The Dalai Lama and Thubten Chodron

THE LIBRARY OF WISDOM AND COMPASSION : VOLUME I

*A Note from the Publisher*

We hope you will enjoy this [Wisdom](#) book. For your convenience, this digital edition is delivered to you without “digital rights management” (DRM). This makes it easier for you to use across a variety of digital platforms, as well as preserve in your personal library for future device migration.

Our nonprofit mission is to develop and deliver to you the very highest quality books on Buddhism and mindful living. We hope this book will be of benefit to you, and we sincerely appreciate your support of the author and Wisdom with your purchase. If you'd like to consider additional support of our mission, please visit our website at [wisdompubs.org](http://wisdompubs.org).

APPROACHING  
THE BUDDHIST PATH

THE LIBRARY OF WISDOM AND COMPASSION

*The Library of Wisdom and Compassion* is a special multivolume series in which His Holiness the Dalai Lama shares the Buddha's teachings on the complete path to full awakening that he himself has practiced his entire life. The topics are arranged especially for people not born in a Buddhist culture and are peppered with the Dalai Lama's own unique outlook. Assisted by his longterm disciple, the American nun Thubten Chodron, the Dalai Lama sets the context for practicing the Buddha's teachings in modern times and then unveils the path of wisdom and compassion that leads to a meaningful life and a sense of personal fulfillment. This series is an important bridge from introductory to profound topics for those seeking an in-depth explanation in contemporary language.

## Prologue

THE WORLD WE LIVE IN is very different from the world at the Buddha's time, yet we human beings have the same afflictions and still experience physical and mental suffering. While the truth of the Buddha's teachings transcends historical eras, the way they are presented to practitioners in a given time is influenced by the specific culture, environment, and economic and political challenges. I encourage us to become twenty-first-century Buddhists—people whose view is rooted in the Buddha's message of compassion and wisdom and who also have a broad understanding of many fields, such as science—especially neurology, psychology, and physics—and other religions.

Our Buddhist knowledge must be expansive, not limited to just one topic, practice, or Buddhist tradition. We should try to learn about the teachings and practices of other Buddhist traditions and understand how they suit the particular dispositions and interests of the people who practice them. We may also include some of these teachings in our own practice. In this way, we will better appreciate the Buddha's skill as a teacher, which will reduce the sectarianism that limits us Buddhists from acting together to contribute to the welfare of all peoples and environments on our planet. We should also understand the full path to awakening and how different teachings can be practiced by the same individual at different points of his or her spiritual journey. This will clarify our personal practice as well as increase our respect for all Buddhist traditions and other religions.

To grow these understandings in ourselves, reciting prayers and mantras

is not sufficient. While perhaps increasing our devotion, these activities alone do not bring wisdom. In the modern world, we need to be realistic and practical, and for this, knowledge is essential. All of us want happiness, not suffering. Since both happiness and suffering arise in dependence on causes and conditions, we must know the causes of each so that we can train our minds to create the causes for happiness and abandon the causes for suffering.

All of us want a harmonious society. Since society consists of individuals, to bring about peace each individual must cultivate peace in his or her own heart and mind. Of course the ultimate aim of the Buddha's teachings goes beyond world peace to liberation from all rebirth in cyclic existence (*samsāra*), but the teachings can help us to create a more peaceful society while we are still in cyclic existence.

The material in this series accords with the general presentation of the Indian sages of the Nālandā tradition, who are held in esteem by all four Buddhist traditions in Tibet as well as Buddhist traditions in China. Most of the quoted passages come from these Indian sources, and in terms of the *method* aspect of the path—renunciation, bodhicitta, and the perfections of generosity, ethical conduct, fortitude, joyous effort, and meditative stability—there is little difference among them. Tibetan traditions follow Nāgārjuna and speak of the noncontradictory nature of emptiness and dependent arising as the essence of the *wisdom* aspect of the path, here we will emphasize Tsongkhapa's presentation of emptiness and sometimes mention teachings from the Nyingma, Kagyu, and Sakya traditions. Because the Pāli tradition emphasizes the Fundamental Vehicle which is common to all Buddhist traditions, we also cite passages from it.

In general, my teaching style does not follow the approach of the traditional *lamrim* (stages of the path) teachings. I like to speak a lot about emptiness and show its relationship to other aspects of the path; this way of presenting the teachings also flourished in ancient India. Many years ago, His Eminence Geshe Lungrik Namgyal, the Gaden Tripa at that time, said to his friends, "Understanding His Holiness the Dalai Lama's teachings is challenging because his way of presenting the material is special. He touches on this point and that, but we are unable to integrate everything into the traditional framework of the teachings." I wonder if this is praise

or criticism. In any case, please think deeply about the various topics in the manner explained. Contemplate how these topics relate to one another and to your life.

Bhikṣu Tenzin Gyatso, the Fourteenth Dalai Lama  
Thekchen Choling

## Preface

### *The Purpose of This Series*

EVERYTHING COMES ABOUT due to causes and conditions, and this series is no exception. Explaining some of its causes and conditions will help you understand the purpose of this series. Its ultimate purpose is to lead you, the reader, and other sentient beings to full awakening. Although many excellent works on the stages of the path, the lamrim, already exist, there is a need for this unique series. To explain why, I will share a little of my personal story, which is typical of the first generation of Westerners encountering Tibetan Buddhism.

Born in the United States, I grew up in a Judeo-Christian culture. I tried to believe in God, but that worldview didn't work for me. There were too many unanswered questions. When I was twenty-four, I attended a three-week Dharma course taught by two Tibetan lamas. One of the first things they said was, "You don't have to believe anything we say. You are intelligent people. Examine these teachings using reasoning. Practice them and see through your own experience if they work. Then decide if you want to adopt them." The attitude of *ehipaśyika*, or "come and see," that the Buddha spoke about in the sūtras attracted me. Studying, contemplating, and practicing the Buddha's teachings over time, I became convinced that this path made sense and would help me if I practiced it sincerely.

Like many young Westerners in the 1970s, I steeped myself in studying and practicing Tibetan Buddhism as best I could, considering that I didn't know the Tibetan language or much about Tibetan culture. Our Dharma education commenced with the lamrim—a genre of texts that lead readers through the progressive stages of the path to awakening. Here it is helpful

to look at the place of Tibetan lamrim works within the tradition. After the Buddha's awakening, he taught across India for forty-five years. Sensitive to the needs, interests, and dispositions of the various audiences, he gave teachings that were appropriate for them at that moment. After his passing (*parinirvāṇa*), the great Indian sages organized the material in the sūtras by topic points and wrote treatises and commentaries explaining these. After the Dharma spread to Tibet, Tibetan masters also wrote treatises and commentaries, of which lamrim literature is one type.

Tibetans see this development of treatises, commentaries, and commentaries on commentaries as a demonstration of the sages' kindness. The fortunate ones who were direct disciples of the Buddha had great merit and could attain realizations of the path without needing lengthy teachings. Since those of future generations had less merit, their minds were not as sharp, and they required more detailed explanations to dispel their doubts, generate the correct views, and attain realizations. Since people's minds are even more obscured and they have less merit now, new commentaries are needed. Our teachers thus said the sūtras are like freshly picked cotton, the Indian treatises and commentaries like woven cloth, and the lamrim texts like ready-made clothes. When the first generation of Westerners were introduced to the lamrim, we were told that everything we needed to know was in these texts, and that all we had to do to gain awakening was study and practice them correctly over time.

However, things didn't turn out to be that simple. From the very beginning of the lamrim, we had doubts about topics that for our Tibetan teachers were obvious. Precious human life, one of the initial meditations of the lamrim, speaks of our fortune being born as human beings, not as hell beings, hungry ghosts, or animals. Tibetans, raised in a culture that believes in rebirth and various realms of existence, accept this without question. However, for those of us raised in Christian, Jewish, or secular cultures that respect science, this is not the case.

Furthermore, while our Tibetan teachers talked about all phenomena being empty of true existence, we were wondering, "Does God exist?" When they taught selflessness, we were trying to find our souls or our true selves. When they explained dependent arising, we were seeking the one absolute truth independent from all else. Philosophically, our views did not coincide.

The traditional presentation of the teachings assumed that the audience had faith in the Buddha, Dharma, and Saṅgha and was free from doubts about religious institutions and issues around authority. The teachings were directed toward people who could separate their emotional needs from their spiritual practice and who would correctly understand the teachings. For example, they assumed we would not be overwhelmed with guilt when reflecting on our harmful actions; we would not harshly criticize ourselves when contemplating the disadvantages of self-centeredness; and we would not succumb to our culture's tendency to idolize the charismatic.

From our side, we Westerners assumed that all Tibetan teachers were buddhas and that the values we grew up holding—democracy, gender equality, care for the environment, and so on—would be perfectly embodied in Tibetan society.

All these assumptions on both sides were incorrect, and after a while many Westerners began to have difficulties with their Dharma studies and practices. The cultural difference was difficult for us and for our spiritual mentors, who were doing their best to teach people whose perspective on life was totally new to them. It took many years for all of us to realize that Westerners require pre-lamrim teachings. For us to grow in the Dharma, the stages of the path need to commence with material that meets our dispositions.

His Holiness the Dalai Lama understood this and adjusted his teachings in the West accordingly. Instead of beginning with a reliance upon a spiritual mentor elevated to the status of a buddha, he started with the two truths—how things appear to exist and how they actually exist. Rather than tell us that reciting a certain mantra a few times would protect us from rebirth in the hells, he explained the four truths of the *āryas*—those who nonconceptually perceive ultimate reality. Instead of saying that drinking blessed water would purify eons of destructive karma, he taught us about the nature of mind, the workings of the mental afflictions, and the possibility of attaining liberation. Diving into the philosophy that underlies the Buddhist worldview, he asked us to think deeply about it. He challenged us to doubt our anger and to open our hearts with compassion for all sentient beings. His was a no-nonsense approach, and when he learned that, contrary to Buddhist scriptures, the earth was not flat and revolved around the sun, he was quick to say that if science conclusively proves something,

we should accept it and not adhere to scriptural pronouncements to the contrary.

In this environment, in 1993, I requested an interview with His Holiness. The interview did not happen for another two years due to His Holiness's full schedule. During the interview, I humbly requested him to write a short lamrim text designed for non-Tibetans. A text that Tibetan geshe could use to teach Westerners, it would present the topics in an order suitable for people who did not grow up Buddhist and would deal with doubts and issues that non-Tibetans had about the Dharma. His Holiness agreed with the idea, but he immediately stipulated that a larger commentary should be written first and then points extracted from it to make a root text. He asked me to speak to senior Dharma students about the topics to include, gave me a transcript of a lamrim teaching he had recently given to use as a foundation, and asked me to begin. I spoke with many senior Western practitioners and assembled a list of questions, topics, issues, and doubts that they would like His Holiness to address.

Over the ensuing years, I met with His Holiness several times to address these topics and to show him the work I had done so far on the manuscript. In our time together, he taught specific subjects upon my request, offered deeper explanations of others, and answered the many questions that I had accumulated. He seemed to thoroughly enjoy these sessions and usually invited other geshe and his brother to come. I would ask a question, and they discussed the answer animatedly in Tibetan, with His Holiness asking the geshe what they thought, bringing up points they had not considered. After some time, the translator gave me the conclusion of the discussion.

As I continued to add more material from many of His Holiness's oral teachings and from our interviews, the manuscript became larger and larger. I came to see that the purpose of this series was to fill the gap between the short lamrim texts with teachings lamas gave in the West and the long philosophical treatises translated into English by scholars. Western practitioners needed a concise presentation in their own language of the major topics in the philosophical texts that could also be the basis for an analytical meditation on the lamrim.

In 2003, I began to read the manuscript aloud for His Holiness so he could check it. We soon realized that this would be a lengthy process that his schedule did not permit. In 2004, he asked his translator Geshe Dorje

Damdul to go through the manuscript with me. Geshela and I worked methodically until 2010 doing this.

His Holiness also clarified that this series was not meant solely for Westerners, but for all those who have interest in Buddhism—particularly the Nālandā tradition—and are keen to study and practice but need a new approach to it. Here he included Tibetans born in the Tibetan diaspora who have a modern education, as well as Asians from Taiwan, Korea, Vietnam, and so forth who are attending his teachings in Dharamsala, India, with increasing frequency and interest.

This series chiefly contains the teachings of the Nālandā tradition, the classical Indian Buddhist tradition stemming from the great monastic universities such as Nālandā, Odantapurī, and Vikramaśīla. This is the Buddhist tradition the Tibetans and to some extent East Asians inherited from classical India. However, His Holiness clearly stated that this series must be unique—it must not be limited to the Nālandā tradition but must also include information about and teachings from other Buddhist traditions. It was time, he said, that followers of Tibetan Buddhism learned more about diverse Buddhist traditions and their teachings. As he began to speak more and more in public talks about being a twenty-first-century Buddhist, I came to understand his wish to dispel wrong conceptions and stereotypes that practitioners of various Buddhist traditions had about one another and bring them closer together. For this purpose, he asked me to visit other Asian countries to learn about how they practiced the Dharma. I stayed in a monastery in Thailand and also visited Taiwan to learn from scholars and practitioners there. I continued intra-Buddhist dialogues with Buddhist monastics in the West at our annual Western Buddhist Monastic Gatherings and became familiar with the teachings of their Asian teachers. These were very rich experiences.

In the 2011 series of interviews, His Holiness clarified that to fulfill the above purpose, he wanted a book explaining the similarities and differences between the Pāli and Sanskrit traditions. While most books that introduce the many forms of Buddhism deal with more superficial topics such as altar layout, forms of worship, and so forth, this book was to deal with doctrine. He wanted people to think deeply about the Buddha's teachings and his skill in addressing the various dispositions and interests of his disciples. By this time the manuscript was too large to be a single volume. To fulfill His

Holiness's wish, I extracted and abbreviated portions of it to form *Buddhism: One Teacher, Many Traditions*, published by Wisdom Publications in 2014.

The present series, which will be published in several volumes, explains the path to buddhahood as set forth in the Nālandā tradition as practiced in the Tibetan Buddhist tradition. In some sections, it brings in teachings from other Buddhist traditions to enrich our understanding and give us a broader view of a topic. The series also incorporates several other purposes: it links study to daily life and formal meditation practice; it serves as a bridge for both new and seasoned practitioners from the short lamrim texts to the lengthy philosophical treatises; and it exposes the reader to the tenets and practices of other Buddhist traditions. Because some of the topics have already been explained in *Buddhism: One Teacher, Many Traditions*, we will sometimes refer you to that book.

### *Overview of the Entire Series*

We begin by laying the groundwork for the Buddha's teachings. The need for pre-lamrim material is evinced in a comment His Holiness made when we began working on the series: "The lamrim assumes that someone is already a practitioner with full faith in the Buddha. The main audience for the lamrim texts in all the Tibetan traditions is someone who already has some knowledge of rebirth and karma, the Three Jewels, reliable cognizers and their objects (Buddhist epistemology), and so on. We need to add introductory material to this series so the students are properly prepared." Also covered here are the meaning of faith, balancing faith and wisdom, seeking out a qualified spiritual mentor, relying on that person properly, and developing the qualities of a receptive student. These will help you to approach the Dharma as a twenty-first-century Buddhist.

Then we set the foundation for learning and meditating by explaining how to structure a meditation session on the lamrim. After again reflecting on the possibility that the continuity of our mindstream does not end at death but will take another body in another life, we look at the precious opportunity our present human life offers us and how to set our priorities. This leads us to reflect on the eight worldly concerns—ways in which we

get distracted from making our lives meaningful—and karma (volitional actions) and their effects, for the first step to having a meaningful life is to abandon harming others. In this way, we will know the causes for happiness and the causes of suffering so we can go about creating the former and abandoning the latter. The topic of karma is vast and of great interest to many people, so that is covered in depth.

We then proceed to explore the four truths of the āryas, those beings who directly realize the ultimate mode of existence. These four form the basic framework of the Buddha's teachings. The first two truths—true *duḥkha* and true origins—lay out our present unsatisfactory situation in cyclic existence and its causes, the afflictions that torment our minds and lie behind our suffering. We look at the twelve links of dependent origination—the process by which afflictions and polluted karma propel our rebirth in cyclic existence and the way we can free ourselves from it. This section delves into the psychology behind wrong views and disturbing emotions.

At this point we realize that we need the guidance of the Three Jewels—the Buddha, Dharma, and Saṅgha—who will teach us and show us the path to liberation through the example of their lives. Learning about the potential of our mind, the possibility to attain liberation, and our buddha nature increases our confidence that we can succeed in freeing ourselves from saṃsāra and attain nirvāṇa, a state of genuine peace. This is explained in the latter two of the four truths—true cessation and true paths—the state of liberation and the method leading to it. Included in true paths are the three higher trainings, the four establishments of mindfulness, and the thirty-seven aids to awakening—topics that are oriented toward practice in both daily life and meditation sessions. Through these we will calm our daily behavior, deepen our concentration, and gain wisdom, thus beginning to actualize our great potential.

But freeing ourselves alone is limited, considering that others suffer just as we do and they have been amazingly kind to us. To free ourselves from the prison of self-centeredness, we learn how to cultivate immeasurable love, compassion, joy, and equanimity, as well as *bodhicitta*—the intention to attain full awakening in order to most effectively benefit all sentient beings. Then we learn how to train in the perfections (*pāramitās*)—practices that enable us to bring our bodhicitta motivation to fruition by practicing

generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom. Imagine the kind of person you will become when all those wonderful qualities have become second nature to you.

Having generated the altruistic intention to attain full awakening, we now want to cultivate the wisdom realizing the nature of reality, the only counterforce that will completely and irreversibly eradicate all the afflictions and their latencies from our mindstreams. Here we learn the tenets of the various Buddhist philosophical systems, which have diverse views about the ultimate truth. Our job is to sort through them with the aid of the past great sages and discern the most accurate view, that of the Prāsaṅgika Madhyamaka tenet system.

This leads us to discuss the two truths—veil and ultimate. Veil truths are objects that appear true to a mind affected by ignorance, and ultimate truth is their actual mode of existence, their emptiness. After further reflection, we come to see the uniqueness of the Prāsaṅgika Madhyamaka view of emptiness as well as how to unite the concentrated mind of serenity (*śamatha*) and the analytic mind of insight (*vipaśyanā*) to realize the ultimate nature. Here we will also touch on the view of selflessness as understood in the Pāli and Chinese Traditions.

The Buddha also set out the paths and stages that practitioners traverse to attain their particular goals—liberation from saṃsāra or the full awakening of buddhahood. Learning these gives us a roadmap to follow on our spiritual journey and we come to understand the various qualities and realizations that are gradually developed on the path. They also enable us to check our meditative experiences with the generally accepted sequence of development.

We then learn about the pure land practice found in both the Tibetan and Chinese traditions, and this leads us to a discussion of Vajrayāna, which is a branch of the general Mahāyāna. The work concludes with an epilogue from His Holiness containing personal advice for his students.

This work is designed not simply to give you information about Buddhism, but to enrich your Dharma practice. To this end, most chapters contain summaries of the main points so that you can easily remember and reflect on them. Please take advantage of these to deepen your practice by contemplating what you read. The work would have become too long had reflections been inserted for every section, so where they are missing, please

review what you read and write out the main points for contemplation. This will help you to apply what you learn to your own experience and integrate the Dharma into your life.

The volumes of this work will be published one at a time. This way you can spend some time learning, contemplating, and meditating on the material in one volume, which will prepare you for the material in the following volume. The stages of the path are presented in a particular order in this series of volumes for the purpose of allowing you to grow into the more advanced and complex stages. Nevertheless, each volume stands alone as an explanation of its unique topic.

When giving public teachings to audiences of people with very different backgrounds and degrees of understanding, His Holiness doesn't shy away from introducing profound topics. Although he doesn't give a full explanation, he brings in advanced concepts and vocabulary in a concise manner. He doesn't expect everyone to understand these topics but is planting seeds for newer students to one day learn and understand the more complex teachings. He often will weave back and forth between general topics that most people can easily understand and difficult topics that only the learned will comprehend. Don't get discouraged if you don't understand everything all at once. The concepts and terms introduced in earlier volumes will be fleshed out in later ones.

This series is written in a similar style, although I tried to edit the material so that the reader is led from easier topics to more difficult ones. If you do not completely understand a topic the first or even second time, don't worry; the series is meant to be a resource for you on the path, a text to which you will repeatedly refer to deepen your understanding of the Dharma. Each time you read it, you will understand more due to the merit and wisdom you accumulated in the intervening time.

By learning the entire path from beginning to end, you will come to see the relationships between the various topics, which will enrich your practice. Although the stages are presented in a linear fashion, the knowledge and experience obtained from later stages will inform your meditation on earlier stages. As you continue to delve into the Buddha's teachings, you will find new ways to relate different points to each other in a creative and thought-provoking way. One of His Holiness's unique qualities as a teacher is his ability to draw threads from seemingly different topics

together to make a tapestry that continually draws us into more profound understandings.

### *Overview of Volume I*

This first volume and part of the second cover topics that form the basic approach of the Nālandā tradition. In the curriculum at a Tibetan monastery, many of these are embedded in larger texts and others are learned in public teachings. Here we extracted the most important points and incorporated them in one volume, so that people who did not grow up in a Buddhist culture or in a monastery will have the background that supports the study of the stages of the path.

Chapter 1 explores the role of Buddhism in the world: the purpose of our lives, the middle way between theistic religions and scientific reductionism, Buddhism's relationship with the other great world religions, and the meaning of being a spiritual practitioner in the modern world.

Chapter 2 delves into the Buddhist view of life: the explanation of the mind and its relationship to body, rebirth, and the self. The four truths of the āryas lay out the essential framework of the path, and to understand these more deeply, we investigate dependent arising and emptiness and the possibility of ending duḥkha—our unsatisfactory situation in cyclic existence.

Chapter 3 explores our minds and emotions, and furnishes some practical strategies for calming our minds as well as for developing a confident and optimistic attitude for approaching life and spiritual practice.

Chapter 4 is a brief survey of the historical development of the Buddha-dharma: the early Buddhist schools in the Indian subcontinent, Sri Lanka, and Central Asia; the Buddhist canons; and the philosophical tenet systems that began to form in India. More detailed information has been included in footnotes for those readers who are interested.

This leads to an examination in chapter 5 of the three turnings of the Dharma wheel—one schema for organizing the Buddha's teachings—as well as the authenticity of the Mahāyāna scriptures. This chapter concludes with an introduction to Tibetan Buddhism as the continuation of the Nālandā tradition in India.

Chapter 6 investigates the teachings, first by discerning reliable teachings and differentiating them from exaggerated statements given to encourage a

particular type of disciple, and then by ensuring we understand the correct point of the teachings we study.

Chapter 7 discusses cultivating a proper motivation for spiritual practice, since this is crucial to prevent fooling ourselves, getting sidetracked, or becoming hypocritical. This chapter brings us back to our inner heart and encourages us to cultivate the sincere wish to free both ourselves and others from cyclic existence and to attain full awakening. His Holiness also illustrates a practical way to cultivate and maintain a compassionate motivation.

Chapter 8 deals with how to progress along the path to full awakening as an initial, intermediate, and advanced level practitioner. This provides the framework for knowing where each topic the Buddha taught fits into the entire path, so we can practice the path in a step-by-step manner without undue confusion.

Chapter 9 speaks of the mental tools we will need to progress along the path, such as faith and wisdom. Here we'll understand the role of prayers and rituals as well as memorization and debate in cultivating the three wisdoms: the wisdom arising from learning, reflecting on the teachings, and meditating on them.

Chapter 10 anticipates some common challenges that practitioners could encounter and offers ways to overcome them.

In chapter 11, His Holiness shares some of his personal reflections and experiences practicing the path, so we can see how a genuine practitioner uses the Dharma in daily life.

Chapter 12 shifts our focus from personal practice to using Buddhist principles to guide our work in and for the world. The Buddha taught the Dharma not only for spiritual transcendence, but also as a method to create a healthier and more just society. Here we apply Buddhist ideas and practices to politics, business, consumerism, the media, the arts, science, gender equality, and respect for other religions as well as for other Buddhist traditions.

### *Please Note*

While this series is coauthored, the vast majority is in His Holiness's voice. I wrote the chapter on Buddhist history, all parts pertaining to the Pāli tradition, and some paragraphs here and there.

Pāli and Sanskrit terms are usually given in parentheses only for the first

usage of a word. Unless otherwise noted with “P” or “T,” indicating Pāli or Tibetan respectively, the italicized terms are Sanskrit. In most cases, Dharma terms and scriptural titles are in English, but when Sanskrit or Pāli terms are well known, those are used, for example Prajñāpāramitā for Perfection of Wisdom, and *jhāna* or *dhyāna*, the Pāli and Sanskrit names respectively for meditative stabilization. Sanskrit or Pāli spellings are used in sections concerning their respective traditions and in quotations from each tradition’s scriptures. For ease of reading, most honorifics have been omitted, although that does not diminish the great respect we have for these most excellent sages. Because it is awkward to gloss every new term when it first appears, a glossary is included at the end of the book. Unless otherwise noted, the personal pronoun “I” refers to His Holiness.

### *Acknowledgments and Appreciation*

I bow to Śākyamuni Buddha and all the buddhas, bodhisattvas, and arhats who embody the Dharma and share it with others. I also bow to all the realized lineage masters of all Buddhist traditions through whose kindness the Dharma still exists in our world.

Since this series will appear in consecutive volumes, I will express my appreciation of those involved in that particular volume. This first volume is due to the talent and efforts of His Holiness’s translators—Geshe Lhakdor, Geshe Dorje Damdul, and Geshe Thupten Jinpa—and of Samdhong Rinpoche and Geshe Sonam Rinchen for their clarification of important points. I also thank Geshe Dadul Namgyal for checking the manuscript; the staff at the Private Office of His Holiness for facilitating the interviews; the communities of Sravasti Abbey and Dharma Friendship Foundation for supporting me while writing this series; and David Kittelstrom for his skillful editing. I am grateful to everyone at Wisdom Publications who contributed to the successful production of this series. All errors are my own.

## Abbreviations

**T**RANSLATIONS USED IN THIS volume, unless noted otherwise, are as cited here. Some terminology has been modified for consistency with the present work.

- AN *Aṅguttara Nikāya*. Translated by Bhikkhu Bodhi in *The Numerical Discourses of the Buddha* (Boston: Wisdom Publications, 2012).
- AKC *Advice to Kunzang Chogyal*, by Dza Patrul Rinpoche, translated by Karen Lilienberg. <http://vajracakra.com/viewtopic.php?f=57&t=3287>.
- BCA *Engaging in the Bodhisattva's Deeds (Bodhicaryāvatāra)* by Śāntideva. Translated by Stephen Batchelor in *A Guide to the Bodhisattva's Way of Life* (Dharamsala, India: Library of Tibetan Works and Archive, 2007).
- CŚ *The Four Hundred (Catuḥśataka)*, by Āryadeva.
- LC *The Great Treatise on the Stages of the Path* (Tib. *Lam rim chen mo*) by Tsongkhapa, 3 vols. Translated by Joshua Cutler et al. (Ithaca: Snow Lion Publications, 2000–2004).
- MN *Majjhima Nikāya*. Translated by Bhikkhu Ñāṇamoli and Bhikkhu Bodhi in *The Middle-Length Discourses of the Buddha* (Boston: Wisdom Publications, 1995).
- RA *Precious Garland (Ratnāvalī)* by Nāgārjuna. Translated by John Dunne and Sara McClintock in *The Precious Garland: An Epistle to a King* (Boston: Wisdom Publications, 1997).

- SN Saṃyutta Nikāya. Translated by Bhikkhu Bodhi in *The Connected Discourses of the Buddha* (Boston: Wisdom Publications, 2000).
- Vism *Path of Purification (Visuddhimagga)* of Buddhaghosa. Translated by Bhikkhu Ñāṇamoli in *The Path of Purification* (Kandy: Buddhist Publication Society, 1991).

APPROACHING  
THE BUDDHIST PATH

# 1 | Exploring Buddhism

A SPIRITUAL PATH IS ESSENTIAL to human life. Although advances in medicine, science, and technology have done much to improve the quality of human life, they have not been able to free us from all suffering and bring us secure and lasting happiness. In fact, in many cases, they have brought new problems that we did not face in the past, such as environmental pollution and the threat of nuclear war. Therefore, external improvements in our world are not sufficient to bring the happiness and peace that we all desire. For this, internal transformation through spiritual development is essential. For this transformation to occur, we need to follow a spiritual path.

Spiritual practice involves transforming our mind. Although our body is important, satisfying it does not bring lasting happiness. We must look inside ourselves, examining our attitudes and emotions to understand how profoundly they influence and shape our experiences. The Buddha comments (SN 1.62):

The world is led by mind and drawn along by mind. All phenomena are controlled by one phenomenon, mind.

The mind includes not only our intellect, but also all our cognitions, emotions, and other mental factors. The Sanskrit word for “mind,” *citta*, can also be translated as “heart.” It refers to all our consciousnesses—sensory and mental—and to the variety of mental states we experience. By subduing the afflicted aspects of our mind, our experience of the world is transformed, whereas if we seek to change only the external environment and the people

in it, we continually meet with frustration and disappointment because we cannot control the external world. It is only by developing the great potential of our mind/heart that we will be able to find a way out of our suffering and to truly benefit others as well.

In Buddhism, therefore, the obstacles we aim to eliminate are not external, but are afflictive mental states—distorted attitudes and disturbing emotions. The tools we use to counteract them are also mental—compassion, wisdom, and other realistic and beneficial attitudes and emotions that we consciously cultivate. The Buddha’s teachings, or Buddhadharma—what is commonly known as Buddhism—help us to differentiate realistic and beneficial attitudes, views, and emotions that accord with the way things are. The teachings also give us instructions regarding what to practice and what to abandon on the spiritual path. The Buddha taught from his own experience, and we are free to accept or reject his teachings, using valid reasons as well as our own experience as criteria.

### *The Purpose of Existence and the Meaning of Life*

The Buddha says (MN 46.2):

For the most part, beings have this wish, desire, and longing: “If only unwished for, undesired, disagreeable things would diminish and wished for, desired, agreeable things would increase!” Yet although beings have this wish, desire, and longing, unwished for, undesired, disagreeable things increase for them, and wished for, desired, agreeable things diminish.

What the Buddha says above is confirmed by our own experience. All of us want happiness and no one wants misery. Yet, despite our sincere wish, the opposite comes about. I believe the meaning and purpose of our life has to do with eradicating the causes of pain and increasing the causes of happiness, so that this deepest wish in the heart of each and every living being can be fulfilled.

I do not know of an overarching purpose for the existence of this world, and from the Buddhist viewpoint, there is not a clear explanation. We simply say that the existence of the world is due to causes and conditions, to

nature. The existence of this universe is a fact. How existence came into being and the possibility of ending suffering are quite different issues. We do not need to know how the world began in order to stop our suffering.

Everyone wants to be happy and peaceful and to avoid suffering. Even a person who doesn't know the purpose for the existence of the universe doesn't want to suffer. Such a person would never think, "Because there is no plan or big purpose, I will let myself suffer." Our body exists, and feelings of happiness and unhappiness exist. Whether our intellect understands the reason for our existence or not, we are concerned about the happiness of ourselves and others. By seeking to bring about this happiness, we give purpose and meaning to our lives.

The purpose of our life is happiness and peace, an internal feeling of well-being. To bring that about, we need material development and proper education. We also need spiritual development. By spirituality, I do not mean religious belief or rituals. For me, spirituality refers to the basic good qualities of human beings, such as compassion, affection, gentleness, and humility. When these qualities are well established in our hearts, we will have more peace of mind and will contribute to the happiness of others. Someone can be happy without religious beliefs but not without these basic good qualities.

Sentient beings—all beings with minds that are not fully awakened—experience two types of happiness and suffering: physical happiness and suffering (which occur at the level of our senses) and mental or emotional happiness and suffering (which occur at the mental level). As human beings, we are not different from animals, insects, and other beings with bodies; we are all basically the same in terms of seeking physical comfort and avoiding pain. But in terms of mental and emotional happiness and suffering, we human beings are very different from other species. We have human intelligence and thus have more capacity to think, remember, explain, and examine. For example, unlike animals, human beings may suffer mentally when they remember injustices their ancestors experienced. We may speculate about the future and become anxious or furious about situations that haven't occurred yet. Due to our imagination, we are much more sensitive on a mental level and experience so much joy and misery that is created by our mind. Because mental suffering is created by the conceptions in our mind, countermeasures that are likewise mental are important. Toward this

end, human beings have developed various religions, philosophies, psychological theories, and scientific hypotheses.

### *A Middle Way between Theistic Religions and Scientific Reductionism*

The more than seven billion human beings on our planet can be divided into three general groups: those who are not interested in religion, those who believe and practice a religion, and those who are actively hostile to religion. The first group, those who are not very interested in religion, is the largest. These people are concerned principally with their day-to-day lives, especially with financial security and material prosperity. Among this group there are two types. The first consists of people who have ethical principles and use them to guide their lives. The second values money, prestige, and pleasure above all else. Those guided by ethical principles are, in general, happier. Those who lack ethical restraint may gain more temporary benefit, but in the end, they do not feel good inside themselves about what they have done. Afraid that their devious means will be found out, they lack genuine self-confidence and inner peace. Many of our global problems are due to such a lack of ethical principles, which comes about when people do not know or care about the moral consequences of their actions. Without such knowledge and the restraint it produces, greed has free reign. We can see that many of our global problems would be solved if people lived with a sense of responsibility that comes from valuing ethical principles.

Of the other two groups, those who sincerely believe in a religion and practice it and those who are hostile to religion, the former also uses ethical principles and compassion to guide their lives, while the latter intentionally opposes religious ideas. Some people in the latter group say religion is the instrument through which the ruling class exploits others; others say that religion is just superstition or a cause of ignorance.

People in these three groups are the same in that they all seek happiness. There is no difference among them in this regard. The difference occurs in terms of what each group believes will lead to happiness. Except for those in the first group who privilege ethical values above personal gain, the rest trust principally in money and material comfort; the second affirms that

happiness comes primarily through ethical conduct as well as religious and spiritual practice; the third believes not only that happiness lies in the material world but also that religious ideas are irrelevant, make-believe, and counter to human happiness. Of these three groups, Buddhist practitioners belong to the second.

From one perspective, Buddhism is a religion and a spiritual discipline. Because Buddhist precepts and meditation are directly linked to mental training, it is also a science of mind. From another viewpoint, since Buddhism does not accept an external creator, it is not a theistic religion but a philosophy. Depending on how we look at Buddhism, we may describe it as a religion, a science of mind, or a philosophy. We do not need to say it is one and not the others, for Buddhism embraces aspects of all three.

We also see radical materialists who deny the existence of mind as an immaterial phenomenon, as well as religious believers who assert an external creator. We see people who stress logical reasoning and others who emphasize uncritical faith. It seems Buddhism does not fit in any of these categories. In contrast to religions that oppose critical investigation, Buddhism emphasizes that we should be skeptical, even of the Buddha's words. We have to investigate whether scriptural passages are reliable and true or not. If we find contradictory evidence, including scientific findings, we should follow what can be proven rather than what the Buddha said. The Buddha himself stated that his followers should not accept his teaching out of respect but after investigation and personal experiment. We have the liberty to examine and test the Buddha's teachings.

On the other hand, while Buddhism shares respect for logic and experimental proof, it doesn't deny the value of having faith and confidence in spiritually realized beings. Since our five senses are limited in what they are capable of knowing, scientific tools are not amenable to investigating many existent phenomena. So it seems that Buddhism is in between science and theistic religions. In the future, perhaps Buddhism may become a bridge between religion and science, bringing the two closer together.

I have met many times with people of other faiths as well as with scientists. Sometimes my Buddhist explanations have helped my Christian brothers and sisters practice their own faith. Other times, scientists in the fields of cosmology, biology, physics, and modern psychology have found common points between Buddhism and their disciplines. Some of these

scientists began our meetings thinking, “This will be a waste of time because Buddhism is a religion and religion doesn’t have much in common with science.” But after a few sessions, they were eager to learn about the Buddhist concepts of subtle particles or our explanation of the relation between the mind and the brain. This demonstrates the possibility of mutual understanding with practitioners of other religions and with scientists.

### *Buddhadharma and Other Religions*

There are two aspects to each religion: one is transformation of the mind or heart, and the other is the philosophy that supports that transformation. I believe that in terms of transforming human beings’ minds and hearts, all religions are in general agreement. They all teach love, compassion, forgiveness, nonharm, contentment, self-discipline, and generosity. No matter the religion, a person who practices it sincerely will develop these qualities. In every religion, we see many examples of ethical and warm-hearted people who benefit others.

The difference among religions occurs mainly in the area of philosophy. Theistic religions—Judaism, Christianity, Islam, and many branches of Hinduism—believe in a supreme being who created the universe and the living beings in it. Theistic philosophy supplies the reasons for the adherents of these religions to transform their hearts and minds. For them, all existence depends on the creator. The creator created us and loves us, and so in return, with gratitude we love the creator. Because we love the creator, we then must love the creations—other sentient beings—and treat them respectfully. This is the reason for our Jewish, Christian, Hindu, and Muslim brothers and sisters to be kind and ethical people.

Buddhism, on the other hand, speaks not of an external creator but of the law of causality. Our actions create the causes for what we will experience in the future. If we want happiness—be it temporal happiness or happiness that comes through spiritual realizations—we must abandon destructive actions and practice love, compassion, tolerance, forgiveness, and generosity.

While big differences exist among their philosophies, all religions agree on the good qualities for human beings to develop. For some people, the

Buddhist philosophy is more effective in cultivating these qualities. For others, the doctrine of another religion is more helpful. Therefore, from the viewpoint of an individual, each person will see one philosophy as true and one religion as best for him or her. But looking at all of society, we must accept the diversity and plurality of religions and of views of truth. These two perspectives—what is best for a given individual and what is best for society—do not contradict each other.

Even within Buddhism, our teacher, the Buddha, taught different philosophies to different people because he understood that due to each individual's disposition and interest, what is suitable for one person is not necessarily effective for another. Thus the Buddha respects individual views, be they within Buddhadharma itself or among individuals from various religions.

This series is written mainly for Buddhist practitioners, so some philosophical explanations naturally will not agree with people of other religions. However, as Buddhists we do not criticize those religions or the people who practice them. From a Buddhist viewpoint, the plurality of religions in the world is beneficial, for each individual must find a belief system that is suited to his or her disposition and interests. **Although the philosophy of another faith may not be correct from a Buddhist viewpoint, we must respect it if it benefits others.**

Whether we accept religion or not is an individual choice. But if we accept a religion, we should be serious in following it and make our way of life concordant with its teachings. If the teachings become part of our lives, we receive true value. In politics and business, hypocrisy and deception are commonplace and regrettable, but in religion they are totally deplorable. We must be sincere and cultivate a kind heart and tolerance no matter which religion we choose.

Once I met a Chilean scientist who told me that he reminds himself not to be attached to his particular scientific field. I think the same is true regarding religion because attachment leads to bias, which in turn brings a fundamentalist attitude that clings to a single absolute truth. While I was still young and lived in Tibet, I was a little biased against other faiths. However, upon coming to India, I met Thomas Merton, Mother Teresa, and people from many other religions. Seeing that the practice of other religions can produce wonderful people, I developed respect for other religions.

When my non-Buddhist brothers and sisters come to learn the Buddhadharma, I usually recommend that they do not think of becoming Buddhists. Buddhism does not proselytize or seek to convert others. You should first explore the religion of your family, and if that meets your spiritual needs, practice that rather than taking on Buddhism. In that way, you will avoid the difficulties of practicing a religion that exists within a culture foreign to your own and whose scriptures are written in languages that you do not understand. However, if your family's religion does not meet your needs and the Buddhadharma suits your disposition better, then of course you are free to become a Buddhist or to adopt some practices from Buddhism while retaining your previous religion.

The reason I advise people to first investigate their family's religion is that some people become confused when they change religions. A case in point is the family of a Tibetan lay official who fled Tibet in the early 1960s after the uprising against the Chinese occupation and became refugees in India. After the father passed away, one of the many Christian missionary groups who kindly helped refugees aided his wife and children. After some years, the wife came to see me and told me her story, saying that the Christians helped her a lot and gave her children an education, so for this life she is a Christian. But in the next life she will be a Buddhist!

To practice and benefit from the Buddha's teachings, you do not need to be a Buddhist. If certain teachings make sense to you, help you to get along better with others, and enable your mind and heart to be clearer and more peaceful, practice those teachings within the context of your own life. The Buddha's teachings on subduing anger and cultivating patience may be practiced by Christians, Jews, Muslims, Hindus, and those who do not follow any religion. Buddhist instructions on how to develop concentration and focused attention can be used by anyone who meditates, no matter what religion or philosophy they follow.

If you are interested in following the Buddhist path, I recommend that you first understand the Buddhist worldview. Take your time and learn how the Buddha describes our present state, the causes of our difficulties, our potential, and the path to actualize it. Explore the ideas of rebirth, karma and its effects, emptiness, awakening, and so on. Then, when you have some conviction arising from thoughtful reflection, you can consider following the Buddhist path.

## *Religion in the Modern World*

Once we adopt a religion, we should practice it sincerely. If we truly believe in Buddha, God, Allah, Śiva, and so forth, we should be honest human beings. Some people claim to have faith in their religion but act counter to its ethical injunctions. They pray for the success of their dishonest and corrupt actions, asking God, Buddha, and so forth for help in covering up their wrongdoings! People like that should give up saying they are religious.

Our world now faces an ethical crisis related to lack of respect for spiritual principles and ethical values. These cannot be forced on society by legislation or by science, and ethical conduct due to fear does not work. Rather, we must think and have conviction in the worth of ethical principles so that we want to live ethically.

The United States and India, for example, both have good governmental structures, but many of the people involved in them lack ethical principles. Self-discipline and ethical self-restraint on the part of political leaders, financial executives, those in the medical field, industrialists, teachers, lawyers, and all other citizens are needed to create a good society. But we cannot impose self-discipline and ethical principles from the outside. We need inner cultivation. That is why spirituality and religion are relevant in the modern world.

India, where I now live, has been home to the ideas of secularism, inclusiveness, and diversity for three thousand years. One philosophical tradition—in ancient times they were known as *Cārvāka*—asserts that only what we know through our five senses exists. Other Indian philosophical schools criticize this nihilistic view but still regard the people who hold it as *rishis*, or sages. In Indian secularism, they are respected by other traditions despite their different philosophy. In the same way, we must all respect those of other religions as well as nonbelievers. I promote this type of secularism, the essence of which is to be a kind person who does not harm others whether you are religious or not.

In previous centuries, Tibetans knew little about the rest of the world. We lived on a high and broad plateau surrounded by the world's highest mountains. Almost everyone, except for a small community of Muslims, was Buddhist, and very few foreigners came to our land. Since we went into exile in 1959, Tibetans have been in contact with the rest of the world;

we relate with diverse religions, ethnic groups, and cultures with a broad spectrum of views. We also live in a world where modern scientific views are prominent. In addition, Tibetan youth now receive a modern education in which they are exposed to views not traditionally found in the Tibetan community. Therefore it is imperative that Tibetan Buddhists be able to clearly explain their tenets and beliefs to others using reason. Simply quoting from Buddhist scriptures does not convince people who did not grow up as Buddhists of the validity of the Buddha's doctrine. If we try to prove points only by quoting scripture, these people may respond, "Why should I believe that scripture? Everyone has a book they can quote from!"

Religion in general faces three principal challenges today: communism, modern science, and the combination of consumerism and materialism. Regarding communism, although the Cold War ended many years ago, communist beliefs and governments still strongly affect life in Buddhist countries. For example, in Tibet the communist government controls who can ordain as a monk or nun and regulates life in the monasteries and nunneries. It also controls the educational system, teaching children that Buddhism is old-fashioned.

Modern science, up until now, has confined itself to studying phenomena that are material in nature. Because scientists by and large examine only things that can be measured with scientific instruments, this limits the scope of their investigations and consequently their understanding of the universe. Phenomena such as rebirth and the existence of mind as a phenomenon separate from the brain are beyond the scope of scientific investigation. Although they have no proof that these things do not exist, some scientists assume that they do not exist and consider these topics as unworthy of consideration. However, in the last two or three decades, I have met with many open-minded scientists, and we have had mutually beneficial discussions that have highlighted our common points as well as our diverging views. These discussions have been carried out with mutual respect, so that both scientists and Buddhists are expanding their worldviews.

The third challenge is the combination of materialism and consumerism. Religion values ethical conduct, which may involve delayed gratification, whereas consumerism directs us toward immediate happiness. Religion stresses inner satisfaction, saying that happiness results from a peaceful mind, while materialism tells us that happiness comes from external objects.

Religious values such as kindness, generosity, and honesty get lost in the rush to make more money and have more and better possessions. As a result, many people's minds are confused about what happiness is and how to create the causes for happiness.

As you begin to learn the Buddha's teachings, you may find that some of them are in harmony with your views on societal values, science, and consumerism, and some of them are not. That is fine. Continue to investigate and reflect on what you learn. In this way, whatever conclusion you reach will be based on reasons, not simply on tradition, peer pressure, or blind faith.

### *A Broad Perspective*

Dharma practice is not comprised of simply one meditation technique. Our minds are far too complex for one meditation technique or one Dharma topic to transform every aspect of our minds. Although some newcomers to the Dharma may want one simple technique to practice and may see progress by sticking to it, they should not think that in the long term this is sufficient to generate all the realizations of the path.

The Dharma encompasses an entire worldview, and practice necessitates examining all aspects of your life. Some of the Buddha's ideas will be new to you and may challenge some of your deeply held beliefs. Be open-minded and curious, investigate these ideas, and observe your mind. Check the teachings using reasoning and apply them to your life to see if they describe your experience. Do not accept them simply because the Buddha taught them, and don't reject them simply because they are foreign to your existing ideas.

If you cultivate a broad outlook and a deeper view about the meaning of life, you will understand not only this life but also the existence of many lives to come. In addition, you will understand your own happiness and suffering as well as that of the countless sentient beings who are similar to you in wanting to be happy and to avoid suffering. This broad view that considers many lives and many sentient beings will contribute to peace and happiness in this life.

If we are chiefly engrossed with our own personal happiness and problems and do not bother much about the happiness and suffering of others,

our vision is quite narrow. When we encounter difficulties, such a limited view will make us think that all the problems of the world have landed on us and we are the most unfortunate person alive. This pessimistic way of looking at our own life will make it difficult for us to be happy here and now, and we will drag ourselves through life day and night.

On the other hand, if we have a wider view and are aware of the experiences of other sentient beings, then when we encounter difficulties, we will understand that unsatisfactory experiences are not isolated cases happening to us alone but are the nature of cyclic existence; they happen to everyone. This mental attitude will help us to maintain stability in life and to face the situations we encounter in a productive way. To take it a step further, if we do not think solely about the betterment of this life and allow for the possibility of many subsequent lives, then when we encounter difficulties in the present, we will be better able to weather them and remain positive about the future. Thinking only about the pleasures of this life and putting all our hopes in this life alone, we feel let down when things inevitably do not turn out the way we wanted. Therefore a broad perspective of life and an understanding of the nature of *duḥkha*—suffering and dissatisfaction—helps us to improve our life now and in many lives to come.

In the first two of his four truths, the Buddha describes *duḥkha* and its causes. We may wonder, “Why should I think about this? It will only make me more depressed and unhappy!” Although reflecting on *duḥkha* and its causes may initially bring some uneasiness, suffering is still there even if we do not think about it in this systematic and purposeful way. If we simply let things take their course, suffering will strike when we are unaware and overwhelm us. We will be confounded regarding the nature of *duḥkha*, its causes, and how to eliminate it, and feelings of hopelessness and desperation may further complicate our situation and make us even more miserable.

Say we undergo a certain illness or injury for which we are not prepared. We have the suffering of the ailment, and on top of that, we also suffer feelings of shock and vulnerability. But if we know about a physical condition and calmly accept it, we go to a doctor for treatment. Because we have accepted the existence of that ailment and are ready to deal with it, even if the doctor prescribes surgery, we will accept it with happiness because we know that we are following a method to remove the suffering.

Similarly, if we know and accept the unsatisfactory nature of cyclic exis-

tence, we will be in a much better position to deal with it when it occurs. We should not simply wait until a tragedy strikes us but reflect on cyclic existence, learn about it, and have a method to face it.

As we now go on to investigate other topics, it's important that you know that I am nothing special. I am a human being, just like you. We all have the same potential, and that is what makes one person's experience relevant and expressible to others. If you have the idea that the Dalai Lama is some extraordinary, special kind of being, then you may also think that you cannot relate to or benefit from what I say. That is foolish.

Some people think I have healing powers. If I did, I would have used them to avoid gall bladder surgery. It is because we are the same that you may be able to derive some benefit from my words and experiences.

## 2 | The Buddhist View of Life

OUR MIND DETERMINES our state of existence. Someone with a mind stained by afflictions is a being in *saṃsāra*. Someone who has eradicated all *afflictive obscurations*—mental afflictions and the karma causing rebirth in *saṃsāra*—is a liberated being, an *arhat*. Someone whose mind has eliminated even the subtlest *cognitive obscurations* is a *buddha*. This is determined by the extent to which that person's mind has been purified. In this regard, the *Sublime Continuum* (*Ratnagoṭravibhāga*) speaks of three types of beings: polluted beings, who revolve in cyclic existence; unpolluted beings, who do not revolve in cyclic existence; and completely unpolluted beings, who are *buddhas*. A person's level of spiritual attainment does not depend on external features but on his or her state of mind.

Although we can practice Buddhist meditation and apply its psychology to our lives without becoming Buddhists, understanding the Buddhist worldview is essential to glean the full impact of the Buddha's teachings. In this chapter, we will investigate some of the most important aspects of the Buddhist worldview: the nature of the mind, the self, the four truths of the *āryas*, dependent arising and emptiness, and the possibility of ending suffering.

### *What Is Mind?*

Modern science focuses principally on gaining knowledge about the external world of matter. Scientists have developed sophisticated tools to manipulate even subatomic particles and have created instruments to measure minute changes in the chemical and electrical states of neurons. We now

know about stars light years away from Earth and tiny organisms that our eyes cannot see.

While science has made great strides in understanding the external world, matter, and its subatomic components, it has not given as much attention to the inner world of mind, consciousness, and experience. Science lacks a cohesive concept of mind, its nature, causes, and potential, and while there are many books about the anatomy and physiology of the brain, the mind is rarely mentioned.

Nowadays, many people who think about the mind explain it in terms of material phenomena. Neurologists portray it in terms of the actions of neurons, especially those in the brain. Behavioral psychologists describe it by referring to a person's deeds and speech. Cognitive scientists study perception, thinking, and mental processes in terms of external measurable behavior and brain activity. The difficulties with these models is that they do not give us any means to accurately or deeply understand experience. Scientists may tell us about the neural events in the brain, the hormonal reaction that accompanies compassion or anger, and people's behavior when they are angry, but this does not convey what these emotions feel like, what the experience of them is.

Other people speak of the mind as an immaterial, permanent self or spirit. But they, too, are not able to suggest tools to observe consciousness. The Buddha's teachings may be considered a "science of mind" in that they provide a complete study of the mind, setting forth specific means for observing it, delineating the various types of consciousness and mental factors, making known the mind's potential, and describing ways to transform the mind.

The nature of the mind is not material; it lacks the tangible quality of physical objects. While mind and brain are related and affect each other when a person is alive, the mind is distinct from the physical organ of the brain, which is matter and can be investigated with scientific instruments that measure physical events. The mind is what experiences; it is what makes an organism sentient. Those of us who have sat with the body of a deceased loved one know that while his or her brain is still there, something else is missing. What is no longer present is the mind, the agent that experiences what life presents and is the essential differentiating factor between a corpse and a living being.

Buddhism has a 2,600-year history of investigating the mind. Many treatises about the mind were written in ancient India, where the Buddha lived, as well as in the countries to which Buddhism has spread throughout the centuries. In recent years, fruitful dialogue between Buddhists and scientists has begun, and I have great interest in seeing how this dialogue develops and the positive contributions to the well-being of sentient beings that it will produce.

Every topic in this series relates to the mind. We will look at the mind from many perspectives: its nature, causes, potential, functions, levels, and so on. We will investigate what obscures its potential and how to cultivate the antidotes to these obscurations so as to reveal the potential of the mind in its wondrous glory that we call full awakening or buddhahood.

The Sanskrit word translated as “mind” may also be translated as “heart.” From a Buddhist perspective, expressions like “He has a kind heart” or “Her mind is very intelligent” both refer to the same entity, the conscious, experiential part of a living being. Although our mind is right here with us and we use it all the time, we don’t understand it very well. In the Buddhadharmā, the mind is defined as “clarity and cognizance.” *Clarity* indicates that unlike the body, the mind is not material. Clarity also indicates that when the mind meets with certain conditions it is able to reflect objects, like a clear mirror. Due to its quality of *cognizance*, it can engage with or cognize that object.

From our own experience, we know that our mind changes from moment to moment. That quality of changeability indicates that it is under the influence of causes and conditions. Each moment of mind arises due to its own unique cause—the previous moment of mind. The mind is a continuum, a series of “mind moments” that we call a mindstream. Each being has his or her own mindstream; mindstreams or parts of individual mindstreams do not merge. Because the mind is influenced by other factors and changes in each moment, when the appropriate conditions are present, mental transformation occurs. A mind that is flooded with disturbing emotions can become one that is peaceful and joyful.

The mind has two natures: its conventional nature (how it functions and relates to other things) and its ultimate nature (its actual mode of existence). *The conventional nature*—its clarity and cognizance—may be compared to pure water that is free from contaminants. When dirt is mixed into this

water, its pure nature is obscured, although it is still there. Sometimes the dirt is stirred up and the water is more obscured than at other times. But no matter how much dirt is in the water, it is not the nature of the water; the water can be purified and the dirt removed. Similarly, the mind is pure even when it is obscured by afflictions. Sometimes our mind is comparatively calm, and other times it is agitated by anger or attachment. These afflictions are temporary; someone may be upset in the morning but relaxed in the afternoon. While the mindstream endures, anger is not always present in it. This is because anger and other afflictions have not entered the nature of the mind.

The mind may be colored by different emotions at different times. Anger and lovingkindness are opposite; they cannot be manifest in our mind at the same time, although they may arise at different times. Even people such as Hitler or Stalin, who had great hatred, felt love for their family members and children. The fact that the mind can be dominated by anger at one time and by an opposite emotion such as love at another indicates that the emotions are not in the nature of the mind. The mind itself is pure; it is like colorless water that can be colored by a variety of hues or by none at all.

Our body is like a house, and the mind is its inhabitant. As long as the body remains, the mind is a long-term resident. However, various mental factors—which include emotions and attitudes—are like visitors. One day resentment comes, another day compassion comes, but neither remains long. While both are visitors, one visitor is respectful, useful, and pleasant—like someone reliable whom we can trust and want to make a member of the family. We invite that visitor to remain in the house all the time and cultivate the conditions so that she will. Meanwhile, the other visitor is rude and disturbs our own and others' peace. We don't want him to visit let alone move in, so we do not invite him in and evict him if he sneaks in. Similarly, it is possible to banish anger and cultivate compassion limitlessly, making it our constant companion.

The *ultimate nature of the mind* is its emptiness of independent or inherent existence. Inherent existence is a false mode of existence that we superimpose on all phenomena; we believe that they have their own findable essence that makes them what they are, that they exist independently of all other factors such as their causes and parts. In fact, they are empty of all such fabricated ways of existing because they exist dependent on other fac-

tors. In the *Eight-Thousand-Line Perfection of Wisdom Sūtra* (*Aṣṭasāhasrikā Prajñāpāramitā Sūtra*), the Buddha says:

The mind is devoid of mind, for the nature of mind is clear light.

“The mind is devoid of mind.” This leads us to investigate what the mind actually is, its ultimate mode of existence, how it really exists. “The mind” refers to the clear and cognizant conventional nature of mind. When we search that clear and cognizant nature, we cannot find something that is the mind. Within the clarity and cognizance, there is nothing we can pinpoint that is inherently the mind. If we were able to find a real mind, then the mind would inherently exist with its own independent essence. However, when we search to find the mind, we do not find the mind in the mind; we do not find an inherently existent mind. That is why it says here that the mind “is devoid of mind.” The final nature of the mind, its ultimate mode of existence, is its emptiness of inherent existence.

Since the mind is devoid of mind, we might think that the mind does not exist at all. But this is not the case. The words “the mind” indicates that the mind exists; it is the basis of our analysis. That the mind exists is shown by the fact that I can explain these statements due to the workings of my mind and you can understand them due to the workings of your mind. Saying that the mind does not abide in the mind means that an inherently existent mind is not the final mode of existence of the mind. It does not mean that the mind does not exist at all.

The mind exists, but it is empty of inherent existence. This is the meaning of “the nature of mind is clear light.” This ultimate nature of the mind is pure in that it is free from inherent existence. But the fact that the mind is empty of inherent existence alone does not mean the afflictions such as ignorance, anger, and attachment can be eliminated from it. These afflictions also lack inherent existence, but we cannot say they are pure by nature.

*Ignorance* is a mental factor that grasps phenomena as inherently existent, with their own independent essences. It is the source of all other disturbing emotions, such as anger, craving, jealousy, and conceit. The fact that the mind, as well as all other phenomena, do not inherently exist means that the ignorance that grasps the mind as inherently existent contradicts reality. If the mind did inherently exist, ignorance would be a correct mind that sees

reality. In that case, it could not be eliminated. However, since ignorance perceives the opposite of reality, it can be eliminated by the wisdom that sees reality correctly, the wisdom that realizes the emptiness of inherent existence.

Because ignorance and other afflictions are erroneous mental factors that lack an inherently existent foundation, they are not embedded in the nature of the mind and can be eliminated forever. Just as clouds temporarily obscure the open sky although they are not the nature of the sky, ignorance and other afflictions temporarily obscure the pure nature of the mind. But unlike clouds, which once gone can reappear, ignorance and afflictions, once they have been eliminated from their root by wisdom, can no longer obscure the mind. Meanwhile, other mental factors, such as love, compassion, and fortitude, do not depend on ignorance to exist and therefore remain as part of our mindstream forever.

## REFLECTION

---

1. The conventional nature of the mind is clarity and cognizance, meaning the mind can reflect and cognize objects.
  2. The conventional nature of the mind is pure: the afflictions have not entered into its nature, although they may temporarily color or obscure the mind.
  3. The body is material in nature; it is like a house, and the mind is its immaterial inhabitant.
  4. The ultimate nature of the mind is empty of inherent existence; it lacks any essence that is findable when we search for how the mind ultimately exists.
- 

### *Body, Mind, Rebirth, and Self*

Our body and mind influence each other while we are alive, although they have different natures and different continua. The body is material and depends on physical causes, such as the sperm and egg of our parents,

to come into existence. The food we eat—also material in nature—is the condition that allows our body to survive and grow. The mind, however, is not matter and cannot be known or measured by scientific instruments designed to measure matter.

According to those who advocate scientific reductionism, the mind is nothing more than the brain. Other scientists, however, assert that the mind is a function of brain processes, and that mental processes and emotional experiences either correlate with or are due to biochemical processes in the brain. However, many aspects of our mind cannot be accounted for by this neuroscientific view. For example, by simply looking at chemical processes in the brain, we cannot determine if a thought is valid—if it is an instance of knowledge or affliction. By examining brain processes we cannot discern whether a mental event is a direct perceiver of a sense object or a conception (a memory or a thought about something).

At the experiential level, there is great difference between the pain we experience due to our own situation and the pain that comes from compassion for others' suffering. The experience of our own pain arises involuntarily and forcefully, and we usually respond to it with fear and anger. The pain that is attendant upon compassion for another's suffering has an element of deliberate sharing and embracing of that pain, and we react to it with courage. However, in terms of the biochemical processes in the brain, these two types of pain are indistinguishable.

Tears can well up in our eyes when we are very joyful or very sad. On the physical level, our eyes do not distinguish the two. But on the mental level, there is a big difference in the cause of the tears and how we experience them. For all these reasons, it is difficult to claim that all aspects of our experiential consciousness can be explained simply through the biological processes of the brain.

All functioning things—things that produce effects—come about due to causes and conditions. To trace back the causes and conditions of our present body, we follow a sequence of material causes and effects that goes to our parents and generations of previous ancestors. Scientists posit the theory of evolution when tracing back the origin of the human body. Before life existed on Earth, the continua of the physical elements that later became our bodies were present, and their continua are traced back to the Big Bang. Since matter—be it gross or subtle—was present at the time of the Big Bang

and even before it, its causes must also have been matter or energy that can transform into matter. Although our body wasn't present when this universe began to form, its previous continuity in the form of material causes and physical elements was.

According to the *Kālacakra Tantra*, the ultimate source of the body is space particles that exist between the disappearance of the previous universe and the production of the subsequent one. They provide the continuum of potential for material during that time. Containing a trace of each of the grosser elemental particles, they are the basic stuff from which all other forms arise when a new universe develops.

It is difficult to identify the essential characteristics of mind. On a daily level, we experience sensory perceptions and the thoughts that chase after objects of the senses. Sense perceivers—our visual, auditory, olfactory, gustatory, and tactile consciousnesses—focus on the external world and assume the aspect of the objects they perceive.<sup>1</sup> The conceptual mind that thinks about these objects also assumes the aspect of these external objects, and even when our mind is directed inward to our own feelings, it assumes the aspect of the feelings. It is difficult for us to separate out the clarity and cognizance of the mind and be aware of the mind alone without also being aware of its objects. However, with meditation it is possible to experience the nature of the mind.

Results are produced from concordant causes—causes that have the ability to produce them; they cannot arise from discordant causes. Since the mind is immaterial, its substantial cause—the principal thing that transforms into a particular moment of mind—must also be immaterial. This is the preceding moment of mind. One moment of mind arises due to the previous moment of mind, which arose due to the moment of mind that preceded it. This can be traced back to the time of conception. The moment of mind at the time of conception arose due to a cause, a previous moment of mind, and in this way the continuum of mind prior to this life is established.

Conception is the coming together of the sperm, egg, and subtle mind. This creates a new life. The material aspect of this new life, the sperm and egg, come from the parents. The immaterial, conscious aspect—the mind—does not come from the parents. It must come from a previous moment of mind, which, at the moment of conception, is the mind of a being in the previous life.

At the time of death, the body and mind separate. Here, too, they have different continua. The body becomes a corpse and is recycled in nature. The mind continues on, one moment of mind producing the next. In the case of ordinary beings, the mind usually takes a new body and another life begins.

Buddhist scriptures describe different levels and types of mind. In terms of levels of mind, there are coarse consciousnesses, such as our five sense consciousnesses; subtler consciousness, such as our mental consciousness that thinks and dreams; and the subtlest mind that becomes manifest in ordinary beings at the time of death. This subtlest mind, which goes from one life to the next, can persist without depending on the coarse physical body, including the brain and nervous system. The subtlest mind is a continuity of ever-changing moments of mind; it is not a permanent self or soul. The terms “subtlest mind” and “fundamental, innate mind of clear light” are merely designated in dependence on a continuum of extremely subtle, transitory moments of clarity and cognizance.

The Buddha explained the continuity of life and rebirth principally on the basis of the continuity of mind. The continuity of mind across lifetimes is not the gross level of mind that is dependent on the physical body. It is the subtlest mind—the fundamental, innate mind of clear light that is the final basis of designation of the person—that connects one life with the next. The detailed explanation of this mind is found only in texts from the highest-yoga class of Buddhist tantras.

Rebirth can also be validated by personal experience. I heard about a Tibetan boy who could read without being taught. Some people may say this is due to his genetic makeup, but to me it makes more sense to say it is due to the continuity of his consciousness from a previous life. I also heard about an Indian girl who had many memories of her previous life. Her parents from her previous life and this life met and confirmed the details. Both now accept her as their daughter, so she has four parents!

Generally speaking, once a mind conjoins with a fertilized egg, a new life has begun. In dependence on that body and mind, we designate “person,” “living being,” “I,” or “self.” Our outlook on life, perceptions, feelings, and emotions are all based on the notion of a self. We say, “I did this. I think that. I feel sad or happy.” Although this is our experience, seldom have we stopped to ask ourselves, “Who is this I upon which everything

is predicated?” The question regarding the identity of the self is important because it is the self, the I, that wants to be happy and to avoid suffering. If the self existed independently from other phenomena, we should be able to isolate and identify it.

The Buddha taught that a person is composed of five psychophysical aggregates—form, feelings, discrimination, miscellaneous factors, and consciousness. The form aggregate is our body, and the other four aggregates constitute our mind. If we search among these five aggregates, we cannot pinpoint a person who is totally separate from them; nor can we identify a person who is identical to his or her body and mind. The collection of the two also is not a person. A person exists in dependence on his mind and body, but is neither totally one with them nor completely separate from them.

The self depends on the body: when our body is ill, we say, “I’m sick.” If the self were a separate entity from the body, we could not say this. The self also depends on the mind. When the mind is happy, we say, “I’m happy.” If the self were separate from the mind, we couldn’t say this. On the basis of the mind seeing a flower, we say that the person possessing that mind sees the flower. Other than this, we cannot find a person who sees something.

In short, “I” is designated in dependence on our body and mind, yet when we search for a findable thing that is “me,” we can’t find it within the body, the mind, the collection of the two, or separate from them. This indicates that the person exists dependently; we lack an inherent, findable, unchanging essence. Since we lack an independent self, we can change, grow, and progress from confusion to awakening.

The person or self creates the causes for happiness and suffering. The person also experiences the pleasurable and painful results of these actions. Although we cannot pinpoint anything that is the self, the existence of a person who creates causes and experiences effects is undeniable.

Countless sentient beings have this feeling of self, although it is difficult to identify what that self is. However, the fact that each and every sentient being wants happiness and not suffering is indisputable; no reason is needed to prove this. Being born, enjoying life, enduring suffering, and dying are conditioned phenomena that are products of previous causes. If there were no person who experiences them, none of these would be tenable. Similarly, we distinguish afflictive saṃsāric existence from the awak-

ened state of *nirvāṇa* based on whether the person has gained realizations. This distinction between *saṃsāra* and *nirvāṇa* would be irrelevant if no person existed.

The self exists, but from the perspective of the deeper nature of reality, our view of it is mistaken. This incongruity between how the self actually exists and how we apprehend it is the source of all our confusion and suffering. As we cultivate correct views, our mental strength increases; this leads to mental peace, which, in turn, brings joy and a sense of fulfillment. A mental state that sees the world as it is is free from fear and anxiety.

## REFLECTION

---

1. The body is material in nature; the mind is immaterial. While the brain and the mind influence each other, they are not the same.
  2. Our body and its substantial cause—the sperm and egg of our parents—are both material. Our mind and its substantial cause—the previous moment of mind—are immaterial; they are mere clarity and cognizance. At the time of conception they meet, forming a new life.
  3. At the time of death, the continuity of the body is a corpse that decomposes to become material elements. The continuity of mind in the form of the very subtle mind continues to the next life.
- 

### *The Four Truths of the Āryas*

The topics of the first discourse the Buddha gave after attaining awakening, the four truths of the *āryas*, well known as the “four noble truths,” form the foundation and structure of the Buddhist path. He taught these at the beginning for a specific purpose. Each sentient being has the innate wish for stable peace, happiness, and freedom from suffering. The longing for these motivates us to engage in many activities in an attempt to gain them. However, until now everything we have done has not brought about stable peace and joy because we live in cyclic existence (*saṃsāra*)—the state

of having a body and mind under the influence of mental afflictions and karma. Within cyclic existence we encounter only *duḥkha*—unsatisfactory conditions and suffering.<sup>2</sup> Without choice, we take a body that gets old, sick, and dies and have a mind that becomes anxious, fearful, and angry. The I—the person that is merely designated in dependence upon the body and mind—revolves in cyclic existence. Our five aggregates of body and mind are unsatisfactory by nature and constitute the first truth of the āryas, *the truth of duḥkha*. The causes of the five aggregates are mental afflictions—skewed attitudes and disturbing emotions, the chief of which is ignorance—and polluted actions.<sup>3</sup> These constitute the second truth, *the true origins of duḥkha*.

The final *true cessation*—the third truth—is liberation and *nirvāṇa*, the state of peace, joy, and fulfillment that we seek. Here ignorance, afflictions, and polluted actions and the unsatisfactory experiences they cause have been extinguished from the root so that they can no longer arise.

True cessations are attained by depending on a method that eradicates ignorance. This is *true paths*, the fourth truth, which consist primarily of the wisdom realizing the ultimate nature—the emptiness of inherent existence of all persons and phenomena—and the virtuous consciousnesses supported by that wisdom. These paths require time and diligent effort to develop; we cannot hire someone else to accomplish them for us, like employing a mechanic to fix our car. How to cultivate these paths and actualize *nirvāṇa* is the subject of this series.

The process of attaining *nirvāṇa* begins with understanding the first truth, the nature of *duḥkha* and the various types of unsatisfactory circumstances and suffering that afflict sentient beings in cyclic existence. When some people hear this, they fear that reflecting on their suffering may only make it worse, and therefore believe that no benefit would come from learning the Buddha’s teachings. This would be true if it were impossible to free ourselves from the causes of *duḥkha*. However, since the root cause of *duḥkha*, ignorance—a mental factor that misapprehends reality and grasps phenomena as inherently existent—is erroneous, it can be eliminated by the wisdom that sees things as they really are—as empty of inherent existence. By gradually eradicating ignorance and other afflictions, we can bring greater satisfaction and freedom into our lives. After all its causes have been accumulated, we attain the final true cessation of *duḥkha* and its causes,

nirvāṇa. While nirvāṇa may sound like a far-off goal, we can easily see steps going in that direction: the more we cease anger, the greater harmony we experience, and the more our greed diminishes, the greater contentment we have. As we gradually reduce ignorance and afflictions through the application of wisdom, tranquility and fulfillment correspondingly increase, culminating in nirvāṇa.

Hence recognizing and reflecting on our suffering has a special, beneficial purpose: it activates us to discover its root and subsidiary causes and to eradicate them by practicing the path to peace that leads to the true freedom of nirvāṇa.

The Buddha spoke of three types of duḥkha. The first is the duḥkha of pain. This is the physical and mental suffering that all beings see as undesirable. All world religions agree that destructive actions, such as killing, stealing, and lying, bring physical and/or mental pain. To counter this pain and the actions that cause it, all religions teach some form of ethical conduct. Scientists also seek to remedy physical and mental pain; they do this by developing the means to change its external causes that are in our environment or due to the malfunction of our body, our brain and nervous system, or our genes.

The second type of duḥkha is the duḥkha of change, which refers to worldly happiness. Why did the Buddha call what is conventionally considered happiness—such as pleasant sensations—duḥkha? Worldly happiness is unsatisfactory because the activities, people, and things that initially give us pleasure do not continue to do so. Although eating, being with friends, receiving praise, and hearing good music may initially relieve pain or boredom and bring pleasure, if we continue to do them, they will eventually bring discomfort or fatigue.

Most people do not recognize worldly happiness as being unsatisfactory by nature, although many religions do. Some Hindus see the unsatisfactory nature of worldly pleasures and seek deep states of single-pointed concentration that are far more enjoyable. Some Christians abandon worldly pleasures in favor of a state of rapture or grace.

The third type of duḥkha—the pervasive duḥkha of conditioning—is the fact that we have a body and mind that are not under our control. Without choice, we take a body that is born, falls ill, ages, and dies. Between birth and death, we encounter problems even though we try to avoid them. We

cannot obtain everything we want even though we try hard to get it, and even when our desires are fulfilled, that happiness is not stable: we become disillusioned or separated from what we crave.

The description of the third type of *duḥkha*—the pervasive *duḥkha* of conditioning—is unique to Buddhadharma. Neither other religions nor science identify our taking a body and mind under the control of ignorance, afflictions, and polluted karma as problematic. They don't look for the causes of the pervasive *duḥkha* of conditioning, let alone work to eliminate them. Instead, they try to make the situation better by focusing their efforts on eliminating the *duḥkha* of pain.

Having identified the pervasive *duḥkha* of conditioning as the basic unsatisfactory condition we sentient beings suffer from, the Buddha sought out its root cause. He identified it as the ignorance grasping inherent existence and saw that this ignorance can be eliminated completely only by cultivating its opposite, the wisdom perceiving the emptiness of inherent existence. Here the Buddha's teachings on selflessness (*anātman*)<sup>4</sup> become important. He explained that when we search for what ignorance apprehends—the inherent or independent existence of persons and phenomena—we cannot find it. The wisdom that realizes this—the true path—has the ability to gradually eradicate all ignorance from the mind, resulting in nirvana, the final true cessation. Here we see that the Buddha's explanation of the origin of *duḥkha*, the ultimate nature of reality, the wisdom realizing it, and the attainment of *nirvāṇa* are also unique.

In this way, the Dharma—true cessations and true paths—is a unique refuge. The Buddha who taught this Dharma is a unique teacher, and the Saṅgha—those followers who have realized directly the lack of inherent existence—are unique companions on the path. These three objects of refuge as described in Buddhism are unequalled and are not found elsewhere.

The situations described in the four truths were not created by the Buddha. He simply described things as they are. If *duḥkha*, its origin and cessation, and the path did not exist, there would be no need to practice Dharma. Of course it is up to each of us to test the veracity of the four truths for ourselves. By observing our own experience, we will come to know that *duḥkha* and its origins exist. Although we may not directly know true cessations and true paths at this time, they, too, also exist. Through understanding that *duḥkha* and its origins can be eliminated, we understand that true cessation

can be attained. This brings conviction that true paths are the means to bring about peace in our minds.

## REFLECTION

---

1. The first two of the four truths of the āryas describe our present experience: we are subject to three main types of unsatisfactory circumstances: pain, change, and pervasive conditioning. These are rooted in ignorance of the ultimate nature of reality.
  2. The last two of the four truths describe possibilities: a state of freedom from ignorance and duḥkha exists, and a path to that state also exists.
  3. It is up to us to learn and reflect on these to gain conviction in them and to cultivate wisdom in order to free ourselves.
- 

### *Dependent Arising and Emptiness*

In the above explanations of the four truths, several topics repeatedly arose: ignorance, which grasps inherent existence; the emptiness of inherent existence, which is the ultimate nature of all persons and phenomena; the wisdom realizing emptiness that counteracts ignorance; and nirvāṇa, which is the state of peace attained from doing so. Another essential topic—dependent arising—ties all of these together.

The Madhyamaka tenet system as explained by the Indian sage Nāgārjuna speaks of three levels of dependent arising. The first, which is common to all Buddhist tenet systems, is *causal dependence*—the fact that products (conditioned things) depend on causes. A table depends on the wood, which is its substantial cause—what actually turns into the result—and the people who make it, who are the cooperative condition that helps to bring about the result. Similarly, our body, mind, and present rebirth depend on their respective causes and conditions. Such dependency rules out the possibility of things arising haphazardly without any cause. It also precludes things arising due to discordant causes—things that do not have the ability

to cause them. Barley cannot grow from rice seeds, and happiness does not come from destructive actions.

In addition to chemical, biological, and physical causality, karma and its effects is another system of causal dependence. Karma is volitional actions done physically, verbally, or mentally. These causes bring their effects: the rebirths we take, our experiences in our lives, and the environment in which we are born.

The second type of dependency is *dependent designation*, which has two branches: mutual dependence and mere designation by term and concept. *Mutual dependence* refers to things existing in relation to each other: long and short, parent and child, whole and parts, and agent, object, and action. Our body—which is a “whole”—depends on its parts—arms, legs, skin, and internal organs. The organs and limbs only become “parts” in dependence upon the body as a whole.

A hard, spherical object the size of a small apple becomes a baseball only because there is the game of baseball, a pitcher, a batter, and a bat. Apart from this context, this round object would neither be called a baseball nor function as a baseball. A parent is identified only in relation to a child, and someone becomes a child only in relation to a parent. Neither the parent nor the child exists independently of each other.

On a daily basis we use conventions and terms and engage in actions based on language. Doing this does not require there to be a direct, one-to-one objective referent for each term. Rather terms are defined relationally and derive meaning only in the context of mutually dependent relations.

The second type of dependent designation is *mere designation by term and concept*. In dependence on the collection of arms, legs, a torso, head, and so on, the mind conceives and designates “body.” In dependence on the collection of body and mind, the mind conceives and imputes “person.” In this way, all phenomena exist in dependence upon mind. Whatever identity an object has is contingent upon the interaction between a basis of designation and a mind that conceives and designates an object in dependence on that basis.

This interdependent nature is built into phenomena. If phenomena had an independent identity unrelated to others, we should be able to find the true referent of a term when we search for it. However, we do not find an independent essence in any phenomenon. This shows that all existent

objects exist by being merely designated by term and concept. Being dependent, all phenomena are empty of independent existence. This is the subtlest meaning of dependent arising.

### *Dependent Arising and the Three Jewels*

Indicating the importance of realizing dependent arising, the Buddha says in the *Rice Seedling Sūtra* (*Śālistamba Sūtra*):

Monastics, whoever sees dependent arising sees the Dharma.  
Whoever sees the Dharma sees the Tathāgata [the Buddha].

How does seeing dependent arising lead to seeing the Dharma, which leads to seeing the Buddha? A process of progressive understanding is needed. When we realize causal dependence—that everything we perceive and experience arises as a result of its own causes and conditions—our perspective on the world and on our inner experiences shifts. Due to understanding that these exist only because their causes and conditions exist, our world, our experience, and even ourselves no longer seem so fixed and solid. Being dependent, they have no essence of their own.

As our understanding of mutual dependence and mere designation by name and concept deepens, we will appreciate that a disparity exists between the way things appear and the way they exist. While things appear to be autonomous, objective, independent realities “out there,” they do not in fact exist in this way. If we focus repeatedly on branches, trunk, twigs, and leaves arranged in a certain manner and question, “What makes this collection of things a tree?” we will begin to understand that neither the individual parts nor the collection of those parts is a tree and that the tree exists by being merely designated in dependence on its parts. Dependent on the collection of parts of a tree (the basis of designation of a tree) and on the mind that conceives and designates “tree,” a tree exists. Because it is dependent on all these factors, the tree is empty of objective, independent, or inherent existence. It does not exist in isolation—from its own side or under its own power—because it depends on causes, conditions, parts, and the conceiving and designating mind.

While an inherently existent tree cannot be found under analysis, a tree

still exists. How does it exist? It exists dependently. Thus, we see that emptiness and dependent arising are not contradictory and, in fact, are mutually complementary. Everything is empty of inherent existence, and simultaneously everything exists, but not in the independent fashion that it appears to. It exists in dependence on other factors.

Underlying strong emotions such as clinging attachment, anger, and jealousy is an assumption that we are inherently existent, independent persons, that exist in and of ourselves. Similarly, there appears to be an independent reality of objectively existent people and things in the world. By recognizing the disparity between appearance and reality, we come to understand that our perceptions and ideas of things are exaggerated. Investigating how our mind perceives and interprets the things we encounter, we develop insight into the functions of the mind and the different types and levels of consciousness operating within us. We also come to appreciate that although some of our emotional states seem so strong and their objects appear so vividly, they are in fact similar to illusions in that they do not exist in the way they appear to us.

Dependent arising is the foundation for all Dharma practices. The two levels of dependent arising—causal dependence and dependent designation—are the main factors through which spiritual practitioners accomplish their aspirations. By developing a deep understanding of the nature of reality in terms of causal dependence, we come to appreciate the workings of karma and its results: our actions bring results. Pain and suffering arise due to destructive actions, and happiness and desirable experiences are the results of constructive actions. Understanding this, we choose to live with good ethical conduct, which enables us to have a higher rebirth in the future.

Through deep contemplation of dependent designation, we come to realize emptiness, the ultimate mode of existence. This wisdom tackles the fundamental ignorance keeping us bound in cyclic existence, allowing us to fulfill our spiritual goals of liberation and full awakening.

Dependent arising also underlies the four truths. Through such reflection and analysis, we understand that the self-grasping ignorance that misapprehends reality gives rise to our mental afflictions (true origins), and that these, in turn, bring about the suffering we experience (true dukkha). Understanding dependent arising also enables us to realize the lack of independent existence of persons and phenomena—their emptiness.

This wisdom realizing emptiness (true path) has the power to overcome all ignorance, wrong views, and afflictions because they lack a valid basis, while emptiness and dependent arising can be proven by reasoning as well as directly experienced. Through this, we will appreciate that a state exists in which all ignorance and afflictions have been removed. This is *nirvāṇa*, true cessations, the third truth. Thus the Dharma Jewel—true cessation and true paths—exists.

If such a state as *nirvāṇa* exists, individuals must be able to actualize it. This leads us to understand the existence of the *ārya Saṅgha*—those beings who perceive emptiness directly. It also demonstrates the existence of the buddhas—omniscient beings who have perfected this state of cessation. In this way, the understanding of dependent arising leads us to establish the existence of the Three Jewels of refuge: the Buddhas, Dharma, and Saṅgha. For this reason, the Buddha said that those who see dependent arising see the Dharma and those who see the Dharma see the Tathāgata.

I believe this statement of the Buddha could also mean that by seeing dependent arising on the level of conventional appearance, we see causal relationships and understand karma, compassion, *bodhicitta*, and the method aspect of the path. Through accomplishing the method aspect of the path, we come to “see”—that is, actualize—the form body (*rūpakāya*) of a buddha. By understanding dependent arising in relation to the ultimate mode of existence, we experience the meaning of emptiness—the *suchness* (*tathatā*) of all phenomena—and by that, we “see” (actualize) the truth body (*dharmakāya*) of a buddha, a buddha’s mind, specifically an awakened one’s wisdom of ultimate reality. In this way, both the body and mind of a buddha are actualized.

## REFLECTION

---

1. All persons and phenomena exist in dependence on other factors. There are three types of dependence: causal dependence (for impermanent things only), mutual dependence, and mere designation by terms and concept.
2. Dependent arising contradicts the possibility of independent or inherent existence. Understanding this can eradicate grasping inherent existence, the root of our *duḥkha* in cyclic existence.

3. The wisdom that eradicates ignorance (the true paths) and the freedom from duḥkha that comes about due to it (true cessations) are the Dharma Jewel.
  4. People who have actualized the Dharma Jewel in their minds are the Saṅgha Jewel and the Buddha Jewel. Thus the Three Jewels of refuge exist.
- 

### *The Possibility of Ending Duḥkha*

If the possibility to end suffering exists, then pursuing that aim is worthwhile. But if duḥkha is a given, trying to eliminate it is a waste of effort. From the Buddhist viewpoint, two factors make liberation possible: the clear-light nature of the mind and the adventitious nature of the defilements. The *clear-light nature of the mind* refers to the basic capacity of the mind to cognize objects, its clear and cognizant nature.<sup>5</sup> The mind's failure to know objects must then be due to obstructing factors. In some cases, obstructing factors may be physical; if we put our hand over our eyes, we cannot see. But in a deeper sense, our seeing is hindered by two types of obstructions: afflictive obscurations that prevent liberation from cyclic existence and cognitive obscurations that prevent omniscience.

Each Buddhist tenet system has a different way of identifying what constitutes these two obstructions. The description here is based on the writings of Nāgārjuna, the great second-century Indian sage. In *Seventy Stanzas on Emptiness* (*Śūnyatāsaptati*), he notes that the conception that things that arise from causes and conditions exist in their own right is ignorance. The clear-light nature of mind has the ability to cognize all objects, but ignorance and its latencies obstruct this. All faulty states of mind are based on and depend on ignorance, and the twelve links of dependent arising—the process through which cyclic existence arises lifetime after lifetime—follow from ignorance. Āryadeva, Nāgārjuna's chief disciple, states (CS 350):

The consciousness that is the seed of existence has objects as its sphere of activity.

When selflessness is seen in objects, the seed of existence is destroyed.

What is the consciousness that is the seed of cyclic existence? If consciousness in general were the root of cyclic existence, there would be no way to overcome cyclic existence because consciousness has a clear and cognizant nature, and nothing can counteract its nature or sever its continuity. Here Āryadeva is referring not to consciousness in general but to a specific type of consciousness—ignorance. His point is that cyclic existence does not arise without a cause, from a discordant cause, or from a permanent creator. Cyclic existence arises from an undisciplined, ignorant mind.

By saying that consciousness has objects as its sphere of activity, Āryadeva indicates the mind's potential to realize objects. Then he stresses that by realizing selflessness, self-grasping ignorance can be eliminated. Since ignorance grasps inherent existence (self), it can be overcome by the wisdom realizing the opposite—the selflessness or emptiness of inherent existence. By removing the ignorance that obscures our knowledge of phenomena, the ability to perceive all objects is possible.

In *Treatise on the Middle Way* (*Mūlamadhyamakakārikā*, 24.18) Nāgārjuna says, “That which is dependent arising is explained to be empty.” But when objects appear to us, they do not appear to be dependent or related to other factors. They appear as independent, discrete objects that exist under their own power—with their own inherent essence, from their own side. This appearance of objects as existing in their own right is false, and the idea that objects exist in that way is erroneous and can be refuted by reasoning. Using investigation and analysis, we can establish the emptiness of inherent existence for ourselves. Inherent existence—also called existence from its own side—is called the *object of negation*; it is what is refuted or negated by analysis and reasoning. Once the analysis is complete, the consciousness realizing that persons and phenomena do not exist from their own side is generated in our mindstream. This wisdom consciousness damages and eventually completely overcomes the conception and grasping that objects exist inherently.

In his *Commentary on the “Compendium of Reliable Cognition”* (*Pramāṇavārttika*),<sup>6</sup> Dharmakīrti says that mental states influenced by ignorance, like any other wrong conception or erroneous consciousness, lack a valid

foundation, and mental states influenced by wisdom, like any other accurate consciousness, have a valid foundation. Thus the more we become accustomed to correct consciousnesses, the more the faulty ones will diminish. Wisdom's mode of apprehension directly contradicts that of ignorance, so by familiarizing ourselves with wisdom, ignorance decreases and is finally extinguished.

Here we see a unique quality of the Buddhist approach: erroneous mental states can be eradicated by cultivating their opposite—accurate states of mind. They are not removed simply through prayer, requesting blessings from the Buddha or deities, or gaining single-pointed concentration (*samādhi*).

Because ignorance has an antidote, it can be removed. This is the meaning of ignorance being adventitious. Thus because of the two factors mentioned earlier—the mind being the nature of clear light and defilements being adventitious—liberation is an attainable possibility. The *Sublime Continuum* (1.62) says:

This clear and luminous nature of mind is as changeless as space.  
It is not afflicted by desire and so on, the adventitious stains that  
spring from false conceptions.

Each of the various Buddhist tenet systems has its own slightly different explanation of *nirvāṇa* or liberation, but they all agree that it is a quality of the mind, the quality of the mind having separated forever from the defilements that cause cyclic existence through the application of antidotes to those defilements.

When we examine that separation from defilements, we discover it is the ultimate nature of the mind that is free from defilements. This ultimate nature of mind exists from beginningless time; it exists as long as there is mind. In the continua of sentient beings, the ultimate nature of the mind is called *buddha nature* or *buddha potential*. When it becomes endowed with the quality of having separated from defilements, it is called *nirvāṇa*. Therefore, the very basis for *nirvāṇa*, the emptiness of the mind, is always with us. It's not something that is newly created or gained from outside.

