:

OM VAJRASATTVA SAMAYA MANUPALAYA / VAJRASATTVA  
TVENOPATISHTHA / DRIDHO ME BHAVA / SUTOSHYO ME BHAVA /  
SUPOSHYO ME BHAVA / ANURAKTO ME BHAVA / SARVA SIDDHIM ME  
PRAYACCHA / SARVA KARMA SU CHAME / CHITTAM SHRIYAM KURU  
HUM / HA HA HA HA HO / BHAGAVAN SARVA TATHAGATA / VAJRA MAME  
MUNCHA / VAJRA BHAVA MAHA SAMAYA SATTVA AH HUM PHAT

ཨོཾ་བཛྲ་སདྲ་ས་མ་ཡ་མ་རུ་སྤྲ་ལ་ཡ། བཛྲ་སདྲ་དུ་འོ་པ་ཏིལ། འི་རྩོ་མེ་རྩ་  
མ། སུ་ཏི་ཕུ་མེ་རྩ་མ། སུ་པོ་ཕུ་མེ་རྩ་མ། ཨ་རུ་རྩོ་མེ་རྩ་མ། སམ་སིལྱི་ལྱི་  
སྤྲ་ཡ་རྩ། སམ་ཀམ་སུ་ཅ་མེ། ཅིའི་སྤྱི་ཡི་ཀྱ་ཏ་འི། ཏ་ཏ་ཏ་ཏ་ཏོ་རྩ་ག་ལྷན་  
སམ་ཏ་སྤྲ་ག་ཏ། བཛྲ་སྤྲ་མེ་རུལྱ། བཛྲི་རྩ་མ་སྤྲ་ས་མ་ཡ་སདྲ་ཨུའི་པའ།

The short mantra is this:

OM VAJRASATTVA HUM

ཨོཾ་བཛྲ་སདྲ་ཧུཾ།

There is also a short mantra that goes OM VAJRASATTVA HA but when I wrote to my root guru, His Holiness Trijang Rinpoche,<sup>105</sup> and asked about both versions, he replied that it was better to recite OM VAJRASATTVA HUM.

It is recommended in many texts and by many great masters such as His Holiness Trijang Rinpoche that each day we recite either the long mantra twenty-one times or the short one twenty-eight times in order to stop the increase of any negative karma we have accumulated during that day, as well as purifying the negative karma accumulated during this life and from beginningless previous lives. The root tantra called *Adorned with the Vajra Essence (Dorjé Nyungpo Genki Gyü)* explains,

According to the method of the hundred syllables, each recitation of the mantra twenty-one times stops you receiving the downfalls and increasing any negative karma. This is explained by the highly

attained ones. You should also enjoy reciting it in the interval times.

Here, “downfalls” refers to the root vows we have broken. “Interval times” means in the breaks between meditation sessions.

Of course, reciting a full mala of the long mantra is more powerful than just twenty-one recitations, but even if we cannot do that before going to bed each day, a shorter recitation, with prostrations if possible, will still purify our negative karma.

### *The Meaning of the Mantra*

The meaning of the short Vajrasattva mantra, OM VAJRASATTVA HUM, is this:

Bhagavan, the Destroyer, the Qualified One Gone-Beyond, you who have the nature of possessing the vajra of all the tathagatas, great hero with your holy mind, in accordance with your samaya, please don't give up on me.

The Sanskrit *bhagavan* is *chom den dä* in Tibetan—*chom* “destroyer,” *den* “having all the qualifications,” and *dä* “having transcended the world”—meaning Vajrasattva has completely destroyed, or purified, the two obscurations and obtained all the qualities of a buddha, having gone beyond even the peace of lower liberation and attained highest enlightenment.

The “vajra of all the tathagatas” refers to the dharmakaya, the transcendental wisdom of nondual bliss and emptiness, the absolute guru. When we visualize Vajrasattva with the wisdom mother, the male deity represents bliss—the method side of the practice—the female deity represents the realization of emptiness, and being in union means that in tantra these two aspects of the path are combined. This is the definitive meaning of “vajra.” It is the real meaning of the guru—the absolute guru, the dharmakaya. We should remember this whenever we see, hear, or remember the guru.

Vajrasattva, Dorjé Sempa in Tibetan, consists of vajra (*dorjé*) and sattva (*sempa*), which means “hero,” so here we are asking—actually, demanding!—that Vajrasattva, this great hero, never forsakes us, in accordance with his samaya, referring to the pledge or commitment Vajrasattva made in the past.

The meaning of the long mantra is this:

Vajrasattva, you who have pledged (SAMAYA) to lead me on the path to enlightenment (MANUPALAYA), bring me to your vajra holy mind (VAJRASATTVA TVENOPATISHTHA), and grant me the firm and stable realization of the ultimate nature (DRIDHO ME BHAVA). Grant me the blessings of being extremely pleased with me (SUTOSHYO ME BHAVA) and bless me with the nature of great bliss (SUPOSHYO ME BHAVA).

Bless me with the love that leads to your state (ANURAKTO ME BHAVA), grant all powerful attainments (SARVA SIDDHIM ME PRAYACCHA), grant all virtuous actions (SARVA KARMA SU CHAME), and grant all your victorious qualities (CHITTAM SHRITAM KURU), the vajra mind (HUM), and the five transcendental wisdoms (HA HA HA HA HO).

You who have destroyed every obscuration, attained all realizations, and passed beyond suffering (BHAGAVAN), you who have realized emptiness and know all things just as they are, inseparably (SARVA TATHAGATA VAJRA), do not abandon me (MAME MUNCHA), you who are in nature indestructible inseparability (VAJRA BHAVA), the great pledge being, the vajra holy mind (MAHA SAMAYA SATTVA), the vajra holy speech (AH), the transcendental wisdom of great bliss (HUM), clarifying the transcendental wisdom of inseparable bliss and emptiness and destroying the dualistic mind that obstructs it (PHAT).

### *The Power of the Mantra*

Reciting the Vajrasattva mantra daily or in a long retreat—usually three months with one hundred thousand mantras—is considered the supreme method of purification. Through the practice we are able to not only purify our general nonvirtues but even the very heavy negativities, such as breaking the bodhisattva or tantric vows.

If negative karma is not purified with a practice such as Vajrasattva it continuously increases day by day, month by month, year by year. Even though

we might not have killed any human beings or performed any other heavy negative actions, small negative actions become like huge mountains.

Therefore in order to stop that terrifying growth, everybody needs a powerful daily purification practice such as the Thirty-Five Buddhas or Vajrasattva.

It is said in the teachings,

To the wise man, even a great negativity becomes small;  
to the fool, even a small negativity becomes huge.<sup>106</sup>

The wise are wise in the profound methods of purification and renunciation, wise in practicing bodhichitta, wise in meditating on emptiness. For such a person, even if they have created much heavy negative karma, it becomes weak because they have the means to purify it.

For example, in his early life, Milarepa used black magic to destroy the house where some enemies of his mother were enjoying a wedding feast, killing the many guests who were upstairs and the horses who were tied up downstairs. Afterward, repenting his act, he asked the lama who taught him the black magic what to do. The lama advised him to go to the great lama Marpa, who put him through a series of great hardships—such as building a nine-story house with his own hands, not once but three times—in order to overcome his negativities. Each time he had finished, Marpa had him tear it down and start again. Marpa scolded him and beat him many times, refusing to give him the teachings he wanted.

All these things became his preliminary practices, like doing many hundreds of thousands of Vajrasattva mantras and prostrations. Through this, Milarepa purified unimaginable obscurations and created unbelievable merit. By correctly following his guru Marpa's advice, he achieved the complete path to enlightenment in one lifetime.

On the other hand, even though the foolish person might not create many very negative actions, because they have no idea about purification, their karmic results become bigger and bigger. It is like a small amount of poison that has gone inside the stomach, spreading throughout the system, or like a small candle flame that can destroy a forest, a mountainside, or a whole city. Even though the negative karma is tiny, the harm is great.

If we examine the negative karmas we create in one day, even one hundred thousand rebirths in the animal, hungry ghost, and hell realms would not exhaust the suffering results of that one day's accumulation. The negative karmas that throw us into the lower realms don't need to be heavy ones. The Kadampa geshe<sup>107</sup> say, "While laughing and playing, just by moving our lips, we sink into the lower realms." This means that whatever we do thoughtlessly, frivolously, meaninglessly, even if it is just fooling around, becomes the cause to be reborn in the lower realms. Knowing this, when we have such a profound method of purification like Vajrasattva, how can we not think of using it?

We should all do the Vajrasattva practice every day, even if our Dharma understanding is limited or we are unable to do many retreats. In this way, we pacify the inner cause of our problems and experience more happiness and peace. If we live our life like this, when the day of our death comes, our negative karma will have become much weaker, causing much less distraction, and allowing us more chance of dying with a virtuous, happy mind, one that is free of worry and fear. Then we will more easily find a better body in our future life and be able to train our mind in the path.

To be able to do a three-month Vajrasattva retreat where we recite the mantra one hundred thousand times is truly incredible. It is stated that the Vajrasattva mantra is so powerful that reciting it that many times purifies any infraction of the root tantric vows, and even the five immediate and the five near-immediate negativities are purified. As we have seen, any of the five immediate negativities—killing your mother or father, killing an arhat, drawing blood from a buddha, and causing disunity in the sangha—causes us to be reborn in the lowest hell immediately after this life. The five near-immediate negatives are similar in having that result. They are killing a bodhisattva, killing an arya not yet an arhat, defiling our mother or a female arhat through sexual misconduct, stealing property from the sangha, and destroying a stupa. Vajrasattva purifies all negativities relating to the sangha, such as making a living through selling holy objects, as well as negativities relating to the Dharma. It purifies all the degenerated vows, such as criticizing the guru. To be able to purify whatever karma we have on our mindstream that brings such a result—can there be anything more worthwhile in life to do than this?

Purification does not depend solely on the number of mantras recited. As Pabongka Dechen Nyungpo explained, the effectiveness of the purification comes from both strong regret and strong determination not to commit the negative action again. These two factors make the purification extremely powerful. And, as I have said many times, a pure motivation is crucial and the best motivation is bodhichitta.

The most important reason for doing the practice of purification is to be able to generate the realizations of the path to enlightenment so we can do perfect work to bring all sentient beings to enlightenment. That's the main aim. Even if our life is so busy that there is not much time to do sitting practice, if we can live our life with the thought of benefiting all sentient beings, when we recite even one Vajrasattva mantra with bodhichitta, we receive the same benefit as having recited one hundred thousand Vajrasattva mantras.

But doing a Vajrasattva purification practice every day takes care of everything else by the way. It takes care of health, it ensures a long life, it overcomes obstacles to being successful, but most importantly, it overcomes obstacles to practicing the Dharma.

### *Vajrasattva Purifies Broken Vows*

A lamrim text explains four ways to make our life most meaningful.

- The best way to live is to always live in the vows.
- The best way to act is to always act with a positive motivation.
- The best way to offer is to see all holy objects as embodiments of the guru.
- The best way to give is to give the Dharma.

The first way to make our life meaningful is to live in the vows. There are various levels of vows we can take to protect our karma, from the pratimoksha vows, such as the five lay vows and the vows of ordained sangha, up to the tantric vows,<sup>108</sup> and these vows are the tools we can use to most quickly accumulate merit. Unless we take and then keep our vows purely, enlightenment is impossible.

As Lama Tsongkhapa said in the *Foundation of All Good Qualities*,

Even if I develop only bodhichitta, without practicing the three  
types of morality  
I will not achieve enlightenment.  
With my clear recognition of this,  
please bless me to practice the bodhisattva vows with great energy.<sup>109</sup>

If our morality degenerates, we become like a pot with no bottom—no matter how much delicious food we put in it, it runs straight through. We have no base for realizations. Although Lama Tsongkhapa mentions the bodhisattva vows here, this is true of all levels of vows. Without the morality of the pratimoksha vows, there can be no realizations. The more purely we keep the pratimoksha vows, the more quickly we are able to achieve the realizations of the lamrim topics, the three principal aspects of the path, and the two stages of highest yoga tantra: the generation stage and the completion stage.

Whether we are living in one, five, or a thousand vows, we accumulate an inconceivable amount of merit every second. On the other hand, when we break one of the vows we have pledged to keep in front of our guru, we create oceans of negative karma and have downfalls pour down on us like a tropical rain shower. The higher the vow we have taken, the heavier the karma we create by breaking it. The consequences of breaking a secondary bodhisattva vow are one hundred thousand times heavier than of breaking a pratimoksha root vow. And the consequences of breaking a secondary tantric vow are one hundred thousand times greater than of breaking a bodhisattva root vow.

Reciting the Vajrasattva mantra every day is vital if we have taken any level of vows, especially if we have taken a tantric initiation and have been given the bodhisattva and tantric vows. Because of their great subtlety, tantric vows can be very easily degenerated, and so we need to constantly purify whatever vows we have broken.

We might be quite daunted if we consider just this point, and the question might arise, “Since I seem to be incapable of keeping these vows purely, meaning negativities pour down on me like rainfall, how is it possible for me to achieve enlightenment?” Lama Atisha answered this question by explaining that the Vajrasattva practice is like throwing one stone to chase away a hundred

birds. This means that doing the one practice of Vajrasattva can purify everything.

If we are put off taking initiations because we are scared of the vows, we will never get to plant the seed of the quick path to enlightenment. In one way it is difficult, because we do not have the very basic realizations, so our mind is very uncontrolled and we constantly break vows and receive downfalls. But on the other hand, we have the skillful means to purify all these negative karmas and infractions, especially with the highest yoga tantra aspect of Vajrasattva with the wisdom mother. Even the heaviest karmas can be purified with this aspect. Therefore, whoever has taken a highest yoga tantra initiation should visualize Vajrasattva with the wisdom mother in order to purify any tantric vows that have been broken.

## HOW TO PRACTICE WITH VAJRASATTVA'S MANTRA

### *The Four Opponent Powers*

If you recite the Vajrasattva mantra or do prostrations to the Thirty-Five Buddhas, in order to make the purification most effective, it is extremely important to incorporate it with the four opponent powers:

1. the power of dependence
2. the power of regret
3. the power of remedy
4. the power of the restraint

The first of the four powers is the power of dependence. This can also be called the “power of reliance on the holy object” or the “power of faculty of the holy object.” It refers to taking refuge in the Three Rare Sublime Ones and generating bodhichitta. By taking refuge you save yourself from harm, and by generating bodhichitta you save others from harm.

The second power is the power of regret. Seeing you have created one specific negative action, or negative actions in general, you recognize that you have unwittingly created the cause for suffering. Understanding this, you naturally regret it. Thinking in this way takes very little time and it is easy and

very effective for the mind. The more you understand the shortcomings of negative karma and the more you can regret having committed negative acts, the more powerful your purification will be.

Regret is not guilt; it is not living your life weighed down by guilt. Regret is the wisdom to see you have harmed yourself and others by doing that action. When you see that, the resolve not to repeat the action comes naturally. With regret comes the power to change the situation.

The third power is the power of the remedy. The texts often cite six ways of practicing the power of the remedy: reciting the names of the buddhas, reciting purifying mantras, making holy objects, reciting emptiness texts, meditating on emptiness or bodhichitta, and making offerings to the Three Rare Sublime Ones. Of these, the Vajrasattva practice is the perfect remedy.

Even when you purify very strongly, you can still suffer. People who do retreats such as Vajrasattva often have illnesses, pain, and even mental problems. That does not mean the purification is ineffectual or you are creating more negative karma. Far from it. Like a burst boil oozes pus, you are seeing the effects of purifying. Rather than experiencing eons in the lowest hells, you suffer a few days of stomach pains. Therefore that pain is a good sign that you are purifying, and that the practice is benefiting you.

The final power is the power of restraint, resolving not to do the action again. Pabongka Dechen Nyingpo said that this power means that you think, “From now on, even if it costs me my life, I won’t commit this negative karma again.” If you can do this strongly enough, you can completely destroy the negative karmic imprint of the action. Purifying less strongly will not completely destroy it but will lessen its effect. I often advise that if it is unrealistic to think you will never do that action again, then choose a feasible length of time you can restrain from doing it, such as a day, an hour, or even a minute, and then resolve to restrain from doing it for that period.

### *Ways to Visualize the Purification*

Whether you do a formal Vajrasattva meditation or simply recite some mantras as you are walking along the road, as you recite you should visualize Vajrasattva (either with or without the wisdom mother) above your head and nectar

flowing from his heart into you. I will describe various ways of doing this, but you can modify it to suit your circumstances.

Visualize Vajrasattva at whatever size suits you—small, the size of a person, or the size of Mount Everest. If Vajrasattva, the moon disk at his heart, and the mantra around the moon disk were all the same bright white color, your visualization might not be clear because you might be unable to differentiate the features. You can therefore visualize Vajrasattva's holy body as crystal, the moon disk at his heart as the color of a conch shell, and the mantras as silver. Although they are all white, making them slightly different shades aids clear visualization. The lotus is also white, as is the moon disk. Everything is white. The function of Vajrasattva is to pacify negative karmas, obscurations, disease, and harm from spirits, and the color white signifies the action of pacifying.

As you recite the mantra, there are three ways to visualize the nectar that flows from the heart of Vajrasattva (or the hearts of the deity father and mother) into your body.

The first way is called “chasing from above,” which means purifying downward. It is like washing a bottle that is black with dirt under a tap, so that all the dirt flushes away and the bottle becomes sparkling clean and clear. Visualize nectar in the form of a white beam of light coming from Vajrasattva's heart and the heart of the wisdom mother, joining at the place of union and flowing in through the top of your head. It fills your body from above, causing all your negative karmas and obscurations to come out of the lower part of the body in the form of a dirty black liquid, like liquid coal sludge. In a more advanced visualization, you can imagine disease coming out in the form of blood and pus, spirit harm in the form snakes or other animals, and all negative karma and obscurations in the form of liquid smoke or sludge.

These flow out of you into a crack in the earth all the way to where the Lord of Death resides. You can visualize him as he appears in the illustration of the wheel of life, to signify impermanence and death. He is looking up, and the ocean of negativities, in whatever form you have visualized them, pour into his wide-open mouth. His mouth closes and is sealed with a golden double vajra. The crack in the earth closes up, making it impossible for the Lord of Death to return. In this way, you stop the danger of untimely death.

The second way is called “purifying from below,” which is like pouring milk into a glass with some dirt in the bottom. As the milk fills the glass, the

dirt is pushed to the top. Similarly, the nectar flows down into the body and pushes up all the negative karmas, in the form of liquid coal sludge, which goes out through the mouth and nose. You can imagine all the negative karmas blown straight out and away, like a hat blown by the wind.

Then, with the third way, called “purifying from the center,” all the negative karmas and obscurations are chased away by the light pouring into the heart, like when you turn on a light and all the darkness in the room disappears immediately. Similarly, all the negative karmas and obscurations in the form of darkness at the heart become completely nonexistent as nectar flows into the heart.

## A SHORT VAJRASATTVA MEDITATION<sup>110</sup>

### *Visualization*

On your right side is your father; on your left side is your mother. Your enemies and those sentient beings who make you agitated are in front of you, and your friends and those you are attached to are seated behind you. All other universal living beings, in human form, are surrounding you, as far as you can imagine.

Visualize your object of refuge, the merit field, in the space in front of you, either elaborately or in the one aspect of Buddha Shakyamuni. As you recite the verse below, think that you and all sentient beings are together taking refuge in the Three Rare Sublime Ones.

### *The Power of Dependence: Taking Refuge*

I forever take refuge in Buddha, Dharma, and Sangha, and in all the  
three vehicles,  
in the dakinis of secret mantra yoga, in the heroes and heroines,  
in the empowering goddesses and the bodhisattvas.  
But most of all, I take refuge in my holy Guru forever. (3x)

### *The Power of Regret*

Think, “Almost every action I do, twenty-four hours a day, is motivated by worldly concern, attachment to the comfort of this life. Nearly every action I have ever created has been nonvirtuous, the cause of suffering. Not only that, but I have also been continuously breaking my pratimoksha, bodhisattva, and tantric vows. Worst of all, I have created the heaviest of negative karmas in relation to my virtuous friends—getting angry at them, generating wrong views, having nondevotional thoughts toward them, harming their holy bodies, and disobeying their advice.

“Having these negative imprints on my mental continuum is unbearable. It’s as if I’ve swallowed a lethal poison. I must practice the antidote right away and purify all these negative karmas immediately, without a second’s delay.”

In this way, generate strong feelings of urgency and regret.

### *Remembering Impermanence and Death*

Think, “Many people my age or younger have died. It’s a miracle that I’m still alive and have this incredible opportunity to purify my negative karma. Death is certain but its time is most uncertain. If I were to die right now, I would definitely be born in the lower realms. Because I could not practice Dharma there, I would remain in the lower realms for countless eons. Therefore, how unbelievably fortunate I am to be able to purify my negative karma right now, without even a second’s delay, by practicing the Vajrasattva meditation-recitation.”

### *The Power of Dependence: Generating Bodhichitta*

Think, “But I am not practicing this Vajrasattva purification for myself alone—the purpose of my life is to release all hell beings, hungry ghosts, animals, humans, demigods, gods, and intermediate state<sup>111</sup> beings from all their suffering and its causes and lead them to unsurpassed enlightenment. In order to do this, I must first reach enlightenment myself. Therefore, I must purify all my negative karma immediately by practicing the Vajrasattva meditation-recitation.”

## *Visualization*

Above the crown of your head, seated upon a lotus and moon seat, are Vajrasattva father and mother. Their bodies are white; each has one face and two arms. He holds a vajra and bell, she a curved knife and skull cup. They are embracing each other. The father is adorned with six mudras, the mother with five. He sits in the vajra posture, she in the lotus.

Vajrasattva is your root Guru, the holy mind of all the buddhas, the dharmakaya, who, out of his unbearable compassion that embraces you and all other sentient beings, appears in this form to purify you and all others.

Thinking in this way, your mind is transformed into guru devotion—the root of all blessings and realizations of the path to enlightenment.

On a moon disk at Vajrasattva's heart stands a HUM encircled by a garland of the hundred-syllable mantra. A powerful stream of white nectar flows from the HUM and mantra garland and you are cleansed of all sickness, spirit harm, negative karma, and obscurations.

## *The Power of the Remedy: Mantra Recitation*

OM VAJRASATTVA SAMAYA MANUPALAYA / VAJRASATTVA  
TVENOPATISHTHA / DRIDHO ME BHAVA / SUTOSHYO ME BHAVA /  
SUPOSHYO ME BHAVA / ANURAKTO ME BHAVA / SARVA SIDDHIM ME  
PRAYACCHA / SARVA KARMA SU CHAME / CHITTAM SHRIYAM KURU  
HUM / HA HA HA HA HO / BHAGAVAN SARVA TATHAGATA / VAJRA MAME  
MUNCHA / VAJRA BHAVA MAHA SAMAYA SATTVA AH HUM PHAT (*Recite  
this 21x, 100x, or as many times as you can.*)

## *Generating Faith in Having Been Purified*

From the crown of your head, Guru Vajrasattva says, “Child of the race, your negativities, obscurations, and broken and damaged pledges have been completely purified.” Generate strong faith that all is completely purified just as Guru Vajrasattva has said.

### *The Power of Restraint: Refraining from Creating Negativities Again*

Think, “Before Guru Vajrasattva, I vow never again to commit those negative actions I can easily abstain from and not to commit for a day, an hour, or at least a few seconds those negative actions I find it difficult to abstain from.”

### *Absorption*

Guru Vajrasattva is extremely pleased with your pledge. Vajrasattva father and mother melt into light and dissolve into you. Your body, speech, and mind become inseparably one with Guru Vajrasattva’s holy body, speech, and mind.

### *Meditation on Emptiness*

In emptiness, there is no I, creator of negative karma; there is no action of creating negative karma; there is no negative karma created.

Place your mind in that emptiness for a little while. In this way, look at all phenomena as empty—they do not exist from their own side. With this awareness of emptiness, dedicate the merits.

### *Dedication*

Think, “Due to all these merits of the three times collected by all the buddhas, bodhisattvas, myself, and all other sentient beings, which appear to be real from their own side, but which are totally empty, may the I, which appears to be real but is totally empty, achieve Guru Vajrasattva’s enlightenment, which appears to be real but is totally empty, and lead all sentient beings, who appear to be real but are totally empty, to that enlightenment, which appears to be real but is totally empty, by myself alone, who appears to be real but is also totally empty, nonexistent from my own side.”

Now finish with your usual dedication prayers.<sup>112</sup>

## 7. THE THIRTY-FIVE CONFESSION BUDDHAS

---

TO CLIMB A FLIGHT of stairs, we naturally put our foot on the first stair, the one right in front of us. Unless we do that, we won't be able to step onto the second or the third stair, and so on, and finally get upstairs. Just wishing to be upstairs to enjoy that comfortable bed won't get us there. Likewise, attaining enlightenment happens step-by-step, but whether we progress quickly or slowly—whether we can achieve enlightenment in one, two, or many lifetimes—depends on how well we observe the vows we have taken. The importance of keeping the vows, and purifying the ones we have broken, is explained very clearly in the Vajrayana teachings.

Besides continually reciting the Vajrasattva mantra to purify the negativities accumulated from having broken our vows, another very powerful way to purify them is by prostrating while reciting the *Confession Prayer* within the prayers and prostrations to the Thirty-Five Confession Buddhas.<sup>113</sup> The prayer is incredibly beneficial, especially for those of us trying to live within the vows we have taken. Just saying it once purifies eons of negative karma.

Why is reciting the Thirty-Five Confession Buddhas' names so beneficial? Lama Atisha explained that when the Thirty-Five Buddhas were bodhisattvas engaging in the bodhisattvas' deeds, they each made a prayer: "If I become enlightened, for any sentient being who holds my name, who prostrates while reciting my name, may such and such of their negative karmas be purified." Each Confession Buddha specified which negativity would be purified. One of the powers of a buddha is that any prayer they made before buddhahood is actualized when they achieve enlightenment. This means that when we recite their names, by the power of that prayer, our recitation has unbelievable power to purify the different negative karmas.

Don't think you have ever purified enough. Even Lama Tsongkhapa, who actualized the graduated path to enlightenment and achieved the fully enlightened state, recited this prayer with prostrations, doing thirty-five sets of prostrations to the Thirty-Five Buddhas many hundreds of thousands of times. He practiced this so much and so intently during his retreats that the Thirty-Five Confession Buddhas actually appeared to him in his cave. (The visualization we use in our tradition is according to Lama Tsongkhapa's vision.) Due to this purifying practice, his Dharma work for sentient beings became as infinite as space. This is the power of purification.

I once asked one of my gurus, Denma Locho Rinpoche,<sup>114</sup> why Lama Tsongkhapa's life story talks about him doing many hundreds of thousands of prostrations to the Thirty-Five Confession Buddhas but doesn't mention Vajrasattva. Rinpoche explained that the Thirty-Five Buddhas practice, if done well even once, can purify even the five immediate negativities. That's why, although the practice of Vajrasattva is also incredibly effective, the Thirty-Five Buddhas practice is emphasized in Lama Tsongkhapa's biographies.

Just like Lama Tsongkhapa, many other yogis have purified by prostrating to the Thirty-Five Buddhas and doing the confession prayer. I generally encourage my students to do this practice every morning, reciting each name, if possible, three times while prostrating. That way, it becomes more than a hundred prostrations. It is also very good to do it again in the evening. Doing it in the morning purifies negative karmas broken during the night, and doing it in the evening stops the negative karmas of the day from increasing. If that is not possible, then do whatever you can. If you can even just recite each name once and then prostrate, that is very good. Of course, if you can do more than a hundred, no question that is excellent.

Whether you recite the Vajrasattva mantra or do prostrations to the Thirty-Five Buddhas, in order to make the purification completely effective, it is extremely important to incorporate it with the four opponent powers, as we have seen with the Vajrasattva practice above.

## THE THIRTY-FIVE BUDDHAS

The Thirty-Five Confession Buddhas are visualized as a merit field, arranged in five rows below Guru Shakyamuni Buddha.

At Shakyamuni Buddha's heart sits Thousand-Arm Chenrezig, and at Chenrezig's heart is the syllable HRIH. Beams of light are emitted from the HRIH, forming five rows in the space below. At the end of each of the thirty-four beams is a throne supported by elephants and adorned with pearls. On each throne is seated one of the Thirty-Five Buddhas.

The thrones are supported by elephants rather than snow lions as usual because the elephant is stronger and more powerful than any other animal, meaning your negativities will be strongly purified. Pearls are specifically mentioned because they are white, symbolizing completely purifying all negativities.

In the first, top, row are six buddhas, blue in color and in the aspect of Akshobhya. Their hands are in the mudra of granting the supreme, with their right hand on their right knee in the earth-touching mudra (like Shakyamuni) and their left in their lap in the meditation mudra, holding a begging bowl. The exception is the third buddha (the fourth in the list below), King Lord of the Nagas, who has a blue-colored body but a white head. He holds his hands in a teaching mudra, with both hands at the heart.

In the second row are seven buddhas, white in color and in the aspect of Vairochana, their hands in the mudra of supreme enlightenment.

In the third row are seven buddhas, yellow in color and in the aspect of Ratnasambhava, their hands in the mudra of granting supreme realizations.

In the fourth row are seven buddhas, red in color and in the aspect of Amitabha, their hands in the lap in the mudra of concentration, holding a begging bowl.

In the fifth row are seven buddhas, green in color and in the aspect of Amoghasiddhi, their left hand in the mudra of concentration and their right in the mudra of giving refuge.

With Shakyamuni, these are the Thirty-Five Confession Buddhas. Each one is in the posture of the particular buddha of that buddha family.

## THE BENEFITS OF RECITING THE NAMES

There are two main texts that explain the benefits of prostrating to each of the Thirty-Five Confession Buddhas. One is by Lama Atisha and the other is by Gyaltsep Jé, Lama Tsongkhapa's disciple. There is also another text by Ngulchu Dharmabhadra<sup>115</sup> that explains it a little bit differently.

The first of the Thirty-Five Confession Buddhas is the founder, Shakyamuni Buddha.

## 1. Shakyamuni Buddha

*[Lama] tön pa chom den dä de zhin sheg pa dra chom pa yang dag par  
dzog päi sang gyä päl gyäl wa sha kya thub pa la chhag tshäl lo*<sup>116</sup>

To the founder, bhagavan, tathagata, arhat, perfectly completed  
buddha, glorious conqueror Shakyamuni Buddha, I prostrate.

With *lama tön pa chom den dä*, it says that the lama is the founder of the present Buddhadharma, the one who has been constantly guiding us from beginningless rebirths. For *chom den dä*, as we have seen with Vajrasattva, *chom* means “having destroyed,” so he has destroyed the delusions. (I say “he” because we are talking about Shakyamuni Buddha, but if we are talking about Tara it’s “she.” Unlike English, Tibetan does not have this distinction.) *Den dä* means “having all the qualifications and transcended the world.”

When you say *lama* at the very beginning, you reinforce that meaning of the ultimate guru. Everything is that quality. The meaning of just that very first word, *lama*, is unimaginable. It is like the limitless sky; everything refers to that. When you get ready to recite *lama tön pa chom den dä*, you can first think a little bit about the guru, what *lama* means, and then recite it. In that way, it becomes unbelievably rich.

When Lama Tsongkhapa first saw the Thirty-Five Buddhas while doing seven hundred thousand prostrations at Wolka Chölung in Tibet, he saw them without heads. This is because he recited the prayer without the words *de zhin sheg pa*, meaning “tathagata,” which explains that quality of the buddhas. But afterward, when he recited *de zhin shek pa*, he saw them with heads.

Some texts say reciting Guru Shakyamuni Buddha's name purifies forty thousand eons of negative karma and some say eighty thousand eons, but in

the Kangyur it says that reciting this name once purifies one hundred million eons of negative karma, and on top of that, hundreds and thousands more.

Reciting the names of the remaining thirty-four buddhas brings different benefits.

## 2. Thoroughly Destroying with Vajra Essence

*De zhin sheg pa dor je nying pö rab tu jom pa la chhag tshäl lo*

To Tathagata Thoroughly Destroying with Vajra Essence, I prostrate.

Thoroughly Destroying with Vajra Essence (Dor je nying pö) purifies ten thousand eons of negative karma. Also, by reciting it, you become enlightened.

## 3. Radiant Jewel

*De zhin sheg pa rin chhen ö thrö la chhag tshäl lo*

To Tathagata Radiant Jewel, I prostrate.

Radiant Jewel (Rin chhen ö thrö) purifies ten thousand eons of negative karma as well. For anybody who hears the name of this buddha, all their wishes succeed, and if a woman hears this name, she will become a wheel-turning king. That's what it says! I don't know. Also, hearing this name is the cause to receive a long life and help from the gods.

## 4. King, Lord of the Nagas

*De zhin sheg pa lu wang gi gyäl po la chhag tshäl lo*

To Tathagata King, Lord of the Nagas, I prostrate.

King, Lord of the Nagas (Lu wang gi gyäl po), also purifies a thousand eons of negative karma, as well as purifying harm from nagas. Because this buddha liberated so many nagas from suffering, benefiting and healing them, they are

indebted to him. So, if you recite the name of the King, Lord of the Nagas, any sicknesses caused by nagas will be cured.

## 5. Army of Heroes

*De zhin sheg pa pa wöi de la chhag tshäl lo*

To Tathagata Army of Heroes, I prostrate.