## 3 | Mind and Emotions

**W**E ARE EMOTIONAL BEINGS. Our feelings of pleasure or pain provoke different emotions, and our emotions motivate us to act. Some of our emotions are afflictive and unrealistic; others are more realistic and beneficial. As a result, some of our actions bring more pain, while others bring happiness. Learning to differentiate destructive from constructive emotions so we can subdue the former and nourish the latter is a worthy endeavor on a personal as well as societal level.

Buddhas have eliminated all afflictive emotions, but that does not mean that they are emotionally flat, apathetic, and unresponsive to human contact. In fact, it is the opposite: by going through the gradual process of overcoming destructive emotions such as greed and anger, buddhas have built up and expanded constructive emotions such as love and compassion. Due to this inner transformation, their work in the world is wiser and more effective. In this chapter, you'll be introduced to the Buddhist view of emotions, comparing and contrasting that view with Western paradigms. We'll also examine how specific emotions affect our daily life and how to work with difficult emotions and cultivate positive ones.

### *Buddhism, Science, and Emotions*

Buddhists and scientists have some similar and some very different ideas about emotions. In general, scientists describe an emotion as having three components: a physiological component, an experiential component, and a behavioral component. The physiological component includes the chemical and electrical changes in the brain as well as galvanic skin response,

heart rate, and other changes in the body. The experiential component is the subjective experience—the psychological mood or feeling aspect of an emotion. The behavioral aspect includes the words and actions of a person motivated by that emotion.

From the Buddhist perspective, emotions are mental states and subjective experiences. They may be accompanied by changes in the body's physiology, but the brain's activities are not the emotion itself. For example, if we could put some live brain cells in a petri dish in front of us, we would not say their chemical and electrical interactions were anger or affection, because anger and affection are internal mental experiences of a living being. This experience may be correlated with activity in a certain area of the brain, but that neurological activity is not the experience of anger. Similarly, an emotion may lead to an action, but that action is an effect of the emotion, not the emotion itself. Consequently, of the three components mentioned above, Buddhists speak of emotions only in terms of the second—what we experience, feel, and think.

Buddhism does not deny that the mind and body affect and influence each other. When our knee hits the table, our mind experiences pain, and we may become irritated. When our mind is calm, our physical health improves. In *Commentary on Reliable Cognition*, Dharmakīrti says that when the body is healthy, attachment to sexual pleasure increases in the mind, whereas when the body is weak, anger arises more easily.

On a subtler level, certain emotions correlate with specific chemical and electrical changes in the brain. Does this correlation indicate a cause-and-effect relationship? Science has made fascinating discoveries correlating certain cognitive and emotional states with specific areas in the brain and particular neuron activity, but we must be careful not to attribute causality when there is merely correlation. Whereas some scientists believe that physiological events in the brain cause the emotions, Buddhists think that in general, the mental states precede the physiological changes. This is an important area open for research, and in recent years many scientists have begun to explore it. But regardless of whether the subtle changes in the brain cause, are caused by, or simply correlate with emotions, Buddhism emphasizes that emotions and feelings are mental states in living beings. Without mind, there is no experience: a corpse certainly doesn't have love or hatred, and a group of neurons or a cluster of genes does not feel pleasure

or pain. Living beings do. Feelings, emotions, thoughts, views, attitudes, and so forth occur in the mind—they are mental states experienced by living beings.

These mental states motivate our physical and verbal actions. It is unreasonable and even dangerous to say, “My biological makeup makes me harm others.” Such an attitude leads us down the slippery slope of abdicating responsibility for our actions by attributing their causes to physical elements over which we have no control. In addition to creating a sense of powerlessness in us, it could be used to justify eliminating individuals with certain genetic or neurological makeups.

The vast majority of our physical and verbal actions are prompted by intentions in our minds, and these intentions are influenced by our feelings, emotions, and views. Although many of our intentions are very subtle and some seem more like primal urges than conceived plans, they are present nonetheless. The fact that our intentions and emotions are the forces behind what we say and do means that by changing them, we can transform our actions and our lives. We are not doomed to a life circumscribed by the limitations of our genes, neural pathways, and biological processes over which we have very little choice or control. While we still have to deal with the effects of genetic and physiological processes, we need not develop a defeatist attitude regarding them. We have human intelligence and the seeds of love, compassion, wisdom, and other magnificent qualities inside us. These can be consciously developed, and many great sages in a variety of cultures and spiritual traditions have done this.

Many years ago I challenged one of the scientists in our Mind and Life dialogues to research the effects of cultivating well-being and positive emotions on the brain. After investigating for some years, he reported that due to a combination of the brain’s neuroplasticity and people’s meditation practice, there were changes in the brain circuits of people who cultivated four selected qualities: resilience, positive outlook, attention, and generosity. Each of these has corresponding Buddhist practices to develop them. *Resilience* is the speed with which we recover from adversity; a *positive outlook* is seeing the basic goodness in others and letting that influence all that we do; *attention* is the ability to focus on an object and enables us to complete what we begin; and *generosity* is an attitude of giving and sharing. All of these activate brain circuits that are correlated with a sense of well-being.

The researchers' conclusion was that well-being can be learned, so they've been developing programs that teach meditation and mindfulness and using them in schools, hospitals, and so forth with great success.

### *Happiness and Unhappiness, Virtue and Nonvirtue*

While both Buddhism and psychology seek to help people have more happiness and fulfillment and decrease their unhappiness and misery, they differ somewhat in what they consider positive and negative emotions. Some psychologists and scientists I have spoken with say that a negative emotion is one that feels bad and makes the person unhappy at the time it is manifest in the mind. A positive emotion makes the person feel happy at the time it is manifest.

In Buddhism, what differentiates positive and negative emotions is not our immediate feeling of happiness or discomfort but the happiness or suffering that is the long-term result of those emotions. That is because the long-term effects of our actions are considered more important than their short-term effects, which tend to be fleeting in comparison. If, in the long term, an emotion produces unpleasant experiences, it is considered negative; if it brings happiness in the long term, it is positive. Buddhism explains that virtuous (positive, constructive, wholesome) emotions lead to happiness in the long term, while nonvirtuous (negative, destructive, unwholesome) emotions lead to suffering.

The Buddha presented four scenarios in which present happiness/pain and virtue/nonvirtue are at play (MN 70.7):

Here, when someone feels a certain kind of pleasant feeling, nonvirtuous states increase in him and virtuous states diminish; but when someone feels another kind of pleasant feeling, nonvirtuous states diminish in him and virtuous states increase. Here, when someone feels a certain kind of painful feeling, nonvirtuous states increase in him and virtuous states diminish; but when someone feels another kind of painful feeling, nonvirtuous states diminish in him and virtuous states increase.

This thought-provoking citation is worthy of some illustrations. As it says, there are four possible permutations of feelings and ethical value. In the first,

a pleasant feeling accompanies the increase of nonvirtue and the decrease of virtue. An example is feeling happy when we successfully deceive others about a vile action we have committed. Even though it may be accompanied by a pleasant feeling, our action is not virtuous, since it is the cause of future suffering.

In the second, there is a pleasant feeling when a nonvirtuous state decreases and a virtuous one increases. An example is taking delight in making a generous offering to a charity that helps refugees or the poor and hungry. This kind of happiness is win-win: we feel joyful now, and our action creates the cause for future happiness for self and others.

The third occurs when an unpleasant feeling accompanies an increase in nonvirtue and a decrease in virtue. An example is the pain of someone who angrily rejects being sentenced to prison after being convicted of embezzlement. Not taking responsibility for his nonvirtuous action, he angrily blames others, creating more nonvirtue. If he accepted responsibility for his action and regretted it, his virtue would increase, and his pain would lead him to change his ways.

In the fourth situation, we have a painful feeling, but our nonvirtue diminishes and our virtue increases. An example is taking a lower-paying job to avoid having to lie to clients or customers. In this case, creating virtue that will bring happiness in the future and peace of mind right now also brings some unhappiness of a loss in income. But it is undoubtedly worthwhile in the long term.

Making some examples of these from your own experience is useful. Such an exercise helps us to value our ethical integrity more than the fleeting happiness of getting what we want at the moment. Since our self-esteem and feelings of self-worth depend more on our ethical integrity than on sensual pleasure, it is worthwhile to take the time to remind ourselves of these values before an impulse arises, so that when the time comes we will make wise decisions.

## REFLECTION

---

1. When you act against your ethical values, how do you feel at the moment of doing the action? How do you feel later, when reflecting on your action?

2. When you give up an immediate pleasure due to your sense of personal integrity or for the sake of long-term happiness, how do you feel at the time? How do you feel later, when reflecting on your action?
  3. How integral is ethical conduct to your happiness? Based on what you conclude here, make some determinations about how you want to live.
- 

### *Emotions and Kleśas*

Before going deeper with the discussion of emotions, we need to clarify terms. Although everyone in the West understands the meaning of the word *emotion*, there is not a parallel word in Tibetan. When I, Chodron, was reviewing this chapter with His Holiness, he and his translators engaged in a lengthy discussion about the meaning of *emotion* and how it could be translated into Tibetan. Some Tibetans suggest the Tibetan word *myong 'tshor* as a translation, although this word is not widely used. Etymologically, *myong* means “experience” and *'tshor* means “feeling.” Both of these qualities pertain to other mental states that are not emotions. Other Tibetans have proposed the word *gyer bag*, found in Gyaltsab Rinpoche’s commentary to Dharmakīrti’s *Commentary on Reliable Cognition*. However, it is an archaic word and does not include what in English we consider positive emotions.

Our discussion led to the conclusion that at present there is no widely used Tibetan word that directly translates the meaning of the English word *emotion*. However, the Tibetan language contains words for the various emotions spoken of in Western languages. The lack of a term and concept for emotion piqued my interest because those of us in the West continually talk about our emotions. I imagined what it would be like to grow up in a culture that wasn’t focused on “my emotions.”

An English dictionary defines *emotion* as “a strong feeling about somebody or something.” The word *feeling* (*vedanā*) is also vague and is already used in Buddhist translations to indicate the aggregate of pleasant (happy), unpleasant (unhappy, painful), or neutral experiences. This aggregate does not include what we would call *feelings* in English, such as anger or love.

The Sanskrit word *kleśa* is a commonly used word in Buddhist texts that refers to mental factors that afflict the mind and do not allow it to abide peacefully. These disturbing emotions and views enslave the mind, confining it to a narrow perspective and motivate actions that hinder the happiness of both ourselves and others. As such, *kleśa* are obscurations on the path to liberation, and Buddhist texts speak of their disadvantages and the antidotes to them. However, there is no English equivalent to the word *kleśa* that encompasses mental factors as diverse as emotions, attitudes, philosophical views, and innate, unquestioned assumptions about ourselves and the world. For the sake of simplicity in this series, we translate *kleśa* as “afflictions” and sometimes expand it and say “disturbing emotions and wrong views.” Some afflictions, such as the view of a personal identity, are called *views* in English, while others—for example, anger and jealousy—are called *emotions*. Mental states such as not believing that awakening is possible are called *views*.

All people have the same types of emotion and similar attitudes and views about the way they and the world exist—some of which are conducive for long-term happiness and peace, others of which are hindrances. However, the words we use to speak of them and the concepts that influence how we relate to them vary. Similarly, the behaviors motivated by certain emotions will be socially acceptable in some cultures but not to others. For example, sticking out our tongue, which is a sign of friendliness and respect in Tibetan culture, is discouraged in Western cultures, while clapping our hands—a sign of being pleased in Western cultures—indicates aversion in Tibetan culture.

The words used to label emotions have many nuances. In addition, there may not always be an exact correspondence in meaning between the Sanskrit or Tibetan word and the English term used to translate it. When reading Buddhist works in English, we must take care not to impute the ordinary meaning of a word onto a term that has a specific meaning in the Buddhist context.

### *Constructive and Destructive Emotions*

When speaking of positive and negative emotions, Buddhists differentiate multiple meanings of the words for some emotions. For example,

attachment, fear, anger, and disillusionment have multiple meanings depending on the circumstance, and it is important to distinguish the different forms of these emotions in order to avoid confusion.

#### ATTACHMENT

Among the multiple meanings of the word *attachment*, one form of attachment is necessary for our physical and psychological well-being; another is one of what are called the *three poisons*—three afflictions that poison our own and others’ well-being.

The first form of attachment is spoken of in psychology and refers to a feeling of closeness or connection among people. For example, psychologists speak of the attachment a baby has for his or her mother. Such attachment or bonding with the mother or mother figure is necessary for the psychological well-being of the child.

This feeling of closeness or attachment is present in families and enables them to function together as a unit for the benefit of each member. Healthy attachment in a harmonious family has a realistic understanding of the other family members’ capabilities and fosters mutual respect. Similarly, attachment unifies the citizens of a country, facilitating their cooperation for the benefit of their society. This form of attachment produces good results.

Buddhists have a positive use of the term as well. Bodhisattvas are said to be “attached” to sentient beings because they feel a tremendous sense of closeness and responsibility for the welfare of each and every sentient being that spurs them to practice. Their love for sentient beings invigorates them to do whatever they can to alleviate suffering and bring happiness. They do this with greater energy and joy than we ordinary people work to benefit ourselves.

More commonly in Buddhism, however, *attachment* (*trṣṇā* and *rāga*) refers to one of the three poisons and one of the six root afflictions. This attachment is a mental factor that, based on exaggeration or projection of good qualities, clings onto its desired object. With attachment, we hunger after, crave, cling to, and become obsessed with an object, person, idea, place, and so forth. When we succeed in procuring the object of our attachment, we are happy; but when that desire is frustrated, we become angry, resentful, and jealous. These emotions, in turn, motivate destructive actions to procure or protect the cherished object. We can clearly see that the greed

of a CEO for money or the craving of a sports or movie star for fame leads to harmful actions and suffering for himself and others.

When attachment is moderate, society in general considers it to be a positive emotion. There is a feeling of happiness or excitement at meeting someone wonderful, receiving a desired possession, or being praised by the people we value. However, from a Buddhist viewpoint, such attachment is based on exaggeration, and while it may be captivating at the beginning of a new relationship, it will hinder the relationship from being harmonious and mutually beneficial in the long term. This is because attachment leads to unrealistic expectations. Difficulties and disappointments naturally follow when we discover that the object of our attachment doesn't possess all the wonderful qualities we thought it did.

This attachment is sneaky. For example, when family members' affection becomes neediness and possessiveness and generates demands based on unrealistic expectations, it turns into unhealthy attachment. If someone's appreciation for his country makes him suspicious of foreigners on the basis of nationality or ethnicity alone, attachment has set in. This emotion can cause prejudice and discrimination, and the person may go so far as to deny others their human rights.

Once I met a Chilean scientist who spoke of scientists being attached to their field of study. He said that any exaggerated clinging onto one's field of study, political beliefs, or religion is harmful. This man was not a Buddhist, but he understood that it is the mental state of clinging, not the object clung to, that causes problems. In the case of a scientist, such attachment could lead to ignoring contrary evidence or even rigging the result of experiments or misreporting data collected from them. Similar disadvantages accrue to a person attached to their own religion or political views.

Some people ask whether it is possible to be attached to *nirvāṇa* or to the Buddha. Aspiring for *nirvāṇa* or to have the Buddha's qualities is not attachment. The mind is clear, and although it is attracted to its object, there is no exaggeration present because the Buddha and *nirvāṇa* possess magnificent qualities. Still, according to the *Prāsaṅgika* viewpoint, as long as there is subtle self-grasping—in this case, grasping *nirvāṇa* or the Buddha to exist inherently—there is the potential for subtle attachment to arise. If someone then clings to *nirvāṇa* and desperately wants to attain it as if it were an external object, exaggeration is present in the mind. When this

person studies and practices the Dharma, eventually the distorted aspect will be dispelled, and she will have a genuine aspiration for nirvāṇa that is free from attachment.

## REFLECTION

---

1. What are some of the common meanings of the English word *attachment*?
  2. What are the disadvantages of the afflictive type of attachment?
  3. Is it easy to tell when attachment in the sense of affection and respect slips into exaggeration and expectations?
- 

## FEAR

Fear is another emotion that can be spoken of in two ways. In common parlance, fear is usually associated with panic, anxiety, worry, and distress; it is considered a negative emotion because it feels so unpleasant and is often based on unrealistic thinking. From a Buddhist viewpoint, this kind of fear is afflictive because it is based on exaggeration and self-preoccupation, and it leads a person to engage in actions or make decisions that are unwise.

Another kind of fear has an element of wisdom; it is an awareness of possible danger that causes us to exercise caution. While this fear may sometimes feel unpleasant, it is useful and is free from the emotional torment of ordinary fear. For example, awareness that you live in an area that is prone to earthquakes encourages people to make and heed building codes to protect buildings from collapsing. People lay careful plans and take precautions without being immersed in uncontrollable panic. This wisdom-fear is also at work when we merge onto a highway. Aware of the danger of other vehicles driving at high speeds, we drive carefully. Parents instill in young children a respectful fear of matches. In the above examples, fear is useful and is not afflictive. The difference between afflictive fear and wisdom-fear is the presence or absence of exaggeration. When we are attuned to facts of

the situation, fear is not distorted, but when we exaggerate some aspect of the situation, fear is unrealistic and leads to suffering.

Certain meditations in the stages of the path are designed to arouse wisdom-fear in us. When we meditate on the disadvantages of cyclic existence, wisdom-fear motivates us to practice the path to liberate ourselves from saṃsāric suffering. The meditation on death is meant to provoke not an emotional, panicky fear of death, which is of no benefit at all, but a wise awareness of our mortality that leads us to set good priorities in life, abandon harmful actions, and live ethically and kindly.

In Thailand, some monks from the forest tradition meditate in fearful places such as cemeteries, jungles, and forests with ferocious animals. Before 1959, meditators in Tibet did the same. If panicky fear arose in their minds, motivated by the suffering that such fear produces, they would make a strong effort to generate samādhi or the wisdom realizing emptiness in order to overcome it. Ajahn Mun, a famous ascetic Thai monk who lived in the late nineteenth and early twentieth century, and his disciples practiced in this way, and there are many stories of them entering deep states of samādhi when encountering a tiger in the jungle. The great Tibetan yogi Milarepa practiced similarly, and meditators in the Chod lineage deliberately invoke spirits and ghosts to spur them to generate deep bodhicitta and wisdom.

If someone meditates on the sufferings of the lower realms, and panicky fear, instead of wisdom-fear arises, what should she do? First she should remind herself that panic is not the desired outcome of the meditation. Then, realizing that she has the ability to avoid the causes for such a rebirth, she should turn her mind to the Three Jewels and take refuge in them. Instead of allowing herself to be overwhelmed by this unrealistic fear, a well-trained practitioner will use it to reaffirm her connection to the Three Jewels.

Some scriptures speak of using the presence or absence of panicky fear as a way to examine whether or not a person is an arhat. When that person is meditating or sitting casually, someone makes a sudden, sharp, loud sound. If the person does not jump or gasp with fear, it is said that he has attained high levels of the path. According to this example, it seems that some level of self-grasping is present when an ordinary person experiences fear but is absent when they are liberated from cyclic existence.

Sometimes it is said that bodhisattvas fear saṃsāra as well as the personal peace of an arhat's nirvāṇa. While the word “fear” is used to indicate their unwillingness to stay in either of these states, it is not the fear that we ordinary people experience. Our fear is usually based on self-grasping and self-centeredness, while bodhisattvas' fear is underlain with compassion and wisdom that wants to attain buddhahood in order to benefit others as soon as they can.

## ANGER

Most of us would agree that in general anger is a destructive emotion. Under its influence, we speak in ways that break the trust in relationships with people we care deeply about. Overwhelmed by anger, we act in ways that are dangerous and destructive to our own and others' well-being. While we often believe that our anger is justified—“any sane person would be angry in this situation”—that doesn't alleviate the downside of anger. When we later calm down, we can see that our mind was exaggerating the negative qualities of a person or situation, or even projecting negative qualities that aren't there.

Some people argue that some forms of anger are constructive. For example, if a student is wasting her time and not actualizing her potential, her teacher may become angry. This anger stems from the teacher's wish that the student succeed and, from that perspective, could be considered a positive form of anger, some people say. Nevertheless, we need to examine each individual situation and check our motivation carefully. It is easy to justify abusive behavior by saying, “I'm doing it for your own good.”

Moral outrage at injustice in the world is another form of anger that some people say is beneficial because it leads to constructive change in society. But here, too, we need to examine if exaggeration is present. Years ago when I, Chodron, was at an anti-war protest, I saw another protester pick up a brick and throw it at the police. His action shocked me into realizing that his mental state had become like the mental state of those who were responsible for the war. There was bias for his own side and animosity toward the other. He was protective of those who agreed with him but sought to harm those who didn't. It is all too easy in a situation of conflict to forget that people on the “other side” are human beings who want happiness and freedom

from suffering just as we do. Painting them as thoroughly evil and never to be trusted is definitely an exaggeration.

Anger is not the only emotion that can motivate us to tackle social injustice. Compassion can be a strong motivating factor as well. Because a compassionate mind is concerned with the well-being of all parties in a conflict, there is a greater chance of reaching an outcome that benefits everyone. We are able to think more clearly when we are free from anger. Ārya bodhisattvas who are liberated from cyclic existence have no anger whatsoever. If they see one person harming another, they have compassion for both people and intercede to avert the harm. Compassion does not mean being passive and ineffective. Rather, it impels us to act assertively when appropriate, but without anger or hatred.

It is difficult to experience the emotions associated with anger—hatred, resentment, vengeance, and so on—without some degree of hostility toward others. When we closely examine such emotions, we find that they are based on self-centeredness. As such, from a Buddhist perspective, emotions falling under the umbrella of anger are distorted and harmful mental states to be abandoned. Having said that, we must be careful not to confuse anger with assertiveness. A person can speak or act firmly and forcefully without being angry, just as an angry person can be passive and withdrawn.

Sūtrayāna—the path based on the sūtras—sees all instances of anger as based on distortion and hence damaging. Tantrayāna—the path based on the tantras—speaks of using anger in the path. In our discussions, His Holiness speculated that when a bodhisattva practicing tantra speaks harshly to someone, the causal motivation—the initial thought to do the action—is compassion, but the immediate motivation at the time of the act is anger. One difference between this anger and ordinary anger is that ordinary anger wants to harm or punish the person, while anger that has been transformed into the path aims to stop the person's harmful actions. A bodhisattva has tremendous concern and compassion for the person and uses fierce actions to stop him from harming others and from creating destructive karma that will later ripen in his own suffering. In addition, the bodhisattva has deep wisdom that realizes the agent, the action, and the object all lack inherent existence.

In speaking of the possibility of using anger in the path, a guideline is

warranted. Since we beginners lack the requisite compassion, wisdom, and skill to transform a destructive emotion into the path, it is better for us to apply the antidotes as taught in the Sūtrayāna path and to practice restraint.

### DISILLUSIONMENT

We commonly speak of disillusionment as a negative emotion because it brings unhappiness. When we feel disillusioned because a person does not turn out to be all we thought he was, we feel uncomfortable, and it may lead to despondency, depression, and in some cases, cynicism. This happens because we previously constructed an unrealistic expectation of the other person, clung to it as true, and now we see the falsehood of it.

But not all disillusionment is bad. When we contemplate the defects of cyclic existence, the shortcomings of saṃsāric rebirth, and the deceptive nature of temporary pleasures, we feel disillusioned with chasing after a type of happiness that we can never secure. From a Buddhist viewpoint, this disillusionment is positive because it will lead us to aspire for liberation and create the causes to attain it. Being disillusioned with cyclic existence, practitioners are happy to relinquish their attachment to it. Although disillusionment makes our mind sober, we need not be despondent or demoralized, because there exists a remedy to the misery of saṃsāra. Such disillusionment makes the mind peaceful and is conducive for cultivating deep states of concentration because it frees our minds from needless worry about the concerns of only this life.

### *Emotions and Survival*

Science tells us that there is a biological basis for our emotions—both afflicted emotions and beneficial ones. We have instincts to draw closer to whatever supports staying alive and to drive away whatever harms us. The need for food, shelter, and companionship motivates us to seek and procure these requirements for human life. According to this theory, certain emotions are conducive to our survival and arise due to biological factors. For example, jealousy and arrogance both encourage competition, which leads to better performance and a greater likelihood of our genes being passed down to offspring. Anger and fear can be useful to avoid or destroy what threatens our life and well-being. Scientists say that from an evolutionary

perspective, those emotions would not be present in us if they didn't serve a useful purpose. When we are angry, blood goes to our arm muscles in case we need to fight, but when fear comes, the blood goes to our legs so we can flee. On a purely biological level, emotions such as attachment, anger, and fear may assist animals and human beings to stay alive, and from that perspective, they may be considered beneficial.

Why, then, does the Buddha call emotions such as attachment, anger, jealousy, arrogance, and fear “afflictions”? Why does he say they cause suffering and recommend counteracting them? The difficulty with these emotions, again, is that they are fueled by exaggeration and grasping and thus do not perform their functions in a reasonable way. They may exaggerate the potential danger of the situation, the primacy of one's own self-interest, or the potential benefit to be gained. When afflictions are manifest, our minds are clouded and we don't think clearly. Instead of responding to a situation intelligently, we react impulsively, following an urge without sufficiently contemplating the likely effects of doing so. The results are often disastrous. In some conflicts, anger exposes us to far greater danger by making us act irrationally, which incites the other party to counter with more violent means. Fear also can endanger our survival, for when we exaggerate danger, we may lash out when the threat is nonexistent or minor. We may freeze when it would be wiser to act, or we may act heedlessly in our panic. It is especially tragic when a government or its citizens collectively fall into these distorted emotions.

Some psychologists say that disturbing emotions are 90 percent exaggeration and projection. While there may be a biological component, exaggeration and projection come from the mind, and we are not generally aware when they step in. A sense of danger that is reasonable in one instance can be later exaggerated and projected onto many other situations, making a person unnecessarily anxious. The anger that produces the rush of adrenalin that helps us to protect ourselves becomes a habit, and we create drama and conflict in our lives because the resulting adrenalin makes us feel alive.

Applying our human intelligence to our emotional lives enables us to discern which emotions lead to well-being and which lead to difficulties. Here we see—and psychological and sociological studies verify this—that children who grow up with kindness are generally more secure and emotionally balanced, while those who live in families with a lot of anger and

physical or verbal violence are more anxious. Angry, resentful, and vindictive thoughts also make us unhappy and tense. These emotions impact our physical health and harm our immune system, while compassion is conducive to better health.

There is a world of difference between constructive and destructive emotions. In ordinary beings, afflictive emotions arise easily; they are impulsive and reactive. Genuinely constructive emotions like compassion and generosity come through investigation and effort. While destructive emotions distort our view of a situation, constructive emotions are conducive to accurate assessment. Destructive emotions cause us to regret our actions, while constructive emotions do not.

By examining the disadvantages and unrealistic perspectives of the afflictions, we will come to a point where we will make a determination to stop letting them run our lives. Seeing the benefits of realistic and beneficial emotions, we will consciously cultivate them. In his teachings, the Buddha described the ways to think and meditate that make positive emotions arise. By familiarizing ourselves with these and with the antidotes to the afflictions again and again, our habitual emotions will change, and in situations where anger once mushroomed, compassion will radiate.

For example, when harmed by another, we can think, “While this person’s action is harmful and I must act to stop it, he has the same wish to be happy as I do.” In this way, we develop a sense of concern for the other person. This will not only alleviate tension and anxiety in our own minds, but will also help us reach out to improve his situation. This, in turn, will result in that person responding to our kindness. This type of kindness and compassion is developed only through reasoning and training; it does not arise instinctively. When we truly care about others’ welfare, we do not want to engage in harmful actions.

While biased compassion and kindness—the kind we might have for our child or parent—may have a biological basis, we must consciously purify them of attachment and greed. Instead of mindlessly following anger, we must assess if it is to our benefit. In many situations, responding with tolerance and kindness protects our own interests and well-being more effectively than hostility. Anger may destroy an aggressor or opponent, but that can have devastating repercussions. Compassion cares for both the perpetrator and victim of harm and thus allows us to intervene in abusive situa-

tions in a balanced, thoughtful way that enables us to remedy the situation with minimal harm to self and others.

There is a progressive development in our reasons for not harming others. People who have not considered the benefits of kindness and the disadvantages of anger and greed may restrain themselves from killing, stealing, unwise sexual behavior, and lying in order to avoid punishment. While such restraint is beneficial, there is not a great deal of virtue in the intention behind it. However, it helps people get along better with others, and that's important.

A step up from this is thinking, "Killing, stealing, and such are nonvirtuous. If I do them, I will have to face the consequences after death, and these results could be dire." While this restraint is self-referenced, there is virtue in the person's motivation, because she is considering the ethical dimension of her action.

The third step is thinking, "This sentient being wants to be happy. His or her life is as sacred as mine." As a consequence, we avoid harming this person. Or we think, "This person will suffer if she loses her possessions. Therefore I will respect and protect her possessions," and in this way we refrain from stealing. The outward action is the same as in the two preceding cases, but our internal motivation is different and is very virtuous because it considers the effects of our actions on the other person.

An even more advanced motivation is restraining ourselves from harming others because it not only causes them pain but also interferes with our ability to attain full awakening and be of the greatest benefit to sentient beings. Here we see the effect of having bodhicitta—the altruistic intention aspiring for full awakening in order to benefit sentient beings. Refraining from nonvirtue with this precious motivation is extremely virtuous and beneficial.

### *Working with Afflictions*

While disturbing emotions may arise naturally in us ordinary beings, they can be eliminated. They are not an intrinsic part of the mind; they haven't penetrated its clear and cognizant nature. Afflictions are rooted in ignorance and other distorted conceptions, and as such they are fragile and can't stand up to the powerful states of mind that understand reality. The

stronger our wisdom grows, the weaker the afflictions become, until eventually they are completely eradicated.

In contrast, constructive states of mind can be developed limitlessly. The fundamental nature of the mind is pure and stable. The innate, subtle mind of clear light, which is the basis of the cultivation of positive states of mind, is stable in that it continues eternally without interruption. While afflictions have powerful antidotes that can destroy them, no such counteracting forces exist that can eliminate constructive emotions and attitudes forever. They are based on accurate perception and thus can be continually enhanced. Furthermore, the nature of the mind is such that once we become thoroughly habituated to these virtuous states, we don't need to make repeated effort to cultivate them. They will continue on limitlessly.

People commonly regard emotions as raw feelings distinct from thought or other cognitive processes; they seem to arise spontaneously, not through conscious effort. We believe that emotions happen to us and that any reasonable person would feel the way we do in the same situation.

However, learning how destructive emotions arise and observing this process with mindfulness enables us to see that they are not givens. We can learn to detect harmful emotions while they are still small and swiftly apply their antidotes. When we ruminate on the harms others have caused us, for example, our resentment increases; when we contemplate the kindness of others, gratitude wells up.

Furthermore, deliberately cultivating accurate perspectives increases the strength of constructive emotions. Due to the force of habituation, these new perspectives gradually become natural, as do the beneficial emotions.

Awareness of our body and physical sensations is especially helpful in becoming aware of disturbing emotions when they begin to arise. Changes in our breathing, heart rate, body temperature, and muscle tension are some of the physical signals that accompany the emergence of a disturbing emotion. Making it a habit to check in with our body regularly can be very helpful.

For some people, observing the mood or texture of their mind enables them to detect a disturbing emotion while it is still small. Regardless of how we do it, the more aware we become of our thoughts and emotions, the quicker we will be able to evaluate them and decide whether to cultivate or counteract them. Engaging in regular meditation practice helps us to

consciously practice cultivating constructive emotions and counteracting destructive ones. Through such training, we can establish new emotional habits, and with time, they will naturally manifest in our daily life.

Intelligence—the ability to precisely discriminate or analyze the characteristics of an object—is another mental factor that can increase or decrease the force of an emotion. When corrupted, intelligence incorrectly understands how things exist and creates more problems for us. When used correctly, our human intelligence and analytical capacity help us to overcome our destructive emotions. This intelligence may be a thought—such as a clear understanding of the disadvantages of anger—or it may directly perceive a deeper characteristic of things, such as their constantly changing nature.

Some afflictions are “corrupted intelligence” (Tib. *shes rab nyon mong chen*). They are called “intelligence” because they involve an analytic process, but because that process is deeply flawed, the conclusion reached is wrong. Consider the two extreme philosophical views: absolutism (grasping at persons and phenomena as inherently existent) and nihilism (believing conventionally existent phenomena are nonexistent). Simply saying to ourselves “This is a wrong view” will not make either of these disappear; nor are prayers and virtuous aspirations sufficient to vanquish them. We have to counteract them directly by developing the wisdom or intelligence (*prajñā*) that understands reality. Absolutism and nihilism arise through thought processes, so they need to be counteracted through correct reasoning that shatters our previous certainty. As our understanding deepens, our wisdom will become the direct, nonconceptual perception of the nature of reality.

It’s helpful to be aware of the mental processes that lie behind emotions. We may have habitual ways of interpreting events that make them appear threatening or desirable when they are not. If so, we can consciously begin to change our interpretations and thus change the emotions that result from them. This is the theory behind the thought-training teachings, such as those describing how to transform adversity into the path to awakening.

For example, a colleague offers to help us with a project, and we think, “Why, all of a sudden, does he want to join in? Does he want some of the credit for himself? Or maybe he wants to slow my work down so that our boss will be upset with me.” Although we are not trained psychologists, we

may even attribute a mental disorder, “This guy is passive-aggressive, and he’s manipulating me because he wants my job.” We are “mind reading”—projecting a motivation to someone’s action with little evidence. Becoming suspicious and hostile, we respond with a snide remark, and a conflict takes off. Unfortunately, many misunderstandings and arguments among people, groups, and nations occur in this way.

In addition to developing our human intelligence and learning to use our logical abilities correctly, we need to make our mind receptive so that the seeds of constructive emotions and attitudes can grow in it. We do this by engaging in spiritual practices that diminish and purify the seeds of harmful deeds in our mindstream. In addition, practices that accumulate merit—seeds of constructive karma—increase the force of our wholesome tendencies. These practices include being generous, living ethically, and cultivating lovingkindness.

Learning how to consciously direct our thoughts in a more positive way is essential for counteracting afflictive mental states. Repeating, “Anger is awful; may it disappear. Compassion is so wonderful; I wish I had it” isn’t sufficient to transform our minds. Praying, “Buddha, please inspire me to be compassionate” or “Buddha, please get rid of my afflictions” without our cultivating the causes won’t work either. To be free of our anger, we must contemplate the kindness of others and train our mind in forgiveness and love by practicing the meditations that evoke these virtuous emotions. While thinking about the value of compassion and requesting inspiration to develop it are useful, the real work is to contemplate the benefits of compassion and then practice the series of meditations to generate it. In our daily lives, too, we must repeatedly bring compassion to mind when we interact with others so that it becomes habitual.

Compassion broadens the scope of our mind and makes it more accepting and inclusive of others. Destructive emotions such as attachment and anger usually focus on one person or one class of people, whereas compassion can be extended to all living beings. The object of our compassion doesn’t need to be someone we have met because we already know that everyone wants to be free from suffering and seeks happiness.

When our mind is unhappy, compassion and love uplift us. The best offering to make to all the buddhas is to abandon harming others physically, verbally, or mentally. Unlike afflictive emotions, virtuous mental

states do not have self-grasping ignorance as a support, so cultivating the wisdom that overcomes ignorance won't harm our virtuous emotions. If anything, it will eliminate obstacles to generating them. If we really care about ourselves, we'll generate an altruistic intention because it gives us encouragement, enthusiasm, resilience, and a good heart. So a wisely selfish person is altruistic!

Habituating ourselves to constructive perspectives is one of the purposes of the *gāthas*, or short phrases used in the mind-training practice. For example, while cleaning the dishes or washing the car, we think, "I am cleansing away my defilements and those of all other sentient beings." When going upstairs, "I will lead all sentient beings to awakening," and when going downstairs, "I am willing to go to suffering abodes to benefit sentient beings." In this way, neutral everyday actions are transformed into the path to awakening.

Some afflictions are destructive emotions that are counteracted by generating opposing emotions. For example, to counteract anger and hatred, we meditate on love. Other afflictions are distorted attitudes and wrong views that are counteracted by seeing that the object they apprehend is false. For example, the ignorance that grasps true existence is counteracted by the wisdom realizing the emptiness of true existence.

Imagination may be used as a skillful means to counteract harmful emotions. For example, as an antidote to lust, the Abhidharma prescribes meditating on the universe being filled with bones. Although the universe isn't actually brimming with bones, by having us contemplate the inside of the body, this technique works to eliminate obsession with sex. In cultivating lovingkindness as an antidote to anger, we may imagine others being happy, and when cultivating compassion, we may reflect on their suffering. Scientists have noticed that when we imagine a situation, the same area of the brain is activated as when we actually experience that situation. This supports the Buddhist view of the usefulness of imagination in developing wholesome and balanced mental states.

Applying an antidote may initially make us feel deflated, but this is not detrimental. For example, when we are arrogant, making the mind more sober is beneficial. However, if we are depressed, deflating our mood is not useful. We must evaluate our mental states, first determining if a destructive emotion is present or not, and if so, then choosing an appropriate antidote.

In short, we learn to become doctors to our own mind, diagnosing our mental ailments, selecting the correct Dharma medicine, and then skillfully applying that medicine.

Working with afflictive emotions requires a two-pronged approach. Managing unwholesome emotions and stopping actions motivated by them are important components, but they don't resolve all problems. We also need to cultivate wholesome emotions. Although we may not initially be able to call upon these positive emotions in the heat of the moment, gradually and diligently cultivating them in our meditation practice affects our temperament and influences our emotional patterns. The more familiar we are with these beneficial emotions, the less susceptible we are to harmful emotions. Developing constructive emotions is similar to bolstering our immune system. Cultivating love strengthens our emotional immunity to anger. Developing compassion prevents cruelty, joy opposes jealousy, and equanimity averts bias due to attachment, anger, and apathy.

Reflecting on the benefits of having a particular wholesome emotion invigorates our efforts to develop it. For instance, if we contemplate the benefits of seeing sentient beings as loveable and imagine the good feeling that will derive from that, we will happily meditate on their kindness. This will cause feelings of gratitude and appreciation for others to arise naturally in our mind. To see the advantages of certain practices, we can ask ourselves, "What is disrupting my inner contentment?" We then see the negative emotions as the culprits and want to oppose them. With this determination, we will seek the methods to counteract those disturbing emotions and diligently practice these methods.

## REFLECTION

---

1. How can you differentiate a destructive emotion from a constructive one?
  2. What are the benefits of subduing disturbing emotions and cultivating wholesome ones?
  3. Review the methods to subdue each disturbing emotion and cultivate each wholesome one.
-

### *Cultivating Love and Compassion*

To generate beneficial emotions such as lovingkindness and compassion for all sentient beings, we must first have a correct understanding of those emotions. The love and compassion we cultivate in our spiritual practice should not be confused with the ordinary love and compassion we feel for our dear ones, which is usually grounded in self-referential considerations, “This person is my friend, my spouse, my child, my parent,” and so on. While such love may be very strong, it is tainted with attachment because it is partial toward those who please us and biased against those who displease us. As we have seen, once we are attached to someone, the stage is set to later be angry at them when they fail to meet our expectations, fulfill our needs, or do what we want. The love and compassion we seek to cultivate in Dharma practice is based on having an equal-hearted sense of concern for all beings simply because they exist and they want happiness and not suffering, just as we do.

Even if we understand the meaning of genuine constructive emotions, we may doubt that it is possible to develop them. We must remember that the seeds of constructive emotions are naturally in our mindstream and, when cultivated, they will increase. Everything becomes easier with familiarity, and positive emotions are no exception.

When we have the confidence that it is possible to develop positive emotions, we make the effort to do so. At this point we engage in the meditations to cultivate equanimity and to see others as kind that precede the actual cultivation of love and compassion. Meditation on equanimity enables us to go beyond the limitations of our judgmental attitude that classifies people as friends, enemies, and strangers and elicits the emotions of attachment, animosity, and apathy toward them. By seeing that everyone is just like us in wanting happiness and not suffering, equanimity sets the stage for cultivating love and compassion for all beings, no matter what they believe or how they treat us.

We then cultivate the sense that others are loveable, which is done by remembering their kindness to us. Here we reflect not just on the kindness of friends and family, but the kindness of all those who do their various jobs in society that enable us to have what we need. We also reflect on the kindness of those whose disruptive actions challenge us to develop forgiveness, patience, and fortitude.

We now turn our attention to the expansive love we seek to develop in our spiritual practice. This love is the simple wish for others to have happiness and its causes. Visualizing a variety of people, extend this wish to them and imagine them having happiness and its causes. Having done this, cultivate compassion wishing them to be free of suffering and its causes. Do this with a few individuals to begin with, and then generalize it to groups of people and finally to all living beings.

Initially the feelings of impartial love or compassion that arise in the depth of our hearts will last only a short while. At this level, they are still contrived in that we have to make effort to experience them. However, through habituation, the time will come when, as soon as we see even a small insect, feelings of love and compassion for it will arise spontaneously and effortlessly. This new experience manifests as a result of having made an effort over a long period of time. Such mental transformation brings about an enduring change in our moods and emotions.

Scientists and Buddhists agree that habituation is necessary for long-lasting change in our thoughts, emotions, and behaviors to occur. When we practice something repeatedly, it becomes part of our temperament. Buddhists describe this as a process of habituating ourselves with new emotional responses. Scientists explain this as building up new neural pathways in the brain. When a certain pathway associated with an emotion is well lubricated, that emotion arises more easily.

Although Buddhism emphasizes cultivating love and compassion for others, we must not neglect ourselves. The happiness of others is one of our goals, so we must take care of ourselves so that we will have the physical energy and the mental clarity to benefit them. If we ignore our own welfare, not only will we be unable to benefit others, they will have to take care of us!

## REFLECTION

---

1. Follow the steps for cultivating love and compassion explained above. Make your contemplation personal.
  2. Enjoy the expansive feeling in your heart as you release anger and judgment and allow unbiased affection to arise.
-

## *A Good State of Mind*

The calmer our mind, the easier it will be to deal with problems. Rather than wait for a crisis and then search for a way to handle it, we should practice open-mindedness and kindness on a daily basis. Then when problems or even traumatic events occur, their impact will be less severe, and we'll be able to return to a balanced state of mind more quickly. On the other hand, if we indulge our bad moods, we'll feel overwhelmed when even small, unpleasant events occur.

Tibetans have a motto, "Hope for the best and prepare for the worst." The main preparation is to let go of the self-centered attitude that magnifies our own problems and to cultivate compassion for ourselves and others. When difficulties arise, looking at them from a broad perspective is useful. Concentrating on *my* problems brings more frustration and unhappiness, while recollecting that everyone faces difficulties puts mine in perspective. In addition, if we see difficult circumstances as a challenge to rise to our potential and as an opportunity to call forth our compassion, we'll be more effective in managing a stressful situation and contributing something useful to it. In this way, our life will be worthwhile, and our mind will be relaxed and open.

In the next few sections, we will discuss some mental states and situations that people frequently see as troublesome—fear, depression, acceptance, comparing ourselves with others, and disagreement and conflict—and ways to train our minds to address them effectively.

## *Working with Fear, Developing Courage*

Above we briefly considered the two types of fear, one based on wisdom and the other that succumbs to panic. The first type of fear stems from reason and is healthy. When we light a fire, we are aware of the danger and take care to avoid it. That fear protects us. Similarly, when we correctly analyze the causes of cyclic existence, we have a wise fear of them and that makes us conscientious about our moods and actions. This wisdom-based fear is important in daily life and on the path.

Panicked fear is problematic because it prevents us from seeing the situation clearly. For example, when I was a child and passed through some dark

rooms in the Potala, I feared someone was hiding there. If just a small mouse ran by, I jumped with fright. This kind of fear is due to our imagination; it is mentally created. Getting accurate information and changing our view of the situation can counteract it. For example, when we feel insecure, fearful, and lonely, we can meditate on the kindness we have received from others so that a sense of connection and gratitude arises in our hearts and we know we have support. If we are skeptical and suspicious of someone, it is helpful to consider him as another human being, just like us. In that way, our attitude will be more receptive, and we will be able to assess the situation with greater clarity and wisdom.

Another unrealistic fear may occur when we are threatened with losing our job. Our minds imagine that we will immediately be homeless, sitting on the street with our hungry children. Applying our intelligence, we should investigate whether we are viewing the situation accurately or exaggerating certain aspects. We may find that the situation is unlikely to occur as we imagined it, and even if it did, we have skills to manage it. There are resources in society and in our network of friends and relatives to help us, so we need not paint a dire picture of circumstances that don't exist at this moment.

Some people look at the political, economic, social, and environmental situation of the world and develop a wisdom-fear that inspires them to work to prevent harm to the planet and its living beings. Looking at the same situation, other people develop a despondent fear. Such a discouraged mental state immobilizes them, and their wish to help gets lost amid waves of despair. To counter this, we must constantly maintain our compassion and keep our hearts open, so that no matter what others' responses are, we remain earnest.

Courage comes from the way we regard situations. For example, from one viewpoint the current situation in Tibet is dire; from another there is hope. Focusing on the positive, while being aware of but not discouraged by the negative, enables us to make every effort to improve conditions.

One single practice or method alone cannot develop courage; it requires contemplation of several topics over a period of time. These topics include the preciousness of our human life; the potential of ourselves and all others to become fully awakened buddhas; the compassionate, awakening activities of the buddhas and bodhisattvas; the life stories of great masters; the kind-

ness we have received from all sentient beings; and love, compassion, and taking others' suffering and giving them our happiness. These will uplift and balance the mind so that we then view situations from a broad perspective.

In addition to courage, we need confidence. To develop this, I keep in mind some basic beliefs: Human nature is gentle and compassionate. Each and every one of us does not want suffering, and we have a right to try to overcome it. All beings have the potential to become wise, altruistic buddhas. Reflecting on these gives me inner strength and determination. A compassionate motivation and a clear, beneficial goal give me self-confidence and destroy doubts. In other words, confidence arises not from being successful in our projects but from engaging in them with a wise and kind motivation.

Human beings have remarkable intelligence, which if applied correctly, can solve problems and conflicts. Fatalistic attitudes are useless. We have the capacity to prevent hardships and improve what is good; we must do our best to use our abilities in constructive ways. If we make every effort and still fail, we need not have regrets. We can accept what happens. However, if due to lack of care or hope, negative things happen, that is extremely sad.

### *Hope, Desire, and Acceptance*

Just as fear has two aspects—one to abandon and one to cultivate—so do hope, desire, and acceptance. For example, when we hope for good things for ourselves—a new house, a good job, a wonderful family, money, and material possessions—we become distracted from our spiritual concerns and entrenched in attachment. Dharma texts that speak of abandoning all hopes are referring to these hopes concerning worldly gain that inevitably let us down.

On the other hand, we must have hope for a better future so that we will work to create the causes for it. Here the future we hope for is not a self-centered one based on worldly desires but one that takes others into consideration and wants happiness for many. This latter type of hope will motivate us to practice the Dharma and to engage in projects that directly benefit others.

No matter what situation we are in, we should not lose hope. Losing hope and sinking into a defeatist attitude are the real causes of failure. They are also distorted mental states. We have human lives with our unique human

intelligence, and these give us the capacity to overcome problems. Therefore we should be calm and wisely investigate various alternatives rather than throwing up our hands in despair, which often makes the problem worse.

The negative desire is related to attachment and keeps us bound in cyclic existence. In contrast, desire can also refer to a positive aspiration, such as the desire to meditate on equanimity or the desire to become a buddha. Such desires are not based on self-grasping or self-preoccupation. They have positive goals and increase our joyous effort to attain what is worthwhile.

Acceptance, too, has two sides. The disempowering kind of acceptance is acquiescence—accepting something unpleasant with a disconsolate heart. Such acceptance leads us to despondency and destroys our enthusiasm for life and for Dharma practice.

The good kind of acceptance acknowledges and accepts our own and others' faults and failures and at the same time wants to improve in the future. There is no use in fighting the reality of the present moment, but we know we can change and improve in the future. We accept the present suffering, for the causes for it have been created and are already ripening. Future suffering, however, can still be prevented, so our mind remains optimistic. By accepting the present situation, our time and energy is not consumed in anger or grief, and we can direct ourselves instead to purifying the causes for future suffering, avoiding the creation of more such causes, and creating the causes for future happiness.

### *Comparing Ourselves with Others and Self-Worth*

Although all sentient beings are equal in wanting happiness and not wanting suffering, each of us has different talents and weaknesses. We can acknowledge that others are better than us in terms of education, health, physical appearance, social standing, wealth, and so on, but that need not lead to jealousy. It is a simple acknowledgement of what is.

Problems begin if we begin to think, “Since I am less than, I am hopeless,” and feel inferior. Comparing ourselves with others and feeling hopeless is the result of a narrow outlook, for we see only our weaknesses and ignore our potential. Here, we should remember that although that person is more successful than we are, she is also a human being, just as we are, and that we have the same potential to succeed.

It is also important to remember that each of us has our own unique good qualities and talents. Comparing ourselves to others is like comparing apples and cars. They may both be red, but they are useful in different situations, so it's good to appreciate both. Similarly, it's good that people have different interests, talents, and abilities. By pooling these together, all of us benefit. We can rejoice in the good qualities of others and rejoice in our own, too, even though they may be different.

Some people often make black-and-white distinctions, with no middle ground. If something good happens, they become too happy and excited, and if something bad happens, they become discouraged and depressed. Life is complex: suffering is bound to happen and good things come as well. When good things occur, some people still do not feel content and push themselves to have more and better until they collapse. With this kind of attitude, if they see their neighbor is more successful, they succumb to jealousy and hopelessness. All this is avoidable with a wider perspective on life.

### *Counteracting Depression*

Some types of severe, clinical depression appear to have a chemical component in the brain, but here we will examine the psychological aspect of depression. The psychologists I have spoken with tell me that in large part depression is due to a lack of affection, love, and compassion in the family and the community. I believe that we human beings are by nature social animals. Our basic nature is such that we appreciate the affection of others, and when we receive insufficient affection or are deprived of it altogether, we become unhappy and listless.

The techniques to counter depression depend very much on the individual, whether he or she follows a spiritual tradition and, if so, which tradition. A nonbeliever can reflect that human nature is gentle. We have experienced some form of love and compassion from many people since we were born. We have received much kindness from others throughout our life. Sometimes we are blind to the kindness around us; other times we are dissatisfied with it and wish it were more or better. Here it is good to cultivate contentment with the affection and kindness we have received and to rejoice in it. See its positive effects on our life. From the time we were born until now, all our happiness in one way or another has depended on

the kindness of others. Just the fact that we are alive is due to the kindness we've received from so many other beings.

To counteract depression, Buddhists can think in two ways. First we develop a sense of our own potential by reflecting on buddha nature. No matter how confused or weak we may sometimes be on a superficial level, deep down our buddha nature is there. On the most basic level of having a mind, no difference exists between the Buddha and us. Each person has the *natural buddha nature* (the emptiness of inherent existence of the mind) as well as the *evolving buddha nature* (those factors that can be increased and whose continuity will continue to awakening). Thus everyone has the potential to become fully awakened.

Second, consider the nature of cyclic existence. At present we are under the control of afflictions and karma. As long as that situation exists, some kind of problem will be present. For example, when our body is ill, we experience pain. We must expect that and accept it. Worrying about the pain is useless. If we do not want the pain, we must remove its cause. If it is possible to remove the cause, we should try to do that. If it is not possible, no benefit comes from worrying.

We can think in a similar way about the nature of cyclic existence. As long as we have a body and mind that are under the influence of ignorance, problems will arise. This is reality. It is to be expected in cyclic existence, and we must accept it. If we do not like these problems, we should try to eliminate their causes—afflictions and polluted karma—and attain liberation. This gives us enthusiasm to practice the Dharma and seek nirvāṇa.

Depression also arises by focusing too much on our own situation and problems. Look around at others and see that everyone suffers in one way or another. Reflecting deeply on this, our hearts will open, and the strength of our love and compassion for others will increase.

### *Disagreement and Conflict*

Disagreements always arise among sentient beings. Differences in views and opinions are potentially positive and can be a source of progress. However, when we are attached to our ideas, possessions, and status, these disagreements may lead to violence or oppression. For this reason, it is important to remember that we are all part of the human community. We need each other; we depend on each other.

Every day I have disagreements within myself as an individual. In the morning I believe one thing is right, and after further investigation, by the evening I have discovered that another course of action is better. This does not cause confusion, and I can manage this disagreement within myself. Similarly, if we see ourselves as one human community, one organism, then we can tolerate differing opinions and learn together. We should listen to others' ideas and investigate their reasons as well as share our experience and knowledge.

Some disagreements arise over economic issues because one group is disadvantaged. This group tries to change the situation using reason and negotiation, but when these fail, they feel frustrated and may become violent. If we look at the situation through a narrow lens, that violence may seem useful. But when looking from a wider perspective, we see that violence may solve one problem while creating another. For example, each party in ethnic conflicts has reasons to support their actions, but in the eyes of the rest of the world, their fighting is madness, for it creates more suffering than was there before. Therefore we must avoid any form of violence. Just as ignorance is decreased through education, our human tendency toward violence can be reduced through education in nonviolence, mediation, and conflict resolution. Learning to listen with an open mind and heart is helpful too; often people's anger dies down when they feel that someone hears their concerns and understands them.

Sometimes we may think that a situation is unjust and want to strike out or rebel. But looking from a wider angle, we note that aggression will bring many complications and that other ways to deal with the difficulties exist. These other methods may take longer, but seeing that in the end they are more beneficial, we adopt them and are patient. I consider such patience and tolerance a sign of strength, not weakness. This is the strategy I have adopted in dealing with the unjust occupation of Tibet.

Violence not only creates new problems, it also goes against human nature. One of my fundamental beliefs is that human nature is gentle. From the time we are born, we are unhappy when we see the harsh treatment of one person by another. But when we see expressions of compassion and love, we naturally feel joy. This is the case even with infants. The educational system should teach the value of human life and the disadvantages of violence. We must instruct children in methods to control anger and manage conflict, and most importantly as adults, we must model tolerance,

empathy, and good listening. At present, the educational systems in most countries emphasize the transmission of information and neglect the creation of good human beings with a sense of responsibility for each other. We need to change this.

The Buddha lays out the root of disputes (AN 6.36):

There are, O monastics, these six roots of disputes. What six? Here a monastic is (1) angry and vengeful, or (2) contemptuous and domineering, or (3) envious and miserly, or (4) deceitful and hypocritical, or (5) he has evil desires and wrong views, or (6) he adheres to his own views, holding to them tenaciously and relinquishing them with difficulty.

Because the Buddha was addressing a group of monastics, he used a monastic as an example. But the same could be said about a person in any group, be it a work situation, club, family, sports team, or a group of social or environmental activists. It just takes one person's uncontrolled mind to throw a group into disarray, preventing it from accomplishing its purpose.

In the passage above, the Buddha outlines ways in which our mind may be uncontrolled. First, we are angry and vengeful. We speak badly about other people behind their backs, retaliate for any and all perceived insults, and make distorted and unjust accusations about others. We can surely think of many examples when we have been around such people, but the point here is not what others have or have not done; it is about our own behavior and emotions. We must examine our angry outbursts and vengeful actions and seek their causes within ourselves. How were we viewing the situation? What are our emotional and behavioral patterns? In short, before thinking about what to say or do, it is best to calm our minds and return them to a more balanced state.

Here's a helpful exercise incorporating the above account of the causes of dispute. Contemplate when you have acted in these ways and consider other ways to look at the situation and methods to adjust your motivation so that it benefits, not harms, yourself and others.

The second root of disputes is being contemptuous and domineering. A person seeks to lead a group whether or not she has the skills or has been given the authority. If others lead, she is disdainful and uncooperative, only

participating if things go her way. Leaders and followers must cooperate. Both have specific duties and require different talents and abilities, and neither can function well without the other.

The third root is envy and miserliness. Insecure, a person is jealous and does not like when others are more successful than he is. He is stingy with information, time, and effort and doesn't help others on the team.

The fourth is being deceitful and hypocritical. People who lie and are dishonest are difficult to trust and therefore difficult to work or live with. They say one thing but mean another; their speech is for their own benefit, without consideration of the situations or feelings of others.

The fifth root of discord is having evil desires and wrong views. Holding bad intentions and wrong views, a person propounds a fallacious doctrine and leads others astray. This is especially pernicious because it can inhibit one's own and others' ability to encounter the Buddha's teachings for many lives to come.

Lastly, someone adheres to his own views, holding on to them tenaciously and relinquishing them with difficulty. Such a person is stubborn and argumentative. He jumps to conclusions and stubbornly defends his ideas. Even if he has thought about an issue, once he forms an opinion, his mind is closed to any new information or other perspectives.

What are the results of possessing a root of dispute? The Buddha continues:

Such a monk dwells without respect and deference toward the Teacher, the Dhamma, and the Saṅgha, and he does not fulfill the training. Such a monastic creates a dispute in the Saṅgha that leads to the harm and unhappiness of the multitude, to the ruin, harm, and suffering of devas and humans.

This person lacks respect for the Three Jewels and is unable to practice sincerely or attain the benefits of practice. She generates disharmony in the family, workplace, factory, school, club, or group. This disharmony harms not only herself but disrupts others' relationships, thwarts their activities, diverts energy, and upsets many others. When we notice a root of dispute within ourselves, it is important to reflect on its disadvantages so that we are motivated to change that mental habit or behavior. How can we deal with

situations when we find any or all of these roots of dispute within ourselves? The Buddha continues:

If, monks, you perceive any such root of dispute either in yourselves or in others, you should strive to abandon this evil root of dispute. And if you do not see any such root of dispute either in yourselves or others, you should practice so that this evil root of dispute does not emerge in the future.

When we notice a root of dispute within ourselves, we should first restrain our body and speech from acting it out. Then we should work with our mind, applying the antidote to that afflictive emotion. When we notice a root of dispute in another person, we can remind ourselves, “That is what I am like when afflictions overpower my mind. That is the kind of behavior that my afflictions lead me to impose on others. Since these are not emotions and behaviors that I respect or find beneficial, I must take great care not to let them arise.” In other words, we take the other person’s actions as a warning and make a strong determination not to act in that way.

Once the emotional affliction has decreased and we can again assess the situation in a more balanced way, we can approach the other person and discuss the various points to resolve in a balanced way.<sup>7</sup>

If we do not see any of these roots of discord in ourselves or others, then let’s make sure to treat others well and to be mindful ourselves so that they do not erupt. Expressing our gratitude to our colleagues, family members, friends, associates, or others in the group, telling them how much we appreciate their kind actions and reasonable behavior, is good to do as well. So often people express their feelings and thoughts only when they are unhappy. This is a good opportunity to train ourselves in cultivating and expressing appreciation for others. Praising others for their good qualities gladdens their minds, further strengthens the harmony in the group, and makes us feel good as well.

### *Survival of the Most Cooperative*

“Survival of the fittest” is cited to support and promote competitiveness across many fields of endeavor. Instead, we may want to consider “survival of

the most cooperative” as the axiom for human progress and prosperity. The way bees and ants cooperate and support each other enables the entire hive or hill to stay alive and flourish. Imagine what would happen if the worker ants packed up and left, saying, “We’ve had enough of serving the queen ant!” Imagine the consequence if the queen ant quit, “I’m so tired of these pesky worker ants. They never leave me alone!” These tiny insects instinctively know that their entire community will survive and prosper when they work together harmoniously for a common aim. They know that by following their own individual needs and wants, they will perish as individuals and the entire colony will also suffer.

Historically, the world’s great civilizations have thrived when people helped each other and worked for the common good. Degeneration has occurred when competitive leaders battled for power and fame, selfishly ignored others, and looked out for only their own welfare. We human beings are dependent on each other just to stay alive; this is true now more than any other time in human history. Most of us do not know how to grow our food, make our clothes, build our homes, or make the medicine that cures our illnesses. We depend on others, and each of us contributes to the common good in his or her own way. The global economy means that we influence each other dramatically. If we human beings use the model of survival of the fittest and try to procure more and better resources for ourselves individually or for just our own group, we will sabotage our personal happiness and endanger the existence of human beings on this planet.

Self-centered concern not only harms others but also harms ourselves. We are dependent beings: we exist in dependence on a multiplicity of other factors, most of which we have due to the efforts of others. The exaggerated sense of self-sufficiency is illusory, and it can and should be replaced by the wise acceptance of mutual interdependence.

Love and compassion are based on an understanding of interdependence. Bodhisattvas, who aspire for full awakening, meditate on interdependence to increase their understanding of the nature of reality as well as their altruism. In this way, they cultivate vibrant self-confidence that they can make a positive contribution to the welfare of others. The more genuine self-confidence we have, the less fear and anger will torment our minds. Especially when we pass through difficulties, compassion and altruism will sustain us.

In a world where the actions of one individual can have far-reaching effects on many people, self-centeredness and ignorance can lead to great damage, while altruism spreads great good. When we cultivate care and concern for others coupled with wisdom that can clearly analyze situations, we are more peaceful inside, and our actions to benefit others are more effective. If we human beings adhere to the self-preoccupied philosophy of survival of the fittest, it may result in the survival of no one. Having the attitude of survival of the most cooperative brings more individual well-being as well as the survival of our species.

## REFLECTION

---

1. Imagine understanding the perspective of someone who has harmed or threatened you or whom you consider an enemy.
  2. Imagine having compassion—not pity—for the mental and physical difficulties that person has undergone and will undergo in life.
  3. Look at the situation with the eyes of wanting that person to be free from their suffering and to have happiness. After all, if they were happy, they wouldn't be doing the things you find distressful.
  4. Imagine speaking to that person with kindness, clarity, and balance.
-

## 4 | The Spread of the Buddhadharmā and Buddhist Canons

NOT ALL PEOPLE THINK ALIKE. They have different needs, interests, and dispositions in almost every area of their lives, including religion. In this light, the Buddha, a skillful teacher, gave multiple teachings to correspond to the variety of sentient beings. As the Buddhadharmā spread across the Indian subcontinent and into other lands, people had access to different sūtras and found certain teachings more suitable for their minds than teachings in other sūtras.

In this way, multiple Buddhist traditions came about. The development of these traditions and their presentation of the teachings were also influenced by the economic and political situations in each land, as well as the climate, social structure, language, and culture of each place. While all Buddhist teachings share the four truths, their selection of texts, imagery, rituals, textual interpretations, points of emphasis, and religious institutions were influenced by the society in which they were produced.

Knowing the history of the Buddhadharmā is important to avoid absorbing sectarian biases that have been passed down for centuries. It also aids us in understanding why Buddhism developed the way it did in different places. This, in turn, stimulates us to discern the actual Buddhadharmā from cultural overlays, so that we can practice the true Dharma without confusing it with cultural traditions.

Learning about the history of Buddhism helps us to see Buddhism as a living tradition that influences various societies and is influenced by them. We come to differentiate the Three Jewels that are perfect objects of refuge from religious institutions established by limited human beings. While the

Dharma Jewel goes beyond space and time, Buddhist institutions are not refuge objects, although they do their best to serve the Dharma.

All Buddhist traditions have their own accounts of Buddhism's history, the place of their own tradition within that, and the authenticity of their own and others' scriptures. These are generally based on oral tradition that was written down in later centuries. Modern academics, employing tools and methods of historical research that are not used in the traditional presentations of Buddhist history, also have their views. While traditional accounts do not change with time, the views of academics change as new discoveries are made.

Speaking of the various Buddhist traditions and teachings can only be done in a general way. As we know, people don't always fit into neat categories with well-defined borders. As in *Buddhism: One Teacher, Many Traditions*, we will speak of two principal Buddhist traditions according to the language they came to be written in—the Pāli and Sanskrit traditions. The Buddha himself taught in some form of Prakrit, a group of languages spoken in India by the common people of his time. After his parinirvāṇa, the discourses were collated into groups and passed on orally for several centuries. The earliest written texts we have date from around the first century BCE, and both Pāli and Sanskrit emerged as primary languages for transmitting the words of the Buddha. The Sanskrit tradition as we describe it here also includes texts in ancient Central Asian languages such as Gāndhārī.

But before exploring the historical development of these traditions, it is helpful to be acquainted with the spiritual vehicles that they teach.

### *Vehicles and Paths*

*Vehicle* and *path* are synonyms. While these terms are frequently used to refer to a progressive set of spiritual practices, they technically refer to exalted “knowers”—wisdom consciousnesses—that are conjoined with the uncontrived determination to be free from saṃsāra. When our Teacher, Śākyamuni Buddha, lived in India, he turned the Dharma wheel (that is, he taught the Dharma) by giving teachings for beings of the three vehicles: the Śrāvaka, Solitary Realizer (Pratyekabuddha), and Bodhisattva vehicles. These are called *vehicles* (*yāna*) because they convey their respective practitioners to distinct spiritual attainments.

According to the Sanskrit tradition, the three vehicles are differentiated in terms of the motivation to attain a specific goal, their principal meditation object, and the accumulation of merit and length of time necessary to attain their goals. Each vehicle leads to its own awakening. Both the Pāli and Sanskrit traditions contain teachings on all three vehicles, although the Pāli tradition places more emphasis on the Śrāvaka Vehicle and the Sanskrit tradition on the Bodhisattva Vehicle.

Sometimes the Śrāvaka and Solitary Realizer vehicles are subsumed under the name Fundamental Vehicle. While both the Pāli and Sanskrit traditions explain the Bodhisattva Vehicle, in the Sanskrit tradition it is called the Universal Vehicle and relies on sūtras that were widely disseminated later.

The Bodhisattva Vehicle is further divided into two according to method: the Perfection Vehicle and the Tantric Vehicle. These are both practiced on the basis of the Fundamental Vehicle, and the Tantric Vehicle is also practiced on the basis of the Perfection Vehicle. The Tantric Vehicle can also be divided in different ways. One way is described in an explanatory tantra, the *Vajra Tent Tantra* (*Vajrapañjara Tantra*), which speaks of four tantric classes: action, performance, yoga, and highest yoga tantra.

## BUDDHIST TRADITIONS

### *Pāli Tradition*

- Śrāvaka Vehicle (P. Sāvakayāna)
- Solitary Realizer Vehicle (P. Paccekabuddhayāna)
- Bodhisattva Vehicle (P. Bodhisattayāna)

### *Sanskrit Tradition*

- Śrāvaka Vehicle (Śrāvakayāna)
- Solitary Realizer Vehicle (Pratyekabuddhayāna)
- Bodhisattva Vehicle (Bodhisattvayāna) or Universal Vehicle (Mahāyāna)
  - Perfection Vehicle (Pāramitāyāna)
  - Tantric Vehicle (Tantrayāna, Vajrayāna, Mantrayāna)

Nowadays the vehicles of the śrāvakas and bodhisattvas are prominent. In their last lives, solitary realizers appear in a time and place where no Buddha has turned the Dharma wheel. Since this is the case, when we speak

of śrāvakas it will include solitary realizers, unless there is a specific reason to delineate their practice separately. While the teachings on the Bodhisattva Vehicle in the Pāli and Sanskrit traditions overlap in several ways, the name “Mahāyāna” refers to the bodhisattva teachings and scriptures in the Sanskrit tradition.

### *The Buddha’s Life*

Buddhism in our world began with Śākyamuni Buddha, who in the view common to all Buddhists, was born Siddhārtha Gautama, a prince from the Śākya clan, most likely in the fifth century BCE near what is today the India-Nepal border.<sup>8</sup> His kind heart and great intelligence were evident from childhood. Despite a sheltered life in the palace, he ventured into the town, where for the first time he saw a sick person, an old person, and a corpse. This prompted him to reflect on the suffering living beings experience, and after seeing a wandering mendicant, he aspired to be free from the cycle of constantly recurring problems called saṃsāra. Disillusioned with the pleasures of palace life and seeking liberation, at the age of twenty-nine he left his family and royal position, shed his elegant clothing, and adopted the lifestyle of a wandering mendicant.

He studied and mastered the meditation techniques of the great teachers of his time, but he saw that they did not bring freedom from cyclic existence. For six years he practiced severe asceticism, but realizing that torturing the body doesn’t tame the mind, he relinquished this for the middle path of keeping the body healthy without indulging in sensual pleasure.

Sitting under the bodhi tree in what is present-day Bodhgaya, India, he determined to arise only after attaining full awakening. On the full moon of the fourth lunar month—the Buddhist holiday of Vesak—he completed the process of cleansing his mind of all obscurations and developing all good qualities and became a buddha, a fully awakened one. Thirty-five years old at that time, he spent the next forty-five years teaching what he had discovered through his own experience to whomever came to hear.

The Buddha taught men and women of all ages, races, and social classes—royalty, beggars, merchants, officials, thieves, farmers, musicians, and prostitutes. Many of his students chose to relinquish the householder’s life and adopt the monastic life, and thus the saṅgha community of ordained beings was born. As his followers attained realizations and became skilled in teach-

ing the Dharma, he asked them to share with others what they had realized “for the welfare of the multitude, for the happiness of the multitude, out of compassion for the world; for the benefit, welfare, and happiness of gods and humans” (AN 1.170). Thus the Buddha’s teachings spread throughout the Indian subcontinent, and in subsequent centuries to present-day Sri Lanka, Southeast Asia, Indonesia, China, Korea, Japan, Central Asia, Tibet, Mongolia, Pakistan, and Afghanistan. In recent years, Dharma centers have opened in locations all around the world.

Personally speaking, I feel a deep connection to Śākyamuni Buddha as well as profound gratitude for his teachings and the example of how he lived his life—abiding in the pure ethical conduct of a monastic and sharing the teachings impartially. The Buddha had insights into the workings of the mind that were previously unknown on the Earth. He taught that our experiences of suffering and happiness are intricately related to our minds and emotions. Suffering is not thrust upon us by other people; it is a product of our ignorant views and beliefs. Happiness is not a gift from the gods; it is a result of our cultivation of wisdom and compassion.

The Buddha’s life is a teaching in itself: he questioned the meaning of worldly life and reached the decision to practice the Dharma while facing pressure from his family and society to inherit the kingship. Despite the hardships he encountered, he practiced diligently and did not give up until he had attained full awakening. He dealt compassionately with the people who berated him or criticized his teachings. Sometimes his followers were uncooperative and belligerent, but he did not give up on them, although he sometimes had to address them sternly. The sūtras show that he engaged with many different kinds of people with great skill and compassion, and he was completely uninterested in fame or praise. Reflecting on the kindness of the Buddha for providing teachings that suit the various dispositions and interests of the variety of sentient beings, I feel deep reverence. I hope that you, too, by learning and practicing the Buddha’s teachings, will develop this sense of personal connection with our Teacher, the Buddha.

### *Early Buddhist Schools*

The historical evolution of Buddhism is a fluid and dynamic process that brought forth various schools, traditions, and tenet systems. We may speak of one school or another as if they were distinct entities with clear

boundaries. However, Buddhism “on the ground” was not so clear. We see this even today with Theravāda monastics who take the bodhisattva precepts, practitioners of Tibetan Buddhism who are ordained in the Dharmaguptaka vinaya lineage followed in Taiwan, Chinese monastics practicing insight meditation as taught in the Pāli tradition, and so on.

It is important to keep in mind when discussing Buddhist history that we can't say for sure what happened in the past. In our present lives, our memory of a specific event differs from that of the person standing next to us. History appears differently according to our perspective; each person selects certain details to focus on, and the interpretation of those details varies from person to person. Despite the subjectivity of history, it is nevertheless useful to have a general knowledge of the historical background of the Dharma we study.

After the Buddha's passing (*parinirvāṇa*), the arhat Mahākāśyapa gathered five hundred arhats together at Rājagṛha to recite the Buddha's discourses at what came to be called the first council. In the early centuries, these sūtras were passed down orally principally by *bhāṇakas*,<sup>9</sup> monastics whose duty it was to memorize and recite the scriptures. Each group of bhāṇakas was assigned a group of scriptures, and for many centuries every successive generation of bhāṇakas memorized the texts and taught them to others. Although the Buddha did not repeat verbatim every talk he gave on a particular topic, passages on certain important themes were standardized for ease in memorization. Thus there are stock phrases and passages—and some almost identical sūtras—in the *nikāyas* of the Pāli canon and in the *āgamas* of the Chinese canon. A famine in the first century BCE threatened the continued existence of the scriptures in present-day Sri Lanka, propelling the monks to preserve them in written form. During this time, other groups of bhāṇakas continued to orally disseminate the Buddha's discourses in many other parts of India.

In the centuries following the second council in 383 BCE,<sup>10</sup> a variety of different Buddhist sects appeared—it is said eighteen in all. There is more than one list of the eighteen, and each list classifies the major schools and their branches differently, but in any case, there was clearly a great profusion of Buddhist lineages in the Indian subcontinent and nearby areas as well. Many factors influenced the development of these different śrāvaka

schools—location, climate, language, culture, and the availability of sūtras and teachings, to mention a few. Since the sūtras were passed down orally and the groups were separated by great distances, each school developed slightly different versions of the Tripiṭaka—the three baskets of Vinaya, Sūtra, and Abhidharma texts—although the majority of the material was shared in common.

Aside from some basic information, little is known about many of these eighteen-plus schools. While they surely debated each other, Buddhist sects and schools by and large maintained friendly relations. The names of some of these eighteen schools are today preserved in the three extant lineages of monastic precepts: the Theravāda (descended from the Sthavira sect and Mahāvihāra Monastery), the Mūlasarvāstivāda (a branch descended from the Sarvāstivāda),<sup>11</sup> and the Dharmaguptaka. In ancient times, the Theravāda flourished in South and Southeast Asia, the Sarvāstivāda was located primarily in northern India and Kashmir, and the Dharmaguptaka was prominent in Gandhāra and Central Asia, from where it was transmitted to China.

Indian and Sri Lankan sages began composing commentaries, unpacking the meaning of what the Buddha said in the suttas. Thus began a commentarial tradition. Some of the differences among the eighteen schools were doctrinal; others were due to people living in different climates and cultures. While the Theravāda, as recorded in ancient Sri Lankan manuscripts, sees the separation into various schools as schisms within the Buddhist community, other Buddhist traditions do not.

Academic scholars previously accepted the material in the Pāli canon as older than that of the schools in northern India. However, they are now revising their view due to recent discoveries of heretofore unknown scriptures in Afghanistan, Pakistan, and China. Fragments of scriptures of some of the early schools have been found and are now being studied by scholars such as Richard Salomon and Collette Cox in the Early Buddhist Manuscripts Project at the University of Washington. Some of these scriptures go back to the first and second centuries CE. Considering the fragile materials used for writing in those days, it is astounding that these manuscripts have survived. Other scholars, such as Bhikkhu K. L. Dhammajoti at the University of Hong Kong, have determined that there are Sarvāstivāda texts

that date within two or three centuries of the Buddha's life. The results of continuing research will give us a clearer idea of the early schools and their scriptures.

Looking back on their forebears, Buddhists in northern India in the medieval period said there were four main śrāvaka schools that subsumed all eighteen: (1) the Sarvāstivāda school, which used Sanskrit, (2) the Mahāsāṃghika, which used a Prakrit dialect, (3) the Saṃmitīya, which used Apabhraṃśa, another Prakrit dialect, and (4) the Sthavira, which used Pāṭī. <sup>12</sup> Interestingly, most of the early scriptures do not self-identify as being from one or another of the eighteen schools, so modern scholars must make intelligent guesses about which school newly found manuscripts are from.

We don't know exactly how long each of the ancient schools existed and why they ceased. The schools in some areas—such as present-day Iran, Afghanistan, Pakistan, and Central Asian republics—became extinct first. They may have died out due to economic, political, and social changes, invasions, or natural disasters in their locales. The remnants of some schools may have merged with others. Because Buddhism was heavily concentrated in monasteries and not in village homes, once the monasteries were destroyed in India during the Turkic invasions in the thirteenth century, Buddhism all but vanished in India.

While some Indian masters such as Bhāvaviveka, and most Tibetans, saw the eighteen schools as branches of the Vaibhāṣika philosophical system, <sup>13</sup> there is little agreement about this elsewhere. The Vaibhāṣika school is unknown in South and Southeast Asia, and the Theravāda does not consider itself a branch of Vaibhāṣika.

### *Early Buddhism in Sri Lanka*

Buddhism was transmitted to Sri Lanka by the son and daughter of the Indian king Aśoka in the third century BCE. Some of the Indian commentaries came, too; they were preserved and augmented in the old Sinhala language by Sinhalese monks. In the fifth century CE, the Indian monk Buddhaghosa traveled to Sri Lanka, where he compiled and edited the contents of these ancient commentaries when writing his own numerous commentaries in Pāli. While Buddhaghosa's works have been widely stud-

ied up to the present, the ancient sages' scriptures in Sinhala unfortunately no longer exist. Due to Buddhaghosa's translation work, Pāli became the scriptural language of all Theravāda Buddhists.

Buddhism flourished in Sri Lanka, and three major sects—the Mahāvihāra, Abhayagiri, and Jetavana—evolved, each with its own monastery. Chinese pilgrims recorded that Abhayagiri, the largest and wealthiest monastery, followed both the early scriptures and the Mahāyāna scriptures; some of the Mahāyāna sūtras in the Chinese Tripiṭaka were obtained in Sri Lanka. There were also many bodhisattva statues and Mahāyāna art on the island, and there is evidence that some tantric teachings were present there as well.

When a dispute arose between the Abhayagiri and Jetavana monasteries—both of which had some Mahāyāna elements—and the Mahāvihāra, who said the Mahāyāna sūtras were inauthentic, King Mahāsena (271–301) supported Abhayagiri and Jetavana. After he died, however, the Mahāvihāra sect gained royal support. As the collection of written scriptures grew, the Mahāvihāra gained more legitimacy as the holder of “pure” Buddhism, free from the heterodox ideas and scriptures found in the Abhayagiri and Jetavana.

The *Dīpavaṃsa* (*Island Chronicle*) and *Mahāvāṃsa* (*Great Chronicle*) presented Buddhist history according to the narrative of the Mahāvihāra. The *Dīpavaṃsa* was probably authored by Mahāvihāra monks in the third or fourth century and the *Mahāvāṃsa* in the second half of the fifth century. Their authors claimed to be the true Theravādins, the spiritual descendants of arhats of the first council. The historical chronicles also spoke of the lineage of Sri Lankan kings and events occurring during their reigns, mythology, and legend. They portrayed Sri Lanka as the island where the Buddha prophesized that his teachings would be purely preserved, thus encouraging a nationalist spirit. Claiming that other monasteries followed sūtras that were not from the original transmission of sūtras to Sri Lanka, and thus were not the Buddha's word, the Mahāvihārans emphasized that they held the one true canon with the complete *Buddhavacana* (Buddha's word), free from the degenerations of the Mahāyāna present in the Abhayagiri and Jetavana monasteries.

The Dharma developed in Sri Lanka over several centuries with the appearance of written sūtras and commentaries, the formation of a closed

canon of scriptures, the establishment of authoritative commentaries, and the creation of official histories in the two chronicles. While helping to preserve the Dharma in Sri Lanka, these factors also served to legitimize and reinforce the authority of the Mahāvihāra sect as the one that preserved the true Dharma with authentic scriptures.<sup>14</sup>

While the Mahāvihāra gained momentum, it did not become dominant until the tenth century. By the twelfth century, King Parakkamabāhu “unified” all the monks by suppressing the Abhayagiri and Jetavana monasteries and their texts and called for their monks to either disrobe or join the Mahāvihāra.

It is not clear what the term Theravāda referred to historically or when it came into common use. While it is often presented nowadays as referring to “original Buddhism,” in fact the term Theravāda is rarely found in Pāli literature, and for the first millennium of the Buddha’s dispensation it was used infrequently in inscriptions, historical chronicles, or other ancient texts in Southeast Asia. Interestingly, it seems the term Theravāda first appeared in Nāgārjunakoṇḍa, in southeastern India, where proto-Mahāyāna views were promulgated. Chinese pilgrims called the Sri Lankan monks living there Mahāyāna Theravādins.<sup>15</sup> The term Theravāda does not seem to have indicated a school in India prior to Buddhism having gone to Sri Lanka but a school originating in Sri Lanka.

Historically, Theravāda has not been a monolithic religious or institutional entity in South and Southeast Asia. While people in that area initially received their monastic ordinations from Sri Lanka, the saṅghas that grew up in these locales functioned independently. When the ordination lineage was extinguished in Sri Lanka during the Chola invasion in the early eleventh century, Sri Lankan kings requested monks from Burma to come and restore it. This began a trend in South and Southeast Asia that continues to this day. Whenever a group of monastics is deemed corrupt, the king invites monastics from another Theravāda country who practice well to come and give the ordination again. Still, the Sri Lankan ordination lineage commands great respect, and monks from other countries traveled to Sri Lanka to ordain in later centuries.

In recent years academics have revised their idea that the Theravāda tradition contains the oldest and most authentic scriptures of the eighteen schools. Some say Theravāda is a modern term and a recent school

derived from the Sthaviras but not identical to it. Others say Theravāda is descendant from the Mahāvihāra<sup>16</sup> or was derived from the Indian school, Vibhajyavāda.

Much of the Pāli literature consists of the commentaries and subcommentaries that were compiled or written beginning in the fifth century. The Pāli scriptures were transmitted in different scripts according to the country; the words were pronounced and recited differently, and this is true even today. Different lineages and *nikāyas* (traditions) developed in each country. The monks also were not a unified whole: those who dwelled in the cities and in the forests lived very differently. Nevertheless, most Buddhists in South and Southeast Asia saw themselves as related in many ways, even though a unifying and common identity as Theravādins may not have developed until the twentieth century. For example, previously in Thailand the Buddhism in Sri Lanka was called *Sinhala-śāsana*, the doctrine in Sinhala. Skilling says, “The centering of ‘Theravāda’ in the Pāli canon, above all in the ‘four main *nikāyas*,’ is a child of the late nineteenth and twentieth centuries. It has grown up to become what we might call a ‘new Theravāda,’ largely Anglophonic but increasingly international in influence and outreach.”<sup>17</sup>

Some scholars<sup>18</sup> state that the standard account of Sri Lankan Buddhist history was made not by Sri Lankans but by British scholars of the early to mid-nineteenth century who misread the historical chronicles and lacked the knowledge of Buddhist and Sri Lankan history that is now available. Reading the commentaries and chronicles, these scholars assumed that they were objective narratives of the facts, not understanding that Mahāvihāran accounts of Buddhist history were disputed by their contemporaries in the Abhayagiri and Jetavana monasteries.

While Sinhalese historical documents have portrayed the Pāli canon as equivalent to early Buddhism and Theravāda Buddhism as the unique upholder of early Buddhism, scholars now question this.<sup>19</sup> The Pāli canon is usually presented by Theravāda Buddhists as a closed collection of texts that present the Buddha’s own words. However, the words *pāli*, *tripiṭaka*, and *buddhavacana* did not originally refer to a closed canon.

Apart from some specific texts mentioned in Aśoka’s inscriptions, we don’t have a clear idea of what texts were recited—and thus affirmed as existing by that group of monastic reciters—during various councils and

communal recitations. The Pāli canon wasn't closed and fixed until the fifth century CE, so for about a millennium after the Buddha, the collection of scriptures was open. While the bhāṅakas had strict standards for what they considered to be the Buddha's teachings, there was some fluidity in the contents of this collection if for no other reason than differences in geographical locale.

In short, some academic scholars now question three “facts” presented in the Mahāvihāra literature: the Theravāda originated at the first council, Sri Lankan Theravāda is and has always been a descendant of only this early Buddhism, and the Mahāvihāra was the original and true upholder of these teachings.<sup>20</sup> Whatever the historical truth may be, the Theravāda is a noble Buddhist tradition that has inspired faith in millions of people, led to their individual betterment and the improvement of society, and produced many highly realized holy beings.

### *Growth of the Mahāyāna*

Mahāyāna sūtras, which emphasized the bodhisattva path, began to appear publicly in India in the first century BCE. Some were transmitted to Central Asia—Buddhism began to spread to Central Asia in the third century BCE and later flourished there for many centuries—and from there to China where they were translated into Chinese by the second half of the second century CE. The Āgamas preserved in the Chinese canon are very early sūtras that are remarkably similar to those in the Pāli Nikāyas. With newly discovered Vinaya texts and other scriptures that date from early on, the Pāli canon is no longer seen as the only literature of early Buddhism, although it is the only canon preserved in an Indic language.

Academic scholars, as well as practitioners of the Pāli tradition, have questioned the authenticity of the Mahāyāna sūtras, asserting that they were not spoken by the Buddha but were written later over a span of several centuries. One of the chief reasons for this claim is that the Pāli suttas were more publicly known and widespread in the early centuries than the Mahāyāna sūtras. The discovery in Pakistan and Afghanistan over the last few decades of many Buddhist manuscripts that date from the end of the first century BCE has changed academic scholars' view of the Mahāyāna. The newly found manuscripts written in Gāndhārī Prakrit are older than any

previously discovered. Many of them are from the Dharmaguptaka school, and some are Mahāyāna sūtras.<sup>21</sup> Although some of these texts are called “early Mahāyāna,” their ideas and presentation of the bodhisattva path are mature. With the revision in the dates of the Buddha’s life to later than previously thought and the discovery of older Mahāyāna texts, modern scholars are reconsidering their ideas concerning the Mahāyāna sūtras.

When previously unknown bodhisattva sūtras first appeared publicly and for several centuries afterward, Mahāyāna was not identified as a separate tradition within Buddhism. Initially the term Mahāyāna referred to the goal of the path—buddhahood—rather than the attainment of arhatship that was prominent in the early sūtras. As time went on, Mahāyāna began to refer to a body of literature, and in the fourth century Asaṅga<sup>22</sup> used it to indicate scriptures explaining the path of a bodhisattva. By the sixth century, people were calling themselves Mahāyānists, indicating that they saw themselves as a distinct Buddhist group. However, due to the great number of Mahāyāna scriptures and the broad distance over which they spread, it seems that their followers did not become a single unified group in India, nor was any Mahāyāna canon ever compiled in India to our knowledge.

Mahāyāna was not a religion and did not have distinct institutions. It had no specific geographical location where its hierarchy was predominant. Monastics following the Śrāvaka Vehicle and Bodhisattva Vehicle lived together and probably recited the *prātimokṣa*, the monastic precepts, together. In the fifth to twelfth centuries, the great Buddhist universities such as Nālandā, Vikramaśīla, and Odantapurī, where Buddhism flourished, were inhabited by monastics and lay practitioners from many different branches, sects, and schools of Buddhism. They studied and debated the Buddha’s teachings, learning from each other.

Mahāyāna scriptures contain many philosophical positions and practices; it has never been a monolithic doctrine, although those who self-identify as Mahāyānist have shared beliefs, such as the bodhisattva path and practices. The early Mahāyāna scriptures were not limited to one language, appearing in Buddhist Hybrid Sanskrit, Buddhist Sanskrit, classical Sanskrit, and Gāndhārī. While many Mahāyāna scriptures were in Sanskrit, not all Sanskrit scriptures are Mahāyāna; some teach the Śrāvaka Vehicle.

Mahāyāna did not dismiss the Śrāvaka Vehicle texts or teachings; in fact, it taught that the bodhisattva practice is based on a thorough understanding

of the four truths of the āryas, the thirty-seven aids to awakening, the three higher trainings, the four immeasurables, serenity, and insight. Many ideas are held in common between the Śrāvaka Vehicle and the Mahāyāna, and all Buddhists, no matter what tradition they belong to, take refuge in the Three Jewels.

While most Mahāyāna sūtras publicly appeared after the Pāli suttas, some appeared before some scriptures in the Pāli canon. The Pāli canon contains texts from many time periods, ranging from the Buddha's time until it became a closed canon ten centuries later. The commentaries in the Pāli canon were written later than some Mahāyāna treatises and commentaries, such as those by Nāgārjuna, Vasubandhu, and Buddhapālita. The earliest scriptures recently discovered in Pakistan and Afghanistan were from both the Śrāvaka Vehicle and the Mahāyāna. In short, many Buddhist schools developed over a long period of time. They had both overlapping and distinct tenets and scriptures. Buddhadharmā was, and still is, a living, dynamic tradition.

Mahāyāna is not an ordination order or lineage. There is no such thing as “Mahāyāna Vinaya” or a “Mahāyāna monastic ordination.” From early times until the present, Mahāyāna practitioners have ordained in the Vinaya traditions of the eighteen schools: Aśaṅga in the Sarvāstivādin, Vimuktisena in the Saṃmitīya, Atiśa in the Mahāsāṃghika, and so forth. The Chinese pilgrims spoke of some of the monasteries of their time as Mahāyāna-Sthavira. While we aren't sure about the meaning of that term, it could refer to monastics who ordained in the Sthavira Vinaya—the lineage of today's Theravāda—and practiced Mahāyāna. Mahāyāna monastics live in monasteries, follow the ethical conduct prescribed in the Vinaya, and conduct monastic rites in accordance with the Vinaya. Practicing the Bodhisattva Vehicle does not make one ethically lax; in fact, in addition to the various sets of prātimokṣa precepts such as the five lay precepts and monastic precepts, Mahāyāna practitioners also take bodhisattva precepts.

Calling Theravāda “mainstream Buddhism” is incorrect and confusing. In each location and at each time period, one or another school may be more well established. There were at least eighteen schools that all saw themselves as mainstream Buddhism in their own locales. Mahāyāna was well received and flourished all over India and Central Asia, and spread to

East Asia, Sri Lanka, Southeast Asia, and Indonesia. Contrary to being a minority movement, it was mainstream.

The Mahāyāna and Śrāvaka Vehicle both include rituals, chanting, mantras, and *dhāraṇīs*.<sup>23</sup> Both show reverence in the presence of stūpas, statues, paintings, and relics. While many Mahāyāna sūtras emphasize the importance of copying those sūtras, practitioners of both vehicles engaged in the activity of copying sūtras.

In India and sometimes in Sri Lanka prior to the twelfth century, the Śrāvaka Vehicle and Mahāyāna flourished together. Practitioners of both vehicles often lived in the same monastery, received monastic ordination in the same lineage, and performed the Vinaya rituals together. They shared many common texts and tenets and debated their unique ones. Both developed commentarial traditions, although the interpretations sometimes differed. The two vehicles had some differences as well, in areas such as the principal sūtras they studied, the intention for practice, the view of the ultimate nature, the path, and the result. Most of the Śrāvaka Vehicle lineages in India disappeared over time due to a variety of conditions such as the political rise of the brahmins, changes in governmental structure, the popularity of Hinduism, and the monastics' lack of involvement in the lives of the lay people. Later on, many of these same factors also affected Mahāyāna groups. While Buddhism largely disappeared in India by the early thirteenth century, both the Sanskrit and Pāli traditions have spread widely throughout Asia and beyond.

### *The Development of Tantra*

The teachings of Buddhist Tantrayāna were practiced and passed down in a circumspect and private way until the sixth century, when they became more widespread. By the ninth century, tantric studies were recognized as a scholarly discipline. At Nālandā Monastic University, the Prajñāpāramitā teachings were conjoined with tantric practice, indicating that tantra has a firm basis in the Perfection Vehicle and is not a separate teaching unrelated to other teachings the Buddha gave.

Buddhist tantra flourished in northern India and spread to Sri Lanka, Southeast Asia, and Indonesia, where many tantric artifacts have been

found. It later faded in these areas as Sri Lankan and Thai kings made Therāvāda the dominant tradition and Muslims occupied and converted much of the Malay Peninsula and Indonesia.

Tantra later spread to China and Tibet, and Kukai introduced it in the ninth century into Japan, where it became known as the Shingon school. Since tantra's public dissemination coincided with the time that many Buddhist scriptures were being brought to Tibet, tantra became very popular there. However, Buddhism was already well established in China at that time, so the Chinese tantric school did not become widespread.

Hinduism and Jainism also have tantric adepts, although their tantric systems differ considerably from Buddhist tantra, which is rooted in the four truths, refuge in the Three Jewels, renunciation of saṃsarā, bodhicitta, and the wisdom realizing emptiness.

Unfortunately, misconceptions about tantra exist due to lack of proper information. These misunderstandings will be clarified in a future volume on tantra in this series.

### *Buddhist Canons*

Considering the vast array of Buddhist sūtras and the complexity of establishing their authenticity, we can understand the reasons to form canons and the difficulties involved in doing so. At present three Buddhist canons are extant: Pāli, Chinese, and Tibetan. Each of these has been translated into other languages or written in various scripts throughout the centuries. For example, the Tibetan canon has been translated into Mongolian,<sup>24</sup> the Pāli canon into English, and the Chinese into Japanese and Vietnamese. Each of the canons is divided into three “baskets” (*piṭaka*), or categories of teachings, which are said to correspond to the three higher trainings. The Vinaya Basket deals chiefly with monastic discipline (*śīla*), the Sūtra Basket emphasizes meditative concentration (*samādhi*), and the Abhidharma Basket is concerned with wisdom (*prajñā*).

#### THE PĀLI CANON

The Pāli canon was codified first, but as we saw above, it was not a closed canon until the fifth century. Its Vinaya Piṭaka has three books that contain not only the monastic code but also stories of the Buddha's disciples.

These are (1) the *Suttavibhaṅga*, which contains the pāṭimokkha precepts, (2) the *Khandhaka*, which consists of two parts, the Mahāvagga and Cūlavagga, and (3) the *Parivāra*, which is an appendix. The Sutta Piṭaka has five Nikāyas, or collections of suttas, described below, and the Abhidhamma Piṭaka consists of seven scholastic works that are unique to the Pāli tradition. The Sutta Piṭaka's five collections are:

1. Dīgha Nikāya (Long Discourses) with thirty-four of the most extensive suttas
2. Majjhima Nikāya (Middle-Length Discourses) with 152 diverse suttas of moderate length
3. Saṃyutta Nikāya (Connected Discourses) with fifty-six thematically connected sections of brief suttas
4. Aṅguttara Nikāya (Numerical Discourses) with eleven sections, each collecting suttas with items of the same number
5. Khuddaka Nikāya (Collection of Little Texts), fifteen distinct works. In addition to containing sutta collections like the *Suttanipāta*, the Khuddaka Nikāya also includes the famous collected sayings such as the *Dhammapada* and the *Udāna*, collections of stories of the Buddha's previous lives such as the *Jātaka* tales, verses (*gāthā*) of early monks and nuns, early commentarial works, and histories of previous buddhas like the *Buddhavaṃsa*.<sup>25</sup>

#### THE CHINESE CANON

Buddhism came to China in the first century CE, about seven centuries before it entered Tibet. It entered first from Central Asia via the Silk Road and later by sea from India and Sri Lanka. As noted above, Buddhist texts began to be translated into Chinese by the second century. Many of the early translations employed Taoist terminology, leading to some misunderstanding of Buddhist thought. By the fifth century, translation terms were more standardized, especially with the literary translations of Kumārajīva. The early fifth century also marked the translation of many more Vinaya texts, which furthered the development of the saṅgha.

In 983 the first Chinese canon was published, with other renditions following. Currently, the *Taisho Shinsbu Daizokyo*, published in Tokyo in the 1920s, is the canon commonly used in China, Taiwan, Korea, Japan, and

parts of Vietnam. It consists of four sections: the first three—sūtras, vinaya, and śāstras (treatises)—were translated from Sanskrit and Central Asian languages into Chinese. The fourth, miscellaneous texts, were originally written in Chinese.

The Chinese canon is very inclusive and extensive, containing a vast array of scriptures, including the Āgamas, which correspond to the first four of the five Nikāyas of the Pāli canon. The Āgamas were translated not from Pāli but from Sanskrit sūtras, mainly from the Sarvāstivāda school, although some came from other Indian Buddhist schools. The Chinese canon contains many Fundamental Vehicle sūtras that were popular during this early period and are not found in the Tibetan canon. It also contains a plethora of Mahāyāna sūtras and Indian commentaries as well as some tantras. Many of these are found in the Tibetan canon as well. Initially, most of the Indian sūtras were translated into Mandarin from Gāndhārī, until the fifth and sixth century, when more Sanskrit texts arrived in China. The monk Xuanzang famously traveled to India and Nālandā Monastery by way of Gandhāra in the seventh century and returned home seventeen years later with hundreds of texts, especially from the Yogācāra school. His translations from Sanskrit are now part of the Chinese canon as well.

While the majority of translation into Mandarin occurred in these earlier centuries, there continued to be an active interest in and translation of valuable Buddhist texts into the Song (960–1279) and Ming (1368–1644) dynasties. In the early twentieth century, translations were made of Buddhist scriptures from other countries, including Tibet.

### THE TIBETAN CANON

Tibetans had been collecting Buddhist scriptures from the inception of Buddhism in Tibet in the seventh century, and the Tibetan canon as we know it today took shape in the early fourteenth century through the editorial efforts of Buton Rinpoche (1290–1364) and other scholars. The first full rendition was printed in Beijing in 1411. Later editions were printed in Tibet itself, notably in Narthang in 1731–32 and in Derge in 1733. Although today there are multiple versions of the canon, the contents over all are very similar.

The Tibetan Buddhist canon is composed of the Kangyur—108 volumes of the Buddha’s word—and the Tengyur—225 volumes of Indian commen-

taries. The canon of the Nyingma tradition differs somewhat from that of the other Tibetan traditions in that it contains tantras from the first transmission of Buddhism into Tibet. The Tibetan system for translation customarily involved an Indian translator and a Tibetan translator working in tandem, which greatly improved the quality of the translations. A number of modern scholars working on these texts have observed that translations from Indian sources into Tibetan are, in general, very accurate.

About twenty-four sūtras in the Tibetan canon correspond to the suttas of the Pāli Nikāyas, and a few Śrāvaka Vehicle sūtras absent in the Pāli and Chinese canons are found in the Tibetan canon. About one hundred sūtras in the Tibetan canon do not have the word Mahāyāna in their titles and are probably Śrāvaka Vehicle sūtras, principally of the Sarvāstivāda school.

About ten or twenty sūtras in the Tibetan canon were translated from Chinese.<sup>26</sup> Among these are the *Sūtra of the Golden Light* (*Suvarṇaprabhā-sottama Sūtra*), the *Mahāparinirvāṇa Sūtra*, and the *Descent into Lanka Sūtra* (*Lankāvatāra Sūtra*), and several sūtras from the Heap of Jewels (Ratnakūṭa) collection, all of which are seminal Mahāyāna sūtras. Some commentaries in the Tibetan canon—notably Kuiji’s commentary on the *Lotus Sūtra* and Wonchuk’s commentary on the *Sūtra Unraveling the Thought* (*Samdhinirmocana Sūtra*)—were also translated from Chinese.

More Prajñāpāramitā sūtras were translated into Chinese than into Tibetan, and many early sūtras in the Pāli canon are not found in Tibetan. To enrich the understanding of Tibetan practitioners, it is important to translate these scriptures into Tibetan.

Texts on the stages of the path authored by Tibetan masters contain much material that is also found in the Pāli suttas and Chinese Āgamas. Considering that not a huge number of these early sūtras were translated into Tibetan, how did this material find its way into treatises authored by Tibetans? Vasubandhu’s *Principles of Exegesis* (*Vyākhyāyukti*), his autocommentary on the *Treasury of Knowledge* (*Abhidharmakośabhāṣya*), and his *One Hundred Extracts from the Sūtras on Principles of Exegesis* (*Vyākhyāyuktisūtrakhaṇḍaśata*) contain quotations from over one hundred early sūtras from different schools, including the Sthavira and Sarvāstivāda. In addition, Śamathadeva’s commentary on the *Treasury of Abhidharma* contains many passages from a variety of early sūtras.<sup>27</sup> One of the biggest sources of sūtra quotations in the stages of the path literature is Śāntideva’s *Compendium*

of *Training* (*Śikṣāsamuccaya*). The *Compendium of Sūtras* (*Sūtrasamuccaya*) attributed to Nāgārjuna also has many.

Furthermore, some Mahāyāna sūtras cover the same material as do the early sūtras. For example, the *Sūtra on the Ten Grounds* (*Daśabhūmika Sūtra*) explains the thirty-seven aids to awakening, and commentaries and treatises by great Indian scholars—Asaṅga, Śāntideva, and others—contain many passages from the early sūtras. Nāgārjuna's *Precious Garland* (*Ratnāvalī*) and *Letter to a Friend* (*Subhillekha*) also share much material with Sarvāstivāda sūtras that are similar to Pāli suttas. In this way, many passages shared with Pāli suttas and Chinese āgamas made their way into Tibet through the commentaries and treatises of the great Indian sages.

A Tibetan monarch issued a decree establishing a convention that enables readers to immediately identify which of the Three Baskets a scripture belonged to. Translators composed a verse of homage placed at the beginning of the text. An homage to the omniscient Buddha indicated texts from the Vinaya Basket that dealt with the higher training of ethical conduct; homage to the buddhas and bodhisattvas showed the text belonged to the Sūtra Basket and concerned the higher training of concentration; homage to Mañjuśrī, the embodiment of wisdom, indicated texts from the Abhidharma Basket, which deals with knowledge and wisdom.

#### VINAYA BASKET

The Chinese canon contains the Vinayas of five early schools: Dharmaguptaka, Mahīśāsaka, Mahāsāṃghika, Sarvāstivāda, and Mūlasarvāstivāda. It also contains Buddhaghosa's commentary on the Vinaya, *Entirely Pleasing* (*Samantapāsādikā*). The Tibetan canon contains the Mūlasarvāstivāda Vinaya, and the Pāli canon has the Theravāda Vinaya.

#### SŪTRA BASKET

Outside of India, sūtras dealing with the bodhisattva practices were mainly transmitted in the Chinese and Tibetan languages. The Chinese and Tibetan canons contain the Prajñāpāramitā sūtras, the Ratnakūṭa sūtras, the *Flower Ornament Sūtra* (*Avataṃsaka Sūtra*), *Vimalakīrti's Instructions* (*Vimalakīrtinirdeśa*), and many other Mahāyāna sūtras. Both canons have Nāgārjuna's *Treatise on the Middle Way* as well as many of his other texts. Because Buddhism was rooted in China several centuries before its resur-

gence in Tibet in the eleventh century, which brought the translation of many later Indian texts into Tibetan, the Tibetan canon contains the works of Candrakīrti and later Mādhyamikas, as well as Dignāga and Dharmakīrti's works on logic, while the Chinese canon does not. However, many of these texts were translated from Tibetan into Chinese in the twentieth century by the great Chinese translator Fazun, who also translated many of Tsongkhapa's works.

Both canons contain works from the Cittamātra and Madhyamaka perspectives, although in general the Chinese follow different Cittamātrin and Madhyamaka commentaries than the Tibetans do. Maitreya's *Ornament of Clear Realizations* (*Abhisamayālaṅkāra*), which is widely studied in the Tibetan community, is not found in the Chinese canon,<sup>28</sup> although Fazun also translated it in the twentieth century.

Based on the Chinese canon, the Buddhadharma spread to Japan, Korea, and Vietnam. Relying on the Tibetan canon, Buddhism developed in Mongolia, four areas in Russia—Tuva, Aginsky, Buryatia, and Kalmykia—and in the Himalayan region. Today, the Chinese and Tibetan languages are the richest living languages that transmit all the practices and teachings of the bodhisattva vehicle.

#### ABHIDHARMA BASKET

The Pāli, Chinese, and Tibetan canons have different perspectives on the origin of the Abhidharma Piṭaka and the texts contained in it. According to one Theravāda account, the Buddha spent a rainy season—about three months—teaching six of the seven Abhidhamma works in the celestial realm of the Thirty-Three (gods) to thousands of *devas* (celestial beings), including his mother Maya, who had passed away a week after his birth. Each day the Buddha would go back to the human realm and repeat to his disciple Sāriputta what he had taught in the celestial realm that day. Sāriputta then organized the Abhidhamma literature, which was recited at the first council and passed down orally until the third council (circa 250 BCE), when it was included in what became the Pāli canon.

According to this traditional Theravāda account, six of its seven Abhidhamma texts are the Buddha's literal word, and the Buddha himself also outlined the *Points of Controversy* (*Kathāvatthu*), the seventh text, which Moggaliputta Tissa would compose in a future century.

Not all contemporary Theravādins agree that the Pāli Abhidhamma originated as described above. Some say that the seven Abhidhamma works were spoken by arhats; others concur with academic scholars that they developed gradually over several centuries and were later incorporated into the Pāli canon. Most other schools<sup>29</sup> see the Abhidhamma Piṭakas in their canons as the works of later generations of scholars.

The seven Abhidhamma works in the Pāli canon<sup>30</sup> differ from the seven Abhidhamma texts propagated by the Sarvāstivāda school. Almost all of the seven Sarvāstivāda Abhidhamma works are included in the Chinese canon,<sup>31</sup> as are the *Abhidhamma Treatise of Śāriputra* (*Śāriputrābhidhamma Śāstra*),<sup>32</sup> the *Mahāvibhāṣā*, and other early Abhidhamma texts, including those by Saṅghabhadra, and the *Path of Freedom* (*Vimuttimaggā*).

While Tibetans are aware of the seven Sarvāstivāda Abhidhamma works, they do not consider them to be the Buddha's word. Only part of one of the seven is included in the Tengyur section of the Tibetan canon. Passages belonging to the Abhidhamma Basket are interspersed in other sūtras in the Kangyur section of the Tibetan canon. The two main Abhidhamma texts studied by the Tibetans are: *Treasury of Knowledge*<sup>33</sup> by Vasubandhu, which summarizes the *Mahāvibhāṣā*, and the *Compendium of Knowledge* (*Abhidharmasamuccaya*) by Asaṅga, who writes from the Cittamātra perspective.<sup>34</sup> Some Abhidhamma texts by subsequent Indian masters are also present in the Tengyur. The *Treasury of Abhidhamma* is found in both the Chinese and Tibetan canons, but the *Mahāvibhāṣā* is absent from the Tibetan canon. Fazun translated it from Chinese into Tibetan in the twentieth century.

The level of importance given to the Abhidhamma differs among Theravādin practitioners. In Sri Lanka and Myanmar, it is considered very important, whereas in Thailand, it is not emphasized as much.

## TANTRA

Spoken by the Buddha when he assumed the form of Vajradhara or a tantric deity, tantras describe Vajrayāna practice. The Tibetan canon contains the most comprehensive collection of Buddhist tantras and tantric commentaries by Indian adepts. While the Chinese canon contains some yoga tantras such as the *Vairocana Tantra* and *Vajra Peak Tantra* (*Vajrasekhara Tantra*), it does not have any highest yoga tantras. It seems that tantric texts

arrived in China during a period of social turmoil and were not included in the Chinese canon. The Chinese canon contains the sūtras of Amitābha (*Sukhāvativyūha Sūtras*), the *Medicine Buddha Sūtra* (*Bhaiṣajyaguru Sūtra*), and scriptures about other bodhisattvas that have been widely read and practiced in the Chinese community for centuries. While these are considered sūtras in China, in Tibet the practices of these same bodhisattvas are included in the Tantrayāna.<sup>35</sup>

From this summary of the three Buddhist canons, it is clear that no one canon contains everything the Buddha taught or all the great commentaries. Nevertheless, there is more than enough in each canon for us to study, contemplate, and meditate. The teachings necessary to gain realizations are there in the three canons. A respected Thai Theravāda master told me (Chodron), “With both Theravāda and Mahāyāna, the Buddha’s teachings are complete,” and “Mahāyāna is just a name, Theravāda is just a name. When we see emptiness, there’s nothing to cling to.”

The various Buddhist traditions share many scriptures and practices in common. Although each has its unique qualities, we should not think of them as separate and unrelated. All three canons contain the Buddha’s teachings and must be respected as such. They all contain teachings to be practiced.

### *Philosophical Systems*

In the initial centuries after the Buddha’s parinirvāṇa, the Abhidharmikas rose to prominence as they developed intricate taxonomies of phenomena and explored the relationships among phenomena. This included material and cosmological phenomena, but even more so the facets of the mind, such as afflicted mental states and the states of meditation and insight. Their focus was on identifying the building blocks of sentient beings’ experience rather than on constructing cohesive interpretations of Buddhist doctrine.

Philosophical systems came about in later centuries, when questions arose about topics that were not clarified in the scriptures themselves, and sages began to explain the meanings of teachings that were not evident to most people. These commentators did not see their writings as new interpretations of the Buddha’s teachings but as in-depth explanations of what the

Buddha actually meant. They saw themselves as clarifying in an expanded form what the Buddha had expressed in an abbreviated form.

Another factor bringing about different philosophical tenet systems was the challenge presented by non-Buddhist logicians and scholars. Debate was a widespread Indian custom, and the loser was expected to convert to the winner's school. Buddhist sages had to develop logical arguments to prove the validity of Buddhist doctrine and to deflect philosophical attacks by non-Buddhist scholars. The renowned Buddhist debaters were also great practitioners. Not all Buddhist practitioners were interested in this approach; many preferred to study the sūtras or practice meditation in hermitages.

From the viewpoint of philosophy, Tibetans have categorized Buddhist tenets into four general systems: (1) the Vaibhāṣika (Followers of the *Mahāvibhāṣā*), (2) Sautrāntika (Followers of Sūtra), (3) Yogācāra or Cittamātra (Mind Only), and (4) Madhyamaka (Middle Way). These four schools are mentioned in the *Hevajra Tantra*, indicating that all four schools existed in India before coming to Tibet.<sup>36</sup> Each system has further subdivisions.

Even though not all the Indian texts were translated into Tibetan, many were. Among these, we find texts presenting the philosophical views of all four tenet systems, texts presenting the paths of all three vehicles, and texts presenting the practices of both Sūtrayāna and Tantrayāna.

## 5 | The Buddha's Teachings Form a Cohesive Whole

AS SEEN IN the previous chapter, the Buddha provided a wide variety of teachings, depending on the disposition and interests of various audiences. He taught human beings as well as celestial beings, spirits, and other life forms.

There are many ways to systematize these teachings that reveal how they form a cohesive whole and build on each other, leading us to an ever deeper understanding of the Dharma. One is according to the three capacities of practitioners, which will be discussed in chapter 9. Another is the four tenet systems, briefly mentioned in the previous chapter, which will be elaborated in a future volume. The three turnings of the Dharma wheel are yet another way. The first part of this chapter focuses on the three turnings of the Dharma wheel and then turns to the topic of the authenticity of the Mahāyāna scriptures. In the previous chapter, we examined this from an academic approach. Now we will look at it from the perspective of Buddhist practitioners.

### *Three Turnings of the Dharma Wheel*

“Turning the Dharma wheel” refers to the Buddha giving teachings that lead sentient beings to temporary happiness within cyclic existence and to the highest goodness of liberation and full awakening. From the perspective of the Sanskrit tradition, as described in the *Sūtra Unraveling the Thought*, the Buddha turned the Dharma wheel three times, with each turning primarily addressing the needs of a specific group of disciples.

The teachings of the first turning form the foundation of Buddhist

practice for all three vehicles. At the same time, they fulfill the specific needs of śrāvakas, who seek personal liberation. The first turning began with the Buddha's first discourse at Deer Park in Sarnath, India, during which he delineated the main framework for training the mind in the four truths of the āryas. When describing the fourth truth, the truth of the path, he taught the thirty-seven aids to awakening, which establish procedures for putting the four truths into practice. The thirty-seven aids relate to two primary methods of training, the first leading to serenity (single-pointedness of mind), the second bringing forth insight (deep understanding). To put these thirty-seven in the context of the three higher trainings, we begin practicing the higher training in ethical conduct to eliminate coarse negativities of body and speech. On this basis, we cultivate serenity in the higher training in concentration and insight in the higher training of wisdom.

The thirty-seven aids can be divided into seven sets—four establishments of mindfulness, four supreme strivings, four bases of supernormal power, five faculties, five powers, seven awakening factors, and the eightfold noble path—which are the principal practices. Vasubandhu in *Treasury of Knowledge* and Asaṅga in *Compendium of Knowledge* correlate their full-fledged practice with successive levels of the five paths. In that context, they are set out sequentially. The following is Vasubandhu's presentation.

The first set is the *four establishments of mindfulness*—mindfulness of the body, feelings, mind, and phenomena. As we deepen our practice of these four, we will gain greater enthusiasm and vigor to engage in wholesome activities. This leads us to make effort in the *four supreme strivings*—to abandon nonvirtues already generated, prevent destructive actions in the future, enhance virtues that have already been generated, and generate new virtues in the future.

By engaging in ethical conduct such as avoiding destructive actions and enhancing and engaging in constructive ones, we will develop a certain clarity of mind and single-pointedness. This leads us to practice the third set, the *four bases of spiritual power*—aspiration, effort, intention, and investigation—which are methods to enhance our capability to remain focused single-pointedly on a chosen object of meditation.

When we have single-pointed concentration that can last for prolonged periods of time, all our other virtuous spiritual faculties will be enhanced. We will increase the *five powers*—faith, effort, mindfulness, concentration,

and wisdom—and the *five forces*—the strengthening of these same five qualities. When these forces are fully developed, we will progress to practice the *seven awakening factors*—correct mindfulness, discrimination of phenomena, effort, rapture, pliancy, concentration, and equanimity. This leads us to fully follow the core of the Buddhist path, the *eightfold noble path*—right view, intention, speech, action, livelihood, effort, mindfulness, and concentration. Through practicing the thirty-seven aids, our minds will be transformed, and we will attain liberation from cyclic existence.

The second turning of the wheel of Dharma contains the Prajñāpāramitā sūtras, the Buddha's teachings on the perfection of wisdom. Elaborating on the topic of selflessness that the Buddha described briefly in the first turning, here he explains that all phenomena are empty of inherent existence. He also clarifies the meaning of the truth of cessation as the emptiness of a mind from which defilements have been eradicated. Giving an extensive explanation of the six perfections—generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom—the second turning also elaborates on the truth of the path for bodhisattvas. The principal and appropriate audience for the sūtras in the second turning of the Dharma wheel are spiritual aspirants who understand the teachings in the first turning and, in addition, aspire for the full awakening of buddhahood. Although they are not the primary audience, these teachings are also for those who seek personal liberation because a comprehensive explanation of emptiness is indispensable for all practitioners. Many of these sūtras were taught at Vulture's Peak, near Rājagṛha, India.

The third turning of the Dharma wheel contains two categories of sūtras. The first furnishes further explanation of the truth of the path and presents a different interpretation of the Prajñāpāramitā sūtras' statement that all phenomena are empty of inherent existence. These third-turning sūtras were taught primarily to benefit those trainees who, although inclined toward the bodhisattva path, are not yet suitable vessels for the teaching on the absence of inherent existence. If they were to embrace the literal meaning of the Prajñāpāramitā sūtras, they would fall into nihilism by mistakenly thinking that emptiness means the total nonexistence of phenomena. For their benefit, the Buddha spoke of naturelessness (*niḥsvabhāva*) in relation to different natures of phenomena—the dependent, imputed, and consummate natures. Rather than think that all phenomena without exception are

empty of inherent existence, the Buddha taught these trainees that different phenomena are empty of different kinds of natures. This category includes sūtras such as the *Sūtra Unraveling the Thought*.

The second category of sūtras comprising the third turning speaks of our potential to become fully awakened beings. These sūtras present and develop the clear-light nature of mind and buddha nature. This category includes sūtras such as the *Tathāgata Essence Sūtra* (*Tathāgatagarbha Sūtra*), which is the basis for Maitreya's *Sublime Continuum* and Nāgārjuna's *Collection of Praises*. The third turning of the wheel of Dharma was taught at Vaiśālī and other places in India; its main audience was both those seeking liberation and those seeking full awakening.

To summarize, the first turning of the wheel of Dharma laid out the basic framework of the Buddhist path to awakening, the four truths of the āryas. The second turning went into greater depth on the third truth, the truth of cessation, which needs to be understood in the context of the ultimate nature of the mind, its emptiness of inherent existence. In addition to having the correct view of the emptiness of the mind as presented in the second turning, a profound subject—a yogic mind that has ceased defilements—is needed. This leads to further discussion in the third turning of the fourth truth, the truth of the path—the mind that realizes the nature of reality and eradicates defilements. By combining our understanding of the wisdom realizing emptiness as presented in the second turning of the Dharma wheel and an understanding of buddha nature and the nature of mind as presented in the third turning of the Dharma wheel, we can gain genuine conviction in the possibility of attaining true cessation.

Some sūtras in the third turning of the wheel of Dharma speak of buddha nature and the subjective experience of emptiness, thus establishing the basis for the Vajrayāna teachings, which emphasize employing the subtlest mind to realize emptiness. In this way, the earlier teachings of the Buddha lay the foundation for topics that are developed more fully in later teachings, and the sūtras of the three turnings of the Dharma wheel complement each other.

The teachings of the first Dharma wheel, which emphasize the practices of the Fundamental Vehicle, form the core of the Pāli tradition. Based on these teachings, the Buddha taught the second and third Dharma wheels, which form the heart of the Sanskrit tradition. The form of Buddhism that

flourished in Tibet comprises all of these teachings. For these reasons, we Tibetans believe that it is a comprehensive form of the Buddhadharmā because it includes all the essential teachings of the Fundamental Vehicle, Mahāyāna, and Vajrayāna. In the Fundamental Vehicle, selflessness generally refers to the lack of a soul—a self that is permanent, unitary, and independent—or a self-sufficient substantially existent person—a person who is the controller of the body and mind. On the foundation of these teachings, the Mahāyāna describes the development of bodhicitta and the extensive practices of the bodhisattvas. In addition to the selflessness of persons, it teaches the selflessness of phenomena in detail. The special techniques described in the Vajrayāna scriptures enhance these bodhisattva practices.

Without a foundation in the core teachings of the Fundamental Vehicle, proclaiming oneself to be a follower of the Mahāyāna is meaningless. We need a broad, inclusive understanding of the Buddha's teachings to avoid generating mistaken notions. Without doing so, we risk disparaging the teachings of the Buddha by saying either that they are limited in scope or that they are not authentic. It is important to understand that these vehicles and their teachings complement each other. We should embody the essence of all these teachings in our personal practice.

## REFLECTION

---

1. The first turning of the Dharma wheel, which focuses on the four truths of the āryas, forms the foundation for Buddhist practice of all three vehicles. Also, it specifically fulfills the needs of śrāvakas, those seeking personal liberation.
2. The second turning, which includes the Prajñāpāramitā sūtras, elaborates on the meaning of true cessations and true paths and gives an extensive explanation of the six perfections. It is directed mainly toward spiritual aspirants who understand the teachings in the first turning and aspire for full awakening.
3. The third turning contains two types of teachings. The first explains the naturelessness of each of three categories of phenomena; it was taught especially for disciples inclined toward the bodhisattva path who are not

yet ready for the teaching on the emptiness of inherent existence. The second explains buddha nature and the clear-light nature of the mind and leads disciples to Vajrayāna.

---

### *Authenticity of the Mahāyāna Scriptures*

At the first council, which occurred soon after the Buddha's passing, neither the Mahāyāna sūtras nor the tantras were recited or included in the collection of sūtras. Because the Mahāyāna sūtras and Vajrayāna tantras in the Sanskrit tradition were initially not widely known, doubts were later raised about their authenticity.

Personally speaking, I am fully convinced that the Buddha taught these sūtras. Among the greatest of these sūtras, the Prajñāpāramitā sūtras explicitly teach emptiness and implicitly teach the bodhisattva paths and stages to awakening. According to the traditional account, these sūtras were spoken by the Buddha and then taken for safe custody to the land of the nāgas—dragon-like beings that dwell in lakes or near streams—because the people at that time were not yet suitable vessels to fully understand them. The great Buddhist sage Nāgārjuna then retrieved them from the nāgas and brought them to our world, where they were widely disseminated in India.

According to this account, Nāgārjuna lived over six hundred years. I do not believe that Nāgārjuna lived this long. Being fully awakened, surely Śākyamuni Buddha must have had the ability to extend his lifespan, but he did not do this. Thus it seems strange—not to mention improbable—that Nāgārjuna would live so long. Regarding his going to the nāga land to retrieve the Prajñāpāramitā sūtras, I do not fully believe this, but neither can I deny it. Some people say the Prajñāpāramitā sūtras and other Mahāyāna scriptures were made up later and attributed to the Buddha. To me, both of these explanations are extreme.

Born in South India, Nāgārjuna visited Bodhgaya and lived at a learning center in Magadha, both of which are located in northern India. During his extensive travels, he must have come in contact with the Prajñāpāramitā sūtras and began to gather them together. Nāgārjuna was a Sanskrit scholar as well as an upstanding Buddhist monk. As such, he would never lie. He

knew that some people doubted the authenticity of the Mahāyāna teachings. Using reasoning, he investigated whether they were authentic. Since Nāgārjuna lived only a few centuries after the Buddha, it would have been easier for him to research and establish the validity of the Sanskrit sūtras than it is for us nearly twenty-six centuries later. Having done a thorough examination, he was convinced that they were the Buddha's word.

Nāgārjuna's writings contain many quotations from the Prajñāpāramitā sūtras. Knowing that the controversy was due to a lack of awareness, he quoted extensively from these sūtras when he composed the *Compendium of Sūtras (Sūtrasamuccaya)*, and in *Precious Garland* he made special effort to demonstrate why these scriptures were authentic. If he had doubt about their validity, he never would have done this. Seeing that these remarkable teachings were on the verge of extinction, with great compassion he propagated them because he knew that the people of his own and future generations would benefit tremendously from the wisdom in them.

The Buddha taught the Prajñāpāramitā sūtras to a select group of monastics as well as to bodhisattvas and other beings reported to have been in the audience. These teachings were given at Vulture's Peak, a site that is too small to accommodate the large number of listeners who reportedly attended. Thus we must understand the delivery of those sūtras on a different level, not the ordinary level. While some human disciples were present, many beings who heard those teachings were not visible to the ordinary human eye. Some were great bodhisattvas such as Avalokiteśvara, Mañjuśrī, and Samantabhadra.

Because the contingent of human beings listening to these teachings was comparatively small and these teachings are radical in their presentation of emptiness, they were passed down from teacher to student privately and were not known to the general public for many centuries. While it is generally accepted that the Vinaya and sūtra teachings were passed on orally, I believe the Prajñāpāramitā sūtras may have been written down early on. Although literacy was not widespread, surely some *bhikṣus* (monks) knew how to read and write.<sup>37</sup> Because so few people knew about these teachings, they almost fell into obscurity. Nāgārjuna came in contact with, reproduced, and disseminated the Prajñāpāramitā sūtras.

The later dissemination of previously little-known texts has occurred several times in the history of Buddhism. During the Cultural Revolution,

many texts in Tibet were destroyed. But later someone found one copy of a text and from it made many copies. In that way the teaching was preserved. Similarly, texts and Buddhist artifacts dating from the fourth to the twelfth centuries were hidden in the Dunhuang Caves, only to be discovered in the early twentieth century and taken to the British Museum, where others came to know of them. Scriptures written in Gāndhārī that date to the first century were found in pots and discovered only in recent years. It seems to me that something similar could have happened in ancient India; the Prajñāpāramitā sūtras could have been relatively unknown for several centuries and then revived due to Nāgārjuna's interest in them and his compassion for us.

The Buddha did not teach the Prajñāpāramitā sūtras and other Mahāyāna sūtras publicly because it would not have been suitable to teach certain disciples, namely those focused on their own liberation rather than the liberation of all. Additionally, people who were inclined to meditate on the selflessness of a self-sufficient substantially existent person would not have been interested in teachings on the emptiness of all phenomena. The Buddha would never force either the goal of buddhahood or the Madhyamaka view of emptiness on others. He respected people, and according to their present disposition, he set out the view, path, and result suitable for them so that they would practice the thirty-seven aids to awakening, realize the four truths, and progress on the path to arhatship.

Other people had the ability or the karma to see bodhisattvas such as Avalokiteśvara, Maitreya, Tārā, and Mañjuśrī. To them, as well as to some devas, nonhuman beings, and bodhisattvas, the Buddha taught the Mahāyāna teachings. To an exceptional few beings who were suitable spiritual vessels to receive the tantric teachings, the Buddha taught Tantrayāna by appearing as Vajradhara and the maṇḍala (the purified environment and deities in it).

If we accept that Śākyamuni Buddha achieved full awakening as a result of having accumulated merit and wisdom for three countless great eons, then such wonderful things are possible. However, if the Buddha was born as an unenlightened human being who, although he became wiser and more compassionate, was not omniscient and still had a body produced by afflictions and karma—as the Buddha is depicted in the Pāli scriptures—then I don't think it would have been possible for him to deliver such teachings at these high levels. Aside from the Cārvākas, who had a nihilistic or hedo-

nistic view, all the spiritual practitioners and intellectuals in India at that time believed in a soul or self (*ātman*). The two teachers that the Buddha studied with before he attained awakening accepted a self, and the Buddha did not encounter other, wiser teachers than these. Given this situation, it would have been extremely difficult for an ordinary person by himself to discover selflessness.

Furthermore, in the nearly 2,600 years since the Buddha lived, millions of people have benefited from his teachings. Many have realized emptiness and attained arhatship and buddhahood. I don't think someone who began that lifetime as an unenlightened human being could have had this kind of effect on the world. In the same way, I don't think the founders of the world's other great religions were ordinary people. They, too, could have been manifestations of the Buddha. A manifestation of the Buddha doesn't necessarily teach Buddhism; he or she teaches what is most suitable for the audience at that time. What ordinary human beings do with the teachings after the founder's passing is another matter. Most academic scholars see the wisdom in a religion as human knowledge—something that evolves over time, with each generation adding what it learns to the knowledge of the previous generations. My perspective is different. I think the major spiritual traditions that have been able to benefit humanity for centuries were each begun by someone with extraordinary spiritual wisdom and compassion, who taught others through their own spiritual experience.

The view of selflessness and nirvāṇa as presented in the Sanskrit tradition is very sophisticated. In the Pāli scriptures, the Buddha stated that nirvāṇa exists and that it is attained by overcoming the afflictions and polluted karma that causes rebirth in cyclic existence. He did not give an in-depth analysis of the precise meaning of selflessness—especially the selflessness of phenomena—or the subtle characteristics of the self that is negated. Such an analysis facilitates understanding the precise meaning of true cessation and nirvāṇa. To benefit his disciples, he needed to extensively explain the emptiness of inherent existence, and thus he gave the teachings of the second turning. In addition, because the bodhisattva path was only briefly explained in the first turning of the Dharma wheel, the Buddha set forth the teachings in the second and third turnings of the Dharma wheel.

Someone might wonder, “Perhaps the deeper teachings about selflessness and more extensive teachings of the bodhisattva path and resultant buddhahood were not taught by the Buddha but were composed by his

followers at a later time.” If we say that the Buddha did not teach them, then he must have given a rudimentary teaching, and his followers refined it and deepened its insights. This would mean that his followers were more insightful and wiser than the Buddha himself! For me, this is unacceptable. In my opinion, the Buddha taught all the essential points of the path when he was alive. The Indian and Tibetan commentators in subsequent centuries drew out the meaning and implication of these points, further explicating or systematizing them in order to clarify the meaning for future generations.

If the Mahāyāna sūtras were not the Buddha’s word, it would mean that the complete instructions of the bodhisattva path do not exist in our world. Without these teachings, attaining buddhahood would be impossible, and the efforts of millions of people in last 2,600 years to actualize that path would have been wasted.

However, over the centuries people have generated bodhicitta and realized the emptiness of all phenomena. Many people of high spiritual capacity—some Tibetan and Chinese practitioners as well as Ajahn Mun—have experienced credible visions of bodhisattvas and buddhas. These people are ethical and wise individuals and do not lie.<sup>38</sup> Thus these holy beings must exist, and the scriptures explaining how to attain their realizations must be the Buddha’s word. To say that the path to full awakening exists but the teachings on how to realize it were fabricated by someone other than the Buddha would be very strange indeed!

The Mahāyāna motivation—the aspiration to attain full awakening for the benefit of all sentient beings—the Mahāyāna path of the six perfections, and the Mahāyāna goal of full buddhahood are wonderful and benefit all beings. What is there to criticize in them? What is the point of saying the Buddha did not teach the Mahāyāna?

I do not accept as literal everything found in Tibetan Buddhist literature about the history of Buddhahadharma. Some of it is clearly biased. I appreciate the efforts of Western historians who impartially try to analyze historical events. Nevertheless, I think looking at the history of Buddhism just from the viewpoint of academic scholars—most of whom accept the existence of only this life—is going too far. From their perspective, many things mentioned in Buddhist scriptures would be impossible. However, with a worldview that includes belief in rebirth and the mind’s ability to

be totally purified and become omniscient, the scope of human experience expands greatly, and our view of history changes as well. Personally, I prefer to consider what seems most reasonable given the view I have of who the Buddha was and what his capabilities were.

In summary, because Śākyamuni Buddha was a fully awakened individual, he knew the spiritual dispositions of different audiences and guided them accordingly, teaching them what was suitable. Because the number of spiritual aspirants receptive to the Mahāyāna teachings was so small at the time of the Buddha, he gave these teachings only to a limited group. These teachings remained in very small pockets of people and almost disappeared. Nāgārjuna made a special effort to collect them and teach them, and for that reason, he is known as a trail blazer.

Personally speaking, I (Chodron) approach the issue of authenticity from a different perspective than those presented above. Having graduated with a degree in history, I'm aware that written histories are partial, both in the sense that the information is not complete and that writers interpret it from their own perspective.

Over the years I have had the fortune to study the Mahāyāna sūtras and commentaries. Even though my knowledge and understanding are limited, these teachings make sense to me when I examine them using reason. They also produce beneficial effects when I apply them in my life. If such profound and effective teachings were not given by a fully awakened being, such as the Buddha, who else would have had the ability to do so? Certainly not limited sentient beings. In short, my experience with these sūtras only confirms my conviction that they are the Buddha's word. While I enjoy learning the different perspectives of the history of Buddhism, my faith is not based on it.

### *Nāgārjuna on the Authenticity of the Mahāyāna Sūtras*

Nāgārjuna gave a reasoned analysis to prove the authenticity of the Mahāyāna scriptures.<sup>39</sup> He argued that if the path to full awakening consisted only of the thirty-seven aids to awakening with no mention of bodhicitta and the bodhisattva practices, there would be little difference between the path leading to arhatship of a śrāvaka or solitary realizer and the path leading to the full awakening of a buddha apart from the amount of time

necessary to complete it. A person aspiring for arhatship could accomplish the goal in just a few lifetimes, while following the bodhisattva path to buddhahood would require accumulating merit and wisdom for three countless great eons.

In addition, the early sūtras that comprise the Fundamental Vehicle teachings state that at the time of attaining parinirvāṇa when an arhat dies, that person attains “nirvāṇa without remainder.” At that time, the continuum of the polluted mental and physical aggregates are said to cease. However, if we analyze carefully, there is no reason why the continuum of an arhat’s mind would totally cease at the time of death. There is no agent or antidote that could bring about the cessation of a continuum of consciousness. According to the natural functioning of things, if a powerful antidote to something exists, that antidote can extinguish that thing, just as water can extinguish fire. Since the afflictions do not abide in the continuity of the innate mind of clear light, when the wisdom realizing selflessness extinguishes the afflictions, the continuity of the innate mind of clear light remains.

If the continuum of an arhat’s mind ended at death, then Śākyamuni Buddha, who attained full awakening after having collected merit and wisdom during three countless great eons, would have been able to benefit sentient beings for only a short time. He left the royal life at age twenty-nine, attained full awakening at thirty-five, and passed away at eighty-one. Thus he would have been able to fulfill his vow to work for the benefit of sentient beings for only forty-five years. Considering that he exerted effort on the path for three countless great eons in order to benefit sentient beings, it does not make sense that he had only a few decades to fulfill the purpose for which he attained awakening.

In *Precious Garland* (vv. 386–87), Nāgārjuna explains that the “extinction” mentioned in the Pāli suttas has the same meaning as “nonarising” in the Mahāyāna sūtras. Both are emptiness. *Extinction* refers to the primordial emptiness of inherent existence of duḥkha and the polluted aggregates, and *nonarising* means that phenomena do not arise inherently. The knowledge of extinction and the knowledge of nonarising both refer to the wisdom realizing emptiness, the indispensable cause of liberation for practitioners of all three vehicles. Since this is the case, why would anyone deprecate the scriptures that teach this?

Nāgārjuna wondered why people would doubt the authenticity of the Mahāyāna sūtras (RA 380–82):

The nature of what the Mahāyāna maintains  
is generosity, ethical conduct, fortitude, joyous effort,  
meditative stability, wisdom, and compassion—  
how could it contain a wrong statement?

Others' aims are achieved through generosity and ethical conduct;  
one's own through fortitude and joyous effort;  
meditative stability and wisdom lead to liberation—  
this summarizes the Mahāyāna teachings.

In brief, the teaching of the Buddha includes  
what benefits oneself and others, and [the way to attain] liberation.  
These topics are contained in the six perfections.  
Therefore they are also the Buddha's words.

The six perfections that are central elements of the Mahāyāna path of the bodhisattva are all extensions of practices found in the Fundamental Vehicle, values and practices that benefit the world. Having explained these topics briefly in the early sūtras, the Buddha elaborated on them in the Mahāyāna to give those with the bodhisattva disposition the complete instructions they needed. These people also needed to learn the bodhisattvas' magnificent aspirational prayers, the extensive bodhisattva practices, and the bodhisattvas' dedication of merit. If the Buddha did not teach them, who else could have? Just as an unenlightened being could not possibly have taught the wonderful teachings in the Fundamental Vehicle, neither could such a person fabricate the vast and profound teachings of the Mahāyāna. They must be the Buddha's word.

Nāgārjuna advised people who did not feel comfortable practicing the bodhisattva path due to the long time needed to complete it or who doubted that the Buddha could have the amazing qualities described in the Mahāyāna sūtras to withhold judgment and keep an open mind. Nothing is lost by doing this, and remaining neutral protects one from the negativity that results from disparaging the teachings.

In this way, Nāgārjuna demonstrated the value and authenticity of the Mahāyāna sūtras that show the path to buddhahood. The teachings of the Sanskrit tradition do not contradict the core teachings of the Pāli tradition, and in fact, elaborate on the themes set forth in it. Maitreya in *Ornament of Mahāyāna Sūtras*, Śāntideva in *Engaging in the Bodhisattvas' Deeds* (*Bodhicaryāvatāra*), and Bhāvaviveka in *Heart of the Middle Way* (*Madhyamakahr̥daya*) also affirmed the validity of the Mahāyāna scriptures.

## REFLECTION

---

1. Because the Mahāyāna sūtras found in the Sanskrit tradition appeared publicly at a later date than the suttas that formed the Pāli canon, there has been doubt about their authenticity.
  2. Contemplate the reasons His Holiness and Nāgārjuna give for their confidence that these teachings are authentic and will lead to supreme awakening.
  3. As you continue learning the Sanskrit tradition, consider that the only person capable of delivering such vast and profound teachings must have been a fully awakened buddha.
- 

### *Is the Buddha's Word Always Spoken by the Buddha?*

Arhats and other ārya disciples of the Buddha delivered some of the sutras in the Pāli canon. In some Sanskrit sūtras, too, the main speaker of the teaching is not the Buddha but another buddha or a bodhisattva. It is said that in the *Heart Sūtra* the Buddha inspired Śāriputra to ask a question and Avalokiteśvara to respond. His reply, a stunning synthesis of the Prajñāpāramitā sūtras, is considered the Buddha's word although it was not spoken directly by the Buddha. The same principle could be used to say that the Mahāyāna sūtras are the words of the Buddha, even though they did not appear publicly until a few centuries after the Buddha lived.

The idea of the Buddha's word being spoken at other times or by other

people is also found in the Pāli tradition. In the *Atthasālinī*, Buddhaghosa said that the *Points of Controversy* (*Kathāvatthu*), one of the seven Abhidhamma texts in the Pāli canon, was the Buddha's word although it was composed by Moggaliputta Tissa around 250 BCE. About it, Buddhaghosa said:

Now when [the Buddha] laid down the table of contents, he fore-saw that, 218 years after his death, Tissa, Moggali's son, seated in the midst of 1,000 bhikkhus, would elaborate the *Kathāvatthu* to the extent of [that is, in accord with] the Dīgha Nikāya, bringing together 500 orthodox and 500 heterodox suttas. So Tissa, Moggali's son, expounded the book not by his own knowledge, but according to the table of contents laid down, as well as by the method given, by the Teacher. Hence, the entire book became the word of the Buddha.<sup>40</sup>

Similarly, in the Numerical Discourses (AN 8:8), Bhikkhu Uttara is said to instruct his fellow monks, "Friends, it is good for a bhikkhu from time to time to review his own failings. It is good for a bhikkhu from time to time to review the failings of others. It is good for a bhikkhu from time to time to review his own achievements. It is good for a bhikkhu from time to time to review the achievements of others."

Overhearing this, the deva king Vessavaṇa asks Sakka, the ruler of the devas, about it. Sakka then approaches Bhikkhu Uttara and asks him whether this was his own discernment or whether it was the word of the Buddha. Uttara replies with a simile, "Suppose not far from a village or town there was a great heap of grain, and a large crowd of people were to take away grain with carrying-poles, baskets, hip-sacks, and their cupped hands. If someone were to approach that large crowd of people and ask them, 'Where did you get this grain?' what should they say?"

Sakka replies that they should say, "We got it from that great heap of grain."

Uttara continues, "So, too, ruler of the devas, whatever is well spoken is all the word of the Blessed One, the Arahant, the Perfectly Awakened One. I myself and others derive our good words from him."

The Buddha's disciples who have understood well the Buddha's thought

speak the Buddha's word. From this perspective, the Mahāyāna sūtras spoken by holy beings other than the Buddha can also be considered the Buddha's word. They are certainly in accord with and do not contradict what the Buddha said in the Pāli suttas.

### *Four Authenticities*

The Lamdre (*Path and Result*) teaching of the Sakya tradition speaks of four authentic factors that help us to have confidence in the Buddha's teachings and develop in the Dharma: authentic sūtras of the Buddha, authentic commentaries, authentic teachers, and authentic experience.

In terms of the historical evolution, authentic sūtras taught by the Buddha came into being first. Based on these, many authentic commentaries—treatises written by Nāgārjuna and other great sages who explained the final thought of the Buddha—were composed. Based upon studying these authentic commentaries, authentic teachers who have realized the themes presented in the authentic commentaries have come into being. On the basis of the teachings given by authentic teachers, authentic spiritual realizations or experiences grow in the hearts of practitioners.

In terms of developing a sense of conviction in these four authentic factors, the sequence is reversed. We begin with our own experience and from there infer the authenticity of the teachers, the authenticity of the commentaries, and finally the authenticity of the Buddha's word. In my own case, understanding this has been very useful in developing faith and confidence in the Buddha and his teachings.

My modest experience of the Dharma, which has been valuable in my life and brought me peace of mind, occurred due to hearing teachings from my teachers and in some cases while studying the commentaries, such as those of Nāgārjuna and Asaṅga. If I had received an education that did not mention these teachers and commentaries, these experiences would never have occurred. Thus I naturally admire and venerate these teachers and commentaries and know through my own experience that the teachings of Tsongkhapa and the great practitioners who followed him are indeed wonderful. Tsongkhapa has great respect and admiration for Nāgārjuna and his writings, and this, together with my own studies of Nāgārjuna's works, inspires me to respect Nāgārjuna and his treatises. Nāgārjuna, in turn,

praised the Buddha highly, so ultimately my respect and admiration must go to the Buddha, who is our actual teacher. He is truly a trustworthy guide on the path to awakening. Therefore, when I encounter teachings given by the Buddha about very obscure topics, I trust them.

Although we may not have had any extraordinary spiritual experiences, each of us has had some ordinary experiences. Reflecting deeply on the teachings on bodhicitta strongly affects our heart and mind, and contemplating the teachings on emptiness induces a change in our perspective. Although these are not full realizations, they are spiritual experiences that give us a taste of these realizations.

Based on these preliminary experiences, we have an idea of the spiritual realizations described in the biographies of the great practitioners and, in this way, develop belief in the authenticity of these great teachers. This leads us to develop trust in and admiration for the commentaries written by past sages upon which these teachers have relied. Admiration for the commentaries that explicate these teachings propels us to trust the validity of the Buddha's scriptures themselves. In his *Treatise on the Middle Way*, Nāgārjuna pays homage to the Buddha by praising him as the one who taught the nature of reality of all phenomena—their emptiness of inherent existence—by revealing dependent arising. Toward the end of this text, Nāgārjuna again pays homage to the Buddha as the one who embodies compassion for all sentient beings, and for that reason, reveals the path to help us overcome all erroneous philosophical views. Reflecting on these homages enables us to employ inference by authoritative testimony, a type of inference that enables us to gain confidence in the validity of obscure teachings that are not knowable by other means of reliable cognition. In Buddhist epistemology, inference must eventually be founded upon and traced back to direct experience. In this case, based on our own initial spiritual experiences, we infer the scope and quality of the spiritual experiences of the great masters, the commentaries they relied upon, and finally the Buddha's word.

## REFLECTION

---

1. Contemplate the development of the Dharma in time, beginning with the Buddha's delivery of authentic sūtras, which led to the writing of

authentic commentaries by the great Indian masters. This led to the emergence of authentic teachers, who by giving teachings, made possible the authentic spiritual experience of their disciples.

2. To develop conviction in these four factors, reverse the contemplation. Begin with whatever small Dharma experiences you have had and infer that authentic spiritual experiences exist in the mindstreams of the great spiritual mentors. This will lead you to have confidence in the authenticity of the commentaries, which in turn will inspire your faith in the Buddha's sūtras.
- 

### *Four Buddha Bodies*

If we have had certain spiritual experiences, we will be able to relate to the accounts of spiritual realizations in the biographies of the great practitioners. These accounts give us some sense that high levels of spiritual experience may be possible. This, in turn, leads to an appreciation of the Buddha's qualities. If we think of the Buddha's awakening in purely ordinary terms, understanding his marvelous qualities is difficult. In the common historical view, Siddhārtha Gautama was an unenlightened being at birth. In the six years from the time he began meditating to his awakening under the bodhi tree, he traversed the path to awakening, from the path of preparation to the path of no-more-learning. While seeing the Buddha as an unenlightened being who attained awakening in this life is very inspiring, from another perspective it may seem limited.

Viewing the Buddha's awakening within the framework of the Mahāyāna doctrine of four buddha bodies provides a different perspective. In this context, "body" does not refer to a physical body but a collection of qualities. The four bodies are the emanation body (*nirmāṇakāya*), enjoyment body (*sambhogakāya*), wisdom truth body (*jñāna dharmakāya*), and nature truth body (*svabhāvika dharmakāya*). An *emanation body* is a buddha's physical appearance as an ordinary being, which he assumes according to the spiritual dispositions and needs of particular disciples. An emanation body manifests from a subtler body, an *enjoyment body*, which is the form

a buddha assumes in order to teach ārya bodhisattvas in the pure lands. An enjoyment body, in turn, emerges from the omniscient mind of a buddha, the *wisdom truth body*. The wisdom truth body arises within the underlying nature of reality, a buddha's *nature truth body*. This is the emptiness of a buddha's mind and the final true cessation actualized by that buddha. Both the mind of a buddha and its emptiness are called *truth* bodies because a buddha's wisdom is the ultimate true path and the emptiness of that mind is the ultimate true cessation.

Viewing this in the reverse order gives us a deeper understanding of Śākyamuni Buddha. The nature truth body—which, as emptiness and true cessation, is an ultimate truth—is nondual with the wisdom truth body—the Buddha's omniscient mind that clearly and directly knows all ultimate and conventional phenomena. Motivated by compassion, from this union of the nature and wisdom truth bodies appears a subtle form, an enjoyment body, a person who guides highly realized bodhisattvas. To guide other sentient beings whose minds are more obscured, an emanation body manifests from the enjoyment body. This is the appearance of a buddha as an unenlightened being who can communicate and interact with ordinary beings. Śākyamuni Buddha was such an emanation body. Because he appeared from the enjoyment body and ultimately from the truth body, he did not cease to exist when he passed away. The continuity of his awakened mind remains. That means that if our own inner spiritual experience reaches a certain level, we will be able to see and speak with the Buddha. From the Buddha's side, he is always ready to help, but because of our lack of merit and spiritual experience, we can't see him. For example, microscopic organisms have existed for a long time, but until the microscope was developed, we couldn't see them. When we develop spiritually, we will be able to perceive things that until now have been inexplicable to our limited way of thinking.

At first, experiences described in the biographies of great masters, such as receiving teachings from the Buddha seen in a vision, seem beyond our imagination. Although they are inexplicable to our ordinary rational mind, these exceptional spiritual experiences do occur, some during my lifetime. The great practitioner Taklung Shabdrung Rinpoche (1918–94) once told me that when he was giving the empowerments of practices of the Taklung Kagyu lineage to Dilgo Khyentse Rinpoche, he had a direct vision of the

great lineage masters of that particular practice, who appeared vividly on the beams of the room where he was giving the empowerment. Taklung Shabdrung Rinpoche was an old lama when he told me this. Having suffered in Chinese prison for many years, he would have had no ambition to impress me by lying or inflating his experience.

A few years ago I met students and colleagues of Khenpo Acho (1918–98), a practitioner from the Nyarong region of Tibet. He was a Nyingma practitioner who studied at Sera, a Geluk monastery, and later he lived as a hermit. His primary practice was reciting the mantra of Avalokiteśvara, *Oṃ maṇi padme hūm*, although he also practiced Vajrayoginī and Vajrakīlaya. His close students and colleagues told me that before he passed away, he asked them not to touch his body and to keep the room closed after he died. After about a week, when they opened the door, they discovered that his body had dissolved into rainbow light. Only his monastic robes were left behind.

Although great Tibetan masters in India do not display supernatural feats during their lifetime, some do at the time of death. After he passed away in 1983, my teacher, Yongzin Ling Rinpoche, remained in the clear-light state for thirteen days without any trace of bodily decay. Some years later, a Sakya abbot remained in the clear light for seventeen days. These extraordinary experiences are not only recorded in the biographies of the past masters but also occur in the present generation.

Ajahn Mun (1870–1949), a well-respected and highly realized monk and meditator in the Thai forest tradition, had visions of Śākyamuni Buddha and the arhats. Even though many people following the Pāli tradition say that Śākyamuni Buddha ceased to exist at the time of his parinirvāṇa, Ajahn Mun clearly saw him surrounded by many arhats. Such experiences are possible when our mind is purified of defilements.

The varying explanations of the Buddha presented above need not be a point of confusion for us. We do not have to choose one view and abandon the other. Rather, at a particular time one or another view may be particularly helpful. When we feel discouraged and think that buddhahood is too high, the path is too difficult, and we are inadequate, it is helpful to think of the Buddha as someone born an ordinary being who experienced the problems involved in career and family life. He chose to practice the Dharma dil-

igently and attained buddhahood. We see we are the same kind of sentient beings that he was and have the same potential to attain full awakening.

At other times, seeing Śākyamuni Buddha as someone who attained awakening eons ago and appeared in our world as an emanation body is more helpful. This perspective gives us the feeling of being cared for and supported by many buddhas and bodhisattvas who manifest in immeasurable worlds for the benefit of sentient beings. These realized beings have accomplished what we aspire to do and can guide us on that path.

We may also think of the Buddha as the physical embodiment of all excellent qualities. Since we limited beings cannot directly perceive the inconceivable qualities of awakening, they appear in the form of the Buddha to communicate with us.

### *Buddhism in Tibet*

To understand Buddhism in Tibet, we must trace its roots back to the Buddha through the Nālandā masters. When Mahāyāna became increasingly more widespread in India, great monastic universities such as Nālandā were constructed. These monastic universities attracted brilliant scholars from all philosophical systems and esteemed practitioners as well. Although Nāgārjuna and his student Āryadeva may have preceded the establishment of Nālandā Monastery, their teachings were studied and debated there. From them sprang the *profound lineage* that widely explained teachings on the ultimate nature. These included the works of Buddhapālita, Bhāvaviveka, Candrakīrti, Śāntideva, Śāntarakṣita, and Kamalaśīla. The *vast lineage*, which emphasized the bodhisattva practices, also flourished there, including the teachings of Maitreya, Asaṅga, Vimuktisena, and Haribhadra. Dignāga and Dharmakīrti, whose teachings on logic and reasoning enabled Buddhists to refute the wrong views of non-Buddhists, also flourished at Nālandā, as did study of the Vinaya—the monastic code of discipline—as expounded by Guṇaprabha and Śākyaprabha. Vasubandhu and Sthiramati elaborated on the Abhidharma.

Buddhadharma first came to Tibet during the reign of Songtsen Gampo (d. 649). Among his wives, Bhṛkuṭī was a Nepali princess and Wencheng a Chinese princess. Both brought with them statues of the Buddha. Bhṛkuṭī

also brought Buddhist scriptures of the Sanskrit tradition, and Wencheng brought Buddhist scriptures in Chinese.

Buddhism flourished during the time of King Trisong Detsen (r. 775–800). Having a farsighted vision for the development of the Dharma, Trisong Detsen invited the great monk, Madhyamaka philosopher, and logician Śāntarakṣita from Nālandā to come to Tibet. Although he was already in his seventies when he arrived, Śāntarakṣita took full responsibility for establishing the Vinaya and the monastic system in Tibet. He ordained seven Tibetan men to see if they could keep the prātimokṣa precepts well. This experiment was successful, and in 779 Samye Monastery was founded. In addition to teaching Madhyamaka, Śāntarakṣita encouraged the Tibetan king to have Buddhist texts translated from Sanskrit into Tibetan so that people could learn the Dharma in their own language. Trisong Detsen also invited to Tibet the great tantric yogi Padmasambhava, who gave tantric initiations and teachings and subdued interferences to the spread of the Dharma. I feel very moved when I think of the hardships these masters underwent to bring Buddhism to Tibet. We should feel profound gratitude to the past masters who set up our current systems of study.

In the early ninth century, many Buddhist texts were translated into Tibetan, and a commission of Tibetan and Indian scholars standardized many of the technical terms and compiled a Sanskrit-Tibetan glossary. However, Buddhism met with drastic persecution under the reign of King Langdarma (r. 838–42). During this time the monastic institutions, which were the central repositories for Buddhist learning and practice, were almost totally decimated. With monastics no longer able to live together, the continuation of the Dharma from teacher to student was disrupted, scriptures were scattered, and practice became fragmented with a group in one place practicing sūtra teachings and another group in another place practicing tantra. In this way, people no longer knew how to practice all the various teachings in a unified manner free of contradictions.

The king Yeshe Ö invited the great sage Atiśa (982–1054) to Tibet to remedy this difficult situation. Arriving in 1042, he taught extensively, and to rectify the misconception that the sūtra and tantra teachings were contradictory, Atiśa wrote *Lamp of the Path (Bodhipathapradīpa)*, showing how a person could practice both sūtra and tantra in a systematic and noncontradictory fashion. As a result, people came to understand that the

monastic discipline of the Vinaya, the bodhisattva ideals of the Perfection Vehicle, and the transformative practices of the Vajrayāna could be practiced in a mutually complementary way. Monasteries were again built and the Dharma flourished in Tibet.

The Buddhist teachings that were established in Tibet before Atiśa became known as the Nyingma, or Old Translation, school. The new lineages of teachings that came into Tibet beginning in the eleventh century were called the New Translation schools, and these slowly crystallized to form the Kadam (which later evolved into the Geluk), Kagyu, and Sakya traditions.

All four of these traditions go back to Nālandā. The Nyingma lineage stems from both Śāntarakṣita and Padmasambhava. The Kagyu tradition came from Nāropa, a great yogi who was previously an astute scholar at Nālandā. The Tibetan translator Marpa went to India and brought his lineage back to Tibet. The Sakya tradition came to Tibet via Virūpa, who began as a Nālandā scholar specializing in Cittamātra philosophy. He had many mystical experiences, and one evening the disciplinarian heard women's voices in his room. Opening the door, he found a group of female tantric practitioners there. They were actually the sixteen *ḍākinīs* (highly realized female tantric practitioners) of the Hevajra tantra, but because monastic rules had been transgressed, the monk Dharmapāla was expelled and became the yogi Virūpa. Atiśa was from Vikramaśīla Monastery in India, but he is considered part of the Nālandā tradition because the curriculum at the two monasteries was the same.

All four Tibetan traditions present the stages of practice in the Perfection Vehicle in a similar way, as seen in their major Tibetan treatises on this topic. In the Nyingma tradition, Longchenpa's (1308–64) *Mind at Ease* and his commentary *Great Chariot* resemble Atiśa's *Lamp of the Path*, especially in terms of the outlines and structure of the texts. The Nyingma master Dza Patrul Rinpoche (1808–87) wrote *Words of My Perfect Teacher*, the Kagyu master Gampopa (1079–1153) authored the *Ornament of Precious Liberation*, the Sakya master Sakya Paṇḍita (1182–1251) authored *Clarifying the Sage's Intent*, and the Geluk master Tsongkhapa (1357–1419) composed his *Great Treatise on the Stages of the Path*.<sup>41</sup>

There has been a rich tradition of debate among the various branches of Tibetan Buddhism. For example, some people think that Tsongkhapa's

writings about emptiness are his own creative invention. In fact, they are firmly rooted in Nāgārjuna's texts; he relies on Nāgārjuna in his discussion of every important topic. I have found some explanations are slightly different from those of Sakya, Kagyu, and Nyingma masters, but the difference is not of great significance.

The main difference among the Tibetan traditions of Geluk, Sakya, Nyingma, and Kagyu is the principal deities they rely on in tantric practice. The Nyingma principally rely on Vajrakīlaya, the Sakya on Hevajra, the Kagyu on Cakrasaṃvara, the Geluk on Guhyasamāja, and the Jonang on Kālacakra. Their explanations of the teachings preliminary to tantric practice are very similar. All rely on the lineage of Maitreya and Asaṅga for the methods to cultivate love, compassion, bodhicitta, and the six perfections. Their elucidations of emptiness are all rooted in the works of Nāgārjuna and his followers.

As a great scholar and logician, Śāntarakṣita introduced his students to the process of using reasoning to examine the teachings, and from then until now, Tibetans have engaged in rigorous study and debate in addition to meditation. With Tibetan scholar-practitioners studying, contemplating, and meditating on the words of the Buddha as well as the great Indian treatises and commentaries, Tibet came to hold the complete Nālandā tradition.

I have two purposes for calling Tibetan Buddhism the Nālandā tradition. First, this shows that it is not Lamaism, a term early Western visitors to Tibet called our form of Buddhism. Lamaism implies that the teachings were created by lamas who pretended to be the Buddha and that people worshiped their lamas. This term created much misunderstanding. Second, many Tibetans don't know the origins of their own teachings and practices and simply follow their own lama or the texts written by teachers of their own monastery. They lack fuller knowledge and a wider perspective. In Nālandā, in addition to studying various Buddhist tenet systems, they also studied non-Buddhist thought. In this way, they developed their critical thinking and gained real knowledge; reading just one text or learning one system doesn't bring that. Having studied many texts and engaged in serious meditation, the most excellent teachers are able to give extensive explanations.

Due to the social context in India at the time Nālandā and the other

great monastic universities flourished, their scholar-practitioners focused on refuting non-Buddhist misconceptions. However, once the great majority of Tibetans became Buddhist, Tibetan scholar-practitioners took it for granted that their audience was Buddhist. For these reasons, although Indian sages wrote texts employing reasoning to refute wrong views, Atiśa emphasized integrating the knowledge of Buddhist practices into daily life. Nowadays the audience is more diverse than ever, and both reasoning to refute wrong views and practice techniques for subduing the mind need to be emphasized.

Sometimes people mistakenly think that Tibetan practice, especially Vajrayāna, is a practice all to itself, separate from the rest of Buddhism. When I first visited Thailand many years ago, some people seemed to think that Tibetan Buddhism was a different religion. However, when we sat together and discussed the Vinaya, the Abhidharma, and such topics as the four truths of the āryas, the thirty-seven aids to awakening, and the four immeasurables (love, compassion, joy, and equanimity), we saw that our Theravāda and Tibetan Buddhist traditions have many common practices and teachings.

With Chinese, Korean, and many Vietnamese Buddhists, Tibetans share the monastic tradition, the bodhisattva ethical restraints, the Sanskrit scriptures, and the practices of Amitābha, Avalokiteśvara, Samantabhadra, and Medicine Buddha. When Tibetan Buddhists meet Japanese Buddhists, we discuss the bodhisattva ethical restraints, the method to generate serenity, and sūtras such as the *Lotus Sūtra* (*Saddharmapuṇḍarīka Sūtra*). The Japanese Shingon sect practices Tantrayāna, and with them we share the yoga tantra practice of Vajradhātu Maṇḍala and the performance tantra practice of Vairocanābhisambodhi. Here we see that Tibetan Buddhist practitioners share many common points that they can discuss with all other Buddhists. For this reason, we can say that Tibetan Buddhism is a comprehensive form of Buddhism.

## 6 | Investigating the Teachings

**B**EFORE A WISE PERSON buys a needed but costly item, he thoroughly investigates the quality of the product. Similarly, if we are to invest our time and energy in practicing a path, it is important to investigate the teachings that explain this path and how to practice it. In this chapter, we will examine the factors that make a teaching reliable. Being able to trace a teaching back to the Buddha is a key element in this, so we must know the criteria to do that, especially regarding teachings that have appeared many centuries after the Buddha.

Once we have found reliable teachings, our task is to understand them correctly. Some of us may take all the statements and stories we read in scriptures or hear in oral teachings literally and find them confusing. It is important to discern the intended purposes of certain statements and the points of particular stories in order to avoid reaching the wrong conclusion. To do this entails taking cultural factors into consideration.

Since the Buddha's teachings are now spreading in new locations and interacting with unfamiliar cultures, the question arises, "Is it desirable or possible to change the Dharma teachings?" To answer this, it is essential to be able to differentiate the actual Dharma from its cultural forms and expressions. If we change the teachings of the path, we will not reach the goal of the path—*nirvāṇa*. If we do not alter external forms, we may spend a lot of time trying to mimic people from another culture without transforming our minds in any meaningful way.

Once we become clear on the path and the goal, we have to set about creating the causes necessary to attain full awakening by practicing the path. Without creating the causes capable of producing a certain result, that

result will not come about, so we must be practical and realistic. If we wait until every one of our questions has been answered to our satisfaction, we will miss out on engaging in genuine spiritual practice.

### *The Kālāmas' Experience*

The *Kālāma Sutta* in the Pāli canon tells the story of the Kālāma people from Kesaputta, who were confused by the stream of religious teachers visiting their place, each espousing his own doctrine and deprecating those of others. At the outset of the sutta, the Kālāmas are not the Buddha's disciples. Hearing of his qualities, they seek his guidance about how to determine which teachers speak the truth and which are mistaken. The Buddha recommends (AN 3.65):

It is proper for you, Kālāmas, to doubt, to be uncertain; uncertainty has arisen in you about what is doubtful. Come, Kālāmas. Do not go upon what has been acquired by repeated hearing; nor upon tradition; nor upon rumor; nor upon what is in a scripture; nor upon surmise; nor upon an axiom; nor upon specious reasoning; nor upon a bias toward a notion that has been pondered over; nor upon another's seeming ability; nor upon the consideration, "The monk is our teacher." Kālāmas, when you yourselves know: "These things are bad; these things are blamable; these things are censured by the wise; undertaken and observed, these things lead to harm and ill," abandon them... when you yourselves know: "These things are good; these things are not blamable; these things are praised by the wise; undertaken and observed, these things lead to benefit and happiness," enter on and abide in them.

Knowing that the Kālāmas are reasonable and sensible people, the Buddha encourages them to investigate the various teachings they hear and not simply accept them because of the flimsy reasons that people too often give for their beliefs. The Buddha does not recommend that the Kālāmas discard statements because they do not understand them. Rather, he encour-

ages them to test the assertions and see if those assertions affirm what the Kālāmas know is true and beneficial from their own experience.

Accepting a teaching simply because it was spoken a long time ago and is part of a lengthy tradition is not wise. However, rejecting old beliefs simply because they don't agree with our present opinions isn't wise either. Remaining open and continuing to examine is judicious. It is our responsibility to use our intelligence to question and test a teaching before accepting it. Having done that, our knowledge will be firm because it will be based on firsthand experience or correct reasoning.

### *Reliable Teachings*

Whatever Buddhist teaching we listen to, study, or practice should be authentic. For centuries people like us have learned and practiced the Buddha's teachings, thereby transforming their minds and hearts and attaining higher spiritual levels, including buddhahood itself. We can be confident that if we learn and practice these teachings correctly, we too can attain the same results as the past great masters did. To ensure that a teaching is effective and reliable—not a recent, untested invention of an unenlightened person—we should be able to trace its roots to the Buddha himself. Three criteria will help us to evaluate a teaching and gain a clearer idea whether it is authentic.

First, teachings given by the fully awakened Buddha himself can be accepted as reliable. To validate commentaries and teachings given by masters of subsequent generations, we investigate if their meanings accord with what the Buddha taught.

Second, a teaching that has been subjected to and affirmed by the logical scrutiny of the great Buddhist sages can be accepted as authentic. These sages were not intellectuals who simply discussed the teachings without practicing themselves. While great sages such as Āryadeva, Candrakīrti, and Śāntideva are usually depicted as actively debating, they were also accomplished practitioners who sincerely put the teachings into practice and transformed their minds.

Third, a teaching that has been practiced and realized by the great *mahāsiddhas*—highly realized yogis and yoginīs—is authentic. These great

practitioners have sincerely practiced the Buddha's teachings, internalized their meaning, and gained significant spiritual realizations. This demonstrates that the teachings they practiced are reliable.

Some people hold the mistaken assumption that monastics in India and Tibet only studied and debated, while the tantrikas, whose appearance and behavior did not correspond to monastic discipline, did not study and yet were the real practitioners. Before becoming a tantric practitioner, Nāropa was a well-respected, learned practitioner and the abbot of Nālandā. He did not become a tantric practitioner as a newcomer to Buddhism but only after many years of study in which he gained an excellent conceptual understanding of the Dharma. While he saw that this alone was insufficient to accomplish buddhahood, his extensive scriptural knowledge was a necessary foundation for successfully actualizing the tantric path as a yogi.

Many of the seventeen great Nālandā adepts<sup>42</sup> were not only debaters and teachers but were also among the eighty mahāsiddhas. In Tibetan the term *khedrup nyenten*—which applies to both the sage-scholars from the monastic universities and the mahāsiddhas—indicates a practitioner endowed with learning as well as realizations derived through practice. Without study, we do not know how to meditate correctly; without meditation, our studies remain dry. Both are necessary.

We can compare a teaching to the texts that are commonly accepted by everyone in either the Theravāda or the Mahāyāna tradition as authentic, and if their meaning is compatible, they may be accepted as accurate. For example, in the Mahāyāna tradition, texts by Nāgārjuna, Ārya Asaṅga, Śāntideva, Candrakīrti, and Dharmakīrti are commonly accepted as accurate explanations of the Buddha's word. These works of the great masters have already been proven to be reliable because they have been investigated by the sages and the mahāsiddhas have attained realizations by depending upon them.

This analysis cannot be made on the basis of words alone but must include meanings. For example, the terminology in various tantric commentaries may differ considerably from that in the root texts. However, if their meaning accords with the root texts, the commentaries can be accepted as reliable.

We should avoid disparaging teachings that we disagree with or do not fully understand by declaring, "The Buddha didn't teach this." For example,

what is to be gained by saying, “The Buddha didn’t teach rebirth” simply because the idea of rebirth makes us uncomfortable or does not immediately make sense to us? It is best to remain neutral toward such teachings and put them aside for the time being.

Nor should we ignore teachings simply because they may not be of immediate use to us. For instance, some people have deep respect for the Buddha and his teachings and are concerned about becoming a more compassionate person. At this time, they are not very attracted to investigating emptiness by means of logical analysis. It is fine for these people to focus on the teachings that are most relevant to their aims. They do not need to study the complex works that the monastics delve into. However, this does not mean that those more complicated texts are irrelevant, unnecessary, or inauthentic.

The Buddha gave some teachings provisionally to benefit a particular individual or group. The scripture is authentic, but its meaning requires interpretation; it is not definitive. For example, one sūtra says, “Father and mother are to be killed.” This clearly is not to be taken literally, and its meaning must be interpreted. The Buddha said this to console a king who had taken the lives of his father and mother and was overwhelmed with remorse. In the Buddha’s mind, “father and mother” referred to craving and existence, two of the twelve links of dependent origination that describe how we take rebirth in cyclic existence. Once the king had overcome his remorse and his mind was open to hearing more teachings, the Buddha taught him the actual meaning of the Dharma.

In sūtras designed for trainees who would benefit from the Cittamātra presentation, the Buddha taught the three natures, saying the imputed nature does not exist by its own characteristics, but the other-powered nature and the consummate nature both exist by their own characteristics. Although the text is to be understood as expressed above by those with the Cittamātra disposition, the teaching is provisional because it does not present the final mode of existence. The Buddha had another, deeper meaning in mind when he spoke this.

Another example of a provisional teaching is one in which a spiritual mentor instructs a particular disciple, “To meditate on emptiness, simply withdraw your mind from focusing on any object whatsoever.” By hearing this advice and applying it in his meditation, the disciple realizes the correct view of emptiness. This instruction, however, is not entirely correct,

because even emptiness is an object to be focused on. Meditation on emptiness is not simply emptying the mind of all thoughts. If such a teaching were given to a general audience, many people would misunderstand it and do blank-minded meditation, such as the Chinese monk Hashang Mahāyāna taught in Tibet in the eighth century. The understanding of emptiness in the minds of people in general would, in fact, be hampered because they would mistake not focusing on any object whatsoever for meditation on emptiness; the two are quite distinct.

Why, then, was this instruction given to that disciple? Under those particular circumstances, that individual was ripe and able to benefit from hearing it. Instead of generating the wrong view mistaking blank-minded meditation for meditation on emptiness, this person's unique mental state made him an appropriate pupil to hear that explanation and understand the correct view.

Because such a view can be damaging if taught publicly, Kamalaśīla came from India to Samye Monastery in Tibet to debate with Hashang Mahāyāna and to refute his view. I wonder if Hashang Mahāyāna had initially taught this view to a particular disciple for whom it was suitable and later started teaching it to a general audience. Śāntarakṣita, Kamalaśīla's guru, was at Samye at that time, and had Hashang taught that view publicly in Tibet from the beginning, Śāntarakṣita surely would have spoken up and rejected it, especially since Hashang said studying and contemplating the teachings were not necessary.

The great Nyingma master Longchenpa once commented that due to Tibetans' lack of merit, Hashang's view did not become dominant in Tibet. Another lama then said that was tantamount to Longchenpa saying that his view was the same as Hashang's. Personally speaking, I'm a follower of both Kamalaśīla and Longchenpa and have faith in both of them. As explained above, a statement such as "withdraw the mind from focusing on any object" may be suitable for a specific individual with particular karma and a certain mental state. Kamalaśīla refuted it when it was taught publicly due to the damage it could cause if accepted literally. However, Longchenpa accepted it as applicable to specific individuals. Therefore their positions are not contradictory.

Some statements in sūtras or Indian treatises are explained differently in

each of the four philosophical schools, and there are levels of profundity within the sūtra and tantra systems. The Buddha taught certain points with skillful means to benefit a particular type of disciple and gradually lead her to the final, correct view. Thus we accept differing statements in the scriptures and differing interpretations of some statements as indicative of the Buddha's skillful means. However, we should not take this to an extreme and think that the Buddha was so vague that anyone can interpret his statements in any way that she likes! Rather, one statement may have many explicit and implicit meanings that can be drawn out in various ways. In the highest yoga tantra specifically, a phrase may be interpreted in four ways—in accord with its literal meaning, general meaning, hidden meaning, and final meaning. It may also be interpreted in six modes: interpretable and definitive, implied meaning and non-implied (direct) meaning, literal and nonliteral. Here interpretable and definitive do not mean the same as in the sūtra context.

## REFLECTION

---

Three criteria can enable us to discern a particular teaching as reliable:

1. It was given by the fully awakened Buddha himself.
  2. It has been subjected to and affirmed by the logical scrutiny of the great Buddhist sages.
  3. It has been practiced and realized by the great mahāsiddhas.
- 

### *Treasure Teachings and Pure Vision Teachings*

In Tibetan Buddhism, in addition to teachings spoken by the Buddha in sūtras and by the great masters in their writings, there are “treasure” teachings (*terma* or *tercho*) and other teachings that arise from pure visions. How are these traced back to the Buddha, and what is the process for ascertaining their validity?

*Termas* are teachings discovered centuries after their composition either concealed somewhere in the environment or revealed as visionary teachings. These were hidden as *termas* because they were not suitable for the practitioners at the time of the initial guru but would benefit practitioners at the time of the *terton*, the later practitioner who discovers them. When the *terma* is hidden, the guru who hides it often prophesizes where, when, and by whom it will later be discovered.

There are two main kinds of *termas*: earth treasures and mind treasures. *Earth treasures* are objects such as texts and ritual implements that are discovered in nature—in rocks, mountains, or trees—or in a temple or *stūpa*. Earth *termas* are not ordinary books but are often written in another script or language. Sometimes they contain symbols that trigger the *terton* to recall a teaching, which he then writes down. *Mind treasures* are found in space—that is, they appear to the mind of the *terton*. Guru Padmasambhava, the most prolific creator of *termas*, or another guru placed them in the mindstream of the *terton*, who experiences them in meditation and then writes the teaching down from memory. Sometimes the *terton* himself holds the teaching in his mindstream and reveals it in a future life.

A treasure teaching enhances the teachings the Buddha already gave. In content and purpose, it is in line with the teachings of Śākyamuni Buddha contained in the *sūtras* and *tantras*. In this way it is traceable to the Buddha.

In the Tibetan Buddhist community, some treasure discoveries are considered false and others authentic, indicating that some claims may be forged or simply erroneous. There is not an appointed committee or person who is responsible for checking the accuracy of *termas*. Rather, a prominent and authoritative master that is well known in the Tibetan community usually comments on a *terma*. He and others take into consideration three factors: whether the *terton* and/or the *terma* were prophesized by the Buddha or another lineage master, chiefly Padmasambhava; how this treasure teaching compares with those well-known, authentic treasure teachings discovered in the past; and the characteristics of the person who claims to be the treasure discoverer.

In most cases, an authentic treasure discoverer conceals a new treasure teaching for some years while he or she practices it to determine whether it is reliable. That person's teacher also practices and evaluates the teaching. Sometimes an explicit statement in the *terma* says that the *terton* will encounter a specific, reliable student to whom he should first give this

teaching. This student is called the “owner of the teaching,” and the discoverer may wait to see if this student appears. As I understand it, when Dilgo Khyentse Rinpoche experienced something akin to intuition in which a teaching appeared in his mind, he explained this to his teacher Khyentse Chokyi Lodro. Then both of them would practice this teaching and, if they both gained some deeper experience, then they considered it authentic.

There are other teachings that derive from a pure vision appearing in the mind of a realized master in deep meditation. Unlike *termas*, they are not transmitted by mind from Padmasambhava. Rather the pure vision of the deity appears directly to the practitioner. Here the deity who appears is in fact a buddha. As with *termas*, the teachings given in a pure vision should accord with original teachings traceable to the Buddha. If the deity in the vision taught that an inherently existent soul existed, that clearly would not be an authentic pure-vision teaching!

The Fifth Dalai Lama had visions of several deities, and thus certain initiation lineages trace back to him. He practiced the teachings from his pure visions and had good results. Later masters also did this, with similar results. The Fifth Dalai Lama was a good monk, an excellent scholar, and an outstanding practitioner. He had no reason to lie.

I received some of the initiations coming from the pure vision of the Fifth Dalai Lama from my teacher Takdrak Rinpoche when I was around ten or eleven years old. At that time, I wasn't very interested in them, although I did have some auspicious dreams during that time. Now when I do retreat on the Fifth Dalai Lama's pure visions here in Dharamsala, some indications of success appear during each retreat. They may not be obvious signs, but still they come, so these plus my experience in practicing these teachings leads me to believe they are authentic. The Second Dalai Lama also had many pure visions, as did the First Dalai Lama, although he kept them concealed.

Each Tibetan Buddhist tradition has guru-yoga meditations centered on prominent lineage holders or founders of that lineage. For Nyingma, it is Padmasambhava; for Kagyu, Milarepa; for Geluk, Tsongkhapa; and for Sakya, the five founders of the Sakya order (Sachen Kunga Nyingpo, Sonam Tsemo, Jetsun Drakpa Gyaltzen, Sakya Paṇḍita, and Chogyal Phakpa). We may wonder: Since these masters were later historical figures, the guru-yoga practices centered on them were written long after the Buddha lived. How do we know that these practices are valid?

Upon examination, we see that these guru-yoga *sadhanas* (ritual texts) contain the important elements of any tantric practice: taking refuge and generating bodhicitta, the seven-limb prayer, requesting inspiration, dissolution of the guru into the meditator, and meditation on emptiness. Although the central figure varies—instead of being a deity it is now a lineage lama—the practice is still authentic because it follows the basic meditation procedures for this type of practice.

### *Exaggerated Statements?*

Sometimes we encounter statements in the sūtras or commentaries that appear exaggerated, and we doubt whether we should take them literally. Using the criteria mentioned above as well as our common sense, we can evaluate whether they are accurate if understood literally.

For example, statements in some scriptures say that by reciting a particular mantra once, one will never be born in an unfortunate realm or one will attain awakening easily. If such statements were literally true, there would have been no need for the Buddha to teach us to avoid destructive actions and create constructive ones. If we could be reborn in a pure land by reciting a few mantras, why would the Buddha spend so much time teaching the importance of counteracting ignorance and afflictions by applying the antidotes to them? If we could gain realizations simply by reciting mantras, the Buddha would not have taught the three higher trainings and the cultivation of method and wisdom. We can see that such statements are not consistent with the Buddha's teachings in other scriptures. Therefore we cannot take these statements literally. Reciting mantras must be conjoined with other virtuous practices to bring the desired results. So why does the scripture say this? In part, the benefits of reciting a mantra were extolled to inspire certain people who are embarking on the practice.

In addition, the results of reciting a mantra differ according to the person doing it and how it is done. A constructive action done by a person adhering to Buddhist precepts is far more powerful than the same action done by one not living within the precepts. The potency of mantra recitation done by a person contemplating the emptiness of the mantra, reciting it with a bodhicitta motivation, or visualizing sending out emanations to benefit sentient beings is much more powerful than the same recitation by someone whose

mind is distracted. The power of the mantra does not operate independent of these other conditions.

On the flip side of these benefits, some scriptures state, for example, that we will be reborn in the hell realm for the same number of eons as the number of moments we are angry with our spiritual master; that one moment of anger destroys the merit of generosity and other practices accumulated over one eon; or that anger toward a bodhisattva leads to experiencing unfortunate rebirths and great suffering for eons.