Army of Heroes (Pa wöi de) purifies the negative karma of gossiping. Ngulchu Dharmabhadra says that it purifies all the negative karmas of speech.<sup>117</sup>

## 6. Delighted Hero

*De zhin sheg pa päl gye la chhag tshäl lo*

To Tathagata Delighted Hero, I prostrate.

Delighted Hero (Päl gye) purifies two thousand eons of negative karma.

## 7. Jewel Fire

*De zhin sheg pa rin chhen me la chag tsäl lo*

To Tathagata Jewel Fire, I prostrate.

Jewel Fire (Rin chhen me) purifies the negative karmas of the mind that have been stained by the pollution of the sangha. When people make offerings to the sangha, because they have delusions, the offerings are polluted, which can affect any sangha member who is not yet an arya being. Reciting this name protects against that.

According to Dharmabhadra, reciting the name once purifies a hundred thousand eons of causing disunity within the sangha or criticizing the arya sangha.<sup>118</sup> *The Preliminary Practice of Prostrations* also says this name purifies

the five immediate negativities, especially that of causing disunity among the sangha.<sup>119</sup>

## 8. Jewel Moonlight

*De zhin sheg pa rin chhen da ö la chhag tshäl lo*

To Tathagata Jewel Moonlight, I prostrate.

Jewel Moonlight (Rin chhen da ö) purifies eight thousand eons of negative karma of the mind. It purifies having criticized the arya sangha. Ngulchu Dharmabhadra says that *all* the negative karmas collected with the mind are purified.<sup>120</sup>

## 9. Meaningful to See

*De zhin sheg pa tong wa dön yö la chhag tshäl lo*

To Tathagata Meaningful to See, I prostrate.

Meaningful to See (Tong wa dön yö) purifies a thousand eons of negative karma and the five immediate negativities—killing your father, mother, or an arhat, and so forth—which usually lead to being immediately reborn in the lowest hell after death without any intervening life. Even if you have committed one of these negative karmas, it is purified by reciting the name of Meaningful to See.

## 10. Jewel Moon

*De zhin sheg pa rin chhen da wa la chhag tshäl lo*

To Tathagata Jewel Moon, I prostrate.

With Jewel Moon (Rin chhen da wa), the five immediate negativities are purified, especially killing your father.

## 11. Stainless One

*De zhin sheg pa dri ma me pa la chhag tshäl lo*

To Tathagata Stainless One, I prostrate.

Stainless One (Dri ma me pa) purifies the five near immediate negativities. The *Preliminary Practice of Prostrations* also mentions it purifies the negative karma collected from stepping over the shadow of a stupa.<sup>121</sup>

## 12. Bestowed with Courage

*De zhin sheg pa pä jin la chhag tshäl lo*

To Tathagata Bestowed with Courage, I prostrate.

From the five immediate negativities, Bestowed with Courage (Pä jin) purifies the karma of having killed an arhat. It also purifies the negative karmas collected through becoming angry.

## 13. Pure One

*De zhin sheg pa tshang pa la chhag tshäl lo*

To Tathagata Pure One, I prostrate.

Pure One (Tshang pa) purifies the negative karmas collected through attachment. According to Ngulchu Dharmabhadra, the negative karma of malevolently causing a buddha to bleed is also purified.<sup>122</sup>

## 14. Bestowed with Purity

*De zhin sheg pa tshang pä jin la chhag tshäl lo*

To Tathagata Bestowed with Purity, I prostrate.

With Bestowed with Purity (Tshang pä jin), ten thousand eons of negative karma are purified, as well as the nonvirtue of causing disunity among the sangha.

## 15. Water God

*De zhin sheg pa chhu lha la chhag tshäl lo*

To Tathagata Water God, I prostrate.

With Water God (Chhu lha), a thousand eons of negative karma are purified, as well as the near immediate negativity of defiling your mother or a female arhat.

## 16. Deity of the Water God

*De zhin sheg pa chhu lhäi lha la chhag tshäl lo*

To Tathagata Deity of the Water God, I prostrate.

According to Ngulchu Dharmabhadra, with Deity of the Water God (Chhu lhäi lha), the negative karma of killing a bodhisattva is purified, as well as five thousand eons of negative karma.<sup>123</sup>

## 17. Glorious Goodness

*De zhin sheg pa päi zang la chhag tshäl lo*

To Tathagata Glorious Goodness, I prostrate.

Glorious Goodness (Päi zang) purifies five thousand eons of negative karma, as well as the negative karma of having killed the vajra master. The term used in the text is *lobpen*, which can mean guru or preceptor.

## 18. Glorious Sandalwood

*De zhin sheg pa tsän dän päl la chhag tshäl lo*

To Tathagata Glorious Sandalwood, I prostrate.

Glorious Sandalwood (Tsän dän päl) purifies seven thousand eons of negative karma, as well as having taken money, food, or offerings given to the sangha. If you have harmed the sangha by taking away what brings them together, those negative karmas are purified.

## 19. Infinite Splendor

*De zhin sheg pa zi ji tha yä la chhag tshäl lo*

To Tathagata Infinite Splendor, I prostrate.

Infinite Splendor (Zi ji tha yä) purifies seven eons of negative karma, as well as the negative karma of having destroyed stupas.

## 20. Glorious Light

*De zhin sheg pa ö päl la chhag tshäl lo*

To Tathagata Glorious Light, I prostrate.

Glorious Light (Ö päl) purifies seven eons of negative karma, as well as the negative karma collected through anger. You must relate this to your own life and see how often you get angry and how easy it is to do so. However, no matter how destructive anger is, by reciting the name of Glorious Light, you can purify all the negative karma you have created through anger.

## 21. Sorrowless Glory

*De zhin sheg pa nya ngän me päi päl la chhag tshäl lo*

To Tathagata Sorrowless Glory, I prostrate.

With Sorrowless Glory (Nya ngän me päi pä), the negative karma collected through attachment is purified. Gyaltsap Jé, Lama Tsongkhapa's older disciple, and Dharmabhadra both mention that.<sup>124</sup>

## 22. Son of Noncraving

*De zhin sheg pa se me kyi bu la chhag tshäl lo*

To Tathagata Son of Non-Craving, I prostrate.

With Son of Noncraving (Se me kyi bu), Ngulchu Dharmabhadra says ten thousand eons of negative karma are purified.<sup>125</sup> Gyaltsap Jé said whatever imprints left on the mind by having created negative karma are purified.<sup>126</sup>

## 23. Glorious Flower

*De zhin sheg pa me tog pä), la chhag tshäl lo*

To Tathagata Glorious Flower, I prostrate.

Glorious Flower (Me tog pä) purifies the negative karma collected with the body, which means through physical actions. Gyaltsap Jé says one hundred thousand eons of negative karma are purified.<sup>127</sup> After Shakyamuni Buddha's verse, this purifies the greatest amount of negative karma.

## 24. Pure Light Rays Clearly Knowing by Play

*De zhin sheg pa tshang päi ö zer nam par röl pä ngön par khyen pa la  
chhag tshäl lo*

To Tathagata Pure Light Rays Clearly Knowing by Play, I prostrate.

Pure Light Rays Clearly Knowing by Play (Tshang päi ö zer nam par röl pä ngön par khyen pa) purifies negative karmas collected with speech. According

to Ngulchu Dharmabhadra, one thousand eons of negative karma are purified.<sup>128</sup>

## 25. Lotus Light Rays Clearly Knowing by Play

*De zhin sheg pa pä mäi ö zer nam par röl pä ngön par kyen pa la chhag tshäl lo*

To Tathagata Lotus Light Rays Clearly Knowing by Play, I prostrate.

Lotus Light Rays Clearly Knowing by Play (Pä mäi ö zer nam par röl pä ngön par kyen pa) purifies seven eons of negative karma.

## 26. Glorious Wealth

*De zhin sheg pa nor päl la chhag tshäl lo*

To Tathagata Glorious Wealth, I prostrate.

Again, with Glorious Wealth (Nor päl), imprints left on the mind by committing negative karma are purified. It is also said that engaging in activities that pollute the sangha is purified.

## 27. Glorious Mindfulness

*De zhin sheg pa drän päi päl la chhag tshäl lo*

To Tathagata Glorious Mindfulness, I prostrate.

Glorious Mindfulness (Drän päi päl) purifies the negative karma of having criticized holy beings.

## 28. Glorious Name Widely Renowned

*De zhin sheg pa tshän päl shin tu yong drag la chhag tshäl lo*

To Tathagata Glorious Name Widely Renowned, I prostrate.

With Glorious Name Widely Renowned (Tshän päl shin tu yong drag), the negative karma collected with the body, through physical actions, is purified. It purifies the negative karma of being unhappy with a buddha descending to this world. Instead of rejoicing, you feel the opposite. Gyaltsap Jé also mentions that the negative karma collected through jealousy is purified.<sup>129</sup>

## 29. King Holding the Victory Banner of Foremost Power

*De zhin sheg pa wang pöi tog gi gyäl tshän gyi gyäl po la chhag tshäl lo*

To Tathagata King Holding the Victory Banner of Foremost Power,  
I prostrate.

King Holding the Victory Banner of Foremost Power (Wang pöi tog gi gyäl tshän gyi gyäl po) purifies having caused other sentient beings to collect negative karma and the negative karma you have collected by slandering others. *The Preliminary Practice of Prostrations* says the negative karma collected through pride and jealousy is purified.<sup>130</sup>

## 30. Glorious One Totally Subduing

*De zhin sheg pa shin tu nam par nön päi päl la chhag tshäl lo*

To Tathagata Glorious One Totally Subduing, I prostrate.

Glorious One Totally Subduing (Shin tu nam par nön päi päl) purifies subtle negative karmas, mainly to do with slander. Gyaltsap Jé says causing others to create negative karma is purified.<sup>131</sup>

## 31. Utterly Victorious in Battle

*De zhin sheg pa yül lä shin tu nam par gyäl wa la chhag tshäl lo*

To Tathagata Utterly Victorious in Battle, I prostrate.

For Utterly Victorious in Battle (Yül lä shin tu nam par gyäl wa), Gyaltsap Jé says reciting this name purifies all delusions and Dharmabhadra says it purifies the negative karma collected with pride.

By reciting this name, the negative karmas of rejoicing in others doing negative karma are purified. For example, rejoicing when there is a war. Let's say a Tibetan person rejoices when he hears that a hundred Chinese soldiers have been killed in a war. That person gets the same heavy karma as if he had killed those hundred human beings.

### 32. Glorious Transcendence through Subduing

*De zhin sheg pa nam par nön pä sheg päi pääl la chhag tshäl lo*

To Tathagata Glorious Transcendence through Subduing, I prostrate.

Glorious Transcendence through Subduing (Nam par nön pä sheg päi pääl) purifies the negative karmas collected by slandering others, as well as causing others to create negative karma.

### 33. Glorious Manifestations Illuminating All

*De zhin sheg pa kün nä nang wa kö päi pääl la chhag tshäl lo*

To Tathagata Glorious Manifestations Illuminating All, I prostrate.

Glorious Manifestations Illuminating All (Kün nä nang wa kö päi pääl) purifies having caused others to engage in negative karma and rejoicing when others create negative karma.

### 34. All-Subduing Jewel Lotus

*De zhin sheg pa rin chhen pä mäi nam par nön pa la chhag tshäl lo*

To Tathagata All-Subduing Jewel Lotus, I prostrate.

With All-Subduing Jewel Lotus (Rin chhen pä mäi nam par nön pa), you purify the very heavy negative karma of having abandoned the holy Dharma, which means losing all respect for and reliance on any of the Buddha's teachings.

For example, say that because you don't understand a teaching you have heard, you reject it, thinking the fault lies with the teaching rather than your lack of understanding. To think like that is to avoid the holy Dharma, which is a heavier negative karma than having destroyed all the temples, statues, stupas, and scriptures in this world. What you *must* think in such a situation is that, although you can't appreciate and understand the teaching now, you determine that you will be able to do so in the future.

You also have to be very careful disposing of Dharma texts. Traditionally, damaged texts or texts that people can no longer keep are kept in a stupa or a special house like a *tsatsa* house;<sup>132</sup> they are not burned. When that isn't possible, you can respectfully offer fire to the Dharma texts you can no longer keep. As the letters of the text are burned, you can imagine them becoming empty, or imagine them absorbing into your heart in the form of the syllable AH. You should never throw any Dharma texts in the garbage because that's the equivalent of seeing them as garbage, which is avoiding the holy Dharma.

### 35. King, Lord of the Mountains Firmly Seated on Jewel and Lotus

*De zhin sheg pa dra chom pa yang dag par dzog päi sang gyä rin po  
chhe dang pä ma la rab tu zhug pa ri wang gi gyäl po la chhag tshäl  
lo*

To Tathagata, arhat, perfectly completed buddha, King, Lord of the Mountains Firmly Seated on Jewel and Lotus, I prostrate.

King, Lord of the Mountains Firmly Seated on Jewel and Lotus (Dra chom pa yang dag par dzog päi sang gyä rin po chhe dang pä ma la rab tu zhug pa ri wang gi gyäl po) purifies the negative karma of having criticized the guru. It also purifies degenerated samaya vows. It is a good idea to recite this buddha's

name three times. As criticizing the guru is the heaviest negative karma and something that happens very easily, if you can recite a mala of this name, that is excellent.

## HOW TO PRACTICE WITH THE THIRTY-FIVE CONFESSION BUDDHAS<sup>133</sup>

This is an abbreviated practice of prostrating to the Thirty-Five Confession Buddhas.

In the space in front of you, visualize your guru in the aspect of Shakyamuni Buddha, with Thousand-Arm Chenrezig at his heart.

At the heart of Thousand-Arm Chenrezig is the syllable HRIH . Beams of light are emitted from the HRIH, forming five rows in the space below. At the end of each of the thirty-four beams is a throne supported by elephants and adorned with pearls and on each throne is seated one of the Thirty-Five Buddhas [as described above on page 137]. If you like, you can also visualize a row of the seven Medicine Buddhas below the Thirty-Five Buddhas and prostrate to them as well.

Think that each one of these buddhas is the embodiment of all the Buddha, Dharma, Sangha, and all statues, stupas, and scriptures of the three times and ten directions, whose essence is the Guru. Have complete faith that each one has the power to purify all your negative karma and imprints collected from beginningless time.

Now imagine that you emanate numberless bodies and that, as you prostrate, all these bodies—in all directions, covering every atom of the earth—prostrate along with you.

Then, before you start prostrating and saying the names of the Thirty-Five Buddhas, increase the merit by taking refuge:

To Bhagavan, Tathagata, Arhat, Perfectly Complete Buddha,  
Precious Victory Banner, I prostrate. (7x)

OM NAMO BHAGAVATE RATNA KETU RAJAYA / TATHAGATAYA / ARHATE  
SAMYAK SAMBUDDHAYA / TADYATHA / OM RATNE RATNE MAHA RATNE  
RATNA BIJA YE SVAHA (7x)

OM NAMO MANJUSHRIYE / NAMA SUSHRIYE / NAMA UTTAMA SHRIYE  
SVAHA (3x)

Homage to the *Confession of a Bodhisattva's Downfalls*.

I, [say your name], throughout all times, take refuge in the Guru.  
I take refuge in the Buddha.  
I take refuge in the Dharma.  
I take refuge in the Sangha. (3x)

Then, while prostrating, recite the name of each buddha as many times as you can. At the end of reciting the names of the Thirty-Five Confession Buddhas, you can also recite the name of the Medicine Buddhas once while prostrating.

To the founder, bhagavan, tathagata, arhat, perfectly completed  
buddha, glorious conqueror Shakyamuni Buddha, I prostrate.

To Tathagata Thoroughly Destroying with Vajra Essence, I prostrate.

To Tathagata Radiant Jewel, I prostrate.

To Tathagata King, Lord of the Nagas, I prostrate.

To Tathagata Army of Heroes, I prostrate.

To Tathagata Delighted Hero, I prostrate.

To Tathagata Jewel Fire, I prostrate.

To Tathagata Jewel Moonlight, I prostrate.

To Tathagata Meaningful to See, I prostrate.

To Tathagata Jewel Moon, I prostrate.

To Tathagata Stainless One, I prostrate.

To Tathagata Bestowed with Courage, I prostrate.

To Tathagata Pure One, I prostrate.  
To Tathagata Bestowed with Purity, I prostrate.  
To Tathagata Water God, I prostrate.  
To Tathagata Deity of the Water God, I prostrate.  
To Tathagata Glorious Goodness, I prostrate.  
To Tathagata Glorious Sandalwood, I prostrate.  
To Tathagata Infinite Splendor, I prostrate.  
To Tathagata Glorious Light, I prostrate.  
To Tathagata Sorrowless Glory, I prostrate.  
To Tathagata Son of Noncraving, I prostrate.  
To Tathagata Glorious Flower, I prostrate.  
To Tathagata Pure Light Rays Clearly Knowing by Play, I prostrate.  
To Tathagata Lotus Light Rays Clearly Knowing by Play, I prostrate.  
To Tathagata Glorious Wealth, I prostrate.  
To Tathagata Glorious Mindfulness, I prostrate.  
To Tathagata Glorious Name Widely Renowned, I prostrate.  
To Tathagata King Holding the Victory Banner of Foremost Power,  
I prostrate.  
To Tathagata Glorious One Totally Subduing, I prostrate.  
To Tathagata Utterly Victorious in Battle, I prostrate.  
To Tathagata Glorious Transcendence Through Subduing, I  
prostrate.  
To Tathagata Glorious Manifestations Illuminating All, I prostrate.  
To Tathagata All-Subduing Jewel Lotus, I prostrate.  
To Tathagata, arhat, perfectly completed buddha, King, Lord of the  
Mountains Firmly Seated on Jewel and Lotus, I prostrate.

Then, either recite the confession prayer and general confession, and close the session with the mantra of pure morality and the prayer to keep pure morality, as in the practice in FPMT's *Confession of Downfalls: Prostrations to the Thirty-Five Buddhas*, or just finish with your normal dedications.

## 8. THE FIVE GREAT MANTRAS

---

### THE MANTRAS

There are five great mantras for liberating sentient beings from the lower realms:

1. The Kunrik Mantra
2. The Mitrukpa Mantra
3. The Namgyalma Mantras
4. The Stainless Pinnacle Deity Mantra
5. The Wish-Granting Wheel Mantra

Besides these mantras, there are other powerful mantras, such as the powerful mantras for benefiting beings at death and the four dharmakaya relic mantras, which are incredibly beneficial in protecting us in our life and helping us when we or somebody else is dying.<sup>134</sup>

### THE BENEFITS OF THE MANTRAS

These five great mantras are commonly used when an extremely powerful blessing is needed, such as when we bless water during an animal liberation practice or with a *jangwa* purifying puja when someone has died.

Generally, our next rebirth is determined by the final moment of the consciousness of this life, the mind we have right at the moment of death. The teaching on the twelve links of dependent origination explains that as we are dying, as our body ceases to function, the two links of craving and grasping cause us to seek another body. If the mind is dominated by negative thoughts such as anger or attachment, that ensures a rebirth in the lower realms. Due to

anger, for instance, our grasping will lead us to a hellish intermediate state and then to rebirth in a hell realm. According to tantra, however, it is possible to change that while the person is in the intermediate state through the power of the tantric practice of *jangwa*, which includes reciting these mantras to the dying person, done by a powerful meditator with good concentration.

Of course, this type of practice is far too advanced for us, but we can make our life very meaningful with these mantras. Even our leisure time, such as going to the beach, can become meaningful, a cause for enlightenment, rather than just for our own pleasure and thus a cause for more samsara. By reciting these mantras over a container of sea water (or some water from our home already blessed) and then pouring it in the sea, we bless all the beings in the sea.

It's wonderful to help animals, but how can we *best* help them? On a very practical level, we can always be careful not to harm them, avoiding stepping on ants and so forth, but it would be so much better to bring them real peace and to make their lives meaningful, so sooner or later they can be reborn as a human being, meet the Dharma, and go on to attain liberation and enlightenment. One way we can do this is to say mantras to them whenever we encounter them. Although the animal has no logical understanding, there is power in the mantra that can help purify their delusions. Chenrezig's mantra, OM MANI PADME HUM, is especially good for this.

There is also the practice of animal liberation,<sup>135</sup> where we actively buy live animals from a place where they are going to be killed and sold for food, then release them in as safe a place as possible, somewhere where they can live without danger. Liberating animals is also a huge benefit to us humans. Prolonging the lives of the animals creates the cause for us to have a long life.

Much more beneficial than just saving their lives is to do it within the context of a Dharma event, thus giving them a Dharma imprint at the same time. When we are about to liberate an animal (or a million animals), we can say mantras and carry the animal while we circumambulate a stupa or other holy objects. The positive merit that the animal receives from such a practice is incalculable. On one level, we are saving that animal's life, and on another level, we are giving it the causes for full enlightenment. What more can anybody do for an animal?

Liberating animals can be a simple act or part of a ceremony involving many people and thousands of animals. In Singapore, Hong Kong, and Taiwan, they release animals by the tens of thousands, making an elaborate and wonderful ceremony of it. They set up an altar with many stupas filled with mantras, such as the four dharmakaya relic mantras, and many texts, such as teachings by Lama Tsongkhapa, prajnaparamita sutras, and so on. Then, they sprinkle the animals with water blessed by reciting the five great mantras as well as the names of the Thirty-Five Confession Buddhas and the Medicine Buddhas. While saying mantras over the animals, they circumambulate with them around an altar full of holy objects, each circumambulation creating the karma for the animals to achieve enlightenment. After that, they mindfully release them some place where they will be safe.

Placing the five great mantras on the body of a dying or dead being purifies their negative karma, meaning they are saved from rebirth in the lower realms. Kirti Tsenshab Rinpoche explains that the people of Amdo, in the lower part of Tibet, use a method where they print or write these mantras on paper and press them onto the person who is dying or dead to purify that person's negative karma.

If you drive, killing insects is unavoidable, and so having these mantras on your car is important. A long time ago, my attendant, Venerable Roger, decided we needed a car while we were in California, so he bought a red van. He was very excited. When I saw it, I thought, "This car belongs to all sentient beings," but the thought only lasted a couple of days.

Trying to think of how to protect the insects that were killed when they hit the windscreen, I decided to put some mantras on the car. Gradually, we added more and more—we made stickers of the mantras of the Thirty-Five Buddhas, Lama Tsongkhapa, Maitreya Buddha, White Tara, all the powerful mantras—and soon the car was covered. The idea is that the mantras that are on the car, especially these five very powerful mantras, have unbelievable power to purify the karma of any being that sees or touches them.

I often tell people in the West that having mantras such as Namgyalma in the car is vital, because not only the sentient beings inside but also all beings who touch the car have their negative karma purified and they obtain a higher rebirth. When you drive, so many insects and ants are killed, especially at nighttime when so many insects fly into the windscreen or are crushed under

the wheel, but with the powerful mantras inside, the negative karma of all those small insects is purified. Of course, that doesn't mean you should drive over rabbits or dogs or children! As a policeman drags you to prison, you can't really tell them you did it because you have a mantra in the car! I suspect that would be inadmissible in a court case.

### *The Kunrik Mantra*

Kunrik's mantra is this:

OM NAMO BHAGAVATE / SARVA DURGATE PARI SHODHANI RAJAYA /  
TATHAGATAYA / ARHATE SAMYAKSAM BUDDHAYA / TADYATHA / OM  
SHODHANI / SHODHANI / SARVA PAPAM BISHODHANI / SHUDHE  
BISHUDHE / SARVA KARMA AVARANA BISHODHANI SVAHA

ཨོཾ་ནཾ་མྱེ་ལྷ་ག་མ་ཏེ། སའ་རུག་ཏེ་པ་རི་ཤོ་རྒྱ་ནི་རྒྱ་ལྷ་ཡ། ཏ་སྤྱ་ག་རྒྱ་ཡ།  
ཨའ་ཏེ་སུལྷི་བུལྷི་ཡ། ཏཏ་སྤྱ། ཨོཾ་ཤོ་རྒྱ་ནི། ཤོ་རྒྱ་ནི། སའ་སྤྱ་པི་བི་ཤོ་རྒྱ་ནི།  
ཤུལྷི་བི་ཤུལྷི། སའ་ཀམ་ལྷ་མ་ར་ཏ་བི་ཤུལྷི་སྤྱ་ལྷ།

Kunrik is called the king of the deities purifying from the lower realms. He is white in color, with three faces; he holds a *dharmachakra* (Dharma wheel).

In Amdo, a customary preparation for death is receiving a Kunrik initiation, which completely purifies all the negative karma created during that life. This leaves the person very relaxed and without any worries, so they are prepared when death happens.

Although *jungwa*, the practice that is done when somebody has died, now incorporates practices such as Medicine Buddha or Vajrayogini,<sup>136</sup> it was originally done with Kunrik. If you do a Kunrik puja for somebody who has already been reborn in the lower realms, they are liberated from there.

### *The Mitrukpa Mantra*

Mitrukpa's mantra is this:

NAMO RATNA TRAYAYA OM KAMKANI KAMKANI ROCHANI ROCHANI  
TROTANI TROTANI TRASANI TRASANI PRATIHANA PRATIHANA SARVA  
KARMA PARAM PARA NI ME SARVA SATTVA NANCHI SVAHA

ན་མོ་རྩུ་ཏུ་ཡུ་ཡུ། རྩི་ཀོ་ཀ་ནི་ཀོ་ཀ་ནི། རོ་ཅ་ནི་རོ་ཅ་ནི། རྩོ་ཏ་ནི་རྩོ་ཏ་ནི།  
ཏུ་ས་ནི་ཏུ་ས་ནི། སྤ་ཏི་ཏ་ན་སྤ་ཏི་ཏ་ན། སམ་ཀམ་པ་རི་པ་རྩུ་ཏི་མེ་སམ་  
སམ་རྩུ་རྩུ་སྤུ་སྤུ།

Mitrukpa is Tibetan for Akshobhya, one of the five buddha families or Dhyani Buddhas. It is said that anybody who simply hears the Mitrukpa mantra can be saved from the lower realms. The mantra can even purify somebody who has created very heavy karma through doing the five immediate negativities or harming or criticizing the sangha. If you abandon the holy Dharma, this very heavy negative karma can be purified by just seeing the Mitrukpa mantra, so another powerful way of helping a dying person is to place this mantra next to their bed where they can see it. If simply seeing this mantra can do that, there is no need to mention the unbelievable benefits that come from reciting the Mitrukpa mantra.

When you recite the Mitrukpa mantra one hundred thousand times and blow on water, sand, or mustard seeds, and then sprinkle that blessed substance on the body of a person or animal that has died, if that being has been born in one of the lower realms, they will immediately be liberated from there. Even though the consciousness has been separated from the body and is somewhere else completely, because of its past connection with that body, the consciousness is still affected. It is said that that being will attain a higher rebirth within seven days.

His Holiness the Dalai Lama explained that in the past, when he ate meat, he kept all the bones, then recited the Mitrukpa mantra and blew on the bones. This kind of practice is unbelievably good to do. If you eat meat, you *must* do something for the animal who has died. Otherwise, it is very sad; that animal cherished its life as much as you cherish yours. If you don't know the Mitrukpa mantra or any of the other powerful mantras, you must at least recite one mala or half a mala of OM MANI PADME HUM or the Medicine Buddha mantra.<sup>137</sup> If that's not possible, you should at least recite it twenty-one or

seven times. Reciting it with strong compassion, you blow on the meat before you eat it and make a strong dedication for that animal to immediately be liberated from the lower realms and to receive a perfect human body or rebirth in a pure land.

It is said in the texts that to recite the Mitrukpa mantra even once purifies the negative karma that continues from life to life. Therefore it is very good to have the Mitrukpa mantra somewhere in the house, especially above the door, where people can see it. If you recite the Mitrukpa mantra every day, there is no question that at the time of your death you will be saved from the lower realms.

### *The Namgyalma Mantras*

Namgyalma's long mantra is this:

OM NAMO BHAGAVATE SARVA TRAILOKYA PRATIVISHISHTAYA /  
BUDDHAYA TE NAMA / TADYATHA / OM BHRUM BHRUM BHRUM  
SHODHAYA SHODHAYA / VISHODHAYA VISHODHAYA / ASAMA  
SAMANTA AVABHASA SPHARANA GATI GAGANA SVABHAVA VISHUDDHE  
/ ABHISHINCHANTU MAM / SARVA TATHAGATA SUGATA VARA VACHANA  
AMRITA ABHISHEKARA / MAHAMUDRA MANTRA PADAI / AHARA AHARA  
/ MAMA AYUS SAMDHARANI / SHODHAYA SHODHAYA / VISHODHAYA  
VISHODHAYA / GAGANA SVABHAVA VISHUDDHE / USHNISHA VIJAYA  
PARISHUDDHE / SAHASRA RASMI SANCHO DITE / SARVA TATHAGATA  
AVALOKINI / SHAT PARAMITA PARIPURANI /SARVA TATHAGATA MATE /  
DASHA BHUMI PRATISHTHITE / SARVA TATHAGATA HRIDAYA /  
ADHISHTHANA ADHISHTHITE / MUDRE MUDRE MAHA MUDRE / VAJRA  
KAYA SAMHATANA PARISHUDDHE / SARVA KARMA AVARANA  
VISHUDDHE / PRATINI VARTAYA MAMA AYUR / VISHUDDHE SARVA  
TATHAGATA / SAMAYA ADHISHTHANA ADHISHTHITE / OM MUNI MUNI  
MAHA MUNI / VIMUNI VIMUNI MAHA VIMUNI / MATI MATI MAHA MATI  
/ MAMATI SUMATI TATHATA / BHUTA KOTI PARISHUDDHE / VISPHUTA  
BUDDHE SHUDDHE / HE HE JAYA JAYA / VIJAYA VIJAYA / SMRARA  
SMRARA / SPHARA SPHARA / SPHARAYA SPHARAYA / SARVA BUDDHA  
ADHISHTHANA ADHISHTHITE / SHUDDHE SHUDDHE / BUDDHE

BUDDHE / VAJRE VAJRE MAHA VAJRE / SUVAJRE VAJRA GARBHE JAYA  
GARBHE / VIJAYA GARBHE / VAJRA JVALA GARBHE / VAJROD BHAVE /  
VAJRA SAMBHAVE / VAJRE VAJRINI / VAJRAMA BHAVATU MAMA  
SHARIRAM / SARVA SATTVA NANCHA KAYA PARISHUDDHIR BHAVATU /  
ME SADA SARVA GATI PARISHUDDHISHCHA / SARVA TATHAGATASHCHA  
/ MAM SAMASHVAS YANTU / BUDDHYA BUDDHYA / SIDDHYA SIDDHYA /  
BODHAYA BODHAYA / VIBODHAYA VIBODHAYA / MOCHAYA MOCHAYA /  
VIMOCHAYA VIMOCHAYA / SHODHAYA SHODHAYA / VISHODHAYA  
VISHODHAYA / SAMANTANA MOCHAYA MOCHAYA / SAMANTA RASMI  
PARISHUDDHE / SARVA TATHAGATA HRIDAYA / ADHISHTHANA  
ADHISHTHITE / MUDRE MUDRE MAHA MUDRE / MAHAMUDRA  
MANTRA PADAI SVAHA

The short mantra is this:

OM BHRUM SVAHA / OM AMRITA AYUR DA DE SVAHA

ཨོཾ་བྷུཾ་སྤྱཾ་ཨོཾ་ཨ་མི་ཏཱ་ཨ་ཡུར་དེ་སྤྱཾ་སྤྱཾ་

At the conclusion, you recite:

OM AMITE / AMITODA BHAVE / AMITE VIKRANTE / AMITA GATRE /  
AMITO GAMINI / AMITA AYURDADE / GAGANA KIRTI KARE SARVA  
KLESHA KSHAYAM KARI YE SVAHA

ཨོཾ་ཨ་མི་ཏཱ་ཨ་མི་ཏཱ་ད་ལྷ་བཤེན་ཨ་མི་ཏཱ་བི་ཀྱར་ཏཱ་ཨ་མི་ཏཱ་གཏི་ཨ་མི་ཏཱ་ག་  
མི་རྣེ། ཨ་མི་ཏཱ་ཡུར་དེ། ག་ག་ཀ་ཀི་ཀ་རི་སྤྱཾ་སྤྱཾ་ཡི་ཀ་རི་ཡི་སྤྱཾ་སྤྱཾ་

Namgyalma is a deity for long life and purification. Both the long Namgyalma mantra and the short one have skies of benefits. If you recite the mantra daily, you will have a pure life at all times, you will always meet buddhas and bodhisattvas in each life, and you will achieve enlightenment.

Namgyalma's mantra is said to be so powerful that anybody who hears it will never again be reborn in the lower realms. There is a story from the time Guru Shakyamuni Buddha was on the earth concerning a god called Paripu Denpa. As he was dying, Denpa saw that he was about to be reborn as an animal—a dog or monkey or something. Very worried, he asked King Indra for advice and Indra suggested that he see the Buddha, which he did. The Buddha manifested as the deity Namgyalma and gave him the mantra. Denpa recited it six times daily, and in seven days completely changed his karma so that he did not have to be reborn as an animal.