Some people may think that the Buddha made such statements to instill fear in us so that we will behave ethically. This is not the case. The Buddha had no reason to threaten us with punishment: the law of karma and its effects is not a system of punishment and reward. Rather, with compassion the Buddha was reminding us that a small action can bring a large result, just as in the physical world a tiny seed can grow into a huge tree. Such seemingly exaggerated statements aren't only about the bad effects of small unwholesome actions. They are also found on the positive side; great beneficial results may come about by doing small constructive actions. For example, it is said that if a person shoots a sinister look to a bodhisattva, the karmic impact is like gouging out the eyes of all sentient beings. However, it is also said that if we pay respect to or venerate a bodhisattva for even one moment, we accumulate merit as vast as the universe. One text says that even if an enraged person glances at the image of the Buddha, he accumulates merit by the power of having contact with an image representing awakening. As a result of this, he will be able to see ten million buddhas in the future. But remember, glancing at a Buddha statue alone will not yield the result of seeing ten million buddhas. We also need to purify our minds, create merit, generate bodhicitta, and understand emptiness.

In statements about the effects of our interactions with buddhas, bodhisattvas, and their images, the heaviness of the karma is primarily due to what is called the “power of the object.” That is, buddhas and bodhisattva are remarkable beings who have accumulated merit for countless eons and have continually engaged in benefiting sentient beings. Venerating such beings, making offerings to them, and assisting them in their various works create powerful karma because, being weighty in virtue, holy beings are powerful objects. Similarly, interfering with their good deeds or scorning them leaves heavy harmful latencies in our mind.

Whether our actions regarding holy objects have the potency to bring strong or weak effects also depends on the context of the action. Let's say a person who is not a bodhisattva gets angry at a bodhisattva for whom she usually holds great admiration. Her anger is not rage; rather she lost her temper over a small thing. If she immediately regains mindfulness and regrets her anger, I don't think she will experience suffering for countless eons. However, another person has no regard for bodhisattvas in general and is antagonistic toward one in particular. If he gets very angry toward that bodhisattva, the harsh consequences mentioned above may apply.

Results arise in dependence upon a multiplicity of causes and conditions, so scriptural statements must be understood in that light. The intensity of our intention, whether getting angry or generating compassion, makes a big difference in the strength of the result. Also, if a person performs an action repetitively—be it constructive or destructive—the result will be heavier. Another factor affecting the heaviness is whether a counterforce is present: if we purify destructive actions, their effects will be lighter, whereas generating anger or wrong views hinders the ripening of our constructive karma. The strength of the regret and the strength of the wrong views will also affect the heaviness of the karma.

In short, many factors are involved in the weight of a karma. In *Blaze of Reasoning* (*Tarkajvālā*) by Bhāvaviveka and in the *Great Treatise on the Stages of the Path* by Tsongkhapa, it is said that the intricacies of karma are very profound. How specific actions bring their specific results is a very obscure phenomenon that only omniscient buddhas know with complete accuracy. Nevertheless, we can still evaluate scriptural statements regarding cause and result based on our limited knowledge by comparing quotations on a similar topic to see if they are consistent. In the case of the efficacy of reciting a mantra once, other scriptures present a divergent view and stress the necessity of purifying destructive karma and practicing both wisdom and method for eons. But in the example of a small instance of anger bringing a large result, we find complementary statements that small constructive actions may ripen in significant results. In this case, the claims are consistent with each other.

If we do not feel comfortable believing some of the scriptural statements about karma and its results, we can leave them aside. No one is forcing us

to believe what the Buddha said or to become a Buddhist. In matters of religion, a great diversity of beliefs is natural. While everyone—animals and human beings alike—agrees that drinking water is necessary, we disagree on what food is delicious. Similarly, although the search for meaning in life is shared, we may differ regarding religious beliefs. There is room for a variety of views.

## REFLECTION

---

1. Are there scriptural statements that you feel uncomfortable with or doubtful toward? If so, what are they?
  2. Are there other scriptures that either reinforce, contradict, or give another interpretation of the meaning of that statement? How does that change your thought?
  3. Was religion used as a tool of coercion or intimidation when you were a child? If so, could that experience now affect your perspective on Buddhist scripture?
- 

### *Correctly Understanding the Point*

The meaning of certain stories found in Dharma texts is not always obvious, especially since they were told for a specific purpose and are related to the author's cultural context. A few examples will illustrate this.

There is a story of the Buddha in his previous life giving away his wife and children as an act of generosity. This seems to contradict not only modern values of gender equality but also the ancient principle of caring for one's family.

We may be confused or even incensed by the values and assumptions underlying such a story. It is helpful to step back and ask ourselves what Dharma meaning is being expressed in the story. Most people cherish their family more than anything else. Attachment to our loved ones is often so strong that the thought of being separated from them brings us great

anguish. That someone was willing to offer what they cherish the most testifies to the depth of that person's faith and veneration for the Three Jewels. He is willing to separate from his most cherished objects to create merit. This story also illustrates that when attachment has been conquered, the mind does not cling even to those we cherish the most. The mind is so free that we are not overwhelmed with distress when separated from our dear ones.

We don't need to agree with the social values of an ancient culture in order to learn a valuable point from an ancient story. While in ancient times—and to some extent even today—a wife and children being a man's property was acceptable to Indian sensibilities, clearly it is not acceptable now in other countries. We can maintain our contemporary social values and still appreciate the Dharma meaning of a story.

Aśvaghōṣa, a great Indian sage of the first century, wrote the *Acts of the Buddha* (*Buddhacarita*) in which he related the Buddha's deeds when he was a bodhisattva. One of these was the well-known story about the Buddha offering his body to a starving tigress so she could feed her cubs. After writing this, Aśvaghōṣa had a strong aspiration to practice just as the Buddha did, so when he encountered a starving tigress one day, in a pure act of generosity, not expecting anything in return, he gave the tigress his body. The moment he did this, he composed a prayer of seventy verses about the bodhisattva practice, using his own blood as ink. This prayer is really wonderful, but it seems that no one was there when he did this, so I'm not sure where the oral transmission of the prayer came from.

Some people may initially be horrified by the idea of feeding their body to a tiger and wonder why Buddhists would glorify such a suicidal act. "Isn't it better to stay alive and work for the welfare of human beings rather than feed our body to an animal?" they ask. The purpose of this story is to emphasize the depth of bodhisattvas' compassion: they are willing to give even their body and life without any attachment to benefit others. This illustrates the strength of compassion we want to cultivate as aspiring bodhisattvas. Although having no attachment to our body may seem almost impossible at our current level, by training our mind in non-attachment and compassion we will gradually be able to cultivate the attitude that can give our body and life as easily as giving an apple to someone.

In another story, a nonbeliever asked Āryadeva for one of his eyes, and

Āryadeva happily offered it to him. This person then crushed the eye. We may wonder: “Does the generosity demonstrated by this holy being mean I should give away everything indiscriminately, even to someone who doesn’t value the gift?”

Some background to this story is needed. At that time, non-Buddhist scholars were challenging Buddhist views, and a big debate was about to occur to determine whose views were correct. Āryadeva was to represent the Buddhist view, and in order to train him, his spiritual mentor, Nāgārjuna, took the position of the non-Buddhists and debated with Āryadeva. Nāgārjuna did this so well that Āryadeva began to think, “My teacher is not actually a Buddhist!” and disparaged him during the practice debate. This disrespect toward his mentor was a destructive act, but because Āryadeva had high realizations, the karmic seed of reviling his spiritual master did not fester in his mindstream but ripened quickly. En route to the debate site, he encountered someone who asked for one of his eyes. In an act of consummate generosity, with no expectation of receiving anything in return, Āryadeva happily complied and continued on his journey. However, as he was walking away, he looked back and saw the person crushing his eye and regretted his generosity. For that reason, his sight was not restored, whereas otherwise it would have been.

There are many lessons in this story: the importance of always maintaining a respectful attitude toward our spiritual mentor, the possibility of compassionately giving away our body with no expectation of return, and the disadvantage of regretting an act of generosity.

From this story, we should not draw the conclusion that we must sacrifice our body or material resources indiscriminately without making sure that they will be properly utilized. The perfection of generosity entails giving an appropriate object to a suitable person at the right time; good judgment is indispensable. Giving a bottle of liquor to an alcoholic is not an act of generosity. In his text, *Bodhisattva Grounds (Bodhisattvabhūmi)*, Asaṅga gives a detailed explanation about the practice of generosity describing appropriate and inappropriate times, objects, recipients, places, and motivations for giving.

From another perspective, Nāgārjuna and Āryadeva were highly realized ārya bodhisattvas. Thus this story seems odd, for it appears to ignore Āryadeva’s mastery. Surely someone with his realizations would never have

behaved like that toward his spiritual mentor. Nor would he have given one of his eyes to someone for whom it was of no benefit. Similarly, he would not have regretted his generosity afterward. Because this story makes Āryadeva appear imprudent, I question whether these events should be taken literally.

There is the story of an old woman whose son was making a pilgrimage to a holy site. She asked him to please bring a relic of the Buddha back for her. He remembered this only on his way home, and not wanting to disappoint his mother, he took a tooth from the carcass of a dead dog he found along the way and presented this to her, saying it was the Buddha's relic. She had great faith and worshiped this tooth devoutly. As a result, the tooth produced many relics, and she experienced miraculous occurrences.

It is easy to conclude from this story that blind faith is necessary on the path. This is clearly contrary to the Buddha's emphasis on developing discriminating wisdom. I do not see much point in this story and propose replacing it with the following, more suitable, account to illustrate the benefit of having confidence in the Three Jewels.

Two or three centuries ago, a great teacher and sincere practitioner named Togyen Lama Rinpoche lived in Tibet. He had a small clay image of Tsongkhapa on his carefully tended altar. One day, due to Togyen Lama's genuine practice and heartfelt aspirational prayers, that image of Tsongkhapa actually spoke and gave teachings to him. This came about not from the side of the statue, but mainly due to Togyen Lama's excellent practice. Due to his spiritual experiences and confidence in Tsongkhapa, this clay image became the real Tsongkhapa and spoke to him. However, for ordinary people who lack that kind of spiritual experience and faith, the statue just looked like clay.

These are just a few examples. When we read stories in texts it is helpful to reflect on them in order to discern the meaning the author intended; we can ignore the social values or other elements of the story that don't make sense to people in our day and age or in our culture. It's also good to remember that not all aspects of an analogy apply to the point being established. Many stories or analogies are useful in one area but cannot be generalized to all situations. When doubts remain, it is helpful to discuss the meaning with Dharma friends or ask our teacher so that we will understand teachings, stories, and analogies in the way that they are intended.

## REFLECTION

---

1. Recall a story you have heard or read in a Dharma teaching that left you feeling confused, disturbed, or irritated.
  2. Realizing that the story is from another culture that had different social values than you do now, set the details of the story aside and ask yourself, “What is the point of this story?”
  3. Consider how that point relates to your Dharma practice.
- 

### *Can the Dharma Change?*

Some people ask if the Buddha’s teachings can be changed in order to make them more relevant to our historical period. While they want to make the Dharma more understandable to others, they are concerned that altering the teachings would impact their authenticity and efficacy. This question requires much careful thought.

It’s important to differentiate between the essence of the Buddha’s teachings—the determination to be free, bodhicitta, and the correct view of reality—and the external forms of Buddhism, such as the color and style of monastic robes, the design of the altar, the types of offerings that are made, and the language and melody of chants. External forms have changed each time Buddhism has spread to a different place, and this does not affect the essence of the Buddha’s message. However, changing the teachings of the Buddha that describe duḥkha, its origin, its cessation, and the path to nirvāṇa would alter the fundamental perspective and principles of the Buddhadharmā, making it no longer the teachings of the Buddha.

Regarding the development of Buddhist thought in ancient India and in the classical period in Tibet, many of the debates in the texts center on issues in epistemology, cognitive processes, and the relationship between body and mind that were important to people at that time and place. In ancient India, Buddhist thinkers had to respond to philosophical claims made by non-Buddhist Indian schools. While some of those debates may, upon first glance, not seem important to us, if we look closely we may see

that some versions of those views might exist today. In that case, studying their refutations could help us when speaking with our contemporaries who assert the existence of a universal mind, an absolute creator, predetermination, and so forth. Understanding the reasons disproving the theses of non-Buddhists may also help us dispel similar kinds of beliefs that we may have.

In Tibet, many of the debates center around the two truths: what they are and how they relate to each other. Here Buddhists debate with each other—not with non-Buddhists—in order to distinguish the Middle Way view from views of nihilism and absolutism. Some of the views expressed by earlier Tibetan Buddhists are held by people today, so studying the pros and cons of these various views can be relevant to our practice.

In ancient times, people lacked a sophisticated understanding of the brain and neural processes and of their role in perception, emotions, and other cognitive processes. Since now we have a much better scientific understanding of the brain and its role in our experiences, it would be helpful to bring that knowledge into Buddhist thinking. Buddhist dialogue with science raises a number of other issues that need to be discussed and debated—issues that would not have occurred to people in ancient India or in classical Tibet. Previously people naturally accepted that mind and body were different entities; these days they don't, so Buddhists need to prove the existence of the mind, its difference from the brain, and the relation of the two. The great Buddhist debaters of the past were not concerned with the issue of predetermination and free will, but when Buddhism enters into cultures influenced by theistic religions, those topics become crucial. In these and other such areas, Buddhists need to learn and contemplate the views of scientists and people of other religions and know how to apply Buddhist principles to them and to respond with wisdom. There is much room for us to grow in these areas.

However, with respect to the teachings on afflictions and how they cause suffering, sentient beings today have the same kind of afflictions as they did thousands of years ago. The specific objects of attachment and anger may change in different times: in ancient times human beings weren't attached to their smartphones and didn't become angry when their computers or cars broke down. However, the general objects of attachment and anger are still very much the same—whatever gives us happiness or interferes with

that happiness. Furthermore, the processes of getting angry by exaggerating the negative aspect of someone and of subduing anger by means of applying counterforces are the same now as before. The antidotes to individual afflictions such as anger and clinging attachment remain as relevant today as they were then.

It is feasible that after several hundred thousand years, our brain may change through an evolutionary process to the point where even the shape of our head or the functioning of our nervous system will be radically different. In those cases, it is conceivable that sentient beings' preoccupations and ways of thinking may change. However, as far as the problem of self-grasping is concerned, I don't think it will change. Since this root of our suffering will not change, neither will its antidote—the wisdom realizing emptiness. As far as the view of emptiness is concerned, it remains relevant at the beginning, the middle, and the end of our practice, in all historical periods, in all places, and for all sentient beings.

When adopting new cultural forms, we must ensure that we neither intentionally nor inadvertently discard or change vital teachings. Should that happen, the liberation and awakening of future generations would be rendered impossible. Thoughtfulness, care, and slow change are preferable to a rush to make Buddhism more attractive to the present public.

### *Being Practical*

Researching the teachers and teachings before making a commitment is a good idea. However, sometimes we go too far and think that all of our doubts must be resolved and questions answered before we can engage in practicing the path to freedom. One sūtra (MN 63) tells the story of Bhikkhu Mālunkyāputta, who has a surge of doubt because the Buddha did not respond to his questions: Is the world eternal or not eternal? Is the world finite or infinite? Is the soul the same as the body or are they different? After death, does a Tathāgata exist, not exist, both, or neither? In his confusion, Mālunkyāputta thinks that he cannot continue to practice the Dharma unless those pressing issues are resolved, and so he approaches the Buddha.

To instruct his disciple, the Buddha uses the simile of a man shot by an arrow. Suppose someone is wounded by a poisonous arrow and taken to the doctor. The wounded man arrives at the clinic, in pain and bleeding

profusely, but rather than letting the doctor treat him, he insists on first knowing the social class of the person who shot the arrow, the name and clan of that person, his height and complexion, where he lived, and the type of bow, shaft, feathers, sinews, and arrow that were used. Clearly he would die before all his questions were answered. And even if he were successful in obtaining that information, it would not stop the bleeding nor extend his life. Similarly, if we think, “I will not practice the Dharma until all my questions are answered and doubts resolved,” this life will end and no practice will have been done.

For that reason, the Buddha told Mālunkyāputta that he teaches, “This is dukkha, this is the origin of dukkha, this is the cessation of dukkha, this is the way leading to the cessation of dukkha.” The Buddha teaches the four truths because they are beneficial to learn, they will help people to live the holy life, and they lead to disenchantment with cyclic existence, the giving up of sensual craving, cessation of dukkha, peace in the mind, direct knowledge of the way things are, and nibbāna. He leaves other topics aside because learning them is not necessary or conducive for this purpose. Whether the world is eternal or not has no relevance to the important task of eliminating afflictions and ceasing saṃsāra. The Buddha recommends that Mālunkyāputta leave aside his questions and focus on the path that leads to liberation. In that way, Mālunkyāputta will not waste time on senseless doubts.

Like this, we should focus on what is important and not be distracted by pointless speculation. If we do not instantly understand a Dharma topic, we can temporarily put it aside and focus on those Dharma topics that help us here and now. Later on we can return to those other topics. Not all our questions can or will be answered at once. Let’s be practical and remove that poisonous arrow of the afflictions before it takes our life.

In this chapter, we have learned the criteria to discern reliable teachings. Now we must study those teachings and understand them as they are meant to be understood. This may entail looking beyond cultural overlays and detecting the point of a story or analogy. To attain the goals of liberation and awakening, we must follow the path as the Buddha taught it, without altering it to suit our fancies and predilections. While the outer “packaging” of the teachings—the cultural forms in which they exist—may be changed, we must take care not to change the essential teachings just because they

don't agree with our opinions. The challenge is to differentiate between the packaging and the essence. Great skill is needed to do this.

Having reached the point where we are ready to engage in serious study and practice of the Buddha's teachings, let's not be waylaid by doubts. Instead, let's approach the teachings with curiosity, sincerity, and intelligence.

## 7 | The Importance of Kindness and Compassion

### *A Peaceful Mind*

**S**IMPLY TAKING CARE of our body and tending to its physical comfort but neglecting the state of our mind and heart is not wise. Just as we nourish our body and care for its health each day, we should also invest effort and time into cultivating our mind and ensuring its spiritual health. Doing so will bring us great peace and happiness now as well as in the future.

Whether or not you accept future lives, counteracting disturbing emotions and cultivating our good qualities are still extremely important. We are all subject to frustration, disappointment, and loss in life as well as to aging, sickness, and death. Such conditions plague us simply because we are human. No external method to eliminate them exists; the only way to face these trials gracefully and lessen the suffering that accompanies them is to prepare for them by transforming our mind. Then, when such inevitable sufferings come, we will be able to handle them more easily, with less anxiety and fear, and even with some joy at the special opportunities they provide for our spiritual development.

Medical researchers are taking more interest in studying emotions because they see there is a relationship between positive emotions and good health. Having a positive attitude sustains good health as well as increases our ability to heal after injury and surgery. Destructive emotions, such as anger, fear, and anxiety, can eat away not only at our emotional well-being but also at our health. The link between these emotions and ulcers, high blood pressure, and so forth has long been known. Some scientific studies have found that destructive emotions weaken our immune system while constructive emotions boost it.

Constructive emotions help people better weather the natural process of the body's aging and eventual demise. People with a positive attitude are able to face these events with inner balance and acceptance—this illustrates that although the body may be ill or painful, the mind can remain peaceful and people can still enjoy a sense of purpose in life. My mother was a good example of this. She experienced many hardships, including fleeing her homeland and becoming a refugee, but she maintained a positive and kind attitude throughout. Due to this, she was appreciated and loved by others.

From the time we are born, constructive emotions affect our physical, social, and emotional development. Studies have shown that when infants receive compassionate care from their parents, it facilitates the proper development of their brains. We all know from our own experience that a child who is treated with kindness and compassion has more self-confidence and better relationships with others.

Sometimes we think that animals and insects may be happier than we are: they have no fear of layoffs at work, financial woes, or broken relationships. This may be true, but their lack of anxiety is not due to spiritual practice and mental transformation but to the clouds of ignorance and confusion that obscure their minds. There is nothing to admire about this state; contrary to the popular saying, ignorance is not bliss. Fortunately, we human beings, by using our intelligence and reason, have the ability to consciously cultivate constructive mental states and the path to peace and happiness. We have the ability to actualize our unique potential to its fullest.

From the beginning of the Buddhist path to the end, each practice is aimed at developing virtuous qualities of mind. The qualities we attain through disciplining and cultivating our mind are vast and extensive, as illustrated by sincere practitioners and highly realized beings.

For our spiritual practice to bear good results, kindness, tolerance, and compassion for other sentient beings are essential. Practicing any spiritual path motivated by habitual self-absorption won't do, because that attitude is a principal cause of our unhappiness. Seeking wealth, social status, or fame is hardly a spiritual motivation, nor is arrogance, jealousy, or competition. To progress on the path to awakening, we need to begin with and maintain a sincere attitude that deeply cherishes others and that cares for ourselves in a healthy way, without being either self-indulgent or self-denigrating. Such a mental state is necessary both to live happily in this life and to make our

spiritual practice effective. This is because our motivation is the chief factor determining the long-term results of our actions. In this chapter, we'll learn contemplations that lead to a compassionate attitude and altruistic intentions, and then we'll discuss mind training, a skillful method to help us maintain a compassionate outlook even in the face of adversity.

### *The Importance of Motivation*

The Buddhadharma is a method to train our mind that aims at eliminating afflictions—disturbing emotions and incorrect views. *Nirvāṇa* is true freedom—the elimination or cessation of these afflictions. Our physical, verbal, and mental efforts directed toward this goal are included in Dharma practice.

What is and is not Dharma practice is determined by our motivation. A spiritual motivation must be different from our ordinary wish to seek well-being by way of possessions, money, reputation, and the sweet words of our loved ones. In short, a spiritual motivation must go beyond seeking the happiness of only this life. There are three levels of Dharma motivation that correspond to the three capacities of practitioners: the first seeks a favorable rebirth, the second aims for liberation from cyclic existence, and the third aspires for full awakening in order to benefit all sentient beings.

We may wonder, “What about the happiness of this life? Everyone wants that.” That is true, but we often employ misguided means in our attempts to be happy and wind up creating more causes for misery instead. To get what we want, we may lie or cheat. When our efforts to procure what we desire are frustrated, we become angry and blame the people around us. We talk behind their backs, stir up others against them, and speak harshly to them. In this way wars begin, be they our personal wars against a colleague, acrimony among racial, ethnic, or religious groups, or wars between countries. In short, attachment to the happiness of this life brings about more problems in the present, creates the causes for future problems by transgressing our ethical values, and impedes our spiritual goals.

For these reasons, the demarcation between a Dharma action and non-Dharma action is whether our principal aim is only the happiness of this life. An activity done exclusively with strong grasping for the happiness of this life is limited in its scope. A motivation focused on my happiness now

cannot act as a cause for good rebirths, liberation, or awakening. In fact, it is antithetical to spiritual aims. On the other hand, actions motivated by kindness and compassion, actions done with the thought to abandon harming others, and actions done with the motivation to attain a good rebirth, liberation, or awakening enable us to transform even the simplest actions in our daily life into Dharma practice.

While the happiness of this life is not the principal aim, it comes as a byproduct of Dharma practice. By restraining from harmful actions, we immediately get along better with others. When we act with kindness and compassion, we feel good about ourselves and our self-esteem improves. Others reciprocate our kindness. Interestingly, people who relinquish the preoccupation with the happiness of only this life experience more happiness in this life.

A motivation seeking good rebirth, liberation, or full awakening helps us to overcome clinging attachment, hostility, confusion, jealousy, and arrogance, which are the source of so much unhappiness. We experience a great sense of purpose in our lives, and our minds become more peaceful now, even as we create the causes to actualize our long-term spiritual goals.

We can't evaluate the spiritual value of an action by how it looks on the outside because the same activity can be done with different motivations. Giving millions of dollars to charity with the aim of increasing our fame or wealth in this life is not Dharma practice, no matter how much acclaim we may receive, whereas giving a small donation with a kind heart is. Meditating with the motivation to reduce our stress will bring that result, but it is not Dharma practice because our motivation is focused solely on our own happiness in this life. To ensure that our practice brings the spiritual results we seek in the long term, we consciously generate a Dharma motivation before engaging in any activity, especially prior to meditating and giving or attending teachings.

Before going to work, take time to cultivate the motivation to help others. For example, think, "May the work I do serve the clients or customers and bring happiness in their lives. May I contribute to a feeling of harmony among my colleagues." Changing our motivation changes our actions, and that in turn changes the dynamics in our family and workplace. One person cultivating kindness has a strong effect on a group.

It is important to observe our mind and ensure that our kindness is sin-

cere. When I was a child in Lhasa, I had a parrot that would bite anyone who put his finger in its cage. My calligraphy teacher would give nuts to the parrot, who was always excited to see him. My teacher would put his hand in the cage and pet the parrot, and the parrot would eat nuts from his hand. I was jealous and wanted the parrot to like me just as much as it liked my teacher, so I gave it some nuts. The parrot took them to the other side of the cage and ignored me. It knew I didn't have a good motivation. One day I was so angry when it didn't respond to me that I hit it. Afterward, whenever I came near, it would cry out in fear. Even animals know if we're hypocritical or sincere.

Mindfulness and introspective awareness are indispensable to maintain a compassionate motivation or a motivation that looks beyond our immediate gain. Because we have strong habits underlain with the thought "I want what I want when I want it," we need to continually reinforce mindfulness of our values so we act ethically. With introspective awareness, we monitor our physical, verbal, and mental actions to make sure they correspond with our motivation. In this way, we treasure, protect, and enhance our noble motivations so that they will manifest in constructive actions.

A good intellectual understanding of the Dharma path helps us refine and improve our motivation. Although conceptual knowledge is not the final goal of the path, it gives us the tools to begin to counteract corrupt motivations. When we feel lazy, we will know to meditate on impermanence and the unsatisfactory nature of cyclic existence to instill a sense of urgency to practice. If we are angry and upset, we meditate on love or fortitude to calm and center ourselves.

## REFLECTION

---

1. Our motivation is the principal factor determining the value of our actions.
2. For an action to be Dharma, the motivation must be more than seeking our immediate happiness of this life.
3. We are not "bad" for seeking the happiness of this life, but if we seek only this, we often create the causes for misery now and in the future.

4. Expanding our hearts to care for others and training our minds in long-term motivations such as seeking fortunate rebirth, liberation, and full awakening bring a sense of inner fulfillment.
- 

### *Cultivating a Compassionate Intention*

Developing a genuinely compassionate attitude is based on being aware of others' duḥkha as well as their kindness. To be aware of others' misery, we must first be aware of our own, and to cultivate compassion that wishes ourselves and others to be free from duḥkha, we must identify the causes of duḥkha and know they can be eradicated. Ignorance—a state of unknowing that misapprehends how phenomena exist—is the root cause of duḥkha. “Unknowing” implies the existence of its opposite—a state of knowing or wisdom. This gives us confidence that it is possible to eliminate ignorance and overcome duḥkha. Understanding this, we naturally want to learn the path to bring it about. Once again, we see the Buddha's teachings on the four truths of the āryas, the framework for the Buddhist path. The first two of the four truths pertain to the cause and result of birth in cyclic existence—ignorance and suffering. The last two truths pertain to the cause and effect of freedom from that duḥkha—the path and the attainment of nirvāṇa.

As discussed earlier, there are three levels of duḥkha. The *duḥkha of pain* is the physical and mental pain that all beings abhor. The *duḥkha of change* refers to experiences and sensations that we usually identify as pleasurable. These are harder for ordinary people to identify as unsatisfactory, but when we think about them in greater depth, we see that they do not bring us lasting happiness, ultimate satisfaction, or security. In fact, they often leave us disillusioned or despondent.

The deepest unsatisfactory condition is the *pervasive duḥkha of conditioning*, the fact that our very existence is conditioned by ignorance and polluted karma. When the Buddha spoke about the disadvantages of duḥkha, he was principally referring to this form of duḥkha. When we can recognize the nature of cyclic existence in such terms, we will be able to develop the genuine aspiration to seek freedom from it.

Cultivating the wisdom that counteracts ignorance is the path to free-

dom. This wisdom that knows reality must be cultivated by the subtlest level of consciousness, a state of mind that is beyond our everyday, gross mental processes. Highest yoga tantra refers to eighty conceptions that are indicative of the gross level of mental processes. When these gross levels of mind gradually dissolve, we experience three increasingly subtler levels of consciousness—called the white appearance, red increase, and black near-attainment. When these, too, have dissolved, the innate mind of clear light dawns. It is at this subtlest level of consciousness that the wisdom that is the true antidote to our innate ignorance needs to be cultivated.

Therefore the demarcation between being fully awakened or imprisoned in cyclic existence is a function of this fundamental mind of clear light. If the fundamental innate mind of clear light remains obscured by the afflictions, we are in the state of cyclic existence. When the afflictions as well as their seeds and latencies have been removed from the fundamental mind of clear light, we attain liberation, and when the fundamental mind of clear light is freed from even the latencies of the afflictions, we attain buddhahood. So we can see that liberation and awakening are actually functions or states of the fundamental innate mind of clear light.

At first we understand *saṃsāra* and awakening in terms of our own *duḥkha* and our own minds, which inspires our renunciation of *saṃsāric duḥkha*. When we extend our perspective to see all other sentient beings in this light, compassion arises. Although we are not always aware of it, we are closely connected to all these sentient beings. Since we have been reborn for infinite lifetimes, they have been our parents and raised us with kindness in previous lives. In this life, too, our ability to stay alive depends on them. They grow our food, make our clothing, build our homes, treat our illnesses, and teach us everything we know. When we look deeply, we see that their kindness to us is limitless. Automatically, compassion and a sense of concern for their well-being arise within us.

Just as all of our experiences of mundane happiness—prosperity, security, friendship, or simply having enough to eat—come in relation to other sentient beings, the fruits of spiritual practice also rely on other beings. Cultivating compassion, practicing generosity, living in ethical conduct, and developing fortitude are all done in relation to other sentient beings. When we cultivate single-pointed concentration or wisdom, our underlying motivation has to do with other sentient beings. Likewise, our attainment of

buddhahood depends on sentient beings: it can only occur when we truly dedicate ourselves to their welfare. Without sentient beings serving as the object of our compassion and care, there is no way for us to create the causes for supreme awakening. Therefore we can see that when it comes to our own happiness, be it mundane or transcendental, the presence of other sentient beings is indispensable. Seeing this, Śāntideva wonders in *Engaging in the Bodhisattvas' Deeds* why we revere the buddhas but not sentient beings. Shouldn't we try to forsake our self-preoccupation and cultivate a sense of endearment and compassion toward them?

One line in the *Seven-Point Mind Training* (*Blo sbyong don bdun ma*) of Geshe Chekawa (1101–75) says that emptiness is the supreme protection. The idea is that when we are confronted with an obstacle, we should reflect upon the emptiness of the person who is harming, the act of harm, and ourselves as the recipient of the harm. By contemplating that none of these has any independent self-nature but exists in dependence on the other two, we are able to counter the obstacle. Similarly, meditating on compassion toward the agent of harm is a strong method to cut the intensity of our sense of injury. Instead of harboring malice toward that person, cultivating a sense of concern, caring, and compassion for him is the most powerful kind of protection.

The tremendous benefits of altruism are evident in both our daily lives and our spiritual lives. When we cultivate an altruistic attitude toward colleagues, family members, or even people whose actions are repugnant to us, immediately fear, insecurity, and anxiety decrease. This occurs because underneath fear and insecurity is a suspicious attitude that looks at others as a threat. When we view others as being truly like ourselves—as living beings who naturally aspire for happiness and wish to overcome suffering—and on that basis develop concern for them, it has the immediate effect of releasing us from the grip of tension, mistrust, and jealousy.

Here it is evident that right away altruism creates ease and joy within us. We can mentally relax, sleep more deeply, and the taste of our food even improves. In a sense, as a byproduct of cultivating an altruistic attitude and engaging in altruistic action, our own interests are served, everything from temporary happiness to the long-term joy of full awakening. All of these are a function and result of altruism. If we think and act with compassion now,

eventually, as buddhas, we will be able to benefit other sentient beings in the most effective way possible.

Although the wisdom realizing emptiness is very important on the path, it is bodhicitta that makes this realization a cause for us to attain the fully awakened mind of a buddha. Without great compassion and bodhicitta, the wisdom realizing emptiness alone cannot bring buddhahood.

## REFLECTION

---

1. The altruistic intention of bodhicitta encompasses all sentient beings. Generating it uplifts our hearts and gives meaning to our lives.
  2. Generating bodhicitta begins with wanting to free ourselves from the three kinds of duḥkha or unsatisfactory conditions—the duḥkha of pain, the duḥkha of change, and the pervasive duḥkha of conditioning.
  3. Like us, other sentient beings are afflicted by the three types of duḥkha. Like us, they want to be happy and avoid misery. In addition, they have been and will continue to be kind to us. Generate compassion wishing them to be free from all duḥkha.
  4. Based on this compassion, generate the altruistic intention to become fully awakened so that you can bring this about.
- 

### *Mind Training*

One of the practices I cherish and enjoy the most is mind training. Many texts have been written on this, and I myself often teach them. Mind training presents techniques for transforming adverse circumstances into the path. From a Buddhist perspective, all the misfortune we experience can be traced back to our own destructive actions—negative karma—which were motivated by our self-centered thought and self-grasping ignorance. The self-centered thought believes that our own happiness—including our own liberation—is more important than that of others, and

self-grasping ignorance misapprehends the actual way all people and phenomena exist.

At the moment, our idea of success is that all external events unfold according to our wishes and all people behave in accordance with our ideas. We are happy when our desires and needs are fulfilled, but when we encounter adversity, we crumble and revert to old habits like complaining, sulking, or attacking those who interfere with our desires.

However, if our happiness depends on the behavior of others, we have no recourse and little control when things do not go as we wish. But if our happiness is rooted in our own thoughts and actions, we have the means to determine the nature of our future experiences. Remembering this, we resolve to subdue self-centeredness and self-grasping ignorance and the actions that are motivated by them. In short, not only is it counterproductive and futile to blame others for our problems and unhappiness, it is also unrealistic: they are not the true cause of our misery. By accepting responsibility for our unrealistic expectations and our previous harmful actions, we can transform their undesirable results into factors that help us to progress on the path to awakening. We do not deliberately seek out suffering, but when it comes our way, we can benefit from it by practicing mind training.

One method to transform adversity into the path to awakening is to contemplate cause and effect by understanding that our difficult experience is the result of our own past destructive actions, which were motivated by afflictions. In this meditative technique, we reflect that the karmic seeds created by those actions could have ripened as horrible suffering in an unfortunate rebirth, but now they are ripening as a suffering we can actually manage. That brings a sense of relief: “This is nothing compared to what it could have been.” Then we understand that if we don’t like this suffering, we must stop creating the causes for it. We renew our determination to live ethically and abandon harmful actions, because we know that harming others also brings suffering upon ourselves.

The practice of transforming adversity into the path sees difficulties as opportunities to learn and grow. If someone criticizes us unjustly or if we experience a painful physical injury, we contemplate the benefits of problematic situations. Adversity strengthens our renunciation because we see no lasting happiness is to be found in cyclic existence. Our conviction in the law of karma and its effects becomes stronger because we see that difficul-

ties arise from causes that we ourselves created. Our compassion increases because we can empathize with the suffering of others. Bodhisattvas even look forward to problems because they are focused on the benefit that can be accrued from experiencing them with a virtuous attitude. That this can happen illustrates dependent arising: when we introduce new ways of thinking, our resultant mental state changes from unhappiness to appreciation. We are no longer constrained in our choice of emotional responses to difficult situations to fear, anger, or self-pity.

The mind-training practice instructs us on the development and implementation of the two bodhicittas. *Conventional bodhicitta* is the altruistic intention to attain awakening for the benefit of all sentient beings, and *ultimate bodhicitta* is the wisdom directly realizing the ultimate nature that relies on the extraordinary method of conventional bodhicitta. Practitioners of mind training generate compassion and conventional bodhicitta whether or not things are going well in their lives. They cultivate ultimate bodhicitta by meditating on emptiness. When doing so, in addition to using reason, they emphasize the practice of seeing all phenomena as like illusions as a way to approach the correct view of emptiness and to deal effectively with adversities. When we see a difficult situation as illusory and remember it is only an appearance to the mind—not an inherently existent problem—then our mind is more relaxed. Recalling impermanence also eases the mind. When we remember that everything is in a state of constant flux, we see that even our painful feeling is changing in every moment and will not endure forever.

Since we live in times when anger, wrong views, and violence abound, mind-training techniques are especially valuable. Sometimes we have difficulties procuring material requisites for life—food, shelter, clothing, and medicine. Other times we are beset by abuse and insult from others. Due to political or economic situations, we may find ourselves impacted by conflict or corruption against our wishes. We may face prejudice and oppression, and in extreme situations even war or genocide. Of course, if we can do something to avoid or escape horrible situations without harming others, we should definitely do it. But when we can't change our environment or the people in it, practicing mind training can lessen our misery and help us find inner strength we didn't know we had. If we don't practice mind training and remain stuck in our old views and emotional habits, these situations

torment us. We may even be in danger of giving up Dharma altogether due to discouragement.

Mind training enables us to turn all these situations around so that we can benefit from them. If we change our way of thinking to make it more in tune with reality, most of our mental unhappiness will be dispelled. Fear comes from the self-centered attitude that fabricates a thousand worst-case scenarios. Recognizing the scenarios are fictions of our own mind and are highly unlikely to happen alleviates stress. Even if those scenarios do occur, we will have inner strength to deal with them and know that resources also exist in the community to help us. Of course, if we take sensible precautions to avert harm or disaster, that is wise, but being crippled by unrealistic fears does not help us prepare for the future.

Many Tibetans practiced mind training when they were imprisoned or tortured by the Communist Chinese after 1959, and for this reason, few of them suffer from post-traumatic stress disorder. Cultivating the two bodhicittas through mind training was the chief practice I relied on when I became a refugee in 1959, at age twenty-four, and it is the practice I have relied on since to maintain a peaceful mind despite not being able to return to my homeland and seeing the suffering of my people, the destruction of our culture, and the denigration of Tibet's pristine environment.

Mind training is very useful for dealing with psychological problems as well, for it gives us alternate perspectives on situations, so that we can break out of the rusty mental and emotional patterns that perpetuate unhappiness. To understand these techniques properly, receiving teachings on them and then applying these instructions to our own situation are important.

## REFLECTION

---

1. Since problems are inescapable in cyclic existence, transforming adversity into the path to awakening is a skillful and useful technique to make every situation we encounter an asset to our spiritual practice.
2. How do we learn from misfortune? We practice thinking that unpleasant situations result from our own destructive actions and we make a strong determination not to perform those actions again in the future.

3. Consider other benefits we can derive from accepting an unpleasant situation—increasing our determination to be free from saṃsāra, enhancing compassion and bodhicitta, and developing the wisdom realizing reality.
- 

### *Eight Verses*

I recite the “Eight Verses of Mind Training” by Langri Tangpa (1054–1123) every day and regularly apply it to my life. When I’m delayed at an airport, I reflect on these verses, and before going into potentially difficult situations, I contemplate them as well. I will briefly explain this poem and encourage you to read it daily. Beyond just reading or reciting the eight verses, try to practice what they say by transforming your emotions and thoughts.

1. With the thought of attaining awakening  
for the welfare of all beings,  
who are more precious than a wish-fulfilling jewel,  
I will constantly practice holding them dear.

Imagine looking at sentient beings—friends, enemies, strangers, humans, animals, the sick, the healthy, the young, and the old—and seeing them all as equally precious. Such an attitude takes time to cultivate, but it is both realistic and beneficial because other sentient beings are a major source of our happiness and prosperity. Recall, as we explored above, that all the experiences that we value and seek depend upon cooperation and interaction with others. We depend on their efforts: they grow the food we eat, make the clothes we wear, construct the buildings and roads we use, and remove the trash we no longer want. Our feelings of comfort and security are due to sentient beings’ help and support. Our knowledge comes from those who teach us; our talents depend on those who encourage us and provide us with opportunities. Even our progress on the path and our Dharma realizations depend on others, for without cultivating the aspiration to attain full awakening for their benefit, we cannot progress on the bodhisattva path. At

buddhahood, too, buddhas' compassionate activities occur spontaneously and effortlessly in relation to sentient beings, who are the beneficiaries of their awakening influence. Without sentient beings, there would be no reason for bodhisattvas to work hard to become buddhas.

Our internal well-being depends on others as well. As we train our minds to see others in a more positive way, feelings of closeness and caring arise in us, which allow us to relax. On the other hand, if we dwell on others' faults and despise them, we are unhappy. A sense of goodwill toward others gives us inner strength in our daily lives, even in the face of difficulties.

When we experience pain, we are often weak-minded, feeling angry or overwhelmed because we lack control over a situation we did not choose. However, while we may feel some discomfort when empathizing with or feeling compassion for another's pain, it is accompanied by a certain inner stability and confidence, because we have accepted that pain voluntarily. Intriguingly, if we imagine taking on the suffering of others when we feel wretched, it alleviates our feelings of misery.

Buddhist teachings on compassion and altruism contain instructions such as, "Disregard yourself and cherish others." Understanding this advice properly is crucial, for it is given in the context of training the mind in compassion and used as an antidote to self-obsession. Compassion for others must be cultivated on the basis of self-respect, not out of guilt or feelings of unworthiness. We and others are equal in wanting to be happy and avoid pain. On that basis, it is suitable to care for and benefit everyone.

Self-preoccupation brings us misery: viewing everything—whether large or inconsequential—in terms of ourselves, we become overly sensitive, easily offended, irritable, and difficult to be with. The self-centered thought clouds our judgment and makes us foolish. If people are kind to us—even if they have the motivation to manipulate or deceive us—we like them. But if people who care about us point out one of our faults or try to prevent us from making a bad decision, we get angry. Skewing our interpretations of situations and people, self-centeredness is the cause of many mistakes and bad choices. Expanding our focus to care about others alleviates this unhealthy self-preoccupation and enables us to connect better with others. As social animals, healthy interactions with others gives meaning and purpose to our lives.

To be happy ourselves, we have to care about the welfare of others. We live in relation to others, and if they are distressed or oppressed, we will be surrounded by unhappy people, which is certainly not pleasant for us. If we care for others' well-being, they will be happy, and living among people who are content is more pleasant for us, too! In short, our own happiness comes about as a byproduct of genuinely caring for others. For this reason, caring for others' welfare is a wise way of caring for ourselves.

2. Whenever I am with others,  
     I will practice seeing myself as the lowest of all,  
     and from the very depth of my heart,  
     I will respectfully hold others as supreme.

Building on the instructions in the first verse to see others as precious, the second verse points out that our arrogance is an obstacle to doing this. Love and compassion are based on seeing others as worthwhile and respecting them. These virtues are unbiased and go beyond the ordinary attitudes of cherishing those who help us and feeling pity for those less fortunate. The foundation of impartial love and compassion is knowing that we and others are equal in wanting happiness and not suffering.

To remedy our arrogance and partiality, we practice seeing ourselves as the lowest of all. This must be understood in the proper context. It does not mean denigrating ourselves or succumbing to low self-esteem. Thinking we are worthless certainly can't lead to compassion for others.

Seeing ourselves as lower is done in relative terms. In general, human beings are considered higher than animals because we have the ability to distinguish virtue and nonvirtue and understand the long-term results of our actions, whereas the ability of animals to do this is limited. From another perspective, however, we could say that animals are superior to human beings because they kill only because they are hungry or to protect their life when they are personally threatened, whereas human beings kill for sport and pleasure or when caught up in an ideology or wrong views.

This verse encourages us to cherish others and appreciate their good qualities. When we invite guests to our home, we respectfully regard them as supreme, prepare a delicious meal for them, and serve them first. In our

workplace and family life, we respect those in leadership positions. Similarly, here too we regard others as “supreme” regardless of their or our social status.

When greed, hatred, or arrogance overwhelms us, we usually act without restraint, often in ways that we later regret. However, cultivating the thought that others are valuable and that we are just one among many people enables us to curb this behavior.

3. In all actions I will examine my mind  
and the moment an affliction arises,  
endangering myself and others,  
I will firmly confront and avert it.

The essence of the Dharma is liberation, the state of freedom from *duḥkha* and the afflictions that cause it. Afflictions are the real enemy that destroys our happiness, and the task of a Buddhist practitioner is to defeat this inner enemy. Confronting and averting afflictions does not mean suppressing them or pretending they do not exist, which can be psychologically unhealthy. Rather, we must notice afflictions and apply an antidote so that they cease, like tossing water on a fire to extinguish it.

Cultivating *introspective awareness*, which identifies afflictions the moment they arise, and *mindfulness*, which recalls their faults, helps us to exercise restraint, curtailing the harmful influence of the afflictions. Without applying mindfulness and introspective awareness, we risk giving afflictions free reign to wreak havoc in our lives. They will increase in strength to the point where they overwhelm common sense and reason, and we will find ourselves in dangerous, bewildering, or painful situations.

This verse describes how to apply antidotes to the afflictions at the level of manifest and felt experience. Since only very advanced practitioners are able to cut off afflictions at their root by meditation on emptiness, we must train ourselves in the easier technique of applying the antidote that counteracts a specific affliction. To counteract anger, we contemplate love and compassion; to oppose strong attachment, we reflect on the disgusting aspects or undesirable aspects of the desired object. To dissolve arrogance, we reflect on our shortcomings and all that we don’t know or understand to increase our humility. Whenever I have a little tingling sense of conceit, I

think of computers, about which I know next to nothing. That really calms my conceit!

## REFLECTION

---

1. Contemplate the disadvantages of the afflictions.
2. Make a strong determination to notice and counteract them.
3. Spend time familiarizing yourself with the antidote to each affliction so that you will be able to recall and apply it easily whenever that affliction begins to arise.

- 
4. Whenever I meet a person of bad nature  
 who is overwhelmed by negative energy and intense suffering,  
 I will hold such a rare one dear,  
 as if I had found a precious treasure.

Difficult people challenge our ability to maintain compassion and peace of mind. When we encounter such people, the temptation is to react with strong anger or even violence. Some people may simply appear to us as hateful or offensive, and we need to be especially mindful in their presence to counter the afflictions that arise in our mind. Not only should we restrain from disdain, this verse advises us to hold them dear.

We can apply this teaching to larger social issues. We may have prejudices about certain groups of people—for example, people branded as criminals—and not want to include them within the scope of our compassion. In the case of the incarcerated, it is important for us to release our biased antipathy and make an extra effort to give them a second opportunity to become accepted and productive members of society and restore their self-esteem.

Likewise, we may habitually ignore or avoid those with disabilities and the terminally ill. We may be afraid we will contract the illness—even if it is not contagious or the chances of our getting it are slim—or we may feel uncomfortable witnessing their suffering. In these cases, too, we need to

consciously cultivate empathy and compassion, remembering that we could one day find ourselves in similar circumstances and need the kindness of others.

Since we have the opportunity to overcome our deep-seated biases only by meeting people who are oppressed by negative energy and intense suffering, for us they are like precious treasures, giving us the chance to enhance our fortitude, empathy, and compassion. We may even be surprised by how much we can learn if we open our hearts and minds to their experiences.

5. When others, out of jealousy,  
mistreat me with abuse, slander, and so on,  
I will practice accepting defeat  
and offering the victory to them.

From a conventional legal viewpoint, if we are wrongfully accused, we feel justified in reacting with righteous indignation. However, vehement outrage is not in our best interest—it simply stirs up an already contentious situation, forcing people to form factions and making genuine communication impossible.

Accepting defeat does not mean we make ourselves the world’s doormat or accept responsibility for the wrongdoing of others. In some conflicts, capitulating could damage others or ourselves. Here, “offering the victory” to others means we don’t have to have the last word in an argument or continually correct every small error others make. We can become more open and tolerant and less vindictive. When we are calm, we can try to clarify the situation and reach a resolution suitable to all.

Some people like to quarrel and enjoy picking a fight. In such a situation, it is best not to bite the hook. When we refuse to argue, the squabble can’t continue. Giving the victory to others means restraining ourselves when we want to dominate others physically or verbally. Seeking to control or have power over others does not bring happiness to ourselves or others in the long term.

This is not to suggest that practitioners should simply yield to whatever harm or injustice is being inflicted upon them. In fact, according to the bodhisattva precepts, we should respond to injustice with a strong countermeasure, especially if there is danger that the perpetrator will continue act-

ing destructively in the future or if others will be adversely affected. We need to be sensitive to the situation, and know when to let a situation pass and when to confront it. But whether we say something to the person or let it go, it is vital that our own mind harbors no resentment. That is what we are releasing when we offer up the victory.

6. When someone I have benefited  
and in whom I have placed great trust  
hurts me very badly,  
I will see that person as my supreme teacher.

After helping someone, we usually expect at least a “thank you” in return, if not their help later on. Especially when we are close to someone, we tend to expect a lot from them. When, instead of responding to us in the way we would like, the other person is inconsiderate or inflicts harm, we often react with hurt and anger. Our sense of disappointment and betrayal is so deep that we may ruminate on the situation for a long time and plan our retaliation, wanting that person to hurt as much as we do. Such thinking can be all-consuming as we alternate between feeling sorry for ourselves and indignant toward the other person. However, taking revenge does not eliminate our pain; it only masks it temporarily by giving us a false sense of power. The only way to free ourselves from pain and anger is through forgiveness.

Forgiveness does not mean we condone the other person’s action. It simply means that we are tired of being hurt and angry and are releasing those emotions because they’re making us miserable. To do this, we practice seeing the other person as our teacher of fortitude. He is like a rare gem, because people who give us the opportunity to practice fortitude and forgiveness are rare.

Also helpful when we feel pained due to the betrayal of trust is to reflect that in the past we have behaved in such ways toward others. Although it is unpleasant to admit to ourselves, it is true that we have not always been exemplars when it comes to treating others fairly or keeping our promises and commitments. Since we have acted in hurtful ways to others, why are we surprised, incensed, or devastated when such behavior is done to us? It is wiser to accept the situation, forgive the other person, and work on making

ourselves more reliable and trustworthy in the future so that we avoid creating the karmic cause to receive such treatment ourselves.

In the future, instead of throwing a blanket of mistrust over everyone to protect ourselves from being hurt, we should slow down and evaluate which areas and to what extent each individual can bear trust. We trust the pilot of a plane, who is a stranger, with our life when we board the plane, but we may not trust him to do our accounting. We may trust a friend to speak to us honestly but not to fix our car. One reason we experience pain from broken trust is that we mistakenly trusted people in areas where they cannot bear trust, or perhaps we had expectations of them that they could not fulfill or never agreed to fulfill. In the future, it is wiser to get to know others better and not have so many unverified assumptions about how they will think or act. In addition, even when people make promises, circumstances change, and they are unable to keep them or no longer want to. Human beings make mistakes and change their minds. Our expectations have to include space for these possibilities as well.

## REFLECTION

---

1. Acknowledge your pain in situations when a betrayal of trust has occurred.
  2. Contemplate that in the past you have acted in ways that others saw as breaking a commitment.
  3. Extend compassion and forgiveness to yourself for such behavior.
  4. Extend gratitude to those who betrayed your trust for the opportunity they gave you to practice fortitude and forgiveness.
-

7. In short, I will offer directly and indirectly  
 every benefit and happiness to all beings, my mothers.  
 I will practice in secret taking upon myself  
 all their harmful actions and sufferings.

This verse describes the taking-and-giving meditation, where at the level of thought, we cultivate compassion so strong that we imagine taking upon ourselves the suffering of others as well as the afflictions and destructive karma that caused it. Upon taking these, we think that they destroy our own ignorance and self-centeredness. Then, with a loving heart, we imagine transforming our body, possessions, and merit into whatever others need and giving those to them. This meditation can be practiced in conjunction with our breathing, inhaling the suffering of others with compassion and exhaling with love all that they need to be happy.

To paraphrase the Kashmiri sage Paṇchen Śākyaśrī, “When I’m happy I dedicate this well-being for all sentient beings throughout space to be filled with happiness and its cause, merit. When I am miserable, may my suffering desiccate the suffering of all sentient beings. Through my experiencing difficulties, may all others be free of these.” These are the thoughts of a true mind-training practitioner, someone who is at peace with himself and with others.

Practicing “in secret” may be understood in two ways. It suggests that this practice of love and compassion may not be suitable for beginners and should be taught only when someone has a certain depth of courage and commitment to the mind-training practice.

“In secret” also refers to how we should do this practice—discreetly, with humility and integrity, without drawing attention to ourselves. Geshe Chekawa advises that we radically transform our inner thoughts and emotions but act normally. When a person with little knowledge succumbs to the temptation to show off and assumes an air of importance, it cheapens his or her true experience and deceives others. We should definitely avoid this.

8. Without these practices being defiled by the stains of the  
 eight worldly concerns,  
 by perceiving all phenomena as illusory,

I will practice without grasping to release all beings  
from the bondage of the disturbing, unsubdued mind and karma.

The eight worldly concerns consist of four pairs:

- Delight at receiving money and possessions and dejection at not receiving or losing them
- Delight with receiving praise and approval and dejection when receiving criticism or disapproval
- Delight with fame and a good reputation and dejection when infamous and notorious
- Delight with pleasurable sights, sounds, smells, tastes, and tangible objects and dejection with those that cause unpleasant feelings

These eight worldly concerns pollute our virtuous activities. For example, when I sit on the Dharma throne, if in the back of my mind there is the thought, “Did I give a good Dharma talk? Will people praise or criticize me?” my mind is polluted with the eight worldly concerns.

Perceiving all phenomena as illusory is one method to prevent the eight worldly concerns from contaminating our mind. Before we can see all phenomena as like illusions, we have to realize they are empty of inherent existence. The realization of emptiness does not come about through repeating this verse in our mind or chanting “empty, empty” while imagining nothingness. To develop a genuine insight into emptiness, we must employ reasoning to investigate how phenomena exist.

One of the most effective and convincing ways to understand that everything is empty of inherent existence is to contemplate dependent arising and interdependence. A unique quality of this approach is that it enables us to find the middle way between total nonexistence and independent or inherent existence. By understanding that things are dependent, we know they are not independent. Since independent existence and inherent existence are synonyms, we then know that they lack inherent existence. However, things are not totally nonexistent because they exist dependently. Contemplating in this way, we will not be lost in either absolutism or nihilism and will generate the correct view.

Once we gain insight into emptiness in our meditation, there is a new quality to our interactions with the world and the people in it. This is due to

our awareness of the illusory nature of veil objects we encounter in daily life. With an understanding of both the empty and the illusory natures of persons and phenomena, we can work with compassion to skillfully lead others on the path so they, too, will be free from the unsubdued mind of afflictions and karma and will experience the joy and peace of full awakening.

## 8 | A Systematic Approach

**A**WAKENING REFERS TO the ultimate qualities of the mind; the path to awakening eliminates the impediments and enhances the qualities leading to this state. Tibetans translated *bodhi*, the Sanskrit word for awakening, as *jangchup*. *Jang* means “to cleanse” and in this case refers to true cessation, the cleansing or elimination of afflictions, their seeds, and latencies. *Chup* refers to having cultivated all positive qualities. *Jang* highlights the buddhas’ abandonment of all faults, while *chup* denotes their qualities and realizations. Awakening is not granted by an external being but is attained through the process of cleansing and cultivating our minds. The potential to attain it is already within us: the nature of the mind is clarity and cognizance, so the capacity to perceive all phenomena is already there. We need to eliminate obstacles to doing so by realizing the empty nature of all phenomena.

Newcomers to Buddhism occasionally ask me what it feels like to be awakened. I don’t know, but I think it must be a sense of deep satisfaction and fulfillment due to knowing reality. To use an analogy: When we are ignorant about something, we feel uncomfortable and try to understand it. Once we have understood it and that obstacle has lifted, we feel tremendous relief. We feel pleased because we are fully confident that our understanding is correct. When we become fully awakened, we will directly realize all that exists, so imagine the deep satisfaction we will experience then. This gives us an idea of the mental joy a buddha experiences.

### *Paths for Spiritual Development*

To attain a buddha's qualities, we need to develop many diverse aspects of our body, speech, and mind. Throughout the ages, Buddhist masters have used various paradigms that set out a progressive path to do this, and in this chapter, we will explore some of these. These step-by-step presentations outline a systematic path that allows each person to practice at his or her own level and progress in a comfortable and gradual way.

We'll begin with Āryadeva's presentation of three stages of the path (CS 190):

First prevent the demeritorious;  
 next prevent self;  
 later prevent views of all kinds.  
 Whoever knows of this is wise.

This verse may be understood in two ways. In the first way, "First prevent the demeritorious" indicates the necessity of abandoning the ten paths of nonvirtue and practicing the ten paths of virtue in order to prevent an unfortunate rebirth and gain a fortunate one. "Next prevent self" means to abandon grasping at the coarse self of persons—a self-sufficient substantially existent person. While abandoning this grasping does not bring arhatship or buddhahood, it does stop the coarse afflictions, which is beneficial. "Later prevent views of all kinds" indicates realizing the emptiness of true existence and employing this wisdom to eradicate all afflictions from the root.

The second way to approach this verse is to start with the final goal and work backward. To attain full awakening, all cognitive obscurations must be eradicated, as indicated by "Later prevent views of all kinds." To eliminate these, it is not sufficient to contemplate the *object clear light*—the ultimate nature, emptiness—based on subtle dependent arising. From the viewpoint of highest yoga tantra, we must make manifest the *subject clear light*—the subtlest mind that arises after the eighty conceptions and three appearances have dissolved—and use it to realize suchness. Prior to this, we must realize emptiness and eradicate the afflictive obscurations, as indicated by "next prevent self." In order to do this, we need a continuous series of

good rebirths in which we can practice the Dharma. The way to attain these is to “first prevent the demeritorious,” the ten paths of nonvirtue.

In *Lamp of the Path*, Atiśa sets out three stages of the path according to three levels of practitioners: great, medium, and initial. The path of the person of great spiritual development eliminates the cognitive obscurations so that he or she can become a buddha in order to benefit all sentient beings most effectively. This individual aims for the highest, longest-lasting bliss and peace for self and others—full awakening—and thus wants to extinguish duḥkha and its causes for both self and others. The cognitive obscurations that impede full awakening are the subtle latencies of ignorance and the appearance of inherent existence that they create. To remove these, a person must cultivate bodhicitta, practice the six perfections, and unite serenity and insight on subtle emptiness. This is the path of the practitioner of great capacity.

The path of the person of medium spiritual development eliminates the afflictive obscurations—the afflictions, their seeds, and polluted karma that cause rebirth in cyclic existence. This person seeks liberation—the peace of nirvāṇa that is free from the cycle of uncontrolled rebirth. To do this, he or she practices the three higher trainings motivated by the determination to be free from cyclic existence and attain liberation.

The path of the person of initial spiritual development eliminates coarse negativities, such as the ten paths of nonvirtue—killing, stealing, unwise and unkind sexual conduct, lying, divisive speech, harsh words, idle talk, covetousness, malice, and wrong views. These ten cause unfortunate rebirths in the future as well as constant problems in this life. The beginning practitioner seeks the happiness in cyclic existence that comes from pacifying her gross mistaken thoughts, words, and deeds.

To express this path in a forward sequence, a practitioner must first and most urgently reduce his or her gross afflictions and harmful actions and practice the path of the ten constructive actions. Although his ultimate goal may be nirvāṇa or awakening, he must first deal with the most blatant obstacles to happiness by taking a defensive stand against them. He must especially prevent taking an unfortunate rebirth that would forestall his being able to practice the path for a long time.

The second level is the actual combat, going on the offensive to destroy the afflictions. A practitioner who is victorious over them attains nirvāṇa.

The third step is to remove the latencies or stains left on the mindstream by the afflictions. Having eliminated these, a practitioner becomes a fully awakened buddha.

LEVEL OF PRACTITIONER	THEIR DIRECT AIM	WHAT THEY PRACTICE	WHAT THEY ELIMINATE
Initial	Fortunate rebirth	Pacifying coarse harmful thoughts, words, and deeds and practicing the ten virtues	Ten nonvirtues
Middle	Liberation (arhatship)	The three higher trainings	Afflictive obscurations: afflictions, their seeds, and polluted karma causing rebirth in <i>saṃsāra</i>
Advanced	Full awakening (buddhahood)	The six perfections, four ways of gathering disciples, Vajrayāna	Cognitive obscurations: latencies of afflictions and appearance of inherent existence

These three levels or capacities of practitioners form the basic outline for the presentation of the teachings in this book. Certain meditations are prescribed to cultivate the motivation specific to each level and other meditations to actualize the intended result of that motivation. The meditations on precious human life, death and gross impermanence, and the possibility of taking an unfortunate rebirth help us generate the aspiration to have a fortunate rebirth. We attain such a rebirth by taking refuge in the Three Jewels and observing the law of karma.

Meditations on the first two of the four truths inspire the aspiration for liberation within us. Generating true paths by practicing the three higher trainings will bring about true cessations and liberation.

Meditation on the seven-point cause-and-effect instruction and the meditation on equalizing and exchanging self and others are the methods to generate bodhicitta, the aspiration for full awakening to benefit all sentient beings. The method that leads to awakening is the practice of the six perfections, four ways of gathering disciples,<sup>43</sup> and Vajrayāna.

LEVEL OF PRACTITIONER	MEDITATIONS THAT LEAD TO THE MOTIVATION OF THIS LEVEL	MOTIVATION	PRACTICES DONE TO ACTUALIZE THE RESULT OF THIS MOTIVATION
Initial	Precious human life, death and impermanence, unfortunate rebirth	To have a fortunate rebirth	Take refuge in the Three Jewels, observe the law of karma and its effects
Middle	The first two truths: true <i>duḥkha</i> and true origins	To attain true cessation, <i>nirvāna</i>	True paths: the higher trainings in ethical conduct, concentration, and wisdom
Great	Equanimity, seven-point cause-and-effect instruction, equalizing and exchanging self and others	Bodhicitta	Six perfections, four ways of gathering disciples, Vajrayāna

There are two types of initial-capacity practitioners, one superior and the other inferior. Superior initial-capacity practitioners seek higher rebirth as a human or a celestial being. Although they also seek the betterment of this life, their main focus is to create the causes for fortunate future lives. Lesser individuals think only of the betterment of this life and do not prepare for future lives, although they may still create virtuous karma through being generous, living ethically, and so on.

Those of you who grew up in cultures where the belief in rebirth is not prevalent may initially come to Buddhism with the motivation simply to improve the quality of this life. At the moment, you are ordinary initial-level individuals who would like to experience less stress and anger, better relationships, improved health, and more peace of mind in this life, and you look to the Buddha's teachings as a way to that end. By using the Dharma to become a more balanced person, you will engage in fewer destructive actions and more constructive ones. As time goes on, you will learn about the existence of future lives, cyclic existence, liberation, awakening, and the paths leading to them. As you think about these topics and gain conviction in them, your perspective will expand, and you will want to create the causes to have a peaceful death and a good rebirth. You will become aware of the dangers of cyclic existence and aspire to free yourself from it. As your heart

opens to others more and more, the thought of attaining awakening for the benefit of all beings will grow in your heart. In this way, you will progress on the path in an organic way.

While Buddhism speaks about the importance of preparing for future lives, this does not mean we should disregard this life. If we want to have favorable future lives, properly taking care of this life by being an honest person who refrains from harming or cheating others is important. By keeping good ethical conduct, we will have fewer problems in this life and will create the causes for fortunate future lives.

The paths practiced by these three levels of practitioners are not separate paths. One person passes through all three stages as he or she progresses. To remove the cognitive obscurations preventing full awakening, we first must remove afflictive obscurations and free ourselves from the sufferings of cyclic existence. To attain liberation by severing the afflictions from their root, we must first rein in the attachment to the happiness of this life, which stimulates us to engage in the ten destructive paths of action. In this way, the practitioners of initial, middle, and advanced capacities refer to one person at three different times in their spiritual journey. Such a practitioner gradually and sequentially develops the three different levels, each one indispensable for those that follow.

On the other hand, the practice for each of these three individuals is complete. If, at present, we wish only for a fortunate rebirth, we will find a complete method to actualize our aspiration in the path of the initial-capacity practitioner. On the basis of first practicing the initial level, middle-level practitioners will find a complete path to fulfill their aspiration for liberation in the practice of the middle level. If we seek full awakening, we will proceed through all three stages by first practicing the first two stages, which will lead us to practice the advanced path. For advanced practitioners, the first two paths are said to be “paths *in common with* initial-capacity practitioners and middle-capacity practitioners” because they are not exclusively for the initial- and middle-capacity practitioners.

“In common with” also indicates that advanced practitioners aiming for full awakening do not practice the initial and middle paths exactly the same way as initial and middle-level practitioners do. While initial-level practitioners are satisfied with aspiring to improve the quality of their lives in cyclic existence, practitioners aiming for full awakening have a more exten-

sive aspiration right from the beginning. Although they lack the realization of bodhicitta, they do all the initial and middle-level practices with some degree of bodhicitta.<sup>44</sup>

As a commentary on the *Lamp of the Path*, Tsongkhapa's *Lamrim Chenmo* followed Atiśa's presentation. The Sakya tradition also follows Atiśa's sequence when it presents abandoning four attachments. The first Sakya patriarch, Sachen Kunga Nyingpo, in "Parting from the Four Clingings" says:

If you cling to this life, you are not a Dharma practitioner;  
if you cling to the three realms, that is not renunciation;  
if you cling to self-interest, you are not a bodhisattva;  
if grasping arises, it is not the view.<sup>45</sup>

Here, we begin by freeing ourselves from the eight worldly concerns that focus on the happiness of only our present life. By abandoning them, we will become an actual Dharma practitioner. We then cultivate renunciation of saṃsāra and the determination to be free from birth in all three saṃsāric realms. Contemplating that all other sentient beings suffer in saṃsāra just as we do, we broaden our perspective and generate the altruistic intention of bodhicitta. To fulfill bodhicitta's aim of attaining full awakening, we must gain the correct view of the two truths and abandon all grasping at the two extremes of inherent existence and total nonexistence by realizing emptiness. In this way, this short verse from the Sakyapas reflects the same approach of three ascending levels of motivation for Dharma practice presented by Atiśa.

The fifth-century Theravādin master Buddhaghosa thought along the same lines when he described inferior, medium, and superior levels of ethical conduct (Vism 1.33):

. . . that [ethical conduct] motivated by craving, the purpose of which is to enjoy continued existence, is inferior; that practiced for the purpose of one's own deliverance is medium; the virtue of the perfections practiced for the deliverance of all sentient beings is superior.

Ethical conduct and other Dharma practices motivated by a desire for a good rebirth in cyclic existence, while virtuous, are inferior. Practices done with the wish to liberate ourselves from cyclic existence are excellent but not supreme; the perfections that are done with the wish to liberate all sentient beings are superior. While initially our motivation may be limited, as our wisdom and compassion expand, our motivation will as well.

### *The Four Truths and Three Levels of Practitioners*

Describing the four truths from the perspective of the three levels of practitioners helps us understand the motivation, aim, and practice of each level.

For an initial level person who aspires for a good rebirth and happiness in cyclic existence, true *duḥkha* refers to coarse suffering, especially the misery involved in unfortunate rebirths. The true origins of this *duḥkha* are the ten nonvirtues and the coarse afflictions that motivate them, such as covetousness, malice, and wrong views. True cessation is the temporary freedom from an unfortunate rebirth, and the true path to attain that is abandoning the ten nonvirtues and engaging in the ten virtues.

For a person of middle capacity, who aspires for liberation, true *duḥkha* is the five aggregates of a *saṃsāric* being that are taken under the influence of afflictions and karma. True origins are the afflictive obscurations that cause rebirth in cyclic existence. True cessation is the freedom from all such rebirth, or more precisely the ultimate nature of the mind that has abandoned all afflictive obscurations by applying the true paths. True paths are *āryas'* realizations held by the wisdom that directly realizes emptiness.

For a person of advanced capacity, who aspires for full awakening, true *duḥkha* is one's own lack of omniscience and the *duḥkha* of all sentient beings. True origins are the cognitive obscurations and the self-centered attitude. True cessation is the cessation of cognitive obscurations at buddhahood, or more exactly the ultimate nature of the mind that has abandoned all cognitive obscurations by applying the true path. True paths are *āryas'* realizations held by the wisdom directly realizing emptiness and *bodhicitta*.

### *More Than One Approach*

Our ultimate goal is to attain buddhahood and become the Three Jewels ourselves. The Dharma Jewel consists of the last two of the four truths—

true paths and true cessations. Our mind becomes the Dharma Jewel when we gain true paths and actualize true cessation. At this time we become the Saṅgha Jewel. When, motivated by bodhicitta, we fully actualize all true cessations, we become the Buddha Jewel. Thus, to understand the meaning of refuge in the Three Jewels, we need a deeper understanding of the Dharma Jewel, and this is based on understanding the four truths. Full understanding of the subtle aspects of true cessations depends on understanding the two truths—veil and ultimate—especially the ultimate truth, the emptiness of inherent existence.

While Atiśa's *Lamp of the Path* presents one sequence of steps to become the Three Jewels, the Prajñāpāramitā sūtras present another. Maitreya's *Ornament of Clear Realizations*, a treatise on the Prajñāpāramitā sūtras, presents this sequence by means of eight clear realizations<sup>46</sup> that are characterized by seventy topics. The first clear realization—the exalted knower of all aspects (omniscience)—has ten principal characteristics that define a buddha's mind: bodhicitta, instructions, and so forth.<sup>47</sup> The topic of instructions begins with the two truths, which encompass all phenomena, followed by the four truths, which are the objects of practice. After this, taking refuge in the Three Jewels is discussed, followed by nonclinging, tireless effort, and so forth.

Haribhadra wrote *Clear Elucidations* (*Sphuṭārthā*), the most widely used commentary on the *Ornament of Clear Realizations*. In it he speaks of two kinds of practitioners: those of sharp faculties who are very intelligent and deeply analyze the meaning of the teachings, and those of more modest faculties who follow due to faith in the Buddha and the scriptures. The principal audience for Haribhadra's commentary is sharp-faculty practitioners, and the above sequence is especially useful for them.

The audience for Atiśa's *Lamp of the Path* is different. He wrote this text at the behest of the prince Jangchup Ö, who requested a teaching that was suitable for Tibetans—the vast majority of whom were Buddhists. He wanted instructions they could easily put into practice that would enable Buddhism to flourish once again in Tibet. In response, Atiśa outlined the sequence of the three levels of practitioners.

When I give general instructions on the Buddhadharmā to educated people who are new to Buddhism, I prefer to use the sequence in the *Ornament of Clear Realizations* to present the overall structure of the Buddhist path, starting with the compassionate bodhicitta motivation and moving on to

the instructions. This helps them to understand how various points fit into the framework. While I can't go into depth on these points with beginners, everyone appreciates the notion of compassion, so I speak of that first. I then briefly introduce the two truths so that people will be aware that the way things appear and the way they actually exist differ. From there, I go onto the four truths of the āryas, which establishes the framework for the path to liberation. In this context, turning to the Three Jewels for refuge and guidance makes sense. For this reason, in this series taking refuge in the Three Jewels will be presented in conjunction with the four truths rather than in the context of the initial-level practitioner, as in the lamrim presentation.

I encourage those of you who have completed philosophical studies and appreciate the sequence of instruction in the *Prajñāpāramitā sūtras* and the *Ornament of Clear Realizations* to integrate that sequence into your lamrim teachings. This will benefit your students. I also suggest you teach the tenet systems. Lamrim is more practical, while tenets are more academic. If your students study both, they will develop a clear sense of purpose for Dharma practice and a deeper understanding of emptiness.

A teacher will vary his or her approach depending on the audience. When Nāgārjuna taught *Precious Garland*, his audience was a king—a person who was interested in the Dharma but also had worldly responsibilities. To him, he first presented the method to secure fortunate rebirths followed by the method to attain liberation. On the other hand, when he taught *Commentary on Bodhicitta (Bodhicittavivarāṇa)*, which explains a verse from the *Guhyasamāja Root Tantra*, the audience was of advanced capacity—specifically practitioners of highest yoga tantra—and this approach suited them.

When instructing a large group, spiritual mentors give teachings designed for the public. Here they usually follow a particular text and give a broad presentation of the path to address the needs of many people in general. When teaching a small group or an individual, spiritual mentors give instructions according to the needs of those specific individuals. It is important not to confuse these two situations and think that because our spiritual mentor gave one instruction to a specific individual that everyone should follow it.

The order of presenting topics may differ as well. The *Ornament of Clear Realizations* briefly mentions the wisdom realizing emptiness and then pro-

ceeds to bodhicitta; the *Commentary on Bodhicitta* presents emptiness first, followed by the cultivation of bodhicitta and the bodhisattva practice. This is the approach for intelligent disciples. Although bodhicitta comes later in the lamrim sequence, Śāntideva teaches it at the beginning of *Engaging in the Bodhisattvas' Deeds* so that all subsequent meditations and practices will be directed toward awakening.

No matter which order we learn bodhicitta and emptiness, it is helpful to cultivate an understanding of both even as we emphasize the practices of the initial and middle levels in our personal practice. In this way, our meditation on precious human life, death and impermanence, and so forth will be supported by some degree of bodhicitta and the wisdom understanding emptiness. In addition, our meditations on the topics of the initial and middle levels will increase our appreciation of and urgency to cultivate bodhicitta and practice the six perfections.

### *Teachings for a Contemporary Audience*

Atiśa composed the *Lamp of the Path* with the needs of eleventh century Tibetans in mind. He did not go into detailed philosophical debates or extensive reasonings when writing that text because his audience already believed in the Buddha's teachings. They simply required a concise, straightforward teaching explaining how to practice from the beginning of the path up to awakening.

With Buddhism now spreading internationally, the audience is very different. These people need to hear the rational arguments proving rebirth, liberation, the existence of the Three Jewels, and karma and its effects that are found in the treatises of the great Indian sages. Without a clear understanding of these topics, their comprehension of the path to awakening will not be complete.

I read some lamrim notes written by the respected Geluk master Tseten Shabdrung (1910–85). He commented that when we contemplate a lamrim topic, we should integrate points from the major treatises on the Perfection of Wisdom and the Middle Way into our reflection. In this way our study of the great philosophical treatises and our lamrim practice will complement each other. This is the method used by the Kadam Shungpawa—the Kadam “great text” tradition headed by Geshe Potowa.<sup>48</sup>

An understanding of the principal subjects studied in the great monastic universities—the Perfection of Wisdom, Middle Way, Reasoning and Epistemology, Abhidharma, and Vinaya—is most helpful to facilitate our practice of lamrim. When Tibetans first began teaching Westerners, very few philosophical texts were translated into Western languages. Nowadays, more translations and study guides are available, making the study of these classical texts possible.

Some people may have heard that since lamrim encompasses all the teachings of the Buddha, it is sufficient to rely on it alone. This is true in the sense that the lamrim summarizes the meaning of the great treatises so that someone who has spent years studying them can easily identify the important points for meditation. Those who have not studied these important texts will benefit from learning something about them.

Modest-faculty disciples rely more on faith, seeing the Buddha as a perfect spiritual master and lineage teachers from Nāgārjuna up to their own teacher as reliable spiritual mentors. These people are not as interested in in-depth study, whereas those of sharp faculties are curious and want to learn more. They question the meaning of the teachings they hear and read; they want to know why a particular sage explained the Dharma the way he did. Buddhism encourages us to investigate and explore. People who are curious, with a genuine wish to investigate the Dharma, are real followers of the Buddha. For these students, lamrim alone is not sufficient; they must rely on the great treatises.

If we lack proper understanding of the exact meaning of emptiness, true cessations, nirvāṇa, and awakening, what is the basis of our devotion? If we understand how it is possible to eliminate ignorance and afflictions completely, our conviction in the Buddha and reliance on his teachings will be firm. Without learning and contemplating the Buddha's teachings, it is difficult to clearly distinguish the Buddhist path from paths espoused by other teachers, and as a result our faith in the Three Jewels will not be firm. We see people who change beliefs from one day to the next. Although they may attribute their changeability to open-mindedness, it seems to me that it is due more to confusion. If they learn and contemplate the Buddha's teachings, especially the philosophical treatises that describe emptiness and dependent arising, this confusion will give way to clarity.

The lamrim teaches us how to go for refuge in the Three Jewels by under-

standing their unique qualities that are not possessed by other spiritual guides. When we have such an understanding, we naturally take refuge in the Three Jewels: no one needs to encourage us to do so, and no one can discourage us from taking refuge in them.

We may hear about pith instructions and ear-whispered teachings that are transmitted orally from teacher to disciple.<sup>49</sup> Do not think that these instructions are separate from Nāgārjuna's texts and the other classical treatises. Whatever is in the ear-whispered teachings and the pith instructions is also in these texts. There are no secret teachings apart from what we study in the classical treatises. If we don't know how to integrate the teachings in the great treatises into our practice, the fault is our own, and it is up to us to rectify it.

### *Value of the Stages of the Path*

The lamrim's gradual, systematic approach to the path has many advantages.

*We will see that the Buddha's teachings are not contradictory.* If we compare the Buddha's advice to various disciples, we may think he contradicted himself. In some sūtras the Buddha said there is a self, in others he spoke of selflessness. In some scriptures he spoke of the importance of abandoning alcohol, in others he allowed it in particular, rare circumstances.

These differences occur because the Buddha guided sentient beings with vastly different dispositions and tendencies, at different levels of the path. His motivation was the same in all instances: to benefit the person and to gradually lead him or her to awakening. To fulfill this purpose, he tailored his instructions to suit the current capacity of each disciple. Saying that a self exists was a skillful way to guide people who fear selflessness. Later, when they were more spiritually mature, he clarified that there is no inherently existent self. For the vast majority of people, consuming intoxicants harms their spiritual practice and should be given up. For highly accomplished tantric practitioners who have renunciation, bodhicitta, and the wisdom realizing emptiness, consuming a small amount of alcohol may benefit their meditation in particular circumstances.

This advice is not contradictory because the Buddha's motivation is the same in all cases. If a person walking on a narrow path with precipices on both sides is too close to the left precipice, a skillful guide will call out, "Go

right!” But if she is too close to the right precipice, the guide will direct, “Go left!” Taken separately, these may seem to be contradictory instructions. However, when we understand the context and the long-term purpose, we see there is no contradiction and only benefit.

Not only does the Buddha give different teachings for different individuals, his advice to one person will vary according to the circumstance at different times, depending on the distortions most prominent in that person’s mind. Initially, someone may conceive of the self as a permanent, unitary, independent soul, in which case the Buddha will teach how to refute such a self. If at another time in her practice, she may conceive of the external world as independent from perception, the Buddha will teach the Citta-mātra view that there is no external world distinct from the mind to help her dissolve that false grasping.

*We will comprehend all of the Buddha’s teachings as personal instructions.* Some people mistakenly believe some scriptures are for study and others for meditation and practice. When we understand the step-by-step approach of the lamrim, we see that all teachings relate in one way or another to subduing defilements and cultivating good qualities and thus are relevant to our practice. Our mind is so complex and the afflictions are so powerful that one practice alone cannot eliminate all afflictive mental states at once. The stages of the path is a systematic strategy for gradually overcoming destructive attitudes and emotions by instructing us in a variety of topics and meditation techniques to develop many different aspects of our minds.

Although the realization of emptiness is the ultimate antidote to all afflictions, at the beginning of the path our understanding of emptiness is too weak to be an effective remedy. Applying some of the techniques that are specific to each affliction, such as those found in the mind-training teachings, enables us to subdue our gross anger, attachment, and confusion. This more pacified state of mind, in turn, is more conducive to meditating on emptiness.

The broad layout of the lamrim enables us to understand how all the various teachings fit together in a cohesive whole designed for one person to practice. This helps us to avoid pitfalls and detours, and to know how to integrate all the key points of the path into our practice in a balanced way so that we will be able to fulfill our spiritual aspiration.

*We will discover the intention of the Buddha.* The Buddha’s ultimate intention was to fulfill all beings’ aspirations for fortunate rebirth, liberation, and

full awakening. The structure of the stages of the path clearly illustrates how to actualize these aims.

*We will be deterred from the great error of rejecting the Buddha's teachings.* Since buddhas and bodhisattvas teach all aspects of the path to lead diverse sentient beings to awakening, we should respect all of the Buddha's teachings. Nowadays we unfortunately find people who criticize not only other religions but also other Buddhist traditions. While debate increases our understanding, deprecating teachings that are helpful to others is not beneficial. If we say we respect the Buddha and want what is best for others, how can we disparage teachings meant for disciples whose dispositions and interests differ from our own?

Knowledge of the stages of the path enables us to understand and respect the practices of other Buddhist traditions as well as the people who engage in them. Knowing the three spiritual aims of sentient beings—fortunate rebirth, liberation, and awakening—as well as the meditations to cultivate these aims and the meditations to actualize them, we will know where in this schema a specific teaching belongs.

### *Two Aims and Four Reliances*

In this chapter, we have focused on the broad perspective of the lamrim and how that gradually leads a person to full awakening. Now we will synthesize the path into two aims and then examine the four reliances that are important for fulfilling the lamrim's ultimate purpose, the attainment of full awakening.

Nāgārjuna says (RA 5–6):

Due to having faith, one relies on the practices;  
 due to having wisdom, one truly understands.  
 Of these two, wisdom is foremost,  
 but faith must come first.

One who does not neglect the practices  
 through attachment, anger, fear, or confusion  
 is known as one with faith,  
 a superior vessel for the highest good.

These verses express the two aims of the Buddhadharmā—the attainment of higher rebirth and the highest good (liberation and awakening). Attaining a higher rebirth corresponds to the initial motivation in the lamrim, while attaining the highest good fulfills the middle or advanced motivation. As the means to attain these, the Buddha taught two methods: faith and wisdom respectively. The obstructions to these two goals are two kinds of ignorance: the ignorance of the law of karma and its effects and the ignorance of the ultimate nature of reality. To eliminate these, the Buddha instructed us to cultivate understanding of two types of dependent arising: the understanding of causal dependence and the understanding of dependent designation.

By meditating on causal dependence, we understand that our happiness and suffering arise from virtue and nonvirtue. Faith is required to accept the subtle details of karma and its effects, which is an obscure phenomenon that cannot be known directly by our senses. With trust in karma and its effects, we will rein in gross attachment, anger, fear, and confusion, and thus will cease nonvirtuous actions and engage in virtuous ones. In this way, we will attain a fortunate rebirth in the future.

The understanding of dependent designation leads to the realization of emptiness. That wisdom is the antidote to the ignorance of the ultimate nature and will eradicate all obscurations completely. By cultivating our understanding of the complementary nature of dependent designation and emptiness, we will be able to attain liberation and awakening.

AIM	MEANS	OBSTACLES THAT ARE PACIFIED	MEDITATION ON DEPENDENT ARISING
Higher rebirth	Faith	Ignorance of karma and its effects, gross afflictions	Causal dependence leading to ethical conduct
Highest good	Wisdom	Ignorance of the ultimate nature of reality, all obscurations	Dependent designation, complementing the realization of emptiness

There is a lot to contemplate in these two short verses by Nāgārjuna. When we examine them carefully, we find that they contain the entire path to awakening.

Of the two purposes for engaging in the Buddhist path, the highest good is foremost. To attain it, the wisdom realizing the empty nature of phenomena is essential. This wisdom is not gained through blind belief or through prayer but by reason. The four reliances—found in the *Sūtra on the Four Reliances* (*Catuhpratisaraṇa Sūtra*) and the *Sūtra Unraveling the Thought*—guide us in doing this.

1. Rely principally not on the person but on the teaching.
2. With respect to the teaching, rely not on mere words but on their meaning.
3. With respect to the meaning, rely not on the interpretable meaning but on the definitive meaning.
4. With respect to the definitive meaning, rely neither on sense consciousnesses nor on conceptual consciousnesses but on the nondual wisdom that realizes emptiness directly and nonconceptually.

The four reliances illustrate a gradual progression in a practitioner's development. Here “rely” means to mentally rely on that which is a source of reliable knowledge, nondeceptive and reasonable to trust. Throughout the path, we must rely on a teacher, learning first the words of the teaching and then understanding their meaning. Regarding the meaning, we rely first on the meaning of the interpretable teachings that describe the stages of the path and the coarser views of selflessness, and then the meaning of the definitive teachings that describe the complete view of emptiness. When we meditate on emptiness, our initial understanding is with a conceptual consciousness. Through familiarization with emptiness, we break through the veil of conception and attain direct, nonconceptual, nondualistic perception of emptiness.

To explore these in more depth:

1. *Rely principally not on the person but on the teaching.* Here “person” refers chiefly to ordinary beings who teach many different paths that they have heard from others, misunderstood, or made up. Rather than depend on people whose minds are under the influence of ignorance, it is wiser to depend on scriptures taught by the Buddha that explain nondeceptive methods to attain awakening. Instead of using “The person who taught this is exceptional” as the reason to follow a teaching, we should apply reason to examine the words and meaning of the teaching.

Even with the Buddha, not everything he said should be taken literally. Sometimes he taught a provisional view as a skillful means to lead a particular individual or group to the final path. To some people, he taught the tathāgatagarbha theory, which, taken literally, seems to affirm the existence of a permanent self. However, the meaning in the Buddha’s mind was the ultimate nature of the mind—its emptiness of true existence—which is permanent. Although such teachings are not to be taken literally, they are considered nondeceptive in that the meaning in the Buddha’s mind is true and reliable. Similarly, when the Buddha taught nihilists that there is a self-sufficient substantially existent person, his words are not to be taken literally. He taught this so that they would not deny karma and its effects and would understand that there is a self that carries karma to future lives and experiences its effects.

2. *With respect to the teaching, rely not on mere words but on their meaning.* If we are attentive to only the words of a teaching, we may neglect its meaning. This inhibits its ability to guide us on the right path. Instead of thinking we understand a topic simply because we can use complex academic terminology and language, we should use our intelligence to understand the meaning of the teaching. We should also focus on the meaning in the Buddha’s mind, not on words that can be misunderstood when taken literally.

When we want to understand the nondeceptive mode of existence of all phenomena, rather than rely on teachings about bodhicitta and the Buddha’s qualities, we should rely on teachings on the emptiness of inherent existence, which is the object of exalted wisdom. This wisdom has the ability to cut the root of saṃsāra. Furthermore, we should rely on reason and cultivate reliable cognizers—nondeceptive minds that know their object correctly.

While the four reliances are taught specifically in relation to realizing emptiness, the first two apply to learning any Dharma topic. Instead of being charmed by an ordinary person’s charisma, we must listen to what he or she teaches. In addition, rather than becoming enchanted with lofty sounding words, we must contemplate their meaning and try to understand them.

3. *With respect to the meaning, rely not on the interpretable meaning but on the definitive meaning.* “Interpretable meaning” refers to veil truths—which include all the objects that exist and function in the world. To understand

the liberating teachings on emptiness, we must rely not on texts that speak about veil truths such as the defects of cyclic existence or the benefits of bodhicitta. While these teachings are important and necessary to actualize the path to full awakening, they do not express the ultimate nature. We should also avoid taking veil truths—such as the multifarious objects of the senses—as the true mode of existence but understand that they mistakenly appear inherently existent, although they are not. The meaning to rely on is phenomena’s subtlest mode of existence, their mere absence of inherent existence. Since all phenomena lack inherent existence, their emptiness is called the “one taste” of all phenomena.

4. *With respect to the definitive meaning, rely neither on sense consciousnesses nor on conceptual consciousnesses but on the nondual wisdom that realizes emptiness directly and nonconceptually.* When progressing on the path to liberation in accord with the Buddhadharmā, we should not be satisfied with conceptual understanding of emptiness but continue to meditate until we gain an unpolluted wisdom consciousness that directly and nonconceptually realizes emptiness. From the perspective of this wisdom, there is no dualistic appearance of a cognizing subject (the person or the consciousness) or of a cognized object (in this case emptiness). While gaining the correct conceptual, inferential realization of emptiness is essential, it is not the culmination of the process of realizing the ultimate nature. Ordinary beings as well as āryas can have profound conceptual understanding, but we must seek to gain an ārya’s nonconceptual wisdom that arises in the wake of analytical meditation on emptiness. To do this, we must look beyond the appearances to our sense consciousnesses and our conceptual mental consciousness of the aggregates and so forth that are the substrata of emptiness—that is, the objects whose ultimate nature is the emptiness of inherent existence. Instead we must cultivate a direct, yogic reliable cognizer of emptiness—a mind that perceives emptiness free of conceptual appearances. This mind knows its own ultimate nature. Emptiness directly appears to this mind, and the mind nonconceptually ascertains it. At this time, the appearance of subject and object ceases, and the mind and emptiness become undifferentiable, like water poured into water.

The progression illustrated by the four reliances indicates that we must not be complacent with one level of understanding but continue until we gain direct experience of the path and actually free our mind from defilements.

## 9 | Tools for the Path

TO PRACTICE THE DHARMA successfully, more than information and a meditation cushion are required. We need a proper motivation and good, practical advice that will help to overcome hindrances. This chapter speaks of the mental tools we will need to progress along the path, such as faith and wisdom. We'll also explore the role of prayers and rituals, of purification and the collection of merit, and of memorization and debate in cultivating the three wisdoms: the wisdoms arising from learning, reflecting on the teachings, and meditating on them.

### *General Advice*

Learning the Dharma is different from learning subjects in school. Not only is our motivation different—we seek the method to attain fortunate rebirths, liberation, or awakening—but also the methodology is different. Our spiritual mentors present topics that are comparatively easy to understand as well as those that are more challenging in the same Dharma talk. Sometimes their response to our questions leads to more confusion. Our mentors instruct us to think about the topic and discuss it with others, but we want them to give us the right answer. Unlike academic studies in the West, where we are expected to remember and understand everything our teacher says so that we can pass a test, this is not necessarily the case in Dharma education. While we should try to remember and reflect on the salient points of a lecture, we are not expected to understand all the intricacies of a topic at once. Teachers explain a topic to “plant seeds” in our

mindstreams so that we will become familiar with the vocabulary. Having heard the topic once, the next time we hear it, we will be able to focus on the concepts being presented. By hearing and reflecting on a teaching repeatedly, our understanding and ability to integrate the meaning into our lives will gradually increase.

Understanding the Dharma is not dependent on worldly intelligence. Some people who are brilliant in academic studies or worldly affairs have great difficulty understanding Dharma principles. On the other hand, some people who do not do well in school quickly catch the intent of the Buddha and practice diligently. For this reason, we should not be arrogant because we have worldly intelligence and not put ourselves down if we lack it.

We need to be patient with ourselves and let go of unrealistic expectations of quick attainments. We should also avoid comparing ourselves to others and feeling proud that we are more advanced than our friends or lamenting that we lag behind them. Each person has different predispositions from previous lives, so no two people will progress at the same speed or in the same way. Comparison of this sort only breeds jealousy, arrogance, and competition, qualities that waste time and are not conducive for transforming our mind.

Similarly, due to karmic connections in previous lives, our friends may be drawn to a particular teacher who does not particularly inspire us and vice versa. Rather than be influenced by peer pressure, we must choose our teachers depending on the quality of guidance we receive from them and the depth of connection we feel with them. We should avoid comparing the practices our teachers instruct us to do with those our friends are prescribed. Because no two sentient beings are identical, the Buddha taught a wide variety of practices so people could find those suitable for them. That does not make one practice better and another worse; it simply means that one practice is more suitable for one person and a different practice for another person. At a buffet dinner, one person may like rice and another noodles. Debating which is best, trying to convert our friends to our preference, or feeling out of place because we aren't attracted to the one our friends like are useless. The point is for each person to eat food that nourishes his or her body. We should study with the teachers who inspire us and practice in the way that works best for us.

Strong, continuous, and stable spiritual experiences are more reliable than powerful, fleeting ones. Some beginners have a strong emotional feeling that they must renounce everything and meditate in solitude for the rest of their lives. Instead of immediately searching for an isolated retreat hut, they should keep practicing and see if after a year the feeling still has the same intensity. If it does, they should consult their teacher for guidance.

For most people, meditating in isolated retreat for years is not an option or even a preference. The vast majority of us need to balance Dharma study and sitting meditation with our daily-life activities. Formal, daily sitting practice enables us to deepen and integrate our understanding of the Dharma in a concentrated way, but the actual determining factor of the effectiveness of our practice manifests in our behavior. There's the story of someone who meditated in an isolated cave for years and thought his practice was progressing well. But when he went down to the town to get supplies, someone criticized him; his anger immediately flared, and he began shouting at the other person. Similar incidents in our life show us which disturbing emotions we need to put more energy into taming in our sitting practice.

People often ask how to balance formal Dharma practice with actively engaging in projects that benefit others. If you are a householder, "fifty-fifty" is a good balance. But remember that how this balance manifests in your life will change according to circumstances, so be flexible. Stabilize your compassion through formal practice and express it through active service to others. Work at transforming your motivation, thus making your daily activities part of the Dharma path.

If you feel stressed by your service work for others or become angry at or disappointed in the people whom you are trying to help, step back, rest, and take more time for personal practice. During your meditation practice, focus on developing a compassionate motivation, fortitude, and joyous effort. Learn to accept the limits of the change you can enact in a world under the influence of afflictions and polluted karma.

Sometimes we go too far in the other direction, becoming complacent in our Dharma studies or in a stagnant meditation practice. In these cases, contemplate impermanence and death as well as the suffering of sentient beings to reinvigorate your compassion.

## REFLECTION

1. A balanced life entails sharing our time among many activities: Dharma practice, socially engaged projects that benefit others, work, caring for friends and family, exercise, and other activities.
  2. What is a practical way to prioritize these activities in your life?
  3. Given your talents and limitations, think of a realistic way to apportion your time and energy that will bring you satisfaction, not stress.
- 

*Wisdom and Faith*

Wisdom and faith complement and reinforce each other on the path. Whereas faith enables us to be inspired and receptive, wisdom gives us a clear mind that understands both conventional existence and ultimate reality.

Wisdom is an analytical mind that deeply understands its object, such as impermanence or selflessness. Analysis is not intellectual gymnastics used to impress others; it involves deep investigation into the nature of objects and leads to understanding and knowledge.

The English word *faith* does not have the same connotation as the Sanskrit word it translates, *śraddhā*. To understand what faith is, we must look beyond our previous associations with the word to its meaning. Faith is confidence and trust in the Three Jewels; it is not blind belief. A virtuous and joyous mental factor, it enriches our spiritual practice and arises when we admire the Three Jewels, aspire to be like them, or deeply understand the teachings. Accordingly, the Mind and Awareness texts speak of three types of faith or trust: admiring faith, aspiring faith, and believing faith.

*Admiring faith* arises when we learn about the excellent qualities of the Three Jewels or witness the good qualities of our spiritual mentors and admire them. It may also arise from reading the biographies of previous practitioners, contemplating their diligence and determination, and reflecting on the difficulties they overcame to practice the Dharma. This faith clears away mental distress and makes the mind joyful. In extreme cases, admiring faith could degenerate into blind faith, which has little value and

may be dangerous. But authentic admiring faith is a vital aid on the path that serves to orient our efforts in a positive direction.

*Aspiring faith* arises when we develop the wish to attain the excellent qualities of the Three Jewels. It arises from reflecting on the possibility of removing defilements and attaining liberation, and it gives purpose and energy to our practice. When we know the benefits of serenity and concentration, we have faith in them and aspire to attain them.

*Believing faith* is of two kinds. The first believes the truth of the Buddha's teachings because they were taught by the Buddha and our spiritual mentors and we trust them. This faith may arise due to reasons that we have only partially verified or without applying reasoning.

The second type of believing faith is based on conviction and arises after having examined and understood a teaching. Because it often involves a reasoning used to verify the topic, this faith is stable. Having contemplated the four truths for a long time, we become convinced that they accurately describe our predicament and how to remedy it. After studying and using reasoning to investigate the ultimate nature of phenomena, we experience a calm conviction that all persons and phenomena are empty of inherent existence. We are confident that by realizing this directly, we will be able to uproot the self-grasping ignorance that is the source of all *duḥkha*. In these examples, believing faith is directed toward the Dharma Jewel—true paths and true cessations. From this, firm confidence in the Buddha and the Saṅgha Jewels easily follow. Such faith borne of conviction stabilizes our practice, enabling us to pursue the Dharma in depth.

Tsongkhapa illustrates this second type of believing faith arising from reason in his “Praise to Dependent Arising”:

Having seen the truth, you taught it.  
Those following you will leave all troubles far behind,  
for they will cut to the root of every fault.

However, those outside your teachings,  
though they practice long and hard,  
are those who beckon back faults,  
for they are welded to views of self.

Ah! When the wise see the difference,  
 how could they not revere you  
 from the very depths of their hearts!<sup>50</sup>

The second type of believing faith arises from deep conviction that is born from clearly knowing and analyzing the distinction between the Buddha's teachings and those of masters who adhere to views of inherent existence. After examining both teachings with discerning wisdom and clearly seeing the truth in the Buddha's teachings, the wise have no choice but to feel great faith, trust, and respect for the Buddha. Tsongkhapa expresses this with these moving words:

Alas! My mind was defeated by ignorance.  
 Though I've sought refuge for a long time  
 in such an embodiment of excellence,  
 I possess not a fraction of his qualities.

Nonetheless, before the stream of this life  
 flowing toward death has come to cease,  
 that I have found slight faith in you—  
 even this I think is fortunate.<sup>51</sup>

In the first verse, "qualities" refers chiefly to insight into emptiness. Tsongkhapa acknowledges that for a long time ignorance has obscured his mind. Yet due to gaining some understanding of emptiness, he experienced faith based on conviction in the doctrine of emptiness taught by the Buddha with great compassion. Considering how few people encounter teachings on emptiness and among those, how few gain even a modest understanding of it, Tsongkhapa felt fortunate to trust the truth of non-inherent existence. Pondering this will increase our aspiring faith and motivate us to practice like the Buddha did and attain the same depth of realization.

Learn the teachings well and use reason to reflect on their meaning. If you do not find any logical fallacies or contradictions, you will have believing faith in the path and the possibility of attaining it. That faith, in turn, will help increase your trust in those topics that cannot be understood completely through factual inference, such as the intricacies of karma and

its effects. Believing that actions bring concordant results is sufficient to help us curb destructive actions and act constructively, thus accumulating merit, which aids the increase of wisdom. In Buddhism, wisdom and faith are not contradictory, and when properly cultivated, they increase each other.

Haribhadra, in a commentary on Maitreya's *Ornament of Clear Realizations*, speaks of having faith not only in the Three Jewels but also in the treatises that take the Three Jewels as their subject matter. While many people have admiring faith in the Three Jewels, not many have faith in the treatises that discuss them. Faith in the treatises and their authors leads us to study the texts, which increases our knowledge of the Three Jewels. This, in turn, promotes contemplating and then meditating on the meaning that we learned, thereby deepening both our wisdom and believing faith. These, in turn, are essential factors for our awakening.

There is no fixed order in which faith and wisdom arise. According to individual tendencies, faith may give rise to wisdom, wisdom may lead to faith, or these two may occur simultaneously.

Stabilizing our faith increases our resilience. Stable faith is not affected by the opinions of others and prevents discouragement when viewing others' wrongdoings. Our faith in the Buddha's teachings will not falter should we find a statement in the scriptures or one said by our teacher with which we initially disagree. Instead, we will continue to investigate.

## REFLECTION

---

1. Find examples in your own experience of the three types of faith.
  2. How does each one contribute to your internal happiness?
  3. How can you gently increase your faith and trust in the Buddha, Dharma, and Saṅgha?
-

### *Proper Practice*

I am concerned that these days people rely too much on admiring faith and, even then, do not understand or cultivate it properly. Some people have great devotion but minimal interest in study. Many years ago I went to Singapore, and the Buddhists there greeted me with so much devotion. Some of them touched my clothes or my body believing they would receive some blessing, but when I explained the Buddhadharma, few of them were interested. I prefer when people are very attentive at teachings and want to learn. They take notes and record the teachings and refer to them later.

Buddhism is a path of self-reliance not one of propitiating an external god or deity to give us material goods, reputation, or spiritual realizations. Tibetans often have statues of protector deities on their altars and store their valuables in the cabinets below. I joke with them that it appears that they pray to the protectors on top of the cabinet to protect the worldly goods inside the cabinet! This is not Buddhist practice.

Expecting an external holy being to remove our suffering and make us a buddha is a wrong view. Improper understanding of prayers in Tibetan liturgy can lead to this idea; we request to the assembly of holy beings, “Please grant me blessings to generate compassion.” This is a skillful way of focusing our energy and identifying what is important. However, we cannot simply make offerings to the gurus and deities, request them to grant us blessings, and then sit back and have a cup of tea, thinking they will do all the work!

The buddhas have such great compassion for sentient beings that if they could have eliminated our suffering and given us realizations, they would have done so by now. However, our progress along the path depends on our creating the appropriate causes. Our own effort is crucial. Just as another person cannot sleep for us so that we’ll feel well rested, no one else can transform our mind for us. Nevertheless, innumerable holy beings are trying to assist and guide us on the path. But do we pay attention to their guidance—the teachings they give us?

If we call ourselves Buddhists and seek protection from suffering, we should rely on the Buddha’s teachings. The principal way the Buddha protects us is by teaching us the Dharma. By putting the teachings into practice, we abandon harmful actions, purify those done in the past, and engage

in constructive actions—this is the best protection. If we do not observe the law of karma and its effects, we may make extensive offerings to protectors, chant innumerable *pūjās* in deep, melodic voices, beat drums, and ring bells, but misery will still befall us because we have created the cause for it. On the other hand, if we act ethically, even if others try to harm us, they will not succeed because we will have removed the causes that make us vulnerable to it.

The Tibetan word *byin rlabs* that is translated as “blessing” or “inspiration” literally means “to transform into magnificence” or “to transform by magnificence.” We receive a blessing not through an external power causing us to have an extraordinary experience, but through a combination of the holy being’s teachings and our practice. The real sense of “blessing” is a transformation of mind from an unwholesome state to a wholesome one. Indications that our mind has been inspired and transformed are that our fear lessens, our temper calms, and our tolerance and respect for others increase.

As a sincere Buddhist, do not seek magnificent mystical experiences to boast about to your friends but instead try to become a better human being. If you do that, you will automatically benefit others and improve the world.

### *Purification and Collection of Merit*

*Merit* is virtuous karma or goodness created by restraining from harmful actions and cultivating constructive ones. It leads to good results in cyclic existence and enriches our minds with positive energy that facilitates gaining spiritual realizations. Merit cannot be seen with our eyes or measured with scientific instruments, yet it acts as the support for both wisdom and faith to grow in our minds and enables our practice to be successful.

If we lack merit, our efforts to cultivate wisdom may result in a corrupt intelligence that reaches the wrong conclusions. Some people are extremely intelligent, but because they are excessively skeptical and critical, they reflexively criticize reasonable theories and beneficial practices. Nihilistic and cynical, they act in ways that harm themselves and others.

A lack of merit also impedes integrating the Dharma in our lives. Some Buddhists study the scriptures extensively and are excellent debaters and great logicians. They can explain the meaning of many scriptures, but their

knowledge has not transformed their minds, and their everyday conduct lacks discipline. This indicates the corruption of intelligence due to lack of merit and proper faith. To cultivate wisdom that is capable of transforming our mind, we must accumulate merit and generate faith based on understanding the meaning of the teachings.

In ancient India, the great non-Buddhist masters who debated complex issues with the Buddhists must have had well-developed knowledge of the Buddhist view of these topics, otherwise they would not have been able to debate them. However, they had no conviction in the veracity of the Buddhist views; knowledge does not always lead to conviction. Gaining a deep understanding of the Buddha's teachings that goes beyond intellectual comprehension depends on having accumulated merit.

Purifying ourselves of negativities—destructive actions and harmful thoughts—is also important. Done by means of the four opponent powers—regret, taking refuge and generating bodhicitta, resolving not to do the action again, and engaging in remedial behavior—purification cleanses the mind of impediments. The mind is like a field. Just as we must remove debris from a field and add fertilizer so that the seeds we plant can grow, we perform purification and collect merit so that the seeds of Dharma planted in our minds during teachings can grow into a vast harvest of Dharma realizations. To do that, the great masters advise us to do certain preparatory practices, such as the seven-limb prayer, at the beginning of meditation sessions to purify and collect merit. These seven limbs are (1) performing prostrations, (2) making offerings, (3) confessing our misdeeds, (4) rejoicing in our own and others' virtue, (5) requesting our teachers to teach the Dharma, (6) imploring the buddhas to remain in the world, and (7) dedicating our merit for the awakening of all beings. In addition, some practitioners engage in specific preliminary practices prior to doing tantric retreats in order to accumulate merit; for example, some do a hundred thousand maṇḍala offerings or recitations of Vajrasattva's mantra. If we do these devotional practices with awareness that the factors composing them—the agent, object, and action—arise dependently yet are empty of inherent existence, we also cultivate wisdom, which is the ultimate purifying agent.

Sometimes we feel stuck in our studies and practice. The mind is bored, unresponsive, and dull, and we have difficulty understanding Dharma topics and focusing the mind on virtue. At such times, engaging in purification

and the collection of merit is very effective to open the mind and make it receptive to the Dharma.

This is illustrated in the biography of Tsongkhapa. After practicing for many years, he had a meditative vision of Mañjuśrī, the buddha of wisdom, and was able to converse with him. He consulted Mañjuśrī regarding some difficult points about emptiness. Mañjuśrī answered his questions, but Tsongkhapa still did not understand. Mañjuśrī responded, “There is no way for me to explain it to you in an easier fashion. You will be able to understand only if you enhance your meditation with three factors. First, make heartfelt supplication to your guru, whom you regard as inseparable from your meditational deity. Second, engage in purification practices and accumulate merit. Third, study the treatises written by the great Indian masters and then reflect and meditate on them. With the help of these three, you will have a true insight into emptiness before long.”

Tsongkhapa then went to do retreat at a hermitage near Ölka. There he made 3.5 million prostrations—a hundred thousand each to the thirty-five purification buddhas—and many thousands of maṇḍala offerings. In addition, he made requests to his guru, whom he viewed as having the same nature as his meditational deity, and continued to study the great treatises as advised by Mañjuśrī. The obstacles to his understanding of emptiness cleared, and he realized the correct view. Similarly, these three can rejuvenate our Dharma practice whenever our mind feels dry or obscured.

### *Prayers and Rituals*

Many people ask me to pray for them. Thousands of buddhas and gurus already pray for us, but because we do not practice sincerely, nothing happens. Our progress depends on our own effort, and I am always delighted when students sincerely practice to transform their minds. That is the best offering.

Bodhisattvas make a vast variety of aspirations and prayers and then strive to accomplish their aspirations. In contrast, ordinary people pray to have a happy life but ignore Dharma practice, which is the source of happiness. They pray “May I be healthy” but eat junk food; they aspire to have good relationships with others but are careless about their speech. Good relationships will elude us as long as we speak divisively, blame, or criticize

others. We should be like bodhisattvas and think about what causes will accomplish our prayers. If we create those causes, our prayers will bear fruit, and we will be receptive to the inspiration of the Three Jewels.

When we request spiritual mentors or monastics to pray for us, we should from our side refrain from nonvirtuous behavior and act constructively. That way their prayers can be effective. The actualization of virtuous prayers and aspirations is a cooperative effort: prayers are made, we engage in virtuous actions, and the Three Jewels send their inspiration. In Prajñāvarman's commentary on the *Udānavarga*, the Buddha says:

Buddhas do not wash away negativities with water,  
clear away beings' duḥkha with their hands,  
or transfer their realizations to other beings:  
they liberate them by teaching the truth of reality.

Buddhas cannot magically make everything go well in our lives and in the world. The principal way they help us sentient beings is by teaching us how to create the causes for happiness and abandon the causes for suffering. Making our actions accord with their instructions—especially those regarding ethical conduct—is essential to alleviate duḥkha. We may recite thousands of prayers and mantras, but if we do not use the Dharma tools to transform our minds, we are wasting time. As Dza Patrul Rinpoche candidly says (AKC 15):

Ritual sessions four times a day without the generation and  
completion stages,  
pounding drums and clashing cymbals without reminding  
ourselves of pure perception,  
droning mantras without any concentration:  
all that gets us no further on the path to liberation.

The main purpose of rituals involving deity-yoga practice is to generate the union of method and wisdom. It is not to seek blessings, as if *nirvāṇa* were something external to us that our spiritual mentor or meditation deity could transfer into our mindstream. Tantric practices are very profound, but to derive the greatest benefit from them, we must have a good foundation in

general Buddhist teachings and learn how to meditate while performing these rituals. While making offerings to the saṅgha and requesting them to perform pūjās on our behalf create merit due to our sincere motivation, we should not think that we can “hire” someone to create merit, freeing us to continue to deceive customers at work or get drunk with our friends!

People easily believe that the performance of a ritual, not the mental change it is supposed to invoke in the participants, is an end to itself. This is precisely the attitude that the Buddha opposed during his life and that led to his disapproval of rites and rituals done simply for their own sake. Nowadays it seems that some people are going backward into this superstitious way of thinking and not forward to deeper, more genuine practice.

After a large teaching in the West some years ago, the students wanted to offer me a long-life pūjā. Although I appreciated their kind intentions and good wishes, I explained to them that it is their Dharma practice that keeps their gurus alive and ensures the presence of buddhas and bodhisattvas in the world. If they don't practice, there is no need for buddhas and bodhisattvas to appear in the world or for teachers to live long. However, if the students practice even a little of what I teach so that when we meet again they have less anger, jealousy, and attachment, then I will be extremely happy, and the cause for their spiritual mentors to live long will be present.

I was once requested to exorcize a spirit. Not knowing any rituals for this, I meditated on compassion and bodhicitta. Later the people told me the problem stopped, so I felt that perhaps I did something helpful. Another time, customers of a hotel had had bad experiences in a particular room. Not telling me this beforehand, the staff had me stay in that room, where I did my daily practice, which includes meditation on compassion and emptiness. Later they told me that the room had become peaceful and their customers could stay there again. While I haven't realized bodhicitta or emptiness, this attests to the power of meditating on them! Please remember this when you face difficulties.

In the Tibetan community, it is common to ask a spiritual mentor to do a divination when facing an obstacle or beginning a new project. Divination texts often attribute a problem to spirit harm, and usually the diviner will recommend that a particular pūjā be performed to eliminate the obstacles caused by spirits. However, as Buddhists, we should not be attributing our problems to external beings but to our own karma. I prefer that instead of

prescribing pūjās, diviners tell people to meditate on bodhicitta and emptiness, to deepen their refuge in the Three Jewels, or to reflect on the law of karma and its effects and engage in purification practices. These will definitely cure the causes of suffering by transforming people’s minds.

There is no need to consult a horoscope before starting a project or deciding where to place an altar. I don’t have much faith in horoscopes and astrology—my tutor Ling Rinpoche (1903–83) told me he was born on a day of nine bad signs. We don’t wait for a good date for the two most significant activities of our life: our birth and death. However, as an ancient tradition that is a part of Tibetan culture and heritage, it’s important to continue Tibetan astrology.

### *Study, Reflection, and Meditation*

The sūtras speak of the threefold practice of study, critical reflection, and meditation and the understanding or wisdom that is developed by each one. Individually and together these three enable us to practice skillfully, avoid pitfalls and detours, and gain liberating realizations.

*Study.* In ancient times, the Buddha’s teachings were passed down orally, so the first step in learning was to hear teachings. The broader meaning of “hearing” (*śruti*) includes all forms of study, including reading and new forms of learning. Studying the sūtras and tantras, as well as treatises and commentaries by later sages, gives us the necessary information to know how to practice. Without this first, crucial step, we risk making up our own path or practicing incorrectly.

Many people are eager to meditate, which is commendable; but without proper study, they run the risk of going astray. They will not know how to meditate correctly, even if they have a strong aspiration to do so. Studying the teachings on emptiness, we learn the reasonings that prove phenomena are empty of inherent existence. Study reveals different perspectives on a topic, thereby increasing our mental flexibility and acuity. Then when we contemplate and meditate, we can look at the topic from many angles and see connections among diverse points. Knowing the paths and stages on the path to awakening enables us to assess our own progress when we are not able to consult our spiritual mentor. Hearing is not dry, intellectual learning. It is dynamic and sparks transformation in our mind.

One lama said that it is better to study scriptures one month than to do a one-month retreat meditating on and reciting the mantra of Mañjuśrī. This illustrates the importance of study to gain wisdom. The Dharma is vast, and we should continue to learn its various aspects our entire lives. Our bodies may become old, but our minds can still be young and full of enthusiasm for learning. Whenever I have time in my busy schedule, I read one of the great treatises. Even if I have studied it many times before, new aspects are revealed with each reading.

Something to keep in mind when studying the Dharma is that many words have multiple meanings that differ according to the context. The Tibetan word *rig pa*, for example, is translated as “awareness” or “cognizance” in the context of the Mind and Awareness teachings, but in Dzogchen it refers to the subtle mind. *Bliss* has different meanings in the contexts of serenity meditation and highest yoga tantra.

*Reflection.* Having studied, we must think about what we learned. This involves investigation and critical analysis to ascertain the correct meaning, which engenders deep conviction in the veracity of the Dharma. Reflection may be done quietly on our own or together with others, discussing and/or debating the teachings. For this reason, Tibetan monastics engage in rigorous debates that are often entertaining as well as educational. Sometimes we believe we understand a topic well but discover we don’t because when someone asks us a question or challenges our assertion, we don’t know how to respond! The *Sūtra Unraveling the Thought* explains four principles that are useful to understand a phenomenon such as the mind from different perspectives.

The *principle of nature or reality* includes examining realities commonly known in the world, such as water’s wetness; inconceivable realities, such as the Buddha’s abilities; and the abiding reality (emptiness). To understand the mind, we examine its clear and cognizant nature and its impermanent nature. Due to the mind’s nature, two contradictory emotions or thoughts—for example anger and love—cannot be manifest simultaneously.

Investigating the *principle of dependence* entails examining causality, the arising of results from their causes. This enables us to understand that because individual phenomena do not have certain qualities or abilities from their own side, when they interact with other phenomena, new properties emerge. Regarding the mind, afflictions depend on ignorance; they

cease when ignorance ceases. Virtuous mental factors are not rooted in ignorance and do not cease when ignorance ceases. They depend on other causes that can be cultivated limitlessly.

Some results are material while others are consciousnesses or abstract composites—impermanent phenomena that are neither material nor consciousness, such as the person and karmic seeds. The diversity of results is due to the diversity of causes. There are two types of causal processes. One involves karma; the other is causality that is distinct from karma. Karmic causal processes involve sentient beings' experience of happiness and suffering and depend on their intentions. Causal processes that are distinct from karma involve the physical, chemical, and biological laws of nature.

The *principal of function* shows that each phenomenon has its own function. Understanding the mind's function, we see that wisdom eradicates ignorance and afflictions, and contemplating the kindness of others as well as their suffering stimulates compassion. Afflictions disturb the mind, while wisdom pacifies and calms it. Agent, object, and action function together within any event.

The *principle of evidence* or *logical reasoning* involves examining whether something can be apprehended by any of the three reliable cognizers—direct perceivers (for example, reliable sense consciousnesses), inferential consciousnesses that use reasoning to know their object, and reliable authoritative testimony of experts. By understanding the first three principles, we can then apply reasoning, e.g., because *x* exists, *y* must exist or occur. We can establish a conclusion that cannot be contradicted by any of the three reliable cognizers. Based on understanding the above three principles with respect to the mind, we can conclude that liberation is possible and that a path exists that can bring it about.

These four principles are built one on top of the other. We can use evidence and reasoning to cultivate understanding because they presuppose that phenomena have particular functions. We can understand their functions because underlying them are dependently related phenomena. Why is there a relationship between cause and effect? Because it is the nature of effects to follow their causes; this is the way things are. When we ask why matter has the property of obstructiveness and consciousness has the aspect of subjective experience, the only answer is “that is its nature.”

To explain these four in their forward sequence: the principle of nature

allows for dependent relationships to occur, and these dependent relationships among phenomena provide the basis for the specific function of each phenomenon. Based on the dependent nature of phenomena and their functions, we can employ the principle of reasoning to understand things that are not immediately evident. “Because there is smoke, there is fire” involves knowing that the nature of fire is hot and burning, that fire produces smoke, and that smoke functions as evidence of fire.

We apply these same four principles when practicing the four establishments of mindfulness. Many of the meditations on the body, feelings, mind, and phenomena involve understanding their nature, causes, and functions or effects. Through that, we can use them as reasons to know that the body, feelings, mind, and phenomena are impermanent, *duḥkha* by nature, empty, and selfless.

The manner in which scientific investigation proceeds is similar to these four principles. Scientists first endeavor to understand the various properties of their object of study—their nature—and then examine what these objects depend on. Through this, they research emergent properties and their functions and then apply reason to understand characteristics that are not evident.

*Meditation.* Based on learning and critical reflection on the teachings, our meditation will be effective. The purpose of meditation is to integrate the meaning of the teachings into our mindstream by means of repeated practice. Having a correct and stable intellectual understanding due to applying the four principles, we now engage in absorption meditation to familiarize our mind with the topic and transform intellectual understanding into realization. Here our meditation mainly, but not exclusively, involves stabilizing meditation done with access or full concentration, although analytical meditation may be applied at times.<sup>52</sup> This produces the understanding arising from meditation, which has a powerful ability to transform our minds.

Learning, critical reflection, and meditation complement each other. Some people incorrectly think “These three apply to *sūtra* practice, but *tantra* is actualized through devotion and faith, so study and analysis are not necessary.” The Kadam geshes, who practiced both *sūtra* and *tantra*, used to say, “When I hear teachings, I also reflect and meditate. When I reflect, I also hear and meditate. When I meditate, I hear and critically reflect.”

Learning gives us general knowledge of the topic and reduces one level

of confusion and doubt. Thinking about and analyzing the teachings gives us a more nuanced conceptual understanding based on reason. Meditating integrates this understanding with our very being. In the case of realizing the nature of reality, hearing and studying the teachings give us a general knowledge about the object of negation, the rational arguments proving that all phenomena lack inherent existence, and the stages of realizing emptiness. By then contemplating and discussing what we have studied, we come to understand that the I does not exist inherently as it appears but exists dependently. The I is empty of inherent existence because it is dependent on the five psychophysical aggregates and on the mind designating “I.” The emptiness that we have ascertained by reflection now becomes the object of meditation. In meditation we now cultivate a union of serenity and insight on emptiness.

## REFLECTION

---

1. Why are study, critical examination, and meditation important to gain realizations?
  2. Pick a particular thing and contemplate the four principles—nature, dependence, function, and evidence or reasoning—in relation to it.
  3. See how the four work together to bring understanding.
- 

### *Memorization and Debate*

In traditional Tibetan monastic universities, the daily schedule includes specified times for group chanting, teachings, memorization, and debate. Private study and silent meditation are done at monastics’ own convenience. Since the time of the Buddha, memorization has been a principal way of preserving and conveying the teachings from spiritual mentor to disciple. Memorization has many benefits: students already have some familiarity with a text’s contents when they receive teachings on it. After studying a text, they will be able to easily recall its key points. By having quick access to quotations, students can draw attention to these passages when they debate

and contemplate. When teaching, they are able to cite passages related to a specific topic from diverse texts, enhancing the breadth and depth of their explanation. In difficult situations, they can easily remember Dharma advice. Many Tibetan monastics who were imprisoned by the Communist Chinese after 1959 silently recited texts in their prison cells. Not only did they spend their time familiarizing themselves with the Buddha's thought, but they also could easily recall advice on how to practice during difficult times. Someone who holds a wealth of texts in their memory is like a cook who has all the ingredients for a delicious meal at her fingertips.

Memorization is also a way of training the mind. Students must learn to concentrate on the material they are memorizing and recall it instantly. In a Tibetan monastery, this requires special focus, since one is surrounded by many other monastics loudly reciting the passages they are memorizing. They build up the ability to not be distracted by external sounds, which is a great aid when they meditate.

Debate is an animated process that helps students to learn the material, think about it, and remember what they have learned. The structure of a debate is formalized, and both participants—the seated respondent and the standing questioner—must be familiar with the syllogistic structure. This format teaches people how to think clearly. The speaker cannot ramble and hope the debate partner understands what he is trying to say. Both parties must be concise and to the point.

A debate begins with the questioner asking the responder a question. Once the questioner has an idea of the view the responder holds (the thesis), he will ask him what reasons he has to support that. If he sees a flaw in the responder's logic, he will try to refute it either by getting the responder to contradict himself or by establishing the correct view.

In his *Supplement to the Middle Way* (*Madhyamakāvātāra*), Candrakīrti states that the purpose of these philosophical debates is not to generate hostility toward the other person and his view or to arrogantly establish our own view in order to gain a good reputation. The purpose is to eradicate the ignorance that obscures both parties from gaining Dharma realizations, and to establish both self and others on the path to awakening. Bearing this in mind helps debaters maintain a good motivation and also counteracts the supposition that debate is simply intellectual competition.

During the Buddha's time, two monks, Bhaṇḍa and Abhiñjika, were

debating the teachings in order to determine who could speak better and have the final word. When news of their activities reached the Buddha, he called for them, and the following dialogue ensued (SN 16.6):

*The Buddha:* Is it true, bhikkhus, that you have been competing with each other in regard to your learning, as to who can speak more, who can speak better, who can speak longer?

*Monks:* Yes, Venerable Sir.

*The Buddha:* Have you ever known me to teach the Dhamma thus: “Come bhikkhus, compete with each other in regard to your learning, and see who can speak more, who can speak better, who can speak longer?”

*Monks:* No, Venerable Sir.

*The Buddha:* Then, if you have never known me to teach the Dhamma thus, what do you senseless men know and see that, having gone forth in such a well-expounded Dhamma and Vinaya, you compete with each other in regard to your learning, as to who can speak more, who can speak better, who can speak longer?

Seeing their fault, the bhikkhus immediately prostrated to the Buddha, confessed their error, and asked for his pardon. We, too, must be careful to maintain a wholesome motivation so that our Dharma debates and discussions do not become a purely intellectual and ego-driven pursuit.

One time a famous logician approached the great meditator Milarepa, and trying to embarrass him, asked “What are the definitions of a syllogism of pervasion and a syllogism of contradiction?”

To this Milarepa replied, “Your mind being pervaded with afflictions is a syllogism of pervasion, and your mind being contradictory with the Dharma is a syllogism of contradiction.” In this way, he skillfully and compassionately burst the bubble of arrogance of this logician, who pursued debate with a skewed motive. Another time, when a logician asked Milarepa to give the definition of *nonascertaining direct perception*, Milarepa responded, “A person who outwardly assumes the appearance of a Dharma practitioner but inwardly is not ascertained as a Dharma practitioner—that is a nonascertaining direct perception.”

Āryadeva says (CS 185):

While attached to your own position  
and disliking others' positions,  
you will not approach nirvāṇa.  
Neither conduct will bring peace.

Someone who is not really interested in Dharma practice may use debate to enhance his arrogance and animosity. I heard a story about a monk who was unable to establish his own position to the responder during a debate. He became so enraged that he stormed off, picked up a stone, and struck the responder.

In another case, I heard of two knowledgeable students whose debates were deep as well as competitive. The questioner and respondent were always eager to defeat each other. This sense of competition continued even after they attended tantric college, sat for their geshe exams, and received their geshe degrees. It seems that for the rest of their lives, they remained antagonistic, continually debating with each other with the thought, "I want to defeat him."

On the other hand, there are those like the respected master Dondrup Tsonдру, well-known for his skill in debate, which made his students proud to have him as their teacher. Once a Mongolian monk, a learned new geshe, was debating at the Great Prayer Festival, and Dondrup Tsonдру was the questioner. During the debate, nothing remarkable happened; there was no rigorous exchange on any important issue. Afterward his students asked Dondrup Tsonдру, "What happened, Master? You weren't successful in bringing about a powerful debate with this responder."

Dondrup Tsonдру replied, "The responder was very skilled and learned. Whatever he said accorded with reasoning and scripture, so there was nothing to debate." The Mongolian monk had used debate in the way it was intended—to eliminate ignorance. Dondrup Tsonдру honored that and did not try to stir up false debates just to demonstrate his skill and emerge victorious.

Among new students who are learning to debate, there's the saying, "If you can convince the responder that something that is correct is incorrect or that something that is incorrect is correct, then you are learned and

skilled in the topic.” Candrakīrti discourages this attitude, saying that it is wrong to refute someone’s idea simply for the sake of refuting it and being triumphant. Having the reputation of being a good debater does not get one closer to awakening. In the tradition of Nālandā’s learned practitioners, we should be objective, honest, and truthful. One physicist told me that a scientist must be impartial and objective when doing research. Being attached to one’s hypothesis or the outcomes of one’s research is not the correct approach.

Some people have the mistaken impression that Gelukpas only engage in intellectual study and debate, without much meditation, and that Nyingmapas and Kagyupas do not study much but meditate a lot. Such stereotypes are unfortunate, because within each Tibetan tradition we find people who focus on study, others who emphasize meditation, and some who offer service in the monasteries. When I speak at any of the three large Geluk monasteries—Gaden, Sera, and Drepung—I encourage the monks to engage enthusiastically in philosophical studies and debate and then relate what they learn to practice-oriented texts such as those on the lamrim. They should meditate on those teachings, integrating the meaning into their hearts and lives. Similarly, when I teach monastics from Nyingma, Kagyu, or Sakya monasteries, I encourage them to study the great Indian classics as well as the texts from their own tradition, and then reflect and meditate on what they learn.

However, I have witnessed the tendency for some people—teachers and students—to get so accustomed to debating that the way they engage with the Dharma becomes unbalanced. For example, Candrakīrti’s *Supplement to the Middle Way* is a key text studied in the monastic curriculum. The initial praise to compassion and the first five chapters are filled with material for practice—compassion, bodhicitta, generosity, ethical conduct, fortitude, joyous effort, and meditative stability. But since there is not much material for debate in these, some people hurry through them to reach chapter 6, which is about emptiness, where they jump into debate with full force. I don’t know if they meditate on chapter 6 while studying it. Just learning the terms—object of negation, emptiness of inherent existence, two truths, and so forth—doesn’t bring realizations. We need to identify the object of negation within ourselves and then see that it doesn’t exist.

Something similar may happen when people study Nāgārjuna's *Treatise on the Middle Way*. They spend more time on the first few chapters where there is a lot to debate, but neglect chapters 18 and 26, which speak about dependent arising and the means to achieve liberation. I like to teach chapters 18, 24, and 26 of this text because understanding how we are reborn in cyclic existence and how to reverse that and attain liberation are essential topics for practice.

A Western professor once commented to me that monastics debate, but in the end they return to scriptural quotations to “prove” their point. He is right. I have suggested many times that people only use reason when debating topics that are slightly obscure. Scriptural authority should only be used concerning very obscure phenomena, and even then, you must show why the scripture you are citing is reliable. In short, we should try to practice wisely.

It is my sincere wish that people emulate the great learned practitioners of the past and develop all three wisdoms of study, reflection, and meditation. Pointing fingers at others and chiding them to both study and meditate is useless; we should evaluate our own activities and examine whether we incorporate all three into our practice in a balanced way.

To investigate the Buddha's teachings in a beneficial way, it is essential to have the qualities of a receptive student—eagerness to learn, intelligence, open-mindedness, and sincerity. As we increase these qualities, our understanding of the Dharma will deepen, and that will arouse confidence in the teachings. This conviction in the truth of the Dharma leads us to have faith in the Buddha who taught it and the Saṅgha who have correctly realized it. This illustrates the interconnectedness of philosophical studies and faith in the Three Jewels.

### *Role Models*

When engaging in a new activity, we naturally look to role models for guidance and inspiration. Spiritual practice is no exception. In the Tibetan Buddhist tradition, the two types of prominent role models we find are the scholar/commentator (such as Asaṅga and Candrakīrti) and the ascetic meditator (such as Saraha or Milarepa). Occasionally we find examples of

people who are both, such as Nāropa, Dza Patrul Rinpoche, or Tsongkhapa. Because they are usually depicted in one role or the other, we tend to forget that most of the great scholars were also great yogis, and that the great meditators often became so after years of study and debate in either this or previous lives.

Hearing about these historical figures, we may receive the unspoken message that to be successful in the Dharma, we have to become either a great scholar or a great meditator. But where does that leave people who are drawn to neither role? What about the average practitioner who does her best according to her own disposition? Each of us wants to feel that we are successful in our own way.

We must remember that success in Dharma practice is not dependent on societal recognition. The law of karma and its effects is not duped by hypocrisy. Leaving this life with a great collection of merit, fewer negativities, and the imprints from having heard and practiced many teachings are signs of a successful Dharma practice. Fame is not.

In seeking out role models, I (Chodron) look to the Buddha himself. In sūtra passages and in artwork, he is depicted in a variety of situations: sitting and meditating peacefully; speaking fearlessly to a crowd of non-Buddhists; tending to the needs of a sick monk; talking to merchants, courtesans, royalty, and paupers. He addresses one person gently and scolds a monk with wrong views. He instructs that the food remaining from a meal offered to the saṅgha be given to the poor. In one instance, he praises the merit of a beggar who mentally offered the meal with a good motivation over the wealthy patron who actually gave the food but lacked a generous intention. He consoles a woman whose child died and those fearing the loss of their parents. The Buddha sits under forest trees; he walks in towns. He spends time with others and is often alone. He speaks with men and women, monastics and lay. He knows how to address intellectuals, wandering ascetics, nonbelievers, the grieving, the impoverished, and criminals—the Buddha is everyone's person. He fits no stereotype.

The Buddha engaged in so many diverse activities that he can serve as a role model for many different kinds of people with diverse interests. We can let go of the critical self-judgment that may arise if we aren't among the best of the debaters or the most realized yogis. It's important for each of us

to find our own way of living a Dharma life while internally cultivating the same qualities of wisdom, bodhicitta, and so forth.

In thinking of the diversity of Tibetan adepts, the three lineages of Kadam practitioners come to mind. One group practiced mainly lamrim, following Atiśa's *Lamp of the Path* and other texts, without studying philosophy extensively or debating very much. The second group emphasized philosophical studies and debate, integrating this into their lamrim meditation. The third group relied mainly on the personal instructions they received from their spiritual mentors and meditated on those.

Some Kadam practitioners displayed great devotion to their teachers and served them assiduously. Others stayed alone or practiced with a small group of companions. Some were teachers, others were not. Their biographies show that they had very different personalities. They did not squeeze themselves into a predetermined role or persona in order to be successful practitioners.

I often comment on the importance of Buddhists being engaged in social welfare projects, and for some people that is the natural expression of their Dharma practice. Master Cheng Yen, the Chinese bhikṣuṇī who founded the Tzu Chi Foundation, is a good example of this. A Buddhist nun, she practiced in a hut in Taiwan for years, bowing to each syllable of the *Lotus Sūtra*. Villagers recall unusual light emanating from her hut. Later she saw a poor person being turned away from a medical clinic, and she began to construct hospitals for the impoverished. Now she directs an international welfare organization whose volunteers travel around the globe to offer aid when disasters and emergencies occur. Master Cheng Yen remains humble and peaceful in demeanor, yet her firm determination to benefit others has inspired thousands. There is a waiting list to volunteer at her welfare centers in Taiwan!

As Buddhists, we should encourage those who want to live as renounced meditators after completing their studies. We should also support those whose talents lie in study and teaching, compassionate service, or social engagement. Each of us must find a suitable way to combine study, meditation, and service in our own lives.

Dharma practitioners have a variety of personalities. In the early sūtras, we meet Mahākāśyapa, who engaged in ascetic practices allowed by the

Buddha. He appears austere, aloof, and perhaps a bit rigid as well. Ānanda, the Buddha's personal attendant, is sociable and kind and compassionately looks after others. Looking at a wide variety of role models widens our perspective.

Bodhisattvas are depicted in several ways in the scriptures. Some live in society, helping those they encounter. Some are royalty who affect the welfare of others through promulgating fair policies and sharing their wealth. Some are merchants who support the saṅgha and give generously to those in need. Some live with the most neglected people in society, uplifting them materially and with the Dharma. Some bodhisattvas live in pure lands, where they make elaborate offerings and learn from the principal Buddha there. Some bodhisattvas teach the Dharma to multitudes; others teach to a few through their example. All these ways of living bodhicitta apply now as well.

Tantric adepts are often portrayed living eccentric lives and sometimes acting outrageously, transgressing the social mores of their time. While many of us admire someone who is not constrained by conventions, this image of tantric adepts can be misleading, especially if emulating it feeds our craving for attention, contempt for society, or unhealthy psychological states. Nowadays it is better to practice as the mind-training teachings advise: externally appearing simple; internally living with love, compassion, and bodhicitta; and discreetly practicing tantra.

In short, do not become rigid in your notion of a successful Dharma life. Know that, due to karma, people have different mentalities and interests and different opportunities as well. Encourage yourself and encourage others to abandon negativity, create virtue, and cultivate wisdom and compassion. Respect all practitioners and rejoice at whatever virtue anyone creates.

# 10 | Making Progress

All of us want our Dharma practice to bear fruit, but even with good intentions it is easy to deviate from the path. We can get sidetracked in several ways. Being aware of potential pitfalls in advance helps us to avoid them, and knowing the signs of making progress on the path enables us to accurately assess our practice.

## *Realistic Expectations*

We have both a useful and a useless sense of self. The unrealistic sense of self operates without sound reason, just on the grounds of “I want this or that.” This sense of self is the root of our *duḥkha* and is eliminated by the realization of emptiness. The positive sense of self operates on the basis of reason. It is the basis for bodhisattvas’ strong self-confidence, without which they would be unable to confront and subdue the self-centered attitude.

Afflictions are overcome in stages, not all at once. The first time a layer of them is eradicated is upon gaining a direct, nonconceptual perception of emptiness. Before that, when we encounter circumstances that give rise to our afflictions, we must practice ethical conduct and employ the antidotes specific to each affliction in order to prevent harmful behavior. To develop such self-control, two factors are crucial—a sense of personal integrity and consideration for others. Personal integrity enables us to abandon negativities because we respect our values and precepts. Consideration for others does this because we care about the effect of our bad behavior on others.

Some people mistakenly believe that if they do some spiritual practice

for a short time, they will continue to progress even if they do not actively practice. If we practice consistently, progress will definitely occur, but if we do not, our afflictions will arise effortlessly and lead to destructive actions, bringing more misery.

Vajrayāna speaks of awakening in this life. Some traditions or teachers speak of a direct, swift path to awakening. Hearing this, some people develop unrealistic expectations, thinking they will have quick results from doing just a little practice. Personally speaking, all these statements remind me of communist propaganda!

How, then, should we understand the statements in some tantric texts that “one attains awakening in one moment”? If this is the case, why do we need to practice step-by-step, as stated in all other teachings? To understand them correctly, we must know the context within which these statements are made. The meaning of “one moment” and “one short instant” varies in different situations. The duration of a phenomenon is understood in relation to other phenomena. Compared to the beginninglessness of cyclic existence, the age in which we live is like one moment. Likewise, when one attains strong concentration, hundreds of eons may appear to that person as just one moment, and one moment may appear as an eon. If a person has accumulated extensive merit in her previous lives, she may gain realizations or attain awakening in this life. In this case, one lifetime is the meaning of “one moment.”

But this does not mean that this person completed the entire path in only one brief lifetime. That person must have collected extensive merit and wisdom during many lifetimes, such that when she meets a particular external situation in this lifetime, realizations or awakening appear to come swiftly. Eons ago, she began the path as an initial-level practitioner and actualized the steps to awakening gradually, life after life. The swift results in the present life are the product of hard work in previous lives.

Westerners are practical and want immediate results. Their eagerness to see results motivates them to practice. However, if they go on retreat and return home at more or less the same level, they may think Dharma practice does not work and give it up. Tibetans may go to the other extreme. They believe in the five paths and ten bodhisattva grounds<sup>53</sup> but tend to be complacent and think these things can be developed later. They lack a sense of urgency and do not exert a lot of effort.

It seems “hybrid” practitioners are best—those who are motivated, enthusiastic, and practice what they learn but who are also relaxed and patient. These practitioners seek awakening quickly for the benefit of sentient beings but accept that it will take a long time to become buddhas and are willing to practice however long it takes.

To illustrate the necessity of gradual training, the Buddha uses a simile about a thoroughbred colt (MN 65). At first the colt is completely wild, so the trainer must get him used to wearing a bit. Because it is something the colt has never done before, he is obviously uncomfortable, but with constant repetition and gradual practice, he gets used to it and is peaceful when wearing the bit. At that time, the trainer introduces the harness, which is new to the colt. Again the colt tries to throw it off, but with repetition and practice, he eventually becomes used to it and wears it happily. Now the trainer progressively trains the colt to keep in step, run in a circle, prance, gallop, charge, and so forth. The colt initially resists each new step but eventually becomes familiar with each task and masters it. When the colt is thoroughly trained and able to do many things that he could not do before, he is fit for the king.

Similarly, when we train as Dharma practitioners, we will come up against many things that are unfamiliar. We may be incapable of doing them at present, be afraid of them, or lack the confidence to try them. But if we have a wise spiritual mentor and like the colt, allow ourselves to be trained and continue to train even when we initially feel some discomfort, good results will come. Eventually, we will accomplish all the causes and conditions necessary to attain awakening.

At present we are ordinary beings whose minds are completely under the influence of the three poisonous attitudes of ignorance, anger, and attachment. Day in and day out these difficult-to-control, unwelcome disturbing emotions and wrong conceptions arise in our mind. Since this is the case, is it reasonable to think that we will be able to quickly remove the cloud of afflictions once and for all? If we tried, it would be difficult. In fact, it is hard to have a peaceful mind for more than a few minutes!

No matter what field of knowledge we want to master, we cannot learn everything at once. We must study step by step and progress gradually. This also applies to gaining transcendental realizations, which are beyond our ordinary understanding.

Eliminating afflictions depends on generating strong counterforces to them, and this requires time. These counterforces are virtuous qualities, which are cultivated gradually, each successive step depending on its own causes and conditions. It is fruitless to expect an outcome without creating the causes that will produce it.

On the path to awakening, it behooves us to study the teachings well so we'll know how to create the specific causes and conditions for our spiritual goals and the order in which to do the various practices. Then we can practice with delight and enthusiasm, knowing that realizations will come when all the causes and conditions are assembled. Greeting each day with the thought, "Will realizations finally come today?" will only make us agitated. Such impatience is the opposite of the attitude necessary for our practice to be effective.

To grow peas, we first till the ground, fertilize it, plant pea seeds in the springtime, and then water them. When this has been done, we relax and give the seeds time to grow. We don't dig them up every day to see if they have sprouted yet! Instead we remain content knowing that they will grow in their own time.

Once, at a large public teaching, someone asked me what was the quickest and easiest path to awakening. I began to weep because I sensed that the person wanted to attain a lofty goal without engaging in the process of getting there. Thoughts of great practitioners, such as Milarepa, flooded my mind. They practiced joyfully even under difficult conditions because they wanted to attain awakening for the benefit of all sentient beings. They were willing to undergo whatever was necessary to create the causes for awakening, because they were convinced in the depths of their hearts that this was the most worthwhile thing to do. To attain results like these great practitioners did, we must cultivate that same compassionate motivation and enthusiastic effort.

When I cultivate enthusiasm to achieve buddhahood in this lifetime, in the back of my mind I have the idea of numerous lives and many eons. Thus my prayer becomes, "In order to serve sentient beings, may I attain buddhahood—if possible within this lifetime, but more likely after countless lives." If we think of attaining awakening in this life but lack the perspective of many lifetimes, our wish is unrealistic and may lead to despair when we do not progress as quickly as we would like. A view accepting future lives is

critical to maintain a long-term joyful motivation free from both idealism and despair.

Some Westerners have genuine interest in Buddhism but have difficulty accepting multiple lifetimes and eons of existence. Thinking that this one lifetime is all that exists, they want to see immediate progress—fast food and fast awakening! But the latter is not possible. I do not know how to help them maintain a joyful motivation given how difficult it is to attain buddhahood in this lifetime.

Some goal-oriented people think of nirvāṇa and awakening as things to achieve, yet they do not want to do what is necessary to get there. They seek transcendental experiences in meditation but are reluctant to change bad habits such as harsh speech, lying, and taking intoxicants. Here, too, it is difficult to guide them.

Transforming our mind is a process. Awareness of this brings our attention to the present moment, for the time to practice is now. A process-orientated approach also rouses us to examine our daily activities in light of the Dharma and to see that progress is made by transforming our thoughts, emotions, speech, and behavior.

Some of my Western students comment to me that Buddhist scriptures talk about either deluded people who consistently create destructive karma or bodhisattvas whose motivation and conduct are pure. They wonder how to practice when they are in between these two extremes.

Bodhisattvas' wonderful deeds are activities to emulate and inspire us to practice. The scriptures always present the ideal; if they didn't, we wouldn't know what to aim for and would think mediocre attainments were the best. But no one—except maybe ourselves—expects us to master the bodhisattva practices instantly. While I admire the abilities of the great bodhisattvas and spiritual mentors, I do not expect myself to practice as they do, given my present situation. By endeavoring to think and act as they do, I am confident that gradually these abilities will take root and grow within me.

Thinking of the Buddha as having always been awakened creates unnecessary obstacles in our mind. The Buddha is not an inherently existent awakened being. He was once an ordinary, confused being like us, and through gradual, consistent practice, he transformed his mind and attained buddhahood. We are no different from him; if we joyfully persevere in creating the causes, we too will become buddhas.

### *Advanced Practices at the Right Time*

In their enthusiasm for the Dharma, some beginners enter into advanced practices without sufficient preparation. They may make serenity and meditation on emptiness the focus of their practice, receive tantric empowerments, and enter a three-year retreat and later become discouraged by their lack of progress.

While the union of serenity and insight on emptiness is the actual path that liberates us from cyclic existence, we must still practice the initial meditations. Without doing that, trying to gain deep concentration while living in the city will only make us frustrated because our minds are unfamiliar with the antidotes to afflictions and the external situation isn't conducive to progress. Tsongkhapa gave some excellent advice in this regard:

Some say to expend your energy only to stabilize your mind and to understand the view, ignoring all earlier topics, but this makes it very difficult to get the vital points. Therefore, you must develop certainty about the whole course of the path.<sup>54</sup>

In other words, our journey to awakening will be successful if we start at the beginning of the path. When we are ready to cultivate serenity and insight on emptiness, it is imperative to receive instructions on the methods to do so and to practice these correctly. Gaining the correct view is not easy. Emptiness is not nothingness, and meditation on emptiness is not simply resting the mind in a vague nonconceptual state. We must be able to negate all fantasized ways of existence and still establish the conventional functioning of karma and its effects that is the support for ethical conduct. Also, our concentration must be vivid, unclouded by subtle laxity or excitement.

Tantra is an advanced practice that requires lengthy preparation. In their excitement to enter tantra, some people find contemplation of the disadvantages of cyclic existence tedious, meditation on death and impermanence uninteresting, and teachings on ethical conduct inconvenient. They skip over practices to generate renunciation and bodhicitta and take many empowerments, which entail assuming tantric precepts and commitments. After some time, they become confused and find keeping tantric precepts

and commitments burdensome. Not progressing as rapidly as they would like, they become discouraged and either neglect their tantric commitments or abandon Dharma practice altogether.

We may ask why Tibetan masters give highest yoga tantra empowerments to relatively inexperienced practitioners. I too wonder about this! It could be to please the students who request them or to plant seeds in their mind-streams so in future lives they will encounter tantra. Perhaps in the audience there are a few people who are able to practice at this level. However, it is sad when this ends with someone giving up the Dharma.

Accomplishing the entire path to awakening is like building a house. A solid foundation is necessary before erecting the walls, and stable walls must be in place to put on the roof. Similarly, beginners would do well to gain an overall understanding of the path by contemplating the four truths, meditating on the practices in common with the initial- and middle-capacity beings, and practicing the six perfections according to the Sūtra Vehicle. Furthermore, doing a lot of purification and collection of merit will eliminate obstacles. If they then receive an empowerment, their tantric practice will bring the desired results.

Some beginners hear about three-year tantric retreats and are eager to do one. However, because they are not well prepared, at the end of the retreat their major accomplishments are being expert in playing ritual musical instruments, chanting pūjās in Tibetan, and making *tormas* (ritual cakes). Not much internal transformation has occurred, and their disturbing emotions remain almost the same. A few who have done many tantra visualizations and recited millions of mantras may boast that they are accomplished tantric practitioners. Some adopt the title “lama” after the retreat, but personally speaking, I believe doing a three-year retreat is insufficient to earn that title. One time I commented upon people entering Vajrayāna too soon to a close disciple of the previous Karmapa, and he fully agreed. The great nineteenth-century Nyingma lama Dza Patrul Rinpoche said (AKC 12):

Any Dharma that does not benefit one’s own mind  
is just sanctimonious, not meaningful Dharma.  
Unless it makes some difference to your mind,  
even doing retreat for a hundred years would just be a pain.

These relative newcomers to the Dharma who do three-year retreats have tremendous determination and self-discipline. I would find it difficult to sleep sitting up and then meditate the next day. I respect and admire them for that. However, rigorous physical disciplines do not necessarily transform the mind; they may simply be a test of one's willpower. Someone may have physical and verbal discipline but an unruly mind. Dza Patrul Rinpoche said (AKC 14):

Even if we have completed our quota of years and  
months on retreat  
and managed to recite millions and millions of mantras,  
unless attachment, hostility, and ignorance have  
decreased in our minds,  
that Dharma I consider as just pointless.

These people have put the cart before the horse. Building a proper foundation by learning the four truths and practicing the bodhisattva deeds would do them well.

### *Checking Our Meditation Experiences*

Some students talk of having extraordinary meditative experiences, but when something upsetting happens in life, they are unprepared and cannot handle it. This usually occurs because they have overestimated their meditative experiences. Unusual experiences such as visual appearances, special dreams, or feelings of bliss are not necessarily indications of spiritual realizations. They may occur due to an imbalance of the winds (*prāna*) in the body, external interferences, or an overactive imagination. For this reason, it is important to consult our spiritual mentors, who will help us evaluate these experiences.

Some experiences, such as having premonitions of future events, arise due to karma. They are not always accurate, and not everyone will welcome a prediction of future illness when they haven't asked us for advice!

Unusual or exotic forms may appear when we're meditating, or we may experience strange sensations in our body. Most of these are distractions and should be ignored.

Once I met a Westerner who considered himself a tantric practitioner.

In a hopeful voice, he told me of a dream in which he saw many deities and related it to the passage in Candrakīrti's *Supplement to the Middle Way*, "At that time you will see one hundred buddhas," which refers to a bodhisattva on the path of seeing who has a direct perception of emptiness. This person thought that because he dreamed of many deities he must be an ārya bodhisattva and waited for me to confirm that. I replied, "Seeing a hundred buddhas is not the only quality of bodhisattvas on the path of seeing. They have many other qualities as well—they can live one hundred eons and emanate one hundred manifestations. So examine whether you can do these as well."

Remaining humble is an essential quality for genuine spiritual practitioners. A disingenuous person may praise himself or disparage others due to attachment to receiving offerings, fame, or status. We should not be led astray by this. The Buddha described several ways to differentiate a true from an untrue person (MN 113):

But a true person considers thus: "It is not because of one's renown that states of greed, hatred, or confusion are destroyed. Even though someone may not be well known and famous, yet if he has entered upon the way that accords with the Dhamma, entered upon the proper way, and conducts himself according to the Dhamma, he should be honored for that, he should be praised for that." So, putting the practice of the way first, he neither lauds himself nor disparages others because of his renown.

The Buddha spoke similarly regarding true persons who do not laud themselves and disparage others due to their family's socioeconomic status, how many offerings they receive, how ascetic they are, how strictly they keep their precepts, or what levels of samādhi they have attained. The Mahāyāna mind-training texts emphasize the same points: "Do not be boastful" and "Do not turn a god into a devil" by using Dharma practice to increase our self-centered attitude and self-grasping ignorance.<sup>55</sup>

One Tibetan meditator had a vision of Tārā in retreat. His student became very excited upon hearing this, but the meditator remained nonplussed. Puzzled, the student asked why, to which the meditator replied, "Whether or not Tārā actually appeared to me, I need to continue practicing. Realizing emptiness with the subtle mind is what will actually free me."

Dreams are illusory, although sometimes they may indicate future occurrences. I have met Tibetans who dreamed of Dharamsala before they came here, and some people dreamed of being at temples before having gone there. However, attachment to dreams increases grasping at true existence, which leads to obstacles, so it's important to remember that dreams are empty of true existence. When we face obstacles due to sentient beings, meditation on compassion is best; when we encounter other obstacles, meditation on emptiness is the best antidote.

Sometimes we meet people who have practiced for years and seem to have deep meditative experience but act in ways that appear ethically questionable. When a contradiction exists between someone's seemingly high realization and their ethical conduct, that realization may not be as high as it seems. Although the ability to remain in single-pointed concentration or in a nonconceptual state is a realization, it is not a very deep one. It is not a realization of emptiness, and the person is still afflicted by ignorance and karma.

An actual realization should bring about a change in our life. The sign of having gained the wisdom of studying the Dharma is that our outward behavior has become calm. The sign of having experientially realized the teachings of the middle level is that our coarse afflictions have diminished in strength. If we meditate properly on bodhicitta, we become kinder human beings who are courageous in practicing the Dharma. In adversity, yogic meditators remain impartial, open, and compassionate. From such behavior we can infer they have subdued their minds through deep meditative experiences. However, this alone is not an indication that they have realized emptiness directly.

## REFLECTION

---

1. Have you inadvertently fallen into any of the above pitfalls?
  2. What were the factors that led to this?
  3. What must you do now to get back on track?
-

## *Signs of Progress*

If we devote our lives to familiarizing ourselves with the Dharma, we will definitely see a change in our mind. As a Buddhist saying predicts, “You will be able to see the whole world and everything in it as Dharma instructions.” This occurs when, through daily practice, our mind has become familiar with the Buddha’s teachings and we are able to practice in most of the situations we encounter. When we have gained some experience of impermanence, we are aware of things changing, arising, and ceasing in each moment. With this understanding prominent in our mind, our clinging to people and things that are unable to provide us lasting happiness decreases. Automatically, our mind is more relaxed and at ease.

When doing analytical meditation on the stages of the path, contemplate each point, considering it logically and relating it to your own experience. While thinking about these points, do not let the mind wander to objects of attachment or become sleepy or dull. Try to have a mind that is clear and concentrated that stays on the points you are contemplating and is able to penetrate their meaning.

Certain signposts along the path help us check whether our meditations are progressing in the right direction and bearing fruit. If we meditate consistently on how to rely on a spiritual mentor and come to a point where we do not pick faults in our spiritual teachers and feel genuine respect for their qualities and gratitude for their kindness, we have achieved a good result from this meditation. If we meditate on precious human life and have a stable feeling, “My present life with so much freedom and opportunity to practice the path is difficult to receive and very precious. I do not want to waste it but direct it toward familiarizing my mind with bodhicitta and emptiness,” we are proceeding in the right direction. If we pay less attention to the happiness of this life and prepare for future lives we are experiencing the result of meditation on impermanence. If acting destructively repulses us and we want to avoid it like poison, we have benefited from meditating on the sufferings of unfortunate rebirths. The mark of gaining experience of the meditation on refuge is that we understand the qualities of the Three Jewels and have deep trust in their ability to guide us on the path. Such feelings may arise during a meditation session, but the sign of real progress is when they occur repeatedly.

How do we know we have generated true renunciation of cyclic existence? Tsongkhapa said that when, through habituation, day and night we do not wish for the pleasures of cyclic existence and yearn for liberation, we have developed true determination to be free. Such an attitude has ramifications in our life. We cease being obsessed with the pleasures of cyclic existence, and things that used to irritate us cease to do so. This does not mean, however, that in deep sleep we still aspire for liberation, for that is not possible. Nor is our determination to be free manifest when we are in deep concentration realizing emptiness. Nevertheless, it has not been lost; it is present but latent when our mind is focused on other objects.

We have realized bodhicitta when, through habituation and practice, the great compassion and the aspiration to attain awakening arises spontaneously in our mind whenever we hear, see, or think about any sentient being. As explained in Tsongkhapa's "Three Principal Aspects of the Path" (*Lam gtso rnam gsum*), the measure of having ascertained the correct view of emptiness is seeing that dependent arising and emptiness are not contradictory but are mutually reinforcing, such that the mere reminder of dependent arising brings understanding of emptiness and vice-versa.

Generating virtuous qualities and realizations involves both undistracted focus and analytical discernment. Tsongkhapa says (LC 1: 272):

Therefore, the Buddha says that any achievement of a virtuous quality in the three vehicles requires a state of mind that is both (1) an actual serenity, or a similitude of it, which rests one-pointedly on its virtuous object of meditation without wandering from it; and (2) an actual insight, or a similitude of it, which carefully analyzes a virtuous object of meditation and distinguishes both the real nature and the diversity of phenomena.

If we take "good qualities" and "realizations" to have similar meanings, serenity and insight or mental states that are similar to them are needed to gain them. This is certainly true for the realization of selflessness, which may be conceptual and inferential (on the path of preparation) or direct and nonconceptual (on the paths of seeing and meditation). For good qualities like renunciation, compassion, or bodhicitta to be definitively achieved, we need serenity or a state of one-pointedness like it. To realize selflessness—be

it the conceptual, inferential realization on the path of preparation or the direct nonconceptual realization on the path of seeing—both full serenity and insight are necessary. To realize selflessness before that, similitudes of serenity and insight are required. For those of us who would like to gain attainments quickly, this may seem like a high bar to reach. However, this description makes it clear that a realization is not a flash of understanding that comes and goes. It is a stable state of mind that can be sustained with undistracted focus. Unlike fleeting flashes that are difficult to replicate, the experiences from gradual cultivation can be generated repeatedly and enhanced through single-pointed concentration.

## REFLECTION

---

1. What are realistic expectations for you on the path?
  2. What can you do to accomplish them?
  3. How can you keep a happy mind and cultivate patience while you go about creating the causes?

# 11 | Personal Reflections on the Path

## *My Day*

PEOPLE OFTEN ASK ME about my daily schedule and Dharma practice. I am a very poor practitioner, but I keep trying because I am convinced that practicing the Dharma is the path to peace and happiness. In Dharamsala, India, where I live, I wake up at 3:30 a.m. and immediately visualize the Buddha and recite a verse of homage written by Nāgārjuna (MMK 27.30):

Enthused by great compassion,  
you taught the exalted Dharma  
to dispel all [wrong] views.  
To you, Gautama, I prostrate.

Sometimes I change the last line of the verse to say, “May I be inspired by Gautama Buddha.” This verse is especially meaningful to me because it points out the Buddha’s compassionate motivation that led him to identify ignorance as the cause of *duḥkha* and then to attain the wisdom realizing the ultimate nature to dispel that ignorance. Ignorance is not a mere lack of knowledge; it is a distorted apprehension that grasps as existing what doesn’t exist—inherent existence. Bodhicitta then spurred him to accumulate merit, purify his mind, and hear, think, and meditate on the Dharma. In that way, he became an awakened teacher with the ability to liberate sentient beings by giving faultless teachings.

Reflecting in this way increases my confidence in the Buddha and in the path I practice to transform my mind. It also helps me to appreciate

my precious human life with many fortunate qualities: I live in a place and time where the Buddha has appeared and his teachings still exist, and I have belief in things worthy of respect such as ethical conduct, concentration, and wisdom. Recalling this daily enables me to maintain a joyful attitude immune to depression and discouragement.

After reciting this verse three times, I visualize Buddha Vajradhara dissolving into me and inspiring my mind. This gives me a feeling of courage and the willingness to persevere in my practice. I then generate bodhicitta and remind myself that I can surely see transformation happening within myself, although it may be small. This encourages me to rejoice in my virtue and continue practicing.

To clear the fogginess of sleep from my mind, I recite Mañjuśrī's mantra, *Oṃ a ra pa ca na dhīḥ*,<sup>56</sup> and then recite *dhīḥ* as many times as possible with one breath, imagining Mañjuśrī's wisdom in the form of the syllable *dhīḥ* absorbing into a *dhīḥ* at the back of my tongue. While meditating on Mañjuśrī like this, I reflect on the four truths of the āryas, especially the liberating power of true paths and the peace that comes with actualizing true cessations.

Then I begin prostrations and daily recitations followed by a glance meditation, in which I recite and contemplate verses sequentially outlining the complete stages of the path to awakening. After that, I do formal meditation, predominantly analytical meditation to increase my understanding of the Buddha's teachings. Here my efforts are mainly directed to meditation on dependent arising and emptiness as well as on compassion and bodhicitta. I also do the tantric practice of deity yoga, which involves imagining transforming death, the intermediate state between one life and the next, and rebirth into the three bodies of a buddha.

I continue meditating, taking a few breaks, including breakfast and exercise, until about 8:30 a.m. If there is no office work, then I study Dharma texts. I take delight in reading the Indian and Tibetan treatises and commentaries repeatedly, each time discovering something new in them. There's a Tibetan saying, "If you read a book nine times, you will have nine understandings." Because this has been my experience, I will continue studying until the end of my life and recommend that others do likewise.

Often my study is interrupted because I am needed in the office. Lunch is just before noon, and after that I go to the office to work. My afternoons

are filled with appointments, one right after the other. As a Buddhist monk, I don't eat dinner, and around 8:30 p.m., I go to sleep. I sleep very soundly, without any sleeping pills, and enjoy very peaceful meditation.

One teaching of the Kadam masters called the “four entrustments” especially touches my heart:

Entrust your mind to Dharma practice;  
 entrust your Dharma practice to a life of poverty;  
 entrust your life of poverty to death;  
 and entrust your death to an empty cave.<sup>57</sup>

These lines speak of completely giving ourselves to the cultivation of the two bodhicittas, conventional and ultimate, making this the most important activity in our lives, so much so that we are willing to give all our life's energies to it, from now until our death. Relinquishing attachment to the eight worldly concerns, our mind experiences so much joy and satisfaction with the freedom the Dharma bestows that money and reputation are of no concern to us. When I reflect on this verse, tears come to my eyes because this is my highest aspiration. It also reflects the greatest challenge in my life—balancing meditative cultivation with directly benefiting others in this life. Both are aspects of Dharma practice and our inner development. The pressing needs of people right now are very important, but meditative practice beckons, and the need to deepen my own practice in order to benefit others more is also essential. Perhaps some of you live with this tension in your lives, too.

Occasionally, I am able to do a retreat. During this time, I practice the visualization of deities and maṇḍalas and the recitation of mantras, but mainly I read and contemplate the great Indian texts. Being able to study and reflect on the meaning of these magnificent texts is a great treat for me.

### *Gradual Progress*

Just as the Buddha was able to gradually transform his mind, we can as well. In my own life, I see progress from the time I was a child until now. Because I grew up in a Buddhist family and in a Buddhist country where everyone repeated, “I take refuge in the Buddha,” I have had faith in the Buddha since

I was young. Although at that time I didn't have much understanding of the Dharma, I knew the Buddha was an extraordinary human being.

I came to the Potala Palace in Lhasa at age five, and my studies began when I was seven. My older brother and I studied together under the direction of our tutor, but as a young child I liked to play. The tutor had a whip, so I studied out of fear. Actually, the tutor had two whips, an ordinary whip and a gold whip that was for beating a holy person. But there was no holy pain!

When I was a little older, I began to study the lamrim, the stages of the path. This caused me to have a deep interest in the Buddhadharmā and increased my confidence in the Three Jewels as authentic refuges. When I was fifteen or sixteen, my enthusiasm to practice the Dharma grew. Occasionally, when I received teachings or meditated, I felt very moved by the Dharma.

My education involved memorizing root texts and listening to my teachers' word-by-word explanations of them. I was tutored by seven debate masters from different monastic colleges. My Mongolian debate master was especially interested in emptiness, so in preparation for my geshe exams in 1958–59, I had to study many texts on that topic. We planned to visit southern Tibet on pilgrimage after my exams in March, 1959, and I would study Tsongkhapa's *Essence of Eloquence* (*Drang nges legs bshad snying po*) then. However, on March 10, everything changed, and we fled Tibet and became refugees in India. I took some texts with me—Śāntideva's *Engaging in the Bodhisattvas' Deeds*, Tsongkhapa's *Great Treatise on the Stages of the Path*, his *Essence of Eloquence*, and others—and studied whenever possible.

In my late twenties in Tibet and my early thirties in Dharamsala, I studied, contemplated, and meditated on emptiness more seriously. I became more convinced of the possibility of attaining nirvāṇa, and my confidence in the Dharma Jewel—true cessations and true paths—deepened. That led me to see the Saṅgha—those beings who have realized this Dharma directly—as magnificent and increased my admiration for them. This in turn helped me develop deeper, genuine faith in the Buddha as our teacher. At that time, the thought arose in my mind that if I could actualize nirvāṇa, I could then have a long, blissful rest!

Whereas I have high regard for bodhicitta and it is not difficult to understand, actually generating it seems challenging. My experience tallies with

what the great masters say: emptiness is difficult to understand; it is especially challenging to maintain the tension between appearance and emptiness and to establish the efficacy of cause and effect in a world that is merely imputed and lacks any existence from its own side. However, when we think about emptiness and dependent arising over time, they become clearer, and we gain some feeling for them and confidence in them. Bodhicitta, on the other hand, is easy to understand but difficult to experience. But there is no other choice. We have to make the effort.

We Tibetans have the tradition of “students offering their realizations to the teacher,” in which we share our understanding of the Dharma with our spiritual mentors. In the late ’70s and early ’80s I had several opportunities to meet with my senior tutor Ling Rinpoche, during which I spoke about my understanding of emptiness in particular. At one point, he listened very carefully and then said, “Soon you will become a yogi of space,” which means someone who has realized emptiness.

Even in my dreams I would often discuss the Dharma with people or meditate on emptiness and bodhicitta. In the last few years, I have had more interest and enthusiasm in understanding emptiness, and that has brought deeper conviction and experience. Once I read in a text, “the person is mere designation,” and a feeling like electricity shook me. I thought that perhaps this was selflessness. When I focused on the self, I could confirm that it was merely designated, but when I focused on the aggregates, the experience was not the same. That indicated that my experience was of the absence of a self-sufficient substantially existent person, not the emptiness of inherent existence.

Today my understanding of selflessness has improved, and that helps greatly to reduce the intensity and frequency of the afflictions, especially attachment and anger. Understanding emptiness has no adverse effect on the practice of authentic love and compassion because these are not driven by ignorance. In fact, understanding emptiness boosts our altruism by enabling us to recognize sentient beings’ suffering more clearly. Contemplation of emptiness and compassion are the backbone of my daily practice.

I do not expect deeper understanding or experience to come within a short period of time. Ten, twenty, thirty, or more years of practice are necessary, but change will definitely occur when we make consistent effort. Some of you may not live another twenty or thirty years, but if you pay serious

attention and make yourself familiar with emptiness and bodhicitta, you will put many positive imprints of these topics on your subtle consciousness. I have seen this in my own experience. Some Buddhist topics are easy for me to understand, but when I discuss these with some senior scholars, these topics sometimes appear difficult for them. This indicates some familiarity with these topics in my previous lives. So even if you are old now, whatever positive imprints you put on your mindstream from studying and contemplating for even a few months or years will carry on to your next life and benefit you.

All the virtuous actions you do now will certainly enable you to have a human rebirth and live in a conducive environment where there is more opportunity to learn and practice the Buddha's teachings. Those who are old like me should not excuse themselves by thinking that now they're very old and nothing can be done. The result of thinking like this will be not achieving anything. So please make as much of an effort as you can while you have this precious life.

Those of you who are young have more time to study and practice. Think seriously about what is important in your life, and put effort into the Dharma. Of course, whether you practice is up to you. If you have genuine interest, practice is very worthwhile. Please give this serious thought.

Some followers of other religions or spiritual traditions may read this book out of curiosity. Please continue with your current practice. The Buddha never imposed his beliefs on anyone. Each individual has complete freedom to follow whatever religion he or she chooses or to follow no faith at all. But whatever you do, be a kind human being.

In Montserrat, Spain, I met a Catholic monk who spent five years as a hermit meditating in the mountains behind the monastery. He told me that his main practice was meditating on love. When I looked into his eyes, there was some special feeling there. I admire and respect him greatly. His life shows that if we meditate for five years, some result will definitely come. Similarly, if we make daily effort to train our mind, the wild monkey of our mind will be subdued.<sup>58</sup>

### *Cultivating Bodhicitta*

In 1959 Khunu Lama Rinpoche<sup>59</sup> came to visit me. At that time, he told me that his practice centered on bodhicitta, especially Śāntideva's *Engaging in*

*the Bodhisattvas' Deeds*. Around that time, I also learned about a short text Khunu Lama Rinpoche authored, *The Jewel Lamp: A Praise of Bodhicitta* (*Byang chub sems kyi bstod pa rin chen sgron ma*), and knowing that my guru Ling Rinpoche had already received teachings from him, in 1967 I requested him to give me the oral transmission of that text. While he was reading *The Jewel Lamp*, I was overwhelmed with tears.

In my twenties, I appreciated bodhicitta, but it seemed far away. In 1967, with Ling Rinpoche's permission, I requested teachings from Khunu Lama Rinpoche on *Engaging in the Bodhisattvas' Deeds*. He accepted and gave the teaching in Bodhgaya. After that, bodhicitta felt closer, and it became obvious that self-centeredness is the basis for fear and distrust. Conversely, if we genuinely care about others, even ghosts and spirits will eventually show appreciation. When our basic attitude is altruistic, then even if anger arises, it leaves quickly. It's like our mind has a strong immune system that protects it from the illness of the afflictions.

Around that time, I also studied another marvelous text, Nāgārjuna's *Precious Garland*, and a few other supplementary books, and every day I thought about and meditated on them. Because I already had strong admiration and faith in Nāgārjuna from contemplating his teachings on emptiness, even reading a short passage from his writings has a profound impact on me.

Of the thirteen great classical texts,<sup>60</sup> I received the oral transmission on Maitreya's *Ornament of Clear Realizations* and Candrakīrti's *Supplement to the Middle Way* from Ling Rinpoche. The oral transmissions of the other eleven treatises I received from Khunu Lama Rinpoche. In addition to being a great, yet humble, practitioner, he was a remarkable scholar and teacher. His teachings were very precise, and he could easily cite many passages from the scriptures. When I asked him how he received his training, he told me that when he was in Kham, Tibet, he thought that texts were to be "left behind" in the sense of not clinging to the physical books, although he was definitely immersed in their meaning and it touched his heart. His translations from both Tibetan and Sanskrit were impeccable. When I received teachings on Śāntideva's work, he often mentioned, "Here the Tibetan translation is wrong. The original Sanskrit says this . . ." I made these corrections in my own copy and incorporate them now when I teach that text.

My teacher Ling Rinpoche was very kind to me. He would encourage me

in my practice, telling me that if I put in effort, I could gain realizations. But if I were to see Ling Rinpoche now, I would have to confess that I still have not attained those realizations, even though many years have passed.

Around 1970, my feeling for bodhicitta became more intimate. After some time, I became convinced that if I had enough time to meditate, I could become a bodhisattva within this life. However, I don't have sufficient time. That is my excuse. But for those with sufficient time, there is no excuse!

I continue receiving teachings on bodhicitta and doing analytical meditation on it. Sometimes when I meditate on bodhicitta in my room, I am so deeply moved that tears come. During one period of my life, I would do lengthy meditation sessions on bodhicitta and emptiness, and almost every day I would have strong experiences and be very touched. At the end of his *Essence of Eloquence*, Tsongkhapa says that when he reflects deeply on what he has learned, his faith in the Buddha increases even more. Sometimes his recollection of the kindness of the Nālandā masters overpowers him with appreciation for the teachings on emptiness, and other times reflecting on the suffering of sentient beings overwhelms him with compassion. He comments that it is almost as if these two feelings were competing with each other. While I do not have Tsongkhapa's realizations, at times I too am affected in the same way as he was when reflecting on emptiness and bodhicitta.

Now when I teach about bodhicitta, I feel very moved. That means my mind is more receptive and has grown closer to bodhicitta. Compared to when I was fifteen, my understanding of these topics has changed considerably. This confirms that the possibility of attaining awakening exists. Due to knowledge, examination, and some experience, my faith in the Three Jewels is firm and deep. The Buddha's marvelous teachings on infinite altruism and the wisdom of reality is indeed a living tradition. However, my experience of Tantrayāna is lacking.

During one period, when meditating on tantric practices such as Guhyasamāja, I focused on the generation stage, which involves dissolving oneself into emptiness and reemerging as the deity. I would try to maintain a stable continuity of this visualization and develop single-pointed concentration on it. When reflecting on the self, I would train to immediately think of myself as the deity, without any thought or appearance of

the ordinary I. This is the practice of cultivating divine appearance and divine identity.

But in the late 1970s, I became very busy with my responsibilities to my students and the Tibetan community. Due to lack of time, I had to discontinue my long meditation sessions, and now I have fallen back to my previous level of experience. Born in 1935, I am becoming old; maybe it is too late to practice much more. The Tibetan community in exile now has an elected government, and I want them to carry out all the governmental and administrative responsibilities. Finally, in 2011, I was able to resign my post in the government in the hope of having more time for practice.

But I still have many visitors and appointments. I can't refuse to meet the Tibetans who have endured so much hardship to come from Tibet to see me. I can't ignore them and say "I am in retreat" when they have risked their lives to come all this way to see me. The purpose of doing retreat is to benefit others. Meeting these people brings some benefit to them, so this is part of my practice. I think the rest of my life will go like this. Although I'm sad not to have the chance to do more retreat, my greatest source of inspiration is Śāntideva's verse (BCA 10.55):

As long as space endures,  
and as long as sentient beings remain,  
so too will I abide  
to dispel the misery of the world.

Whether I attain buddhahood or not in this one simple existence is not important; I must at least benefit others, especially when they have problems. Bodhicitta compels me to do this.

The First Dalai Lama, Gendun Drup, spent a long time in retreat. During this time, he had visions of White Tārā and Green Tārā and wrote very moving and meaningful praises to them. After his retreat, he voluntarily began to do more work, some of it difficult and time-consuming: he gave daily teachings on different texts to his students, and he established Tashi Lhunpo Monastery in Shigatse. By that time, he was already an old monk with white hair and a cane, but he was the architect and foreman who oversaw the construction of the monastery. He also sent people out to collect donations so the monastery could be built. Then, despite his age, as the

manager of the monastery, he gave instructions on the daily operation of the monastery and the monks' discipline.

Naturally, some of his students created trouble. On one occasion, Gendun Drup became exasperated with them and said, "If I had remained in Kangchen Monastery, I would have developed some high spiritual attainments by now. But I sacrificed that to come to this place to help you, to help the larger Buddhist community and a greater number of people." Although this may have sounded boastful, he was cautioning his students to be careful, to look at the big picture, and to appreciate that their opportunity to learn the Dharma depended on others.

One day toward the end of his life, Gendun Drup said, "Now I am very old." He said it just like that.

One of his main disciples then reminded him, "It was prophesized that you would go directly to a pure land. Will you do that?"

Gendun Drup replied, "I have no wish to go to these higher places. My only wish is to go to troubled areas where I can serve." That is very wonderful! That truly inspires me!

The Buddha's tradition is a living tradition. If we practice, we can transform ourselves. This occurs not through merely praying but through meditating, principally doing analytical meditation. Buddhist practices use our human intelligence in the greatest way to develop the maximum potential of a good heart.

### *Willingness to Undergo Hardship*

When we look at the life of our teacher, Śākyamuni Buddha, we notice that he went through a process of spiritual development. Born as a prince, he later gave up the comforts of royal life and became a monastic in order to pursue his spiritual practice. He endured the disapproval of his father and the poor living conditions that his wandering lifestyle entailed. He also did six years of severe, ascetic spiritual practice. After all this, he displayed the act of attaining full awakening.

His life exemplifies the necessity to be able to bear hardship in spiritual pursuit. This is true of the lives of the teachers of many other spiritual traditions as well. The message we receive from the examples of their lives is that we, as the followers of these teachers, must be willing to go through hardship and persevere in order to realize our spiritual aspirations.

Sometimes the thought remains in the back of our minds, “Yes, the Buddha went through so many hardships to attain awakening, but I don’t need to do this. Somehow I’ll be able to attain awakening without having to give up the comforts and luxury that I’m attached to.” Although we may not say it, thinking in this way indicates we believe that we are more fortunate than the Buddha. While he had to go through so many hardships, we feel we can attain the same spiritual realizations without having to live ascetically and endure difficulties as he did. This is mistaken.

The Buddha taught the middle way, a path avoiding the extremes of severe asceticism and heedless indulgence. Nevertheless, we must be willing to give up the pleasures to which we are attached if we are to penetrate the nature of reality and open our hearts with bodhicitta toward all beings. Our priorities must be clear: Which do we value more, our present comfort and security or spiritual liberation? Are we willing to undergo the physical and emotional hardships of relinquishing our attachments in order to practice the spiritual path? These are questions on which we must reflect deeply.

Each of us will face different hardships along the path. For some people, the challenge will not be living a simple lifestyle but enduring the criticism of family and society. Others will face having to practice despite health issues, while some must deal with strong sexual cravings. We must develop the internal fortitude to persevere in our practice no matter what suffering—physical, emotional, or mental—comes our way.

### *Keeping a Happy Mind*

It is important to keep a happy mind when practicing Dharma. Buoyancy, enthusiasm, and joy are needed to maintain our practice; these cannot exist in a mind weighed down by depression. People ask me how I maintain a happy mind and relaxed demeanor even though I have been a refugee for over fifty years. One time a news reporter was interviewing me and asked me why I wasn’t angry given the fact that I have witnessed so much destruction in my native land and to my people. I looked at her and replied, “What good would it do to be angry? I wouldn’t sleep well or be able to digest my food. Plus my anger wouldn’t change the situation at all!” I suppose she assumed I would take the opportunity to tell the world about the sufferings of the Tibetans under the Communist Chinese and was astonished when I didn’t.

While we may sometimes experience happiness when the mind is non-virtuous—for example, the pleasure that arises when our craving is satisfied or when we have exacted revenge on someone who hurt us—that happiness does not help us on the path to awakening and should be abandoned. In any case, deep down, I don't think we are really happy then.

Other experiences of happiness are rooted in virtuous mental states. When I am generous and can relieve the poverty of others, I feel good inside. The ability to live ethically with a nonviolent attitude makes me rejoice and generates a sense of well-being. Having lovingkindness toward others brings pleasure in the mind, and doing my daily meditation practices, which deepens my refuge in the Three Jewels, brings great inner satisfaction. It is also said that gaining meditative stabilization suffuses the mind with bliss.