Even if you are in danger of dying because the karma that determines your lifespan is running out, if you wash your body, wear clean clothes, and, abiding in the eight Mahayana precepts, recite the Namgyalma mantra one thousand times, you can increase your lifespan, purify your obscurations, and free yourself from disease.

By reciting this mantra twenty-one times and blowing on mustard seeds, when you throw them onto the bones of a being, even one who has created

many heavy negative karmas, they will immediately be liberated from the lower realms and reborn in a higher realm.

When I give refuge and lay vows, I often give the students a card with the Namgyalma mantra on it as well a blessing string and a picture of the bodhisattva Kshitigarbha.<sup>138</sup> These things are incredible because just having them constantly purifies negative karma.

Putting the Namgyalma mantra up somewhere in your home brings it protection and makes it a holy place. Then, whatever sentient beings are inside—dogs, cats, mosquitoes—always have their negative karma purified and they obtain a higher rebirth. If even the shadow of the house touches any being, like an insect or a person, their negative karma is purified, and they obtain a higher rebirth. If the Namgyalma mantra is on top of a mountain, the whole mountain becomes holy and the negative karma of any being who climbs or touches the mountain is purified and they obtain a higher rebirth. And it is vital to have it in your car.

When Lama Yeshe<sup>139</sup> and I were visiting my root guru, His Holiness Trijang Rinpoche, in Mundgod in India,<sup>140</sup> Rinpoche chatted with us while maintaining his meditation practice at the same time. Afterward, he explained he was doing the Namgyalma mantra for all the people who had sent him offerings. The purpose was twofold. Because the people who sent the offerings had delusions, the offerings were polluted and the mantra purified that pollution, but it also purified the negative karma of the people and helped them have a long life. That is how powerful the Namgyalma mantra is.

### *The Stainless Pinnacle Deity Mantra*

The Stainless Pinnacle Deity mantra is this:

OM NAMAS TRAIYA DHVIKANAM / SARVA TATHAGATA HRIDAYA  
GARBHE JVALA JVALA / DHARMA DHATU GARBHE / SAMBHARA MAMA  
AYUH SAMSHODHAYA / MAMA SARVA PAPAM / SARVA TATHAGATA  
SAMANTOSHNISHA VIMALE VISHUDDHE HUM HUM HUM HUM / AM  
VAM SAM JA SVAHA

ཨོ་ན་མ་རྒྱལ་རྒྱ་ལྷ་ལྷོ་ལྷོ། སའ་ཏ་སྤྲ་ག་ཏ་འི་ད་ཡ་གཞི་རྩ་ལ་རྩ་ལ། རྣམ་རྣམ་  
 ཏུ་གཞི། སྤྲ་ར་མ་མ་ལྷ་ཡུཾ་སྤོ་རྣ་ཡ། མ་མ་སའ་སྤྲ་པོ། སའ་ཏ་སྤྲ་ག་ཏ་  
 ས་མ་རྣམ་པུ་པུ་པུ་པུ་པུ། ཧཱུྃ་ཧཱུྃ་ཧཱུྃ་ཧཱུྃ། ཨོ་པོ་ཨོ་པོ་ཨོ་པོ་ཨོ་པོ།

The Stainless Pinnacle Deity mantra is one of the four dharmakaya relic mantras. Hearing or seeing the Stainless Pinnacle Deity mantra liberates from all negative karmas and defilements and the fears of the lower realms. Like fire that turns hay to fine ash, which is then swept away by the wind, similarly, all negative karmas are consumed and swept away completely. The mantra is also compared to a flash flood that sweeps away all the garbage lying on the ground, or to a goldsmith’s fire that softens the hard metal and makes it pure and workable. This relates to how reciting or seeing this mantra purifies you and makes your body malleable, a suitable vessel for helping others. When the sun rises, its beams cover the whole world, beautifying it. In the same way, this mantra beautifies anyone who keeps it on them.

Merely by remembering or reciting this mantra, your obstacles are pacified and you have long life. If you put this mantra inside a stupa, no matter what size, it helps prolong the life of somebody whose life is nearly finished. A text describing the benefits of the mantra says that when death comes, just as a snake changes its skin, your consciousness leaves your body and immediately goes to Amitabha’s pure land. Then, you will never be reborn in the lower realms and never experience the feeling of death, which I think means suffering. Once you get to a pure land, you will never again hear the word “hell,” let alone experience any suffering.

That is why I usually encourage people to build stupas that have mantras such as the Stainless Pinnacle Deity mantra inside. There are incalculable benefits for those involved with planning it, those who fundraise for it, those who actually build it, and so forth. It is a very skillful way to liberate sentient beings. Then for the hundreds or thousands of years that the stupa stands, whenever any being sees it, they collect merits greater than making offerings of divine clothes—where one ornament is of greater value than all the wealth of this world—and divine food to as many arhats liberated from samsara as there are grains of sand in the River Ganges. For animals that go near the stupa, for insects and birds that fly around it and land on it, the merit they collect is

unbelievable and the negative karma they purify is incalculable. And that is the same for people who see it, remember it, talk about it, and so forth. The stupa is a protection, a blessing for the area, for the country, for humans and even nonhumans: spirits and nagas, and so forth.

### *The Wish-Granting Wheel Mantra*

The Wish-Granting Wheel mantra is this:

OM PADMO USHNISHA VIMALE HUM PHAT

ཨོཾ་པདྨོ་ཡུ་སྐལ་པུ་བཤི་མ་ལེ་རྩུ་པཎ།

This mantra also has unbelievable benefits. If you recite it seven times every day, you accumulate merit equivalent to that of making offerings to buddhas equal in number to the grains of sand in the River Ganges. In your next life, you will be reborn in a pure realm and will be able to achieve great concentration.

It not only purifies and heals you, but, if you recite it and then blow on the clothes you wear, it purifies and heals any other sentient being who touches them. If the clothes are made of an animal product, such as leather, silk, or fur, it purifies the negative karma of the animal that died in making them and helps them be reborn in an upper realm.

Recalling this mantra just once has the power to purify even the five immediate negativities. It prevents rebirth in inexhaustible hot hell, the heaviest of all the hells. For many eons you will not have to be reborn in this state of unbearable suffering. It enables you to remember past lives and see future lives. It helps you achieve the complete qualities of a buddha.

If you recite this mantra, blow upon sand, and sprinkle that sand onto a dead body, even if the dead person had broken vows and was reborn in a lower realm, you can change their life and they will be reborn in a higher realm.

If you recite it and blow on burning incense or on perfume, it purifies all sentient beings who smell it, even curing them of contagious diseases. It is said in the Kangyur that anybody who passes underneath the Wish-Granting Wheel mantra has a thousand eons' negative karma purified. That is why I

encourage students to put this mantra and the other powerful mantras above a door in their house. It is also good to have it in the car so that insects that touch the car are purified. If the car gets rained on, the rainwater becomes like holy water after touching the Wish-Granting Wheel mantra.

## CONCLUSION: THE BENEFITS OF RECITING MANTRAS ARE UNCOUNTABLE

---

**N**O MATTER WHICH MANTRA we recite, OM MANI PADME HUM, the Medicine Buddha's mantra, the names of the Thirty-Five Buddhas, or whatever, our mind is transformed and protected by the power of that mantra. Because each mantra contains the enlightened being's name, each links us directly to the dharmakaya, the omniscient mind of all the buddhas. Knowing how powerful mantra recitation is, our devotion to the Buddha, Dharma, and Sangha, and to our own guru, becomes stronger and stronger, and that transforms our mind, protecting us from suffering.

When our mind is about to slip into negativity, reciting a mantra protects us, keeping it virtuous. Reciting a mantra can also destroy the negative karmic imprints that are on our mindstream that will otherwise manifest as suffering when the conditions arise. Every mantra does this, not just the great purification mantras like Vajrasattva. Because of that purification, we are spared all sorts of suffering, such as sickness, relationship problems, and so forth, as well as being saved from an unfortunate rebirth. A mantra is like a flame that can burn up all our negative karma.

How effective our mantra recitation is depends on our motivation. Because of the power of the mantra itself, we can gain some benefit even if we do it with a selfish motivation. For instance, reciting a White Tara mantra to be saved from sickness or untimely death without any altruistic intention will definitely help, but it is not Dharma. For a mantra recitation to be Dharma, we must have the motivation of attaining a fortunate rebirth, achieving liberation from samsara, or—the very best motivation—attaining enlightenment in order to benefit all sentient beings. Reciting a mantra such as OM MANI PADME HUM even once with a bodhichitta motivation has the power

to totally transform our mind. It is like reciting one hundred thousand mantras with a lesser motivation.

The reason we are alive, the reason we have this precious human body, is to benefit other sentient beings. Therefore, it is vital that we bring this motivation into everything we do, and that includes practicing a tantric deity and reciting a mantra. Every action—eating, walking, sleeping, working—should be purely to benefit others, so of course our Dharma practice should be to benefit others. This should be our attitude for life. When we do everything with this motivation, everything becomes the cause of enlightenment.

When we understand the benefits of reciting mantras and know how powerful they are, reciting a mantra comes as easily as breathing. It is a joy to do. Then, with every mantra we recite, our mind is profoundly transformed. The drops of water that comprise all the oceans can be counted, the atoms of the earth can be counted, each snowflake in a countryside covered in snow can be counted, but we can never finish counting the benefits of mantras; they are infinite.

## APPENDIX 1: PREPARING FOR PRACTICE<sup>141</sup>

---

### CREATING A SACRED SPACE

It is very helpful for your practice to have a special area of your home dedicated for your daily practice, whether it is a separate meditation room or a part of another room kept for that purpose. You can make your meditation space simple or ornate, but I strongly recommend making it as beautiful as you can, with an altar with offering bowls and an image of the Buddha. Of course, it is even better to have ten images and better still to have ten thousand!

If you have an altar in your home and you offer incense and lights to the statues on that altar with the mind of bodhichitta, the effect is so powerful. You can also do this with a “mental altar” just by visualizing the Buddha, but a physical altar can become the focus of your meditations. Once your altar is set up, every time you see the altar you see the Buddha. This is not some projection from your own side. The Buddha *is* there. To think this is just in your imagination disturbs your practice. Whether you have a statue or not, there is no place where the omniscient mind doesn't reside, and so when you make offerings to the altar, you are not making offerings to a small bronze statue but to the actual Buddha.

Westerners seem to lead incredibly busy lives. Students are always telling me that they have no time to meditate. But they certainly have time to buy food and make lots and lots of cups of tea. In all that running here and there, you can easily sacrifice just a few minutes filling a few water bowls instead of (or as well as) filling the kettle. It's not difficult, it doesn't take much time, and it creates incredible merit.

The main items to include in your meditation room or space should be an altar, your meditation seat, and perhaps a text table and a bookshelf to hold your Dharma books. The altar is where you place the holy objects, pictures, and texts that inspire you. It should be used only as an altar and not double as

a coffee table or desk, and it should be kept in a clean, respectful place. The objects should be placed higher than the level of your head as you sit facing your altar.

Before setting up your altar for the first time, clean the space well and burn incense to purify the place. After initially setting up your altar, always keep the area clean. Sweep and dust every day before making offerings.

The Tibetan Buddhist altar contains a statue or photo of Buddha Shakyamuni and other deities you feel a connection with. These symbolize the enlightened holy body. Photographs of your spiritual teachers may be included here as well. Traditionally, statues of the Buddha and other deities are placed at the center of the altar, with pictures of teachers placed to either side of the deities. The statues need to be filled with certain mantras and incense and blessed.<sup>142</sup>

If you like, you may wrap each statue in a *khatak*—the silk scarf Tibetan Buddhists traditionally use for greeting and offering. You can do that by wrapping the scarf beautifully around the statue's base and part of the statue itself.

If you have sacred paintings of deities (*thangkas*), these can be hung on the wall above the altar or on either side of it. Often, a *khatak* is draped over the top of the *thangka*, or alternatively, wrapped around the decorative ends of the *thangka* at the bottom.

To the left of the Buddha as you face the altar, place a Dharma text. This symbolizes the enlightened holy speech. The text does not need to be written in Tibetan or Sanskrit; it can be in any language. If you use a cloth to wrap the texts it should be new and clean, or at least it should not have been used for anything in the past except wrapping texts.

To the right of the Buddha as you face the altar, place a stupa. The stupa symbolizes the enlightened mind of the Buddha. It doesn't have to be expensive—a simple plaster stupa or even a photograph of one is acceptable. If you have a real stupa, you might also like to wrap it in a *khatak*.

So, the order should be, from left to right (as you are facing the altar): text, Buddha, and stupa, with the offering bowls in front.

## YOUR DAILY ROUTINE

Before you start your main meditation practice, such as a daily deity practice, there are certain preliminary practices that should be done:

- cleaning the room
- setting up the altar
- doing three prostrations
- sitting in a proper meditation posture
- doing some form of calming meditation such as watching the breath
- reciting the preliminary prayers, such as refuge, bodhichitta, the seven-limb prayer, and so forth<sup>143</sup>

The purpose of doing actions such as cleaning the room, making offerings, and prostrating to the enlightened beings is to purify your negativities. The power of these actions comes not only from the action itself but from the power born out of the limitless wisdom and compassion of the Buddha. As you make offerings or prostrate, if you are aware of the great qualities of the Buddha, this increases your devotion to him and therefore the effectiveness of the action. Making offerings and prostrating are not ritualistic customs without meaning or benefit. If you do them with full awareness, they can bring about the most profound purification. Even if you don't have so much as a stick of incense, just visualizing a buddha image and mentally offering it creates unbelievable merit.

### *Cleaning the Room and Setting Up the Altar*

Even if the altar and meditation room are not particularly dirty, you should still clean them. You should think that this is Guru Shakyamuni Buddha's room, not yours. It's not like you are cleaning the room to impress a friend who is coming over; this is out of great respect for the Buddha. This is his mandala, his palace, and cleaning it is offering service to him, rather than becoming a service to your negative mind. You should therefore check your motivation carefully as you are cleaning the room.

After that, make offerings to the Buddha, Dharma, and Sangha on the altar. They should be clean, new, and honestly obtained. Offer only fresh food and flowers, never anything spoiled or dirty. Fill bowls or vases high with

offerings to create the cause for abundance; never offer a bowl that isn't filled to the top. It is better to offer a small bowl heaped high with offerings than a large bowl that looks partly empty.

To make the offerings, you need to offer something, and the simplest, easiest, and cheapest thing is water—and, unlike a nice piece of chocolate, there is little likelihood of your becoming attached to it—and so you should have water bowls placed in front of the image. The traditional number of bowls in Tibetan Buddhism is seven or eight. The eighth bowl symbolizes music, so if you recite aloud, some traditions leave this out. If you don't have room, then one or two is also okay. A hundred thousand is better of course.

These are the offerings placed in the bowls at the front of the altar, from your left to right:

- *argham*: water for drinking
- *padyam*: water for cleaning the feet
- *pushpe*: flowers
- *dhupe*: incense
- *aloke*: light
- *ghande*: perfume
- *naividya*: food
- *shapta*: music

During the time of the Buddha, when someone important visited, these were offered as a sign of hospitality, and so this is according to Indian custom. If you can imagine a king coming to your home in ancient times, on a hot, dusty day, you would first offer him water to drink to quench his thirst and then water to wash the dust off his feet. The other offerings are to delight his senses. You would offer flowers, perhaps as a garland to place around his neck. There would be incense burning in the room and lights, such as candles, making the room visually beautiful. You would offer him perfume, perhaps a scented cloth to wipe his face, and food. Finally, while the king is eating, there would be beautiful music playing, an offering for the ear. If you think about the preparations you make for receiving a good friend in your house here in the twenty-first century, it is not that different.

Another way of laying out the offerings is with actual substances instead of water. So there would be incense, a candle, food, and flowers. This makes a very attractive offering.

It is good to make the offerings in the morning as you start your day, and to take them down in the evening, dispensing the blessed water respectfully, by pouring it over the flowers in your garden, for instance.

You are making an offering to a holy being, so it's important not only to be mindful and respectful, but also to make the offerings and the action of offering as beneficial as possible. Don't be lazy or sloppy, and make sure everything is very clean—make sure the bowls are clean and the water is clean.

The bowls don't have to be big, but they shouldn't be tiny, like a child's plaything. They can be very simple; they can be glass or porcelain or even clay, but they should be as beautiful as possible. Crystal or gold bowls make the altar look so much nicer and the mind feels so much happier than if cheap, ugly ones are used.

If possible, use saffron water in the bowls. To do this, boil a pot of hot water and then put a small amount of saffron in the water. Cover the pot with a towel and let it sit until it is a deep yellow or orange color. Then place the water in a clean, covered container and refrigerate it. Each day, a small amount of this saffron water can be added to the water in the pitcher used to fill the bowls. The color of the saffron water in your bowls can vary—some teachers suggest it should be the color of a fine champagne, while others like the water to be a more vibrant yellow.

The bowls will be upside down from when you emptied them the previous day, so, traditionally, you “seed” the bowls. This means holding each bowl upside down and filling it with incense smoke to purify it, while saying OM AH HUM. An empty vessel should never be placed right side up on an altar, as this empty offering creates the cause to not receive the bounty of the Dharma. Then, with a pitcher of water, pour water into the first bowl until it is full. Then pour most (but not all) of the water from the first bowl into the second bowl and place the first bowl onto your altar, toward the left-hand side. Pour most of the water from the second bowl into the third, and place the second bowl onto the altar, just to the right of the first bowl. Continue in this way

until all seven or eight bowls are on the altar in a straight line, each with some water in the bottom of it.

Make sure the bowls have been placed in a straight line, close together but not touching. Traditionally, the distance between bowls is about the width of a grain of wheat. The symbolism in this is that if the bowls are too far apart, you can create the karma to be separated from your guru; if they are too close together, you can create the karma to have a dull mind, without sharp intelligence.

Now, use your pitcher of water and, while reciting OM AH HUM, fill each bowl. The reason for saying OM AH HUM is to protect yourself from interference from spirits who can steal the essence of the offerings. For instance, it is said that if you don't say these three sacred syllables as you are offering light, it can be the cause to become very dull and distracted. So, you should always remember to say this. Even when you turn on a light in a room, especially one with holy objects in it, this is very good to do.

Pour the water like the shape of a wheat grain—in a thin stream at first, then gradually more, tapering off at the end. Try to pour the water neatly, without making noise. The water should fill the bowl to just about the size of a wheat grain from the top, so that the bowls are full but not too full. If your bowls are not full enough, your wisdom will be incomplete; if they are overfull, you create the cause for your wisdom to be incomplete or for it to be unstable. In addition, you might want to cover your mouth with a *khatak* or face mask, as it is important not to breathe on the offerings while making them.

As I have said, instead of water, you can offer flowers, incense, light, and food in their respective places in the lineup of water bowls. For instance, for the nonwater offerings, you can place some rice in the bowl and the offering on top of that—a small flower, a stick of incense, a tea-light, a piece of fruit, and so forth. You can have water in the perfume bowl and add some fragrance you really like. For the music offering, you can have a bell or even a recording of beautiful music. For the nonwater offerings, you don't have to turn the bowls over when clearing away the offerings at the end of the day.

Whether you use just water or different substances depends on your resources and what suits you. Whatever you use, when you make the offering mentally, you transform it into divine nectar for the Buddha; it is no longer a

bowl of water or an apple. The important thing is to feel very happy you are offering these substances and to make the offerings as beautiful as you can.

There are two ways of making offerings, actually transformed offerings and mentally transformed offerings. Physically, what you have in the bowls are just mundane substances—water, rice, incense, and so forth—but by saying the mantra OM AH HUM and visualizing the offerings as divine offerings, you transform them into what you are actually offering the Buddha. (There are also methods of increasing the offerings, using other mantras, which you can find in many sadhanas and pujas.)

You can even make offerings without anything physical there at all, merely by visualizing offerings. The main part of the offering doesn't take place on the altar but in your mind. You could have all the riches in the world in the room with that Buddha image, but that doesn't mean you are making vast offerings to the Buddha. The idea is to mentally create the most wonderful things and then freely offer them all up to the Buddha, without a shred of attachment from your side. In fact, offering is a direct antidote to miserliness.

And just as you can make the offerings as extensive as possible, dependent on your ability to visualize, you can make the field to which you are offering as extensive as possible. I have talked of offering to Guru Shakyamuni Buddha, but Tibetan Buddhism describes extensive merit fields—fields that allow you to create merit—with the Buddha or Lama Tsongkhapa at the center and all the buddhas, bodhisattvas, and lineage lamas surrounding.

When you make the offering, besides saying the mantra, it is very good to dedicate to not only the Buddha but to all sentient beings, that they might quickly attain enlightenment. Then even if it is the simplest of actions, just pouring a little water in a bowl, it covers all sentient beings; you have done a service for an infinite number of beings and so the benefits are infinite. It is so easy that way. For instance, as you light a candle for the light offering you can think, “By making this light offering, may the ignorance of all sentient beings be burned and destroyed and may the transcendental wisdom light shine forever in their minds.” Think that all their dualistic thinking is consumed in the flames of the wisdom realizing emptiness. This sort of offering is very effective. And, of course, if your offering is imbued with the mind of enlightenment, bodhichitta, then it becomes so powerful.

## *Prostrations*

A simple action like making a water bowl offering can have such vast results, and it's the same with prostrations. Many people new to Buddhism seem reluctant to prostrate, thinking prostrations are somehow both alien and hard work (even though the same people often spend so much time and money—and sweat—at the gym). When they are told about the Thirty-Five Buddhas practice, they put it off and put it off. If they could really see how prostrating to the Thirty-Five Buddhas can completely transform their minds, there would be nothing else they would want to do.

Doing prostrations correctly brings so many benefits. As you go down onto the floor, you have to prostrate to the Buddha, Dharma, and Sangha, otherwise it just becomes exercise. When you prostrate, you are wiping off the garbage, the obscurations, the negative karma collected through actions of your body, speech, and mind from beginningless rebirths. I don't know what the English word "prostration" means, but the Tibetan *chagtsel* has this meaning.

By purifying the negative karma collected with your body, speech, and mind, prostrations create the cause to achieve the vajra holy body, vajra holy speech, and vajra holy mind of the Buddha. A prostration is the particular remedy to a particular delusion in the same way that specific medicines are used for particular illnesses. Pride is a huge hindrance to developing on the path, and prostration is a very strong antidote to pride. Even if you don't do a full-length or a five-limb (half) prostration, when you recite the seven-limb prayer, with the line to do with prostrating, you must put your palms together in the prostration mudra. To not do so would be such a waste.

The prostration mudra is a very simple action that can take less than a second, but it is incredibly powerful. Each aspect of the mudra has significance. You place your hands at your chest, palms together and fingers straight and facing upward, much like a Christian prayer mudra. The thumbs are slightly tucked in.

This is also called the "lotus bud" mudra because it looks like the bud of a lotus plant, and it has great significance. Keeping the two thumbs inside signifies offering a jewel, rather than prostrating with empty hands with the palms flat, which is regarded as the non-Buddhist prostration method. The hollow between the palms signifies the dharmakaya and the two thumbs inside that hollow signify the rupakaya, the dharmakaya and rupakaya being the two

buddha bodies that result from completing the two paths of wisdom and method.

The full-length prostration is according to the tradition of Naropa. It is good to begin with this mantra:

OM NAMO MANJUSHRIYE NAMO SUSHRIYE NAMO UTAMASHRIYE  
SVAHA

His Holiness Serkong Rinpoche explained the meaning of the mantra to me, but I didn't write it down immediately so I have forgotten. (I think it is quite uncommon for someone to know the meaning of these mantras.) It is said in the teachings that if you recite this mantra three times you not only receive the same merit as listening, reflecting, and meditating on the Tripitaka, the three baskets of teachings, but also, when you do three full-length prostrations with this mantra each day, you receive the benefit of being able to achieve the path of seeing—the wisdom directly perceiving emptiness—in this life, and you will not be afflicted by disease, spirits, or human beings. One of the main advantages of doing prostrations with this mantra is that it increases the benefits of each prostration one thousand-fold.

Furthermore, if you recite the following buddhas' names seven times at the beginning of doing prostrations, it increases the benefits of the prostrations ten million times.

CHOM DÄN DÄ DE ZHIN SHEG PA DRA CHOM PA YANG DAG PAR DZOG  
PÄI SANG GYÄ RINCHHEN GYÄLTSHÄN LA CHHAG TSHÄL LO

OM NAMO BHAGAVATE RATNA KETU RAJAYA / TATHAGATAYA / ARHATE  
SAMYAK SAMBUDDHAYA / TADYATHA / OM RATNE RATNE MAHA RATNE  
RATNA BIJA YE SVAHA

When you prostrate, keep your feet together, not separated, but also not like an army exercise. With your hands in the prostration mudra, first place them on your crown, which causes you to create the merit to achieve a crown pinnacle, one of a buddha's thirty-two holy signs and eighty holy exemplifications. Then, touch them to the forehead, which, according to Kyabje Pabongka Rinpoche, purifies the negative karmas collected with the

body from beginningless rebirths. It creates the cause to achieve the holy sign of the clockwise curled hair at the center of a buddha's eyebrows, for which unbelievable merit is needed. It also creates the cause to achieve the vajra holy body. Then, touch your folded hands to the throat, which purifies the negative karmas collected from speech from beginningless rebirths and creates the cause to achieve the vajra holy speech. Then, touch them to the heart, which purifies the negative karmas collected with the mind from beginningless rebirths and creates the cause to achieve the vajra holy mind.

When you go down, either with a full or half prostration, you must touch the ground with your forehead, otherwise it doesn't become a complete prostration. But then, you should get up quickly, signifying a quick release from samsara. To lie there without immediately getting up creates the karma to be reborn as a worm or snake—a creature who slides along the ground!

You should also be careful to hold your hands in the correct fashion when you are on the ground, with the fingers straight out. If you splay them you create the karma to be reborn as a duck or a creature with webbed feet, and if you bunch them up you create the karma to be reborn as a horse or a creature with hooves. Doing prostrations correctly brings the most amazing benefits, but because you are prostrating to the Buddha, Dharma, and Sangha, a sloppy prostration can bring great suffering results.

With the full-length prostration, you then lie flat on the floor, stretching your arms in front of you and touching your head to the floor. The more you spread your body, the more atoms touch the ground. It is said in the *Lankavatara Sutra* that when you do a full-length prostration, with your hands fully extended, you create the merit to be born a wheel-turning king a thousand times for each atom of the floor your body covers, and that is not just the atoms on the surface, but from the surface right down to the center of the earth. It is unimaginable.

A five-limb or half prostration is when you simply go down on your knees and touch your head to the floor.

You can increase the power of your prostration in many ways. Firstly, if prostrating to one buddha creates vast merit, then prostrating to countless buddhas creates even more, and so, if you can, it is good to visualize the merit field as not just Guru Shakyamuni Buddha but as a whole field of buddhas,

bodhisattvas, and gurus, such as you see in the illustrations of the Guru Puja merit field.

Also, rather than prostrating alone, one body making offerings to the buddhas, you can visualize countless other sentient beings surrounding you, in all directions, covering the entire planet. Then, however many bodies you can visualize prostrating with you, you collect that much merit. If you visualize a hundred thousand beings prostrating with you, you collect the merit of a hundred thousand prostrations with just one movement. This is the most extensive way to collect merit when you prostrate, which is reflected in the verse from *The King of Prayers*:

With the energy of aspiration for the bodhisattva way,  
with a sense of deep respect,  
and with as many bodies as atoms of the world,  
to all you buddhas visualized as real, I bow down.<sup>144</sup>

### *The Posture*

Then, having cleaned the room; made offerings to the Buddha, Dharma, and Sangha on your altar; and prostrated, you sit down in a proper meditation posture. The texts say this should be Vairochana's seven-point meditation posture:

- legs in vajra (full lotus) position or crossed
- hands in meditation mudra
- back straight
- head tilted forward
- eyes slightly open, gaze directed downward
- jaw relaxed, tongue against palate
- shoulders level and relaxed

The full vajra position is where your legs are crossed with each foot, sole upward, placed on the opposite thigh. This is difficult for many Westerners, so a half vajra (with just one foot on the thigh) or with the legs just crossed is also acceptable. It's good to have a cushion that raises your buttocks slightly. This

will enable you to easily keep your back straight for an extended period. If sitting on the floor is too uncomfortable, you can also sit on a chair.

The meditation mudra is holding your hands on your lap, just below the navel, palms upward with the right hand on top of the left and thumbs touching, forming a triangle. Arms and shoulders should be relaxed, and you should hold your arms out slightly from your body to allow the circulation of air.

Your back should be straight but relaxed. It helps to imagine your spine as a pile of coins rising straight up. Your gaze should be slightly down to prevent mental wandering (if the gaze is too high) or drowsiness (if it is too low). Your eyes should be half open. This is often difficult for new meditators, so having them closed is acceptable. However, this can lead to drowsiness, just as having them fully open can lead to distractions. Your jaw should be relaxed, with your tongue lightly touching the roof of your mouth, just behind the teeth. Your teeth should be slightly apart and your lips lightly together.

When you are sitting comfortably, you can do some form of calming meditation, such as watching the breath, and then begin reciting the preliminary prayers.

## APPENDIX 2: PRELIMINARY PRAYERS AND DEDICATIONS<sup>145</sup>

---

### PRELIMINARY PRAYERS

#### *Taking Refuge and Generating Bodhichitta*

I go for refuge until I am enlightened  
to the Buddha, the Dharma, and the Supreme Assembly.  
By my practice of giving and other perfections,  
may I become a buddha to benefit all sentient beings. (3x)

#### *The Four Immeasurable Thoughts*

May all sentient beings have happiness and the causes of happiness.  
May all sentient beings be free from suffering and the causes of  
suffering.  
May all sentient beings be inseparable from the happiness that is free  
from suffering.  
May all sentient beings abide in equanimity, free from attachment  
for friends and hatred for enemies.

#### *Seven-Limb Prayer*

Reverently, I prostrate with my body, speech, and mind;  
I present clouds of every type of offering, actual and imagined;  
I declare all my negative actions accumulated since beginningless  
time

and rejoice in the merit of all holy and ordinary beings.  
Please, remain until the end of cyclic existence  
and turn the wheel of Dharma for living beings.  
I dedicate my own merits and those of all others to the great  
enlightenment.

### *Short Mandala Offering*

This ground, anointed with perfume, strewn with flowers,  
adorned with Mount Meru, four continents, the sun, and the moon:  
I imagine this as a buddha field and offer it.  
May all living beings enjoy this pure land!

IDAM GURU RATNA MANDALAKAM NIRYATAYAMI

## DEDICATION PRAYERS

Due to the merits of these virtuous actions,  
may I quickly attain the state of a Guru-Buddha  
and lead all living beings, without exception,  
into that enlightened state.

May the supreme jewel bodhichitta  
that has not arisen, arise and grow;  
and may that which has arisen not diminish  
but increase more and more.

You may include many other dedication prayers, especially prayers for the long life of your gurus, such as His Holiness the Dalai Lama.

## APPENDIX 3: MEDITATION ON THE SEVEN WISDOMS<sup>146</sup>

---

**T**HIS PRACTICE OF ATTAINING the seven wisdoms is a part of the *Lama Tsongkhapa Daily Guru Yoga Meditation*.

### VISUALIZATION FOR CLEANSING AWAY IMPURITIES

Visualize Lama Tsongkhapa, who is Manjushri; Gyalsap Jé, who is Chenrezig; and Khedrup Jé, who is Vajrapani, in the space in front of you, and then focus on Lama Tsongkhapa in particular. For this to become a guru yoga practice, it is important to maintain the awareness that your root guru is inseparable from Lama Tsongkhapa, who in essence is the three deities: Manjushri, the embodiment of all the buddhas' wisdom; Chenrezig, the embodiment of all the buddhas' compassion; and Vajrapani, the embodiment of all the buddhas' power.

By the force of my having fervently requested in this way,  
from the hearts of the three—the perfect, pure Father and Sons<sup>147</sup>—  
hollow beams of white light are emitted  
and, combining into one, enter my crown.  
White nectar, the color of milk,  
flows from the opening of the tube of white light,  
cleansing away all my sicknesses, harm from spirits, negative karmas,  
obscurations, and their imprints without exception.  
My body becomes as pure and clear as crystal.

## FIVE-LINE PRAYER TO LAMA TSONGKHAPA (MIGTSEMA)

*Mig me tse wäi ter chhen chän rä zig*  
Chenrezig<sup>148</sup> great treasure of nonobjectifying compassion;  
*dri me khyen päi wang po jam päi yang*  
Manjushri, master of stainless wisdom;  
*dü pung ma lü jom dzä sang wäi dag*  
Lord of Secrets, destroyer of the entire host of maras;  
*gang chän khä pä tsug gyän tsong kha pa*  
Tsongkhapa, crown jewel of the sages of the Land of Snow;  
*lo zang drag pä zhab la söl wa deb*  
Losang Dragpa, at your feet I make requests.

## VISUALIZATIONS FOR ACHIEVING THE SEVEN WISDOMS

Continue reciting the five-line *migtsema* while doing the following visualizations for achieving the seven wisdoms. For the last three wisdoms, spend more time on the particular wisdom that you wish to achieve.

### 1. Great Wisdom

Please bless me to achieve great wisdom,  
which is unimpeded in discerning the meanings of the infinite  
scriptures.

Once again, great wisdom flows forth  
in the form of orange nectar, whereby my body is filled.  
Light radiates from the atoms of the nectar,  
which are clarified in the form of perfect, pure Manjushris.