We are often distracted from the Dharma by sensory stimuli—attractive or repulsive sights, sounds, smells, tastes, or physical sensations. But when our mind of attachment doesn't have enough sense stimuli, we are bored. People who are very involved with the external world of the five senses often find themselves in this predicament and are frequently dissatisfied, whereas those who derive happiness from internal qualities—faith, love, compassion, wisdom, and so forth—experience much joy and contentment. They are not swept away by the goings on of people in the environment around them. Too much sensory input makes us exhausted, and our mental potential declines. For that reason, it is better to watch our mind. I don't watch television or explore the Internet, although I do listen to BBC news on the radio so I know what is going on in the lives of other sentient beings. Listening to the news becomes a kind of meditation on karma and its effects and inspires me to cultivate compassion.

In my own practice, I weed out the unwholesome states that bring some sort of temporary, polluted pleasure and instead put energy into cultivating wholesome mental states. That enables me to keep a happy mind—which is important to continue practicing the Dharma—even in difficult situations.

### *Realized Beings*

Some people have asked me whether I know people who have attained full awakening. The Buddha stipulated that unless there is great purpose

in revealing one's realizations, one should not do so. Speaking of one's own spiritual attainments is an infraction of the monastic precepts, and proclaiming realizations that one does not have is a root downfall, such that one is no longer a monastic. Falsely proclaiming one has realized emptiness is a root downfall of the bodhisattva ethical code. Thus proclaiming one's realization publicly is unheard of among true Buddhist practitioners.

Nevertheless, I have had the opportunity to meet some people who have experienced extraordinary development and may be near buddhahood. Meeting these people demonstrates that the teachings are alive and gives us great inspiration and determination. For this reason, refuge in the Saṅgha—the highly realized beings—strengthens our practice.

In the remainder of this section, I (Chodron) would like to explain further why realized beings do not discuss their attainments, especially nowadays when people make great effort to proclaim their good qualities and accomplishments. First, speaking about attainments has a deleterious effect on our practice. As soon as someone begins to talk about spiritual experiences publicly, words begin to replace experience. The actual feeling of the experience fades in the mind, and we become expert in telling a fascinating story. It is easy to become arrogant and complacent if we attain celebrity as a spiritual luminary. For the sake of our personal practice, remaining humble and modest is best.

Furthermore, spiritually immature people easily confuse an unusual meditation experience for spiritual realization. Even if their intentions are good, if they proclaim their spiritual prowess and begin to instruct others, naive people can easily be led astray and follow an incorrect path. Then, if that teacher's veneer cracks, the followers will be deeply disillusioned and may even abandon following a spiritual path altogether. Teachers who make no special claim to greatness avoid being transformed into false idols by their followers.

Say someone with actual attainments were to announce them publicly, what would come of it? Many people would worship that person instead of listening to their teachings. Imagine if the Buddha appeared in New York with a body of radiant, golden light. People would be so struck by amazement that they would stare at him and wait for him to perform miraculous feats. The media would want to interview him, and soon there would be a new line of apparel named after him.

If someone has genuine and stable realizations, people with merit who are receptive will discern this and have faith in that person. It is not necessary to advertise one's qualities. Someone who is a good cook does not need to proclaim his culinary feats to all. When he cooks a meal, people will know for themselves.

Humble behavior is a sign of spiritual attainment. People with genuine realizations have no need for praise, reputation, and the glamour and perks that they bring. Their main interest is in stabilizing and enhancing their realizations and benefiting others.

In special cases, a teacher with close connections to a few students may reveal his or her spiritual experiences in a confidential manner and in a private setting. This may be to inspire those students who are already dedicated to the path, so that they will put more energy into their practice. These students should be discreet with regards to what they have heard.

While publicly discussing our attainments does not serve a good purpose, consulting with our spiritual mentor when engaging in intense spiritual practice is important. During a meeting, we relate our spiritual insights and experiences to the spiritual mentor, who will help us evaluate and understand them and will give us further guidance and instructions. If a practitioner is in strict retreat and her spiritual master is not nearby, she may discuss her meditation experiences with a trusted and experienced fellow retreatant to clarify and refine her understanding and avoid misinterpreting an experience. As such it is important for spiritual progress.

### *What I Have Learned in Life*

Someone once asked me, “You have lived many decades now. Please sum up the most important things you have learned in life.” I paused to reflect. Of course, I have had many different kinds of experience—as a citizen in my own country and as a refugee, as a young person and now as an older one, as a student and as a leader. In Buddhism we always pray for the welfare of all sentient beings no matter their life form; this has had great impact on me. In all situations and with a wide variety of people, I regard everyone as being fundamentally the same: each of us wishes to be happy and to be free from suffering. Thinking like this, I immediately feel close to others wherever I go; there is no barrier between us.

As a result of meeting many different kinds of people and also due to the experience that age brings, I act in an informal manner with everyone and talk to others as one human being to another. This attitude and behavior eliminate any ground for anxiety. On the other hand, if I thought, “I am the Dalai Lama and a Buddhist monk, so I should act a certain way, and people should treat me in a particular way,” that would foster anxiety and resentment. So I forget about such distinctions and see that I am just a human being who is meeting another human being. On the emotional level, we are the same. On the mental and physical levels, we are also the same. It is helpful for me to think in this way, and it also puts others at ease. Sometimes at the beginning of a meeting or a conversation, people are very reserved and stiff, but within a few minutes that is gone and we feel very close.

## 12 | Working in the World

AS BUDDHISTS, and particularly as practitioners of the Mahāyāna path, we are part of the human community and have the responsibility to benefit that community. We should take a more active role in helping society by employing whatever talents and abilities we possess to help others, whether or not they are Buddhist. If the human community is happy and at peace, all of us automatically benefit.

People's differing temperaments are reflected in two types of compassion. The first wants others to be free of their suffering and problems but still prioritizes happiness for oneself. The second not only wishes others to be free of suffering but is also prepared to act to bring this about. The experience of compassion is similar in the two, but due to focusing more on the well-being of others and the disadvantages of self-centeredness, the second compassion is courageous and actively engages with others.

There are many ways for those who wish to alleviate misery to apply Dharma principles to their interactions with family, society, and the surrounding world. As we actively help others, we must continue to meditate on the two methods to generate bodhicitta, using reason and concrete examples to increase the strength and scope of our compassion and to prevent it from degenerating.

Good health and a positive attitude are assets when we work to benefit others, so we will turn to these topics first. Reflections have not been included in this chapter, so please pause at the end of each section to reflect on its main points and how they relate to your own experience and aspirations.

### *Good Health and Dealing with Illness and Injury*

Everyone desires good health, and for Dharma practitioners, it facilitates our ability to practice. For this reason we should do our best to maintain our health by eating nutritious meals, exercising and sleeping enough (but not too much!), and maintaining good standards of cleanliness. Here our motivation is not attachment to pleasure or fear of pain; it is the opportunity good health provides to use our precious human life for Dharma practice, and specifically to cultivate bodhicitta and wisdom in order to benefit all sentient beings.

Balance is important. One meaning of the “middle way” is to avoid the extremes of self-mortification and self-indulgence. Physical suffering comes naturally, simply because we have a body. Deliberately inflicting pain on our body does not purify our mind. In fact, severe ascetic practices could become another form of self-centeredness if the motive is to gain a good reputation for having the ability to tolerate pain.

Self-indulgence hinders Dharma practice by consuming our time. Instead of practicing the Dharma to go beyond the saṃsāric situation of having a body under the influence of afflictions and karma, we spend inordinate energy and time pampering our body and worrying about its health and comfort. It is wiser to accept that as long as we are human beings in cyclic existence, we will have a body that is prone to illness. Falling ill is not some unusual or unique fate that we alone suffer, nor is it a punishment or indicative of failure on our part. Accepting the limitations of having a saṃsāric body and understanding it is the basis of our precious human life, we must use it wisely without fussing over it.

People often write to me for advice regarding illness. Although my responses vary according to the illness and the person’s disposition, I will share some general advice to help others.

When you are ill, you should consult a doctor and follow his or her advice. Do not abandon conventional medicine in favor of faith healing.

It happens that someone comments to a cancer patient, “Your anger caused the cancer.” Such comments not only lack compassion, they are mistaken. Diseases come about due to many causes and conditions, and blaming someone who is ill for their disease is heartless.

The mind-training practice of seeing our illness as a result of destructive

actions we have done in previous lives or earlier in this life is very different than blaming the victim. Seeing illness in this way does not mean that we deserve to suffer: no one *deserves* to suffer. Rather, we act and experience results that accord with those actions. Daisy seeds grow into daisies; they don't produce chilies. Thinking in this way enables us to release our anger and sense of injustice and accept the situation. Doing this transforms a bad situation into a learning experience, because we understand that if we do not like suffering results, we should abandon creating their causes in the future. This gives us great impetus to let go of destructive actions and negative habits.

Thinking that the karma that caused the illness could have instead ripened in a far worse suffering helps put our misery in perspective. Cancer is not at all pleasant, but if that karma had ripened in an unfortunate rebirth, we would have been in an even worse situation. Reflecting in this way helps us to realize that we can in fact endure our present misery. In addition, because that karma has now ripened, its energy has been consumed and cannot afflict us again.

Distinguishing between physical pain and mental suffering is crucial. Even if your body is ill, your mind can remain peaceful, and a relaxed mind will lessen your suffering and help the body heal. Sit quietly and observe the difference between the actual physical pain of the illness or injury and the mental suffering caused by fear and anxiety. By letting our preconceptions proliferate and imagining all sorts of horrible things that could happen due to our illness or injury, our mind can cause us more misery than our physical condition. Instead of indulging the anxiety, bring your attention to a wholesome way of viewing the situation: contemplate the kindness of those who are taking care of you. By doing so, you will be filled with strong gratitude.

Remembering that tragedy is not unique to ourselves also helps to broaden our view and prevents us from falling into self-pity, which only increases misery. We can contemplate, "At this very moment, many others are experiencing far worse miseries, and many of them have no protector, no refuge, and no friends to help them. I am more fortunate for I can rely on the Three Jewels, and so many friends, relatives, and even strangers—such as the hospital staff—are helping me. For someone who is ill, my situation is quite good." Then send love and compassion to others who are ill, injured, or unjustly imprisoned by wishing them to be free of misery and to have

all happiness. You can combine this with the taking-and-giving meditation described in chapter 7.

Remembering that such problems are characteristic of cyclic existence helps us generate the determination to be free and to attain liberation. This gives our Dharma practice a big boost by helping us to make Dharma, not the eight worldly concerns, our priority in life. In addition, suffering has some benefits: it makes us humbler and helps us to open our heart in compassion for others.

Visualization practices can also be useful. At the place where you experience pain, visualize the syllables of a mantra or a ball of light. Its brilliant yet gentle white light radiates and fills the painful or diseased area, purifying all illness and pain and filling the area with bliss.

Alternatively, imagine the Buddha (or a meditational deity such as Avalokiteśvara or Tārā) in front of you or on the crown of your head. Light and nectar flow from the Buddha or deity into you, purifying and healing your body and restoring the balances of the elements.

Doing purification to cleanse the karma causing the illness is also helpful. Purifying karma that has already ripened or is presently ripening isn't possible, but the karma that perpetuates the illness in the future can be purified. However, when karma is extremely heavy, preventing it from ripening altogether is difficult, although purification can make the result shorter or less severe. It also makes the mind more peaceful and thus better able to handle the illness.

### *Maintaining a Positive Attitude*

Except for a few rare individuals who can devote their full energies to meditation twenty-four hours a day, the majority of Buddhists should remain active in helping their communities. Social engagement is vital, but without meditation our work in society may not become a genuine Dharma activity. On the other hand, without a social component, our practice of benefiting others may not be truly effective. Balance is important.

Whenever you can offer direct help to others, do so. In Tibet, when I saw animals on the way to be slaughtered, I would send someone to buy them, and we gave the animals shelter. In India, seeing animals in cages on trucks pains me a lot. However, I cannot pull over the trucks and buy the animals.

Instead I recite mantras and prayers for them, reflect on karma, and generate compassion.

Countless sentient beings toil in cyclic existence. All of them are caught up in the three types of *duḥkha*: obvious physical and mental suffering, suffering because happy circumstances are fleeting, and suffering by being under the influence of afflictions and karma. Of course we cannot solve all of these problems. Cyclic existence remains; things will never be perfect. But making even a small contribution to one person or to ten people to help them have peace of mind is worthwhile. We have done something. Giving up hope, withdrawing, and doing nothing is senseless. We are all tourists here on Earth; we stay just a short time. So let's not be troublemakers while we are here! Every being wants to be happy and has the right to be. It is our responsibility to make a contribution toward their well-being, and we must do what we can. That is the purpose of our life.

From a Buddhist viewpoint, cyclic existence has been faulty since beginningless time. Because all sentient beings are under the influence of afflictions and karma, trying to create a perfect world by rearranging external conditions is impossible. Because of this worldview, Tibetans do not expect so much from external situations. They accept difficulties more readily and are more easily satisfied. If we cultivate a view that does not expect fantastic happiness and magnificence in cyclic existence, we will be more content with what we have. Rather than leading to apathy or complacency, having modest expectations makes our minds more stable and prevents discouragement.

People ask me how I can bear the suffering in Tibet. When I compare the suffering in Tibet with the suffering of cyclic existence, the latter is much worse. We can't close our eyes to suffering of any kind. Looking at our own suffering, we generate the determination to be free—this is compassion for ourselves. When seeing the suffering of others, we generate great compassion and *bodhicitta* and engage in practices that directly or indirectly contribute to their well-being.

Sometimes we may want to help, but the situation may not allow it. People who do humanitarian work in war zones speak of the danger they face in places where human beings have many disturbing emotions and cannot think clearly. These aid workers have one foot there and one foot ready to run, because there is no value in their getting killed. Even if the Buddha were

to go to some of these places, he could not do much to help. Under these circumstances, we may have to leave the situation physically but can continue to send our compassion and pray for the well-being of those trapped there. We can actively work to educate people in danger of being drawn into the conflict. Although we may not be able to extinguish the fire, we can at least prevent it from spreading. Do not ignore the value of this.

Well-meaning individuals ask me how to develop the courage to keep trying to make a difference in a world that seems so chaotic. No matter how numerous the difficulties and no matter how large the obstacles, if our aim is reasonable and beneficial, we must keep our determination and maintain constant effort. If something is good for the larger community, it doesn't matter whether that goal materializes during our lifetime; we must keep working toward it. The next generation can build upon the good work we have done, and with time things will change.

### *Using Diverse Methods to Benefit Others*

As limited beings, we may find it difficult to know what is beneficial for others. Sometimes our prejudice, attachment, and anger color the situation. We have preconceived ideas about how others should live their lives. The first step in helping others is clearing away the afflictions and self-preoccupation from our own minds.

Second, we actively cultivate love, compassion, and courage in order to have the inner strength to be of assistance.

Third, we develop the wisdom to determine the most skillful way to help. At this point, we may practice the four types of awakening activity: peace, increase, control, and wrath. Initially, we practice these in meditation, first imagining *pacifying* the afflictions of others by encouraging them to purify their negativities, then imagining *increasing* their lifespan, wisdom, and merit by inspiring them to act constructively. Next we imagine being able to influence or *control* their afflictions through the force of our wisdom and compassion. Finally, for those who are intractable, we imagine employing *wrathful* means to destroy their ability to harm others.

To apply these four to an actual situation, let's take the example of someone who is about to perform some act of cruelty. A bodhisattva who lacks clairvoyant powers, and thus doesn't know exactly what is best to do in the

situation, begins with peaceful means. She uses gentle measures to intercede, pacifying that person by giving comfort, verbally addressing his concerns, or using reason to dissuade him from harming someone.

If that doesn't work, she tries increasing his well-being. She may give him medicine or a gift, or teach him a topic that interests him. If this too doesn't work, she will use strong pressure or influence to try to steer him in a good direction. Should that too fail, she may intimidate the person through aggressive means or destroy his ability to harm others. Such forceful action must be motivated by compassion, not by vengeance, and is used only as a last resort.

The basic approach here is to apply whatever techniques are most effective to relieve our own or others' difficulties. This is consistent with the advice that there is nothing a bodhisattva should not learn. We don't use just the Dharma to prevent or solve our own and others' problems but also eat a healthy diet, exercise, and use whatever type of medical treatment is suitable. Complementing Buddhist practice with other methods is fine, although it is wise to remember they are distinct fields. For example, if Buddhists have issues that psychotherapy can help solve, they can and should enter therapy. Dharma centers could have counselors who are also Dharma students. Students would not regard the counselors as spiritual teachers but could discuss psychological issues with them. I am happy to hear that some Buddhists are developing Buddhist-based psychotherapeutic methods.

From one viewpoint, anything can be considered Buddhist if it is motivated by bodhicitta. However, just because a practice is done by a Buddhist does not necessarily make it a Buddhist practice. For example, to attain liberation, a Buddhist must practice serenity meditation. But this in itself is not a Buddhist practice because practitioners of other traditions do it as well. Similarly, except for insight into impermanence and selflessness, insight in itself cannot be called Buddhist because non-Buddhists also practice it. Techniques from disciplines such as psychotherapy can be adopted by Buddhists, but that does not make these techniques Buddhist. From this viewpoint, the only techniques or practices that can specifically be called Buddhist are those directly relating to the goal of liberation from cyclic existence, for example, the meditation on selflessness.

If other disciplines, such as psychology or yoga, do not entail believing

in a permanent soul or a creator, and if they make us a kinder or healthier person, we may use them. If other disciplines teach beliefs that conflict with Buddhist views or create difficulties in our practice, it is wiser to leave them aside. This is the general position, but there may be some exceptions. For instance, to help people with low self-esteem have a better view of themselves, teaching them there is a permanent soul may be helpful. Even the Buddha taught a permanent self in some scriptures as a skillful means to benefit a particular audience.

Any Buddhist teaching, such as mindfulness, compassion, or the taking-and-giving meditation can be taught to others to help them. People doing so should not consider themselves Buddhist teachers, nor should they call secularized versions of Buddhist practices “Buddhism.” They may simply say the technique they teach has its source in Buddhism. Although mindfulness is very popular now and is rooted in Buddhadharma, the way it is taught and practiced in secular society differs from in a Buddhist context. The purpose of secular mindfulness is to help people live better in the present, while Buddhists meditate on the four establishments of mindfulness to attain liberation and awakening. Secular mindfulness simply observes sensation and thoughts as they arise in the body and mind; Buddhist mindfulness has an element of wisdom and leads to insight into impermanence, the nature of *duḥkha*, and selflessness.

If a person has faith in both Christianity and Buddhism, she may view Jesus as a *bodhisattva* and visualize him as a symbol of love and compassion. However, we can’t say this is a Buddhist practice. We can teach Buddhist principles to the general public without using specifically Buddhist language and without calling these concepts Buddhist. However, we should not incorporate non-Buddhist practices or concepts into Buddhism and call them Buddhism. This harms the existence of the pure Dharma.

### *Engaged Buddhism and Political Involvement*

I have some reservations speaking about politics, the business world, and so forth because I don’t want it to appear that I have advice regarding each and every field, especially those in which my knowledge is limited. I also do not want my personal opinions on these topics to be seen as “the Buddhist view” to which all Buddhists must adhere, so I will simply discuss

general points about motivation and so forth and leave their application to the reader.

If someone can make significant spiritual progress, remaining isolated in retreat and spending most of her energy in deep meditation is worthwhile. However, this is difficult for most people, who wish to have a family and a job. In this case, live in a balanced way: maintain a daily meditation practice of whatever length is practical for you, earn your living through right livelihood, and contribute to the benefit of society in general or to specific individuals in it. You will have to determine a good balance of time and energy, given your own situation.

We need education to help others most effectively. The purpose of education is not just to learn more about the world or the living beings in it; it is to build a happier human community and to benefit animals as well. With that motivation, study whatever field interests you and seek employment that does not involve harming others or living unethically. In this way, right from the beginning, your whole life will be involved in benefiting others.

I see three ways the Buddhist community can serve society. First, we can be more active in projects that directly benefit others. Dharma centers and monasteries can either set up their own projects or participate in already existing organizations that help the homeless, provide hospice care for the terminally ill, educate children, reach out to refugees, counsel prisoners, provide healthcare and food to the poor, protect endangered species, care for the environment, and so on. Some centers are already engaged in such works, and I am very pleased with this.

Baba Amte (1914–2008), a follower of Mahatma Gandhi and an Indian social worker, established an ashram for thousands of lepers, who are ordinarily neglected by society, and trained them in various skills. When I saw them working with tools, I was concerned that they would hurt themselves, but the lepers worked diligently and with self-confidence. I offered part of the money from my Nobel Peace Prize to his ashram.

I have also met residents of a slum in a large Indian city. Since they are from a low caste, they feel demoralized. If we treat them with kindness, respecting them as human beings like us, they feel more confident. Once, some laborers were repairing my residence in Dharamsala. At first they were shy and timid, but when I shook their hands and chatted with them, they smiled and laughed. We should not think we are special and look down on

others; we have been in that situation in past lives and may be in future lives if we act recklessly now.

We should also help individuals directly. Often there are many severely disabled beggars outside the monasteries where I teach in India. Some of them drag themselves on the ground. I feel very sad looking at them and encourage people who attend teachings to help them.

Second, we can use Buddhist principles and techniques to promote compassion, altruism, self-confidence, fearlessness, fortitude, and tolerance in society. Many concepts and techniques found in Buddhism for working with the mind can help others, both secular people and those of other faiths. Social activists may want to learn methods to overcome anger. Teachers may want to introduce exercises to cultivate empathy, compassion, and good communication among students. We should explain these methods to others in a secular setting without speaking about Buddhist doctrine or encouraging people to become Buddhists.

Childhood is a crucial time, yet many children grow up in an atmosphere with little compassion. Their parents quarrel and divorce; their teachers do not care for them as individuals. When these children become adults and act without conscience or compassion, who can blame them? They never experienced deeper human affection. The Buddhist community can make significant contributions in schools and families by helping people build families with more warmth and affection, and by showing teachers how to be involved, patient, and compassionate with their students. Parents and teachers—and society in general—need to learn that teaching children to be good human beings is more important than helping them become rich or famous.

Third, we can present Buddhist ideas and practices to help those who are interested. Someone who is terminally ill may want to hear about rebirth. Healthcare professionals may be interested in the stages of dying as described in Buddhist texts. Buddhist teachings may help young people who are spiritually lost, and teaching buddha nature and compassion to the incarcerated can give them a new vision of life.

Representatives from various Buddhist groups could meet to consider taking a united stand on some issues. In that way, Buddhists can participate with concerted effort to preserve the environment and protect the beings in it, including animals. In our world many life forms that do not create

problems are sacrificed to serve the purposes of human beings, who are the troublemakers. We cannot change these things at once, but it is worthwhile to voice our concerns and do whatever is possible.

Some people believe that religious practice and political involvement are contradictory and that a truly spiritual person should not be involved in politics. Several factors must be taken into consideration here. Although politics itself is not inherently corrupt or evil, a person's motivation can make it so. A person using politics to convert people to his religion or impose beliefs unique to his religion on all of society lacks respect for all beings. However, political action taken with a compassionate motivation can be another method to solve human problems, just as engineering, teaching, farming, healthcare, and factory work can benefit humanity.

It is especially important for politicians to behave ethically and develop compassion, and their personal spiritual practice may help them to do so. I sometimes tell Indian politicians that they should be genuinely religious because their actions have a strong effect on society. If a hermit in the mountains lacks proper ethical restraint, few people are harmed; but if a politician does, an entire nation and even the world can be adversely affected. In the *Precious Garland*, which Nāgārjuna wrote for the Śātavāhana king, he penned many verses with instructions on how to govern effectively and fairly. Here are some examples (RA 399, 256, 134):

At that time [as a ruler] you should internalize firmly  
the practices of generosity, ethical conduct, and fortitude  
that were especially taught for householders  
and have as their essence compassion.

Just as you are intent on thinking  
of what could be done to help yourself,  
so you should be intent on thinking  
of what could be done to help others.

Just as by themselves the true words  
of kings generate firm trust,  
so their false words  
are the best means to create distrust.

Nāgārjuna also encouraged the king to tax citizens fairly, fund a system of public education that ensures teachers are well compensated, and construct public roads with rest stops and parks where people can relax and enjoy themselves.

In recent years many people have turned to Buddhist scriptures for guidance on current issues. Other people have sought confirmation of their political or social views in the Buddhadharmā. Quotations to support this or that view may certainly be found in the scriptures. However, we must be open-minded and avoid thinking that everyone who calls himself a Buddhist should agree on all political and social issues. The Buddha principally taught the path to liberation from cyclic existence. When he gave advice on social, family, political, and other issues, he spoke in the context of Indian culture of the fifth century BCE. Some, but not all, of this advice can be applied and adapted to present contexts.

Some people regard the Tibet issue as political, and as Dharma practitioners they do not want to get involved. However, if we want Tibetan Buddhism to flourish and remain in our world, we need freedom in Tibet. Without having autonomy in our country, we Tibetans will have great difficulty in preserving our form of Buddhadharmā. This, in turn, will adversely impact the rest of the world. Although I do not expect all Dharma practitioners to actively work for human rights and freedom in Tibet, your sympathy and moral support does have an effect.

### *Consumerism and the Environment*

Peace and the survival of life on Earth as we know it are threatened by human activities that are bereft of humanitarian values. Destruction of nature and natural resources results from ignorance, greed, and disregard for sentient beings who depend on the earth for survival. Environmental degradation also cheats future generations, who will inherit a vastly degraded planet if the destruction of the natural environment continues at the present rate. Protecting the planet is an ethical issue.

While environmental destruction in the past could be attributed to ignorance, today we have more information. We must learn to work together for something we all care about—the survival and flourishing of our planet and the beings living on it. While science, technology, and industrialization

have brought much benefit, they have also been the source of many current tragedies, including global warming and pollution. When we are able to recognize and forgive ignorant actions of the past, we gain strength to constructively solve problems in the present.

Scientific predictions of environmental change are difficult for ordinary human beings to comprehend fully. We hear about global warming and rising sea levels, increased cancer rates, depletion of resources, extinction of species, and overpopulation. The global economy may grow and with it extreme rates of energy consumption, carbon dioxide production, and deforestation. We must consider the prospects in the near future of global suffering and environmental degradation unlike anything in human history. Then we must do our best to prevent what is preventable and to prepare for what isn't.

Human activity driven by the wish for present pleasure and convenience without care for future living beings and their environment cannot be sustained. Our greed needs to take the backseat to practical methods to care for nature and natural resources. More equal distribution of wealth among nations and among groups of people within each nation is essential, as is education about the importance of caring for the environment and for each other.

Remembering our mutual dependence is a key to counteract harmful practices. Each sentient being wants happiness, not suffering. Developing a genuine, compassionate sense of universal responsibility is crucial. When we are motivated by wisdom and compassion, the results of our actions benefit everyone, not just ourselves.

Consumerism is closely related to the plight of our environment. Although advances in science and technology may be able to offset some deleterious effects of the overconsumption of natural resources, we should not be overly confident and leave it to future generations to resolve the problems we create. We human beings must consider the prospect that one day science and technology may not be able to help us in the face of limited resources. This earth we share is not infinite.

As individuals and as a society, we must practice contentment to counter our greed for more and better. No matter what we do to try to gratify our desires, we will not find total satisfaction; external goods are not capable of providing this. Real fulfillment is found by adopting the inner disciplines

of self-restraint and contentment as well as the joy of love, compassion, and inner freedom.

Every person and each nation wants to improve its standard of living. If the standard of living of poorer countries were raised to that of wealthier countries, natural resources would not be able to meet the demand. Even if we had the resources to provide a car to every person on the planet, would we want to? Could we control the pollution they produce?

Sooner or later the lifestyle of wealthier nations will have to change according to new imperatives. While people expect a successful economy to grow each year, growth has its limits. Rather than being unprepared and colliding with the problems these limitations entail, we should cultivate a sense of contentment and voluntary restraint. Then we may be able to avoid or at least reduce the disastrous results of overconsumption. With a good heart and wisdom, we will be motivated to do what needs to be done to protect each other and the natural environment. This is much easier than having to adapt to the severe environmental conditions projected for the future.

### *The World of Business and Finance*

Every human being has an ethical duty to humanity, a responsibility to consider our common future. In addition, each person has the potential to contribute to the common good. People in the world of business and finance are no exception; they have great potential and great responsibility for global welfare. If they think only of immediate profit, all of us will suffer the consequences. This is already evident in the environmental destruction that has occurred due to the unregulated pursuits of big business.

At the global level, a huge gap exists between wealthy industrialized countries and other nations in which people struggle to fulfill their basic needs for survival. While children in wealthy countries complain when they cannot get the latest technological device, children in impoverished countries face malnutrition. This is very sad. Within each country, too, the rich increase their wealth, while the poor remain poor, and in some cases become even poorer. This is not only ethically wrong, it is a source of practical problems.

Even though governments may theoretically ensure equal rights and opportunities, this great economic disparity places the poor at a disadvan-

tage in terms of obtaining good education and jobs. As a result, they feel discontent and discouraged, which feeds resentment toward the privileged. This, in turn, entices them to become involved in legitimate protest as well as gangs, crime, and terrorism. Social discord affects the happiness of both the wealthy and the poor.

Each person wants to leave the world having made a positive contribution; everyone wants to ensure that their children and grandchildren have good lives. Therefore I ask those involved in business and government to keep future generations in mind as you make decisions in the present.

Human activities in all fields are constructive when done with regard for the interdependence of all beings. An awareness of the profound interconnection among all beings and the planet we share inspires a sense of responsibility and concern for others, a commitment to the welfare of society, awareness of the consequences of our actions, and restraint from harm. When we act with concern for only short-term interests or the welfare of only a select group or when our intention is simply to accrue money or power, our actions inevitably bring unpleasant results for everyone.

Our motivation is pivotal; for any human endeavor to be constructive, we must first check our motivation and purify it of ignorant and self-centered intent as much as possible. The most important element in a healthy and productive motivation is a sense of caring for others, an awareness of the big picture and long-term results. With such a motivation, doing business and making money are fine. These activities are not inherently flawed or corrupt.

Some businesspeople tell me that doing business honestly reduces their profit and bogs them down in bureaucracy. Because increasing their profits also benefits society and their employees, they say that cutting corners to facilitate business is beneficial. I have doubts about this line of reasoning.

Ethical standards and ethical behavior are neither a nuisance nor unrealistic when it comes to business matters. For me, ethics means doing what is right, and that means what is beneficial for self and others. There may be times when what is beneficial in the long-term and short-term conflict, but many other times they coincide. Overemphasis on short-term benefit often harms the long-term good, while wise attention paid to the long-term goals usually pays off.

If a company cheats its clients or customers, these stakeholders will

become aware of the situation and stop doing business with that company. In addition, these customers and clients will tell others about the company's deceitful practices, and consequently, others will avoid doing business with that company. When clients are treated respectfully and charged fair prices, they will do business with that company over a long period and will refer their friends to it as well, thus increasing the company's profits over the long term.

When arrested for illegal business practices, CEOs and their families suffer disgrace and humiliation. Their behavior causes the public to lose faith in the stock market, which in turn harms those corporations and the national economy. Corporations spend an enormous amount on legal fees due to their malpractices, so even if we consider prosperity in this life, dishonest business practices ruin individuals and companies.

Buddhist practitioners have even greater reason to abandon illegal and deceitful business practices, for they understand the destructive karma involved and the three kinds of suffering effects that it produces. They know that truthful business dealings and kind interactions with others are constructive actions that bring prosperity and good relationships in future lives. Aware that happiness comes from having a contented mind, not from greedily grasping for more wealth, true Dharma practitioners conduct their business affairs honestly. Although in the short term they may not make as much profit as dishonest businesspeople, in the long term they have fewer problems and more mental peace.

In the business world compassion translates into cooperation, responsibility, and caring. Some companies now take more care of their employees, clients, and customers. They see that a pleasant working environment in which individuals are valued, respected, and have a voice increases productivity. Although their main motivation for caring for others may be financial gain, they nevertheless know that their success is dependent on others and that, therefore, kindness and fairness are important. In the end, this produces happier employees, a good working environment, and a better reputation for the company. This in turn wins public approval and support, which benefit the company.

Some people assume that compassion in business means being too soft, abandoning competition, and thus not being successful. These assumptions are not correct. There are two types of competition. One is negative; for

example, actively creating obstacles for competitors or cheating customers in our efforts to reach the top. The other is beneficial: we want to improve ourselves and work hard to attain our goal, but not at others' expense. We accept that just like us, others also have the wish and the right to success.

Wanting to attain a goal is not necessarily selfish. In spiritual practice, our desire to become a buddha is not self-centered; it doesn't involve promoting ourselves at others' expense. Rather, to be more capable of benefiting others, we develop our abilities and talents and work toward our goal.

There's nothing wrong with wanting to be the best. That motivation gives us initiative and encourages progress. However, what makes us the best is not always money and status. If a company makes huge profits and earns a bad name, that's not being the best! A business that benefits more people and serves the community better than its competitors has become the best.

Each person in the business and financial world is responsible for his or her own goals and actions. At the end of the day, we have to be able to live with ourselves and feel good about what we have done. Human values are important, no matter our profession. I never heard of anyone who said on their deathbed, "I should have made more money," "I wish I had worked more overtime," or "I should have crushed that competitor."

The transformation of values in the business and financial worlds begins at the individual level. When one individual changes, the effects are felt within that person's sphere of activities. Through the ripple effect, this positive influence will spread to more people.

### *Media and the Arts*

The media plays a vital role in investigating important issues and bringing them to the public's attention, and I appreciate their efforts in this direction. The freedom of press benefits society greatly. At the same time, those working in the media need to have compassion for the entire society and not sensationalize events in order to have larger sales. I find it frightening that people are constantly fed violence on the news as well as for entertainment. No wonder people report depression and despair, and children grow into violent adults.

Balanced reporting is essential. On one day in any large city, a few people

receive great harm, whereas so many people receive help in the form of healthcare, education, friendship, and so on. Yet the headlines about the harmful events dominate. The tremendous amount of help that people give each other every day is overlooked. In this way, citizens get a skewed view of humanity, and their suspicion, fear, and distrust increase. If the media also reported the helpful activities that people do for each other and for the planet each day, people would have a more realistic perspective and would be aware of the great kindness human beings show each other. This in turn would cause the public to be more optimistic about the future, which will prompt them to work harder to create a good future for themselves and others.

The plots of movies and entertainment usually revolve around violence and sex. One of my American students told me that one day she heard a child suggest to his playmates, “Let’s play divorce!” The children then proceeded to quarrel and argue, mimicking those on television programs they had seen. The media has great potential to influence others as well as the responsibility to use this potential wisely. Movies showing people developing skills to resolve their conflicts in a fair and mutually beneficial way can also be entertaining, in addition to teaching good communication skills.

The media, as well as the makers of video and online games, have some responsibility for the tragedies of mass shootings. When violence becomes entertainment, and when it is so normal that children see hundreds of instances of it each week on television or the Internet, it plants seeds in their minds that will affect their behavior. Those working in the media, game design, and advertising must have the well-being of the entire society in mind, not to mention the welfare of their own children. They should use their great creative powers and intelligence to influence youth in a constructive way and to teach them good human values, kindness, and respect for others.

Throughout history, the arts have been a medium for the expression of the highest human values and aspirations as well as of despair and depravity. Many people in the arts—painters, writers, actors, dancers, musicians, and others—ask me about the role of the arts in spiritual practice. As with other occupations, this depends on the artist’s motivation. If art is created simply to make a name for oneself, with no concern for the effect it has on others, it has questionable spiritual value. On the other hand, if artists with

compassion for the welfare of others use their talents to benefit others, their art can be magnificent artistically and spiritually.

### *Science*

In general, the Buddha's teachings fall into three categories: Buddhist science, which involves the Buddha's description of the external world, the physical body, and the nature of consciousness; Buddhist philosophy, which contains the Buddha's theory of reality; and Buddhist religion, the practice of the spiritual path.

Interdependence and causality are central concepts in Buddhist philosophy and are now applied to all fields. Scientists in particular know that changing one thing produces ramifications elsewhere, and a fruitful dialogue between modern science and Buddhist science and philosophy has begun. Buddhists speak about Buddhist science and certain concepts from Buddhist philosophy such as subtle impermanence and interdependence. Some scientists are also interested in Buddhist assertions that ultimate reality lacks independent existence and phenomena exist by mere designation. We Buddhists do not discuss Buddhist religious practice or Buddhist concepts such as past and future lives, karmic causality, and liberation with scientists. Those topics are "our business" as the Buddha's followers.

In this interdisciplinary discussion, we are not trying to use science to validate the Dharma. Buddhists have a long history of realized spiritual practitioners who have validated the efficacy of the path through their personal experience. Buddhism has survived nearly 2,600 years without the support or approval of science; we will continue. However, our dialogue is good for society, as it is an example of the modern and the ancient learning from and complementing each other. Over the years, the dialogue has sparked many projects, for example, teaching mindfulness to help reduce physical pain and mental stress, and developing programs for teachers to instruct their students in compassionate thought and action. In addition, we Tibetans have begun science education in some of our monasteries and nunneries, and a few Tibetan monks are now studying science at Western universities, bringing their knowledge back to the debate ground.

I appreciate the scientific perspective very much. Scientists are looking for truth, for reality. They approach their investigation with an open mind

and are willing to revise their ideas if their findings do not correspond to their original theories. As the Buddha's followers, we too are looking for truth and reality. The Buddha wanted us to test his teachings, not to accept them blindly. This accords with the scientific way. If scientists can disprove points in the Buddhist scriptures, we must accept their findings. Because of the similarity of our approach, I do not think there is any danger in discussion with scientists. Their attitude is objective, they are open to the investigation of new things, and they are intelligent.

Within Buddhist science, as we saw in chapter 8, there are three categories of phenomena: evident, slightly obscure, and very obscure. Up until now, common topics of dialogue with scientists have focused on evident phenomena and a little bit regarding slightly obscure phenomena, such as subtle impermanence and emptiness. Within the category of evident phenomena, we have discussed topics found in physics, neurology, cognitive science, psychology, and so forth.

It is useful for Buddhists to study scientific findings. For example, while Buddhist literature speaks about subtle particles, scientific knowledge of that topic is more advanced. Learning about the brain's role in cognition and emotion is new and interesting for Buddhists. However, regarding perception and psychology, Buddhist literature is much richer, and psychologists and neurologists find Buddhist findings and experiences regarding attention and emotion very helpful.

Both Buddhadharma and science can benefit humanity, and both also have limitations. Science helps us understand the physical basis upon which the mind depends while we are alive. However, because scientific research requires physical measurements of external phenomena, it lacks the tools to investigate things beyond the scope of our physical senses. Although science has contributed greatly to human knowledge about some topics, it lacks the tools necessary to fully understand every aspect of human beings. Scientists can benefit from learning the vast knowledge Buddhism possesses about the mind: for example, distinguishing sensory and mental consciousness, and differentiating between minds that directly perceive their object and conceptual consciousnesses that know their objects via conceptual appearance. Buddhism also describes various levels of consciousness and how they function, as well as the power the mind gains through developing single-pointed concentration. Buddhist psychology describes mental states conducive to human happiness and those that are unrealistic and bring suffering.

I believe that in this century many new ideas and findings will come, enlarging science's field of investigation. Continuing dialogue between Buddhists and scientists is important, so both can expand their knowledge, methodologies, and ways of thinking. Dialogues with scientists have been fruitful, and some of the perspectives I have gained from them are included in this book.

I encourage more Buddhist monasteries to introduce science into their curriculum. Studying scientific findings and dialoguing with scientists help us to cultivate faith based on analysis and investigation. In addition, for Buddhism to be taken seriously in the West and among the young Tibetans in India with a modern education, Buddhist practitioners and teachers must be conversant with scientific assumptions.

Similarly, I encourage scientists to stretch the field of their investigation. The ultimate laboratory is in our own mind and body, and for this meditation is important. Scientists who develop internal awareness of their own cognitive and emotional processes through meditation will bring new vigor to scientific exploration.

My main purpose in dialoguing with scientists is to bring a deeper awareness about the value to society of living an ethical life. So many of our problems are due to people's lack of care for the ethical dimensions of their actions and the effect their behavior has on others. We need to make more effort to promote inner values, but doing that is difficult if they are based only on religious ideas that appeal only to people following a particular religion. Secular ethics that speak of universal values appeal to believers of all religions and to nonbelievers as well.

Scientists have found and continue to find connections between our mental states on the one hand and our physical health and the quality of our social interactions on the other. Scientific findings demonstrate the benefits of compassion, a peaceful mind, and ethical living. Since the results of scientific research are respected internationally, their findings can be used to support the advancement of secular ethics for the benefit of society.

### *Gender Equality*

Women's right to have equal opportunity in all fields must be respected. I don't believe that in the past, society in general or Buddhist institutions in particular deliberately discriminated against women. Rather, they were

negligent and simply assumed that men should lead because larger and stronger bodies made them more fit to lead. But this concept is no longer valid, and it was not even true historically. Napoleon was physically small but very clever, and he became a powerful leader.

In addition, men assumed they were intellectually superior and less dominated by their emotions. However, as the Buddha noted, men and women have the same afflictions, and men and women are equally bound in cyclic existence by these afflictions. For civilized society, intelligence is far more important than physical strength, and in this regard, men and women are equal. Everyone should have a good education and be able to use their talents and abilities to contribute to society. Equal opportunity means equal responsibility, and men and women should share these.

People tend to identify strongly according to their gender. But as Āryadeva points out (CS 226–27), there is no inherently existent “inner self” that is male, female, or other. The body is also not an inherently existent man or woman because none of the elements that compose the body have a gender. Although from the viewpoint of emptiness, no distinction can be made between men and women, that is no excuse to ignore sexual discrimination. The status of men and women in Buddhist institutions is not equal, and this has a deleterious effect on female and male practitioners as well as on the acceptance of Buddhism in Western society. Buddhist institutions, teachers, and practitioners must treat everyone equally. All forms of exclusivity are based on an attitude of “me versus them,” which is not suitable for genuine practitioners. True practitioners are humble and regard everyone as their teacher; they work to benefit all beings.

Women must develop self-confidence and take every opportunity to make themselves equal in all fields. Some women are accomplished practitioners, but they are shy and therefore do not teach or take leadership positions. Especially those practicing the bodhisattva path should develop great self-confidence, inner strength, and courage. They must take the initiative, studying and developing their qualities, and not get discouraged by the defeatist resignation that society is simply sexist. If they encounter prejudice from social and religious institutions, they should speak up, and we must work together to tackle these problems.

In the past, there has been a shortage of well-known female role models in Buddhism. This is due in part to lack of knowledge about great female

practitioners of the past. More books and articles that focus on past and present female practitioners are needed. In India, the Buddha's stepmother was an extraordinary nun praised by the Buddha himself. The Indian nun Bhikṣuṇī Lakṣmī had a vision of Thousand-Armed Avalokiteśvara and is the first lineage holder of this practice. Nāropa's sister Niguma was a great tantric adept, as were Machik Labkyi Dronma and Dorje Pakmo in Tibet. The reincarnation lineage of Dorje Pakmo began very early on, more or less at the same time as that of the Karmapa, and continues today.

The Vinaya records that when the Buddha began the nuns' order, he stated that women were able to attain liberation and become arhats, and many stories of liberated women exist in the scriptures. Sūtrayāna and the three lower tantras state that one has to have a male body in the final life before attaining buddhahood, but in Tibetan Buddhism highest yoga tantra is the final authority, and here females and males are equally capable of attaining full awakening. Highest yoga tantra emphasizes cultivating respect for women, and one of the root tantric precepts forbids disparaging women.

The discriminatory statements against women in the Buddhist scriptures were made due to societal circumstances at the Buddha's time and later, when the scriptures were actually written down. Since this prejudice arose due to cultural bias, it can and must be changed. Other things, for example bhikṣus being the preceptors of bhikṣuṇīs, seem like prejudice but are difficult for one person to change. A council of saṅgha elders from all Buddhist traditions would need to meet and agree in order to change that.

According to the Vinaya, bhikṣus sit and walk in front of bhikṣuṇīs. While bhikṣuṇīs are governed by more precepts, most of them are for their protection. Because women are more prone to being raped or bullied than men, to offset these risks the Buddha established precepts that prevent women from encountering dangerous situations.

However, in terms of rights, both men and women are equal. Just as a man has the right and opportunity to become a monk, so a woman has the right and opportunity to become a nun. The bhikṣuṇī saṅgha of fully ordained nuns is responsible for the screening and training of women who are candidates for novice and full ordination. They are responsible for running their own communities and teaching other nuns. Bhikṣuṇīs are ordained by a process involving both the bhikṣuṇī and the bhikṣu saṅghas,

and the monks must teach the Dharma to the nuns when requested. Since the full ordination lineage for women did not spread to Tibet, it is my hope that it will be established and the bhikṣuṇī ordination given in the Tibetan community. It is also my hope more nuns will become teachers in their own right and abbesses in the nunneries. This has happened to some extent in Tibetan Buddhist monasteries in the West and certainly is the case in the Chinese Buddhist community.

A story in the Pāli canon (SN 15.2) tells of Bhikkhunī Soma, who was meditating one day in the forest. Māra, the embodiment of evil, appears, and with the intention of making her lose her meditative concentration, says:

That state so hard to achieve  
that is to be attained by the seers  
cannot be attained by a woman  
with her two-fingered wisdom.<sup>61</sup>

Bhikkhunī Soma immediately recognized that it was Māra who was trying to make her afraid, lose self-confidence, and fall away from her concentration. She firmly replied:

What does womanhood matter at all  
when the mind is concentrated well,  
when knowledge flows on steadily  
as one sees correctly into the Dhamma?

One to whom it might occur,  
“I’m a woman” or “I’m a man”  
or “I’m anything at all”  
is fit for Māra to address.

In this instance “knowledge” refers to the knowledge of the four truths in the continuum of an arahant. As an arahant Bhikkhunī Soma had eradicated all defilements preventing liberation. Only someone who adheres to craving, conceit, and views—the defilements that lie behind false conceptualizations—is a receptive audience for Māra’s rantings. Those with

knowledge and vision do not grasp onto a self or fabricate identities and will not fall prey to Māra. They continue their practice and virtuous activities undaunted.

### *Interfaith*

Buddhists should try to create friendly and respectful relations with people of other faiths. For me, Buddhism is the best and it suits me perfectly. But it is not necessarily the best for everyone. Therefore I accept and respect all religious traditions.

Jains, Buddhists, and one branch of Hindu Sāṃkhyas do not believe in a creator God, while Jews, Christians, and Muslims do. If we look only at this, we see a big difference among religions. However, the purpose of the religious theories of no-God and of God is the same: to make better human beings. Human minds are so varied and different that one philosophy cannot suit them all. Many philosophies are needed to suit the many kinds of mentality.

All great religious leaders endeavor to lead their followers away from selfishness, anger, and greed. All emphasize relinquishing violence and rampant materialism. By understanding their common function and aim, we will see that the superficial differences in religious theology are due to differences in the spiritual needs of people in a particular place at that time. Knowing this, we can avoid sectarianism, partisanship, and disparaging any authentic religious teaching.

This variety in religions is a blessing, not a difficulty. Just as there is a tremendous variety of food, giving each person the opportunity to eat what suits their taste and constitution, the great variety in religion enables each person to choose the belief system most suitable for them. Trying to make everyone accept the same religion is impossible and would not be beneficial.

Some people find it more comfortable to believe in a creator. Being a God-fearing person, they are disciplined and careful in their actions. This approach benefits these people. Other people may be more conscientious regarding their motivations and behavior when they believe that the responsibility lies with them. Both of these approaches share the same purpose in encouraging people to live ethically and be kind to each other.

My Christian and Muslim friends weep with faith when they pray to

God, and their lives are devoted to service to others. I appreciate my Christian brothers and sisters who make great effort to educate others. Hindus also work in education and healthcare. Their selfless effort to help others is due to devotion to God. People of other religions who practice sincerely create good karma and will have good future lives. Virtuous actions alone will not lead to nirvāṇa, however, because that depends on realizing selflessness.

Although some individuals may misinterpret the teachings of their own religion or use religion to incite hostility, I have never encountered true religious teachings that preach hatred and violence. We should abandon all such actions in the name of religion.

Many centuries ago Buddhists suffered under Muslim invaders in India, but now the Muslims in Bodhgaya help the Buddhist pilgrims there. Each year when I go to Bodhgaya, they invite me and we share food. Sincere Muslim practitioners are very good human beings. It is important that we remember this and not generalize about all people of a certain faith based on the harmful actions of a few who misuse their religion to justify their destructive actions.

Although all religions have a similar purpose and similar values, we must not blur the distinctions. We do not need to say that our beliefs are the same in order to get along. We can note and respect the differences, knowing that due to the diversity of religions everyone will be able to find a faith that suits them.

In our interfaith discussions, investigating the meaning of words and concepts is important. Sometimes we hastily conclude that because the words are the same, their meaning is also. The meaning of “blessing,” for example, is not the same in Buddhism as in theistic religions. Conversely, we may think that because traditions use different vocabulary, their meanings are unrelated, although that may not be the case.

More contact and communication among religious leaders as well as among their followers are needed to promote mutual understanding and harmony. I suggest four activities in this regard. First, religious and theological scholars should meet to discuss points of similarity and difference among faiths. This will promote awareness of the similar purposes of all religions and respect for their doctrinal differences. At an interfaith meeting in Australia, a Christian introduced me and concluded by saying, “The Dalai

Lama is a very good Christian practitioner.” When I spoke, I thanked him for his kind words and commented that he was a good Buddhist.

In addition, practitioners of various faiths should meet to talk, pray, and meditate together. This will bring deeper experiences that lead to seeing the value of other religions. Furthermore, people can go on pilgrimages together, not as tourists but to visit and pray together at the holy places of different religions. In this way, they will experientially realize the value of other religions.

Last, religious leaders should come together to pray and speak about remedying problems in the world and allow the media to cover the event. When citizens of the world see religious leaders working harmoniously together, they will feel more hopeful and will become more tolerant themselves.

Bishop Tutu, whom I admire greatly, suggested a fifth practice: religions should speak in a united voice on issues of global concern such as wealth inequality, human rights, the environment, and disarmament. I support this as well.

An important element in religious harmony is mutual respect, which entails refraining from aggressive attempts at conversion. As mentioned in chapter 1, when I give lectures on Buddhist topics in the West, I tell people that they should follow their family religion unless it does not suit their needs. The same is true in countries that have traditionally been Buddhist: the people there should remain Buddhist unless it does not suit them. In Mongolia, China, Korea, and some other Buddhist countries, Christian missionaries have strongly promoted their religion. I heard that in Mongolia some churches give people fifty dollars when they convert. Some Mongolians are apparently quite savvy and get baptized multiple times!

Sometimes it is necessary to say frankly to others that their attempts to convert others are harmful. It causes friction in families, especially when one family member converts and then pressures others to do the same. On one occasion some missionaries came to see me, and I candidly told them not to try to convert people in traditionally Buddhist countries because it creates discord and confusion in society. Once, some Mormons invited me to their headquarters and arranged for me to give a public talk in Salt Lake City. Here too I frankly said, “Doing missionary work among people who do not follow a religion with a philosophical basis is fine, especially if they perform animal sacrifices or other harmful practices. However, in

places where the population follows their own traditional religion that has an ethical and philosophical basis, it is not good to proselytize. Maintaining harmony in society is far more important.”

### *Incorporating Practices from Other Religions*

Changing religion is a serious matter that should not be taken lightly. Some people prefer to follow the religion of their birth yet find it helpful to incorporate certain methods from other traditions into their own spiritual practice. While remaining deeply committed to their own faith, some of my Christian friends practice techniques for cultivating meditative concentration that they learned from Buddhism. They also use methods such as visualizations that enhance compassion and meditations to strengthen fortitude and forgiveness. This does not interfere with their refuge in God.

Similarly, Buddhists may learn and incorporate some aspects of Christian teachings into their own practice. One clear example is in the area of community work. Christian monastics have a long history of social work, particularly in education and healthcare, areas in which the Buddhist community lags behind. One of my friends, a German Buddhist, told me after he visited Nepal, that over the last forty or fifty years Tibetan lamas have constructed many large monasteries. However, they have built very few hospitals and schools for the public. He observed that if Christians had constructed new monasteries, they would include schools and hospitals for the general population. In response to his observation, we Buddhists can only hang our heads and agree that he is right.

Some of my Christian friends have taken serious interest in the Buddhist philosophy of emptiness. I have told them that since the theory of emptiness is unique to Buddhism, it may not be wise for them to look into it deeply. Doing so may cause difficulties in their Christian practice, because if they pursue the theory of emptiness and dependent arising that underlies the Buddhist worldview, it challenges the worldview founded upon belief in an absolute, independent, eternal creator. Adopting the Buddhist idea of emptiness would harm their deep faith in God, and this would not benefit them.

When we are beginning spiritual practitioners, it is good to develop a

sense of reverence for the teachers of all religious traditions. At the beginning of our spiritual path, we can be both a practicing Buddhist and a practicing Christian or Jew. However, as we go further into spiritual practice, we reach a point where we need to accept one philosophical view and deepen our understanding of that. This is similar to new university students benefiting from studying many subjects but at a later point choosing to major in one.

From the viewpoint of an individual who is going deeper into their spiritual path, practicing one religion is important. However, from the perspective of society at large, it is important to adhere to the principle of many religions and many truths. At first glance, these two concepts—one truth, one religion versus many truths, many religions—seem contradictory. However, if we examine them carefully, we see that each is correct in its own context. From the perspective of an individual spiritual practitioner, the concept of one truth and one religion is valid. From the viewpoint of wider society, the concept of many truths and many religions is cogent. There is no contradiction. Truth must be understood and defined in relation to the context. Even within one religion, such as Buddhism, we speak of two truths, veil and ultimate.

### *A Nonsectarian Approach*

In the past, sectarianism has created many problems and harmed both individuals and the Buddhist community. It arose mainly due to lack of personal contact among practitioners of different Buddhist traditions, leading to lack of correct information about each other's doctrine and practices. Unfortunately, in recent years it has spread to international practitioners and Dharma centers as well. Now, with better means of transportation and communication, practitioners from diverse traditions can learn about each other and meet together easily.

Sectarianism can take many forms. Sometimes it is motivated by jealousy or conceit. Other times it is done with “compassion,” telling students that they will get confused if they go to other teachings or that other traditions are preliminaries to their own, higher tradition. Sometimes sectarianism arises due to ignorance in which someone believes he understands another system but in fact does not comprehend it correctly. Some people are

prejudiced against other traditions or teachers due to a misdirected sense of loyalty to their own teacher or tradition.

Misunderstandings that lead to sectarianism may arise when comments made in relation to a specific individual are generalized for everyone at all times. Milarepa's demeaning remarks about scholars were the former. He was speaking about specific people who lived at that time and did not mean that all scholars did not practice purely or that being a scholar was worthless. If people misunderstand and think that all study of the scriptures is a waste of time, that will create friction between Buddhists who study a lot and those who don't, harm the existence of the Buddhadharma in the world, and inhibit individuals who want to learn.

The only solution to sectarianism is to study and practice other Buddhist traditions in addition to our own and to develop a broad understanding of all of the Buddha's teachings. Instead of identifying with a specific tradition, we should consider ourselves simply Buddhists; after all, when we take refuge it is in the same Three Jewels, not in a specific Buddhist tradition or teacher. You may still principally follow one Buddhist tradition, but when you need clarification in specific areas, learn the details from whichever tradition gives the fullest presentation of that point and incorporate that explanation into your practice.

In the past, especially in the late nineteenth century in Tibet and now in India as well, many Tibetan masters in principle were nonsectarian. Dilgo Khyentse Rinpoche, his main teacher Khyentse Chokyi Lodro, and his main disciple Trulshik Rinpoche were all nonsectarian. They belonged to the Nyingma tradition, but from the time they were young, they received teachings from many different spiritual mentors. In the 1940s, a Geluk lama in Amdo invited Dilgo Khyentse Rinpoche to his area to give teachings, and Rinpoche also received teachings from this Geluk lama.

The previous Dalai Lamas have practiced in multiple lineages. According to their biographies, the first three Dalai Lamas were basically Geluk but had a nonsectarian approach and received teachings from all traditions. The Fifth Dalai Lama received teachings from Sakya and Nyingma teachers, although not as many from Kagyu masters. The Seventh Dalai Lama did not have much connection with Nyingma or Sakya, and the Thirteenth Dalai Lama was in principle nonsectarian. He received Nyingma teachings as well as Geluk and included in his writings is a text about Vajrakilaya, a deity cen-

tral to the Nyingma tradition. One of my debate teachers, Lodro Chonyi from Mongolia, was a great scholar and good practitioner. His main teacher also practiced Nyingma, principally Hayagrīva. He told Lodro Chonyi that the Thirteenth Dalai Lama mainly practiced two deities: Yamāntaka and Vajrakīlaya.

When I was young, I was a strict Gelukpa but later became nonsectarian. One reason I recommended that people not worship the spirit Shugden is because I value the nonsectarian approach and the freedom to receive teachings from various spiritual mentors, and this spirit is opposed to this. My understanding of clear light has been greatly enhanced by hearing teachings on Dzogchen and Mahāmudrā in addition to Tsongkhapa's explanation of the different levels of mind. Now I read texts of all traditions; studying explanations on the same topic from different perspectives helps me immensely to gain a fuller understanding. In these days when the Buddhadharma is degenerating, nonsectarianism is essential. Quarreling and fighting in the name of religion is foolish and wrong.

According to practitioners, the various explanations of a topic come to one point. For example, in Dzogchen, sometimes you meditate on emptiness as an affirming negative as taught in the text of a great scholar who has actual meditation experience. Although emptiness is a nonaffirming negative, due to this specific way of practice, it may be useful to see it as an affirming negative.<sup>62</sup> Knowing these different perspectives is helpful; one day we'll know for ourselves through our own experience.

Once an elderly monk requested me to teach bodhicitta according to a Kagyu text. I was not familiar with the text. Unable to fulfill his wish, I felt sad. Unfortunately, not many Tibetan lamas can teach all four Tibetan traditions. I hope in the future that both Tibetan and Western practitioners will remedy this. More knowledge about each other's tradition enriches our own practice. Practitioners should have as broad a perspective as possible, without being scattered or confused by the multiplicity.

Furthermore, Tibetan contact with the Zen, Pure Land, and Theravāda traditions has not been adequate. During the years I've lived in exile, my relationship with the Pope and other Christian leaders has seemed closer than that with Theravāda, Zen, and Pure Land masters. On a personal level, I would like to have more contact with other Buddhists, and for the good of Buddhism in the world, I would like all the Buddhist traditions to be closer.

One reason for writing *Buddhism: One Teacher, Many Traditions* was to give Buddhists from all traditions accurate information about one another's doctrine and practices. In doing so, it becomes clear that the foundation for all our traditions is the same. We take refuge in the same Three Jewels, we see the world through the perspective of the four truths of the āryas, and we all practice the three higher trainings and cultivate love, compassion, joy, and equanimity. All Buddhist traditions speak of selflessness and dependent arising. Although we may approach some of these topics from different perspectives, that is no reason to criticize one another.

Within Tibetan Buddhism, we find scholars refuting one another's position. We should examine why they are doing this and the reasons they use to support their positions. If we do not agree, we can respond with reasons backing our understanding. Doing this furthers our own and the other's understanding and is not disrespectful. When debating the view in *Recognizing the Mother*, Changkya Rolpai Dorje says, "I am not disrespecting you. Please pardon me if you are offended." Debating ideas is different from being arrogant regarding our own tradition and denigrating others. While we may disagree with others, it is important to respect them and their traditions.

Coming together as disciples of the same Teacher, we Buddhists will have closer relationships. We could speak with a common voice about difficult social and environmental issues and promote nonviolence and tolerance. This would definitely please the Buddha and benefit all sentient beings.

## Notes

1. That is, the object is reflected in the mind. It is similar to, but not the same as, the image of an object forming on the retina when the visual consciousness sees it. Seeing the aspect—the representation—is the meaning of seeing the object.
2. *Duḥkha* (P. *dukkha*) is often translated as “suffering,” but this translation is misleading. Its meaning is more nuanced and refers to all unsatisfactory states and experiences, many of which are not explicitly painful. While the Buddha says that life under the influence of afflictions and polluted karma is unsatisfactory, he does not say that life is suffering.
3. The Sanskrit term *āsrava* is translated as “polluted,” “contaminated,” or “tainted,” meaning under the influence of ignorance or its latencies.
4. In this context, “self” does not mean a person but refers to inherent, independent, or true existence. “Selflessness” is the absence of independent existence, not the absence of a person.
5. The term *clear light* has different meanings depending on the context. It may also refer to the emptiness of inherent existence or to the subtlest mind.
6. Hereafter this title is shortened to *Commentary on Reliable Cognition*.
7. See Russell Kolts and Thubten Chodron, *An Open-Hearted Life* (Boston: Shambhala, 2014) for an in-depth explanation of working with disturbing emotions and cultivating beneficial communication skills.
8. Theravāda Buddhists place the Buddha as living 563–483 BCE, while many people following the Sanskrit tradition often date the Buddha as living 448–368 BCE. Having analyzed traditional historical records from a different angle, Richard Gombrich, professor of Sanskrit at Oxford University, has placed the Buddha’s life at 485–404 BCE. “Dating the Buddha: A Red Herring Revealed,” in *The Dating of the Historical Buddha*, vol. 2, ed. Heinz Bechert (Göttingen: Vandenhoeck & Ruprecht, 1992), 237–59.
9. This word is the root of the title *bhante*.
10. This date is according to the old way of dating the Buddha’s life. According to the dates Gombrich proposed for the Buddha’s life, this requires revision.
11. Some academic scholars say the Mūlasarvāstivāda school was located in Mathurā

in northern India and may have later moved to Kashmir, and from there to Tibet, where its vinaya became the dominant monastic code.

12. Some say Paisācī is a literary, but not spoken, Prakrit. Others say it was an early name for Pāli.
13. Many modern scholars believe that the Vaibhāṣikas were a branch of the Sarvāstivāda because the Vaibhāṣikas' main text, the *Mahāvibhāṣā* (*Great Detailed Explanation*), is a commentary on the final book of the Sarvāstivāda Abhidharma, the *Foundation of Knowledge* (*Jñānaprasthāna*). For a few versions of the eighteen schools, see Jeffrey Hopkins, *Meditation on Emptiness* (Boston: Wisdom, 1996), 713–19.
14. Steven Collins, "On the Very Idea of the Pāli Canon," *Journal of the Pāli Text Society* 15 (1990): 89–126.
15. Jonathan Walters, "Mahāyāna Theravāda and the Origins of the Mahāvihāra," *The Sri Lankan Journal of the Humanities* 23.1–2 (Sri Lanka: University of Peradeniya, 1997).
16. Correspondence from Bhikkhu Bodhi to Bhikṣuṇī Jampa Tsedroen, February 21, 2010: "Theravāda refers to a modern school of Buddhism which derives from the old Sthaviravāda, but the latter has a much longer history and is the source of many of the old Indian schools that did not survive...it would be misleading to simply assume that Theravāda is identical with Sthaviravāda and the latter simply a Sanskritized form signifying exactly what the former means.  
 "I also don't think it is suitable to identify Theravādins as Mahāvihārāns. The latter term was meaningful during the period in Sri Lanka when the schools of Buddhism were named after the vihāras (monasteries) where they were centered. In that era, Mahāvihārāns referred to those based at the Mahāvihāra in Anurādhapura. They were distinguished by their particular attitude toward Buddhist texts and methods of interpretation, preserved in the Pāli commentaries. But nowadays all that is left of the Mahāvihāra are its ruins...and what we call Theravāda has evolved in more complex ways than the old Mahāvihārāns could ever have foreseen."
17. Peter Skilling, "Theravāda in History," in *Pacific World: Journal of the Institute of Buddhist Studies* 3.11 (Fall 2009): 72.
18. Walters, "Mahāyāna Theravāda and the Origins of the Mahāvihāra."
19. Collins, "On the Very Idea of the Pāli Canon."
20. Walters, "Mahāyāna Theravāda."
21. One is a Mahāyāna sūtra from Pakistan dated to the first or second century CE. There is also a Prajñāpāramitā (Perfection of Wisdom) manuscript from Gandhāra from the first century CE. The content of another Prajñāpāramitā sūtra in Prakrit dating from the first century BCE affirms it was already well-developed literature. Also see the work of Dr. Richard Salomon and the Early Buddhist Manuscript Project. Several Mahāyāna manuscripts written in Gāndhārī date from the first or second century CE.
22. Some historians place Aśoka in the fourth century, while others say his life spanned from the latter fourth century through the first quarter of the fifth century.
23. Peter Skilling, "Vaidalya, Mahāyāna, and Bodhisattva in India," in *The Bodhisattva Ideal: Essays on the Emergence of the Mahāyāna* (Kandy: Buddhist Publication Society, 2013), 151–178.

24. The Kangyur was translated into Mongolian in the seventeenth century, the Tengyur in the eighteenth century.
25. Three additional scriptures are found only in the Burmese canon, including the *Questions of King Milinda* (Milindapañha), a dialogue between the monk Nāgasena and the Gandhāran king Menander.
26. Nanjio, Bunyiu, *A Catalogue of the Chinese Translation of the Buddhist Tripiṭaka, the Sacred Canon of the Buddhists in China and Japan* (San Francisco, Chinese Materials Central, Inc., 1975). This contains a complete list of contents of the Chinese Tripiṭaka and specifies if each title has a Tibetan version.
27. The information in the above three paragraphs was provided by Dr. Lobsang Dorjee Rabling from the Central University of Tibetan Studies in Sarnath in personal correspondence.
28. The five works attributed to Maitreya in the Chinese canon are: *Treatise on the Stages of Yogic Practice* (*Yogācārabhūmi*), which the Tibetan canon attributes to Asaṅga; the *Ornament of Mahāyāna Sūtras* (*Mahāyānasūtrālaṃkāra*); *Middle Beyond Extremes* (*Madhyāntavibhāga*); a commentary on the *Diamond Sūtra* (*Vajracchedikā Sūtra*); and *Yogavibhāga*, which is reputed to be lost. In the Tibetan canon the five works of Maitreya are *Ornament of Mahāyāna Sūtras*, *Middle Beyond Extremes*, *Distinction Between Phenomena and Their Nature* (*Dharmadharmatāvibhāga*), *Ornament of Clear Realizations*, and *Sublime Continuum* (*Uttaratantra* or *Ratnagotravibhāga*). The last two works appeared in India a few centuries after the death of Asaṅga, and Xuanzang never mentioned them in his collection of Indian Yogācāra texts nor did he attribute them to either Maitreya or Asaṅga. The Chinese say the *Uttaratantra Śāstra* was authored by Sāramati or Sthiramati.
29. The Vaibhāṣikas say the Buddha spoke the Abhidharma in many places and it was later compiled by others.
30. The seven in the Pāli canon are the: (1) *Dhammasaṅgaṇi* (*Enumeration of Factors*), which lists the various factors, or *dhammas*, of existence; (2) *Vibhaṅga* (*Analysis*), which explains the aggregates, sense sources, elements, truths, faculties, dependent arising, establishments of mindfulness, awakening, *jhānas*, four immeasurables, noble eightfold path, types of knowledge, and cosmology, among other topics; (3) *Dhātukathā* (*Discussion of Elements*), which discusses phenomena in relation to the aggregates, sense sources, and constituents; (4) *Puggalapaññatti* (*Descriptions of Individuals*), which describes the various kinds of persons; (5) *Kāthavatthu* (*Points of Controversy*), which is a discussion of differing perspectives; (6) *Yamaka* (*The Pairs*), which resolves misconceptions related to technical terminology; and (7) *Paṭṭhāna* (*Foundational Conditions or Relations*), which speaks of the relationship of all phenomena. The *Kāthavatthu* is said to have been written by Moggaliputta Tissa in the third century BCE.
31. Yaśomitra lists the seven Sanskrit treatises as the *Attainment of Knowledge* (*Jñānaprasthāna*) by Kātyāyanīputra, *Topic Divisions* (*Prakaranaṇapāda*) by Vasu-mitra, *Compendium of Consciousness* (*Vijñānakāya*) by Devaśarman, *Aggregate of Dharma* (*Dharmaskandha*) by Śāriputra, *Treatise on Designation* (*Prajñaptiśāstra*) by Maudgalyāyana, *Combined Recitation* (*Samgītiparyāya*) by Mahākauṣṭhila, and the *Compendium of Elements* (*Dhātukāya*) by Pūrṇa.

32. This is one of the oldest Abhidharma texts, now extant only in Chinese. There are varying opinions regarding which of the eighteen schools it is from.
33. The *Treasury of Knowledge* has eight chapters: examinations of the elements; faculties; world (the cosmos and the sentient beings abiding in it); karma; pollutants; paths and persons; exalted wisdom; and meditative absorptions. Vasubandhu's autocommentary on this text has a ninth chapter, which presents the Sautrāntika viewpoint.
34. Tibetans consider Aśaṅga as being a Mādhyamika but explaining the Dharma according to the Cittamātra view for the benefit of people inclined to that view. His brother, Vasubandhu, held the Cittamātra view but wrote some texts according to the Vaibhāṣika and Sautrāntika tenets to benefit people who appreciated those views.
35. Interestingly, in the Tibetan canon, the *Bhaiṣajyaguru* is in the tantra section of the Kangyur, while the *Sukhāvativyūha* is in the sūtra section.
36. There are divergent opinions among modern scholars regarding the tenet systems, when and where they flourished, the details of their philosophical positions, and to what extent the tenets were systematized in India before arriving in Tibet.
37. Scholars do not know when writing first became popular in India and have diverse theories about this, but by the time of King Aśoka in the third century BCE, writing was widespread. The Indus Valley civilization used writing since 2000 BCE, and some scholars believe that the Brahmi script used in Aśoka's time descended from it. K. R. Norman, *Buddhist Forum Volume V: Philological Approach to Buddhism* (London: School of Oriental and African Studies, 1997), 78. Norman also comments (p. 81) that it would be surprising if monks from the ruling and merchant castes, who were familiar with writing by the time of Aśoka in the third century BCE, did not write down, if not whole texts, then at least notes that would be helpful for their own practice and for teaching others.
38. It is wise to investigate all spiritual claims and not naively accept them. Some people misinterpret experiences they have in meditation.
39. See Khensur Jampa Tegchok, *Practical Ethics and Profound Emptiness* (Boston: Wisdom, 2017), verses 367–93.
40. John Benedict Buescher, *The Buddhist Doctrine of Two Truths in the Vaibhāṣika and Theravāda Schools*, PhD dissertation (University of Virginia, 1982), 44. His footnote on the citation credits a translation published by the Pali Text Society and reads, "P. Maung Tin, *The Expositor*, pp. 5ff. The scriptural precedent that Buddhaghosa gives for this is an incident in the Madhupiṇḍika Sutta."
41. The Tibetan titles of these texts are respectively *Sems nyid ngal gso*, *Shing rta chen po*, *Kun bzang bla ma'i zhal lung*, *Thar pa rin po che'i rgyan*, *Thub pa'i dgongs gsal*, and *Lam rim chen mo*.
42. The seventeen Nālandā adepts are Nāgārjuna, Āryadeva, Buddhapālita, Bhāvaviveka, Candrakīrti, Śāntideva, Śāntarakṣita, Kamalaśīla, Aśaṅga, Vasubandhu, Dignāga, Dharmakīrti, Vimuktisena, Haribhadra, Guṇaprabha, Śākyaprabha, and Atiśa.
43. These are being generous and giving material aid, speaking pleasantly by teaching

- the Dharma to others according to their dispositions, encouraging them to practice, and living the teachings through example.
44. The above outline of the topics pertaining to each level of spiritual development may differ slightly according to the presentation. For example, meditation on the law of karma and its effects is included in the path in common with the initial level of spiritual development in the lamrim, but in the presentation in the three principal aspects of the path, it is subsumed in the practice in common with the person of medium spiritual development.
  45. *Mind Training*, trans. Thupten Jinpa (Boston: Wisdom, 2006), 517.
  46. The eight clear realizations are exalted knower of all aspects (omniscient mind), knower of paths, knower of bases, complete application of all aspects, peak application, serial application, momentary application, and the resultant truth body (dharmakāya).
  47. The ten points that characterize the exalted knower of all aspects are mind generation (bodhicitta), spiritual instructions, four branches of definite discrimination, natural abiding lineage that is the basis of Mahāyāna attainments (buddha potential), the observed object of Mahāyāna attainment, the objective of practice, attainment through the armor-like practice, attainment through engagement, attainment through the collections, and definite emergence.
  48. The Kadam great text tradition (*gzhung*) principally studied six Indian texts: Āryaśūra's *Garland of Jātaka Tales (Jātakamālā)* and the *Collection of Aphorisms (Udānavarga)* to cultivate devotion and take refuge; Asaṅga's *Bodhisattva Grounds (Bodhisattvabhūmi)* and Maitreya's *Ornament of Mahāyāna Sūtras* to learn meditation and the bodhisattva paths and stages; and Śāntideva's *Engaging in the Bodhisattvas' Deeds* and his *Compendium of Instructions (Śikṣāsamuccaya)* to learn the bodhisattva practices. From another perspective, the first two texts are studied in order to learn and observe karma and its effects, the second two to cultivate bodhicitta, and the last two to understand the correct view and realize emptiness. In addition to Potowa's great text tradition, there are two other Kadam traditions: the stages of the path tradition and the pith instructions tradition. The former principally studied lamrim texts, while the latter relied heavily on practice manuals and the oral instructions of their teacher.
  49. Pith instructions (*man ngag*) and "ear-whispered" teachings (*snyan brgyud*) are types of oral instructions (*gdams ngag*) transmitted directly from teacher to student, though this style of advice now forms its own genre of texts. These teachings tend to be concise and practical, pointing to the heart of the practice and the nature of the mind. Such teachings are present in all the Tibetan Buddhist lineages but are more explicitly central to the Nyingma and Kagyu schools.
  50. Gavin Kilty, trans., *Splendor of an Autumn Moon: The Devotional Verse of Tsongkhapa* (Boston: Wisdom Publications, 2001), 231–33.
  51. Thupten Jinpa, trans., <http://www.tibetanclassics.org/html-assets/In%20Praise%20of%20Dependent%20Origination.pdf>.
  52. Access concentration is the level of concentration attained with serenity; full concentration is deeper.

53. The five paths and ten bodhisattva grounds are stages that demarcate a bodhisattva's step-by-step journey to full awakening. On the first two paths—the paths of accumulation and preparation—one creates the causes to realize emptiness directly on the third path, the path of seeing. The ten grounds commence at the path of seeing and occur concurrently with the next path—the path of meditation—until the attainment of the path of no-more-learning, buddhahood.
54. Guy Newland, *Introduction to Emptiness* (Ithaca NY: Snow Lion, 2008), 112.
55. See the *Seven-Point Mind Training* by Geshe Chekawa and *Mind Training Like Rays of the Sun* by Nam-kha Pel.
56. Tibetans pronounce this *Om ah ra pa tsa na dhi*.
57. Thupten Jinpa, trans., *Wisdom of the Kadam Masters* (Boston: Wisdom, 2013), 5.
58. Thubten Chodron: In 1984 or 85 I visited Montserrat and together with two or three other nuns, I went to visit this monk at his hermitage in the mountain. We arrived unannounced, and he invited us in. On his altar was a long white *khatak* (Tibetan ceremonial scarf) and a picture of Avalokiteśvara that His Holiness had given him. As the sunlight streamed in and lit up his altar, he invited us to meditate with him. We did and after some time quietly departed. That same exceptional look in his eyes that His Holiness had noticed was still there.
59. Khunu Lama Rinpoche Tenzin Gyalsten (1894/95–1977) was born Kinnaur, India, studied in Tibet, and in the late 1950s went to Varanasi, where he was based for the remainder of his life. A story that illustrates the depth of his practice: in the mid-1970s some Westerners went to meet him and asked if he needed anything. He said, “No, I have all I need because I have bodhicitta.” The next day he sent a one-rupee offering to each of the Westerners.
60. These are the *Prātimokṣa Sūtra*, *Vinayasūtra* by Guṇaprabha, *Treasury of Knowledge* by Vasubandhu, *Compendium of Knowledge* by Asaṅga, *Treatise on the Middle Way* by Nāgārjuna, *Four Hundred* by Āryadeva, *Supplement to the Middle Way* by Candrakīrti, *Engaging in the Bodhisattvas' Deeds* by Śāntideva, and Maitreya's five treatises.
61. “Two-fingered” indicates a woman's wisdom, because as the cook in a household, she tests the rice between two fingers to see if it is cooked. She also cuts thread while holding the ball of cotton between two fingers.
62. As a nonaffirming negative, emptiness is the absence of inherent existence; it doesn't establish anything positive. An affirming negative will negate one thing while establishing another. “The emptiness of the mind” negates inherent existence in terms of the mind. “The mind's emptiness” establishes the mind as having the attribute of emptiness.

## Glossary

*Abhayagiri*. An early Buddhist monastery in Sri Lanka that was rooted in the teachings of early Buddhism and influenced by the Mahāyāna and later tantric teachings; a sect with that name.

*Abhidharma*. The branch of the Buddhist teachings dealing with wisdom that contains detailed analysis of phenomena; one of the three collections in the Tripiṭaka.

*absolutism*. Believing that phenomena exist inherently.

*access concentration*. The level of concentration attained with serenity.

*affirming negative*. A negation that implies something else.

*afflictions (kleśa)*. Mental factors such as disturbing emotions and incorrect views that disturb the tranquility of the mind.

*afflictive obscurations (kleśāvaraṇa)*. Obscurations that mainly prevent liberation; afflictions, their seeds, and polluted karma.

*Āgamas*. The anthologies of scriptures in the Chinese canon that correspond to four of the five Nikāyas in the Pāli canon.

*aggregates (skandha)*. (1) The four or five components of a living being: body (except for beings born in the formless realm), feelings, discriminations, miscellaneous factors, and consciousnesses. (2) In general, the aggregates are a way to categorize all impermanent things. Here form includes the five sense objects, their five cognitive faculties, and forms for mental consciousness.

*analytical meditation (vicārabhāvanā, T. dpyad sgom)*. Meditation for comprehending an object.

*arhat*. Someone who has eradicated all afflictive obscurations and is liberated from saṃsāra.

*ārya*. Someone who has directly and nonconceptually realized the emptiness of inherent existence.

*basis of designation*. The collection of parts or factors in dependence on which an object is designated.

*bhāṅakas*. A group of monastics whose duty it was to memorize and recite the scriptures.

*bhikṣu* and *bhikṣuṇī*. Fully ordained monk and nun.

*bodhicitta*. A primary mental consciousness induced by an aspiration to bring about others' welfare and accompanied by an aspiration to attain full awakening oneself. This is conventional bodhicitta. *See also* ultimate bodhicitta.

*bodhisattva*. Someone who has generated the spontaneous wish to attain buddhahood for the benefit of all sentient beings.

*bodhisattva ground (bodhisattvabhūmi)*. A consciousness characterized by wisdom and compassion in the continuum of an ārya bodhisattva. It is the basis of development of good qualities and the basis for the eradication of ignorance and mistaken appearances.

*cessation (nirodha)*. The cessation of afflictions, their seeds, and the polluted karma that produces rebirth in cyclic existence; liberation.

*clear light*. A mind that has always been and will continue to be pure; emptiness.

*cognitive obscurations (jñeyāvaraṇa)*. Obscurations that mainly prevent full awakening; the latencies of ignorance and the subtle dualistic view that they give rise to. *See also* afflictive obscurations.

*collection of merit*. A bodhisattva's practice of the method aspect of the path that accumulates merit.

*compassion (karuṇā)*. The wish for sentient beings to be free from all duḥkha and its causes.

*conceptual appearance.* A mental image of an object that appears to a conceptual consciousness.

*consciousness (jñāna).* That which is clear and cognizant.

*conventional existence.* Existence.

*corrupted intelligence.* An analytical mental factor that reaches an incorrect conclusion.

*cyclic existence.* See saṃsāra.

*ḍākinī.* A highly realized female tantric practitioner.

*definitive teachings (nītārtha).* Teachings that speak about the ultimate nature of reality and can be accepted literally (according to the Prāsaṅgikas). See also interpretable/provisional teachings.

*dependent arising (pratīyasamutpāda).* This is of three types (1) causal dependence—things arising due to causes and conditions, (2) mutual dependence—phenomena existing in relation to other phenomena, and (3) dependent designation—phenomena existing by being merely designated by terms and concepts.

*Dhamma.* The Pāli word for Dharma.

*dhāraṇī.* Mantra, a set of syllables expressing a spiritual meaning.

*Dharmaguptaka.* One of the eighteen early schools, whose Vinaya is practiced today in East Asia.

*duḥkha.* Unsatisfactory experiences of cyclic existence, which are of three types: the duḥkha of pain, the duḥkha of change, and the pervasive duḥkha of conditioning; the first truth of the āryas.

*emanation body (nirmāṇakāya).* The buddha body that appears to ordinary sentient beings in order to benefit others.

*emptiness (śūnyatā).* The lack of inherent existence, lack of independent existence.

*enjoyment body (saṃbhogakāya).* The buddha body that appears in the pure lands to teach ārya bodhisattvas.

*evident phenomena.* Phenomena that ordinary beings can perceive with their five senses.

*exalted knower.* A wisdom consciousness that realizes emptiness.

*feeling (vedanā).* One of the five aggregates; the experience of objects as pleasant, unpleasant, or neutral.

*form body (rūpakāya).* The buddha body in which a buddha appears to sentient beings; it includes the emanation and enjoyment bodies.

*four truths of the āryas.* The truth of duḥkha, its origin, its cessation, and the path to that cessation.

*full awakening.* Buddhahood; the state where all obscurations have been abandoned and all good qualities developed limitlessly.

*functional phenomena.* A thing that is produced by causes and conditions and produces an effect.

*fundamental, innate mind of clear light.* The subtlest level of mind.

*Fundamental Vehicle.* The path leading to the liberation of śrāvakas and solitary realizers.

*gāthas.* Short phrases used in the mind-training practice.

*god (deva).* A celestial being who is still born in saṃsāra.

*highest yoga tantra (anuttarayogatantra).* The most advanced of the four classes of tantra.

*ignorance (avidyā).* A mental factor that is obscured and grasps the opposite of what exists. There are two types: ignorance regarding reality that is the root of saṃsāra, and ignorance regarding karma and its effects.

*inferential cognizer (anumāna).* A conceptual mind that ascertains its object by means of a correct reason.

*inherent existence (svabhāva).* Existence without depending on any other factors; independent existence.

*insight (vipaśyanā).* A discerning wisdom conjoined with special pliancy induced by the power of having analyzed one's object within serenity.

*interpretable/provisional teachings (neyārtha).* Teachings that do not speak about the ultimate nature of phenomena and/or teachings that cannot be taken literally. *See also* definitive teachings.

*Jetavana*. An early Buddhist monastery in Sri Lanka that was rooted in the teachings of early Buddhism and influenced by the Mahāyāna and later tantric teachings; a sect with that name.

*karma*. Intentional action.

*lamrim*. Stages of the path to awakening; a text that teaches these based on the explanation of the three levels of practitioners.

*latencies (vāsanā)*. Predispositions, imprints, or tendencies. There are latencies of karma and latencies of afflictions.

*liberation (mokṣa)*. The state of freedom from cyclic existence. *See also* nirvāṇa.

*Mahāvihāra*. A monastery in Sri Lanka many centuries ago, whose teachings became prominent in Sri Lanka and the Theravāda world; a Buddhist sect in Sri Lanka.

*Mahāyāna*. The path to buddhahood; scriptures that describe this; a movement or type of practice within Buddhism that became prominent in India and spread to Central and East Asia.

*meditational deity*. A Buddhist deity that is a buddha or very high bodhisattva that is visualized in certain kinds of meditation.

*meditative equipoise on emptiness*. An ārya's mind focused single-pointedly on the emptiness of inherent existence.

*mental factor (caitta)*. An aspect of a consciousness that apprehends a particular quality of the object or performs a specific cognitive function.

*merit (puṇya)*. Good karma.

*mind (cittajñāna)*. The clear, immaterial, and aware part of living beings that cognizes, experiences, thinks, feels, and so on.

*mind training*. A method to train the mind in conventional and ultimate bodhicitta. Mind training texts consist of short, pithy instructions.

*mindstream*. The continuity of mind.

*monastic*. Someone who has received monastic ordination; a monk or nun.

*Mūlasarvāstivāda.* An early Buddhist school that is a branch of the Sarvāstivāda school; the Vinaya lineage dominant in Tibet.

*Nālandā tradition.* The Buddhist tradition descendant from Nālandā Monastery and other monastic universities in India that flourished from the sixth to the late twelfth century.

*nature truth body (svābhāvīkadharmakāya).* The buddha body that is the emptiness of a buddha's mind and that buddha's true cessations. *See also* truth body.

*nihilism.* Believing that our actions have no ethical dimension; believing that what exists—such as the Three Jewels, four truths, and the law of cause and effect—does not exist.

*nikāya.* (1) A collection of suttas in the Pāli canon, (2) a tradition within Theravāda Buddhism.

*nirvāṇa.* Liberation; the cessation of afflictive obscurations and the rebirth in saṃsāra that they cause.

*nonaffirming negative.* A negation that does not imply something else.

*nonduality.* The non-appearance of subject and object, inherent existence, veil truths, and conceptual appearances in an arya's meditative equipoise on emptiness

*object of negation.* What is negated or refuted.

*Pāli tradition.* The form of Buddhism based on scriptures written in the Pāli language.

*parinirvāṇa.* The Buddha's passing away.

*permanent, unitary, independent self.* A soul or self (*ātman*) asserted by non-Buddhists.

*permanent.* Unchanging moment to moment, static. It does not necessarily mean eternal.

*person (pudgala).* A living being designated in dependence on the four or five aggregates.

*polluted.* Under the influence of ignorance or the latencies of ignorance.

*Prajñāpāramitā.* The perfection of wisdom, which is the topic of a class of Mahāyāna sūtras by this name.

*prātimokṣa.* The different sets of ethical precepts that assist in attaining liberation.

*pure vision teachings.* The teachings stemming from the pure vision of a meditational deity seen by a realized master in meditation.

*reliable cognizer (pramāṇa).* A nondeceptive awareness that is incontrovertible with respect to its apprehended object and that enables us to accomplish our purpose.

*samādhi.* Single-pointed concentration.

*saṃsāra.* The cycle of rebirth that occurs under the control of afflictions and karma.

*Sanskrit tradition.* The form of Buddhism based on scriptures originally written in Sanskrit as well as other Central Asian languages.

*Sarvāstivāda.* One of the prominent early Buddhist schools in northern India.

*scriptural authority.* The authority of a scripture that has met three criteria that deem it reliable.

*self (ātman).* Depending on the context, (1) a person or (2) inherent existence.

*self-centeredness.* (1) In general, the attitude that believes our own happiness is more important than that of all others, (2) the attitude seeking only our own personal liberation.

*self-grasping (ātmagrāha).* The ignorance grasping inherent existence.

*self-sufficient, substantially existent person.* A self that is the controller of the body and mind. Such a self does not exist.

*sentient being (sattva).* Any being with a mind that is not free from pollutants; i.e., a being who is not a buddha. This includes ordinary beings as well as arhats and bodhisattvas.

*serenity (śamatha).* A concentration arising from meditation and accompanied by the bliss of mental and physical pliancy in which the mind

abides effortlessly, without fluctuation, for as long as we wish, on whichever object it has been placed.

*six perfections (sadbhāramitā)*. The practices of generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom that are motivated by bodhicitta and sealed with the wisdom seeing them as both empty and dependent.

*slightly obscure phenomena*. Phenomena that can initially be known only by an inferential cognizer.

*solitary realizer (pratyekabuddha)*. A person following the Fundamental Vehicle who seeks personal liberation and emphasizes understanding the twelve links of dependent arising.

*śrāvaka*. Someone practicing the Fundamental Vehicle leading to arhatship who emphasizes meditation on the four truths of the āryas.

*stabilizing meditation*. Meditation for developing concentration.

*Sthavira*. An early Buddhist school. The Theravāda is said to have descended from it.

*Sūtrayāna*. The path to awakening based on the sūtras.

*sutta*. The Pāli word for sūtra.

*Tantrayāna*. The path to awakening described in the tantras. To practice it one must have a firm understanding of the teachings in the Fundamental Vehicle and the general Mahāyana.

*tathāgata*. A buddha.

*terma*. Treasure teachings; teachings hidden in the environment or revealed as visionary teachings.

*terton*. A Buddhist teacher who discovers a terma.

*Theravāda*. The predominant form of Buddhism practiced today in Sri Lanka, Thailand, Burma, Laos, Cambodia, and so forth.

*thirty-seven aids to awakening (bodhipakṣya-dharma)*. Seven sets of trainings—four establishments of mindfulness, four supreme strivings, four bases of supernormal power, five faculties, five powers, seven awak-

ening factors, and the eightfold noble path—that together lead to the attainment of serenity and insight.

*three higher trainings.* The trainings in ethical conduct, concentration, and wisdom that are practiced within having taken refuge in the Three Jewels and that form the path to liberation.

*Tripitaka.* The Buddha's teachings in three branches: Vinaya, Sūtra, and Abhidharma.

*true cessation.* The cessation of a portion of afflictions or a portion of cognitive obscurations.

*true existence.* Inherent existence (according to the Prāsaṅgika system).

*truth body (dharmakāya).* The buddha body that includes the nature truth body and the wisdom truth body.

*turning the Dharma wheel.* The Buddha giving teachings.

*ultimate bodhicitta.* The wisdom directly realizing emptiness that is supported by conventional bodhicitta. *See also* bodhicitta.

*ultimate truth (paramārthasatya).* The ultimate mode of existence of all persons and phenomena; emptiness.

*unfortunate rebirth.* Rebirth as a hell being, hungry ghost, or animal.

*veil truth (samvṛtisatya).* That which appears true from the perspective of the mind grasping true existence. Also called conventional truth.

*very obscure phenomena.* Phenomena that can be known only by relying on the testimony of a reliable person or a valid scripture.

*view of a personal identity (satkāyadr̥ṣṭi).* Grasping an inherently existent I or mine (according to the Prāsaṅgika system).

*Vinaya.* Monastic discipline; the scriptures that present the monastic discipline.

*wisdom truth body (jnānadharmakāya).* The buddha body that is a buddha's omniscient mind. *See also* truth body.

## About the Authors

THE DALAI LAMA is the spiritual leader of the Tibetan people, a Nobel Peace Prize recipient, and an advocate for compassion and peace throughout the world. He promotes harmony among the world's religions and engages in dialogue with leading scientists. Ordained as a Buddhist monk when he was a child, he completed the traditional monastic studies and earned his geshe degree (equivalent to a PhD). Renowned for his erudite and open-minded scholarship, his meditative attainments, and his humility, Bhikṣu Tenzin Gyatso says, "I am a simple Buddhist monk."

Peter Aronson

BHIKṢUṆĪ THUBTEN CHODRON has been a Buddhist nun since 1977. Growing up in Los Angeles, she graduated with honors in history from UCLA and did graduate work in education at USC. After years studying and teaching Buddhism in Asia, Europe, and the United States, she became the founder and abbess of Sravasti Abbey in Washington State. A popular speaker for her practical explanations of how to apply Buddhist teachings in daily life, she is the author of several bestselling books, including *Buddhism for Beginners*. She is the editor of Khensur Jampa Tegchok's *Insight into Emptiness*. For more information, visit [sravastiabbey.org](http://sravastiabbey.org) and [thubtenchodron.org](http://thubtenchodron.org).

## About Wisdom Publications

Wisdom Publications is the leading publisher of classic and contemporary Buddhist books and practical works on mindfulness. To learn more about us or to explore our other books, please visit our website at [wisdompubs.org](http://wisdompubs.org) or contact us at the address below.

Wisdom Publications  
199 Elm Street  
Somerville, MA 02144 USA

We are a 501(c)(3) organization, and donations in support of our mission are tax deductible.

Wisdom Publications is affiliated with the Foundation for the Preservation of the Mahayana Tradition (FPMT).

*A Note from the Publisher*

We hope you have enjoyed this Wisdom book. For your convenience, this digital edition is being delivered to you without “digital rights management” (DRM). This makes it easier for you to use across a variety of digital platforms, as well as preserve in your personal library for future device migration.

Our nonprofit mission is to develop and deliver to you the very highest quality books on Buddhism and mindful living. We invite you to consider making a donation to Wisdom in any amount through our website at [wisdompubs.org](http://wisdompubs.org). This will help enable us to continue developing excellent books and supporting the authors who write them—and distributing DRM-free eBooks.

We at Wisdom Publications sincerely hope this book has been of benefit to you, and we thank you for your support.

# THE FOUNDATION OF BUDDHIST PRACTICE

.....  
The Dalai Lama and Thubten Chodron

THE LIBRARY OF WISDOM AND COMPASSION : VOLUME 2

## THE LIBRARY OF WISDOM AND COMPASSION

*The Library of Wisdom and Compassion* is a special multivolume series in which His Holiness the Dalai Lama shares the Buddha's teachings on the complete path to full awakening that he himself has practiced his entire life. The topics are arranged especially for people not born in Buddhist cultures and are peppered with the Dalai Lama's unique outlook. Assisted by his long-term disciple, the American nun Thubten Chodron, the Dalai Lama sets the context for practicing the Buddha's teachings in modern times and then unveils the path of wisdom and compassion that leads to a meaningful life, a sense of personal fulfillment, and full awakening. This series is an important bridge from introductory to profound topics for those seeking an in-depth explanation from a contemporary perspective.

*and*  
Bhikṣuṃ Thubten Chodron

The second volume in the Dalai Lama's definitive and comprehensive series on the stages of the  
Buddhist path,  
*The Library of Wisdom and Compassion.*

---

VOLUME 1, *Approaching the Buddhist Path*, contains introductory material that sets the context for Buddhist practice. This second volume, *The Foundation of Buddhist Practice*, describes the important teachings that will help us establish a flourishing Dharma practice.

Traditional presentations of the path in Tibetan Buddhism assume the audience already has faith in the Buddha and believes in rebirth and karma, but the Dalai Lama realized early on that a different approach was needed for his Western and contemporary Asian students. Starting with the four seals and the two truths, His Holiness illuminates key Buddhist ideas, such as dependent arising, emptiness, and karma, to support the reader in engaging with this rich tradition. This second volume in the new *Library of Wisdom and Compassion* series provides a wealth of reflections on the relationship between a spiritual mentor and student, how to begin a meditation practice, and the relationship between the body and mind, among other fascinating topics.

## Publisher's Acknowledgment

The publisher gratefully acknowledges the generous help of the Hershey Family Foundation in sponsoring the production of this book.

About the Authors

## Preface

**W**ELCOME TO THE second volume of the Library of Wisdom and Compassion that shares His Holiness the Dalai Lama's compassionate wisdom on how to practice the path to full awakening. The first volume of the Library of Wisdom and Compassion, *Approaching the Buddhist Path*, principally contained introductory material that set the context for Buddhist practice. It gave us a way to approach the Buddha's teachings: to "get our toes wet" without diving in. This volume, which can also be read as an independent book, takes the next step and describes the foundation of Buddhist practice — important topics that will help us to stay focused on what is worthwhile and to build a firm basis on which to establish a healthy Dharma practice.

As an individual who has studied and practiced the Buddhadharma since he was a small child, His Holiness the Dalai Lama is uniquely qualified to share with us what he has learned and how he implements it in his life. Occupying the office of the Dalai Lama, Bhikṣu Tenzin Gyatso is the spiritual leader of the Tibetan people, and until he resigned in 2011 he was also their political leader. From early on, he insisted that Tibetans develop democratic institutions in keeping with modern standards. Once the Central Tibetan Authority was established in Dharamsala, India, with functioning legislative, executive, and judicial branches, he followed his heart's yearning to retire from government service and devote his time to the Buddha's teachings. Looking back on his years as a political leader, he comments that the confluence of spiritual and political power in pre-1959 Tibet was influenced by feudalism. He relinquished the political power of the institution of the Dalai Lama in favor of a democratic government and believes that spiritual and political leadership should be distinct.

His Holiness is nonsectarian in his approach to the Dharma. He is not the leader of the Geluk tradition — that position is held by the Ganden Tripa and is a seven-year appointed position accorded to a former abbot of one of the two Geluk tantric monasteries. His Holiness refers to himself as a

simple Buddhist monk who follows the Nālandā tradition — the teachings of the vibrant Buddhist monastic universities in classical India, one of which was Nālandā.

## *How the Library of Wisdom and Compassion Came About*

As explained more extensively in *Approaching the Buddhist Path*, the first volume in the Library of Wisdom and Compassion, this series grew from the need for a presentation of traditional Buddhist teachings in a new format designed especially for people who did not grow up with knowledge of the Buddha's teachings. This audience — myself included — generally engages with Buddhism using a rational approach. We seek reasoned explanations and examine what we learn to see if it makes sense and is logically consistent. We try it out to see if it works before having faith or calling ourselves Buddhists.

With this in mind, in 1995 I requested His Holiness to write a short text that teachers could use for this purpose. He responded by saying that a larger commentary should be written first and, giving me transcripts of some of his talks, charged me with that task. Since I have been His Holiness's student since 1979, I also had a wealth of notes as well as English translations of many of the texts he has taught. With each new teaching I heard, more was added to the manuscript, and what began as one book quickly turned into a series of volumes. In addition, His Holiness said that he wanted this book to be unique and to include the perspectives of the Pāli and Chinese Buddhist traditions.

Every few years I would meet with His Holiness for a series of interviews to ask him questions that I had accumulated from my own studies and from my friends who were also Western Buddhists. Perhaps because of cultural differences or the way society is now structured, we often have questions and qualms that require in-depth explanations that are not found in the classical Buddhist texts. His Holiness enjoyed these discussions — he would often invite two or three geshe, his brother Ngari Rinpoche (Tenzin Choegyal), and the scholar and former Tibetan prime

minister Samdhong Rinpoche to join us. There were serious philosophical debates and robust laughter during our sessions.

Much of the content of the two chapters on properly relating to a spiritual mentor came from these interviews as well as from gatherings of Western Buddhist teachers with His Holiness in 1993 and 1994, when we spoke frankly with him about difficulties that have arisen as Buddhism spreads in new lands. His Holiness discussed these topics openly and gave practical responses suitable for current issues.

Since the material for this series came from oral teachings, interviews, and written texts, which were translated by various interpreters who had different English translations of technical terms and different speaking and writing styles, one of my tasks as editor was to express the material in a consistent style and standardize the terms. At one point His Holiness insisted that the series be coauthored, although this was not my intent or wish. Although the series follows His Holiness's teachings, I have expanded on certain points that he covered briefly and mentioned some points that were omitted. He has been my spiritual mentor for nearly forty years, so whatever I have written has definitely been shaped by his perspective and guidance. Geshe Dorje Damdul and Geshe Dadul Namgyal also checked the manuscript.

Most of the series is written from the perspective of the Nālandā tradition, which stems from the monastic universities in ancient India, and the Sanskrit tradition in general. There are so many similarities between the Sanskrit tradition and the Pāli tradition of Buddhism that quotations from sūtras and commentaries in the Pāli tradition are freely intertwined in this book. In some places — for example, in the chapters on karma and its effects — some points from the Pāli tradition are added to expand our understanding. This is part of His Holiness's vision of our being twenty-first-century Buddhists with flexible minds who can understand and learn from a variety of perspectives.

His Holiness wants this series to address the spiritual needs of not only Westerners but also people from traditionally Buddhist cultures in Asia and abroad, as well as the younger generations of Tibetans who are English educated.

## *Overview of “The Foundation of Buddhist Practice”*

The “prelude” to the Library of Wisdom and Compassion was *Buddhism: One Teacher, Many Traditions*, which shared the Buddha’s teachings in both the Pāli and Sanskrit traditions, showing the many similarities as well as the different perspectives. In our modern world, it is increasingly important that Buddhists from different traditions and countries learn about one another. In that way we will abandon old misconceptions that divide us and be able to speak as one voice on the Buddha’s principal teachings on nonviolence, love, compassion, ethical conduct, and so forth — values that desperately need to be promulgated to counter the self-centeredness of individuals, groups, and nations.

His Holiness’s teaching style is unique. He respects the intelligence of his audience and is not afraid to introduce profound concepts to beginners. While he does not expect us to understand everything the first time we hear or read it, he urges us to do our best and to come back to the material repeatedly over time and continue to deepen our understanding. He presents the path in a straightforward manner, without exaggerated claims of quick or easy attainments that require minimum effort and commitment, and urges us to exert joyous effort in learning, reflecting on, and meditating on the topics. He earnestly models this effort and commitment in his own life, living simply without any intention to become a celebrity. He also trusts that when we encounter difficult concepts, we will not give up but will persevere, gradually progressing according to our individual ability. By teaching in this way, His Holiness gives us a clear aim and path to get there as he compassionately encourages us to keep going.

The present volume begins with the four seals — basic premises that are accepted by all Buddhist schools — and the two truths, which are the basis of the path. Here we are introduced to key Buddhist ideas such as dependent arising and emptiness according to the view of the Prāsaṅgika Madhyamaka tenet system. We begin to understand that things — especially our own selves — do not exist as they appear. There is an ultimate reality to be discovered that does not negate the existence of the world but gives us a new, liberating way to see it.

Chapter 2 focuses on epistemology, how we know the phenomena that comprise the two truths. How do we discriminate reliable cognizers — awarenesses that accurately know their objects — from wrong consciousnesses that misperceive sensory objects or hold incorrect views? This topic keeps our spiritual exploration grounded in reason and is important to fulfill both our temporary and ultimate aims.

Knowing the qualities of correct and erroneous cognizers, we examine the objects of these cognizers in chapter 3 — external objects that form the environment and internal ones that are the basis of the self, our body and mind. This chapter contains an extensive classification of phenomena that is helpful to keep in mind as we explore other topics on the path.

Chapters 4 and 5 discuss a subject that many people find confusing: how to choose a qualified spiritual mentor and form a healthy relationship with that person. Practicing under the guidance of excellent spiritual mentors is essential; without them we risk wandering in the spiritual marketplace, taking a little of this and a little of that and blending them together in a way that pleases us. Worse yet, an unqualified teacher may lead us on the wrong path. These chapters explain the different kinds of spiritual mentors, their requisite qualities, and how to relate to them in a way that benefits our practice. But for benefit to occur, we need to become receptive students. When difficulties arise in the mentor-student relationship, we need to address them skillfully. His Holiness is very practical in this regard.

Before actually embarking on the path, we also need to know the various types of meditations and how to structure our meditation session. This is covered in chapter 6. The preliminaries, such as proper sitting positions and calming the mind through observing the breath, facilitate meditation. Reciting verses that direct our minds to positive thoughts settles the mind. Doing these recitations while imagining that we are in the presence of the buddhas and bodhisattvas makes them especially heartfelt.

In chapter 7 His Holiness explains the mind, body, and rebirth in more depth, bringing in a scientific perspective while adhering to the Buddhist view that body and mind have different natures and different causes. He also introduces a meditation to help you get a sense of the clear and cognizant nature of the mind.

Chapter 8 begins the path in common with the initial-level practitioner. First we contemplate our precious human life, its meaning, and its rarity. This meditation is a wonderful antidote to depression and discouragement, for it emphasizes the good fortune and remarkable opportunity we have at present.

Chapter 9 asks us to look at what distracts us from practicing the path: our addiction to the pleasure that comes from other people and sense objects and our aversion to any pain or disappointment. The attitude that seeks only our own happiness of this life keeps us busy trying to make other people and the environment correspond with our current wishes and ignores the need to create the causes for fortunate future lives, liberation, and full awakening. Meditation on death helps us clear away our “rat race” mentality and set clear priorities. This chapter also includes advice for how to prepare for death and help someone who is dying.

Understanding the value of our lives and determined to use them to progress on the path to awakening, we want to learn how to create the causes for happiness and abandon the causes of suffering. This is covered in the final three chapters about karma and its effects. Here we find a comprehensive description of how our actions create our experiences. We learn to distinguish virtuous and nonvirtuous actions, giving us power to create the kind of future we want. A section on current ethical issues is a starting point for discussions on how to live an ethical life in a changing society. The four opponent powers set out a psychologically healthy way to remedy our misdeeds and begin anew. We also explore the deeper implications of causality. With this knowledge we can live in a healthy, wholesome, and meaningful way that enables us to accomplish our spiritual goals.

### *Please Note*

Although this series is coauthored, the writings are primarily His Holiness’s instructions. I wrote the parts pertaining to the Pāli tradition and some other paragraphs.

For ease of reading, most honorifics have been omitted, but that does not diminish the great respect we have for these most excellent sages and

practitioners. Foreign terms are given in parentheses at their first usage and in the glossary. Unless otherwise noted with “P” or “T,” indicating Pāli or Tibetan, respectively, the italicized terms are Sanskrit. Sanskrit spelling is used for Sanskrit and Pāli terms used widely (nirvāṇa, Dharma, arhat, and so forth), except in citations from Pāli scriptures and parenthetical technical terms in explanations from the Pāli tradition. For brevity, the term *srāvaka* encompasses solitary realizers (*pratyekabuddha*) as well, unless there is reason to specifically speak of solitary realizers. To maintain the flow of a passage, it is not always possible to gloss all new terms on their first use, so a glossary is included at the end of the book. Unless otherwise noted, the personal pronoun I refers to His Holiness.

## *Acknowledgments and Appreciation*

I bow to Śākyamuni Buddha and all the buddhas, bodhisattvas, and arhats who embody the Dharma and share it with others. I also bow to all the realized lineage masters of all Buddhist traditions through whose kindness the Dharma still exists in our world.

Since this series will appear in consecutive volumes, I will express my appreciation of those involved in that particular volume. This second volume is due to the talent and efforts of His Holiness’s translators — Geshe Lhakdor, Geshe Dorje Damdul, and Mr. Tenzin Tsepak. I appreciate Samdhong Rinpoche, Geshe Palden Dragpa, Geshe Sonam Rinchen, and Geshe Dadul Namgyal for their clarification of important points. I also thank Bhikkhu Bodhi for his clear teachings on the Pāli tradition, Geshe Dadul Namgyal for checking the manuscript, the staff at the Private Office of His Holiness for facilitating the interviews, the communities of Sravasti Abbey and Dharma Friendship Foundation for supporting me while I wrote this series, and David Kittelstrom and Mary Petrusiewicz for their skillful editing. I am grateful to everyone at Wisdom Publications who contributed to the successful production of this series. All errors are my own.

Bhikṣuṇī Thubten Chodron

# Introduction

## *Three Aspects of Buddhism's Contribution*

OVER THE CENTURIES, Buddhism has made a powerful and valuable contribution to our human culture. When speaking of the contribution of the Nālandā tradition in particular, I place its contents in three categories: Buddhist science, philosophy, and religion. *Buddhist science* includes discussion of the nature of the external world and the subject, the mind, that cognizes it, as well as how the mind engages its objects through sensory and mental cognizers and through conceptual and nonconceptual consciousnesses. Buddhist science also discusses how the mind engages with objects by employing reasoning that helps establish facts about the world.

*Buddhist philosophy* includes discussion about the conventional and ultimate modes of existence of persons and phenomena, the four seals indicating a philosophy is Buddhist, the two truths, and emptiness and dependent arising. *Buddhist religion* describes the basis, path, and result of spiritual practice and emphasizes its liberating aspirations and goals. Buddhist religion relies on understanding Buddhist science and philosophy, in the sense that they provide the foundation and essential elements for the path to fulfill the spiritual aims of liberation and full awakening. Based on the assumption that every living being has the potential to become fully awakened, Buddhist religion stresses the path of mental development and transformation to attain these supramundane states.

Since we live in a multicultural, multireligious world, one of my aims is to present ethical conduct and compassion in a secular way, free of reliance on a specific religious doctrine, so that people of all faiths and of no faith can benefit. I also wish to give society access to the intellectual treasures in India's ancient texts and ensure that they are preserved in the body of world knowledge. In this light, I asked some of my foremost students, who are scholars in their own right, to form compendiums of the important points of

Buddhist science and philosophy and translate them into a variety of languages. The series of these compendiums is entitled *Science and Philosophy in the Indian Buddhist Classics* and is published by Wisdom Publications.

Buddhist science and philosophy can be studied by all. However, Buddhist religion is for Buddhists and those interested in it. We respect each individual's choice regarding religion. The Library of Wisdom and Compassion deals with the spiritual and religious perspective of Buddhism's contribution to the world. It is for those who are interested in learning and practicing the path that frees us from *duḥkha* — the unsatisfactory conditions of cyclic existence (*samsāra*) — and enables us to actualize our full human potential. In this Library, you will find Buddhist science and philosophy presented as the basis and means for practicing the liberating path. You will learn how to engage with this liberating knowledge in a personal, transformative way.

## *A Good Attitude toward Learning the Dharma*

Buddhist texts contain wise advice about how to approach learning the Buddha's teachings and explaining them to others. Since in this volume we will establish the foundation for Buddhist practice, it is especially helpful to touch on this now.

Reflecting on the value of learning the Dharma in my own life, I recall some verses in the *Jātaka Tales* (LC 1.56):

Hearing (learning) is a lamp that dispels the darkness of afflictions,  
the supreme wealth that cannot be carried off by thieves,  
a weapon that vanquishes the foe of confusion.

It is the best of friends, revealing personal instructions, the techniques  
of method.

It is the friend who does not desert you in times of need,  
a soothing medicine for the illness of sorrow,  
the supreme battalion to vanquish the troops of great misdeeds.

It is the best fame, glory, and treasure.

Due to the problems concerning Tibet's sovereignty that occurred during my youth, I had to accept the request of the Tibetan people and assume leadership of the Tibetan government. I was a mere teenager at the time, with little to no experience of my new duties and responsibilities that concerned the well-being of millions of people. Although anxiety was always beckoning, the Buddha's teachings gave me inner strength. They were the lamp that dispels the darkness of afflictions.

When I had to suddenly flee to India in March 1959, and leave almost all possessions behind and go forward to an unknown future, the Dharma was the friend who did not desert me in times of need. All the sūtras and scriptures I had memorized throughout the years came with me to India, providing guidance whenever I needed it. As I lived in exile and watched my homeland and its traditions, culture, and temples be destroyed, the Dharma was a soothing medicine for the illness of sorrow, giving me optimism and courage. In exile, the Buddha's teachings have been the best fame, glory, and treasure because they are always valuable in life and in death.

Seeing the benefits of learning the Buddha's teachings, we want to listen to and study them in an effective manner, without the defects of three faulty vessels. If we don't pay attention while at teachings or when reading Dharma books, we don't learn anything. Like an upside-down pot, nothing can go in. If we don't review what we have heard or read to make our understanding firm, we will forget the teachings, becoming like a leaky pot that can't retain the precious nectar poured into it. If we are closed-minded, opinionated, or have the wrong motivation for learning the Dharma, we become like a filthy pot; pure nectar may be poured inside and stay there, but because it is mixed with the filth in the pot it cannot serve its purpose to nourish us.

With this in mind, please set a wholesome altruistic intention when reading this book. Aspire, "May I read, reflect, and meditate on the Buddha's teachings so that I can become a kind, compassionate, and wise person. Through this, may I be of benefit to all living beings, and in the long term, may I become a fully awakened buddha."

Bhikṣu Tenzin Gyatso, the Fourteenth Dalai Lama

Thekchen Choling

# 1 | The Buddhist Approach

## *Four Seals*

THE ISSUE OF distinguishing Buddhists from non-Buddhists existed in olden times as it does now. In ancient India, this was usually done on the basis of philosophical views regarding the nature of the self and phenomena. A convenient and concise way to delineate Buddhist views is according to the four seals as found in the *King of Concentration Sūtra* (*Samādhirāja Sūtra*). People accepting the four seals are considered Buddhists by view,<sup>1</sup> and those accepting the Three Jewels as their ultimate source of refuge are considered Buddhists by conduct. The four seals are: (1) all conditioned phenomena are transient, (2) all polluted phenomena are *duḥkha* (unsatisfactory) in nature, (3) all phenomena are empty and selfless, and (4) *nirvāṇa* is true peace.

### *1. All conditioned phenomena are transient.*

Conditioned phenomena are products of causes and conditions, and all of them undergo change, disintegrating from what they were and becoming something new. Change occurs in coarse and subtle ways. Coarse change occurs when the continuum of a thing ceases. Subtle change occurs moment by moment — it is a thing's not remaining the same from one instant to the next.

We can observe coarse impermanence with our senses: we see that after coming into being, things later cease. A chair breaks, a person dies, bottles are recycled. Understanding coarse transience is not difficult; we don't need logical arguments to accept this coarse level of change.

However, for something to arise and cease in this obvious way, there must be a subtler process of change occurring moment to moment. Without a seed changing moment by moment, a sprout will not appear. Without the

sprout growing in each moment, the plant won't come into being. Without the plant aging and disintegrating moment by moment, it won't die. Without subtle, momentary change, coarse change could not occur. The fact that things end indicates they change subtly in each instant. They are transient or impermanent. In Buddhism, "impermanent" means changing moment by moment.

All the main Buddhist philosophical tenet schools (except for Vaibhāṣika, which has a slightly different understanding of the process of change and cessation) accept that the moment a thing comes into being, it contains the seed of its own cessation simply by the fact that it is produced by causes and conditions. It is not the case that one cause produces a particular thing, that thing remains unchanged for a period of time, and then another condition suddenly arises that causes its cessation. Rather, the very factor that causes something to arise also causes it to cease. From the very first moment of a thing's existence, it has the nature of coming to an end. The very nature of conditioned phenomena is that they do not last from one moment to the next.

Generally speaking, when we think of something coming into being, we look at it from a positive angle and think of it growing. When we think of something ending, we have the negative feeling that what existed before is ceasing. We see these two as incompatible and contradictory. However, if we reflect on the deeper meaning of impermanence, we see that its very definition — momentary change — applies to both the arising and ceasing of a thing. Nothing, whether it is in the process of arising or the process of ending, lasts into the next moment.

The present is insubstantial. It is an unfindable border between the past — what has already happened — and the future — what is yet to come. While we spend a great deal of time thinking about the past and planning for the future, neither of them is occurring in the present. The only time we ever live is in the present, but it is elusive, changing in each nanosecond. We cannot stop the flow of time to examine the present moment.

Scientists, too, speak of momentary change: subatomic particles are in continuous motion, and cells in our body undergo constant, imperceptible alteration. When we understand impermanence to mean momentariness, we see that arising and ceasing are not contradictory but are two aspects of the

same process. The very fact that something comes into being means it will cease. Change and disintegration occur moment by moment. When we understand impermanence in those terms, we'll recognize the significance of the first seal, that all conditioned phenomena are impermanent.

Understanding impermanence is a powerful antidote to harmful emotions that plague our lives. Emotions such as attachment or anger are based on grasping: we unconsciously hold the view that the people to whom we're attached will not cease and that the problem or mood we're experiencing at present will continue. Contemplating impermanence shows us the opposite: since everyone and everything changes, clinging to people, objects, or situations as being fixed doesn't make much sense. Since our problems and bad moods are transient by nature, we do not need to let them weigh us down. Rather than resist change, we can accept it.

While the direct and complete antidote to attachment is the realization of selflessness, an understanding of impermanence will prepare our mind to gain insight into the meaning of selflessness. But understanding impermanence will not harm beneficial qualities such as love, compassion, and altruism because those emotions are not based on unrealistically grasping impermanent things to be permanent. Contemplating impermanence gives us confidence that our disturbing emotional habits can change and that excellent qualities can grow in us.

## *2. All polluted phenomena are duḥkha — unsatisfactory by nature.*

Polluted phenomena are those produced under the control of ignorance and its latencies. Because all things in cyclic existence — including our body and mind — are polluted in this way, they are said to be *duḥkha*, unsatisfactory by nature. They are not capable of providing the enduring happiness and security that we seek.

How are the unsatisfactory circumstances in our lives related to our minds? In the *Sūtra on the Ten Grounds (Daśabhūmika Sūtra)*, the Buddha said, “The three realms are only mind.” The Cittamātra (Mind Only) school says this means the external physical world that we perceive is nothing but a projection of our mind. The Prāsaṅgika Madhyamaka school understands this statement differently, saying that it indicates there is no absolute, independent creator and that the source of our experiences lies in our minds

— our virtuous, nonvirtuous, and neutral minds — and the actions, or karma, that these mental states motivate.

From the Buddhist viewpoint, many universes exist simultaneously at different stages of development — some are beginning while others are devolving. Before a particular universe begins, the potential for material substances exists in the form of space particles. Changing moment by moment, these space particles are not absolute or independent entities.

How is the physical evolution of a universe related to sentient beings — their mental states and their experiences of pain and pleasure, happiness and unhappiness? This is where karma comes in. Karma is intentional actions done by sentient beings.<sup>2</sup> As the potencies remaining from these actions ripen, they shape the evolution of the external world and condition our experiences in it.

Sentient beings create karma physically, verbally, and mentally. Our motivation is principal, for it fuels our physical and verbal actions. Destructive actions are motivated by afflictions such as attachment, anger, and confusion, which in turn are polluted by and rooted in ignorance, an erroneous belief in inherent existence.<sup>3</sup> Even when sentient beings act with kindness, the karma they create is still polluted by the ignorance grasping inherent existence. So whether the actions are constructive or destructive, they produce rebirth in cyclic existence. Because unawakened cyclic existence is a product of the undisciplined mind, it is said to be *duḥkha*, unsatisfactory by nature. Secure peace and happiness cannot come from ignorance. For this reason, the second seal of Buddhism is that all polluted phenomena are in the nature of *duḥkha*.

The first truth, the truth of *duḥkha*, consists of two factors: those in the external environment, such as our environment, tables, and oceans, and those internal to sentient beings — our bodies and minds. Within the latter, the feeling aggregate, the primary consciousnesses and mental factors that accompany them, and the cognitive faculties that cause these consciousnesses are all unsatisfactory by nature. Both the external and internal objects are true *duḥkha* because they come into being due to the polluted karma and the afflictions of ordinary sentient beings.

Once someone has eliminated afflictions and karma, she becomes an arhat, someone liberated from cyclic existence. Even so, she may continue

to live in the external world, which is true *duḥkha*. In other words, the criterion for being in cyclic existence is not the environment in which a person lives but her state of mind.

The first two seals are related. We can use the transient nature of functioning things as a reason to show that all polluted phenomena are unsatisfactory in nature. Functioning things are products of causes and conditions, thus they are under the control of other factors. Polluted things, such as our ordinary bodies and unenlightened minds, are under the power of polluted causes — the undisciplined mind, at the root of which lies ignorance. As long as our minds remain under the control of ignorance, we live in an unsatisfactory state where the cause of suffering is always present.

*3. All phenomena are empty and selfless.*

*4. Nirvāṇa is true peace.*

The third and fourth seals are closely related. The explanation of the third seal accepted by almost all Buddhist tenet schools glosses the term “empty” as the absence of a permanent, unitary, independent self or soul and “selfless” as the absence of a self-sufficient, substantially existent person. According to the Prāsaṅgika Madhyamaka school, which is considered the most accurate view, “empty” and “selfless” both refer to the absence of inherent, true, or independent existence. Unless otherwise noted in this book, explanations will be according to this school.

The root of our cyclic existence is the ignorance that grasps phenomena as possessing some sort of independent existence, selfhood, or self-existence. The word *ignorance* conjures up the image of something inauspicious or undesirable, and it is indeed so. Just as whatever grows from a poisonous seed will be poisonous, everything that arises from ignorance will be undesirable. As long as we remain under the control of ignorance and erroneous views, there is no possibility for lasting joy.

According to Prāsaṅgikas, ignorance is not simply a state of unknowing. It actively grasps or conceives things to exist in a way that they do not. Superimposing inherent existence on persons and phenomena, it apprehends what is contrary to reality. Whereas persons and phenomena do not exist

inherently, under their own power, ignorance grasps them as existing in that way.

As we investigate how phenomena actually exist, our conviction that ignorance is erroneous increases. By seeing and familiarizing ourselves with the wisdom knowing reality, we gradually erode the force of ignorance and the undisciplined mind. When the cause, ignorance, is completely uprooted by its counterforce, wisdom, its resultant *duḥkha* is likewise extinguished. This state of freedom is *nirvāṇa*, lasting peace and true freedom. Therefore the fourth seal of Buddhism is that *nirvāṇa* is true peace.

Knowing the evolution of afflictions such as attachment and anger helps us understand the necessity of employing analysis to gain the wisdom realizing the selflessness of persons and phenomena that eradicates ignorance. If we examine emotions such as attachment and anger, we see that they are rooted in grasping at inherent existence. The stronger our grasping at an independent I, the stronger our attachment to the concerns of that self. We cling to whatever is seen as important to the self and are hostile toward whatever impedes fulfilling its interests.

For example, we may see a beautiful item that we are very attracted to in a store, and we crave to possess it. After we buy it, we call it mine and become even more attached to it. Behind the label mine is the belief in a self whose happiness is extremely important. If someone else then takes or breaks the article, we become angry because the happiness of this I has been adversely affected. Here we see the relationship between our grasping at an inherently existent I and our attachment to the article and anger at whatever interferes with our enjoying it. Refuting the inherent existence of this I eliminates the basis of our attachment and anger, which subsequently diminish and eventually are totally eradicated.

The distinguishing mark of being in cyclic existence is the mere I being under the control of ignorance and karma; that is, when the aggregates that are the basis of designation of the I are produced by these polluted causes, the person designated in dependence on them is bound in cyclic existence. As soon as that person eliminates ignorance, she no longer creates polluted actions that propel cyclic existence. Her cyclic existence ceases, and that person — that mere I — attains liberation. Gradually, she can also remove

the cognitive obscurations that prevent omniscience, and when this is done, that mere I attains buddhahood, the state of full awakening or nonabiding nirvāṇa, in which the person abides neither in cyclic existence nor in the personal peace of an arhat's nirvāṇa.

The four seals follow each other in a natural sequence. The existence of our body, mind, self, as well as the people and environment around us, is governed by causes and conditions. Thus their very nature is transient and momentary. The very causes and conditions that brought them into existence are the causes for their disintegration. In short, all conditioned phenomena are impermanent, the first of the four seals.

The external environment as well as factors internal to sentient beings — our bodies and minds — came about under the influence of our afflictions and polluted karma. Thus they are unsatisfactory by nature. As the second seal states, all polluted phenomena are duḥkha.

The story does not stop here, because there exists a powerful antidote — the wisdom realizing the emptiness of inherent existence — that is capable of totally eradicating ignorance, afflictions, and karma. All phenomena are empty and selfless, the third seal. When emptiness is realized directly and nonconceptually, and the mind becomes habituated with it through consistent meditation, all afflictions and karma causing rebirth are eradicated. In this way, cyclic existence is ceased and the fourth seal — nirvāṇa is peace — comes about.

The four seals are related to the four truths. The first two seals — all conditioned phenomena are transient and all polluted phenomena are unsatisfactory — describe the first two noble truths: the truths of duḥkha and its origins. But knowing this alone doesn't overcome our suffering. The last two seals — emptiness and selflessness, and nirvāṇa — speak of the third truth, true cessations, and imply the fourth truth, true paths, as the path that realizes them. By realizing the true path — the wisdom realizing emptiness — that knows all phenomena are empty and selfless, we uproot the ignorance that is the root cause of cyclic existence. Its cessation is the fourth seal, nirvāṇa is true peace.

## *Two Truths*

From the perspective of subtle dependent arising, all phenomena are empty of inherent existence and exist by being merely designated by names and concepts. How, then, do we maintain a coherent notion of our everyday world? How can we accept causes producing results and maintain the distinctions among different objects if ultimately everything lacks inherent existence and exists by mere designation? The Buddha’s teaching on the two truths — ultimate and conventional — helps us understand this.

*Ultimate (paramārtha)* truth — the emptiness of inherent existence of all phenomena — is the actual way phenomena exist. Ultimate truths are true in that they exist the way they appear to the nonconceptual wisdom of āryas. *Samvṛti*, the Sanskrit word translated as “convention,” also means “veil,” indicating that the actual truth of an object is obscured or veiled — the veil being ignorance, the mind grasping inherent existence. Due to ignorance, phenomena appear inherently existent, whereas they are not. Veiled truths are not true — they do not exist as they appear — they are true only for ignorance, and as such, are false. Our everyday world of people, things, and experiences are veiled truths.

To give another example, people gave me the title Dalai Lama. If you attend a public teaching that I give, you look at the person in the front of the room who is speaking and think, “This is the Dalai Lama,” as if there were an objective person out there, a person that exists from his own side. But when you search for exactly what that person is, you can’t pinpoint anything. You see the body of a Buddhist monk and hear a voice. Through my body language and speech, you have some idea of what is going on in my mind. But when you look in the body, speech, and mind, you can’t find the Dalai Lama. He is not his body, speech, or mind. The appearance of the Dalai Lama as an inherently existent person is false. Actually he exists because on the basis of the collection of body and mind, your mind forms the conception of a person that you then designate the “Dalai Lama.” The Dalai Lama exists by being merely designated by name and concept. That is his conventional nature. The deeper way he exists — his ultimate nature — is the emptiness of being an inherently existent Dalai Lama.

For each phenomenon, the two truths are present on that one base. For example, the mind has a veiled or conventional nature and a deeper reality or ultimate nature. Its conventional nature is its clarity and cognizance, the

mind that perceives and experiences things. Its ultimate nature is its emptiness of inherent existence. These two truths exist inseparably with respect to the mind, although they are perceived by different cognizers. The conventional mind is perceived by a conventional reliable cognizer, while the ultimate nature of the mind is known by a wisdom mind that realizes emptiness. Although the two truths are different, they exist together and depend on each other. For that reason, the mind and its emptiness are said to be one nature but nominally different. The two truths are not two unrelated levels of being, with ultimate truth being some absolute independent reality separate from the world of interdependent things.

The very meaning of the term *dependent arising* enables us to gain insight into the union of the two truths. Everything exists *dependent* on or in relation to other factors that are not it. Flowers depend on seeds, a human being depends on his or her body and mind, space depends on the lack of obstruction. Being dependent, they are empty of inherent existence. But emptiness doesn't mean total nonexistence. Because flowers, humans, and space *arise*, these veiled truths exist.

Within the context of these appearances being dependent veiled truths, the Buddha taught the method aspect of the path to awakening. Because so many different kinds of forms and appearances exist, they are called “the vast” or “the varieties of phenomena.”

Within the context of phenomena's ultimate nature being emptiness, the Buddha taught the wisdom aspect of the path. The emptiness of phenomena is called “the profound” because it is free from conceptual fabrications and is realized by a profound wisdom consciousness. Method and wisdom together are called “the stages of the vast and profound path.”

By meditating on the two truths and their inseparability and by cultivating the method and wisdom aspects of the path, all faulty states of mind are gradually removed and the excellent attributes of a buddha's truth body and form body are developed. Buddhahood is attained through the unified cultivation of both method and wisdom. The chief wisdom is the wisdom realizing the emptiness of inherent existence, and in the Mahāyāna the chief method is the altruistic intention to become a buddha (*bodhicitta*), induced by great love and great compassion. Although practiced in tandem, method and wisdom each has its own principal result in buddhahood. The

principal result of method is the form bodies of a buddha — the bodies in which a buddha manifests in order to teach sentient beings — and the principal result of wisdom is the truth body of a buddha — a buddha’s omniscient mind and its ultimate nature.

Buddhadharma can also be spoken of in terms of basis, path, and result. The basis is the two truths — conventional and ultimate. The path is the two cultivations — method and wisdom. The result is the two bodies of a buddha — the form body and truth body. Here we see clearly the correlation of conventional truths, the method aspect of the path, and the form body of a buddha, and the correlation of ultimate truths, the wisdom aspect of the path, and the truth body of a buddha.

The topics introduced in this chapter are complex and important. Only when we understand the nature and relationship of the two truths according to the Madhyamaka viewpoint can we fully understand the meaning of the four truths and know the full meaning and purpose of taking refuge in the Three Jewels. This chapter gave you a glimpse of these, and the fuller explanations that follow will elaborate on them.

The four seals — impermanence, duḥkha, selflessness, and nirvāṇa (true cessation) — are among the most important objects for us to know on the path. For that reason, in the following chapter, we will explore the reliable cognizers that enable us to have correct knowledge.

## 2 | Gaining Nondeceptive Knowledge

AS HUMAN BEINGS, we act to accomplish certain goals and purposes. In the area of spirituality and religion, our aim is to attain a state of enduring fulfillment and peace. To determine if full awakening is possible, to know what to practice and abandon in order to attain awakening, and to discern the ultimate nature of all phenomena, we need to be able to test various claims and determine if they are accurate and nondeceptive. In a meditation session, we want to be aware of what type of cognizer is knowing impermanence and emptiness, because a correct assumption of emptiness is very different from a nonconceptual realization of emptiness. The disciplines of logic and epistemology contain the tools for doing so. The objects that we seek to ascertain with reliable cognizers include the two truths and those spoken of in the four seals — impermanence, duḥkha, selflessness, and nirvāṇa. When speaking of cognizers and perceivers, we are referring to minds that know objects. They are agents that perform the function of knowing their objects.

This chapter contains terminology and ideas that will be new to some readers. It takes time and further study to understand everything completely. You will understand some points now and can return to this chapter later as a resource in your future studies.

### *Three Kinds of Objects and Their Cognizers*

As we learn the Buddhadharma, we are exposed to new concepts that may challenge our view of the world and of reality. We may wonder how to go about verifying or disproving them. Śāntarakṣita's *Compendium on Reality* (*Tattvasaṃgraha*) quotes the Buddha as recommending an analytical approach:

Do not accept my Dharma merely out of respect for me,

but analyze and check it  
the way a goldsmith analyzes gold —  
by burning, cutting, and rubbing it.

First a goldsmith checks for external impurities, which can be detected by burning the gold. Then he looks for internal impurities by cutting the gold. Finally he searches for very subtle impurities using a special technique of filing the gold. Similarly, we must test the teachings thoroughly, looking for three types of “impurities”: incorrect explanations regarding evident (*abhimukhī*) phenomena, slightly obscure (*parokṣa*) phenomena, and very obscure (*atyantaparokṣa*) phenomena. If there are none, we can accept the teachings with confidence. Each of the three types of phenomena is known by a specific kind of reliable cognizer.

*Evident phenomena* are those that ordinary beings can easily perceive. These include (1) external objects, such as colors, sounds, odors, tastes, and tangible objects, which are known by *direct reliable cognizers* that correspond to our five physical senses, and (2) internal objects, such as feelings of happiness, pain, hopes, and desires, which are known by the mental consciousness.

*Slightly obscure phenomena* cannot initially be directly perceived. Ordinary beings must initially know them by *factual inferential cognizers* — inferential reliable cognizers based on valid factual reasons. Examples of slightly obscure phenomena are subtle impermanence — the momentary arising and ceasing of conditioned things — and selflessness. The fact that the apple arises in dependence on causes and conditions is part of the conventional nature of the apple. Through understanding that its existence is a result of causes and conditions, we can know that the apple is impermanent.

The sun setting in the west is coarse change that is evident to our visual sense. But to understand the sun’s subtle changeable nature, we must use reasoning. The sun rose in the east and in order to set in the west, it must move continuously, moment by moment, imperceptibly across the sky. This momentary change cannot be detected by our eyes; we need reasoning to know it.

To know a slightly obscure phenomenon such as selflessness — for example, the absence of a permanent, independent soul or self — we may use the reason of “dependence” and contemplate the syllogism *Consider a person, she does not exist as a permanent, partless, under-its-own-power soul or self because she depends on her body and mind.*

*Very obscure phenomena* are known by ordinary sentient beings by relying on *inferential reliable cognizers by authoritative testimony*, the attestation of someone who is authoritative in that field. We know our birthday by asking our mother, and we understand the subtle intricacies of karma by depending on the Buddha’s teachings. While atoms and subatomic particles are slightly obscure phenomena that can be known by inference, most of us rely on the testimony of scientists to know their existence and characteristics.

According to Sautrāntikas, from the viewpoint of direct perceivers, all functioning things are evident phenomena because under the right conditions they can be perceived by our direct perceivers. From the viewpoint of conceptual consciousnesses, all knowable objects — both impermanent and permanent — are obscure phenomena because they can be known by a conceptual consciousness thinking about them. Conceptual consciousnesses are obscured because they know things by means of a conceptual appearance, which obstructs them from seeing functioning things directly.

Prāsaṅgikas describe evident and obscure phenomena differently, saying that evident objects are those that can be known through our own experience, without depending on inference; for example, sense objects. Obscure objects must initially be known by depending on a reason. They are objects of inference — for example, the subtle impermanence of the body and the selflessness of the person.

These categories are described in relation to ordinary sentient beings, not āryas. For an ārya, subtle impermanence and selflessness are evident phenomena, whereas for us they are slightly obscure. There are no obscure objects for buddhas because they are omniscient. Even in terms of ordinary sentient beings, these categories can vary according to our situation. When we are at a campfire, the fire is evident to us; we see it with our eyes and feel the heat on our skin. To people on the other side of a clump of trees, the

campfire is slightly obscure; they must infer, “In the area behind those trees, there is fire because there is smoke.” To our friends in another state, the campfire is very obscure. They know it because we call and tell them we are at a campfire.

Another example is devas — celestial beings such as the god Brahmā. For us human beings who live on Earth, Brahmā is very obscure; we know about him only through the testimony of a reliable authority. Our senses cannot see him and no amount of reasoning can prove his existence. To other living beings born in that realm, Brahmā is evident. Similarly, to people watching a spacecraft land on the moon, that event is evident, but to people who have no idea that such a thing is possible, it is very obscure. They must trust the testimony of those who witnessed it to know it happened.

An object becomes evident, slightly obscure, or very obscure in relation to an individual. For ordinary beings who haven’t entered a path, subtle impermanence and emptiness are slightly obscure, while for āryas they are evident phenomena, known by yogic direct perceivers.

To our mother, our birthday is an evident phenomenon, but for us it is a very obscure phenomenon. Owing to the extremely long distance, the details of various stars and planets in the universe are very obscure to us. But they are evident to whatever life forms inhabit those places.

Various aspects of one thing may be different types of objects. Our friend’s body is an evident phenomenon that we see with our eyes. His heart is a slightly obscure phenomenon that we infer because all human bodies have hearts. The karmic causes for our friend to be born into that body are very obscure phenomena known only by a buddha.

## REFLECTION

---

1. Make examples of evident phenomena, slightly obscure phenomena, and very obscure phenomena that you already know. How did you come to understand them? Which type of reliable cognizer was involved?
2. Consider how we know things such as the existence of atoms, the Ice Age, or the qualities of other solar systems. Which of the three types of objects are they and how do we know them?

3. If you have never been to Antarctica, which of the three categories of phenomena is Antarctica in relation to you? Is it very obscure because you have to depend on another person's testimony to know what it looks like? Is it slightly obscure because by seeing photographs or a 3D model you can infer what it looks like? Would it be evident because you could see it through live streaming on the Internet?
- 

## *Seven Types of Awareness*

Ancient Indian religious practitioners from many traditions discussed the topic of reliable cognizers at length. Dignāga (ca. 480–540 CE) and Dharmakīrti (ca. 600–660 CE) were the two foremost Buddhist sages in India involved in debating this topic with non-Buddhists and in establishing the systems of epistemology and logic studied by Tibetan Buddhists to this day. These topics of epistemology and logical reasoning are learned not for the sake of philosophical speculation or abstract theory, but for the purpose of actualizing human goals, in particular nirvāṇa. Dharmakīrti said in his *Drop of Reasoning (Nyāyabindu)*, “Since correct [i.e., reliable] cognition is a prerequisite for achieving all human purposes, I shall explain it.”

In monastic universities, students are first introduced to the topic of reliable cognizers in the context of the seven types of awareness (T. *blo rig bdun du dbye ba*), which is taught from the Sautrāntika point of view. As we will see, some of these seven are reliable cognizers, others are not.

1. A *direct perceiver (pratyakṣa)* is an awareness that knows its object directly, without a conceptual appearance of its observed object (*ālambana*). Direct perceivers do not involve thinking, imagining, or remembering.
2. An *inferential cognizer (anumāna)* is an awareness that correctly understands its observed object through a conceptual appearance — a mental image of the object — and by means of an inference. An inference must be a correct argument; arguments using spurious logic are not considered inference.
3. A *subsequent cognizer* is an awareness that realizes an existent object that has already been realized. It is the second moment onward following a conceptual or nonconceptual reliable cognizer.

“Moment” has different meanings according to the context. When speaking of cognizing objects, it refers to the period of time needed to ascertain the object; it does not refer to the smallest unit of time because to ascertain an object a series of smallest units of time is required. The second moment onward of a cognizer uninterruptedly follows the first moment; for example, the second moment onward of a sense direct reliable cognizer of blue or the second moment onward of an inferential reliable cognizer realizing the emptiness of the person.

4. A *correct assumption* is a conceptual awareness that correctly apprehends its object as a result of having read or heard an explanation of it, but does not fully or firmly grasp the meaning or conclusively ascertain its object. After learning a new topic, we have a correct general idea about it, but because we don’t ascertain the meaning, our understanding is not firm and we could change our mind later.
5. An *inattentive awareness* is a direct perceiver to which its apprehended object clearly appears but is not ascertained. For example, while engrossed in watching a movie, our auditory consciousness hears the voices of people near us, but later we cannot say with certainty that people were speaking or what they were discussing.
6. *Deluded doubt* is an awareness that vacillates between two or more options and is inclined toward the wrong conclusion.
7. A *wrong awareness* (*viparyayajñāna*) is either a conceptual or nonconceptual consciousness that incorrectly apprehends its observed object. A hallucination hearing voices where there are none is a wrong sensory awareness. Holding the view that impermanent things are permanent or that what is foul is actually delightful are wrong conceptual awarenesses.

## *Reliable Cognizers and Unreliable Awarenesses*

Dharmakīrti, who wrote from the Sautrāntika and Cittamātrin perspective, and Candrakīrti (ca. 600–650 CE), who taught from the Prāsaṅgika Mādhyamaka perspective, defined the Sanskrit term *pramāṇa* differently. According to Dharmakīrti, *pramāṇa* is a prime cognizer — a new and nondeceptive knower. “New” indicates that it is the first moment of a nondeceptive cognizer; the following moments in that continuity knowing the same object are subsequent cognizers and are not prime.

According to Candrakīrti, *pramāṇa* is a knower that is nondeceptive (*avidamvādi*) with regard to its principal or apprehended object (*muṣṭibandhaviṣata*). In his *Commentary on “The Four Hundred,”* he says, “Undeceived consciousness is seen in the world to be reliable cognizer (*pramāṇa*) itself.”<sup>4</sup> “Nondeceptive” means incontrovertible; this knower is trustworthy and knows its object correctly. It does not have to be the first moment of a stream of moments of cognition. It is called a *reliable* cognizer because it can lead us to accomplish our purpose. Prāsaṅgikas say subsequent cognizers are reliable cognizers because they know the same apprehended object as the first moment that preceded it. Candrakīrti’s *Clear Words (Prasannapadā)* lists four types of reliable cognizers according to the objects to be comprehended:<sup>5</sup>

1. *Direct reliable cognizers* know their objects — evident phenomena — directly and nondeceptively, without depending on a reason or logical mark. With an unimpaired eye faculty, we see blue. This is a nonconceptual direct reliable cognizer. A subsequent cognizer can also be a direct reliable cognizer. A consciousness correctly remembering a conversation we had yesterday is a direct reliable cognizer even though it is a conceptual memory of the conversation. Similarly, many, but not all, scholars agree that the second moment onward of an inferential cognizer realizing impermanence is a direct reliable cognizer because unlike the first moment of that inferential cognizer, it does not depend on a reason. Although it is considered a direct reliable cognizer, it does not directly apprehend its object because it is a conceptual consciousness.
2. *Inferential reliable cognizers* know their objects — slightly obscure phenomena — nondeceptively purely in dependence on a reason (a

logical mark). We know a car is impermanent because it is produced by causes.

3. *Reliable cognizers based on an example* are inferential cognizers that realize their object by understanding that it is similar to something else. Here an evident phenomenon such as an example, analogy, or model is used as the reason to understand the meaning, which is slightly obscure. For instance, the Potala is a slightly obscure phenomenon for people who have never been to Lhasa. But if someone shows them a model of the Potala and says, “It looks like this,” they will understand what the Potala is.
4. *Reliable cognizers based on authoritative testimony* are inferential cognizers knowing very obscure phenomena that cannot be established through direct perceivers or other inferential reliable cognizers, but only by depending on the authoritative testimony of a trustworthy source, such as a credible person or scripture. For example, we understand the subtle workings of karma by relying on a credible scripture taught by the Buddha, who is a reliable person.<sup>6</sup>

The number of reliable cognizers differs according to context. In the above classification, reliable cognizers based on authoritative testimony and based on an example are forms of inferential reliable cognizers. They are listed separately due to their specific functions. In this case, an inferential reliable cognizer is one based on factual inference, a specific type of inference. Here the general name “inferential reliable cognizer” is given to a specific instance.

However, when we say the comprehended objects (*prameya*) of reliable cognizers are of two types — evident phenomena and obscure phenomena — then reliable cognizers are also two: direct reliable perceivers and inferential reliable cognizers.<sup>7</sup> In this case, reliable cognizers based on authoritative testimony and based on an example are included in inferential reliable cognizers, with that term now being used to refer to all inferential reliable cognizers. It is not uncommon that terms in a text have more than one meaning depending on their context, so we must take care not to get confused!

While reliable cognizers correctly ascertain their objects and give us reliable knowledge so we can accomplish our aims, other awarenesses — such as correct assumers, inattentive awarenesses, doubt, and wrong awarenesses — do not. These and other unreliable awarenesses cannot be trusted because we will not be able to achieve our purposes by relying on them. If we have bad eyesight and mistake an orange for a grapefruit, we will not purchase the fruit we want. Similarly, if we believe that the self is permanent or that phenomena exist as self-enclosed, independent entities, we will not be able to realize the emptiness of inherent existence or attain nirvāṇa.

Subsequent cognizers are minds that know what has already been known. The first moment of a visual consciousness knows red and the immediately subsequent moments of the visual consciousness also know red. Sautrāntikas say subsequent cognizers are not prime cognizers because, unlike prime cognizers that know the object by their own power, subsequent cognizers know the object by the force of the prime cognizer inducing them. Prāsaṅgikas say subsequent cognizers are direct reliable cognizers. In the case of an inferential cognizer, this is because the second moment onward of an inferential cognizer remembers the object inferred directly — it doesn't rely on a reason or logical mark to know the object. It is a reliable cognizer because it incontrovertibly knows its object. For Sautrāntikas, “direct” in “direct perceiver” means without a conceptual appearance; for Prāsaṅgikas it means not relying on a reason.<sup>8</sup> However, in another context, such as speaking about a direct realization of emptiness, Prāsaṅgikas take “direct” to mean nonconceptual.

Our knowledge about an object may gradually evolve via these various cognizers. For example, a new science student hears about bacteria from his teacher and gains a rough idea of what they are; this is a correct assumption. His knowledge also involves inference by authoritative testimony, for he trusts his science teacher's knowledge even though he cannot yet verify the information for himself. He learns about the structure of bacteria by seeing a model or diagram, which is inference based on an example. If he then looks under a microscope and sees some bacteria, those bacteria become evident phenomena that he knows with a direct reliable cognizer. Through executing various experiments and gaining reliable data, he will be able to

have an inferential reliable cognizer of other properties of bacteria that are slightly obscure phenomena.

However, he may be able to verify that his conclusion is an inferential reliable cognizer only later on. First he needs to make sure that the research data are valid and can be duplicated by others. Even if his data are reliable, they may not be complete, thus skewing a conclusion based on them. New data about other properties of bacteria may cause him to rethink his initial conclusions. For this reason, many scientists consider the initial knowledge from their research to be a correct assumption or even doubt.

In many areas of scientific research, human knowledge rests on assumptions. Even though scientists have supportive reasons for drawing certain conclusions, those conclusions are by no means hard and fast. They will be verified, denied, or revised later on as more data are collected. It may take a while for correct conclusions to be known by inference. Those of us who learn of new discoveries by listening to experts or reading scientific journals will have either a correct assumption or an inferential cognizer by authoritative testimony, depending on how well we understood the explanation.

#### REFLECTION

---

1. Consider why having reliable cognizers is important in your daily life and in your spiritual life.
  2. Make examples of times when you have had an inattentive awareness or deluded doubt. How did they inhibit your full knowledge?
  3. Make examples of wrong awarenesses, such as seeing things incorrectly or misunderstanding the meaning of what someone said. Have you ever had a wrong awareness but not known it was incorrect until sometime later?
  4. Make an example of how your understanding of a topic began as a wrong consciousness or doubt and slowly evolved to a correct assumption and then to an inferential cognizer or direct perceiver.
- 

CHART: RELIABLE COGNIZERS AND UNRELIABLE AWARENESSES ACCORDING TO CANDRAKĪRTI

RELIABLE COGNIZERS	UNRELIABLE AWARENESSES
1. Direct reliable cognizers <sup>9</sup> a. Sense direct reliable cognizers b. Mental direct reliable cognizers c. Yogic direct reliable cognizers	1. Wrong awareness
2. Inferential reliable cognizers	2. Deluded doubt
3. Reliable cognizers based on an example	3. Inattentive awareness
4. Reliable cognizers based on authoritative testimony	4. Correct assumption

## *Direct Reliable Cognizers*

Reliable cognizers have specific characteristics, and not all our cognitions meet those standards. Learning the descriptions of the various types of reliable cognizers helps us to identify them in our own experience, and that lets us know whether to trust what we're seeing and thinking. Wrong awarenesses and correct assumptions are not reliable cognizers, even when we mistakenly think they are. Direct reliable cognizers are of three types: sense, mental, and yogic direct reliable cognizers.

*Sense direct reliable cognizers* know their objects — sights, sounds, smells, tastes, and tangible objects — directly by depending on a physical cognitive faculty. These reliable cognizers enable us to know our surroundings and the things within them.

*Mental direct reliable cognizers* correctly know their objects by depending on a mental cognitive faculty — that is, on another consciousness that induces it. Mental direct reliable cognizers include clairvoyance and consciousnesses that know our own feelings of happiness and pain. They also include conceptual subsequent cognizers induced by inferential valid cognizers, such as the second moment onward of an inferential cognizer of impermanence, and memory consciousnesses, such as the consciousness remembering a person we met last week.

*Yogic direct reliable cognizers* are mental consciousnesses that know their objects — the sixteen attributes of the four truths and subtle and gross

selflessness — by depending on a union of serenity and insight. These direct perceivers are essential to overcome defilements.

An evident phenomenon, such as the sound of leaves rustling in the breeze, is known by a sense direct perceiver, in this case an auditory consciousness. By means of mental direct perceivers we know that we feel happy from hearing that sound, and we can remember the sound of rustling leaves the next day. A highly evolved consciousness, a yogic direct perceiver, realizes the subtle impermanence of both the sound of the leaves and the happy feeling.

### *Inferential Reliable Cognizers*

To be able to benefit sentient beings most effectively, we must gain the direct, nonconceptual cognizers of a buddha so that we will clearly perceive all phenomena, both ultimate truths and conventional truths. Unlike buddhas, at present we ordinary beings are not capable of directly knowing slightly obscure and very obscure phenomena, but must rely on an inferential cognizer, a mind that nondeceptively realizes an obscure object in dependence on a reason.

Inferential cognizers must trace back to direct experiences and shared direct perceptions. Although our initial access to an object may be through reasoning, in time an inferential cognizer can lead to direct experience. We initially know emptiness through an inferential cognizer, but by continuously familiarizing our minds with it in meditation that is a union of serenity and insight, we will be able to dissolve the conceptual appearance and realize emptiness with a yogic direct reliable cognizer. An inferential cognizer not only depends on direct experience but also leads to it.

We use inferential cognizers often in our daily lives and at our jobs. According to classical Indian logic, an inference is generated by means of a syllogism (*prayoga*), a statement with four parts — a subject (*dharmin*), predicate (*sādhya dharma*), reason (*liṅga*), and example. To teach the parts of a syllogism, Buddhist monastics often use the syllogism *Consider sound, it is impermanent because it is produced by causes; for example, like the last moment of a flame*. Although this syllogism may not stir us, it was extremely important for Buddhists in ancient India. This is the argument

they used to refute the assertion of brahmins who believed that the sound of the Vedas was permanent and unchanging.

In this syllogism, “sound” is the subject (A) about which something is to be proven. “Is impermanent” is the predicate (B), the attribute we want to establish about sound. “Because it is produced by causes” is the reason (C) we use to prove the thesis. “For example, like the last moment of a flame” is the example. The thesis (*pratijñā*) is what is to be proven — the combination of the subject and the predicate — in this case, “sound is impermanent.”

To understand this, the person who hears the syllogism needs to understand three criteria of a correct inference: (1) The *reason applies to the subject* (*pakṣadharmā*) corresponds to the major premise. This is the relationship between the subject and the reason, specifically that the reason is a property of the subject. Being produced by causes is a quality of sound. (2) The *pervasion or entailment* (*anvayavyāpti*) corresponds to the minor premise. This is the relationship between the reason and the predicate: If something is the reason, it is necessarily the predicate. If something is produced by causes, it is necessarily impermanent. (3) The *counterpervasion* (*vyatirekavyāpti*) corresponds to the contrapositive of the minor premise. This is the relationship between the opposite of the predicate and the opposite of the reason: If something is not the predicate, it is necessarily not the reason. If something is not impermanent (i.e., if it is permanent), it is definitely not produced by causes.

The reason is the key to establish the three criteria. We must understand that the reason applies to the subject, is present in the predicate, and is not present in the opposite of the predicate. In simplified form:

C applies to A. The reason is a property of the subject.

If it's C, it must be B. There is pervasion.

If it's not B, it cannot be C. There is counterpervasion.

To gain an inferential cognizer, we must establish these three criteria in the syllogism. In general, the first criterion is something obvious; it can be established by means of a direct perceiver. We know that sound is produced by causes; we hear the sound after the bell is struck. Then through

reasoning we try to establish something that is not obvious — that sound is impermanent and momentary.

If a syllogism is not formed correctly, it will not prove its thesis. That may mean that the thesis is wrong or that the person constructing the syllogism did not think well about the topic. *Consider sound, it is impermanent because it exists* is not a correct syllogism. Although the reason is established (sound exists), the pervasion doesn't hold (if something exists, it is not necessarily impermanent; permanent phenomena also exist).

In the syllogism *Consider this person, he will die because he was born*, “this person” is the subject, “will die” is the predicate, and “because he was born” is the reason. The reason applies to the subject because that person was born. The pervasion holds true because if someone is born, he will die. The counterpervasion is established: if there is no death, it is because birth did not precede it. When the full force of this syllogism dawns in our mind, it becomes a powerful motivator for us to practice the Dharma in order to cease the causes of rebirth in cyclic existence and thereby to cease death as well.

We do not necessarily realize the thesis of a correct syllogism immediately after hearing it. To realize the three criteria of a correct syllogism, we must have a certain level of knowledge and be mentally receptive. Three preliminary reliable cognizers are needed in order to ascertain the second criterion, the pervasion. In the syllogism *Consider sound, it is impermanent because it is produced by causes*, these are:

1. *A reliable cognizer ascertaining the reason.* “Being produced by causes” is a reason that can establish that sound is impermanent. It is suitable to be used as a reason in this syllogism.
2. *A reliable cognizer ascertaining that in the opposite of the predicate, the reason does not exist.* The opposite of the predicate is devoid of the reason. Among permanent phenomena, no products exist. Permanent phenomena are devoid of products.
3. *A reliable cognizer ascertaining that the predicate and its opposite are mutually exclusive.* Impermanent and permanent are mutually exclusive.

Sometimes ascertaining the three criteria requires a considerable amount of time and effort: a person may have to learn the meaning of terms or understand other syllogisms first. Many texts contain debates in which a syllogism is presented, followed by other syllogisms that help us understand important points so that we will be able to comprehend the first syllogism. When we encounter difficult topics, we must persevere and continue to contemplate the material. As with most other subjects, it may be difficult at the beginning, but through familiarization it becomes easier.

After presenting a syllogism to a person, three kinds of wisdom arise progressively over time: the wisdom arising from hearing or studying the Dharma; the wisdom arising from contemplating, thinking, and reflecting on it; and the wisdom arising from meditating. When we first learn about subtle impermanence by hearing a teaching or reading a Dharma book, our understanding is the wisdom arising from hearing. At best this is a correct assumption that is a general idea about subtle impermanence. It is not the incontrovertible knowledge of an inferential reliable cognizer. While correct assumptions and factual inferential cognizers both focus on subtle impermanence, the depth and stability of their understandings differ. A correct assumption can easily become vague if we don't repeatedly familiarize ourselves with the topic. Also, if we are presented with the opposite view, a correct assumption may degenerate into doubt.

By continuing to analyze, our correct assumption will become an inferential reliable cognizer that realizes subtle impermanence by means of a conceptual appearance. This is the wisdom arising from contemplation. This inferential understanding will not degenerate unless we allow the intensity of this cognition to deteriorate by ceasing to contemplate the topic. The deterioration of inferential reliable cognizers occurs because the seeds of wrong views haven't been eliminated completely from our mental continua and our familiarity with the correct view is not strong. For this reason, we must make effort to maintain the correct understandings we gain through repeatedly bringing them to mind.

To deepen our understanding, we continue to cultivate concentration and analytical wisdom so that we can attain the union of serenity and insight on subtle impermanence. This is the wisdom arising from meditation. Initially this wisdom is conceptual because the veil of the

conceptual appearance of impermanence is present. With continuous meditation over time, that veil becomes thinner and thinner and will eventually disappear, and we will realize subtle impermanence directly and nonconceptually. This yogic direct perceiver of subtle impermanence is also the wisdom arising from meditation.

From the very beginning of their training in philosophy, when they are still young children, Tibetan monastics are taught that whatever is produced by causes necessarily has the quality of subtle impermanence. At the same time, their teachers caution them, “You have a highly learned mouth (you know all the words), but actual understanding will come through constant reflection after you have passed your geshe exam. Only then will there be the possibility of the actual realization dawning in your mind. Be realistic and patient and continue to work hard.”

There is debate on whether a syllogism needs to be stated for someone to gain an inferential reliable cognizer. Prāsaṅgikas claim it is not necessary; they accept an inferential cognizer through example as a reliable cognizer. They also say that merely stating a consequence (*prasaṅga*) — that is, pointing out the internal contradictions in someone’s argument — is sufficient for sharp-faculty people to gain an inferential reliable cognizer. For example, someone understands that the person is a dependent arising but also believes the person truly exists. By pointing out to him the unwanted consequence of his view by saying, “Consider the person, he isn’t a dependent arising because of being truly existent,” a sharp-faculty disciple will understand that the person is not truly existent. It isn’t necessary to subsequently state the syllogism *Consider a person, she is not truly existent because of being a dependent arising*. For a person of more modest faculties, a follow-up syllogism is needed for him to understand.

To the contrary, the lower schools hold that an inferential reliable cognizer must come about through the power of reasoning, implying that it is always necessary to state a syllogism. In addition, they adhere to autonomous syllogisms in which the subject, predicate, and reason all truly exist, whereas Prāsaṅgikas establish the parts of a syllogism and all phenomena by convention.

1. Identify the parts of the syllogism and the three criteria in the syllogism *Consider smoking, it is a health risk because it is directly responsible for approximately 80 to 90 percent of lung cancers.*
  2. Behind our emotions we often find “syllogisms.” Identify the parts of the following syllogisms and test them with the three criteria to see if they are correct.
    - *Consider me, I am an unlovable person because my friend is mad at me.*
    - *Consider my friend, he is untrustworthy because he didn't do what I wanted him to do.*
    - *Consider my ideas, they are always good because they are the ideas of a smart person.*
- 

## *Reliable Cognizers Based on an Example*

We often use analogies, models, and examples when learning something new. These evident phenomena — a map, picture, model, and so forth — illustrate a meaning that is obscure because the two have some similar characteristics.

In ancient India, a king was given a painting of the wheel of life, which illustrates the three realms (*tridhātu*) and six classes of saṃsāric beings (*śaṣṡgati*) and the process by which ordinary beings take rebirth. By contemplating the picture, the king understood the causal chain leading to rebirth in cyclic existence. This understanding of dependent arising, in turn, later led him to realize that there is no inherent existence.

A face in a mirror is an evident phenomenon, whereas emptiness is a slightly obscure phenomenon. When an intelligent disciple whose mindstream is fully ripened is told that just as a face in a mirror lacks true existence, so does the person, by the power of this example she will understand the selflessness of persons.

Unlike the lower schools, Prāsaṅgikas accept inference by example as a means to generate a reliable cognizer. Whether someone generates an understanding through this means or through factual inference depends on the mindset and faculties of the individual. Although a few ripened disciples may be able to realize emptiness through inference by example, most people need to rely on factual inference.

## *Reliable Cognizers Based on Authoritative Testimony*

A reliable cognizer based on authoritative testimony is used to gain knowledge about very obscure phenomena that we are unable to know through direct perceivers or other types of inferential cognizers. A reliable cognizer based on authoritative testimony uses as the reason to accept a statement as true the word of someone we have examined and determined to be a reliable authority on the subject. The validity of this inference hinges on the reliability of the person whose testimony we trust. Such a person should know the information, have no cognitive disability, and speak truthfully. For example, someone who wants to enroll in a school trusts the application instructions given by people working at the administrative office. Still it is our responsibility to examine their qualifications and not to believe things blindly.

In spiritual practice, this form of inference is also called “inference by belief” or “by scriptural authority.” Important for spiritual progress, it involves accepting reliable scriptural passages in order to understand very obscure points that cannot be otherwise known. Such topics include the subtle workings of karma and its effects, the twelve sets of qualities bodhisattvas gain on the ten grounds, the causes of the Buddha’s thirty-two signs, the inexpressible qualities of the resultant state of awakening, and the life spans of beings in realms imperceptible by our senses.

To correctly infer that a scriptural passage is accurate and free from fault, we must test it by means of a threefold analysis:

1. There is no reason to reject this statement or scripture in terms of its presentation of evident phenomena. To assess this, we examine if its presentation of evident phenomena can be refuted by direct perception.
2. There is no reason to reject this statement or scripture in terms of its presentation of slightly obscure phenomena. To assess this, we examine if its presentation of slightly obscure phenomena can be refuted by inference.
3. There is no reason to reject this scripture in terms of its presentation of very obscure phenomena. To assess this, we examine two factors:  
(a) The scripture’s explicit and implicit meanings about very obscure phenomena are free from contradiction. The explicit meaning is the evident theme of the scripture; the implicit meaning

is other topics that are the basis. The explicit meaning of the Prajñāpāramitā Sūtras is the doctrine of emptiness and the implicit meaning is the progressive stages of the paths that realize emptiness. (b) The former and latter passages of its presentation of very obscure phenomena are free from contradiction. What the scripture says in one place does not contradict what it says in another.

There is not a recommended number of pages to read in order to determine that a scripture is free from faults by the threefold analysis. Each person must read enough to be satisfied that his or her analysis is thorough. If a scripture meets these three criteria, accepting its statements as true gives us access to knowledge that is useful for our Dharma practice.

Dharmakīrti says that a scripture may also be considered trustworthy if its author is a reliable or credible person. A reliable person is one who is able to fulfill the desires of disciples in a nondeceptive manner. The Buddha is a reliable being because he has freed his mind from all defilements, developed all excellent qualities, and knows all phenomena directly with his omniscient mind. Motivated by compassion, he has the genuine wish to lead all sentient beings from duḥkha to the joy of liberation, and he has no reason to lie. Furthermore, what the Buddha said about the most essential aspects of the path — the four truths and emptiness based on dependent arising — can be validated by an inferential reliable cognizer. As we become convinced regarding these subjects, we begin to appreciate the possibility of attaining awakening and respect the Buddha as the one who taught such a wonderful path. Since the Buddha explained the essential aspects in a nondeceptive manner, we can infer that his statements on auxiliary topics that are very obscure phenomena are also trustworthy.<sup>10</sup> Āryadeva says (CŚ 280):

Whoever doubts what the Buddha said  
about that which is very obscure  
should rely on emptiness  
and gain conviction in him alone.

Dharmakīrti makes a similar point (PV 1.217):

Alternatively, since the true nature (*tattva*) of that which is to be avoided and that which is to be done along with the methods for doing so are well established, the statements of the credible person in question [the Buddha] are nondeceptive with regard to the most important issues [the four truths]. Hence, he is a source of inferential knowledge with regard to other objects.<sup>11</sup>

Tsongkhapa agrees that investigating one teaching of the Buddha — in this case dependent arising — and seeing its veracity gives us confidence in his other teachings. Tsongkhapa says (PDA 30):

Through this very path of dependent arising,  
the rationale for your speech being peerless,  
convictions arise in me  
that your other words are valid too.

Inference by authoritative testimony is not the first choice for gaining knowledge. It cannot be used to prove evident phenomena that can be known by direct perceivers or to prove slightly obscure phenomena that must initially be known through inference. During debates, participants must use inference as much as possible. The quality of a debate deteriorates if students mistakenly believe that quoting a well-respected master is sufficient to prove a point that actually needs to be realized through inference. It is unsuitable to abandon our investigative abilities and blindly quote scripture to prove a point. However, scriptural statements on these topics are useful because they inspire our practice, reinforce our understanding, and suggest new perspectives.

An example of gaining knowledge about the subtle workings of karma by using scriptural inference is the syllogism *Consider the statement “Through generosity comes wealth; through ethical conduct comes upper rebirth.” It is nondeceptive in its subject matter because it is a statement that is free from faults by the threefold analysis.* This statement is from Nāgārjuna’s *Precious Garland* (RA 438), a text written by a great master; its content cannot be invalidated by the threefold analysis.

The sūtras of both the Pāli and Sanskrit traditions contain accounts of the Buddha and his disciples encountering living beings in very peculiar

situations. The Buddha would often describe the karma that person had created in a previous life that brought about that situation. The *Connected Discourses with Lakkhaṇa* (*Lakkhaṇasaṃyutta*, SN 19) is dedicated to such accounts. It is helpful to read and think about these and use them as guidelines for our behavior. The *Sūtra of the Wise and the Foolish* (*Damamūrkha Sūtra*) also describes the subtle workings of karma and gives us much food for thought.

We ordinary people must use inference by authoritative testimony to understand the subtlest clear light mind. According to Nyingma and Kagyu presentations, the clear light mind is not only the subtlest mind that manifests after the dissolution of grosser conceptual levels of mind, but also the clear light mind that is present and pervades all mental states even when the grosser levels of mind are manifest. However, the *Guhyasamāja Tantra* says the clear light mind manifests only after the grosser winds and minds have dissolved. Highly realized practitioners with direct experience of this clear light do not need to prove its existence by inference because for them it is an evident phenomenon. For those of us who have not had this experience, it is very obscure, and neither direct perceivers nor factual inferential cognizers can prove its existence.

The minds of white appearance, red increase, and black near attainment that appear during the dissolution process are probably very obscure phenomena for us as well. We may get some inkling of these increasingly subtle states of mind culminating in the clear light by considering that the eighty indicative conceptions are classified into three levels according to their subtlety. Thus the combination of wind and mind that are their underlying foundation — the vivid white appearance, red increase, and black near attainment — should also be increasingly subtle and culminate in the clear light. For example, we may see three clouds moving at different speeds in the sky — one fast, another slower, and a third barely moving at all. Although we cannot see the winds moving the clouds, we can infer that those winds are moving at three different speeds.

Also, tantric texts that discuss the various levels of mind describe many things that we can verify through direct perceivers — we have experiences of the awake state, dream state, and state of deep sleep, which are increasingly subtle states of mind. This gives us confidence in the accuracy

of other topics presented in these texts. Furthermore, we do not know of any evidence that contradicts the existence of the clear light mind. Therefore, based on the authoritative testimony of the Buddha and those meditators who have direct experience of the subtlest clear light mind, there seems to be more grounds for accepting its existence than disproving it

For us ordinary beings, the level of realizations of those who are more highly realized than we are is very obscure. In his commentary on the *Ornament* entitled *Golden Rosary (Legs bshad gser phreng)*, Tsongkhapa said that no matter how many reasons ordinary beings apply or how much logic they use, they cannot infer the level of realizations of highly realized practitioners. However, for those with higher realizations, the level of realizations of people inferior to them are evident phenomena.

If we are speaking with our teacher in the classroom, and he says that there is a text on the table in another room, we can accept that as true by believing his words. While in general the book is an evident phenomenon, to us at that moment it is very obscure. We cannot see it with our eyes or know it by inference. At that time, the only way we have to know the book is by relying on the testimony of someone who does.

However, simply citing our teacher or a scripture that says, “All phenomena are empty because they are dependent” will not help us to understand emptiness initially. What is the difference between trusting our teacher’s words to know the book and to understand emptiness? In general, a book is an evident phenomenon. We know what it is and have an image of a table with a book and a table without one. His words clarify for us which one it is. However, initially we do not have an idea of what emptiness is — or if we do, it’s the emptiness of our stomach, which is not the kind of emptiness we’re trying to realize! Quoting our spiritual mentor that phenomena are empty does not enhance our understanding of emptiness, even if we have tremendous devotion to our teacher. However, our trust in our teacher will inspire us to contemplate and meditate on emptiness according to the teachings, and through that we will understand the three criteria of the syllogism and in time will gain an inferential reliable cognizer of emptiness.

1. Who do you trust as an authority and in what areas do you take them as authoritative? To what extent is that person fully reliable in terms of knowledge of that topic?
  2. Those of us who are not scientists know the existence of atoms, the healthy range for human blood pressure, and so forth through accepting the word of scientists. Do we investigate their qualifications as authorities on the subject or do we blindly accept their word?
  3. When politicians make various statements, to what extent do we check the reliability of their information and the reliability of their words before believing their statements?
  4. In what other areas of life do you rely on the testimony of others to know something? Do you check the credibility of the person first or do you tend to believe something simply because someone said it or you read it somewhere?
- 

## *Applying the Threefold Analysis*

If direct reliable cognizers, inferential reliable cognizers, or other reliable scriptures contradict a particular scriptural passage, or if scientists can irrefutably prove that a scriptural statement is incorrect, we should not accept it. Vasubandhu's *Treasury of Knowledge* (*Abhidharmakośa*) describes the structure of the universe as a flat world with Mount Meru at the center, four surrounding continents, heavenly realms above, and hellish states below. The sun and moon are said to be the same distance from the Earth, and the sun is only slightly larger than the moon. I do not believe that we should accept this description as accurate. My reasons for this are based on the guidelines the Buddhist scriptures have set out for evaluating the veracity of a teaching.

In Vasubandhu's time the structure of our solar system was a very obscure phenomenon. Now, due to scientific advancement, some parts of its structure are evident while other parts can be known through factual inference. This new information affects our understanding of Vasubandhu's description. We must apply the threefold analysis necessary for inference by scriptural authority to determine whether to accept his statements regarding our solar system.

The first criterion, that the statement is not contradicted by direct perception of evident phenomena, is not fulfilled. One way of proving the nonexistence of something is to prove the existence of its opposite.

Vasubandhu describes the sun and moon as being almost the same size — 51 yojanas (20,400 km) and 50 yojanas (20,000 km) in diameter, respectively.<sup>12</sup> However, reliable scientific instruments have measured the sun's diameter as 1,392,000 km and the moon's diameter as 3,480 km. It is clear that the sizes of the sun and moon as written in the *Treasury of Knowledge* are inaccurate.

Furthermore, this treatise says that the sun and the moon are the same height above the ocean — 40,000 yojanas (16,000,000 km) — and that they circle Mount Meru. Reliable scientific measurements have calculated that the sun is 150,000,000 km and the moon is 384,400 km from the Earth's oceans. Here too we see that the measurements in the *Treasury of Knowledge* are inaccurate. In addition, there is scientific evidence showing that the sun does not orbit the Earth.

Another criterion for inference by scriptural authority is that the scripture lacks internal contradictions. As a learned practitioner from Nālandā Monastery, Vasubandhu would have based what he wrote on material in Buddhist scriptures. We find various measurements and structures of the solar system presented in Buddhist scriptures. The presentation of the shapes of the worlds in the *Flower Ornament Sūtra* (*Avatamsaka Sūtra*) differs from that in Vasubandhu's treatise. Because there are inconsistencies among Buddhist scriptures, a literal reading of their presentation of the world's structure is not reliable.

I consider myself a student of Vasubandhu and have full respect for his great learning and spiritual attainments. At the same time, the Buddha advised us not to accept teachings merely out of respect, but to investigate them. Having followed the Buddha's instructions and made a thorough investigation, I believe that if Vasubandhu were alive today, he would rewrite chapter 3 of the *Treasury of Knowledge* in light of current scientific knowledge.

The description of the world found in the *Kālacakra Tantra* and the scientific description also differ in several ways. It is possible that the description in the *Kālacakra Tantra* is designed to point out parallels between the external world and our internal human physiology, not as a description for space travel. In that case, it is valuable to use in meditation practice, although I find it difficult to accept literally.

## *Reflections on Scriptural Inference*

Some people grow up in an environment where questioning a scripture's authority is unacceptable and disbelievers are shunned or threatened. These experiences may cause us to mistrust religious authority. In Buddhism no one asks us to have blind belief. Instead we are encouraged and even required to scrutinize a scripture's reliability by means of the threefold analysis and by examining the qualities of its author.

It is easier for serious, learned practitioners to examine a scripture's reliability. Such practitioners have studied Buddhist scriptures for a period of time and have gained an understanding of the four truths and emptiness based on dependent arising, which facilitates their ability to examine scriptural authority.

How do people who are new to Buddhism approach the issue of the reliability of Buddhist scriptures and of the Buddha as a teacher? When you hear a teaching that tallies with what you have experienced — a teaching that touches you deeply and that in your heart you know is true — you will naturally think, “The Buddha accurately described my experience in one area in a way that no one else has. He may have some special knowledge or spiritual realizations.” In addition, when you put a teaching into practice and experience beneficial results, you will easily think, “I followed the Buddha's instructions on how to deal with this disturbing emotion and it worked. Other teachings he has given may be equally valuable.” Like the Kālāmas, your trust in the Buddha and his teachings will increase due to your own experiences, as will your receptivity and interest.<sup>13</sup> In this case, it makes sense to continue learning and practicing the Dharma, using your intelligence to examine the teachings. If you don't find a particular point illogical or contradictory, you can accept it; this is not blind belief. The Buddha does not pressure anyone to follow his teachings and gives us full liberty to examine them. But if you don't fully understand a topic and doubts about it remain, leave it for the time being and focus on the parts that help you. You can come back to these more challenging topics later.

Dharmakīrti instructed that inference by authoritative testimony should be applied only to topics that are important to know in order to make spiritual progress. In general, cosmology, political issues, history, gender

traits and roles, and so forth are not included. As Buddhist practitioners, we must scrutinize scriptural passages about such topics, weigh them against contemporary ideas of human rights, scientific knowledge, and historical analysis, and come to our own conclusions.

After recommending that the Kālāmas examine the various teachings they heard, the Buddha asked them a series of questions about what they observed to be the results of attachment, anger, and confusion. They replied that the results were consistently unpleasant. When questioned about the results of the absence of attachment, anger, and confusion, the Kālāmas replied that they were pleasant. After having them examine evident phenomena by means of their own experience, the Buddha taught them the meditation on the four immeasurables, and they practiced cultivating love, compassion, joy, and equanimity for all sentient beings. Again the Kālāmas experienced for themselves the beneficial results of following the Buddha's instructions. Having ascertained the reliability of some of the Buddha's teachings through their own experience, they came to trust the Buddha and his teachings and took refuge in the Three Jewels. Their confidence in the Buddha, in turn, made them more open to hear more complex teachings on topics that could be ascertained by factual inference and inference through authoritative testimony.

### *The Prāsaṅgikas' Unique View of Reliable Cognizers*

The Prāsaṅgikas' presentation of reliable cognizers has several distinctive features that differentiate it from the presentations of the Svātantrikas and other lower tenet schools. These principally center on the Prāsaṅgikas' rejection of inherent or true existence. The lower tenet schools say that reliable cognizers and their comprehended objects exist inherently, whereas Prāsaṅgikas assert that they are established in dependence on each other. Candrakīrti states in *Clear Words*:

When in that way it is posited that the aims of the world are realized by the four reliable cognizers, those also are established in mutual dependence. When reliable cognizers exist, there are comprehended objects, and when

comprehended objects exist, there are reliable cognizers. The two — reliable cognizers and comprehended objects that are inherently established — do not exist.

The existence of reliable cognizers and reliable objects is established in dependence on each other. There are no objects out there, existing in their own right, waiting to be comprehended. Nor are there reliable cognizers existing from their own side without perceiving a comprehended object.

A second distinctive feature is the Prāsaṅgikas' assertion that a reliable cognizer can be mistaken. Veiled truths appear inherently existent to all consciousnesses of sentient beings except āryas' meditative equipoise on emptiness. When a sentient being looks at a table, that table appears to her eye consciousness as inherently existent even though it isn't. This consciousness is mistaken with respect to the appearance of the table. Still it is reliable with respect to the main object it cognizes — the table. It gives the person the information she needs to put her cup down. That visual consciousness is a reliable cognizer that is nondeceptive with respect to its apprehended object — its main object, in this case the table. At the same time, it is mistaken with respect to its appearing object (*T. snang yul*) — a table that appears to exist inherently although it does not.

Contrary to Sautrāntikas, Prāsaṅgikas assert that a yogic direct perceiver does not necessarily exist only in the mindstreams of āryas. Ordinary beings can have them as well, for example, the yogic direct perceiver apprehending subtle impermanence. This reliable cognizer is mistaken in that subtle impermanence appears truly existent to it, but nevertheless it correctly knows subtle impermanence.

Some people question whether Prāsaṅgikas can accept factual inference at all, saying that the Tibetan word for “fact,” *dngos po*, implies inherent existence. Prāsaṅgikas do not agree that *dngos po* implies inherent existence in this context. They assert that phenomena do not have some “fact” or independent essence that inheres in them. They refute inherent existence on all phenomena and assert that everything exists by being merely designated, dependent on conventions.

Svātantrikas and below say that direct reliable cognizers must be nonconceptual and must be the first moment of knowing the object.