The great wisdom of the victorious ones of the ten directions and  
their sons

absorbs into me in the form of bodies of the deity, whereby my body is filled.

## *2. Clear Wisdom*

Please bless me to achieve clear wisdom,  
which clarifies the detailed, subtle, and difficult vital points without  
mixing them up.

Once again, clear wisdom flows forth  
in the form of orange nectar, whereby my body is filled.  
Light radiates from the atoms of the nectar,  
which are clarified in the form of AH RA PA CHA NA DHI.

The clear wisdom of the victorious ones of the ten directions and  
their sons  
absorbs into me in the form of the mantras, whereby my body is  
filled.

## *3. Quick Wisdom*

Please bless me to achieve quick wisdom,  
which quickly cuts through nonunderstanding, misunderstanding,  
and doubt.

Once again, quick wisdom flows forth  
in the form of orange nectar, whereby my body is filled.  
Light radiates from the atoms of the nectar,  
which are clarified in the form of orange DHI syllables.

The quick wisdom of the victorious ones of the ten directions and  
their sons  
absorbs into me in the form of the seed syllables, whereby my body  
is filled.

#### *4. Profound Wisdom*

Please bless me to achieve profound wisdom,  
which is unfathomable in discerning the meanings of the scriptures.

Once again, profound wisdom flows forth  
in the form of orange nectar, whereby my body is filled.  
Light radiates from the atoms of the nectar,  
which are clarified in the form of texts and swords.

The profound wisdom of the victorious ones of the ten directions  
and their sons  
absorbs into me in the form of the hand implements, whereby my  
body is filled.

#### *5. Wisdom of Explaining*

Please bless me to achieve the wisdom of explaining,  
which gives supreme ascertainment regarding all words and their  
meanings.

Once again, the wisdom of explaining flows forth  
in the form of orange nectar, whereby my body is filled.  
Light radiates from the atoms of the nectar,  
which are clarified in the form of the texts that are explained.

The wisdom of explaining of the victorious ones of the ten directions  
and their sons  
absorbs into me in the form of the texts, whereby my body is filled.

#### *6. Wisdom of Debating*

Please bless me to achieve the wisdom of debating,  
which thoroughly deprives malicious debaters of their self-  
confidence.

Once again, the wisdom of debating flows forth  
in the form of orange nectar, whereby my body is filled.  
Light radiates from the atoms of the nectar,  
which are clarified in the form of wheels of swords.

The wisdom of debating of the victorious ones of the ten directions  
and their sons  
absorbs into me in the form of the wheels, whereby my body is  
filled.

### *7. Wisdom of Composing*

Please bless me to achieve the wisdom of composing,  
which gives rise to a joyous, clear understanding of the excellent  
words and their meanings.

Once again, the wisdom of composing flows forth  
in the form of orange nectar, whereby my body is filled.  
Light radiates from the atoms of the nectar,  
which are clarified in the form of texts and wheels.

The wisdom of composing of the victorious ones of the ten  
directions and their sons  
absorbs into me in the form of the texts and wheels, whereby my  
body is filled.

### REQUEST

May my wisdoms of listening, reflecting, and meditating increase.  
May my wisdoms of explaining, debating, and composing develop.  
May I be granted the supreme and common realizations.  
Please bless me to quickly become like you. (3x)

May my transcendental wisdom of simultaneously-born great bliss  
arise.

May my stains of mistakenly grasping things as real be purified.

May my net of doubts that is only mind be cut.

Please bless me to quickly become like you. (3x)

The special benefit of meditating on these seven wisdoms within the Lama Tsongkhapa Guru Yoga is that you quickly develop your wisdom. Practicing for even a month, you can see the development. Whatever you do—listening, reflecting, meditating, or whatever—becomes effective, subduing your mind and eliminating the obstacles to practicing the Dharma.

Furthermore, when you die you will be able to be born in Tushita pure land, the pure land of Lama Tsongkhapa and Maitreya Buddha. And, even more special than that, in future lives you will be able to meet Lama Tsongkhapa's teachings. They say that meeting Lama Tsongkhapa's teachings is much rarer than being born in Amitabha's pure land, because his teachings are the unification of sutra and tantra. That means you will have the opportunity to practice tantra.

## APPENDIX 4: A SHORT GREEN TARA SADHANA<sup>149</sup>

---

### A GLANCE MEDITATION ON THE GRADUATED PATH

#### *Refuge*

I take refuge in the holy guru, essence of all buddhas, original grantor of all holy teachings and lord of all supreme beings.

#### *Prayer for Success in Dharma Practice*

Please, Guru-Buddhas, bestow on me the ability to unify my mind with the Dharma and be successful in practicing the Dharma in order to achieve the graduated path. May no hindrances occur while achieving this path.

#### *Prayer of the Practitioner of Lower Capability*

Please bless me to realize that I have received a perfect human rebirth, which is highly meaningful, for many reasons difficult to obtain, but perishable, transient, and fragile, decaying in the shortest moment because of its changeable nature. Thus, my death is definite, but its actual time is most indefinite, and after death I am far more likely to be reborn in the lower suffering realms, having created infinitely more negative than positive karma in this life and all previous lives.

Please bless me to comprehend how incredibly unendurable is the suffering of the lower realms, that I might take refuge in Buddha, Dharma, and Sangha with all my heart, and realize the evolution of karma in all its profundity, that I might perform only virtuous actions and abandon all negative creations.

### *Prayer of the Practitioner of Middling Capability*

By practicing in this way I will be reborn in the upper realms but will still have to experience unlimited samsaric suffering because of uncontrolled delusion and karma.

Please bless me to realize fully the evolution of samsara, from uncontrolled rebirth to death to rebirth, and to follow day and night the three higher trainings of the path: higher conduct, higher concentration, and higher wisdom, which are the main methods to release me from samsara.

### *The Prayer of the Practitioner of the Higher Capability*

#### The Sutra Path

But as each sentient being has been my mother and as most of them are in extreme suffering, please bless me to bring success to all by renouncing the perfect happiness of self and practicing the bodhisattva's deeds of the six perfections with a bodhisattva's mind of bodhichitta, on the basis of the equanimity meditation. Thus shall I have no sorrow in experiencing the samsaric suffering of all other sentient beings for no matter how long, having trained my mind in the general path.

#### The Vajrayana Path

Please bless me to follow the quick Vajrayana teachings, by feeling sentient beings' suffering, very unimaginably unbearable for even

the shortest moment, as my own, and to achieve the attainment of Shakyamuni Buddha immediately, at this very moment, by keeping my ordinations and the instructions of the guru with the best and highest care in life for the sole purpose of enlightening all sentient beings.

## VISUALIZATION

Above the crown of my head I visualize a lotus and a moon disk. Upon these is the great treasury of compassion, Arya Tara, mother of all enlightened beings, who is oneness with my kind root guru. My guru is seated in the full lotus position within a transparent bubble of rainbow-colored light, is pink in complexion, and wears saffron robes and a pandit's hat. His right hand is at his heart in the gesture of teaching the Dharma and holds a vajra and the stem of a white lotus that blooms beside his right ear. His left hand rests on his hip; it holds a bell and the stem of another white lotus that blooms beside his left ear.

At my guru's heart is Arya Tara in female aspect, green in color and seated in the dancing posture within a rainbow bubble. Her left leg is bent up, and her right leg is outstretched. Her left hand is at her heart in the mudra symbolizing the Triple Gem and holding the stem of a blue utpala flower. Her right hand extended over her right knee is in the mudra of granting sublime realizations. She is beautifully adorned with jeweled ornaments and scarves and at her three places (crown, throat, and heart) are syllables OM ཨྎ, AH ཨྎ, HUM ཨྎ. At her heart is a lotus and moon seat on which stands a radiant green syllable TAM ཨྎ. Rays of green light radiate in all directions from the TAM and invoke all the enlightened beings of the ten directions. They are all absorbed into Arya Tara and become one.

*Make a heartfelt prayer:*

Please remain above my head until I receive enlightenment.

## REFUGE AND BODHICITTA

I go for refuge until I am enlightened  
to the Buddha, the Dharma, and the Supreme Assembly.  
By my merit from giving and other perfections,  
may I become a buddha in order to benefit all sentient beings. (3x)

### SEVEN-LIMB PRAYER

Reverently, I prostrate with my body, speech, and mind;  
I present clouds of every type of offering, actual and imagined;  
I declare all my negative actions accumulated since beginningless  
time  
and rejoice in the merit of all holy and ordinary beings.  
Please, remain until the end of cyclic existence  
and turn the wheel of Dharma for living beings.  
I dedicate my own merits and those of all others to the great  
enlightenment.

### MANDALA OFFERINGS (OUTER AND INNER)

This ground, anointed with perfume, strewn with flowers,  
adorned with Mount Meru, four continents, the sun, and the moon:  
I imagine this as a buddha-field and offer it.  
May all living beings enjoy this pure land!

The objects of my attachment, aversion, and ignorance—  
friends, enemies, and strangers—and my body, wealth, and  
enjoyments:  
without any sense of loss I offer this collection.  
Please accept it with pleasure and  
bless me with freedom from the three poisons.

IDAM GURU RATNA MANDALAKAM NIRYATAYAMI

## PURIFICATION

### *Request:*

Please bless me to purify all obscurations of my body, so that it will become one in essence with Guru Tara's holy vajra body.

### *Visualize:*

White light emanates from the OM at Arya Tara's brow and curves in an arc to enter my brow. My body is purified completely of all obscurations and becomes one in essence with Guru Tara's holy vajra body.

### *Request:*

Please bless me to purify all obscurations of my speech so that it will become one in essence with Guru Tara's holy vajra speech.

### *Visualize:*

Red light emanates from the AH at Arya Tara's throat and curves in an arc to enter my throat. My speech is purified completely of all obscurations and becomes one in essence with Guru Tara's holy vajra speech.

### *Request:*

Please bless me to purify all obscurations of my mind so that it will become one in essence with Guru Tara's holy vajra mind.

### *Visualize:*

Blue light emanates from the HUM at Arya Tara's heart and curves in an arc to enter my heart. My mind is purified of all obscurations and becomes one in essence with Guru Tara's holy vajra mind.

*Request:*

Please bless me to purify all delusions and subtle obscurations to omniscience so that my body, speech, and mind will become one with Guru Tara's holy body, holy speech, and holy mind.

*Visualize:*

Now the three-colored beams emanate simultaneously from the OM, AH, and HUM syllables, curving in an arc and entering my three places, completely purifying all my delusions and subtle obscurations to omniscience. My body, speech, and mind become one in essence with Guru Tara's holy body, holy speech, and holy mind.

My root guru dissolves into Arya Tara who melts into green light, which flows into me. Instantly, my wrong conception that I and all other phenomena are self-existent, together with my dualistic mind and its views, disappear, becoming completely empty—not even a trace of them remains.

I concentrate one-pointedly in this empty state, with the wisdom that is indistinguishably one with Guru Tara's blissful omniscient mind.

Then, out of that emptiness, my wisdom manifests instantly as Arya Tara's holy body seated upon a lotus and moon cushion. At my heart is another lotus and moon, upon which in the center stands the syllable TAM surrounded in a clockwise direction by the syllables of the mantra: OM TARE TUTTARE TURE SVAHA. The TAM and the mantra are manifestations of Guru Tara's holy mind, with which my mind is totally united.

Green light radiates from all the letters. Spreading in every direction, it purifies the negative karmas, gross delusions, and subtle obscurations to omniscience of all sentient beings, who become Tara.

Again light radiates, bearing manifold offerings to the six transcendental senses of all the buddhas and sentient beings who have become Tara.

The enlightened beings are extremely pleased, and shower down the superlative qualities of Buddha Tara's holy body, holy speech, and holy mind—omniscient wisdom, supreme power, and infinite compassion, in the form of a great shower of light rays. As I recite the mantra, I absorb and am blessed by this rain.

OM TARE TUTTARE TURE SVAHA

## DEDICATION

May I quickly become Guru Arya Tara and lead each and every sentient being into her enlightened state because of these merits.

May the supreme jewel bodhichitta that has not arisen, arise and grow; and may that which has arisen not diminish, but increase more and more.

## APPENDIX 5: HEALING BUDDHA<sup>150</sup>

---

### A PRACTICE FOR THE PREVENTION AND HEALING OF DISEASE

by Padmasambhava

#### THE ACTUAL PRACTICE

##### *Motivation*

The purpose of my life is to free all living beings from all of their problems and from the causes of these problems, which are in their minds; also to bring them peace and happiness, especially the peerless happiness of full enlightenment, which they need. In order to accomplish this, I need a perfect, pure, healthy mind and body. For this reason, in order to benefit all living beings equaling the extent of space, I am going to do this healing meditation.

##### *Meditation*

At dawn or at another time, visualize your ordinary body. In the center of your chest is your heart, upside down, pointing upward. Inside your heart is an eight-petaled white lotus. In the center of this is a moon disk, and on that is Medicine Buddha.

His holy body, clear and in the nature of deep blue light, is in the aspect of supreme transformation. He is holding an arura plant in his right hand and a begging bowl in his left. In front of Medicine Buddha is the white medicinal goddess Actualized Wisdom; to his right, the yellow medicinal goddess Simultaneous Wealth; behind him, the red forest goddess Neck of Peacock; to

his left, the green tree goddess Having Radiance. Each of these goddesses is in the nature of blissful radiant light and has one face and two arms. In her right hand, each goddess holds an arura plant, and in her left, a vase adorned with various ornaments. Each is seated cross-legged (not in the full vajra position) in an attitude of respecting Healing Buddha.

### *Visualization and Mantra Recitation*

From the five deities in your heart, light beams are emitted in their respective colors. Your whole heart and body are filled with these blissful light beams, which completely purify all disease, harm from spirits, negative actions, and their imprints.

From all the pores of your body, five-colored light beams are emitted. Also, nectar flows down from the begging bowl and the vases held in the left hands of the five heart deities, completely filling your heart and body. Make a strong determination that all diseases have been completely pacified forever, that you can no longer experience any disease.

While one-pointedly concentrating on this visualization, recite the short or long mantra of Medicine Buddha seven, twenty-one, 108, or more times.

If you are ill with a contagious or other disease, after reciting the mantra, put some saliva on your left palm and rub it with the tip of your right ring finger. Then place the tip of the right ring finger at the base of the right and left nostrils, where there is a nerve called the All-Doing King Nerve. Then apply the saliva wherever there is disease.

### *Short Medicine Buddha Mantra*

TADYATHA / OM BHAISHAJYE BHAISHAJYE MAHA BHAISHAJYE  
[BHAISHAJYE] / RAJA SAMUDGATE SVAHA

ཏཱ་ཨྱི་ཨྱི་ཤཱི་ཤཱི་མཱཱ་ཨྱི་ཤཱི་[ཨྱི་ཤཱི་]། རྒྱ་ལོ་སྤྱུ་ལྷི་སྤྱུ་ལྷི་

*Common pronunciation:*

*Ta ya ta / om bekanzay bekanzay maha bekanzay [bekanzay] / radza samudgatay soha*

*Long Medicine Buddha Mantra*

OM NAMO BHAGAVATE BHAISHAJYE / GURU BAIDURYA / PRABHA  
RAJAYA / TATHAGATAYA / ARHATE SAMYAKSAM BUDDHAYA / TADYATHA  
/ OM BHAISHAJYE BHAISHAJYE MAHA BHAISHAJYE [BHAISHAJYE] / RAJA  
SAMUDGATE SVAHA

ॐ नमो भगवते वासुदेवाय । नमो भगवते वासुदेवाय ।  
नमो भगवते वासुदेवाय । नमो भगवते वासुदेवाय । नमो भगवते वासुदेवाय ।  
ॐ नमो भगवते वासुदेवाय । नमो भगवते वासुदेवाय । नमो भगवते वासुदेवाय ।  
ॐ नमो भगवते वासुदेवाय । नमो भगवते वासुदेवाय । नमो भगवते वासुदेवाय ।

*Common pronunciation:*

*Om namo bagawatay bekanzay guru baidurya / praba radza ya /  
tatagataya / arhatay samyaksam buddhaya / ta ya ta / om bekanzay  
bekanzay maha bekanzay [bekanzay] / radza samudgatay soha*

(The bracketed BHAISHAJYE is optional.)

*Then make this request:*

You, the destroyer, the qualified one gone beyond (Medicine Buddha) and the four medicinal goddesses, please help me to avoid experiencing the various diseases and to pacify immediately those that I am already experiencing.

*After doing this, recite the mantras of the Sanskrit vowels and consonants as much as possible, and also the Heart of Dependent Arising mantra:*

## Sanskrit vowels

OM A AA I II U UU RI RII LI LII E AI O AU AM AH SVAHA

ॐ अ आ इ ई उ ऊ रि री ली ली ए ऐ ओ औ अम् अह स्वाहा

## Sanskrit consonants

OM KA KHA GA GHA NGA / CHA CHHA JA JHA NYA / TA THA DA DHA NA  
/ TA THA DA DHA NA / PA PHA BA BHA MA / YA RA LA VA / SHA SHA SA HA  
KSHA SVAHA

ॐ का खा गा गघा नगा / चा चघा जा जघा न्या / ता था दा दघा ना  
/ ता था दा दघा ना / पा पघा बा बघा मा / या रा ला वा / शा शा सा हा  
क्षशा स्वाहा

## *The Heart of Dependent Arising Mantra:*

OM YE DHARMA HETU PRABHAVA HETUN TESHAN TATHAGATO  
HYAVADAT TESHAN CHA YO NIRODHA EVAM VADI MAHA SHRAMANA  
YE SVAHA (3x)

ॐ ये धर्मा हेतु प्रभवत्तेषां तेषां तथगतो ह्यवावदत् तेषां चा यो निरोद्धा एवमवदति महाश्रमणा ये स्वाहा

This practice protects you from diseases not yet experienced and from those already being experienced. It is the terma (treasure) advice instruction of the Lotus Arisen One (Padmasambhava).

## *Dedication*

Due to all my past, present, and future positive actions, which bring the result of happiness, may the ultimate good heart that cherishes and cares for all living beings, who are the source of all

my and others' happiness in the past, present, and future, be generated in my mind and the minds of others. May that which has already arisen in my and others' minds increase.

Due to all my positive actions in the past, present, and future as well as those of all holy beings, who have the purest attitude, may all father and mother living beings have happiness, and may I cause this by myself alone. May the realms of the unfortunate beings (hell, hungry ghost, and animal) be emptied forever.

Wherever there are holy beings who dedicate their lives to bringing happiness to others, may all their prayers succeed immediately, and may I cause this by myself alone.

Due to my positive actions of the past, present, and future and those done by these holy beings, may I achieve the peerless happiness of full enlightenment—the state of mind that is free of all mistakes and possesses all positive qualities—and lead everyone to this state.

## APPENDIX 6: MORE POWERFUL MANTRAS

---

**T** of mantras that I have been recommending for many years because of their great power. They are specifically those mantras than can benefit beings who are dying or dead and the four dharmakaya relic mantras.

### THE POWERFUL MANTRAS FOR BENEFITING BEINGS AT DEATH<sup>152</sup>

#### *1. The Chenrezig Mantras*

The short mantra:

ཨོཾ་མ་ཎི་པ་ལྷོ་ཧྲཱི།

The long mantra:

ན་མོ་རྣམ་པར་ཡུལ་ཡ། མེ་གི་ག་ནི་གི་ག་ནི། རོ་ཙ་ནི་རོ་ཙ་ནི། རྩོ་ལ་ནི་རྩོ་ལ་ནི།  
རྩོ་ས་ནི་རྩོ་ས་ནི། སྤ་ཉི་ཉ་ན་སྤ་ཉི་ཉ་ན། སམ་ཀམ་པ་རི་པ་རྣམ་ཅི་མེ་སམ་  
སམ་རྣམ་རྣམ་སྤྲོ་བ།

### 5. *The Namgyalma Mantras*

The long mantra:

8. *The Milarepa Mantra:*

ཨོཾ་ཨུཾ་གུ་ཏུ་ཏ་ས་བཟླ་སམ་སི་རྗེ་པ་ལ་ཧྲཱི།

9. *The Zung of the Exalted Completely Pure Stainless Light (1):*

ན་མེ་སལྷ་ལྷོ་སྟེ་མཉམ་ལྷོ་གོ་ལྷོ་རྒྱ་པ་རི་ཤུལ་མ་ན་སེ། ཨ་ལྷོ་ཅི་ཏ་པ་ཏི་ཅུ་  
ཏུ་རྒྱ་ན་མེ་ལྷ་ག་བ་ཏེ། ཨ་མི་ཏ་ཨུ་ཡུ་ཤ་ཤུ། ཏ་སྤ་ག་ཏ་ཤུ། ཨོ་སམ་ཏ་  
སྤ་ག་ཏ་ཤུ། ཨུ་ཡུ་རི་ཤོ་རྒྱ་ནི། སོ་ཏ་ར་སོ་ཏ་ར། མམ་ཏ་སྤ་ག་ཏ་སྤུ་བ་  
ལེ་ན་སྤ་ཏི་སོ་ཏ་ར་ཨུ་ཡུ་སྤ་ར་སྤ་ར། མམ་ཏ་སྤ་ག་ཏ་ས་མ་ཡ། སོ་རྒྱི་སོ་རྒྱི།  
ཤུལ་ཤུལ། སོ་རྒྱ་ལ་སོ་རྒྱ་ལ། མ་མ་སམ་སྤ་པོ་ཨུ་བ་ར་ཅ་པོ་ཤུལ། བེ་ག་ཏ་མ་  
ལོ། མོ་ར་སྤ་ཤུལ་ཤུལ་ཏུ་ཏུ་ཏུ་ཏུ་སྤ་སྤ།

10. *The Zung of the Exalted Completely Pure Stainless Light (2):*

ན་མེན་བ་ན་བ་རྒྱུ་འུ་ཏ་སྐྱ་ག་ཏ་གི་སྐྱ་འོ་རྒྱུ་ལྷ་གྲ་འོ་ ཀོ་ལི་ནི་ལྷ་ཏ་ཤ  
ཏ་ས་ཏ་སྐྱུ་འོ་ འོ་བོ་བོ་ལི། ཅ་རི་ཅི་ཅ་ལི། མོ་རི་གོ་ལི་ཅ་ལ་བྲ་རི་སྐྱུ་འོ།

### 11. *The Maitreya Buddha mantras*

The mantra of Maitreya Buddha's promise:

ན་མོ་རྣ་ཏ་ཡུ་ཡ། ན་མོ་ལྷ་ག་བ་ཏེ། རྒྱུ་ལྷ་ན་ཡེ། ཏ་སྐྱ་ག་ཏུ་ཡ། ཨཱཱ་ཏེ་  
སུལྷོ་བུལྷོ་ཡ། ཏུ་སྐྱ། འོ་ཨ་འོ་ཏེ། ཨ་འོ་ཏེ། ཨ་བ་རྣ་འོ་ཏེ། ཨ་འོ་ཏུ་ཡ།

### THE FOUR DHARMAKAYA RELIC MANTRAS<sup>153</sup>

There are four dharmakaya relic mantras:

1. The Stainless Pinnacle Deity Mantra
2. The Secret Relic Mantra
3. The Zung of the Exalted Completely Pure Stainless Light
4. The Hundred Thousand Ornaments of Enlightenment Mantra

These four mantras are the relics of the dharmakaya, the relics of the Buddha. Other relics that we normally see, such as robes or parts of the Buddha’s holy body, are secondary relics. These are the highest relics. After I learned about the unbelievable benefits of each of these mantras, I had them written down and we printed many copies. These are normally what we should put inside stupas, statues, and so on.

By putting these mantras inside a stupa, even a bell that is offered to the stupa brings unimaginable benefit. For example, the negative karma of all sentient beings who hear the sound of that bell is purified; they are liberated from the lower realms and receive a good rebirth. In that way, it makes it so easy for sentient beings to purify negative karma and reach enlightenment.

Even while building a stupa, people’s minds are transformed. Students tell me how their hearts become softer, and they can definitely see some purification. To put just one brick or stone in a stupa being built becomes the cause for enlightenment. And when the stupa is finished, especially if it contains these four very powerful mantras, it blesses the whole environment around it; it protects it and helps all beings: humans, animals, even spirits and nagas.

You don't have to be Buddhist to benefit from a stupa. I remember the builders who built the Kadampa stupa at Institut Vajrayogini in France were Christians, a very special group whose service to their church was to build and restore holy objects.

There was also a stupa built in Iceland. A student at Tushita, Dharamsala, asked me what she should do after the meditation course, so I suggested building a stupa, which she did back at home in Iceland. Most of the people who helped her build it were non-Buddhists. I went there to bless it. When the sun is shining there, the area of the stupa is so pleasant, close to the main road and overlooking the city. But when I was there, the weather was very bad: windy, foggy, snowing! I ended up having to do half the ceremony in the car, which was being rocked by the wind. I have no idea how they managed to build the stupa in such a place. After it was consecrated, it was offered to the government, so the mayor came to give a speech—even in all that foggy weather. Now, the stupa is easily seen from the road and many people stop to look at it. It is of great benefit to Iceland.

The benefits of circumambulating and so forth are extensively explained in sutras such as *Arya Compassionate Eye Looking One* and *Compassionate White Lotus*.

### 1. *The Stainless Pinnacle Deity Mantra*

As we have seen, the heart mantra of Stainless Pinnacle Deity (*Tsugtor Drime*) is this:

ཨོྫ་མ་རྩི་ཡ་རྩི་ཀུ་རྩི། སཐ་ཏ་སྐ་ག་ཏ་ཨི་ད་ཡ་གཟེ་རྩི་ལ་རྩི་ལ། རྣམ་རྩི་  
ཏུ་གཟེ། སི་རྣ་ར་མ་མ་ཞུ་ཡུཾ་སི་ཤོ་རྣ་ཡ། མ་མ་སཐ་སྐ་པི། སཐ་ཏ་སྐ་ག་ཏ་  
ས་མ་རྩི་རྩི་པ་བི་མ་ལེ་བི་བྱེ། རྩི་རྩི་རྩི་རྩི། ཨོྫ་པི་སི་རྩི་རྩི།

As explained by the Buddha in the Kangyur, there are skies of benefits for making even just one prostration, circumambulation, or offering to a holy object containing the Stainless Pinnacle Deity mantra:

- It completely purifies the karmic obstacles of the five immediate negativities.
- You will be completely liberated from the hell, hungry ghost, and animal realms, and from the evil-gone realm of the yama world.
- You will have a long life.
- Like a snake changing its skin, when leaving the body, you will have the fortune to go to the blissful realm (that is, a pure land).
- You will never be stained by the smell of the womb.
- All your wishes will be completely and exactly fulfilled.
- If you put this mantra inside a stupa, you will never be reborn in the lower realms and will have a pure life until you achieve enlightenment.
- You will have good rebirths up until enlightenment is achieved.

This is most amazing. We have so many human problems that are unbearable, so how could we bear the sufferings of the lower realms, such as being born as an insect, much less being born a hell being or a hungry ghost? When we human beings have problems, we can communicate and try many ways to resolve the problems, but animals and hungry ghosts cannot do this, and their suffering is so much greater. And if their problems are unimaginably terrible, there is no question that the sufferings of the hell beings are so much worse. Therefore it is incredibly precious that just by putting this mantra inside a stupa, we can be freed forever from these sufferings, be ensured pure lives, and have higher rebirths until enlightenment is achieved.

## *2. The Secret Relic Mantra*

The Secret Relic (Sangwa Rigsel) Mantra is this:

ན་མ་རྩི་ཡ་རྩི་གུ་ལྟོ་སའ་ཏ་སྲ་ག་ཏུ་ལྟོ་ཨོ་རྩུ་འི་རྩ་སྲུ་བ་རེ་བ་ཙེ་ལོ་ཙེ་  
ལུ་ཙེ་ལུ་རྩ་ར་རྩ་ར་སའ་ཏ་སྲ་ག་ཏུ་རྩ་ཏུ་རྩ་རེ། བརྩ་གརྩེ། ར་ཡ་བ་རེ།  
ཨ་ཙེ་ལེ། ལྷ་ར་ཏ་སྲ་ག་ཏུ་རྩ་མ་ཙེ་ལ། ས་བརྩ་ན། བརྩ་པོ་རྩི། མརྩ་ཨ་ཡི་  
གུ་ར། ཨ་ཡི་གི་ཏེ། སའ་ཏ་སྲ་ག་ཏུ་ཨ་རྩི་རྩི་ཏེ། བོ་རྩ་ཡ་བོ་རྩ་ཡ། བོ་རྩ་འི་བོ་  
རྩ་འི། བརྩ་ཡ་བརྩ་ཡ། སོ་བོ་རྩ་འི་སོ་བོ་རྩ་ཡ། ཙེ་ལ་ཙེ་ལ། ཙེ་ཡི་ཏུ་སའ་ལྷ་  
བ་ར་རྩ་ན། སའ་སྲ་པོ་འི་ག་ཏེ། ཏུ་ཏུ་ཏུ་ཏུ། སའ་པོ་ག་འི་ག་ཏེ། སའ་ཏ་སྲ་  
ག་ཏུ་འི་ད་ཡ། བརྩི་འི། སོ་རྩ་བ་སོ་རྩ་བ། སའ་ཏ་སྲ་ག་ཏུ་ལུ་ལྟོ། རྩ་ར་འི་ལུ་  
འི། བརྩེ། ལུ་བརྩེ། སའ་ཏ་སྲ་ག་ཏུ་ཨ་རྩི་རྩི་ཏེ། རྩ་ཏུ་གརྩེ་སྲ་ལྟོ། ས་མ་ཡ་ཨ་  
རྩི་རྩི་ཏེ་སྲ་ལྟོ། སའ་ཏ་སྲ་ག་ཏུ་འི་ད་ཡ། རྩ་ཏུ་ལུ་འི་སྲ་ལྟོ། ལུ་ས་འི་རྩི་ཏུ་ལུ་འི་  
ཏ་སྲ་ག་ཏུ་ཨ་རྩི་རྩི་ཏེ། རྩི་རྩི་སྲ་ལྟོ། ཨོ་སའ་ཏ་སྲ་ག་ཏུ་ལུ་རྩི་པ་རྩ་ཏུ་ལུ་སྲ་འི་  
སའ་ཏ་སྲ་ག་ཏུ་རྩ་མ་རྩ་ཏུ་འི་རྩུ་འི་ཨ་རྩི་རྩི་ཏེ་ཏུ་ཏུ་ཏུ་ཏུ་རྩི་རྩི་སྲ་ལྟོ།

The heart mantra is this:

ཨོཾ་མཐ་ཏ་ཐ་ཤ་ཏ་ཏུ་མེ་ཏུ་ཐུ་ཏུ་མེ་ཏུ་མཐ་ཏ་ཐ་ཤ་ཏ་ཏུ་མེ་ཏུ་ཐུ་ཏུ་མེ་ཏུ་  
ཏེ་ཨོ་ཏུ་ཏུ་ཏུ་ཏུ་ཏུ་ཏུ་ཏུ་

As explained by the Buddha in the Kangyur, if you have this mantra inside a holy object, then all the buddhas will abide in that holy object. Therefore, there are skies of benefits for making even just one prostration, circumambulation, or offering to a holy object containing the Secret Relic Mantra:

- You purify the negative karma of the ten nonvirtuous actions as well as the five immediate negativities and so forth, and will be completely liberated from the eight hot hells.
- You will never turn back from peerless enlightenment. (That is, your life will always be directed toward enlightenment. This is irreversible; you will never go in the opposite direction.)
- You will always attain higher rebirth.
- By printing the Secret Relic Mantra just once, you collect the same amount of merit as making offerings to one hundred thousand times ten million times one hundred billion buddhas. This was told to Vajrapani.
- You create the same merit as having made offerings to as many buddhas as there are in ninety-nine sesame seed pods and you are always guided by that many buddhas.

This is just a tiny drop from the unimaginable benefits of this mantra.

### *3. The Zung of the Completely Pure Stainless Light*

There are many Zung of the Exalted Completely Pure Stainless Light (Özer Drime) mantras, and they are all contained within the Four Dharmakaya Relic Mantras. Some of them are this:

ཨོ་སཐ་ཏ་སྐྱ་ག་ཏ་མ་ལ་བི་ཤོ་ད་ནི་ཅུ་རྒྱ། བ་ལེ་སྤ་ཏི་སི་སྐྱ་ར། ཏ་སྐྱ་ག་ཏ་  
རྒྱ་ཏུ་རྒྱ་རེ། རྒྱ་ར་རྒྱ་ར། སི་རྒྱ་ར་སི་རྒྱ་ར། སཐ་ཏ་སྐྱ་ག་ཏ་ཨ་རྒྱི་རྒྱ་ན་ཨ་རྒྱི་  
ལྷོ་ཏི་སྐྱ་རྒྱ།

As explained by the Buddha in the Kangyur, there are skies of benefit in making even just one prostration, circumambulation, or offering to a holy object containing the Zung of the Completely Pure Stainless Light:

If you offer even a bell to a stupa containing this mantra, all the sentient beings in that area, animals or humans, by hearing the sound of that bell will be completely purified of the five immediate negativities.

Normally, committing the five immediate negativities is the cause to be reborn in the lowest hot hell, which is the most extreme suffering there is, but having this mantra inside a stupa purifies that. This shows how unbelievably powerful this mantra is. Since even hearing the sound of a bell offered to such a stupa has incredible power to purify, there is no question that any insect or other being who sees or touches the stupa is purified of negative karma. The mantra is so powerful that even just *thinking* about the stupa purifies the five immediate negativities. That is amazing! It is like a small flame that eventually grows into a fire that burns many thousands of miles of forest or entire cities.

If water, rain, or dust just touches the stupa, it is so blessed that it purifies all the negative karmas of the insects on the ground who come into contact with it. And the wind that touches such a stupa purifies the negative karmas of people or animals that it contacts, ensuring a good rebirth. Even the shadow of the stupa does this.

Everything that touches the land the stupa is on becomes meaningful, including the rain that touches the stupa and then flows to the ground and touches worms. The worms' negative karma is purified, and they will receive a higher rebirth.

#### *4. The Hundred Thousand Ornaments of Enlightenment Mantra*

The mantra of the Hundred Thousand Ornaments of Enlightenment (Jangchub Gyänbum) is this:

ཇི་ན་མོ་རྣ་ག་བ་ཏེ་མི་ཕུ་ལ་བ་ད་ན་གུ་རྩུ་ལོ་ཏ་གྱི་དྲུ་ མ་ལྷ་ས་གེ་རུ་ཕུ་རྩུ་  
 བེ། ཏ་སྐ་ག་ཏ་ཡ། ཇེ་རྩ་ཏེ། ས་ཕུ་རྩི་ཕུ་རྩུ་ཡ། བ་མོ་རྣ་ག་བ་ཏེ་མི་ཕུ་ཕུ་བ་  
 ཡ། ཏ་སྐ་ག་ཏ་ཡ། ཇེ་རྩ་ཏེ། ས་ཕུ་རྩི་ཕུ་རྩུ་ཡ། ཏ་ཏུ་སྐ། བོ་རྩི་བོ་རྩི། བོ་རྩི་བོ་  
 བོ་རྩི་བོ། སམ་ཏ་སྐ་ག་ཏ་མོ་ཙ་མི། རྩ་ར་རྩ་ར། ཏ་ར་ཏ་ར། མ་ཏ་ར་མ་ཏ་ར།  
 མ་རྩ་བོ་རྩི་ཙི་རྩ་རྩ་མེ། རུ་ཕུ་རུ་ཕུ། བ་ཏ་ར་སྐྱི་ས་རྩུ་ཏེ་ཏེ། སམ་ཏ་སྐ་ག་ཏུ་  
 མི་ཏི་གྱེ། ཕུ་ཏི་ཕུ་བ་ཏེ། སམ་ཏུ་རྩུ་ཕུ་རྩུ་བ་རྩུ་སེ། མི་མི་མི་མི། ག་ག་བ་ཏ་  
 ཡ། སམ་ཏ་སྐ་ག་ཏུ་རྩི་རྩི་ཏེ། བ་རྩ་རྩ་ཡེ། བ་མེ་བ་མེ། མ་བ་མེ་མ་བ་མེ། སམ་  
 ཏ་སྐ་ག་ཏུ་སམ་སྐ་བོ་མ་བ་མ་བེ། སམ་སྐ་བོ་མི་བོ་རྩི་བེ། ཏུ་ཕུ་རུ་ཕུ། མ་རྩ་  
 བོ་རྩི་སྐ་མ་སྐ་མ་ཏི་རྩི་ཏེ། སམ་ཏ་སྐ་ག་ཏ་ཕུ་མ་ཏི་རྩི་ཏེ། ཕུ་རྩུ་སྐ་རྩུ། ཇི་སམ་  
 ཏ་སྐ་ག་ཏ་ཕུ་བ་མོ་གི་ཏེ། རྩ་ཡ་རྩ་ཡ་སྐ་རྩུ། ཇི་རུ་ཕུ་རུ་ཕུ། རྩ་ཡ་ཕུ་མི་སྐ་  
 རྩུ། ཇི་བརྩ་ཕུ་ཕུ་ཏི་སྐ་རྩུ།

It has both heart mantra and nearing heart mantra. The heart mantra is this:

ཇི་སམ་ཏ་སྐ་ག་ཏ་ཕུ་བ་མོ་གི་ཏེ་སྐ་རྩུ། རྩ་ཡ་རྩ་ཡ་སྐ་རྩུ། ཇི་རུ་ཕུ་རུ་ཕུ། རྩ་  
 ཡ་ཕུ་མི་སྐ་རྩུ།

The close heart mantra is this:

ཇི་བརྩ་ཕུ་ཕུ་ཏི་སྐ་རྩུ།

As explained by the Buddha in the Kangyur, there are skies of benefits for making even just one prostration, circumambulation, or offering to a holy object containing the Hundred Thousand Ornaments of Enlightenment

Mantra. When you do, you are not only making offerings to the stupa but also to all the Three Rare Sublime Ones that exist in the ten directions, in every universe.

By putting even just one mantra inside a stupa, it brings the same merit as having built one hundred thousand stupas—whether the stupa is gigantic like Bodhgaya or just the size of a finger. By dedicating this merit for the happiness of all sentient beings up to full enlightenment, both you and they receive unbelievable benefits.

A wonderful practice is to chant the name of somebody who has died at the exact moment you put this mantra inside a stupa. Then you make offerings to the stupa—either actual offerings or visualized offerings, as in the seven-limb prayer. If you visualize offerings, you can include all the flowers inside and outside, all the food offerings, all the water offerings, all the light offerings, everything! You can use all the offerings at my houses in California and Washington, as well as all the offerings at all the FPMT centers.

The Buddha said to Ananda,

I explained this sutra for those beings who have very little merit and no devotion, for those who are overcome by doubt and cannot believe in the Dharma. For those sentient beings, I explained the Hundred Thousand Ornaments of Enlightenment mantra.

That means the Buddha explained this mantra for us. The Buddha also told Ananda,

In future times, if ordained ones don't read this sutra that contains the benefits of this mantra and don't make offering to this mantra, which makes it so unbelievably easy to purify the negative karma that are the cause to be reborn in the lower realms and to accumulate the merit to achieve enlightenment and then offer extensive benefit to sentient beings, those ordained ones will suffer in the same way as householders. But if they listen to this teaching and then make even one stupa with this mantra inside, they make offering to all the eighty-four thousand teachings of the Buddha.

This means that this mantra is an antidote to the eighty-four thousand delusions, and you create inconceivable heaps of merit through reciting it. When you put these four dharmakaya relic mantras inside a stupa, even mentioning the name of a person or animal that has died and praying for them brings them a good rebirth, such as birth in a pure land. That person will definitely be liberated from the lower realms. Placing the mantras inside a holy object such as a stupa, saying the seven-limb practice, and making dedications for that person or animal is a very powerful method for healing.

Holy objects such as these liberate sentient beings continuously, twenty-four hours a day, every day. They purify the causes of the lower realms and bring sentient beings to the higher realms where they can meet the Dharma and then reach liberation and enlightenment.

As soon as stupas and statues of the Buddha are made, they have the power to cause sentient beings to do actions such as circumambulating, prostrating, offering, and so forth, which then become virtuous actions creating the cause of enlightenment, even if they are done with the eight worldly dharmas and nonvirtuous thoughts. So even though you might not have any realizations such as bodhichitta or emptiness, the holy objects you make still have the power to liberate sentient beings from the oceans of samsaric suffering, to actualize all the realizations of the path, and then to achieve enlightenment.

## APPENDIX 7: DAILY MANTRAS<sup>158</sup>

---

### A COMMENTARY ON “BLESSING THE SPEECH ACCORDING TO THE INSTRUCTIONS OF GREAT YOGI KHYUNGPO”

#### *Why and When to Do the Practice Blessing the Speech*

According to the Instructions of Great Yogi Khyungpo, this is a method to make the speech perfect. According to my root guru, Kyabje Trijang Rinpoche, this practice of blessing the speech multiplies the recitation of mantra ten million times. I received the oral transmission of this practice from Kyabje Kirti Tsenshab Rinpoche. You should do the blessing of the speech and recite the daily mantras first thing in the morning before you begin to speak, even while you are still in bed.

#### *Visualizing Yourself as the Deity*

I clarify myself as the deity.

To do this practice, you need to transform yourself into the form of a deity. You don't just change a truly existent human body into a truly existent deity body; it is not like that. First you purify the truly existent I in emptiness by looking at the real I as empty, as it is empty. Then, your wisdom of realizing emptiness, which is nondual with great bliss, manifests as a deity. Usually you arise as the main deity with whom you have a karmic connection and by means of which you will achieve enlightenment most quickly. However, if you are doing a deity retreat, you can arise as that deity. You are only allowed to clarify yourself as a deity after having received a great initiation of a lower

tantra or highest yoga tantra deity. If you haven't received a great initiation, you can visualize yourself as Guru Shakyamuni Buddha. My guru Kyabje Denma Locho Rinpoche said that this is an exception based on the Buddha being the founder of the present Buddhadharma. However, for Medicine Buddha, Chenrezig, and all other deities, you must have received the initiation of the deity in order to visualize yourself as that deity. If you haven't received a great initiation, it might also be okay to do the blessing of the speech with your ordinary body, but I haven't actually heard that.

### *Visualizing the Seed Syllable and Mantra Garlands*

On my tongue, a syllable transforms into a moon. On top of it appears a white syllable encircled by the white Sanskrit vowels standing clockwise, the red Sanskrit consonants standing counterclockwise, and the blue Dependent Related Heart Mantra standing clockwise.

On your tongue, in the center, visualize a white syllable . The transforms into a white moon disk, transparent like a magnifying glass and of the nature of light. In the center of the moon disk is a white , standing upright and facing forward. Standing clockwise around the are the white Sanskrit vowels, called in Sanskrit— . Standing counterclockwise around the vowels are the red Sanskrit consonants, called in Sanskrit—

. Standing clockwise around the consonants is the blue Dependent Related Heart Mantra—

. All the letters of the mantras are standing upright and are radiant, like neon signs on hotels and restaurants at night. The three s that begin the three mantras are in front of the syllable that is in the center of the moon disk. The mantra garlands do not circle the in the sense of turning or spinning around it.

## *Visualizing Hooking Back the Power and Blessings of Speech*

Light beams radiate from the syllable        and the mantra garlands, hooking back the blessings and power of the speech of those beyond and not beyond the world in the form of the three mantras, the seven sublime precious objects of a king's reign, the eight auspicious signs, [and the eight auspicious substances].

Those who are beyond the world are the buddhas, arya bodhisattvas abiding on the three pure bhumis, and arhats. Those who are not beyond the world are the yogis who are accomplishing the path and the sages who have actualized words of truth. Due to the power of abiding in silence and living in the morality of abstaining from negative karmas of speech, the words of these sages have much power and so whatever they pray for is successful.

All their blessings and power of speech are hooked back in the form of the three mantras, the seven precious objects of a king's reign, the eight auspicious signs, and the eight auspicious substances, filling the whole sky. They absorb into the mantras on the moon disk on your tongue, like rain falling on the ocean.

Visualize that light beams are emitted from the syllable        and the three mantra garlands on your tongue. They hook back the blessings and power of speech of those who are beyond the world and those who are not beyond the world.

“Those who are beyond the world” does not mean those who are distant from the world, but those who are beyond samsara; that is, beyond aggregates caused by karma and delusions. They are the buddhas, arya bodhisattvas abiding on the three pure bhumis, and arhats—those who have achieved liberation from samsara through developing their minds in renunciation and the wisdom realizing emptiness.

First, visualize that beams are emitted from the syllable        and the three mantra garlands on your tongue and hook back all the blessings and power of their holy speech in the form of the three mantras—the vowels, consonants, and Dependent Related Heart Mantra, which absorb into the mantras on your tongue. Then, beams are emitted and hook back all the blessings and power of

their holy speech in the form of the seven precious objects of a king's reign, the eight auspicious signs, and the eight auspicious substances. These fill the sky in different layers, like the layers of clouds you see when you travel by plane. Visualize that many sets of the seven precious objects of a king's reign absorb into the mantras on your tongue, like snowfall or rainfall. Then visualize that many sets of the eight auspicious signs absorb into the mantras on your tongue, like snowfall or rainfall. Then visualize that many sets of the eight auspicious substances absorb into the mantras on your tongue, like snowfall or rainfall.

Those who are not beyond the world are samsaric beings—those whose aggregates are caused by karma and delusion. They include some yogis. Yogis can be of different levels—those who have achieved high realizations of secret mantra and are beyond samsara and those who are still samsaric beings. The beings who are not beyond the world also include sages who have actualized words of truth. Due to living their whole life in silence and practicing the morality of abandoning negative karmas of speech by abstaining from telling lies, gossiping, and so forth, their words have power and so their prayers are quickly actualized.

Visualize that the blessings and power of the speech of these yogis and sages are hooked back in the form of the three mantras, the seven precious objects of a king's reign, the eight auspicious signs, and the eight auspicious substances. These are not material things; they are of the nature of light. They absorb into the mantras on the moon disk on your tongue, like rain falling on the ocean.

### *Visualizing the Purification of Negative Karmas and Obscurations*

I have added a visualization here that is not mentioned in the actual practice. As you recite the vowels three times, visualize that from each syllable of the white vowels, white nectar beams are emitted. They totally illuminate and fill the inside of your whole body from your feet up to your head, like a glass filled with milk. All your negative karmas and obscurations collected with the body from beginningless rebirths are completely purified.

As you recite the consonants three times, visualize that from each syllable of the red consonants, red nectar beams are emitted and completely fill your

whole body. All your negative karmas and obscurations collected with the speech from beginningless rebirths are completely purified.

As you recite the Dependent Related Heart Mantra three times, visualize that from each syllable of the blue mantra, blue nectar beams are emitted and completely fill your whole body. All your negative karmas and obscurations collected with the mind from beginningless rebirths are completely purified.

### *Reciting the Mantras*

#### Mantras for Blessing the Speech

Concentrate on the visualization and recite the mantras beginning from the inner circle.

Recite the mantras one by one, three times each, beginning with the vowels, the inner circle; then the consonants; and then the Dependent Related Heart Mantra, the outer circle.

When you recite mantras, you have to recite them very clearly and slowly. For example, when you recite the vowels, say (pause), (pause), (pause), (pause), and so forth.

When Kyabje Choden Rinpoche gave a commentary on Secret Vajrapani at Vajrapani Institute, he talked about how important it is to recite mantras correctly. Rinpoche used this example of the Sanskrit vowels to show how they should be recited very clearly and very precisely, with the sounds of all the syllables pronounced correctly.

There are different techniques for reciting these mantras, but according to the great yogi Drubchen Khyungpo, all three mantras—the vowels, consonants, and Dependent Related Heart Mantra—have at the beginning and at the end.

#### Sanskrit Vowels (*Ali*)

As you recite the vowels, white nectar beams flow down from the mantra and fill your whole body. All negative karmas collected

As you recite the mantra, blue nectar beams flow down from the mantra and fill your whole body. All negative karmas collected with your mind from beginningless rebirths are completely purified.

ཨོ་ཡི་ལྷ་མུ་ཏེ་དུ་མ་ལྷ་བུ་ཏེ་དུ་ལྷི་ལྷ་ལྷ་མུ་ག་ཏོ་བྱ་བ་དཏ་ཏེ་ལྷ་ལྷ་ཡོན་རོ་ལྷ་  
ཨོ་འོ་བུ་དྲི་མ་དྲི་བྲ་མ་ཏ་ཡེ་སྐ་དྲི་

Although there is no break in the Tibetan writing, you have to pause between and . This is because if you recite and together as , the mantra would have the very strange meaning of “May the female sex organ be destroyed.” But if you pause after and then recite , it doesn’t mean that. This way of reciting the mantra is explained and emphasized in the texts. Reciting this mantra stops all inauspicious things, gathers all good things, and fulfills all wishes.

### *Absorption of the Mantras*

The Dependent Related Heart Mantra absorbs into the consonants, the consonants into the vowels, the vowels into the syllable , and the into the moon cushion. That transforms into a syllable . The melts into pink nectar and absorbs into my tongue, which becomes of the nature of a vajra.

Your tongue becomes very heavy and strong, as if difficult to move, and as indestructible as a vajra. Generate very strong faith that all the blessings and power of the speech of all the buddhas, bodhisattvas, arhats, yogis, and sages have entered your speech and made it perfect. Think: “My speech has become perfect.”

When you have finished reciting the three mantras, visualize that the outer mantras gradually absorb into the inner ones. First visualize that the Dependent Related Heart Mantra absorbs into the consonants. Then the consonants absorb into the vowels. Then the vowels absorb into the syllable in the center of the moon disk. The syllable absorbs into the moon disk. The moon disk transforms into a syllable, which is what it originally came from. Here you should visualize a Tibetan letter like this, ཨྱེ, with a small ཨ, and the two dots, ེ. The ཨྱེ melts into pink nectar, which absorbs into your tongue. Your tongue becomes the nature of a vajra, indestructible. Eating black foods can no longer destroy the power of your speech. Think that your tongue becomes solid, like iron or a rock, as well as very strong and very heavy, almost as if you cannot move it. Generate very strong faith that the blessings and power of speech of all the buddhas, bodhisattvas, arhats, yogis, and sages have entered your speech and made it perfect. Think: “My speech has become perfect.”

### *The Benefits of Blessing the Speech*

The benefits of blessing the speech are: (1) the power of your speech becomes perfect; (2) whatever you recite is multiplied ten million times; (3) the power of your speech is not taken away by eating wrong foods; and (4) gossiping becomes the recitation of mantra.

When you bless your speech, all the blessings and power of the holy speech of all the buddhas and other holy beings are received in your tongue, and you get an unbelievable number of benefits. I don't know how many millions and zillions of benefits are received! However, there are four particular benefits.

The first benefit of blessing the speech is that it makes the power of your speech perfect. Due to this, when you teach the Dharma, everyone listens to you and practices the Dharma. When you do counseling, everyone pays attention and follows your advice. When you give a lecture, even a political speech, all the people pay attention and listen to you. When you speak to an important person, they listen to you and help you. In short, when your speech

has power, other people listen to you, pay attention to you, and keep your words in their hearts.

Therefore, you should bless your speech in the morning, not only for your recitation of mantras to have power, but even for your ordinary speech to have power. Whether it is to do your job, to request someone's help, or to explain something to someone, your speech needs power. If your speech doesn't have power, nothing will work.

The second benefit of blessing the speech is that any prayer or mantra you recite is multiplied ten million times. For example, if you recite a mantra such as *Om Hrim Namah Shivaya* or the Vajrasattva mantra one time, you get the benefit of having recited it ten million times. It is unbelievably powerful. However, other mantras and practices also do that.

The third benefit is a particular benefit of the practice of blessing the speech—it stops the power of your speech, including the power of your mantras, from being taken away or degenerated by eating black foods. According to the Kadampa text *Practical Buddhist Tantra*, eating garlic takes away the power of speech for seven days, onion for five days, and radish for nine days. There are different types of radish, but I think this is a particular radish that is large, round, and very strong; it makes the breath smell, produces a lot of gas, and pollutes the whole body. Eating nettles causes the power of your speech to be lost for half a year. When nettles are cooked well they are very delicious, but eating them has this shortcoming. Eating animal tongue, in particular sheep tongue, takes away the power of your speech for your whole life. Animals such as sheep are extremely ignorant, so when you eat their meat, in particular the lower parts of their bodies, the heart, and, worst of all, the tongue, due to a dependent arising it dulls your mind and causes your intelligence and wisdom to degenerate. Blessing your speech in the morning stops all the harm that comes from eating these wrong foods.

If you are very sensitive, you can feel the harmful effects of having eaten black foods. They make your mind unclear and can also make your body kind of tough and even cause it to change color. Because black foods destroy the power of your mind and body, in addition to the power of your speech, it is best to avoid eating them. However, it is different for a great yogi of secret mantra who has complete control over their mind and the winds that are the vehicle of the mind. Such a person can eat black foods, and even poisons that

would normally kill an ordinary person, and not be harmed. Instead these foods only become a cause to increase their bliss and realizations.

The fourth benefit is also a particular benefit of the practice of blessing the speech—anything you say, even gossip, becomes the recitation of mantra. If you do the practice of blessing the speech in the morning, from then until sunrise the next morning, by the power of this practice all your gossip becomes the recitation of mantra. This probably means that whatever you say becomes virtue. There are also other specific benefits of blessing the speech. For example, Lama Atisha taught that when reciting a certain number of mantras, such as twenty-one or a hundred, if you engage in ordinary talk before you finish the recitation, your mantras are as if stabbed with a sword and their power is taken away. If you do this blessing of the speech, that doesn't happen.

### *Dedication*

May my tongue sense base  
have all the courage of the ones gone to bliss.  
By the magnificence and power of my words,  
may all sentient beings be subdued.  
May all the meanings of whatever words I say be accomplished.

I added this dedication from a Nyingma prayer book containing a collection of daily practices. It is a very good and important dedication that summarizes the purpose of blessing the speech in three requests.

First dedicate for your tongue sense base, or sense power, to have the courage or power of the ones gone to bliss, the buddhas. Then dedicate for the magnificence and power of your words to subdue the minds of sentient beings, so that when you give teachings and when you talk to others, you will be able to bring inner peace to them by pacifying their delusions, selfish mind, and negative thoughts. Then, when you say, “May all the meanings of whatever words I say be accomplished,” dedicate that whenever you teach the Dharma, or even when you explain something to someone, give someone advice, or ask someone to do something, you will be able to accomplish whatever you say because they will listen to you.

## *Nagarjuna's Heart Practice*

Nagarjuna's heart practice is to recite these three mantras—the Sanskrit vowels, Sanskrit consonants, and Dependent Related Heart Mantra—three times each after doing any virtuous activity of body, speech, or mind. In particular, it is good to recite these mantras after reciting the mantras of a deity when doing a sadhana or during a session in retreat. By doing this, the purpose for which you recited those particular mantras will be accomplished. For example, you can recite mantras for pacification (to pacify sicknesses, harm from spirits, negative karmas, and defilements), for increase (to increase life, merits, wisdom, wealth, and realizations), for control (to have the necessary outer conditions, such as material things, for your practice of Dharma and your actions to benefit others to be successful), or for wrath (to gain control over evil beings so that they listen to you and stop engaging in heavy negative karma, so you can then bring them into the Dharma and to enlightenment).

## A COMMENTARY ON “DAILY MANTRAS” AND “MANTRAS FOR SPECIFIC OCCASIONS”

### *Daily Mantras*

It is very good to recite these mantras first thing in the morning to make your life meaningful and to increase all the merits you collect during the day.

### The Mantra to Bless the Mala

ཨོ་འུ་ཅི་ར་མ་ཉི་མ་བཏུ་ཡ་ཏྟཱི།

Recite this mantra seven times and then blow on your mala. All the recitations you do of the secret mantras taught by the Tathagata are multiplied one hundred sextillion times (10<sup>21</sup>). This is taught in .

If you recite          seven times and then blow on your mala, the power of any mantra taught by the Buddha that you recite, such as          or the Vajrasattva mantra, is increased ten million times one hundred billion times a hundred thousand. Although other mantras can be used to bless the mala in order to increase the power of mantra recitation, the benefits of this one are unbelievable.

This mantra was taught in the sutra

. The name of the sutra is mentioned here to show that this mantra came from the Buddha. The Buddha taught it so that sentient beings' merits could be increased. Due to the power of the Buddha's compassionate wish to bring sentient beings to enlightenment, reciting even one mantra can become very powerful.

I asked a Sanskrit expert how the Sanskrit syllable          should be pronounced. He said that although it can be pronounced         , it is better to say         , as if it had the Tibetan letter          at the end rather than the letter         . However, I don't know what other people who know Sanskrit would say about that.

## The Mantra to Multiply Virtue

ཨོཾ་སྐྱུ་ར་སྐྱུ་ར་བི་མ་ན་ས་ར་མདུ་ཇ་བ་ཏུ། ཨོཾ་སྐྱུ་ར་སྐྱུ་ར་བི་མ་ན་སྐྱུ་ར་  
མདུ་ཇ་བ་ཏུ།

If you recite this mantra seven times, any virtuous activity you do is multiplied by a hundred thousand. This is taught in the

There are many different mantras to increase the merits that you collect during the day. If you recite this particular mantra seven times, any virtuous activity you do with your body, speech, or mind during the day will increase one

hundred thousand times. The Buddha taught this mantra in the

In your daily life, because you don't want suffering and want only happiness, you need to make the fewest mistakes—nonvirtues—possible and create the most merits—virtues—possible. This is because suffering comes from nonvirtue and happiness comes from virtue. Therefore, reciting this mantra is very important; it makes the way you live your life very wise.

## The Zung of the Completely Pure Stainless Light

ན་མཆོད་བ་ན་བ་ཀྱི་ལྷོ། ཏ་སྤྱ་ག་ཏ་གི་སྤྱ་ལྷོ་ལྷོ་ལྷོ་ལྷོ་ལྷོ། ཀོ་ལི་ནི་ལྷོ་ཏ་ཤ།  
ཏ་ས་ཏ་སྤྱ་ལྷོ། ལྷོ་བོ་བོ་རི། ཅ་རི་ཅི་ཅ་རི། མོ་རི་གོ་ལི་ཅ་ལ་སྤྱ་རི་སྤྱ་ལྷོ།

Talking to a person who has recited this mantra purifies even the five heavy negative karmas without break. Just hearing the voice of a person who has recited this mantra, being touched by their shadow, or touching their body purifies negative karmas collected in this and past lives. If you recite this mantra, you won't be harmed by poison, spirits, lightning, and so forth. All the buddhas will protect you, Chenrezig will look after you, and all the devas and those who are living in samaya will support you. You won't be harmed by black magic mantras, rituals, and substances. If this mantra is put inside a stupa, the negative karmas of anyone who sees the stupa, hears of it, touches it, or is touched by earth, dust, or wind that has touched it get purified. They won't be reborn in the lower realms and instead will be born as a happy transmigratory being.

This mantra, one of the dharmakaya relic mantras, is from the Kangyur, the Buddha's teachings. I received the oral transmission of all four mantras and their benefits from Kyabje Kyongla Rato Rinpoche in San Jose, California. It is

good to recite the Zung of the Completely Pure Stainless Light after blessing your speech in the morning, before you begin to talk and engage in impure speech. You can recite it twenty-one times, ten times, or even just three, four, or five times.

The

says that if someone recites this mantra after blessing their speech in the morning, the five heavy negative karmas without break of anyone who talks to them get purified. What does “without break” mean? Without the break of another life. Because these negative karmas are very powerful, right after you die you are reborn in the lowest hell, the inexhaustible hell, where the suffering is the heaviest in samsara and experienced for the longest time—one intermediate eon. And if your karma to be there is not finished when this world ends, you will be reborn in that hell in another universe.

Also, after you have recited this mantra, there is unbelievable benefit for anyone who hears your voice, whose body is touched by your shadow, and who touches your body (for example, a person who shakes your hand or an insect that lands on your body). Not only are their negative karmas of this life purified, but also their negative karmas from past lives. Because even their very heavy negative karmas without break are purified, there is no doubt that their ten nonvirtuous actions are also purified. Therefore, whether you are doing counseling, teaching in a school, or just engaging in conversation, reciting this mantra becomes beneficial for others when they hear your voice. Even if someone is blind and cannot see you, you can speak to them so that they hear your voice and you can touch their body, hands, or face and bring them unimaginable benefit. You should remember this when you are talking to and touching others.

Also, due to reciting this mantra you will be protected by all the buddhas. You will be supported and helped by Chenrezig. All the devas and all those living in samaya will be happy with you. You won't be harmed by others' black magic mantras, rituals, and substances.

If this mantra is put inside a stupa, the negative karmas are purified of anyone who sees the stupa, hears about it, touches it (including the insects that land on it), or is touched by earth, dust, or wind that has touched the stupa, and they won't be reborn in the lower realms. Instead they will be reborn as

happy transmigratory beings, as devas or human beings. In short, it will be impossible for those who are in the lower realms to be born back there again.

Guru Shakyamuni Buddha explained to Bodhisattva Great Sattva Eliminating All Obscurations, Lord of Secrets (Vajrapani), the Four Great Kings, and the gods, including Brahma, who is the lord of this unbearable suffering world; the devas of Brahma Type; and Maheshvara,

Holy beings, I am handing you the essence of the king of secret mantras. You should always respect and offer service to it. Keep it and put it inside a jewel container. Then announce it in all places and unceasingly show it to sentient beings. If you make them see and hear it, their five negative karmas without break will be purified.

Usually big statues and stupas have a life-tree inside them on which the four dharmakaya relic mantras are written in gold, but this mantra can be put in small statues and stupas instead of it. Even if there is just one Zung of the Completely Pure Stainless Light in a statue or stupa, there is unbelievable benefit—the negative karmas and obscurations of anyone who sees it get purified.

### The Mantra of Great Wisdom Bimala Ushnisha

ཨོ་ཨི་ཡ་རྟེ་སའ་ཏ་སྐ་ག་ཏ་ཨི་ད་ཡ་གཞི། རུ་ལ་རྟམ་རྟུ་ཏུ་གཞི། སི་ཏ་ར་ཎ་  
ཞུ་ཡུལ་མོ་རྟེ་ཡ། སྐ་པི་སའ་ཏ་སྐ་ག་ཏ་ས་མཇུ་ཞུ་ཞི་པ་བེ་མ་ལེ་རྟེ་ཤུ་རྟེ་སྐ་རྟེ།

This mantra has two major benefits. The first is that it purifies the five heavy negative karmas without break of anyone who hears it. The second is that because it is the most powerful mantra for

consecration, it can be used to consecrate holy objects as well as rocks, trees, mountains, and so forth.

There are two versions of the Mantra of Great Wisdom Bimala Ushnisha. One version begins with \_\_\_\_\_ and the other with \_\_\_\_\_. The rest of the mantra is the same. I found the first version in a book written by a very great and learned lama in Tibet to educate young incarnate lamas. It explains to them how to do prayers and practices in order to help people, for example, how to do \_\_\_\_\_, transference of consciousness, for the dying, what prayers to do for the sick, and so forth. There must be a valid source for this version of the mantra, but so far I haven't been able to find it in the Kangyur, whereas the version that begins with \_\_\_\_\_ is found in the Kangyur. The benefits of reciting this mantra are mentioned in the book from Tibet. There it says,

After you recite this mantra, if you make one stupa \_\_\_\_\_, it becomes the same as having made ten million stupa tsatsas. Also after you have recited this mantra, if any of the four elements touches you, it becomes twice as powerful as a stupa, and anyone who sees or touches the element will be liberated, their five heavy negative karmas without break will be purified, they will be reborn in a high caste, have a long life and wealth, remember their past lives, be protected from all harm, and achieve enlightenment. This is taught by Drodren Gyalwa Cho.

If you recite this mantra and make a huge stupa, such as a billion-story stupa, or a small tsatsa stupa the size of a fingernail, you receive the same benefit, or the same amount of merit, as having made ten million huge or small stupas.

The merits you receive from making one stupa, which are inconceivable, are multiplied by ten million by reciting this mantra. Because it has this unbelievable benefit, it is important to recite this mantra before you begin the work of building a stupa, but you should also recite it every day during its construction. You can use it to bless the bricks, cement, and any other material that you are going to use. If you were to actually make ten million stupas, even small ones, can you imagine how many years it would take? If you were to build ten million big stupas the size of Lama Yeshe's stupa at Chenrezig

Institute, can you imagine how many lifetimes it would take? But if you recite this mantra when you start to build a stupa, you get the same benefit as having built ten million stupas without needing to undergo all the hardship. The whole point is that the more merit you are able to collect, the more easily and quickly you will be able to achieve enlightenment, which means that you will be able to liberate sentient beings from the sufferings of samsara and bring them to enlightenment more quickly.

By reciting this mantra, if any element—earth, water, fire, or wind—touches your body, it gets blessed. It gains the power to liberate other sentient beings by purifying their negative karmas. For example, if you recite this mantra and then swim in water, the water becomes blessed and when it touches the numberless creatures living in it—from the largest whale down to the tiniest microscopic insect—and when it touches the human beings who are diving and playing in it, they are liberated from their negative karmas and the lower realms. It's the same for the rest of the elements; by your reciting this mantra and touching them, the elements gain the power, double that of a stupa, to purify other sentient beings.

This advice was taught by Drodren Gyalwa Cho, which might be the name of one of Buddha's past lives. However, the term is confusing. means "transmigratory being" and means "guide." I'm not sure whether Drodren Gyalwa Cho is the name of a buddha or if it is simply talking about the function of a buddha, which is to guide transmigratory beings to enlightenment.

This mantra can be recited a few times at the beginning of each day along with other morning prayers and mantras, as well as before making statues, stupas, or tsatsas. The people who, in particular, can use this mantra to benefit others are those who are seen by and who touch many people or animals, such as performers, models, public speakers, teachers, nurses, doctors, veterinarians, and so forth, as well as those who touch objects or elements that other sentient beings see or touch, such as cooks, bakers, potters, artists, painters, factory workers, dry cleaners, swimmers, and so forth.

There are also two major benefits of this mantra. The first is that reciting it purifies the five heavy negative karmas without break of anyone who hears it, whether they created these negative karmas in this life or in past lives. Because of this, I try to chant it, along with Maitreya Buddha's mantra, whenever I

recite mantras for people and animals. Hearing Maitreya Buddha's mantra makes it impossible for that sentient being to be reborn in the lower realms. Also, if they do not become enlightened during Buddha Shakyamuni's time, when Maitreya Buddha descends they will be among his first disciples and will receive teachings from him and a prediction regarding their enlightenment.

The second benefit of this mantra is that it can be used for consecration. In the Kangyur, the Buddha said that among the many different prayers for consecration, this mantra is the most powerful. If you chant this mantra on a holy object, all the buddhas' wisdom absorbs into it. But even if you chant this mantra on a tree, rock, mountain, and so forth, all the buddhas' wisdom absorbs into it and then you and other sentient beings can circumambulate it. Because of this benefit, I often add this mantra to the usual short consecration ritual. Since this mantra is not common and most people don't know it, when I do consecration with others I usually end up being the only one saying the mantra!

Because all the buddhas' wisdom abides in any object on which this mantra is recited, I only recite it on holy objects, since they will be treated with respect. I don't recite it on malas that people give me to bless, because people treat them as ornaments and tend to leave them lying around anywhere. I just recite a few times and then blow on the mala. If that mantra is recited on a mala, when the person touches and uses it, all their negative karmas, and especially their five heavy negative karmas without break, get purified.

In short, because this is a very powerful mantra for consecration, you can use it even if you don't know any other prayers for consecration. Also, when you don't have much time, you can do a short consecration by reciting the mantra of Bimala Ushnisha three times. Then, say the two prayers: "Please, Bhagavan, the destroyer qualified gone beyond one, abide until this world ends," and "Please grant all sentient beings the common and sublime realizations." When there is time you can do a longer version. The most elaborate consecration ritual involves doing sessions for seven days with a lot of offerings and a fire puja at the end. There is another ritual that involves reciting the Yamantaka sadhana, which takes about two hours to do. Then there is a very short consecration that has seven outlines and includes offering a tormo to

the interferers and a bath offering. However, the mantra of Bimala Ushnisha is the most important one

## The Holy Name Mantra That Fulfills Wishes

De zhin sheg pa sa dzin gyäl po la chhag tshäl lo  
To Tathagata Earth-Holder King, I prostrate.

ཏཱ་ཐཱ་ལྷོ་མེག་པ་ས་ཏཱི་འཇམ་མེག་པ་ལ་ཅམ་ག་ཏཱེ་ཤེ་ལོ།

This mantra is found in the Kangyur. You can recite the buddha's name, Sadzin Gyalpo (Earth-Holder King), and the mantra together for one mala, half a mala, or twenty-one times. Although there are other mantras to achieve success, those who are able to and would like to can recite this one. It is not difficult to recite and even if you recite it just a few times, it will be very helpful.

### *Mantras for Specific Occasions*

#### Mantra to Increase the Power of Recitation

ཏཱ་ཐཱ་ལྷོ་མེག་པ་ས་ཏཱི་འཇམ་མེག་པ་ལ་ཅམ་ག་ཏཱེ་ཤེ་ལོ།

I received the oral transmission of this mantra from my guru Geshe Sengé, who was a disciple of Gonsar Rinpoche's previous incarnation in Mongolia. If you recite it seven times before you read a Dharma text, such as , , and so forth, it is as if you read the text millions of times. When you read the text, you should think that you are teaching it to the six-realm sentient beings, who all hear it in their own language.

## Mantra to Bless the Feet

ཨོ་ཕྱི་ཙ་ར་ལྷ་ན་ཕུ་ལྷི་སྤྲ་ལྷ།

My Tibetan prayer book doesn't mention which text this mantra comes from. However, I found it in the .

Some texts say to recite this mantra seven times, others say to recite it three times. After reciting it, don't only blow on the soles of your feet, spit on them. Then, any insects that die under your feet that day will be reborn in the deva realm of the Thirty-Three. Although the text says to spit on your feet, since you usually wear shoes, after reciting it seven or three times you should spit on the soles of your shoes because they are what actually kill the insects. If you generate faith and do this practice, it will be of great benefit to sentient beings.

I also suggest that before you drive somewhere you chant this mantra and then spit on the wheels of the car, which are what touch the ground. Or you can chant the mantra over some water, blow on it, and then sprinkle it on the wheels. Since there are definitely many insects on the roads, they will get killed when you drive a car, but if you do this at least they will get a higher rebirth. If you are working in a garden or building something, you can also recite this mantra and spit on the tools you are using. Don't only think to bless your feet or shoes—you can bless anything that could kill sentient beings.

In short, any time you find yourself in a place or situation where there is the danger of crushing and killing sentient beings, it is good to recite this mantra. Therefore, you should write it in a notebook and carry it with you all the time in case you need to recite it but can't remember it. Reciting it makes your life very fruitful and beneficial for other sentient beings. You should think from your heart that this mantra for blessing the feet and other things is important. It is one way to make your life meaningful. I want to emphasize this because otherwise, although this mantra is in your prayer book, you might never use it. Don't do that! You must take advantage of this practice, since it is the Buddha's way of helping you by making it very easy for you to purify negative karmas, collect merits, gain realizations, and achieve enlightenment quickly. You must think about that and you must take each opportunity to use it. Don't just leave this mantra in your prayer book and then die without ever having taken advantage of it while you were alive!

## GLOSSARY

---

( ). The dharmakaya; the omniscient mind of a buddha, free from all gross and subtle delusions, compared to the conventional guru, the spiritual teacher.

( ). The psychophysical constituents that make up a sentient being: form, feeling, discrimination, compositional factors, and consciousness. Beings of the desire and form realms have all five, whereas beings in the formless realm no longer have the aggregate of form.

. Mitrūkpa

( ). One of the five buddha families or types (Dhyani Buddhas), red in color, representing the wisdom of discernment and the fully purified aggregate of discrimination. five buddha types.

( ). One of the five buddha families or types (Dhyani Buddhas), green in color, representing the all-accomplishing wisdom and the fully purified aggregate of compositional factors. five buddha types.

. A disturbing thought that exaggerates the negative qualities of an object and wishes to harm it; one of the six root delusions.

( ). Literally, “foe destroyer.” A person who has destroyed their inner enemy, the delusions, and attained liberation from cyclic existence.

( ). Literally, “noble.” One who has realized the wisdom of emptiness.

(982–1054). The renowned Indian master who went to Tibet in 1042 to help in the revival of Buddhism and established the Kadam tradition. His text

( ) was the first lamrim text.

. A disturbing thought that exaggerates the positive qualities of an object and wishes to possess it; one of the six root delusions.

. Chenrezig.

( ). Epithet for a buddha; one who has destroyed ( ) all the defilements, possesses all qualities ( ), and has transcended the world ( ).

( ). A principal consciousness that combines the two factors of wishing to free all beings from suffering and wishing to attain enlightenment in order to accomplish that.

( ). One who possesses bodhichitta.

The vows taken when you enter the bodhisattva path.

, ( ). A fully enlightened being. One who has totally eliminated ( ) all obscurations veiling the mind and has fully developed ( ) all good qualities to perfection. enlightenment.

, . The historical Buddha. Shakyamuni Buddha

The teachings of the Buddha. Dharma.

( , , or ). graduated path of the three capable beings.

( ). Compassion Buddha. The meditational deity embodying the compassion of all the buddhas. The Dalai Lamas are said to be emanations of this deity.

( , ). The wish that others be free from suffering.

Chenrezig

wisdom mother.

( ). As opposed to ultimate truth, which is the understanding of the ultimate nature of reality (emptiness), conventional truth is what is true to the valid conventional consciousness. It is also called concealer truth or all-obscuring truth because, although true on one level, it obscures the ultimate nature. Conventional and ultimate truth form the important subject in Buddhist philosophy called the two truths. ultimate truth.

samsara.

(b. 1935). Gyalwa Tenzin Gyatso. Revered spiritual leader of the Tibetan people and tireless worker for world peace; winner of the Nobel Peace Prize in 1989; a guru of Lama Zopa Rinpoche.

( , ). An emanation of the enlightened mind used as the object of meditation in tantric practices.

( , ). An obscuration covering the essentially pure nature of the mind, causing suffering and dissatisfaction; the main delusion is ignorance, and all the others come from this. root delusions; three poisons.

( , ). A being in the god realms who enjoys greater comfort and pleasure than human beings but who suffers from jealousy and quarreling. six realms; cyclic existence. god.

( ). The second refuge jewel. Literally, “that which holds or protects (from suffering)” and hence brings happiness and leads you toward liberation and enlightenment. In Buddhism, absolute Dharma is the realizations attained along the path to liberation and enlightenment, and conventional Dharma is seen as both the teachings of the Buddha and virtuous actions.

( ). The truth body of a buddha (the other “body” being the form body, or rupakaya); the blissful omniscient mind of a buddha, the result of the wisdom side of the path. It can be divided into the wisdom body ( ; ) and the nature body ( ; ). rupakaya delusion.

( ; ). Also known as , these are the grosser of the two types of obscurations, the ones that block liberation. obscurations to knowledge; two obscurations.

. The eight internal and external dangers or fears that Tara saves us from. They are the fear of: fire and hatred; water and attachment; lions and pride; elephants and ignorance; hungry ghosts and doubt; imprisonment and miserliness; thieves and wrong views; and snakes and jealousy.

One-day vows to abandon killing; stealing; lying; sexual contact; taking intoxicants; sitting on high seats or beds; eating at an inappropriate time; and singing, dancing, and wearing perfumes and jewelry.

( ; ). The absence, or lack, of true existence. Ultimately every phenomenon is empty of existing truly or from its own side or independently.

( ; ). Full awakening; buddhahood; omniscience. The ultimate goal of a Mahayana Buddhist, attained when all limitations have been removed from the mind and the positive potential has been completely and perfectly realized. It is a state characterized by infinite compassion, wisdom, and skill.

( ). A world period, an inconceivably long period of time. The life span of the universe is divided into four great eons, which are themselves divided into twenty lesser eons.

The absence of the usual discrimination of sentient beings into friend, enemy, or stranger, deriving from the realization that all sentient beings are equal in wanting happiness and not wanting suffering and that since beginningless time all beings have been all things to each other. An impartial mind that serves as the basis for the development of great love, great compassion, and bodhichitta.

( ). Also known as five Dhyani buddhas. Five buddhas that represent a different aspect of enlightenment, linked to a fully purified aggregate and a fully purified delusion. They are (white, form aggregate, transforming ignorance into the mirror-like wisdom); (yellow, feeling aggregate, transforming miserliness or pride into the wisdom of equality); (red, discrimination aggregate, transforming desire into the wisdom of discernment); (green, compositional factors aggregate, transforming jealousy into the all-accomplishing wisdom); and (blue, consciousness aggregate, transforming anger into dharmadhatu wisdom).

. The ways in which our world is degenerating: the degenerations of mind, lifespan, sentient beings, time, and view.

( ; ). The five actions that are so heavy that they are the cause to be reborn in hell immediately after death. They are killing your father or mother, killing an arhat, maliciously drawing blood from a buddha, and creating a schism in the sangha.

( ; ). The precepts taken by lay Buddhist practitioners for life, to abstain from killing, stealing, lying, sexual misconduct, and taking intoxicants. pratimoksha vows.

( ; ).  
Similar to the five immediate negativities in that they are the cause to be reborn in hell immediately after death, they are: killing a bodhisattva, killing an arya not yet an arhat, defiling your mother or a female arhat, stealing property from the sangha, and destroying a stupa.

The paths along which beings progress to liberation and enlightenment: the path of merit, the path of preparation, the path of seeing, the path of meditation, and the path of no more learning.

The five forces to be practiced both in this life and at the time of death: the power of motivation, the power of acquaintance, the power of the white seed (developing positive qualities), the power of destruction (of self-cherishing), and the power of prayer.

( ; ). The wisdoms possessed by a buddha, they are the mirror-like wisdom, the wisdom of equality, the all-accomplishing wisdom, the wisdom of discernment or discriminating wisdom, and the dharmadhatu wisdom.

. Four mantras placed in holy objects such as stupas. Simply circumambulating an object containing these mantras purifies the karma to be reborn in the hot hells. They are the Stainless Pinnacle Deity Mantra ( ), the Secret Relic Mantra ( ), the Zung of the Completely Pure Stainless Light ( ), and Hundred Thousand Ornaments of Enlightenment ( ).

( ). Also known as the or the ( ), these are four states of mind or aspirations: loving-kindness ( ; ), compassion ( ; ), sympathetic joy ( ; ), and equanimity ( ; ). They are usually expressed in this prayer, which also has longer variations: May all sentient beings have happiness and its causes, be free from suffering and its causes, be inseparable from sorrowless bliss, and abide in equanimity.

The subject of the Buddha's first turning of the wheel of Dharma: the truths of suffering, the origin of suffering, the cessation of suffering, and the path leading to the cessation of suffering as seen by an arya.

( ). The four practices used to purify nonvirtuous imprints on the mindstream. They are: the , taking refuge in the Three Rare Sublime Ones and generating bodhichitta; the , feeling deep regret for the negativity committed; the , determining not to repeat that negativity; and the , a practice such as Vajrasattva that effectively acts as an antidote to the negativity.

One of the four main traditions of Tibetan Buddhism, it was founded by Lama Tsongkhapa in the early fifteenth century and has been propagated by such illustrious masters as the successive Dalai Lamas and Panchen Lamas.

. Literally, “elder.” A title of respect.

Literally, “a spiritual friend.” The title conferred on those who have completed extensive studies and examinations at Geluk monastic universities.

( ). A being dwelling in a state with much comfort and pleasure in the god realms of the desire, form, or formless realms.

lamrim.

Also known as the or the three levels of the lower, middle, and higher capable being, based on the motivations of trying to attain a better future rebirth, liberation, and enlightenment respectively. higher capable being; middle capable being; lower capable being.

( ; ). The compassion that includes not only the wish for all sentient beings to be free from suffering and its causes but the heartfelt determination to accomplish this on your own.

immeasurable compassion.

( ). The inspirational text written by the eight-century Indian master Shantideva.

( ). A spiritual guide or teacher. One who shows a disciple the path to liberation and enlightenment. Literally, “heavy”—heavy with knowledge of the Dharma. In tantra, your teacher is seen as inseparable from the meditational deity and the Three Rare Sublime Ones.

The sutra or tantra practice of seeing the guru as a buddha, then devoting yourself to him or her with thought and action.

The historical Buddha. Lama Zopa Rinpoche often adds “Guru” to remind us of the inseparability of the guru and the Buddha.

The fundamental tantric practice whereby your guru is seen as identical with the buddhas, your personal meditational deity, and the essential nature of your own mind.

A samsaric being in the realms of gods ( ), or demigods ( ), or humans ( ). The samsaric realm with the greatest suffering. There are eight hot hells, eight cold hells, and four neighboring hells. six realms; cyclic existence.

( ). Also called , one of the five afflicted views that are part of the root afflictions. A deluded intelligence that rejects the existence of something that exists, such as karma, reincarnation, the Three Rare Sublime Ones, and so forth, and ascribes existence to that which is nonexistent, such as inherent existence. It is also the holding of incorrect views about the guru.

The highest of the three levels of practice or scopes, it has the goal of full enlightenment. graduated path of the three capable beings; lower capable being; middle capable being.

( ). The fourth and supreme division of tantric practice, sometimes called . It consists of generation and completion stages. Through this practice you can attain full enlightenment within one lifetime. kriya tantra.

. Literally, “Small, or Lesser, Vehicle.” One of the two general divisions of Buddhism, the other being the Mahayana. His Holiness the Dalai Lama usually refers to this as the (with the Mahayana referred to as the ). It can also be called as compared to . Hinayana practitioners’ motivation for following the Dharma path is principally their intense wish for personal liberation from samsara. Two types of Hinayana practitioner are identified: hearers ( ) and solitary realizers ( ). Mahayana; individual liberation.

( ). The hungry ghost realm is one of the three lower realms of cyclic existence, where the main suffering is hunger and thirst. six

realms; cyclic existence.

( ; ). Literally, “not seeing” that which exists or the way in which things exist. There are basically two kinds: ignorance of karma and ignorance of ultimate truth. The fundamental delusion from which all others spring. The first of the twelve links of dependent origination.

( ). The gross and subtle levels of the transience of phenomena, gross being the observable changes in things and events, and subtle being the moment-by-moment disintegration that happens the moment they come into existence.

. One of the initial practices of the graduated path of the lower capable being, showing how fragile this precious life is and how you must not waste a moment of it.

( ). The seed, or potential, left on the mind by positive or negative actions of body, speech, and mind.

The liberation achieved by the hearer ( ) or the solitary realizer ( ) within the Hinayana tradition, as compared with enlightenment achieved by a practitioner of the Mahayana tradition.

. A transmission received from a tantric master allowing a disciple to engage in the practices of a particular meditational deity. It is also referred to as an and can be given as a full empowerment ( ) or a permission to practice ( ).

( ). The state between death and rebirth.

. A powerful tantric practice done when somebody has just died to try to influence their next rebirth.

A practitioner of Kadam lineage. Kadampa geshees are renowned for their practice of thought transformation.

Literally, “translation of the [Buddha’s] word.” The part of the Tibetan canon consisting of 108 volumes that contains the sutras and tantras. Commentaries on this from Indian and Tibetan masters are contained in the Tengyur, which consists of about 225 volumes (depending on the edition).

( ). Action; the working of cause and effect, whereby positive (virtuous) actions produce happiness and negative (nonvirtuous) actions produce suffering.

(1926–2006). A highly attained and learned ascetic yogi who lived in Dharamsala, India, and who was one of Lama Zopa Rinpoche's gurus.

The monastery near Boudhanath in the Kathmandu Valley, Nepal, founded by Lama Yeshe and Lama Zopa Rinpoche.

( ; ). The first of the four classes of tantra, it emphasizes external activities, such as prayers, mudras, and so forth.

highest yoga tantra.

. A deity belonging to one of the lower tantras, known as the king of the deities purifying the lower realms. Somebody who has died who has a Kunrik practice or puja performed for them will be liberated from the lower realms, even if they have already been born there.

( ). A spiritual guide or teacher; one who shows a disciple the path to liberation and enlightenment.

Atisha Dipamkara Shrijnana.

Tsongkhapa, Lama Jé Losang Drakpa.

. The graduated path. A presentation of Shakyamuni Buddha's teachings in a form suitable for the step-by-step training of a disciple. The lamrim was first formulated by the great Indian teacher Atisha when he came to Tibet in 1042. Atisha; three principal aspects of the path.

( or ). The state of complete freedom from samsara; the goal of a practitioner seeking his or her own escape from suffering.

A spiritual teacher who is in the line of direct guru-disciple transmission of teachings, from Buddha to the teachers of the present day.

( ; ). In the context of the seven points of cause and effect, the wish for all beings to have happiness and its causes, with the added dimension of ("beautiful" or "affectionate"); often translated as "affectionate loving-kindness." Rinpoche suggests this is the "loving-kindness of seeing others in beauty."

The first of the three levels of practice or scopes, the lower capable being has the goal of a better future existence. graduated path of the three capable beings; higher capable being; middle capable being.

The three realms of cyclic existence with the most suffering: the hell being ( ), hungry ghost ( ), and animal ( ) realms.

six realms; cyclic existence.

. Literally, “Great Vehicle.” It is one of the two general divisions of Buddhism. Mahayana practitioners’ motivation for following the Dharma path is principally their intense wish for all sentient beings to be liberated from samsara and to attain the full enlightenment of buddhahood in order to accomplish this. The Mahayana has two divisions,

( ) and (also known as or ).

( ). After Shakyamuni Buddha, the next (fifth) of the thousand buddhas of this fortunate eon to descend to turn the wheel of Dharma. Presently residing in the pure land of Tushita ( ). Recipient of the method lineage of Shakyamuni Buddha’s teachings, which, in a mystical transmission, he passed on to Asanga.

( ) A rosary of beads for counting mantras.

( ). A circular diagram symbolic of the entire universe. The abode of a meditational deity.

( ). The buddha (or bodhisattva) of wisdom. Recipient of the wisdom lineage of Shakyamuni Buddha’s teachings, which he passed on to Nagarjuna.

( ). Literally, “mind protection.” Mantras are Sanskrit syllables usually recited in conjunction with the practice of a particular meditational deity; they embody the qualities of the deity with which they are associated.

The four external and internal hindrances or obstacles to our spiritual progress. They are the mara of the (contaminated) aggregates, the mara of delusions, the mara of the Lord of Death, and the mara of the deva’s son (the demon of desire and temptation).

( ; ). A buddha who vowed as a bodhisattva to be able to completely free all sentient beings from their illnesses.

( ). Familiarization of the mind with a virtuous object. There are two types: single-pointed ( ), also called , , or ; and analytic or insight meditation ( ).

. Positive imprints left on the mind by virtuous, or Dharma, actions. The principal cause of happiness. two merits.

. All aspects of the path to enlightenment other than those related to emptiness, principally associated with the development of loving-kindness, compassion, and bodhichitta.

The second of the three levels of practice or scopes, the middle capable being has the goal of liberation from suffering. graduated path of the three capable beings; higher capable being; lower capable being.

( ). One of the five buddha types or families, blue in color, representing the dharmadhatu wisdom and the fully purified aggregate of consciousness. five buddha types.

The mythical center of the universe in Buddhist cosmology.

( ). Literally, seal or token; a symbolic hand gesture, endowed with power not unlike a mantra.

( ) Snakelike beings of the animal realm who live in or near bodies of water; commonly associated with fertility of the land but can also function as protectors of religion.

. A Mahayana Buddhist monastic university founded in the fifth century in North India, not far from Bodhgaya, which served as a major source of the Buddhist teachings that spread to Tibet.

( ). One of three long-life deities, with Amitayus and White Tara.

. Negative karma; that which results in suffering.

( ). Liberation; the state of complete freedom from samsara; the goal of the practitioner of the individual liberation path. “Lower nirvana” is used to refer to this state of self-liberation, while “higher nirvana” refers to the supreme attainment of the full enlightenment of buddhahood. “Natural nirvana” is the fundamentally pure nature of reality, where all things and events are devoid of any inherent existence.

A two-day thousand-arm Chenrezig retreat that involves fasting, prostrations, and silence.

( ; ). One of the two obscurations, these are the more subtle ones that block enlightenment; also known as , and . disturbing-thought obscurations; two obscurations.

OM MANI PADME HUM. The ; the mantra of Chenrezig, buddha of compassion.

(1871–1941). An influential and charismatic lama of the Geluk order, Pabongka Rinpoche was the root guru of His Holiness the Dalai Lama's senior and junior tutors. He also gave the teachings compiled in .

. The eighth-century Indian tantric master who played a key role in establishing Buddhism in Tibet; he is revered by all Tibetans but especially by followers of the Nyingma tradition, which he founded. Often known in Tibetan as Guru Rinpoche.

Scholar; learned person.

The final nirvana the Buddha attained when he passed away in Kushinagar.

The rare human state, qualified by eight freedoms and ten richnesses, which is the ideal condition for practicing the Dharma and attaining enlightenment. The eight freedoms are being free from being born as a hell being, hungry ghost, animal, long-life god, or barbarian, or in a dark age when no buddha has descended, holding wrong views, and being born with mental or physical problems that preclude you from understanding the Dharma. The ten richnesses are being born as a human being, in a Dharma country, and with perfect mental and physical faculties; not having committed any of the five immediate negativities; having faith in the Buddha's teachings; being alive when a buddha has descended, the teachings have been revealed, the complete teachings still exist, and when there are still followers of the teachings; and having the necessary conditions to practice the Dharma, such as the kindness of others.

( ). Sutras pertaining to the Buddha's second turning of the wheel of Dharma, in which the wisdom of emptiness and the path of the bodhisattva were set forth.

Perfection of Wisdom.

. The various levels of individual liberation vows for lay and ordained, including the five lay vows, the novice vows, and full ordination taken by monks and nuns.

vows.

( ). The practices that prepare the mind for successful tantric meditation by removing hindrances and accumulating merit. These practices are found in all schools of Tibetan Buddhism and are usually done 100,000 times each; the four main practices are recitation of the refuge formula, mandala offerings, prostrations, and Vajrasattva mantra recitation. The Geluk tradition adds five more: guru yoga, water bowl offerings, Damtsig Dorjé purifying meditation, making , and the Dorjé Khadro burning offering practice. The term is also used to refer to the practices done on a daily basis before the main meditation session, such as cleaning the room, setting up the altar, doing a breathing meditation, and the preliminary prayers.

Paying respect to the guru-deity with body, speech, and mind; one of the tantric preliminaries.

A worldly or enlightened being who protects Buddhism and its practitioners.

. Literally, “offering”; a religious ceremony. The term is usually used to describe an offering ceremony such as the ( ).

A pure land of a buddha is a place where there is no suffering. In some but not all pure lands, after taking birth, the practitioner receives teachings directly from the buddha of that pure land, allowing them to actualize the rest of the path and then become enlightened.

. The elimination from the mind of negative imprints left by past nonvirtuous actions, which would otherwise ripen into suffering. The most effective methods of purification employ the four opponent powers, the powers of the dependence, regret, restraint, and the remedy.

( ). One of the five buddha types, yellow in color, representing the wisdom of equality and the purification of the feeling aggregate. five buddha types.

A valid mind that holds a stable, correct understanding of a Dharma subject, such as emptiness, that effects a deep change within the continuum of the person. The effortless experience resulting from study and meditation supported by guru devotion and ripened by purification and merit-building practices.

. The door to the Dharma path. Having taken refuge from the heart, you become an inner being or Buddhist. There are three levels of refuge—Hinayana, Mahayana, and Vajrayana—and two or three causes necessary for taking refuge: the sufferings of samsara in general and lower realms in particular; that Buddha, Dharma, and Sangha have the qualities and power to lead you to happiness, liberation, and enlightenment; and (for Mahayana refuge) for all sentient beings.

. The state of mind of not having the slightest attraction to samsaric pleasures for even a second and having the strong wish for liberation. The first of the three principal aspects of the path to enlightenment. bodhichitta; emptiness.

Literally, “precious one.” Epithet for an incarnate lama, that is, one who has intentionally taken rebirth in a human form to benefit sentient beings on the path to enlightenment.

One of the six groups of mental factors, these are the deluded or nonvirtuous minds that subsequently lead to the secondary afflictions. There are six: desire, anger, pride, ignorance, afflicted doubt, and afflicted view. mental factors.

( ). The form body of a fully enlightened being; the result of the complete and perfect accumulation of merit. It has two aspects: ( , enjoyment body), in which the enlightened mind appears to benefit highly realized bodhisattvas; and ( , emanation body), in which the enlightened mind appears to benefit ordinary beings. dharmakaya.

Method of accomplishment; the step-by-step instructions for practicing the meditations related to a particular meditational deity.

( ). Cyclic existence; the six realms of conditioned existence, three lower—hell being ( ), hungry ghost ( ), and animal ( )—and three upper—human ( ), demigod ( ), and god ( or ). The beginningless, recurring cycle of death and rebirth under the control of karma and delusion, fraught with suffering. Also refers to the contaminated aggregates of a sentient being.

( ). Spiritual community; the third of the Three Rare Sublime Ones. In Tibetan literally means “intending ( ) to virtue ( ).”

( ; ). In tantric visualizations, a Sanskrit syllable arising out of emptiness and out of which the meditational deity in turn arises. A single syllable representing a deity's entire mantra.

The self-centered attitude of considering your own happiness to be more important than that of others.

An unenlightened being; any being whose mind is not completely free from gross and subtle obscurations.

. As explained in the Lama Tsongkhapa Daily Guru Yoga Meditation, these are the seven types of wisdom that need to be attained: great wisdom, clear wisdom, quick wisdom, profound wisdom, wisdom of explaining (the Dharma), wisdom of debating, and wisdom of composing.

(563–483 BC). Fourth of the one thousand founding buddhas of this present world age. Born a prince of the Shakya clan in North India, he taught the sutra and tantra paths to liberation and enlightenment; founder of what came to be known as Buddhism. (From , “fully awake.”)

(685–763). The Indian Buddhist philosopher and bodhisattva who wrote the quintessential Mahayana text,

( ).

( ). The practices of a bodhisattva. On the basis of bodhichitta, a bodhisattva practices the six perfections: generosity, morality, patience, enthusiastic perseverance, concentration, and wisdom.

The general way that Buddhism divides the whole of cyclic existence, with three suffering realms (hell, hungry ghost, and animal) and three fortunate realms (human, demigod, and god). samsara.

root delusions.

. Beings not usually visible to ordinary people; they can belong to the hungry ghost or god realms, and they can be beneficent as well as harmful.

A dome-shaped structure, often containing Buddhist relics, that represents the enlightened mind; stupas range in size from huge to a few inches in height.

. obscurations to knowledge

A discourse of the Buddha recognized as a canonical text.

The secret teachings of the Buddha; a scriptural text and the teachings and practices it contains. Also called \_\_\_\_\_ or \_\_\_\_\_.

(\_\_\_\_\_). A female meditational deity who embodies the enlightened activity of all the buddhas; often referred to as the mother of the buddhas of the past, present, and future. The \_\_\_\_\_ prayer is the most popular prayer for lay and ordained Tibetans alike.

(\_\_\_\_\_). Epithet for a buddha; literally, “one who has gone to suchness.”

\_\_\_\_\_. General actions to be avoided so as not to create negative karma. Three of body (killing, stealing, and sexual misconduct); four of speech (lying, speaking harshly, slandering, and gossiping); and three of mind (covetousness, ill will, and wrong views).

\_\_\_\_\_. Also called \_\_\_\_\_. Used in the practice of confessing and purifying negative karmas, the group of thirty-five buddhas visualized while reciting the \_\_\_\_\_ and performing prostrations.

\_\_\_\_\_. Attachment, anger, and ignorance.

\_\_\_\_\_. The three main divisions of the lamrim: renunciation, bodhichitta, and the right view (of emptiness).

(\_\_\_\_\_ ; \_\_\_\_\_). Also called the \_\_\_\_\_ or \_\_\_\_\_; the objects of Buddhist refuge: the Buddha, Dharma, and Sangha. Lama Zopa Rinpoche prefers “Three Rare Sublime Ones” as a more direct translation of \_\_\_\_\_.

\_\_\_\_\_. Sentient beings who pass from one realm to another, taking rebirth within cyclic existence.

### Three Rare Sublime Ones

\_\_\_\_\_, \_\_\_\_\_ (1357–1419). Founder of the Geluk tradition of Tibetan Buddhism and revitalizer of many sutra and tantra lineages as well as the monastic tradition in Tibet.

(\_\_\_\_\_). The Joyous Land. The pure land of the thousand buddhas of this eon, where the future buddha, Maitreya, and Lama Tsongkhapa reside.

(\_\_\_\_\_ ; \_\_\_\_\_). Also called the \_\_\_\_\_ or \_\_\_\_\_: the merit of virtue (also called the \_\_\_\_\_ or the \_\_\_\_\_), which develops the method side of the path by practicing generosity and so forth; and the merit of (transcendental)

wisdom (also called the *śūnyatā*), which develops the wisdom side of the path by meditation on emptiness and so forth.

(*āvaraṇa*; *āvaraṇa*). Deluded mental states that block the attainment of liberation and enlightenment. They are the grosser kind, called disturbing-thought obscurations or obscurations to liberation (*āvaraṇa*, *āvaraṇa*); and the subtle obscurations, the imprints left when those are purified, called obscurations to knowledge or obscurations to enlightenment (*āvaraṇa*, *āvaraṇa*).

. The paths of method and wisdom.

(*saṃvṛta*; *saṃvṛta*). The two ways of relating to phenomena: conventional or all-obscuring truth (*saṃvṛta*; *saṃvṛta*), which is the truth to a worldly mind; and ultimate truth (*paramārtha*; *paramārtha*), the truth to a mind engaged in ultimate analysis conventional truth, ultimate truth.

(*paramārtha*, *paramārtha*). One of the two truths, the other being conventional truth. It is the understanding of the ultimate nature of things and events, emptiness. *paramārtha* conventional truth.

(*śūnyatā* or *śūnyatā*). One of the five buddha types, white in color, representing mirror-like wisdom and the purification of the form aggregate. *śūnyatā* five buddha types.

(*śūnyatā*). Literally, “adamantine”; the four- or five-spoke implement used in tantric practice.

(*śūnyatā*). A male meditational deity embodying the power of all enlightened beings to accomplish their goals.

(*śūnyatā*) A male meditational deity symbolizing the inherent purity of all buddhas. A major tantric purification practice for removing obstacles created by negative karma and the breaking of vows.

. Another name for *śūnyatā*; the Adamantine Vehicle; the second of the two Mahayana paths. It is also called *śūnyatā* or *śūnyatā*. This is the quickest vehicle of Buddhism, as it allows certain practitioners to attain enlightenment within a single lifetime.

. Positive karma; that which results in happiness.

. Precepts taken on the basis of refuge at all levels of Buddhist practice. Pratimoksha precepts (vows of individual liberation) are the main vows in the Hinayana tradition and are taken by monks, nuns, and laypeople; they

are the basis of all other vows. Bodhisattva and tantric vows are taken in the Mahayana tradition in association with a tantric initiation.

. Different levels of insight into the nature of reality. There are, for example, the three wisdoms of hearing, contemplation, and meditation. Ultimately, there is the wisdom of realizing emptiness, which frees beings from cyclic existence and eventually brings them to enlightenment. The complete and perfect accumulation of wisdom results in the dharmakaya.

( ). A tantric consort.

. Also called . A jewel that brings its possessor everything that they desire.

A highly realized male meditator.

(1905–1984). A powerful Gelukpa lama renowned for his wrathful aspect, who had impeccable knowledge of Tibetan Buddhist rituals, art, and science.

( ). Zungs resemble mantras, but are usually longer than a mantra, consisting of a homage or invocation of the deity, followed by a request to act.

## ABOUT THE AUTHOR

---

LAMA ZOPA RINPOCHE is one of the most internationally renowned masters of Tibetan Buddhism, working and teaching ceaselessly on almost every continent.

He is the spiritual director and cofounder of the Foundation for the Preservation of the Mahayana Tradition (FPMT), an international network of Buddhist projects, including monasteries in six countries and meditation centers in over thirty; health and nutrition clinics, and clinics specializing in the treatment of leprosy and polio; as well as hospices, schools, publishing activities, and prison outreach projects worldwide.

Lama Zopa Rinpoche is the author of numerous books, including *Patience*, *The Six Perfections*, *Bodhichitta*, *The Four Noble Truths*, *Transforming Problems into Happiness*, *How to Enjoy Death*, *Ultimate Healing*, *The Door to Satisfaction*, *How to Be Happy*, *Wholesome Fear*, *Wisdom Energy*, and *Dear Lama Zopa*, all from Wisdom Publications.

## ABOUT THE EDITOR

Gordon McDougall was director of Cham Tse Ling, the FPMT's Hong Kong center, for two years in the 1980s and worked for Jamyang Buddhist Centre in London from 2000 to 2007. He helped develop the Foundation of Buddhist Thought study program and administered it for seven years. Since 2008 he has been editing Lama Zopa Rinpoche's teachings for Lama Yeshe Wisdom Archive and Wisdom Publications.

## ABOUT THE PAINTER

Peter Iseli, born in 1947, studied thangka painting with Chating Jamyang la and his master student Sherab la; with Jampa la, the Tibetan state artist; and at the Library of Tibetan Works & Archives. Iseli lives in Bern, Switzerland.

## WHAT TO READ NEXT FROM WISDOM PUBLICATIONS

---

### **Patience**

*A Guide to Shantideva's Sixth Chapter*

Lama Zopa Rinpoche

“Often in the West we think that patience is passive aggression: waiting for that horrible thing to go away. Lama Zopa Rinpoche shows us in great detail how to cultivate actual patience, the practice of the bodhisattva: wholeheartedly welcoming the problems. Rinpoche’s powerfully experiential teachings give us the confidence to know that we can do it, too.”

—Ven. Robina Courtin

### **Six Perfections**

*The Practice of the Bodhisattvas*

Lama Zopa Rinpoche

“A jewel of a book, containing much practical advice on how we can start working on these six precious practices, even if we are not yet bodhisattvas.”

—Sangye Khadro (Kathleen McDonald), author of *How to Meditate*

### **Bodhichitta**

*Practice for a Meaningful Life*

Lama Zopa Rinpoche

An accessible, inspiring book on one of the most important topics in Tibetan Buddhism, written by one of its renowned masters who has an international

following of thousands.

### **The Four Noble Truths**

*A Guide to Everyday Life*

Lama Zopa Rinpoche

The Buddha's profound teachings on the four noble truths are illuminated by a Tibetan master simply and directly, so that readers gain an immediate and personal understanding of the causes and conditions that give rise to suffering as well as the spiritual life as the path to liberation.

### **How to Be Happy**

Lama Zopa Rinpoche

“Rinpoche works with determination and great sincerity in the service of Buddha's teachings and sentient beings.”

—His Holiness the Dalai Lama

### **Transforming Problems into Happiness**

Foreword by His Holiness the Dalai Lama

Lama Zopa Rinpoche

“A masterfully brief statement of Buddhist teachings on the nature of humanity and human suffering. . . . This book should be read as the words of a wise, loving parent.”

—*Utne Reader*

### **How to Face Death without Fear**

*A Handbook by Lama Zopa Rinpoche*

“The reality of death is an important opportunity for spiritual transformation. Kyabje Lama Zopa Rinpoche's combined teachings and practices lead the reader to an understanding of this reality and help the person who is dying to

achieve a better future life. Rinpoche's clarity and blessings will be tremendously beneficial."

—Yangsi Rinpoche, president, Maitripa College

### **Bliss of Inner Fire**

*Heart Practice of the Six Yogas of Naropa*

Lama Thubten Yeshe

Foreword by Lama Zopa Rinpoche

"An impressive contribution to the growing body of Buddhist literature for an English-reading audience."

—*The Midwest Book Review*

### **Introduction to Tantra**

Lama Thubten Yeshe

Edited by Jonathan Landaw

Foreword by Philip Glass

"The best introductory work on Tibetan Buddhist tantra available today."

—Janet Gyatso, Harvard University

### **Becoming Vajrasattva**

*The Tantric Path of Purification*

Lama Thubten Yeshe

Foreword by Lama Zopa Rinpoche

"Lama Yeshe was capable of translating Tibetan Buddhist thought not only through language, but by his presence, gestures, and way of life."

—Gelek Rinpoche, author of *Good Life, Good Death*

### **Ultimate Healing**

*The Power of Compassion*

Lama Zopa Rinpoche

“This truly is an awesome book.”

—Lillian Too

ISBN:

**T**he world is witnessing  
in 2022, a phase where  
technology and social trends  
imposed by the Ruling  
Forces push the world's  
population into a sense of  
isolation and loneliness.

**A** group of Zen monks  
of the Storm and Thunder  
Order, the Hidden Rai Jin  
order of Zen, decided to  
bring out the ancient wisdom  
to enable individuals to grow  
during the phase, and defeat  
the plans of the evil empire.

**I**ndividuals who take up this ancient and powerful way of transcending, are urged to share this book widely. The world is presently at a Spiritual war with forces that seek to destroy the very DNA of humanity.

**Z**en were the mode of  
meditation of the Samurai  
Warrior, and action to  
defend the world against the  
forces of Evil, is the way of  
the Warrior.

And in action the warrior  
builds Virtue and Good  
karma.

**I**n ancient days the Zen path were imparted during a phase of war against the evil alien race, that occurred on the planet Dubbore. During the war phase, the adepts were urged to hide their practice under various symbols – a Silver Sun, a Silver horizontal stroke, calligraphic in form, other than the usual Silver Enso.

Form tightly knit groups,  
ideally within own family,  
and immediate friends, that  
explore the art and various  
ideas pertinent to Zen, and  
for that matter Zen is open  
to the study of any field or  
mythology, or the principle  
of different traditions.

Discuss own experiences.  
Organize games, and so on,  
with a Zen Spirit.

The  
Breath

# Training Day 1

**Z**en is found not just on earth but is  
practiced by several extraterrestrial  
civilizations.

In the words of a sage from another world,  
“The breath is an anchor that is always there.”

**I**n Zen meditation, one focuses on the

breath. Before leading you to the understanding of the way to meditate on the breath, these pages will familiarize you with the Nature of the Breath.

**T**ake a deep breath and observe the nature of it. Are you able to define its properties with the senses? The touch, smell, sensations, of what one describes as the breath.

**W** hat about defining the properties  
of the breath with the mind?

**T**he wisdom of the - now lost to the  
greater world- Zen book written by Ame No  
Wakahiko, says,

“**T**he purest part of the breath  
is beyond the senses, and  
transcends the mind.”

“The purest part of the breath  
is beyond the senses, and  
transcends the mind” - Ame No  
Wakahiko

Study your own breath,  
observe it, deeply, at ease and  
staying in the ease, till you  
discover that part of own  
breath.

# Training

## Day

### 2

“What is Beyond the mind and  
the senses, is beyond the  
universe.” - Wakahiko

**P**onder deeply on what Wakahiko says

in the verse above. Discuss aspects of it in  
own thought. Is the breath, being beyond the  
senses and the mind, beyond the universe in  
origin?

One of the foundational planes of the universe is termed ether. It is ether in vibration that appears as the breath here.

So the breath is the whole universe in movement, an aspect of which animates own physical form.

“**T**he breath is one  
function” – Ame No Wakahiko

A Zen Koan has it that three monks were meditating in a monastery near mount Fuji. The Flag, on a post near the monastery, which had the Enso on it, fluttered in the wind, making a sound that brought the novice monk out of meditation. The novice said, “ The Flag is fluttering.”

The older disciple said, “ It is the mind that is fluttering, not the flag.”

The Zen teacher said, “ Both the mind and the flag are fluttering. “

Were it the flag or the mind  
that were fluttering?

The flag, the mind, are all movements of  
a universal breath, and one is not independent  
of the other.

The observer of the Zen breath, beyond  
external vibrations, is beyond the mind, and  
the world phenomenon.

The world, the mind, the flag, these are all one  
function. And Zen adept transcends *that*.

# Training Day 3

**T**he goal of Zen is to transcend the  
appeared universe.

The universe is made of several planes,  
hierarchies, of divine beings exist above the  
earthly planes, for instance.

And hierarchies exist below as well. This is  
related to the geometric and vibrational  
structure of the universe.

**O**n the same plane, there exists  
different parallel worlds.

**T**he human mind through a zero point

is bonded to an underlying plane beyond vibrations. Phenomenon such as interaction across a distance, beyond light speed, and so forth, and even humans being able to feel each other across space, is related to the Zero point plane.

**B**eyond the Zero Point, is the Silver

Planes, the Great Brightness into which the  
Zen Adept finally enters.

**T**he presence of higher and lower

dimensions and parallel worlds account for a great variety of phenomenon. Do ponder for a while, what such would have been part of your worldly experiences.

# Training Day 4

# Zen

Breathing is  
to be  
understood,

By first taking in a deep ,  
breath. Natural, almost  
effortless. Then breath out  
slow, and deep into the  
lower abdomen, the hara,  
the space of the abdomen  
below the navel region.

One follows the breath.  
The awareness follows the  
breath moving naturally  
down along the front of  
the body, entering the  
lower abdomen, the hara.

““**T**he hidden key is  
not for the beginner,  
and one is to ignore it  
unless it is experienced,  
but the rising breath  
touches the Silver, and  
the Silver is guided  
down and the breath  
enters the hara, forming  
the body in Silver.” – Ame

No Wakahiko

# Training Day 5

**S**earch online for  
Hinnerk Zen meditation  
15 minutes. Meditate to  
the audio instructions, if  
you are able to find the  
audio. If not, meditate to  
your breath.

Try meditating then to  
silence, and then to your  
favorite music – any  
genre, rock, or soft rock,  
playing in the  
background.

# Training Day 6

Find a few  
Zen books.

Study a few  
pages, and  
see if it  
appeals to  
the Soul.

If it does,  
follow on,  
with the  
Study.

Add those  
books to  
your library.

One studies  
the theory,  
and then  
abandons it  
for the  
experience of  
Zen, In

# Meditation

Reason  
forms the  
frame of a  
theory.

And then,  
the beyond is  
approached  
in Zen.

# Training Day 7

Zen form of  
sitting  
meditation,  
Is termed  
**Za Zen.**

Study the Za  
Zen form  
with various  
resources  
you are able  
to discover.

One, in the  
traditional  
form,  
Sits in the  
Half lotus or  
Full lotus  
position.

The left leg,  
is generally,  
on top of the  
right, and the  
left palm  
rests above  
the right.

The thumb tips  
may be held  
touching each  
other, forming  
the oval shape  
of the  
DharmaDatu  
mudra.

That the  
left palm  
is above,  
were  
taught

by the  
God  
Ebisu.

Different  
schools of  
Zen may  
use slightly  
Different  
mudras.

One  
may  
adopt  
any  
position

in which  
the spine  
is  
relatively  
straight,

be it  
lying  
down  
with the  
head

rested  
on a  
good  
pillow,  
or

standing  
up.

Another  
recomm  
ended  
mudra is  
left hand

forming  
a natural  
hollow  
fist, and  
the

thumb  
wedged  
between  
the  
fore-

finger  
and  
thumb  
of the  
right

hand.

The  
right  
hand

naturally  
wraps  
around  
he left  
fist.

The left  
fist is  
held  
natural  
and

hollow.

The left  
thumb is  
held in  
a way  
that it

endows

a

natural

sense

of

upward  
flow, of  
the  
Silver,  
along

the  
spine.

Training

Day

8

The  
adept  
should  
follow  
the

Soul-  
Impulse  
in his  
or her  
actions.

The  
Soul  
impulse  
is

above  
the  
Senses,  
and is  
found

gradually  
as one  
progresses  
on  
the

path.

When  
the  
Vital  
Spirit is

preserv  
ed, and  
the  
breath  
attende

d to,  
there is  
both  
Joy and  
wisdom

The

adept  
should  
realize  
meditati  
on is

practica  
l work.

Meditat  
ion

purifies  
the  
being,  
grants  
prowes

s to the  
being,  
is work  
that  
outlasts

a  
lifetime,  
and in  
the  
ultimate

sense,  
grants  
enlighte  
nment.

# Training

## Day

### 9

Zen lays  
great  
emphasi  
s on  
aesthetic

S.

The

environ  
ment  
ought be  
clear,

And the  
room  
for  
meditati  
on duly

prepared

•

In

ancient  
days,  
one  
would  
light a

natural  
Zen  
incense.

The

duration  
for  
meditati  
on were  
till the

incense  
burned,  
around  
half an  
hour.

# Training Day 10

The  
Stability  
of one's  
thoughts  
and

energies  
is  
directly  
related  
to the

food.

If the  
food is  
of

discordant  
vibrations, so will  
the body

and  
mind be.

Thus  
gentle,  
tasteful,

nourishi  
ng food,  
prepared  
with  
gentle

herbs,  
and  
never  
anything  
of a

harsh  
nature  
were the  
food of  
the Zen

# order.

The way the food is prepared in itself endows elevating properties. The state of the awareness of the one preparing the food, and, further, things such as vegetarianism were never path of any ancient Zen order.

Training

Day

11

One  
may  
explore  
the  
various

forms of  
Zen,  
Tea, the  
paintings  
, these

arts may  
be  
studied  
and  
refined

based on  
own  
intuition

•

# effING up DE EVIL CASTE SYSTEM

D Words From a 9000 Year Old Imaginary  
Y Himalayan Sage.

A

ISBN:

**T**he word Brahmana  
referred to a kind sage  
striving for enlightenment.

Are cruel fakers  
and

**EVIL**

repressors

enlightening and enlightened  
sages, or evil?

The word kshatriya  
referred to a super warrior  
who could fight a whole  
army single handedly,  
without any fancy weapons.

Are evil  
**fools** who  
cannot win a boxing  
match, who strut

around like vain  
aunties, insulting  
people, “ kshatriyas?”

Kshatriya and Brahman were  
only names of two modes  
of enlightenment, and not  
names by birth.

**E**nough is enough of  
this evil.

It is time to get India rid of  
these falsely peddled evil  
labels.

Do not be passive.

Stand up for your  
nation **NOW**

Share this PDF **WIDELY**,  
**WITH EVERY SINGLE**  
**PERSON YOU KNOW** and  
don't.

U  
SE THE  
IMAGINATION TO  
ARRIVE AT  
CREATIVE WAYS TO  
SHARE THE PDF.

I'm what you might  
think of as an imaginary  
immortal.

And given that that says I  
have seen more of historical  
truth than you would admit  
in your imagination even,  
allow me to give you a  
glimpse of what the Aryan

Religion says

about the caste system.

There is **no trace**  
of a by marriage caste system  
in the original Vedic writings.  
Does the marriage of  
prominent characters of  
the two major mythologies  
follow that pattern?

In Mahabharata we have the  
Pandavas marrying all  
around.

The caste system is therefore not the idea of the four orders mentioned in the early writings. Which are clearly nothing but four sacred forms in which the Divine were served. What were Valmiki's order?

It altered through life,  
DYNAMIC, were not  
externally imposed, and were  
taken up so that each could  
do action that led them to  
the Divine.

Arthasastra points out actors.

Doctors, engineers,  
Teachers, all these are the  
Sudra order. The word  
were not an

insult, as the ngyaaha  
myaaha guluuha  
abomiantions have made it  
to be. Su means good and  
Dra means substance. Of  
Good substance.

A student in an Ashram in  
early studies in the novice  
monk stage is in that mode.

They made sure they used  
their skills to serve Good  
people – not as slaves, but as  
free independently thinking  
yet profoundly humble  
humans.

They selected who they serve  
as the action were done for  
Divine benefit. And to raise  
oneself to higher planes.

If you go serve an evil fool  
for money and work just for  
money, and study for some  
joobu for some foreign firm,  
you are not even of the four

sacred orders.

Approaching the state of enlightenment, one may enter the form of a sage which is called Brahmanical – and had nothing to do with birth. If so – how were Vyasa or Valmiki or Vishwamitra all the greatest of Brahmanical sages?

The Impostors –  
ngyaaha myaaaha gluuha  
– insult to humanity and  
God - that category of

# abomina tions are

nothing but thieves. As per  
the Vedic ideal.

The enlightened would  
gently guide the others  
through wisdom. Just as the  
seven sages gently guided  
Valmiki. Did they go “  
ngyaaha myaaaha gluuha”  
“jump to de sidoo”

Mahabharata often has

statements like “in that forest a Brahmin ( not a birth idea) lived with a forest woman.”

And it were normal. And  
Sacred.

Sudra were as per the Arthasatra that mode of action which served the purpose of the truly Enlightened. A truly enlightened person is like the Buddha. Not ngaaahah myaaha gluuha evil impostor.

Bhima, a Kshatriya by prowess, had a rakshasi wife.

Did anyone make a ruckus?  
Where were de dukking caste  
system ?

Or are the marriages of the  
Pandavas as per Gotras?

Anyway, regarding the term  
Sudra, ..

Again: The term is for a  
mode of Divine serving.. and  
they served the “ Twice  
Born” – the truly  
Enlightened people – not  
fake ngaaayha myaaha gluuha

# evil, cruel, actors.

They who served were gently  
guided spiritually, rewarded  
for their work, etc.

The word Kshatriya  
referred to somebody who  
had enough strength to  
conquer the whole world  
single handedly. “ A Single  
kshatriya can defeat  
the whole world’s  
armies by the strength of  
his bare arms alone,” says the

## Mahabharata.

There are no fools in India who can even win a proper running race, a lemon and spoon race on the international level, musical chair, or a boxing match at the top level. So let no dukking impostor fool you saying he is a kshatriya. Ask him to fight 10 MMA fighters single handedly in front of all. IF NOT LAUGH AT THE DUDE FOR BEING AN EVIL FAKER AND AN IMPOSTOR WANNABE,

BY GENERATIONS.  
LIVING  
OFF OF  
FOOLING  
PEOPLE.

“Guna Karma  
Vibhagasa,” says  
the Gita. It means  
the four orders  
were merely just  
dynamic labels,  
overall identifying  
people’s Inner  
Nature and  
Ability to Do  
Action .

Karna were  
married to  
Princesses.

Karna Rules as a  
King.

Did anybody  
Oppose?

Fake mythology  
and edited  
versions of  
Mahabharata say  
Karna were not  
allowed to  
participate in the  
Swayamvara.

While all major

recensions  
including the  
Southern one  
says Karna were  
allowed to  
participate but  
failed to tie the  
bow.

# Only Arjun

*a* Succeeded.

A source says,  
“ the insult by  
Draupadi is  
present only in  
about 3  
manuscripts out  
of some 1200  
manuscripts of  
Mahabharat.

Hence **it is**  
**conside**  
**red** an  
interpolation(  
IMAGINARY  
ADDITION).”

IT WERE THE  
FUKKED UP  
BRITS DATTE  
ADDED THE  
NONSENSE  
FROM THE  
FRINGE  
MANUSCRIPTS  
TO DE  
OFFICIAL  
EDITION.

It were done so  
as to divide India  
and run down  
Indian traditions.

How could the  
lineage of  
mendicant

Brahmins WHO  
pandavas  
appeared to be,  
be known?

Anybody could  
take up  
Brahmanical  
form of effort,  
THAT ERA.

And no enquiry  
were made to  
their lineage for  
the marriage  
WITH  
ARJUNA— as  
they kept their  
anonymity.

Some major

“Ghatot  
kacha  
was the  
son of  
the

Pandava  
Bhima and  
the demoness  
Hidimbi” –  
Wikipedia

“ In Rajasthan,  
Barbari  
ka is  
worship  
ped as  
Khatushyamji,

and in Gujarat, he  
is

worship

ped as

Baliyadev” -

Wikipedia

“

According to a  
legend,  
Ahilawati or  
Mauravi was  
the daughter  
of Mura, the  
general of  
the demon  
Narakasura.”

– Wikipedia

“Barbarika  
(Barbarīka), is a  
Hindu deity,  
particularly  
worshipped in  
western India.

According to the

Skanda Purana,  
Barbarika  
was the son  
of  
Ghatotkacha  
(Son of  
Bhima) and  
Princess

Maurvi,  
daughter of  
Daitya  
Moora,” -

Here is an  
authentic sage –  
sage Bhrigu from  
the Mahabharata,

“

Of mobile objects the number is infinite;  
the species also of immobile objects are  
innumerable. How, then, can objects of such  
very great diversity be distributed into  
classes?’,

“

Bhrigu said, 'There is really no distinction between the different orders. The whole world at first consisted of Brahmanas. Created (equal) by Brahman, men have, in consequence of their acts, become distributed into different orders. They that became fond of indulging in desire and enjoying pleasures, possessed of the attributes of severity and wrath, endued with courage, and unmindful of the duties of piety and worship,--these Brahmanas possessing the attribute of Passion,--became Kshatriyas. Those Brahmanas again who, without attending to the duties laid down for them, became possessed of both the attributes of Goodness and Passion, and took to the professions of cattle-rearing and agriculture, became Vaisyas. Those Brahmanas again that became fond of untruth and injuring other creatures, possessed of cupidity,--engaged in all kinds of acts for a living, and fallen away from purity of behaviour, and thus wedded to the attribute of Darkness, became Sudras. Separated by these occupations, Brahmanas, falling away

from their own order, became members of the

other three orders. **All the four**

**orders, therefore,**

**have always the**

**right** to the

performance of all

pious duties and of

**sacrifices.** Even thus were the four

orders at first created equal by Brahman who

ordained for all of them (the observances

disclosed in) the words of *Brahma* (in the

Vedas). Through cupidity alone, many fell

away, and became possessed by ignorance.

The Brahmanas are always devoted to the

scriptures on Brahma; and mindful of vows

and restraints, are capable of grasping the

conception of Brahma. Their penances

therefore, never go for nothing. They amongst

them are not Brahmanas that are incapable of

understanding that every created thing is

Supreme Brahma. These, falling away, became members of diverse (inferior) orders. Losing the light of knowledge, and betaking themselves to an unrestrained course of conduct, they take birth as *Pisachas* and *Rakshasas* and *Pretas* and as individuals of diverse *Mleccha* species. The great *Rishis* who at the beginning sprang into life (through Brahman's Will) subsequently created, by means of their penances, men devoted to the duties ordained for them and attached to the rites laid down in the Eternal Vedas. That other Creation, however, which is eternal and undecaying, which is based upon *Brahma* and has sprung from the Primeval God, and which has its refuge upon *yoga*, is a mental one." [1](#)

Once you take away false labels the quality of people's souls are apparent. The fake brahmin pretender wanker eating off of the

EVIL insults

he throws at the human,  
when in the heart of each  
human resides God Himself,  
as per Scripture, is the sole  
evil category .

And I am not bracketing any  
by birth. But let not

for

OWN

# DIGNI TY'S SAKE

ANYBODY HOLD FALSE  
LABELS AND STRUT  
AROUND AS PANDITS  
AND BRAHMINS WHILE  
THEY WERE  
HISTORICALLY OFTEN  
ABOMINATIONS TO  
THE VERY IDEA THAT  
TERM REPRESENTED.

To appropriate a term such as “pandit” is like appropriating the word “genius” and labelling oneself a genius for no reason and saying all else are not. What evil stupidity. A genius is individually known by inner wisdom (guna) and action (karma). Prahlada were a pundit, his ancestors all not so.

A brahmin were ANY  
SAGE WHO WERE  
APPROACHING  
ENLIGHTENMENT IN  
THE SAGELY MODE.

A KSHATRIYA WERE A  
SUPERPOWER WARRIOR  
WITH DIVINE  
WEPAONS ABLE TO  
SINGLE HANDEDLY  
FACE AN ARMY WITH  
BOMBS AND  
MACHINERY, BY OWN  
SUPERNOMRAL  
PROWESS ALONE.

NOBODY NEEDS  
LABELS TO IDENTIFY  
SUCH PEOPLE.

FAKE LOWDOWN  
CRUEL PEOPLE ARE  
THE WORSE THAN  
DEMONS CATEGORY.  
WHATEVER FALSE  
LABELS THEY STRUTT  
BEHIND. IS THAT NOT  
THE IDEA OF ANY  
SACRED FAITH?

AND OFTEN  
KSHATRIYAS AS THE  
PANDAVAS DID EVEN  
HIDE THEMSELVES,  
TAKE UP WORK IN A  
ROYAL PALACE FOR A  
YEAR, ETC. SO THE

MODE WERE ALWAYS  
DYNAMIC. THEY  
WOULD ALSO AS  
ARJUNA DID , DO  
TAPASYA IN THE MODE  
OF THE BRAHMINICAL  
DIVINE EFFORT.

WHEN THE  
SITUATION  
DEMANDED THEY  
EVEN SERVED  
WORKING LIKE  
THE ORDINARY IN  
A PALACE – THEY  
DYNAMICALLY SHIFT  
THEIR mode of action.

This dynamic mode of shifting between the four orders is prescribed in the Bhagavada as well.

ANYBODY, EVEN A FOREST HUNTER-THEIF IF HE TAKES UP AND UNDERTAKES THE DIVINE EFFORT SUCCESSFULLY IS ON THE DIVINE PATH, AND DESERVES A DIVINE TERM TO DESCRIBE HIM OR HER. AND IT IS OBVIOUS WHAT HE OR SHE IS WITHOUT ANY

TERM. SO LET THE  
TERMS BE AVOIDED TO  
THE GREATEST.

ANYWAY, THE TERM  
WERE ONLY THAT FOR  
A MODE OF  
ACTION. A MODE  
OF SPIRITUAL  
EFFORT.

THE WARRIOR-KING  
MODE OF SPIRITUAL  
EFFORT, HAD A  
DIFFERENT SENSE TO  
THAT OF THE SAGE.  
THAT WERE THE IDEA

OF KSHATRIYA MODE  
VS BRAHMIN MODE.

INITIALLY ALL HAVE  
TO START BY SERVING  
– THERE IS NO  
OTHER WAY  
AROUND.

ONE HAS TO SERVE  
THE GOOD, DO GOOD  
THINGS, STUDY, AND  
SO ON.

ASSUMING ONE  
BECAME A  
SUPERPOWER WARRIOR

STILL ONE HAS TO  
HUMBLY SERVE THE  
WHOLE KINGDOM.  
NOBODY IS STRUTTIG  
AROUND KALLIGN  
EACH OTHERS  
RANDOM NAMES.  
THOSE KINDS OF  
PEOPLE ARE EVIL  
TRASH TO BE  
PUNISHED BY DIVINE  
LAWS.

Everything in the mahabahrat from the term suta putra to everything has been made an insult by the shitty evil nyaahas. A suta is one that kan divinely guide a king. It were not an insult. The narrator of Bhagavat Gita to Dhratashtra is what? If things were by marriage isn't the whole of kauravas not of any lineage as Vyasas father had Vyasa in a simple but assumably beautiful lakeside, village girl?

THE caste  
system of  
today is from  
the kraKsshit  
primitive  
tribes.

The gotra system is

found in primitive aboriginal tribes. Freud in his writing, "Taboo and Totem," describes this.

The "Fear of Incest" is the origin of the Gotra system. In small tribes inbreeding would result in their getting diseases and getting

wiped out. So marriage within a group were heavily punished. Even Now, the krakkshit northie gotra system refers to people in one gotra as “ siblings,” and they have death penalty idea for marrying within same gotra or caste. These are the retarded tribes

who never understood

Aryan  ideas.

The South Indian caste system is de same evil shit – nonsense of tribes. Pretenders who never understood

Aryan

traditions, and

fools who

fooled

others for

money and other easy

benefits. Frown on

those who do that.  
Look down on them.  
They are NOT of the  
Vedic tradition of  
India. For the Vedas  
have nothing of it and  
say the OPPOSITE  
REPEATEDLY. Where  
did their Yama  
Niyamas such as  
ahimsa go – aren't they  
evil and a harm to

fellow humans? Are they kind to good humans? So they are a fallen group. Do they have yoga, inner spirituality, the goodness that emerges from spiritual effort? Aren't those who harm and insult fellow humans evil, by ancient mythology of

this land, and as per  
the standards of  
authentic core ancient  
scriptures? Or by the  
Standards of Soul and  
God?

The Dignity and Worth  
of every Good Human  
is God Himself. Do not  
let these impostors  
tread on Human

Dignity.

Wipe out the idea of  
caste system from India  
– for it is not part of  
any authentic high  
Indian tradition, be it  
Indus Valley,  
Ramayana, or  
Mahabharat.

Discourage and mock  
openly the use of these  
labels is Surnames.

If the evil nonsense is  
not removed from  
India, each day it adds  
to the Sin of the land,  
pushing out God, by  
humans insulting each

other as if there is  
nothing else to do in  
the absolute loony  
asylum.

People of a similar  
quality and action bind  
in Marriage and even  
ordinary friendships.  
Its Natural. Valmiki  
won't be smoking  
weed in a Pub or

Hunting birds after  
enlightenment. Before  
a baaaad theif and a  
hunter.. after.. the  
Greatest kinda  
Brahmin.. Who would  
dispute? You? So it is  
entirely dependent on  
inner Wisdom,  
awareness and action,  
and displayed ability –  
and not the ability to

act and fool, with a shit  
ton of fake  
paraphernalia..

People can easily be given assistance based on their individual family economic background. Ban labelling people for it, as one would ban a sin on the nation. India and its sacred

traditions also get  
laughed at because of  
these fools peddling de  
evil.

Indians themselves  
generally hate Sanskrit  
due to the Ngyaaha  
Myaaha Gluuuha trash  
pretending around.

Their pronunciation of Sanskrit even is an abomination with no depth. And I am not generalizing.

The remedy is infusion of proper interest, text to speech accurate rendering of the Vedas,

revival of the original chanting principle from texts, and so on. What is beautiful, now sounds retarded – precisely because no study or effort takes place in that direction, given fools sit on top of it scaring everybody away.

Another idea is the

word Aryan  .

This idea were  
appropriated by the  
fukked up British trash.

They claimed they are Aryans and hopped over Himalayas with the Mahabharata and Ramayana and Vedas.

Then why does all those texts place them in the Geography of India. Physical features, ornaments, places such as

Himalaya, Lanka, traits such as unbreakable marriages, were and are still only found in India.

THE pink bunch of dressed up british cucks are another evil category - Dressing up and strutting around to fool people and loot

and pretending to be  
this and that. And  
stealing even  
traditions, and  
appropriating labels for  
power, sitting on top of  
a fake academia to  
destroy the world  
through sly ways.  
Strikes a cord with the  
ngyaaaha myaahha  
trash in the evil they

do.

Adolf Hitler and Co  
then nuked the fake  
brits taking up the  
Aryan label on  
themselves.

Btw, wonder why the  
Nazis hated the  
Ngyaaha category?

They rightly said the  
Ngyaahas had  
corrupted scripture,  
tortured people, and so  
on, and had no values  
outside of material  
gains and moneys.

Even the Aristocracy  
were all manipulated

by that trash resulting  
in the fall of India, due  
to what? God's Wrath,  
I assume.

So let us now discard  
that culture of labels.

The Aryan 

label were in the  
Mahabharata only a  
dynamic term for the  
Spiritually Evolved.  
Valimiki is an Aryan

sage, and before  
that an unAryan  
hunter.

The Buddhists texts

describe the adepts of  
Buddhism as Aryans

The Heart

Sutra describes words  
of the Bodddhisattva

Arya  -

Avalokiteshwara. See  
the Heart Sutra.

Now the word has  
become to mean a  
krakkshit pink fool  
rolling out tanks the  
kill the unarmed, a tin  
foil imitation of Adolf.

All outside of India  
were thought generally  
UnAryan tribes by the  
ancient Indians.

This is not to say they were disrespected. The Romanaka, and other people with high divine nature outside of India, are all described in the Mahabharata, in that section where Sanjaya narrates the world's layout to Dhritarashtra

before the war.

Mutual respect were  
always great.

Neither were Aryanism  
based on appearance.

What were Astavakra?

These superficial ideas  
are from the West.

“It is UnAryan  ,

Unheavenly, Not  
Leading to Glory,” as  
the Gita says.

On a side note, Adolf  
Hitler and Himmler of  
the Nazi fame, who  
hated the Brahmins,

were in high  
appreciation of the  
Gita. It were a source of  
Inspiration.

Krakksshit fools cannot  
understand high ideas.  
Like tribal trash when  
they hear Aryan  
mythology will gang  
up and attack unarmed  
people like hyenas.

They forget Pandavas endured 12 years just avoid war, then attempted a peace treaty. Never fought anyone not wielding a weapon against them, never fought from behind, etc.

Even Nazis, despite being not authentic

Indian Aryans,  
attempted for peace in  
their fight against the  
shadow banker's gov.

Mental disease is a  
feature of primitive  
tribes. The caste  
**psychosis** is one  
of them.

And what is a tribe - is it by birth? No.. it is based the present level of evolution.

Tribes in Africa,  
Himalayas, North East  
are all bearers of High  
Wisdom – and are to be  
profoundly respected,  
venerated. Studied,  
Humbly, learned from.

If you read a few books on African Wisdom as, “ The Healing Wisdom of Africa,” by Malidoma, for instance, you will understand the depth and profundity of those traditions.

And why they maintain a timeless

state focused on their  
sacred community,  
meditativeness, and  
effort at the Spirit.

It is as respectable as  
the Aghori sage .They  
exit the world in a  
supernormal state,  
abiding in that form.

The

abominatio

n is the fool

living in

delusion for

material things,

putting false

labels on

oneself and  
others.

I am referring to both  
the indigenous and the  
krasskhsit brit  
educated, brainless,  
substanceless fool.

**T** here are  
dimensions

and planes  
to the  
Universe.

The  
Purpose of  
Good

Action,  
Good  
endeavors,  
Brahmacharya,  
Joyous  
Familal

mode, is all  
to form  
own stuff  
in heavens.  
Spend eons  
in those

worlds,  
reincarnati  
ng again  
taking up  
the effort  
for absolute

enlightenm  
ent, and so  
on. The  
work in a  
human life  
is to

accumulate  
wisdom,  
and virtue  
toward  
that.

Virtue,

gained by  
treating  
fellow  
humans  
with  
humility is

a material  
gain in the  
Universe.  
Analogous  
to the idea  
of Good

Karma.

And not

just the

action, the

Inner

Thought,

Soul State,  
Bhava, all  
determine  
the Virtue  
of an  
action.

Good  
words to a  
good and  
innocent  
human is  
an offering

to the  
Yagna of  
the  
Universe,  
to God's  
Yagna.

It forms  
rewards  
automatic  
ly.

Life itself is

the form of  
the Yagna.

Good  
joyous  
interaction,

being kind  
and helpful  
to good  
people in  
need, not  
being vain,

not  
strutting  
around, all  
these are  
foundational  
aspects.

Any form  
of strutting  
is a fall  
from the  
needed

Spiritual  
State of  
Inner  
Depth  
and

Profun  
dity.

Any  
display of  
parapherna  
lia to  
appear  
spiritual, or

false labels  
is only a sin  
of Vanity.

Does  
Arjuna

have to  
announce  
he is a  
Kshatriya?  
Or does he  
stay

humble,  
often for  
years  
staying  
away from  
society. At

times,  
living a  
simple life  
to avoid  
war, taking  
nothing in

the form of  
benefits or  
attention.

He even  
turns down

invitation  
to  
IndraLoka,  
in favour of  
just  
performing

his

Dharma.

Dharma

naturally

arises from

the Soul,  
Ishvara.

The first  
few sutras  
of the  
Mimamsa

sutra make  
it obvious.

And within  
the humn it  
appears as  
an inner

push to  
Good  
Action,  
from  
Ishvara and  
Soul

planes.

Did  
Yudhistra  
even want  
the  
Kingdom  
after war –

or wanted  
to take up  
Spiritual  
effort in the  
forests after  
war?

So the  
original  
Kshatriyas  
were not  
FAKE

display

aunties

with labels.

YUDHSITR

A HAD TO  
BE  
ADVISED  
BY  
EVERYBO  
DY AND

REMINDE

D IT is his

dharma TO

RULE.

The form of

Dharma is  
not  
outward  
command  
ment – but  
the form

that  
appears  
from the  
Ishvara,  
through the  
Soul, and

the  
Universe,  
Prakriti.

India  
needs  
to

throw

out

these

labels

of

fools,

stop

being

the

laughi

ng

stock

of the  
world.

Focus

with

deep

reason

, on

the

writin

gs of

the

ancien

ts.

Nyaya(  
Reasoni  
ng ) ,  
Sankha

( Math-  
Analysi  
s) were  
foudna

tional

in

ancient

Indian

traditio

ns.

The

Subject

of

Study

were “

Sat”, “

Reality

”

, which

were

“Imagi

nary”

and

that

only

their

bankin

g

system

is

reality.

When a false reality is held  
people become victims of it.  
For forest dwellers technology  
doesn't exist. For those lost in  
tech the superpowers of the  
Buddhist monk still  
disappearing into brightness in

Tibet, doesn't exist.

For the

wester

ns,

marria

ge

doesn't

exist.

Why?

A false  
reality  
is  
taught

and it

become

s the

narrow

possibil

ity

observe

d.

A New  
Religion  
For India

**F**or those who wish to stay out of this krakkshit nonsense, and abide by the purest part of the Vedas – which are not just surface writings but mathematical ideas encoded in symbols, I describe a religion in the appended books.

First thing is to avoid a  
Jandu label. Call yourself  
a student of reality. Or  
that you do Zen, or

**IDEN**

**TIFY**

# WITH

the Solar Order which  
doesn't believe in false  
labels.

If Janduism is a bunch  
foolishness and hate  
peddled on India by the  
brits be anything but a  
Jandu.

Call yourself a aspirant  
“ Surya Yagnika” do  
not claim you have  
touched the standards  
required, but if you  
aspire to the standards,  
say you do so. Do not  
boast around or put up  
fancy airs. But keep the  
Dignity. Have, if needed,  
the Symbol as that of the  
Silver Sun, if you truly

aspire to the mode of  
Study, Meditation, and  
avoiding unreasonable  
false ideas. Do not fall  
into vanity of displays,  
but aesthetics form a  
force in itself.

The Family itself is the  
monastery.

As above, so below, the  
family here is not so

different often in its core  
aspect from the family in  
heaven.

Sacred forms of  
interaction within family,  
and within society.

Not allowing human  
Dignity to be stepped on,  
and not allowing own  
Dignity to be stepped on.

Keeping Inner Ease and Steadiness. Endeavoring on the Greater Goal of life in the best ways one is able to .

These are the ideals of this path. There are no labels or anything.

Only if pressed to say a

religion, one says, the  
Vedic Solar Religion,  
the Surya Yagnika.

The idea entirely is  
aligned to  
mythology, the  
aspects of it not  
distorted by the  
distorters of tradition  
( remember the same

myth has different versions in different ancient writings) .

One uses own reason and Good judgement to distinguish.

God as the Spirit  
Inside guides, not  
random writings of  
humans. Writings are

only to spark that  
Inner Brightness, and  
Soul.

Profundity, depth,  
humility these keep one  
grounded to the Spirit  
and free of vanity.

The Upanishads describe

that One Purusha who  
appears from Yuga to  
Yuga to restore Dharma –  
that One God, as also the  
“Purusha in the Sun.”

“Adityanam aham  
Vishnu,” says the Gita. “  
Within the Suns, I am  
Vishnu.”

The Gita also states  
“Jyotisam ravir  
amsuman,” “ Amongst  
the Bright, I am the

Splendorous Sun.”

The Surya Yagnika mode doesn't limit itself to this form or that form, but adopts freely study of the Truth Under the Sun.

The Sat, the Truth is the Goal. Not random ideas made by humans.

The ritual forms one may abide by the Vedic, or adopt the sacred Idea of African Traditions that any who is a human may make a ritual.

If you pour water on the earth Understanding Earth to be the Solar Body itself, wishing the

Good of all Existence,  
that is a Great Ritual.

Those vibrations held, if  
accepted by the Aware  
Solar God, transform the  
world. No ritual  
imitation is needed. Just  
the reason and a direct  
awareness is needed.

If you pour that water to  
a cactus or any plant in  
your Garden that space

and the plant even holds vibrations inviting of Goodness, and evolving Goodness for the world.

Anyway, you will find these ideas discussed better in the attached two books.

One abandons every idea that is not the purest of

Vedic Ideas – all later distortions of scripture and fake additions nowhere found in the original great tradition. One abandon that which is not Reason. One accept all forms of reason.

Like simple reason that brahma made humans 4 trillion years and all de trash since then bred under labels is false. And so is it demonstrably false by the easily demonstrable science of genetics. All that is unveiled by reason, is true. Aunty logic and vanity and evil is why the system existed in the first place.

We do not hesitate to employ ways of the present day world to research, study, preserve accurately the stuff of the traditions. To broadly make available source material for Individuals' research.

There are only two sources of knowledge – the Soul, and world-

observation. The Vedic Scriptures are a window to what is in the Soul planes. To unveil the original meaning of the Vedas, they have to be deciphered on that plane, by the individual.

Interpretations are only fancy ideas of the mind. Truth is beyond the mind – a mere sense organ, as per Buddhist traditions.

Buddhist and Vedic traditions were understood as aligned to the same Truth in the times of Nalanda.

The Sun worship found across the world, aligns to the same truth.

Mathematics based on axiomatics of thought

unveil patterns in reality.

Experiment based on

sensory observation

unveil truths in reality.

Thus, the Buddhist

scholar Dharmakirti

pointed out that there are

only two sources of

knowledge “ Inner Soul

Form Observations ( Sva

Lakshana ) and sensory

observation.” If sensory

observation were flawed,

the empirical sciences  
would fall apart. Only  
the interpretation of the  
senses can be wrong, or  
just limited to one set of  
dimensions that that  
sense processes, but it is  
indeed a function of the  
greater truth.

We abide by the  
ParjnaAparamita

# Principle

That any idea taken  
to an extreme is  
false.

Human words or  
ideas cannot  
capture the great

ultimate truth. So any expression of it is not the ultimate truth. “No Dharma taught is fully true or fully false” says the Buddhist traditions, thus.

And it need not be

entirely false either.

If someone says,  
truth is this set of  
words, “ Well.. it is  
false.” By the  
PrajnaAparamita  
Principle. Prajna  
means wisdom,  
Aparamita means

boundless or  
unbounded.

The Gita says, “  
What use is in a  
well, in the middle  
of an infinite ocean,  
the knowledge of  
the so labelled  
brahimins are that

much in the Ocean  
of Vedas' Wisdom.”

Arjuna is obviously  
being advised not  
to fall into narrow  
ideas. Arjuna is  
also advised to turn  
away from the  
shaky ideas of

scripture and  
directly situate his  
awareness in the  
Absolute planes.  
That is Yoga.

“ A log of wood  
that doesn't get  
stuck to either bank,  
eventually floats to

Ocean,” noted the Buddha. “ The right view, gravitates, levitates.. toward the Absolute.”

So do not hold extreme views, absolute exclusivity etc., as truths.

We broadly study different traditions. Zen, which focuses on the breath, is another view of a Vedic approach which states, “All of the Vedas are in the Breath.”

We study books  
such as Zen by Dao  
Re ( available for  
free download on  
Scribd.com . Dao Re  
is a pseudonym,  
btw), Meditate to  
images in CC Tsai's  
Zen.

We broadly study  
the Daoist  
traditions, gain  
wisdom from the  
African traditions,  
in alignment with  
Uddhava Gita  
which describes the  
Universe itself as  
the Teacher, and

various forms of  
Nature appearing  
as the Teacher.

We go beyond the  
words, read,  
keeping only the  
divine essence in  
own Wisdom,  
forgetting the

words.

We adopt the idea of the YogaSutra, which describes God as a "VeshsaPurusha," a unique Individual – just as the Gita does.

And the path of the  
Yogasutras “ Tapa ( Effort and  
Meditation), SvaDhy  
ana ( Self Study and  
Inner Observation,  
Trusting and noting  
down what one sees  
within, when it falls  
into a frame of

reason, eventually),  
IshvaraPranidhana  
( Obeisance to the  
One God.)”

We note that the  
writings of the  
Apocryphon of  
John regarding  
“The Inexpressible

One,” the Writings  
of Plotinus on the  
One, the Writings of  
the Egyptian Sage  
Hermes, studied by  
the Greeks, which  
describe the  
descend of “the  
One,” are all  
reflections of what

is the description of  
God in the Gita.

So traditions in  
their original purity  
were visions of the  
same Truth.

We take broad

study, reading,  
SvaDhyaya (Inner  
and Outer Self  
Study), as adoration  
of that Divine  
Supreme within.

The Bible actually  
says stuff such as  
“even the writings

of Moses veils the heart” and the New Testament is a testament directly of the Spirit, written in the Soul and Heart, not of words, for “ the letter kills, spirit gives life.”  
Read that section.

The Gnostic writing  
“ Apocryphon of  
John” says “ I will  
appear as the eagle  
on top of the tree”  
That is the wisdom  
unfolded from God’  
on the brain- spine  
tree.”

We abide by the  
Zen principle in  
later stages of  
meditation,  
described by Dao  
Re, “ Be devoid of  
oneself and others,  
situated in the  
Atman( Eternal  
Self.)”

Well, another view  
had described it  
has,” Be devoid of  
yourself and others,  
situated in the  
Atman,” the phrase  
were rephrased in a  
Zen sense to put  
oneself first, and a  
greater centering in

the Spirit achieved.

We subscribe to the teaching of ease and stability, sukham sthiram, of the awareness, taught in the YogaSutras, by absorbing any sense of unease,

into the awareness  
of the Infinite  
absolute.

“ prayatna[Effort]  
śaithilyānanta [By  
awareness of the  
ease of the Infinite  
absolute]samāpattib  
hyām[is absorbed]”  
– YogaSutras 2.47.

By that ease, we go  
beyond Duality. “

tato

dvandvānabhighāta  
ḥ” – Yogsutras 2.48.

This ease and  
stability, Sukham  
Sthiram, were the

original definition of Asana in Yogasutras, and Yogasutras had no reference to any idea of exercises or artificial effort.

Thus these texts have not to this date even been properly translated.

We are open to  
discovery. Even the  
sound of OM, might  
have been ONG. For  
the vibration of the  
absolute were  
associated with the  
top of the nose area  
– when sound  
vibrates there the  
sound is NNGGGG.

Some ancient Saivite  
texts describe the  
end sound of  
syllables such as  
LAM as

**LANNNGGG..**

“the sound a  
honeybee.” The  
written form of OM  
in other traditions  
we research, for

some even seem to  
abstract the nose  
and the Divine  
Origin as a bindu – A  
DOT -marked on top.  
The U shaped form  
above OM form we  
mathematically  
understand as the  
intensity of spatial  
density involved in  
topological

projection and  
compression of  
higher dimensions  
to the lower, making  
that form appear  
with the bindu  
inside, and it is  
observed during  
meditation, directly  
a stage.

Sankhya for us is the processing domains, the 7 cores of which starting from the root chakra are the processing cores of the universal DNA DIFFERENTIATED in the human.

The processing cores were associated with the numbers, as

the initial phrases of Bija Ganita of Bhaskaracharya make apparent. It is not a text of algebra, for even the second chapter says for title, “there are six different types zeros( corresponding the 6 processing domains,

chakras, in the  
human.)”. It  
describes a yogic  
procedure for  
directly  
understanding it.  
Sunyata of the  
Buddhists would  
thus have had an  
mathematical zero  
plane of the  
Universe

interpretation.

We study the intricacies of language and grammar. Those inclined to such study even going into the depths of the Astadhyaayi. We attempt to use

modern tools and  
programmatic  
expressions to  
present another  
view of the system.

We abide by own  
Dharma, the idea of  
duty to, friends and  
family, itself as a  
whole path.

Dharma we do not understand as a false outwardly imposed duty, but naturally arising from the Soul Planes, planes beyond ideas of thought.

Buddha's idea that attachment is "fuel"

ON THE PATH - and  
attachment, joy in  
family forms is what  
unveils the  
Brightness of God.

Dharmic  
Love is God  
Himself, says

the Gita. Familial forms of Love, and Devotion among humans, unveil God, thus.

Joyousness, games, all have their part. The study of the Gayatri Mantra intensifies it.

The preservation of  
the Inner Vital as  
foundation to  
evolving spiritually.

And that God has not  
set up any set of  
circus hoops and  
given it a label as  
“religion” to go

anywhere. The Gita asks abandoning fixation on scripture. Buddha emphasized reason and direct understanding over time. And a discouragement of foolish fixation on ritual forms of religion and ideas that are ultimately

without substance,  
are also found in the  
Gita, and in the  
Buddhist teachings  
as well – which  
emphasize reason  
and direct  
understanding.

We stay wary of the  
academia which tells  
foolish things such as

Buddhists don't believe in the Self, while those famous Ox Herding Diagrams of Zen, the writings of Zen masters, all say the opposite. The "Great Brightness of Zen" is the same the Brahman. The Second teaching of the Buddha taught about distinguishing

sings of Soul from that  
of the ephemeral ,non-  
Soul. The major  
Buddhist writings has  
Buddha  
acknowledging the  
Vedic sages, listing  
their names, received  
revelation in the form  
of the Vedas. Buddha  
encourages chanting of  
the Gayatri Mantra of

the rig veda, in another Sutra. So the foundational ideas were the exact same, obviously. Buddha offered another approach - avoiding the great deal of ritual nonsense the truth were obscured by.

We research and study

on own and never rush  
into narrow ideas, or  
simplistic conclusions.

Even good music, art,  
good food, aesthetics,  
all unveil the Divine,  
through the Soul. Life  
itself is the path, and  
not any artificial set of  
labels or mimicry of  
things of another era.

At the same time we  
acknowledge the force  
and sacredness of  
formalized ancient  
ritual forms. And we  
remember the  
Bhagavata asks often  
that they all be  
abandoned and the  
individual directly  
resort to the One God.  
“ Unto to that One

God, in the Heart of All  
Beings, alone Resort,”  
says the Gita.

Well, do a flip through  
of the appended two  
books.

This is a new path for  
all those who would  
not identify with a

mess of false ideas  
insulting fellow  
humans and allowing  
fake vanity, for their “  
religion.” Vanity and  
hate is a path to God?

One only fights to  
protect the Human  
Dignity - which is a  
Universal Dharma – to  
destroy evil forms that  
insult each other, and

thus the God within.  
The word temple in all  
ancient traditions  
originally referred to  
the human form. “ This  
body is the Kshetra(  
temple),” says the Gita.  
So its important to  
Run, as in the Pink  
Floyd Song, Just like on  
a Pill, from false  
religion set up to insult

humans.

We understand the six enemies of the human mind, AriShadVargas are to be overcome even in dreams, as the arthasastra also reminds.

Unless people push us  
to express a label for  
our religion, we do  
not identify with  
labels.

Grand Solar  
Architecture for places  
of study and  
preservation of

knowledge, aesthetics,  
grand art, only  
achieved by an  
elevated consciousness,  
these can be aspired for  
as forms.

And we do not hesitate  
to engage in the  
simplest of art as in  
Zen. For in simplicity is

the greatest profundity.

We aspire to build  
grand cities. We aspire  
to build beautiful  
simple villages, for  
beautiful form reflects  
the Divine. We study  
aesthetics of traditions  
world over. From the  
Greek to the Japanese.

In food habits we abide by reason. There is no false vegetarianism or avoiding of beef or anything. The Vedas prescribe eating of beef, meat, wine.

On a side note: Here is from Hatha Yoga Pradipika as translated by Pancham Singh," Those who eat

the flesh of the cow and drink the immortal liquor daily, are regarded by me men of noble family. Others are but a disgrace to their families.”

गोमांसं भक्षयेन्नित्यं पिबेदमर-वारुणीम ।

कुलीनं तमहं मन्ये छेत्रे कुल-घातकाः ॥ ४७ ॥

ghomāṃsaṃ bhakṣhayennityaṃ pibedamara-  
vāruṇīm ।

kulīnaṃ tamahaṃ manye chetare kula-  
ghātakāḥ ॥ 47 ॥

Not just a disgrace the next phrase used is kula-ghātakāḥ - “destroyers of own family and nation” in addition to the author saying “kulīnaṃ tamahaṃ manye” - “I think of them as the dull brained of the family, the dullening of family glory.” A full translation would be

“Those who do not eat beef daily, and drink the wine of the Gods, I think of them as the ones who dullen familial gory and the destroyers of own family/nation/lineage.” Refer Manusmriti on the aspect as well – which uses even more stronger words saying they will be reborn as sacrificial animals eaten for food – to understand it is not a bad thing. Yagnavalkia says he enjoys beef. Both Mahatma Gandhi and Vivekananda have pointed out in their published writings that the original ancient Indian religion had the requirement on the spiritual aspirant.

The not killing of animals raised as pets are normal. Nobody eats their pet swordfish for dinner.

Ideas and discussion along the lines may be found in the Book, “ A Path To Greatness: A Book for India” by Dilip Rajeev, available for free download online, and on Scribd.

We do not do any “pushipatam vacham” ( research the meaning of the phrase as found in

the Gita, “flowery words” ) or take weak forms of life as some spiritual ideal, but understand that such ideas are false, and we stay away from such patterns deviant from forms set by the Universe Itself for human beings. The flowery worded spirituality is the domain of fools who do not understand anything, points of the Gita.

We pay attention to the aesthetics of our actions, surroundings, living spaces. Often when necessary taking an approach of Zen simplicity and clarity of living spaces, so that the greater endeavour can be focused on. On each stage the ideals are different. On each plane of awareness the demands and forms of existence are different. What is acceptable in heaven, may not be so on earth. Time, Space, Dharma Sense, Inner Soul, these determine the action. Individual to individual this is different. Listening to own Soul, that deeper impulse from God, beyond all flimsy thoughts, beyond the mind and passing emotion, one understand what the Dharmic action is.

Aesthetics of good food and wine, can in itself become a spiritual path. Food forms the vibrations that form the body and mind. The Gita advises wholesome nourishing, creamy, food pleasing to the heart. Good fats reduce the glycemic index. Spices and overly salty food chaotize the body and the brain.

Gentle herbs as in  
western food is an ideal.  
Overtly medicinal herbs  
are unhealthy as food.

The properties of food  
unveil in its texture, taste,  
and appearance, the  
wavefunction form of it.  
Taste unveils all the  
properties, as per  
Ayurveda, and all  
ancient traditions world

over. A good nourishing taste is a window to the Divine planes of the Soul. Overly harsh vibrations make spiritual efforts even difficult. The importance of a spiritual focus in determining the quality of food, including of meats and wines, which are necessary for the fire element in appropriate amounts

differing from Individual to Individual, is a great endeavor in itself. Stage of the spiritual endeavour, and all other factors determine which food endow a clear view of the inner, stabilizing the energies clearing up the vibrations. And it is one's own reason, study and judgement that decides. Not anything

outward. The soul state of the person preparing the food has an impact. I once had a rasgulla made by someone at a restaurant in a Himalayan nation. The taste immediately took me to the Zero point of Zen, and for the first time. As if the person who made it had no intent, no motive to

please or not please, no  
motive to impress or not  
impress, no motive for  
money, yet an absolute  
pleasantness, difficult to  
put in words. A Zen  
meditative state,  
inimitable, not  
describable.

One should think of  
Spirituality as field of  
discovery, of joyous  
discovery, understood

fully by no mortal. For if  
any understood it fully,  
they wouldn't be mortal.

The Guru, is depth of  
reasoning.

Fake Gurus with  
paraphernalia and  
followers admiring them  
and describing their feats  
are a way of employing  
spies to fool people as per

Kautilaya's Arthasastra.

A beyond “ This is the approach to understanding, and you are by yourself and with God,( whose brightness will appear inside you, )in walking the Path. “ no Guru has any role. In an era of writing and what not,

there is no need for  
people to gather others  
around.

The Yogasutras for  
instance guide that  
way. A good book on  
Zen can take farther  
ahead than any of these  
on stage for fame  
gurus.

Vedas are ultimately  
mathematical code,  
interpreted understood  
once their vibration-  
origin is found and  
awareness stilled by  
Samadhi in the  
absolute planes, as  
yogasutras describe.

Discussion and exchange of ideas could easily happen in a formal setting, much like an academic setting, with no banners but the topic of discussion – in the style of the present day's academia, and that attire and structuring, if not, the discussion

can also be casual ,  
between friends.

Normal reason,  
experience and insights  
guide. One may  
discuss things one read  
last week, with friends.  
Or, discuss insights  
with family.

Even the talk between  
Socrates and friends is

that way. Simple  
conversations.

Sparking deeper ideas  
naturally.

Be dynamic in forming  
and discarding  
understandings. That is  
the way any field of  
study progresses, the  
faster you can identify  
a wrong idea, or the  
narrowness of a view,

the faster you end up  
in the possibility of a  
greater view.

The Socratean  
approach were to lead  
the reasoning of the  
other person by asking  
simple questions.

One should be  
absolutely cool and at  
ease about admitting  
one doesn't know

things. Who knows what. I know nothing is what Socrates said.

The family space can be streamlined to support this endeavor, by eliminating out unnecessary efforts.

The Purpose of family is to encourage on each other in the Spiritual effort.

And to gently guide.  
One should  
understand own  
wisdom is limited and  
often the other being  
has a purpose in its  
inner and deeper  
inclination.

For the Zen monk, the  
tea experience unveils  
joys of the Divine. Thus

the senses in the right mode are an opening to the Divine.

The Senses are also an input of knowledge.

This idea is present in the Gita as well – as pointed out by Abhinavagupta's writings.

Joyousness,  
Family, Good  
friendships, all  
of this are integral  
and natural aspects  
of a Spiritual  
Journey.

I urge the reader to  
widely share the  
PDF, to displace the  
false ideas that have  
been permeating India,  
and threatening the  
very displacement of  
the original sacred  
traditions from India,  
and alienating people

from spiritual efforts.

It is the individual's duty. There is nothing else outside that would transform the world, it is own duty to help lift up own nation.

Do not shy away from own Dharma.

All Good

Emerges from the  
Doing of

own

Dhar  
ma.

DILIP RAJEEV

# Solar Worship

Dilip Rajeev

Copyright © 2020 Dilip Rajeev

All rights reserved.

ISBN:

The Sun is a Conscious  
Living Expression, of the  
One.

The ancient Upanishadic  
traditions describe God as,  
“the Purusha in the Sun.”

The Sun is a 6D expression,  
it expresses the world  
phenomenon here, and its  
own DNA, differentiated,  
becomes the DNA of the  
worlds and beings appeared  
here.

A 6D space has 5D for its surface expressions. The planetary bodies, thus are as expressions of the Sun's surface, 5D in Nature.

Each planet is thus as a Solar  
Chakra.

Within the human, the 6  
Chakras reflect the 6 -  
Dimensional nature of the  
Solar Angel, the Sun.

The heart chakra, the 4<sup>th</sup> chakra, an expression of four dimensional aspect of the Sun, is where the human finds his or her feeling of the three dimensional world.

The Earth is 5D, and within  
the earth is an expression of  
the Sun, the 6D, in a  
dimensional view.

Within 5D is 6D, and 5D as  
it evolves and draws from  
6D, is also as if orbiting the  
6D world.

Thus, the earth is a set of frequencies, scanning the DNA of the Sun itself.

Earth exists not a distance  
from the Sun, but in the Sun.  
The idea of distance emerges  
from the way the frequencies  
projected by the Sun are  
interpreted.

All phenomenon in Solar  
Space, is as if storypaths  
projected by the Sun.

The awareness identified  
with a high vibration story,  
evolves out a greater world  
on earth.

The Solar Universe is made  
of parallel worlds, and  
dimensions invisible to the  
human eye.

The Sun is the Origin of Life  
and Consciousness here, and  
the Predominant Expression  
of Pure Divine in our World.

Great traditions, particularly  
the Vedic, Adored the Sun.

For Solar Worship,  
The Sun is to be understood  
as the Living Expression of  
the Divine in which the  
world here exists.

Early Morning, One,  
Listening to Vedic Chants, or  
After Reciting a verse such as  
the Gayatri, One  
worshipfully offers his or her  
obeisance to the Sun.

As water is a medium which  
embodies thoughts, a  
medium of expression, and  
that which binds the worlds,  
a handful of water is  
worshipfully offered to the  
Sun.

The water is, in the ancient way of doing it, held in the hand and offered by the heart and thoughts of worship-devotion unto the Solar Angel, in whom the world exists.

The water is then gently and respectfully, poured on the Earth, while One faces the Sun.

The water offered in  
Worship, may be poured as  
well on the roots of a sacred  
plant such as holy basil.

Then, one stands awhile in  
Profound Worship, facing  
the Sun, Pondering the  
World as emerging from the  
Sun, and one's own life  
expression here as from the  
Solar Angel.

One on the Vedic Path,  
tends to study the Gayatri  
Mantra frequently. Prepare a  
book in which on each page  
is the Gayatri Mantra with  
Vedic Markers,

Gain an understanding of the  
Pronunciation of the Gayatri  
by listening to the Chanting  
of it in the Vedic form,

Study the Gayatri Mantra by  
visually reading it from the  
pages, 108 times, if one is  
inclined to the Mantra Yagna  
form of Worship.

The  
Symbol  
of the  
Silver  
Sun, is a  
symbol of the Path.

And those who abided by  
the ancient religion  
described here, were  
identified by the name,

Surya  
Yajnika.

# Instructions for Printing.

Give this PDF to any printing press or local printers near you to get a perfect bound paperback copy of the book Gayatri Yajna by Dilip Rajeev printed.

Print Book Size: 8.5 \* 11in

Cover page is the sheet in the following document that appears as

The content of the book is the set of pages starting from

to the end of the PDF.

Recommended Cover: Paperback, 220 GSM Glossy.

Recommended paper thickness for inside of the body: 90 GSM white paper.

The next page in this PDF IS THE COVER PAGE.

The cover page looks like,

WHAT follows **after** the cover page is the content of the book. It starts with the page following the cover page, and ends with the PDF.

Until this page were just the printing instructions.

## To the Reader

By giving this PDF as a whole to the printer, and asking them to go by the above instructions you can get a perfect-bound paperback print copy of the book.. A Printed paperback kept with you, would make it easy to study the Gayatri Mantra any time you wish and elevate yourself. Google to find a good local printing service.

**T**his work is a guidance to  
establishing oneself in a great  
yajna.

The happiness of individuals  
evolve as they evolve the spiritual  
light inside.

**T**he Gayatri Yajna involves  
studying the Gayatri Mantra 108  
times, at the 3 sandhyas, daily.

**T**he three sandhyas are at early morning, midday, and at night.

# The gayatri

**mantra** is to be studied

with a deep sense 108 times, at the  
three Sandhyas.

Each sound of the mantra is to be studied in a way that brightens the inner. That brightness inside is the Sun.

The Sun is a term used for the Atman, the Soul.

When the sounds of the Gayatri Mantra reveal an inner brightness, keep the awareness on that inner bright Sun. The awareness expands forth what it holds.

The Sound vibrates the body and the mind, and thus unveils what is beyond the body and the mind, which is the Soul, the Sun.

**T**he Gayatri Mantra may be read a few times at any point one wishes to brighten one's intelligence.

**D**o keep sharing with all your friends, and family. A Yajna is to bring joy, love, and spiritual light to the entire world.

As part of the Yajna itself, do take this work to as many in the world, as you are able to.

**T**he Universal DNA, or the EkaBija of the Universe is processed by the 6D entity that is the Sun. The Same 6D system unfolds as the human chakras, viewed through unique maps of the differentiated individual DNA, by the unique individual awareness spark, the individual soul in that DNA matrix space.

The Planets, thus are as if Chakras or processing spaces of the Sun. They are in the Sun, so to speak, and the notion of distance arises from the set of frequencies processed by the planets each of which is a 5D sphere. The human experience involves the 4D DNA differentiated views, the heart chakras of humans, processing the world-phenomenon as projected by the Solar God.

Gayatri Mantra

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्स॑वि॒तुर्वरे॑ण्यं॑ भर्गो॑ दे॒वस्य॑ धीमहि ।

धियो॑ यो नः॑ प्रचो॒दया॑त् ॥

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्स॑वि॒तुर्व॑रे॒ण्यं॑ भ॒र्गो॑ दे॒वस्य॑ धीमहि ।

धियो॑ यो नः॑ प्र॒चोद॑यात् ॥

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्स॑वि॒तुर्वरे॑ण्यं॑ भर्गो॑ दे॒वस्य॑ धीमहि ।

धियो॑ यो नः॑ प्रचो॒दया॑त् ॥

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्स॑वि॒तुर्वरे॑ण्यं॑ भर्गो॑ दे॒वस्य॑ धीमहि ।

धियो॑ यो नः॑ प्रचो॒दया॑त् ॥

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्स॑वि॒तुर्वरे॑ण्यं॑ भर्गो॑ दे॒वस्य॑ धीमहि ।

धियो॑ यो नः॑ प्रचो॒दया॑त् ॥

ॐ भूर्भुवः स्वः

तत्स॑वि॒तुर्व॑रे॒ण्यं॑ भ॒र्गो॑ दे॒वस्य॑ धीमहि ।

धियो॑ यो नः॑ प्रचो॒दया॑त् ॥

ॐ भूर्भुवः स्वः

तत्स॑वि॒तुर्व॑रे॒ण्यं॑ भ॒र्गो॑ दे॒वस्य॑ धीमहि ।

धियो॑ यो नः प्रचो॒दया॑त् ॥

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्सवितुर्वरेण्यं भर्गो देवस्य धीमहि ।

धियो यो नः प्रचोदयात् ॥

ॐ भूर्भुवः स्वः

तत्स॑वि॒तुर्वरे॑ण्यं॑ भर्गो॑ दे॒वस्य॑ धीमहि ।