Prāsaṅgikas define a reliable cognizer as a nondeceptive consciousness; it need not be the first moment of that cognizer. Glossing *direct* as meaning *not dependent on a reason*, they accept both conceptual and nonconceptual direct reliable cognizers. An example of a *conceptual direct reliable cognizer* is the second moment of an inferential cognizer realizing selflessness. This consciousness is conceptual and correct; it nondeceptively apprehends its main object selflessness that was ascertained in the first moment of that inferential cognizer. However, unlike the first moment, it apprehends selflessness without depending on a reason. Hence it is a conceptual consciousness that is a direct reliable cognizer. Another example of a conceptual direct reliable cognizer is a consciousness remembering the table after our visual consciousness saw it. It directly remembers the table that was seen without depending on a reason. For Prāsaṅgikas, subsequent cognizers are necessarily direct reliable cognizers.

Unlike Sautrāntikas, Prāsaṅgikas say that all consciousnesses, even erroneous ones, are direct reliable cognizers with respect to their appearing objects. For example, the erroneous conception of a turtle's moustache is a *reliable cognizer with respect to its appearing object*, the appearance of a turtle's moustache, because it knows the conceptual appearance of a turtle's moustache and can induce memory of it. However, it is not a *direct reliable cognizer* in general because it is erroneous; a turtle's moustache does not exist.

## *Knowing When We Have a Correct Reason and a Reliable Cognizer*

We do not necessarily know that a particular reason is correct at the time we state it. This could happen for more than one reason. For example, weather forecasting involves factual inference. When a weatherperson predicts that it will be sunny in three days, he is doing so based on the data available to him at that moment. Since the causes and conditions influencing the weather can change quickly, it is unsure whether his conclusion will be correct and, even if it is, if his current reason will be the correct reason later on.

A similar process may occur with a Buddhist practitioner trying to realize emptiness. She may state many reasons to prove emptiness and reach a certain ascertainment or conclusion. But she is not totally confident in the validity of her reasons. Only later, when she has a profound realization, is she confident that her reasons were correct. This is not because the reasons were unsound, but because the initial understanding in her mind was not deep. It was a correct assumption because she did not incontrovertibly ascertain her conclusion at that time. With continued reflection, a correct assumption can become an inferential cognizer.

Although both of these examples involve factual inference in which the person may not be able to ascertain that the reason is correct when stating it, there is a difference between them. The reasons the weatherperson uses — barometric readings and so forth — could easily change as circumstances change. But the reason the Buddhist practitioner contemplates remains constant; it's just that at her current level she's not able to completely ascertain the reason as correct.

Knowing when we have a reliable cognizer is important. For example, when you drive a car and see an animal out of the corner of your eye, you need to find out if that is a direct reliable perception. If it is, you must brake to avoid hitting the animal. When medical researchers conduct trials for a new medication, they need to know that their interpretation of the data is a correct inference, because many people's lives depend on it. We may have certain experiences in our meditation practice, and we need to know if these are reliable cognizers or wrong awarenesses because that will determine whether we reinforce these minds or counteract them.

Tsongkhapa lays out three criteria for existent phenomena (LC 3:178): (1) The object is known to a conventional consciousness. (2) The existence of that object is not invalidated by another conventional reliable cognizer — another reliable cognizer that accurately knows conventional truths. (3) It is not invalidated by a mind analyzing suchness (emptiness).

While a consciousness is cognizing an object, it is unable to know if it knows the object correctly. For this reason, the second criterion is important: another reliable cognizer — which may be another person's reliable cognizer or a later reliable cognizer in our own mental continuum — does not disprove it. We may apprehend something protruding from a

field and think it is a person. However, another person comes along and ascertains that it is a scarecrow. Third, a mind analyzing emptiness cannot disprove it. We may believe that inherently existent social castes exist, but a probing awareness analyzing emptiness can negate that.

## *Inferential Reliable Cognizers and Meditation*

All Buddhist traditions share two forms of meditation: serenity, which is principally stabilizing meditation, and insight, which is principally analytical meditation. It is helpful to understand how inferential cognizers relate to these two types of meditation lest we mistakenly believe that inference is mere intellectualization unrelated to experience-based insight. In fact, factual inference can have a profound effect on our mind and totally change our outlook.

For us ordinary beings, deep states of concentration such as serenity are not evident phenomena that we have experienced, nor can we know their existence through factual inference. Rather, we depend on the authoritative testimony of the Buddha, arhats, and practitioners who have realized serenity to know that it exists. Based on their authoritative testimony, we develop faith in serenity, which leads us to aspire to actualize it. This, in turn, inspires us to listen to the instructions on the method to develop it and to apply effort to practice accordingly. Serenity is attained primarily through stabilizing meditation that trains the mind to focus on one object; doing this does not involve factual inference.

Factual inference is crucial for analytical meditation and the development of insight. By contemplating the reason of a syllogism, we come to understand it and to determine that it applies to the subject and is present in the predicate. This process occurs even when we do not consciously state a syllogism. When we establish mindfulness on the body, we do not necessarily verbally state the syllogism at the outset of a meditation session: “The body is unattractive because it is composed of unappealing parts.” Rather, by examining the body and its components with strong mindfulness, we naturally come to see that it is unattractive because it is composed of bones, muscles, blood, internal organs, eyeballs, hair, tissue, and so forth. Such an inferential understanding has a strong effect on

how we relate to our own and others' bodies and stimulates our determination to be free from cyclic existence.

We may not begin a meditation on mindfulness of feelings with the syllogism *Consider feelings, they are duḥkha (unsatisfactory) in nature because they are under the control of afflictions and karma.* However, this is the understanding we reach by mindfully exploring our pleasant, unpleasant, and neutral feelings. This, in turn, leads us to understand that there is no purpose in clinging to saṃsāric feelings of pleasure. Such knowledge is very freeing and profoundly affects our lives. Here again we see that deep meditation naturally leads us to understand the thesis of a syllogism, even though we do not consciously state a syllogism at the beginning of our meditation. A similar process occurs when establishing mindfulness on the mind, which brings the understanding that the mind is impermanent because it is produced by causes, and when establishing mindfulness on phenomena, through which we understand that all the various mental states are not I or mine because they are neither identical with nor totally unrelated to the I. In short, although we may not be aware that we are using reasoning to cultivate a correct assumption and then an inferential reliable cognizer, this is in fact what is happening.

It is also interesting to apply our knowledge of the three types of phenomena and the reliable cognizers that know them to the stages of the path. Some examples are helpful.

A human life is an evident phenomenon, but our precious human life is slightly obscure. We need to use the reason that we have the eight freedoms and ten fortunes to infer that we have such a wonderful life with all the conducive circumstances for practicing the path. We need to employ inference of authoritative testimony to know that our precious human life is a product of specific karmic causes.

In general, death and coarse impermanence are evident phenomena; we witness people dying and things breaking. But the fact that those of us who are presently alive will die is slightly obscure. We infer it by thinking that we will die because we were born. The exact time and circumstances of our death, however, are very obscure.

Regarding the meditation on unfortunate rebirths, animals are evident to us. Hell beings and hungry ghosts are very obscure; we know them through

inference by authoritative testimony. Even if we have a correct assumption of the existence of these states, we may wonder, “How is it possible for a human being to take such a rebirth?” Here it is helpful to think about the continuity of mind that goes from one life to the next. Rebirth itself can be known through factual inference, but it may take us a while to gain the understandings preliminary to this. Sometimes contemplating passages in the sūtras where the Buddha directly speaks about rebirth boosts our understanding. For example, discussing the attainment of a vision of the truth, the Buddha says (DN 28.7):

He understands a human’s unbroken stream of mind that is established in both this world and the next.

The Buddha also refers to a future life that follows death (SN 4.9):

This life span of human beings is short. One has to go on to the future life. One should do what is wholesome and lead the holy life; for one who has taken birth, there is no avoiding death.

To wholeheartedly take refuge in the Three Jewels, we must first establish their existence. The best way to do this is to transform our mind into the Dharma Jewel, which depends on having a yogic direct, nonconceptual perceiver of subtle selflessness. This is gained from first having an inferential reliable cognizer of selflessness, which is a slightly obscure phenomenon. In his *Commentary on Reliable Cognition*, Dharmakīrti set out the reasoning proving that it is possible to have a yogic direct perceiver of selflessness. The process begins by having a correct assumption, an understanding derived from hearing. This is deepened by means of the wisdom of reflecting — an inferential cognizer realizing selflessness — which is further enhanced by the wisdom of meditation until it becomes a yogic direct perceiver of selflessness. This wisdom, which is a true path, is then used to progressively eradicate the afflictions from the mindstream and attain true cessations. The true paths and true cessations are the Dharma Jewel. From these we infer the existence of the Saṅgha Jewel, those beings who have attained these realizations. Following this, we can

infer the existence of the Buddha Jewel, someone who has eradicated all obscurations.

At the present moment, our understanding of selflessness and of the process of actualizing true paths and true cessations may be a correct assumption. This is sufficient for us to understand that the Three Jewels have the ability to guide us from the dangers of cyclic existence in general and from unfortunate rebirths in particular. Understanding this has the power to impel us to turn to the Three Jewels for spiritual guidance, which is the purpose of the teaching on refuge.

Regarding the teaching on karma and its results, some of the results of our actions are evident, while others are slightly obscure or very obscure. An evident result is the reciprocal kindness we receive after treating someone else with care. A slightly obscure karmic result is a person's being compassionate from a young age. We can infer that this is due to her having cultivated compassion in previous lives. Barring any inhibiting factors, familiarity with compassion in previous lives will cause compassion to arise easily again in future lives.

A very obscure karmic result is the specific rebirth that is the maturation result of a complete karma we did today. Only an omniscient one, a buddha, can know this. Once an old man asked Śāriputra to ordain him as a monk. Even with his great clairvoyance, Śāriputra could not determine if this man had created the virtuous causes in the past to be able to ordain. It was only after he consulted the Buddha, who saw with his omniscience that indeed this man had created the virtuous karma, that he was able to become a monastic. Even for Śāriputra, the Buddha's disciple most renowned for his wisdom, the exact details of karma and its effects were very obscure.

The measure of understanding the meditation on karma is gaining an understanding of karma and its effects that is sufficient to make us increasingly conscientious of our physical, verbal, and mental actions so that we avoid engaging in harmful actions and are eager to create constructive ones. This is gained by understanding the causes of our experiences and results of our actions through direct perception, factual inference, and inference by authoritative testimony, as described above.

As we've seen in this chapter, reliable cognizers apply to many aspects of our lives and our Dharma practice. By learning about them, we will lay a

foundation for the critical thinking necessary to correctly understand ever more profound subjects.

**REFLECTION** \_\_\_\_\_

1. What kind of reliable cognizers know the duḥkha of cyclic existence?
  2. When you reflect on the kindness of others, what kind of reliable cognizers are at play?
-

# 3 | The Basis of the Self: The Body and Mind

THE BUDDHA'S TEACHINGS are studied and lived by those seeking to assuage misery and attain awakening. What is the nature of a person who does this? That person depends on a body and mind and lives in a universe filled with a plethora of other phenomena. In this chapter we will outline the phenomena that comprise the person and the universe as seen by Buddhist sages. The objects we endeavor to understand with reliable cognizers are these phenomena, their impermanence and unsatisfactory nature, the relationships among them, and their ultimate mode of existence.

## *Classifications of Phenomena*

The classification of phenomena was one of the first topics I learned in my studies as a young boy. Although initially I just memorized definitions without understanding them, I later realized that since this terminology was used by the great sages and scholars, it was important in order to gain an understanding of their writings. This gave me impetus to study the terminology. The following presentation of phenomena is common to most Buddhist schools.

We begin with the selfless — that which does not exist inherently. This has two divisions: (1) The *existent (sat)* is that which is perceivable by mind, that which is suitable to be known by an awareness. Existent is synonymous with phenomena (*dharma*), object of knowledge, established base, and object. (2) The *nonexistent (asat)* is that which is not perceivable by mind.

If something exists, a consciousness must be able to perceive it. A table is existent; a rabbit's horn is not.

Existents are divided into: (1) permanent phenomena (*nitya*) and (2) things (*vastu/bhāva*) or impermanent phenomena (*anitya*). A permanent

phenomenon does not change moment by moment, whereas an impermanent one — a functioning thing — does. *Permanent* does not mean eternal or existing forever without end. Something that is eternal may be impermanent or permanent. For example, the emptiness of a cup does not change moment by moment, but it ceases to exist when the cup breaks. This emptiness is permanent, but not eternal. The mind changes moment by moment and is eternal. It is impermanent, yet its continuity never ceases.

### *Permanent phenomena*

Permanent phenomena are not produced by causes and conditions and are not products. They neither produce an effect nor change in the next moment. The number of permanent phenomena is limitless; some examples are unconditioned space — the absence of obstruction — and the emptiness of inherent existence. There are two types of permanent phenomena:

1. *Occasional permanents* may come into existence and go out of existence, although they do not arise or disintegrate momentarily under the influence of causes and conditions. The emptiness of inherent existence of this book is one example. This emptiness is the ultimate nature of the book; it came into existence simultaneous with the book and it will go out of existence when the book ceases. However, it does not change momentarily or disintegrate under the power of causes and conditions.
2. *Nonoccasional permanents* are eternal. Unconditioned space (*ākāśa*) is an example. This space exists everywhere, at all times, not just occasionally.

Analytical cessations (*pratisamkhyā-nirodha*) and nonanalytical cessations (*apratisamkhyā-nirodha*) are also permanent phenomena. The former are true cessations, the absence of obscurations through having applied the antidote — the direct realization of emptiness — so that those obscurations can never reappear. Nonanalytical cessations are temporary absences of afflictions because the conditions for the arising of those afflictions are not present. Our not being angry at this moment is not due to a true cessation by our having ceased the seeds of anger in our mindstream. It is due to not being in contact with a disagreeable object at this moment.

Anger may arise later when the cooperative conditions — such as someone criticizing us — are present.

### *Things: impermanent phenomena*

A thing is something that performs a function — it produces an effect. Things are impermanent; being conditioned phenomena produced by causes and conditions, they are products (*saṃskṛta*). Things are of three types: (1) form (*rūpa*), (2) consciousness (*jñāna*), and (3) abstract composites (*viprayukta-saṃskāra*). These three are mutually exclusive — something cannot be two or all three of them.

*Form* is defined in a general way as that which is suitable to be form. Forms include objects of the sense consciousnesses (colors and shapes, sounds, odors, tastes, and tangibles) as well as subtle forms such as the five cognitive faculties (the subtle material that enables us to see, hear, smell, taste, and touch objects). Tangibles include the four elements — earth (heaviness), water (cohesion), fire (heat), wind (movement) — and smoothness, lightness, cold, hunger, thirst, and so forth. Forms for mental consciousness — such as dream objects and special subtle forms that meditators create by the power of their meditative concentration — are also included among forms.

Gross forms — those apprehended by our senses — can be measured by scientific instruments. Other forms, as well as consciousness and many abstract phenomena, cannot be directly measured by scientific instruments because they are not atomic in nature.

*Consciousness* is defined as that which is clear and cognizant.<sup>14</sup> *Clear* indicates that it is not physical in nature and can reflect objects. *Cognizant* means that it can know and experience objects. It is of two types: mind (*citta*) and mental factors (*caitta*).

*Mind* is of six types: visual, auditory, olfactory, gustatory, tactile, and mental primary consciousnesses (*viññāna*). These apprehend the presence or basic entity of an object: they know the type of object something is, for example, a sight, sound, a mental object, and so forth.

*Mental factors* fill out the cognition, apprehending particular attributes of the object or performing a specific function. Some mental factors, such

as feeling, discrimination, intention, contact, and attention, accompany all consciousnesses. Other mental factors — such as love or anger — are manifest at some times and latent at other times. Some mental factors, such as the six root afflictions, are harmful; others, such as faith and compassion, are beneficial. Some mental factors — such as investigation and analysis — can be either virtuous or nonvirtuous, depending on what other mental factors accompany (are concomitant with) those consciousnesses.

*Abstract composites* are impermanent things that are neither form nor consciousness. Many of them — such as impermanence — enable the coming together of causes and conditions and the arising, abiding, and disintegration of things. To perceive abstract composites, we must perceive something else. For example, we know a person by perceiving his or her body, speech, or mind. We know impermanence by seeing an object change.

There are two types of abstract composites: persons and not persons. The term “person” (*pudgala*) has a wider meaning here than it does in general usage. Examples of a person are any living being: Joe, a woman, an accountant, a monastic, a Spaniard, an animal, and a god. A person is designated in dependence on his or her aggregates — the body and consciousness — but a person is neither of those. Abstract composites that are not persons (*apudgala-viprayukta-saṃskāra*) are such things as time, birth, aging, democracy, life force, area, number, absorption without discrimination, and absorption of cessation.<sup>15</sup>

Contemplating these categories enables us to see that not everything that exists is material in nature. In fact a wide variety of things that arise from causes and produce results exist, although we cannot apprehend them with our senses or measure them with scientific instruments. While we can measure the activities of the brain when a person is experiencing a particular emotion, the brain is form; it is not the emotion, which is consciousness.

Understanding these different types of phenomena is helpful when we explore the four truths, the thirty-seven harmonies with awakening, and emptiness. What may seem to be a dry list of categories comes alive when we ask questions. Is love brain activity or conscious experience? That is, is the brain consciousness? That is not possible because the brain is form and consciousness is clear and cognizant. Nevertheless, the brain and

consciousness often influence each other. Is emptiness form, as the words in the *Heart Sūtra* literally say? Form is an impermanent thing and emptiness is permanent, and nothing can be both. However, emptiness is an inseparable quality of form.

If a truly existent person existed, we should be able to say what it is and we should be able to find it. When meditating on the selflessness of persons, we examine how the I exists: Is it the body, a primary consciousness, a mental factor, the collection of these, or something separate from them?

## *Five Aggregates*

The five aggregates (*skandha*) is a schema for categorizing impermanent phenomena. In general, the five aggregates include all impermanent phenomena, but when they are spoken of in relation to a person, they are the basis of designation of that person. In his *Supplement (Madhyamakāvātāra)*, Candrakīrti defines the five aggregates:

Form has the definition “suitable as form.”

Feeling has the nature of experience.

Discrimination apprehends [entities and] characteristics.

Miscellaneous factors contain [all the others].

“Individually cognizing objects” is the specific definition of primary consciousness.

In general, the form aggregate consists of things that are material in nature. The other four aggregates are predominantly mental.

1. *Form (rūpa)* in general refers to objects apprehended by our sense consciousnesses — colors, shapes, sounds, odors, tastes, and tangibles. As noted above, it also includes forms for mental consciousness. When speaking of the five aggregates that constitute a person, the form aggregate refers to the body.
2. *Feeling (vedanā)* is the mental factor of the experience of pleasure, pain, or neutrality.

3. *Discrimination (saṃjñā)* is the mental factor that apprehends the distinctive characteristics of an object and can distinguish one thing from another.
4. *Miscellaneous factors (saṃskāra)* are mental factors other than feeling and discrimination, such as emotions, attitudes, and views, as well as abstract composites such as karmic seeds and latencies of afflictions.
5. *Primary consciousnesses (vijñāna)* consist of the visual, auditory, olfactory, gustatory, tactile, and mental primary consciousnesses that apprehend the general type of object. Visual primary consciousness apprehends colors and shapes, auditory primary consciousness apprehends sounds, olfactory primary consciousness apprehends smells, gustatory primary consciousness apprehends tastes, tactile primary consciousness apprehends tangibles, and mental primary consciousnesses know mental phenomena.

Unlike other mental factors, feeling and discrimination are distinguished as their own aggregates. This is due to the special roles they play. Pleasant and unpleasant feelings evoke attachment and animosity, respectively. These emotions motivate sentient beings to create karma that ripens in birth in cyclic existence. Discrimination is the source of disputes because sentient beings discriminate one thing as attractive and another as repulsive, one idea as right and another as wrong. Becoming attached to their views, they quarrel with others who hold different views, thus creating karma that propels rebirth in cyclic existence.

## REFLECTION

---

1. One by one, identify each of the five aggregates that constitute you as a person. Be aware of your body. Identify feelings of pleasure and happiness, discomfort and suffering, and neutral feelings that are neither. Notice the discriminations you make, the moods and emotions you have, and the types of primary consciousnesses that are present.
2. Identifying each aggregate in your own experience, contemplate their different functions and unique attributes.

- Contemplate the characteristics common to all five aggregates: they change moment by moment (impermanent), they are under the influence of afflictions and karma (duḥkha by nature), they depend on other factors and are not a person (selfless).
- 

## *Twelve Sources and Eighteen Constituents*

An alternative method of classifying all phenomena is the twelve sources (*āyatana*), so-called because they are sources that give rise to consciousness. Six of the sources are external — the objects known by consciousness; and six are internal — the cognitive faculties of a person that enable an object to be cognized by a consciousness.

### THE TWELVE SOURCES

INTERNAL SOURCE (COGNITIVE FACULTY)	EXTERNAL SOURCE (OBJECT THAT IS COGNIZED)
Eye source	Forms
Ear source	Sounds
Nose source	Odors
Tongue source	Tastes
Body or tactile source	Tangibles
Mental source	Phenomena

The eye source, ear source, and so forth are called internal sources because they belong to the person. The first five — the eye, ear, nose, tongue, and tactile sources — are not the gross organs such as the eyeball and the ear. They are subtle forms within the gross organ that are sensitive and receptive to their corresponding object. The mental source includes all six consciousnesses because they have the power to give rise to a mental consciousness that knows a phenomenon. For example, dependent on the

visual consciousness seeing blue, the mental consciousness remembers blue.

The eighteen constituents (*dhātu*) — which consist of objects and their corresponding mental faculties and consciousnesses — are another way to categorize all phenomena, both permanent and impermanent. The phenomena source and the phenomena constituent include only objects known uniquely by the mental consciousness: permanent phenomena such as emptiness and permanent space, feelings, and forms for mental consciousness. The latter consists of single particles, the appearance of clear space to the mental consciousness, imperceptible forms, dream objects, and forms generated in deep concentration. Although sense objects are also known by the mental consciousness, they are not included in the phenomena source or phenomena constituent.

When we think deeply about these diverse ways of classifying phenomena, we begin to see that the self we consider to be one unique item is actually a collection of diverse factors that function dependent on one another.

## THE EIGHTEEN CONSTITUENTS

COGNITIVE FACULTY	OBSERVED OBJECT	APPREHENDING CONSCIOUSNESS
Eye faculty	Forms	Visual consciousness
Ear faculty	Sounds	Auditory consciousness
Nose faculty	Odors	Olfactory consciousness
Tongue faculty	Tastes	Gustatory consciousness
Body or tactile faculty	Tangibles	Tactile consciousness
Mental faculty	Phenomena	Mental consciousness

REFLECTION \_\_\_\_\_

1. In your own experience, identify each of the twelve sources. Observe the relationship between the internal source, the external source, and consciousness arisen from them for each sense.
  2. Of the six senses, which ones prompt strong attachment in you? Which are the source of the greatest anger or aversion?
  3. Identify the eighteen constituents, especially the ones that compose you as a person.
  4. What is the relationship between you — the person — and the constituents that compose you? Are you one and the same as any of those constituents? Are you completely separate from them? Do you depend on them?
- 

## *Consciousness: Mind and Mental Factors*

There are many ways to speak about and classify types of consciousness: mind and mental factors, conceptual and nonconceptual consciousnesses, the seven types of awarenesses, and so forth. The Abhidharma makes the division of consciousness into mind and mental factors and describes the components of these categories. Later Indian sages such as Asaṅga and Vasubandhu elaborated on those descriptions in their *Compendium of Knowledge (Abhidharmasamuccaya)* and *Treasury of Knowledge*, respectively. When referred to together, these two texts are called the “Two Knowledges.”

Learning about mind and mental factors enables us to better understand our mind. We will be able to identify in our own experience the mental factors that arise due to pleasant, unpleasant, and neutral feelings and that in turn create the causes of happiness and suffering by motivating the actions (karma) we do. Such introspective awareness of our own mental processes is essential in order to tame and transform our mind. We will also understand that Dharma practice entails subduing the destructive mental factors that lead to misery in cyclic existence and enhancing the constructive ones that lead to happiness in cyclic existence as well as to liberation and awakening. This in turn will positively affect our thoughts, words, and deeds.

The core of the meditation on emptiness is examining how the I or self exists. It appears to be very real and “solid,” but can it be found in the

aggregates individually or in their collection, or separate from the aggregates? It is not too difficult to understand that we are not the body, but the self strongly appears to be associated with the mind. Understanding the various types of mind and how they function will aid in understanding what the I is and is not, and its relationship to the aggregates.

As noted above, all cognizers consist of a primary consciousness and various mental factors that accompany it. Primary consciousnesses are of six types, as mentioned above: visual, auditory, olfactory, gustatory, tactile, and mental primary consciousnesses. Each of these apprehends the fundamental presence of its object. Although a primary consciousness and its accompanying mental factors are different, when they arise together as one mental state, they are the same nature. They are concomitant and share five similarities.

1. They have the same *basis* (*āśraya*): they depend on the same cognitive faculty.
2. They share the same *observed object* (*ālambana*): they apprehend the same object.
3. Both are generated in the same *aspect* (*ākāra*) of the object: they reflect a similar aspect of the object.
4. They occur at the same *time* (*kāla*): they arise, abide, and cease simultaneously.
5. They are the same *entity* (*dravya*): each mental state consists of only one primary consciousness and only one of each of its accompanying mental factors. Furthermore, the primary mind and all its accompanying mental factors are either conceptual or nonconceptual, either mistaken or nonmistaken.

The Pāli scripture *Milindapañha*<sup>16</sup> contains an excellent example of the relationship of a primary consciousness and its accompanying mental factors. King Milinda asked the monk Nāgasena Thera whether mental factors can be separated out such that we can see them as different parts of the puzzle: “This is contact, and this feeling, and this mentation, and this discrimination.” Nāgasena Thera replied by asking if the king would be able to pick out each flavor, separate from all the others, when the royal

cook made a syrup or a sauce with curds, salt, ginger, cumin seed, pepper, and other ingredients.

Clearly this would not be possible. All the various flavors together give the sauce its taste, even though each ingredient adds its own unique flavor. Similarly, the various mental factors accompanying a primary consciousness function together and cannot be separated out since they share the same basis, observed object, aspect, time, and entity. Nevertheless, the primary consciousness and each mental factor perform its unique function and contribute its own “flavor” to the cognizer.

To give another example, the primary consciousness is like the main light in a room, while its accompanying mental factors are like other lights in the same room. While each light is distinct, they blend together to illuminate the room. The fact that an auditory primary consciousness is present means that all its accompanying mental factors also perceive sound. If the mental factor of feeling experiences pleasure, the entire mental state is pleasurable.

The mental factors described below are not an exhaustive list; they are the principal ones that must be abandoned or cultivated in order to attain liberation. Their enumeration and precise definitions may differ according to the specific Abhidharma text. Here the prominent mental factors are counted as fifty-one and divided into six groups in accordance with the *Compendium of Knowledge*: (1) five omnipresent mental factors (*sarvatraga*), (2) five object-ascertaining mental factors (*viniyata*), (3) eleven virtuous mental factors (*kuśala-caitta*), (4) six root afflictions (*mūlakleśa*), (5) twenty secondary afflictions (*upakleśa*), and (6) four variable mental factors (*aniyata*).

## *Five Omnipresent Mental Factors*

The five omnipresent mental factors accompany all minds. Without them complete cognition of an object cannot occur.

1. *Feeling* is an experience of pleasure, pain, or neutrality. Feeling experiences the results of our past actions and can lead to reactions of attachment, anger, confusion, and so forth.

2. *Discrimination* functions to distinguish “it is this and not that” and to apprehend the characteristics of an object. It differentiates and identifies objects.
3. *Intention* (*cetanā*) moves the primary consciousness and its accompanying mental factors to the object. It is the conscious and automatic motivating element that causes the mind to involve itself with and apprehend its object. It is action, karma. Although the mental factor of intention itself is not constructive, destructive, or neutral, it becomes so depending on what other mental factors — such as attachment or anger — accompany that mental state.
4. *Attention* (mental engagement, *manaskāra*) functions to direct the primary consciousness and its concomitant mental factors to the object and to actually apprehend the object. It focuses and holds the mind on an object without allowing it to move elsewhere.
5. *Contact* (*sparśa*) connects the object, cognitive faculty, and primary consciousness, thereby acting as a basis for feelings of pleasure, pain, and indifference. It is the cause of feeling.

The *Compendium of Knowledge* says that the five omnipresent mental factors accompany all primary consciousnesses. The Abhidharma system of the Pāli canon explains that each primary consciousness has seven omnipresent mental factors (P. *cetasika*): contact (P. *phassa*); feeling (P. *vedanā*); discrimination (P. *saññā*), which Pāli translators often render as “perception”; intention or volition (*cetanā*); one-pointedness (P. *ekaggatā*); life faculty or psychic life (P. *jīvitindriya*);<sup>17</sup> and attention (P. *manasikāra*).

## *Five Object-Ascertaining Mental Factors*

The five object-ascertaining mental factors are so-called because they apprehend the individual features of an object. The *Treasury of Knowledge* says that these five accompany all mental states, whereas the *Compendium of Knowledge* asserts that they accompany only virtuous mental states. These five are not themselves virtuous, but become virtuous because of being associated with a virtuous mental state. In this case, the mindfulness accompanying a mental consciousness that apprehends and has aversion

toward a repulsive object would not be the mindfulness of the five object-ascertaining mental factors, but would be another mental factor similar to it.

1. Aspiration (*chanda*) takes a strong interest in an intended object and is the basis for joyous effort.
2. Appreciation (belief, *adhimokṣa*) stabilizes the apprehension of a previously ascertained object and holds it such that it cannot be distracted by another view.
3. Mindfulness (*smṛti*) repeatedly brings to mind a phenomenon of previous acquaintance without forgetting it. It does not allow the mind to be distracted from the object and is the basis for concentration.<sup>18</sup>
4. Concentration (single-pointedness, *samādhi*) dwells one-pointedly for a sustained period of time on a single object. It is the basis for developing serenity and increasing wisdom.
5. Wisdom (understanding, intelligence, *prajñā*) functions to discriminate precisely with analysis the qualities, faults, or characteristics of an object held by mindfulness. It cuts through indecision and doubt with certainty and maintains the root of all constructive qualities in this and future lives. There are various types of intelligence:
  - a. Inborn intelligence is the natural acuity of mind that comes as a result of karma from previous lives.
  - b. Acquired understanding or wisdom is cultivated in this life. A person may generate it with respect to various topics of the stages of the path. It is of three types:
    - i. The understanding or wisdom arising when hearing, learning, or studying a topic. It brings initial knowledge of the topic and lays the foundation for the other two types of understanding.
    - ii. The understanding or wisdom arising from critical reflection or contemplation is generated by thinking about a topic on our own or debating and discussing it with others. Through it, we gain a correct conceptual (inferential) understanding of the topic.

- iii. The understanding or wisdom arising from meditation is derived from deeper personal experience when understanding of the topic arises automatically in our minds because we are very familiar with it.<sup>19</sup>

Our current mental factors of concentration and wisdom are the uncultivated bases for the actual concentration and wisdom that arise due to sustained Dharma practice. The wisdom referred to in the expression “method and wisdom” and the concentration referred to in the phrase “concentration found in the fourth jhāna” are very different in strength, acuity, and effectiveness from the mental factors we have now that bear the same names. Nonetheless, our present mental factors of concentration and wisdom can be nourished and transformed into serenity and insight.

## *Eleven Virtuous Mental Factors*

The eleven virtuous mental factors cause the omnipresent, object-ascertaining, and variable mental factors to take on a virtuous aspect and bring peace to oneself and others. Each of the eleven is an antidote to particular afflictions.

1. *Faith* (confidence, trust, *śraddhā*) is confidence in such things as the law of karma and its effects and the Three Jewels. It produces a joyous state of mind free from the turmoil of the root and auxiliary afflictions and is the basis for generating the aspiration to develop new constructive qualities and enhancing virtuous aspirations already generated. It is of three kinds: *Inspired faith* knows the qualities of the object and rejoices in them. *Aspiring faith* knows the qualities of the object and aspires to attain them. *Convictional faith* (believing faith) knows the qualities of the object and thereby has confidence in it.
2. *Integrity* (*hrī*) avoids negativity for reasons of personal conscience and self-respect. It enables us to restrain from harmful physical, verbal, and mental actions and is the basis for ethical conduct.
3. *Consideration for others* (*apatrāpya*) cares about the effect of our actions on others and avoids negativity for their sake. It enables us

to restrain from harmful physical, verbal, and mental actions, acts as the basis for maintaining pure ethical conduct, prevents others from losing faith in us, and causes joy to arise in the minds of others.

4. *Nonattachment (alobha)* is not the mere absence of attachment, but the opposite of attachment and the direct antidote to it. Referring to an object in cyclic existence, nonattachment prevents and counteracts attachment and subdues obsession with attractive objects and people.
5. *Nonhatred (adveṣa)* is the opposite of animosity — it is love and benevolence, not just the absence of anger and ill will. When referring to someone who harms us, the harm itself, or the cause of the harm, it has the characteristic of love and directly overcomes anger and hatred. It is the basis for the prevention of hostility and the increase of love, benevolence, forgiveness, and fortitude.
6. *Nonconfusion (amoha)* is the opposite of confusion. Arising from an inborn disposition and nurtured by study, reflection, and meditation, it acts as a remedy for confusion and ignorance and accompanies the firm wisdom that thoroughly analyzes the nature and specific characteristics of an object. It prevents confusion, increases the four types of wisdom, and helps to actualize constructive qualities.
7. *Joyous effort (vīrya)* counteracts laziness and joyfully engages in constructive actions. It acts to generate constructive qualities that have not been generated and to bring those that have to completion.
8. *Pliancy (flexibility, praśrabdhi)* enables the mind to apply itself to a constructive object in whatever manner it wishes and dissipates any mental or physical tightness or rigidity.
9. *Conscientiousness (apramāda)* values the accumulation of virtue and guards the mind against that which gives rise to afflictions. It brings to fulfillment and maintains all that is good, protects the mind from pollution, and is the root for attaining all grounds and paths.
10. *Nonharmfulness (noncruelty, ahiṃsā)* is compassion. Lacking any intention to cause harm, it wishes all sentient beings to be free from

suffering. It prevents disrespecting or harming others and increases the wish to benefit and bring them happiness.

11. *Equanimity (upekṣā)* does not allow the mind to be greatly affected by restlessness and laxity without having to exert great effort to prevent them. Important for the development of serenity, it enables the mind to settle and remain on a virtuous object. This equanimity differs from the equanimity of the four immeasurables and the equanimity that is a neutral feeling.

## *Six Root Afflictions*

These six are called root afflictions because they are primary causes of cyclic existence and are the root or cause of the auxiliary afflictions. They are the basis for all distorted conceptions and emotional conflict. Sometimes the last root affliction, afflictive views, is subdivided to make ten afflictions.

1. *Attachment (rāga)* arises based on projecting or exaggerating the attractiveness of an object within cyclic existence (people, things, ideas, places, and so forth). It wishes for, takes a strong interest in, and clings to that object.
2. *Anger (pratigha)* arises based on projecting or exaggerating the unattractive qualities of an object or person. It agitates the mind through being unable to bear or through wanting to harm that object or person. It arises in reference to someone who harms us, the suffering itself, or the cause of the harm.
3. *Arrogance (māna)* is based on the view of a personal identity that apprehends an inherently existent I or mine. It strongly grasps an inflated or superior image of ourselves.
4. *Ignorance (avidyā)* is a state of unknowing brought about by the mind being unclear about the nature of things such as the four truths of the āryas, karma and its results, and the Three Jewels. This definition is held in common by all Buddhist tenet systems, although each system has its own unique way of defining ignorance. This will be discussed in depth later.

5. *Deluded doubt* (*vicikitsā*) is indecisive wavering that tends toward an incorrect conclusion about important points such as karma and its results, the four truths, and the Three Jewels.
6. *Afflictive views* (*dr̥ṣṭi*) are either an afflictive intelligence (corrupt understanding) that regards the aggregates as being inherently I or mine or, in direct dependence on such a view, an afflictive intelligence that develops further mistaken conceptions.
  - a. The view of a personal identity (*satkāyadr̥ṣṭi*) is an afflictive intelligence that, when referring to the conventional I or mine, grasps it to be either inherently I or mine. It is called “intelligence” in the sense that it analyzes something.<sup>20</sup> It is the root of saṃsāra and acts as the basis for all afflictions.
  - b. The view of extremes (*antagrāhadr̥ṣṭi*) is an afflictive intelligence that, when referring to the I or mine grasped by the view of a personal identity, regards them in an absolutist or nihilistic fashion. It prevents us from finding the view of the middle way free from extremes.
  - c. The view holding wrong views as supreme (*dr̥ṣṭiparāmarśa*) is an afflictive intelligence that regards other afflictive views as the best views. It increases our attachment to other afflictive views.
  - d. The view of rules and practices (*śīlavrataparāmarśa*) is an afflictive intelligence that believes purification of mental defilements occurs by engaging in ascetic practices, inferior codes of ethical conduct, and mistaken practices that are inspired by wrong views.<sup>21</sup> It is the basis for wasting time on incorrect modes of practice that do not lead to our spiritual goals.
  - e. Wrong views (*mithyādr̥ṣṭi*) is an afflictive intelligence that denies the existence of something that in fact exists — for example, karma and its effects, past and future lives, and the Three Jewels — or that believes a divine creator or primal substance to be the cause of sentient beings. It functions to prevent us from engaging in virtue and to lead us to create nonvirtue.

## *Twenty Auxiliary Afflictions*

The twenty auxiliary afflictions are branches of the root afflictions and similarly disturb the mind. These will be explained in more depth in the next volume of the Library of Wisdom and Compassion. For now, suffice it to list them: wrath, resentment, spite, jealousy, cruelty, miserliness, haughtiness, restlessness, concealment, lethargy, laziness, lack of faith, forgetfulness, nonintrospective awareness, pretension, deceit, lack of integrity, inconsideration for others, heedlessness, and distraction.

## *Four Variable Mental Factors*

In themselves, the four variable factors are neither virtuous nor nonvirtuous, but become so in dependence on our motivation and the other mental factors that accompany the same mental state.

1. Sleep (*middha*) makes the mind unclear, gathers the sense consciousnesses inward, and renders the mind incapable of apprehending the body. Sleeping out of attachment and laziness is destructive, sleeping because the body is tired is neutral, sleeping with the intention to resume our compassionate activities after resting is virtuous.
2. Regret (*kaukr̥tya*) regards an appropriate or inappropriate action that we have performed of our own accord or under pressure as something we do not wish to repeat. Regretting negativities is virtuous, but regretting our constructive actions is nonvirtuous.
3. Investigation (coarse engagement, *vitarka*) arises depending on intention or wisdom and examines an object in general. Investigating the meaning of impermanence is virtuous, whereas investigating someone's faults with the intention to criticize is nonvirtuous.
4. Analysis (subtle engagement, *vicāra*) arises in dependence on intention or wisdom and analyzes the object in detail. Analyzing the nature of reality with the motivation of bodhicitta is virtuous, but

analyzing how to make more efficient weapons with the intention to kill is destructive.

While there is much that can be said about each of these mental factors, the brief descriptions above give an idea of how our mind operates and the various kinds of thoughts, attitudes, and emotions that arise in it at different times. Such a list of views, emotions, and attitudes provides a structure that helps us to get to know ourselves. We become more aware of our mental states by naming our thoughts and emotions. While meditating or going about our daily activities, it is helpful to practice identifying various mental factors and discerning whether they are conducive to happiness and constructive action or detrimental to them. When an affliction manifests in our mind, we must identify the mental factors that are opposed to it and then activate them.

#### REFLECTION

---

1. Read the description of each mental factor, contemplate its meaning, and try to identify it in your own experience.
  2. Look especially at the eleven virtuous mental factors and the six root afflictions. Give examples of when you have experienced each of these mental states.
  3. Outline both the external events and internal causes (thoughts, moods, and so forth) that make each of these virtuous and nonvirtuous mental factors arise.
  4. What effects does each mental factor have on your life, your spiritual practice, and your progress on the path to awakening?
- 

### *Conceptual and Nonconceptual Consciousnesses*

Another way to classify consciousness is into nonconceptual and conceptual consciousnesses. A nonconceptual consciousness knows its object directly, without the medium of a conceptual appearance (*artha-sāmānya*)<sup>22</sup> appearing to the mind. Sense consciousnesses are always nonconceptual — they are direct perceivers — whereas mental consciousnesses may be either

conceptual or nonconceptual. Examples of nonconceptual mental consciousness are clairvoyance or a yogic direct perceiver of emptiness.

Reliable sense consciousnesses correctly and directly perceive their object; they see color and shape, hear sounds, and so forth. Based on these direct perceivers, we then think about and remember objects. These are conceptual consciousnesses.<sup>23</sup> Thought is conceptual; it does not know its object clearly but only via a conceptual appearance of the object appearing to the mind. Dharmakīrti says (PV), “Whatsoever consciousness has clear appearance is asserted to be nonconceptual.”<sup>24</sup> A direct perceiver sees the building; conceptual consciousnesses plan its construction.

In the *Collected Topics (bsdus grwa)*, a conceptual appearance of a pot is defined as “that factor of superimposition that is the appearance to the conceptual cognizer [of a pot] as a pot despite its not being a pot.” The appearing object of this conceptual consciousness is the conceptual appearance of the pot, not the actual pot.

A conceptual appearance is a representation of the object; it is the appearing object of a conceptual consciousness. It is not the actual object, but it allows us to think about various qualities and aspects of the object. Memories, thoughts, views, plans, imaginings, and afflictions are all conceptual consciousnesses. Conceptuality covers a wide range: from the thought “this is a pot,” to the conception grasping inherent existence, to a correct assumption of the meaning of emptiness, to an inferential cognizer of emptiness on the path of preparation that will soon transform into a nonconceptual, direct perceiver of emptiness on the path of seeing.

Sense consciousnesses directly perceive their objects, while thought apprehends its object in an indirect way by means of negation. When we think about yellow, the opposite of nonyellow appears to our mind. This is the conceptual appearance of yellow.

A conceptual consciousness does not know its object directly, but knows it through a negative process. Its appearing object is a conceptual appearance — an image of the object that comes about by negating everything that is not that object. In other words, what appears to a thought that knows a flower is the elimination of everything that is not a flower. This image expresses the general meaning of flower by combining the

characteristics of many flowers with different characteristics that sense consciousnesses perceived at different times.

Because a conceptual appearance comes about through a process of elimination and negation, it is generally considered a permanent phenomenon, although the mind to which it appears is impermanent. There is debate about this, however.<sup>25</sup>

The *appearing object* to the conception of a flower — the primary object that appears to that conceptual consciousness — is the conceptual appearance of the flower. The *apprehended object* of that mind — what that consciousness apprehends — is the flower. Conflating the actual flower with the appearance of the flower to a conceptual consciousness enables us to think about the flower. Conceptual consciousnesses are useful because through them we understand the broader properties and potentials of things and the relationships among them. Conceptual consciousnesses enable us to learn about things that we cannot perceive directly through sense perceivers. Scientific theories, planning a benefit event to help a charity, and considering measures that will stop global warming all depend on our ability to conceptualize objects, their causes, results, relationships, abilities, and so forth. In fact, most of our education entails learning terms and concepts.

Direct perceivers are immediate: they know objects that exist in the present. Nonconceptual direct perceivers apprehend the color, shape, texture, temperature, taste, and smell of an apple. Thought is able to apprehend objects that do not exist in the present moment, thus giving us the ability to remember our previous experiences and to plan for the future.

A visual direct perceiver sees many things in its field of perception, whereas conceptual consciousnesses are selective and focus on only a few aspects of the object. A thought picks out certain attributes and constructs a conceptual appearance of the object. Our memory of something consists of a few details that we happened to pay attention to when directly perceiving the object.

In forming conceptual appearances, conceptual consciousnesses conflate the time, place, or characteristics of several objects. We think, “This is the same table I saw yesterday,” when in fact yesterday’s table no longer exists and we are seeing today’s table. Here the tables of two

different times — yesterday and today — have been conflated to form the conceptual appearance of that table. The conceptual appearance of the table appearing to our mind is neither yesterday’s table nor today’s table. It is simply the general meaning of that table.

When shopping for a table, we may think, “This is the same table I saw at my friend’s house.” In fact they are different tables, but thought conflates the two tables that are in different places. There are over seven billion human beings on our planet. Each one is different, yet when someone says, “Think about a human being,” the general meaning of a human being appears to our mind. This conceptual appearance obscures all the variations among human beings and emphasizes a few common characteristics.

#### REFLECTION

---

1. When eating a meal, pause before each bite and be aware of what you expect the taste and texture of the next bite to be. What appears to your mind is a conceptual appearance based on having eaten similar kinds of food in the past.
  2. Take the next bite and be aware of the taste and texture of the food. This is a direct perceiver of the food.
  3. Was your expectation of the taste and texture accurate? What was the difference between conceptual imagination of the taste of the food and your direct perception of it?
- 

Both nonconceptual and conceptual consciousnesses have their advantages and disadvantages in daily life and in Dharma practice. Perceiving objects directly gives us information about the immediate environment around us. However, these direct perceivers cannot remember these objects, nor can they relate one object to another to invent new items, plan how to use the things, or remember our previous experience with them so that we can apply what we learned to what we will do now. Thought enables us to do all this. However, the price we pay with thought is that the conceptual appearance is a conflation of objects at different times, in different places, or with different characteristics. Conceptual consciousnesses lack the vividness and clarity of direct perceivers.

Hearing the sounds of Dharma teachings on impermanence or seeing the black squiggles in a book about this topic involve nonconceptual, direct perception with our auditory and visual consciousnesses. Understanding and contemplating the meanings of these sounds and squiggles are done by conceptual consciousnesses. After we realize impermanence through inference with a conceptual consciousness, we continue meditating until we break through the conceptual appearance and perceive impermanence directly and nonconceptually. This realization is much more profound.

In my conversations with scientists I asked if they differentiate conceptual and nonconceptual consciousnesses. It seems that at this moment they do not. I wonder if there is a difference in brain activity between these two ways of cognizing objects. This is a new and interesting area to research.

Since a conceptual appearance of a table appears to be a table but isn't, conceptual consciousnesses are mistaken (*bhrānti*) in that they confuse the conceptual appearance with the actual object. However, not all conceptual consciousnesses are erroneous (*viparīta*). Confusion about an object can occur on two levels: the level of appearance and the level of apprehension. Conceptual consciousnesses that misapprehend their object — for example, thinking a scarecrow is a human being or believing that the person is truly existent — are erroneous and are not reliable cognizers. However, conceptions may also know their objects correctly even though they are mistaken. When we think about cooking food in a pot, the conceptual appearance of the pot mistakenly appears to be a pot. The conceptual cognizer of the pot correctly knows the pot and is useful in cooking a meal. It does not *apprehend* the pot and the conceptual appearance of the pot to be one — it does not think the conceptual appearance of the pot *is* this pot. Thus it is not an erroneous mind. However, on the level of appearance, the pot and its conceptual appearance *appear* to be mixed and this mind is mistaken with respect to its appearing object, the conceptual appearance of a pot, although it is not erroneous with respect to its apprehended object, the pot.

Language and thought are related. When we conceive an object, we give it a name, and when someone says that name, a conceptual appearance of the object appears in our mind. If someone says, “monkey,” we think of a

monkey. Can someone who does not know language — such as a baby or an animal — still have conceptions and thoughts? In the *Essence of Eloquence* Tsongkhapa says that although animals such as cows do not know words and terms, they do have thoughts, and these thoughts enable them to identify their calves.

By observing babies and animals, we can see that they identify things by means of conception, even though they don't know language. Although a baby does not know the word "mother," after some time he or she is able to identify a certain person and know this person is helpful. This is due to the conceptual appearance conflating the characteristics of his mother on many different days. He also understands she is very kind, even though he cannot express this understanding in words. A mother dog may smell another animal in the area near her puppies. Although she lacks language, she knows that danger is nearby and responds by protecting her puppies.

Learning to differentiate the way conceptual and nonconceptual consciousnesses apprehend their objects gives us a new and valuable tool to understand how our minds work. It enables us to be more aware of when we are conceptualizing and forming a myriad of opinions and judgments about someone, versus when we are actually experiencing and directly knowing the person. Seeing a person directly is very different from fabricating an image of him and daydreaming about him with our conceptual consciousness. Direct perceivers see the color and shape of food and smell its odor. This is different from imagining its taste and wondering if we will like it. If we think the food will be delicious, attachment will arise. But if the food isn't as good as we had anticipated, we will be discontent. So many emotions can arise in us based on these thoughts.

Differentiating conceptual and nonconceptual consciousnesses brings into vivid relief how we superimpose our past experiences onto the present and develop false expectations. If a child was bitten by a dog and experienced pain, his memory of that unpleasant experience is a conceptual consciousness. Later, when he sees a similar-looking dog, he remembers the previous experience and the conceptual consciousness conflates the present dog with the previous dog, causing him to become afraid of the dog in front of him even if the present dog is friendly. When he brings his attention to the present dog, he stops conflating the past and present dogs and stops

projecting his memory of the previous dog onto his interaction with the present one.

## REFLECTION

---

1. To identify conceptual and nonconceptual consciousnesses in your own experience, look at a color and listen to a sound. Minds that know these things are nonconceptual, sense direct perceivers.
  2. Close your eyes. Remember the color, then the sound. These remembering consciousnesses are conceptual mental consciousnesses to which a conceptual appearance appears.
  3. Which way of knowing the color and sound is more vivid and immediate, seeing or hearing it directly or remembering it?
  4. Which is more useful for understanding how a muscle works — a direct perceiver of the color of the muscle or a conceptual consciousness thinking about the way to strengthen the muscle through correct exercise?
- 

It can be challenging to greet situations and people freshly, without our conceptual consciousnesses superimposing previous pleasant or unpleasant memories or associations on them. Although in some cases our memories may have some truth that gives us useful information, at other times they are overlain with attachment, aversion, and confusion. The Zen expression “beginner’s mind” refers to clearly seeing what is presently in front of us without projecting biased conceptions from the past onto present objects and people.

When we meditate, some of our distractions may be sparked by sense direct perceivers, for example, hearing a sound. If we just notice the sound and return to our object of meditation, the meditation session continues. However, sometimes we start thinking about the sound, “What a loud sound! Who made it? Doesn’t she know I’m trying to meditate?” All these thoughts about the sound and the person making it are conceptual consciousnesses that become a major distraction.

We may think about someone, and an image of her appears to our mental consciousness. This conceptual appearance is not her; it is created by our mind having selected and pieced together a few of her

characteristics. Ruminating on this image and on memories of past interactions with her, we generate judgments and opinions. Pretty soon, we find ourselves angry, even though the other person may be across the country. We may spend an entire meditation session being furious and planning what we're going to say to get revenge, when in fact nothing has happened. All this is due to faulty conceptualization.

## REFLECTION

---

1. In the morning when thinking about who you will meet that day, notice your expectation of how an interaction will go with a person with whom you have had difficulty in the past.
  2. Be aware that that person is not here now and today's interaction has not yet occurred.
  3. To what extent will your expectation — which is just a conceptual appearance to your mind — become a self-fulfilling prophesy?
  4. Try to release that expectation and approach the person with a relaxed and open mind. How does the interaction differ from your expectation?
- 

Conceptions are involved in cultivating wisdom. The process of studying, reflecting, and meditating on the Buddha's teachings requires conceptual consciousnesses that give meaning to sounds and squiggles. Remembering what we have learned, reflecting on it, discussing and debating its meaning with others also involve conceptual consciousnesses. When we meditate, our initial understanding of topics such as emptiness is conceptual and our first realization is by means of an inferential cognizer, a conceptual consciousness. Although conceptual realizations cannot substitute for direct perceivers of emptiness, they are a useful and necessary stepping stone to gain a direct perceiver of this slightly obscure phenomena. By meditating on emptiness further, the veil of the conceptual appearance is gradually removed and emptiness appears directly and vividly to the mental consciousness, which is now a yogic direct perceiver.

In this chapter we have explored the varieties of phenomena that make up persons and our world. These include permanent and impermanent phenomena; among impermanent phenomena there are forms, consciousnesses, and abstract phenomena. We explored various way of

looking at consciousness including differentiating primary consciousnesses and mental factors and discerning nonconceptual and conceptual consciousnesses. Being able to identify these phenomena and being mindful of their functions and relationships is the gist of understanding the external world of form as well as our internal world of mind. When we later investigate the question of what is the self, we will examine all these phenomena to determine if any of them is the person.

## 4 | Choosing Spiritual Mentors and Becoming a Qualified Disciple

**T**HE DHARMA IS the key to having a meaningful and happy life now and in the future. To practice it seriously, two conditions must be present: The external condition is relying on the guidance of a qualified spiritual mentor. The internal condition is a precious human life with the freedom and fortune to practice the Dharma. The stages of the path begin with these two essential topics. This and the next chapter address the relationship between a qualified spiritual mentor and a qualified disciple, as well as the importance of those qualities and the method to cultivate them.

### *Importance of Relying on Spiritual Mentors*

When we are seriously interested in following the path, forming a healthy relationship with a qualified spiritual teacher is essential. If we need teachers for ordinary skills such as driving or typing, we certainly need them for more complex and delicate endeavors such as transforming our mind into that of a buddha. Tsongkhapa tells us (LC 1:70):

Thus the excellent teacher is the source of all temporary happiness and highest goodness, beginning with the production of a single good quality and the reduction of a single fault in a student's mind and eventually encompassing all the knowledge beyond that.

Spiritual teachers play a unique and important role in our lives. Qualified spiritual mentors guide us along the path by giving us teachings, Dharma advice, precepts, oral transmissions, and empowerments. When we experience blocks in our practice, they teach us the antidotes to overcome them. When we have spiritual experiences, they help us determine if the experiences were authentic or deceptive. When our practice is progressing

well, our spiritual mentors encourage us to continue. The *Sutta on Half (of the Holy Life)* (*Upaddha Sutta*, SN 45.2) relates a conversation between the Buddha and his disciple Ānanda about the importance of a spiritual teacher. Thinking that a successful Dharma practice is half due to spiritual teachers and half to one's own effort, Ānanda says to the Buddha, "Venerable Sir, this is half of the holy life, that is, spiritual friendship, spiritual companionship, spiritual comradeship." While our own effort is undoubtedly essential, to emphasize that the spiritual path cannot be actualized without a spiritual mentor, the Buddha replies:

Not so, Ānanda! Not so Ānanda! This is the entire holy life, Ānanda, that is, spiritual friendship, spiritual companionship, spiritual comradeship. When a monastic has a spiritual friend, a spiritual companion, a spiritual comrade, it is to be expected that he will develop and cultivate the noble eightfold path . . . By the following method, too, Ānanda, it may be understood how the entire holy life is spiritual friendship, spiritual companionship, spiritual comradeship: By relying on me as a spiritual friend, Ānanda, beings subject to birth are freed from birth; beings subject to aging are freed from aging; beings subject to death are freed from death; beings subject to sorrow, lamentation, pain, displeasure, and despair are freed from sorrow, lamentation, pain, displeasure, and despair. By this method, Ānanda, it may be understood how the entire holy life is spiritual friendship, spiritual companionship, spiritual comradeship.

This passage has sometimes been taken out of context and interpreted to mean that having ordinary friends who practice the Dharma is the entire spiritual life. While having such friends is a boost to our practice, it is clear in the sūtra that the Buddha is referring to himself as the spiritual teacher whose spiritual friendship is crucial and must not be neglected. By extension, our spiritual mentors become the virtuous friends that guide us when the Buddha is no longer physically present.

In the context of training in samādhi and meditation, Buddhaghosa emphasizes the importance of relying on a spiritual teacher (*Vism* 3.126):

When he dedicates himself to a teacher, he should say, “I relinquish this, my person, to you, Venerable.” For one who has not dedicated his person thus becomes unresponsive to correction, hard to speak to, and not amenable to advice, or he goes where he likes without asking the teacher. Consequently, the teacher does not help him with either material needs or the Dhamma, and does not train him in the scriptures. Failing to get these two kinds of help, he finds no footing in the doctrine, and he soon descends to inappropriate behavior or to the lay state. But if he has dedicated his person, he is not unresponsive to correction, does not go about as he likes, is easy to speak to, and lives in dependence on the teacher. He receives the twofold help from the teacher and attains growth, increase, and fulfillment in the doctrine.

## *Spiritual Mentors*

The Sanskrit name for a spiritual teacher is *guru* — *lama* in Tibetan. Both of these terms have the connotation of someone heavy with good qualities and superior in spiritual qualities. These terms do not have the connotation of someone being a living buddha, for not all gurus are awakened. If we said that all gurus are buddhas, there would be some gurus who became buddhas without working very hard on the path! Mistakenly thinking that all teachers are buddhas and later discovering that a certain person lacks all the qualities of an awakened one not only leaves us disappointed but also puts the lama in a difficult situation. The only thing the lama can do then is just shake his head because he lacks all of a buddha’s qualities. Therefore it makes more sense to follow the real connotation of the terms “lama” and “guru” because genuine spiritual teachers have superior qualities in comparison to their followers.

Being a Dharma teacher depends on other people wanting to take that person as their teacher. In Tibet in the past, a person did not become a teacher by being appointed by some authority. Rather, through diligent training a person became a good practitioner. A small group who saw that person’s qualities asked him to teach. As those students practiced and

developed good qualities, others gained respect for the teacher, and gradually that person became known as a great teacher.

Similarly, nowadays in monasteries the process of becoming a teacher occurs within the monastic structure. Monastics study for their geshe or khenpo degree. Students in the lower classes then ask the new geshes and khenpos who are respected for their learning, understanding, and memorization to teach. When students benefit from the explanations and guidance of the new geshes and khenpos, they become known as good teachers and other monastics are eager to attend their classes.

In the contemporary secular world, “teacher” connotes someone in an academic field who, after completing certain requirements, is certified as a teacher by an organization, whether or not that person has any students. Perhaps in the West that model would be better. That is for Westerners to determine. In that case, Buddhists could form an organization that certifies people as teachers after examining their Dharma understanding as well as their personal conduct. However, an organization cannot certify someone’s spiritual attainments, so issuing certificates attesting to attainment of spiritual realization or level of the path does not make sense. In any case, it is not necessary to be a realized master to teach at a Dharma center. A good education in Buddhism, personal integrity, and genuine care for the students’ well-being are sufficient.

Although we are the ones who choose our spiritual mentors, there are certain conditions under which someone becomes one of our teachers — for example, if they give us refuge and the five precepts, monastic ordination, bodhisattva ethical restraints, or tantric initiation. For this reason, it is necessary that we check the person’s qualifications before attending these ceremonies and not rush blindly into things.

Buddhism is spreading to countries where it has not existed before, and there it encounters different cultural values and ways of doing things. The model of a spiritual mentor-disciple relationship that has existed for centuries in Asia does not easily transplant into a secular modern society. Traditional spiritual mentors and contemporary students raised in secular societies both enter into a teacher-student relationship with expectations that they may not be aware of.

In traditional Tibetan Buddhist monasteries, there are many types of teachers: Some are like parents who look after the physical well-being of the young monastics, teach them the alphabet, and guide them in appropriate behavior in the monastery. More advanced students teach the lower-level debate and philosophy classes. Geshe teach the more advanced classes, while rinpoches — both ordained and lay — and some geshe give initiations and tantric teachings. Tibetan monastics and lay followers relate to these people differently, according to their role in that individual's practice, their standing in the monastery, and their reputation in Tibetan society. When Tibetans go to other countries, people in the Dharma centers do not necessarily know what kind of teacher is coming, and out of respect they treat everyone as though he were a highly esteemed lama. This can create misunderstandings.

The expectations for a secular teacher and a Dharma teacher differ greatly. In a secular educational facility, students trust that the school hires competent teachers. They often do not choose their teachers; if they need to attend a required class, students take it from whoever is teaching it. The teacher's job is to impart information and knowledge; they seldom get involved in a student's personal development as a human being. Students who are experiencing difficulties are usually referred to a school counselor. Students in colleges and universities pay to attend, and they fill out evaluation forms of the classes and teachers at the end of the semester. Teachers are hired employees in a paid position who can be fired if their work or behavior is not up to standard. Teachers and students do not live together, and after the semester is done they go their separate ways.

In the past, children in secular schools were taught to respect their teachers, but depending on the country, that is often not the case nowadays. The advent of online classes has changed the teacher-student relationship even more, so that teachers and students may never meet in person. The teacher's job is to plan the curriculum and assess the student's assimilation of knowledge; the student's job is to learn the material. There is little sense of personal connection to each other, the other person simply being a name or face on the computer screen.

A relationship with a Dharma teacher — here meaning a qualified spiritual mentor who teaches the sūtras and commentaries — is different.

The focus of this relationship is not only the conveyance of knowledge but also character building. The teacher is responsible for guiding students spiritually over time so that they become ethical, kind, and wise human beings with the correct understanding of the Buddha's teachings and the ability to meditate on them.

In the context of the Dharma, disciples and students are expected to investigate a prospective teacher's qualities before taking him or her as one of their spiritual mentors, because a mentor-disciple relationship is expected to be lifelong. This is not the case when studying with a secular teacher in school.

In addition, Dharma teachers traditionally do not charge for teachings and students do not pay their teachers; they support them by making offerings and volunteering their services. Here the motivation is one of gratitude, and the offering is given to create merit; it is not payment due, as in a business relationship. As part of their spiritual development, Dharma students are taught to appreciate and respect their teachers. This helps to reduce the students' arrogance and increases their receptivity to learning the Dharma. There is a natural hierarchy in the spiritual mentor-disciple relationship that is useful for subduing students' self-centered attitude. Students do not seek equal status with their teachers.

In traditional monastic settings, teachers and students may live in the same building, with students caring for some of the teacher's personal needs, such as preparing meals, cleaning, making appointments, running errands, and organizing events.

In entering a relationship with a spiritual mentor, having appropriate expectations is important. Although we may have emotional needs, the role of Dharma teachers is not to fulfill these. Complications arise if we have conscious or unconscious expectations that our spiritual mentors will meet our emotional needs, be our psychotherapist, tell us whom to marry, or choose our career. The role of spiritual mentors is to guide us in learning the Dharma, critically reflecting on its meaning, and correctly meditating on it. This is why it is so important to be under their guidance. However, spiritual mentors do not do the work of gaining realizations for us. We must practice the Dharma ourselves.

In brief, the differences in roles and expectations between a traditional Dharma teacher-disciple relationship and a contemporary, secular teacher-student relationship are great. It is important for everyone to be aware of these as we navigate the uncharted waters of the Dharma as it flows into new countries and cultures.

#### REFLECTION

---

1. Why is it important to have spiritual mentors?
  2. How does the relationship with a spiritual mentor differ from one with a schoolteacher or professor?
- 

### *Three Types of Practice, Three Types of Spiritual Mentors*

Tibetan Buddhism includes three types of practice, each with its own emphasis, method of practice, and ethical restraints: Fundamental Vehicle, Perfection Vehicle, and Vajra Vehicle. In the Fundamental Vehicle, students learn the four truths of āryas and come to seek liberation from cyclic existence. To bring this about, they take refuge in the Three Jewels and practice the three higher trainings. In terms of ethical restraints, they avoid the ten nonvirtues and take prātimokṣa precepts as a lay or monastic follower of the Buddha. The lay precepts consist of the five precepts — to abandon killing, stealing, unwise or unkind sexual behavior, lying, and taking intoxicants. The monastic precepts include those of novice and fully ordained monastics.

On this basis, we go on to practice the Perfection Vehicle, which is one branch of Mahāyāna.<sup>26</sup> Here students learn and meditate on the methods to cultivate bodhicitta and come to seek full awakening in order to benefit others most effectively. To actualize this, they take the bodhisattva precepts and engage in practicing the six perfections of generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom.

The Vajra Vehicle is also a branch of the Mahāyāna, and thus the motivation to practice it is the same. Practitioners enter the Vajra Vehicle because their compassion is exceptionally strong. They want to attain awakening quickly because they cannot endure sentient beings' suffering. To accomplish this, they receive empowerment into the practice of a tantric deity and engage in the practice of deity yoga. All tantric practitioners adopt the bodhisattva ethical code, and those initiated into the yoga tantra and highest yoga tantra also adopt the tantric ethical code.

These three types of practice have three types of teachers. Many similarities exist in the qualifications of each type of teacher and the way students relate to them, but differences also exist. Fundamental Vehicle, Perfection Vehicle, and Vajra Vehicle texts reveal a progression in the way of regarding and relating to teachers. Our Fundamental Vehicle teacher instructs us in the four truths, gives us refuge and lay or monastic precepts, and teaches us the Vinaya, the monastic discipline. As such, he or she acts as a representative of the Buddha. We see our teacher as a teacher, our preceptor as a preceptor, and relate to him or her on a human level. We regard him as a wise elder, a sincere practitioner from whom we can learn.

For monastics, three Vinaya teachers are important for their training. The first is their preceptor or abbot/abbess (*upādhyāya*, *upādhyāyā*), the person heading the saṅgha of monastics that ordains them. Second is the activity instructor (*karma ācārya*), who gives guidance and instruction during the ordination ceremony. Third is the interview instructor (*raho 'nuśāsaka ācārya*), who privately interviews the candidate to see if obstacles to ordination exist. Another important teacher is the resident teacher (T. *gnas kyi bla ma*), the principal teacher of the monastery in which the monastic resides. Vinaya puts great importance on the resident teacher because that is the person who trains the junior monastics on a daily basis.

Perfection Vehicle texts speak of buddhas and bodhisattvas emanating in many forms to benefit others. Since our Perfection Vehicle teacher leads us on the bodhisattva path and gives us the bodhisattva ethical restraints, we view that person as an emanation of the Buddha or a high bodhisattva. Here the teacher is seen as equal to, or like, a buddha in the sense that the karma accumulated in relation to our teacher is similar to that accumulated in relation to the Buddha. By making offerings to or harming our Perfection

Vehicle teacher, we accumulate karma equal to acting in a similar way toward the Buddha himself.

When we have trained in the Fundamental Vehicle and Perfection Vehicle practices and are sufficiently mature in the Dharma, we may request empowerment into practices of various tantric meditational deities. Students imagine the guru giving the empowerment to be the meditational deity and the environment to be the deity's abode or maṇḍala. When doing tantric practice following empowerment, we imagine ourselves and all sentient beings as buddhas and the environment as a pure land. In this case not seeing our tantric master as a buddha would be strange.

Only in tantric practice is it essential to regard the tantric master as a buddha. This view should not be taught to beginners who are not mature in the Dharma, because it is open to misinterpretation and confusion.

I recommend going about the stages of practice in a gradual way. First form a relationship with a Fundamental Vehicle teacher, learn the four truths, and take refuge and some level of prātimokṣa precepts. Later, as your practice progresses, seek out a spiritual mentor who can teach you the bodhisattva path, practice the six perfections, and undertake the bodhisattva ethical restraints. After some time, when you are properly prepared, seek a qualified tantric master, receive empowerment into that practice, and meditate on deity yoga.

Shabkar Tsokdruk Rangdrol, the great Tibetan yogi who did extensive retreat and was a prolific writer, speaks of these three kinds of teachers:

From the teacher who showed the path of deliverance,  
I received the sacred teachings of individual liberation.  
My practice was to shun wrongdoing and cultivate virtue.

From the bodhisattva teacher,  
I received the sacred Mahāyāna teachings on generating bodhicitta.  
My practice was to cherish others more than myself.

From the Vajradhara teacher,  
I received the sacred teachings, empowerments, and instructions of  
the secret Mantrayāna.

My practice was to meditate upon the generation and completion states, and Dzogchen.<sup>27</sup>

## *Investigate a Person's Qualities*

If, like a spiritual mentor, the pilot of a plane is not well trained, traveling with him or her is risky. To help disciples assess the training of a potential spiritual mentor, the Buddha explained the qualities of the various types of spiritual teachers. Students are responsible for evaluating the qualifications of prospective teachers and choosing with whom they wish to form a mentor-disciple relationship. Sakya Paṇḍita commented that people are very careful and diligently test the purity of jewels before purchasing them. Examining spiritual mentors and teachings is even more important than checking the quality of jewels, since we are seeking the truth that will lead us to lasting happiness. We should not run after spiritual mentors like dogs gobbling up meat. Instead of being impressed by titles and elaborate thrones, we must seek spiritual mentors who are learned and practice well.

Some people are naive and easily misled by charismatic teachers who claim to be spiritually realized. In the West this may happen because Buddhism is new and people do not yet know the qualities to look for in good teachers. Difficulties arise in Asia too. Some years ago, a person from mainland China came to see me and said that a false lama from Tibet had gone to China and claimed to be a Dharma king, but was actually seeking money and sex. Blind to his true motivation, some Chinese were devoted to him. Similar things have happened in Mongolia as well.

The Buddha would not have described in detail the qualifications for choosing suitable spiritual guides if simply having great faith in anyone called a “teacher” or “lama” were sufficient. Although we may be attracted to a person who is charismatic, entertaining, or makes us feel good, these are not signs of having Dharma knowledge or spiritual attainments. Our spiritual teachers should be people we can rely on and trust and who have correct knowledge of the Dharma and its practice.

We must investigate and examine a teacher thoroughly before deciding that he or she will be one of our teachers. Immediately accepting someone as our teacher without proper investigation is unwise. I recommend that

people attend Dharma teachings and get to know the person first. At this time, do not regard him or her as your teacher, let alone as a buddha. Consider the person as a Dharma friend who shares information with you. Observe his or her conduct in daily life, and assess his understanding of the teachings as best as you can. Ask other students about the teacher's qualities, and look at the qualities of those students to see if you want to become like them by following the same teacher. Check if the teacher has a good relationship with his or her teachers. In addition, read Dharma books so that you have a general knowledge of Buddhist tenets and can assess if this person's teachings are correct. After some time, if you see that this person teaches in accord with the Buddhadharma, is reliable, knowledgeable, ethical, kind, and a good practitioner, then form a mentor-disciple relationship with him or her.

The Buddha recommends that prospective disciples examine even the Buddha himself (MN 47). But how is an unawakened, ordinary being who "does not know the mind of another as it really is" to investigate this? The Buddha instructs us to first use empirical observation, watching the person's behavior and listening to his or her speech to see if defilements are present or if his speech and deeds are pure. Then examine how he or she handles the role of a teacher: Is he attracted to gaining respect and offerings or does he have genuine compassion for his disciples and a sincere wish to guide them on the path? Third, directly ask the teacher if he has eliminated observable faults and if he is accomplished in the Vinaya and the Dharma. Doing this assumes the person is neither deluded regarding his own practice nor lying. It is rather bold to ask a teacher this question, and most accomplished teachers will be hesitant to discuss their level of attainment. However, if we are satisfied so far by our investigation of the teacher, we then practice what he teaches and see the results for ourselves. If, through diligent and correct practice, we realize the result the teacher described, then we know with certainty through our own experience that he is a reliable spiritual mentor.

Having a hundred or even a thousand qualified spiritual mentors is fine. But if teachers are not qualified, it is better not to have any and to rely on Dharma texts until we meet qualified mentors. However, to receive monastic ordination or tantric empowerment, we must rely on a living

person. We cannot receive these from a text or by ourselves. Since this is the case, in these areas you must wait until you meet a qualified teacher.

## *Qualities of a Spiritual Mentor*

According to the three types of spiritual teachers, there are three sets of qualities to look for. Śākyaprabha's *Three Hundred Verses on the Novice* (*Śrāmaṇeratriśatakakārikā*) describes the qualities of a suitable Vinaya teacher:

1. Keeping pure ethical conduct.
2. Having knowledge of what to practice and abandon on the path as well as of Vinaya rituals and procedures.
3. Having compassion for the sick.
4. Having disciples who are gentle, kind, and wise.
5. Providing their monastic disciples with requisites for living and Dharma teachings.
6. Being able to teach a Dharma topic at the right time to a disciple capable of benefiting from it.

In short, a Fundamental Vehicle teacher should have the following three qualities:

1. This person is worthy of respect because he or she is self-disciplined and has refined behavior as a result of keeping the precepts purely and serious Dharma practice. Also, this person is willing to help the disciple whenever required.
2. He or she has stable ethical conduct. For monastics, this means the person has been fully ordained for at least ten years.
3. He or she is learned and wise, having profound knowledge of the three baskets of scriptures (Tripiṭaka).

Fundamental Vehicle teachers should also be disillusioned with cyclic existence and not seek worldly success or many possessions for themselves. They should also have strength to endure the difficulties involved in teaching and guiding disciples.

In *Ornament of Mahāyāna Sūtras (Mahāyānasūtrālaṃkāra)*, Maitreya described the ten qualities of a fully qualified Perfection Vehicle mentor (17.10):

Rely on a friend who is subdued, calm, and quiet;  
has more virtue, is energetic, learned in scripture;  
has realized suchness, is endowed with eloquence, has a  
compassionate nature, and ignores weariness.

To present these qualities in an expanded way, a fully qualified Perfection Vehicle teacher:

1. Is disciplined and subdued in his or her behavior (higher training in ethical conduct).
2. Has serenity and meditative experience (higher training in concentration).
3. Is pacified through developing wisdom (higher training in wisdom).
4. Has more qualities than the student.
5. Is enthusiastic to practice Dharma and benefit others.
6. Is learned in the scriptures.
7. Has realized the emptiness of all phenomena, not just the emptiness of the person. This refers to having the correct view of selflessness.<sup>28</sup>
8. Is skillful in giving teachings, articulate, and able to explain the Dharma clearly.
9. Is compassionate, always wishing to benefit others.
10. Does not easily become tired or discouraged by expounding the Dharma to others.

It is important for a Mahāyāna spiritual mentor to possess the first three qualities — the three higher trainings — because without having disciplined and subdued one's own body, speech, and mind, subduing those of others will be difficult.

Someone may be able to discipline her own mind, but without other qualities she will not be able to adequately guide others in the methods for transforming their minds. Thus wide knowledge and understanding of the

Mahāyāna teachings as expressed in the fourth, sixth, and seventh qualities are necessary. Such a teacher has discerned the exact meaning of the Buddha's teachings by employing reasoning and scriptural quotations. She also has a broad knowledge and understanding of the path, which is necessary to lead sentient beings with a variety of dispositions and capabilities to awakening.

The remaining qualities — the fifth, eighth, ninth, and tenth — demonstrate that a spiritual teacher wishes to benefit others and has the ability to endure the hardships of guiding them.

The ten qualities of an excellent spiritual mentor may be abbreviated in three: he or she should be learned and wise, disciplined, and have a kind heart. His discipline should not prevent learnedness, and his learnedness should not lead to the neglect of discipline. Even if he has both learning and discipline, if he lacks a kind heart, he will not be able to help others on a vast scale. If he has a kind heart, but lacks learning and discipline, he will likewise be unable to lead others on the path. Thus all three qualities are necessary.

Although finding teachers with all ten qualities fully developed may be difficult, try to find teachers with as many of those qualities as possible. Follow teachers who have at least more good qualities than negative ones, are more interested in future lives than in this life, and consider others more important than themselves.

The qualities of a suitable tantric master are explained in all four classes of tantra. This person should have the qualities of a Perfection Vehicle spiritual mentor and have received empowerment into Vajrayāna. In addition to keeping the tantric precepts and commitments purely, he or she should have studied the practices well, completed the appropriate retreats and concluding fire pūjā, and experienced some deep insight through this path. In the case of a highest yoga tantra guru, the person should optimally have some stability in, if not realization of, the completion stage. Otherwise seek a person who has stability in the generation stage practice; however, if they do not have the correct understanding of emptiness, their practice is lacking. For a tantric guru, the determination to be free from saṃsāra and an understanding of emptiness that is complemented by bodhicitta is presupposed. Clearly not everyone who recites tantric sādhanas is qualified

to give empowerments and tantric instructions! In *Fifty Verses of Relying on a Spiritual Master (Gurupañcāśikā)*, Aśvaghoṣa describes the qualities of a vajra master in detail. These will be explained in a later volume on tantra.

Do not be too quick to regard a person as your spiritual mentor. Rather, for however long it takes — two years, five years, or longer — regard this person as a spiritual friend. In the meantime, examine his or her behavior, attitudes, and ways of teaching until you are confident of his or her integrity and ability to guide you.

In certain situations a Dharma connection is automatically formed, and after that you should regard that person as one of your spiritual mentors. A person who gives you refuge, the five lay precepts, or monastic precepts becomes one of your Vinaya teachers. Those from whom you receive the bodhisattva ethical restraints become your Perfection Vehicle teachers. Someone who gives you an empowerment, tantric transmission, or tantric commentary becomes one of your Vajrayāna masters.

#### REFLECTION

---

1. One by one, contemplate qualities for a Fundamental Vehicle, Perfection Vehicle, and Vajrayāna spiritual mentor.
  2. Reflect on the purpose of the three sets of qualities and how each applies to the respective stage of development of the disciple.
  3. Make a determination to examine the qualities of prospective spiritual mentors and to choose wisely.
- 

### *Seek Internal Qualities, Not Titles or External Appearance*

Some people may believe that the titles a person has indicates whether he or she is a qualified spiritual mentor. However, this is not necessarily the case. Each Buddhist tradition employs an array of titles that can be confusing to newcomers and that are not necessarily used in a systematic fashion.

Nowadays the title *lama* is used in a variety of ways — in some cases it indicates a Dharma teacher, in others it indicates someone who has completed a three-year retreat. Some people are qualified teachers, but out of humility do not want to be called lama, while some people who have not done extensive study and practice are eager to assume that title.

*Geshe* is a degree awarded by the large monasteries after the completion of many years of serious scriptural study and debate. In general, geshe have vast learning in the scriptures and some also have meditative experience and realizations. However, after completing their studies, some geshe are eager to go abroad not just to teach but to receive offerings.

*Khenpo* indicates an abbot of a monastery and *khensur* a former abbot, although in some Tibetan traditions, *khenpo* is an educational degree similar to *geshe*. *Gen-la* is used to address adult monks, our own Dharma teacher, or teachers of secular subjects as well. *Choe-la* is the respectful way to address a nun.

*Tulku* is a title given to someone recognized as the reincarnation of a previous master. *Tulku* literally means an emanation body of a buddha, but not everyone with this title is an emanation of the Buddha or even a bodhisattva. There are different levels of tulkus according to the respect and renown of the previous master.

*Rinpoche*, which means “precious one,” is often used to address tulkus. Some students call their teachers who are not recognized incarnations “Gen Rinpoche” (precious teacher) to indicate their respect. Having the title *rinpoche* does not indicate that one has spiritual realizations. Some may be manifestations of buddhas or of ārya bodhisattvas — those who have directly perceived emptiness and compassionately manifest to benefit sentient beings. Others may be lower-level bodhisattvas who have not yet eradicated afflictions and are not able to control the rebirth process. Still other people are identified as incarnations of great masters due to their accumulation of merit in the past, even though they have not entered even the first of the five bodhisattva paths. We should not assume that everyone who uses the title *rinpoche* is a realized being.

The system of recognizing incarnations of previous spiritual masters is a Tibetan cultural tradition. It is not a practice taught by the Buddha. In the 1960s I discussed limiting the number of tulkus, but one adviser told me

that would be difficult because it is the Tibetans' custom. Nowadays being recognized as a rinpoche has become a position of social status, not one of religious import, and this is not healthy.

We should seek teachers who are well-educated in the Dharma, practice it sincerely, and have compassion for others. In looking at Tibetan society, I often see people ignoring learned geshe and khenpos but showing great respect to rinpoches who are not learned. I tell the young rinpoches that they should not rely on the reputation of their previous lives but should study diligently, practice sincerely, and be humble in this life. If they do, they will be an honor to their predecessor's name. If they do not and merely use their social status to manipulate or deceive others, they are a disgrace, not only to their predecessor but also to the Buddhadharma.

Nowadays, many people look for the incarnations of their deceased teachers, but letting a child speak for him- or herself is better. A child may display obvious characteristics, such as clearly remembering a previous life or reciting texts not memorized in this life. In such cases, we cannot fail to recognize that the child is unusual. Only then could recognition as a tulku possibly be beneficial.

I favor allowing children to grow up naturally and to develop their qualities in this life. Those who have gained spiritual realizations in the past will naturally progress in their own practice and benefit others in this life whether or not they are identified and given a title.

Some people who are unknown in Tibetan society go to the West or Taiwan and suddenly have many titles and are publicized as great teachers. This is completely inappropriate. One lama from Amdo commented to me that in the past lamas' names were short but the list of their realizations was long. But now they have very long and lofty titles, and the list of their realizations is short.

Teachers who are monastics must wear monastic robes, and those who are not monastics should not wear monastic robes or even maroon clothing that resembles monastic robes. The general public as well as Buddhists become very confused when they see a teacher, whom they believe to be a monastic, with a spouse and children. Lay teachers should wear lay clothes, or if they wear a long robe, it should be white and their upper shawl should be predominantly white but with some maroon stripes. For many years I

have recommended this and am happy to see at least some lay teachers follow my advice.

Although the Buddhadharma flourished in Tibet, the general public's level of understanding of the Buddhadharma was low. Many people would look at the height of a teacher's throne or the number of horses in his procession to determine who to respect. They didn't consider that a famous bandit would also have many horses in his caravan!

In Tibet, and now in exile, some people placed great emphasis on external appearance — brocade robes, colorful costumes, and the shape and size of hats. But our Teacher, Śākyamuni Buddha, did not have a hat; nor did he wear special robes. His robes were the same as those of other monastics. Even though some of the Indian masters, such as Asaṅga and Candrakīrti, are depicted with big hats, it is questionable whether such hats were worn in the great Indian monastic universities such as Nālandā.

In Tibet there was perhaps some reason for wearing a hat because the weather was cold. Bald teachers especially found hats helpful! However, Tibetans went to an extreme and made hats in elaborate shapes, sizes, and designs, so much so that some foreigners came to distinguish the different schools of Tibetan Buddhism by the color of their hats. This is very unfortunate. In addition to the yellow, red, and black hats that are so famous, perhaps monastics nowadays could wear green hats, indicating that they care for the environment!

We must try to understand the essence of the Buddha's teachings and the commentaries of the great Indian masters. By doing so, we will see that the true gauge for evaluating the quality of a teacher is his or her understanding and behavior. Faith in spiritual teachers should be well earned. Some great teachers, such as Milarepa, looked like poverty-stricken beggars. The Kadam master Dromtonpa was a humble nomad. The twentieth-century Dzogchen master Dza Patrul Rinpoche looked like an ordinary wanderer. These truly great spiritual masters had no external appearance of grandeur. Our priority should be understanding the meaning of the Dharma, not wearing elegant robes, donning colorful costumes and hats, sitting on expensive seats, or riding in luxurious vehicles. Nowadays we have to add sporting expensive watches and displaying a range of costly

technological gadgets to this list. Of course, every lama says this when teaching, but in their own lives some do not follow it.

Recently the emphasis on elaborate rituals — complete with drums, cymbals, dances, and colorful masks — has increased in the Tibetan tradition, and the emphasis on teaching has diminished. The time has come to change this and to return to the Nālandā tradition of ancient India. Practitioners' philosophical views and conduct must be grounded in the teachings of the Buddha and the great Indian masters. We must simplify ceremonies and rituals, strengthen our philosophical understanding, and implement the teachings in daily life. If we do this, Buddhism will play an important and meaningful role in the upcoming centuries. If we do not, it could degenerate into mere show.

It is important for all of us who consider ourselves to be followers of the Buddha to constantly check our motivation. In my own case, whenever I sit on a high throne to teach, self-importance and pride seldom arise. Even so, I notice that occasionally my thoughts become defiled by the eight worldly concerns. I think how nice it would be if people complimented me on my Dharma talk and how disappointed I would be if they criticized it. Our vulnerability to worldly concerns is real, so we must be extremely careful. To ensure that we are engaging in genuine Dharma practice, we must check that our motivation is not defiled by the eight worldly concerns. Otherwise, self-importance will lead us to have other faults. It then becomes easy to abuse power, greedily seek offerings from the faithful, or manipulate others. We may even envy other teachers and compete with them. All of these corruptions arise once we become proud. However, when we honor the responsibility that comes with sharing the Dharma with others, we will constantly monitor our motivation and repeatedly turn our mind to benefiting others.

## REFLECTION

---

1. Why is following the guidance of a spiritual mentor important?
2. What kind of qualities do you want to look for in selecting a spiritual mentor?
3. Are you easily influenced by titles, external appearances, and charisma? If so, what ideas do you have for redirecting your focus to important qualities?

---

## *Becoming a Qualified Disciple*

In addition to seeking qualified teachers, we must make ourselves into receptive vessels so that we can benefit from our mentors' instructions. We may receive profound teachings from excellent mentors, but without attempting to develop the qualities of a good disciple, the benefit will be minimal. Āryadeva describes the qualities of a disciple who will realize the meaning of selflessness (CŚ 276):

An unprejudiced, intelligent, and interested listener is called a vessel.

The first quality for suitable Mahāyāna students is being *impartial and open-minded*. We should try to be free from preconceptions and not close-mindedly cling to our own views. If we are biased, we will follow only the teachings that please our ego and accord with our own ideas. Dismissing valuable teachings that challenge our opinions hampers our spiritual progress.

*Intelligence* is the second quality of a disciple. This does not refer to intelligence in academic subjects, but to having the discriminative intelligence that can discern correct and incorrect views as well as what to practice and what to abandon. Without intelligence, our actions, meditation practice, and view will be skewed.

Intelligent and discerning disciples also examine the source of a teaching and are not satisfied unless they know it originated with the Buddha. They investigate if that teaching has been studied and explained by sages, actualized by yogis, and translated by excellent translators. Using reasoning and scriptural citations, they establish a teaching's validity.

Even if students are open-minded and intelligent, if they do not practice, they will not progress. Therefore, *interest*, diligence, eagerness, and commitment to engage in the practice are essential for spiritual transformation.

Two more qualities of a suitable disciple are often added to these three. The first, *respect and veneration* toward the teacher and teaching, makes us

a receptive vessel to receive the Dharma, whereas arrogance and apathy prevent spiritual growth. Appreciating our teachers' wisdom and kindness and respecting the excellent qualities of the teachings moistens our minds, making it receptive to the Buddhadharma.

*Attentively taking the teacher's advice and instructions to heart* by putting them into practice enables us to plumb the depth of the teachings and integrate them into our very being. Do not think that these instructions must be given one-on-one. Even when we are in an audience of a thousand people, our mentor's spiritual instructions remain the key to actualizing the path.

People who sincerely wish to attain liberation or full awakening will cultivate these qualities in order to become receptive disciples and increase the benefit they receive from listening to teachings. In doing so, they become more self-confident and responsible in their Dharma practice. With clear understanding, they will be capable of receiving teachings and empowerments from various spiritual mentors and lineages without becoming either confused or sectarian. Not falling into mistaken ideas of "surrendering everything to the guru," they will not be led astray by teachers with impure motivations. Instead they will derive great benefit from relationships with qualified spiritual mentors. Their clarity of mind and good qualities will increase, and they will become good examples for newcomers on the path.

This book began with an explanation of the two truths, the four truths of the āryas, and the noncontradictory nature of dependent arising and emptiness. These instructions guide a practitioner of middle capacity on the path to liberation and enable a sharp-faculty advanced disciple to ascertain the possibility of attaining full awakening. When you understand these instructions well, you will know the kind of qualities a spiritual mentor must have to guide a disciple on the path to liberation and full awakening. You will also understand the qualities a disciple must have to be a receptive vessel, and the way the disciple should rely on the spiritual mentor.

To illustrate the importance of being an intelligent disciple, the Buddha gives the example of misguided people and intelligent ones who want to get the poison from a water snake in order to use it as medicine. A misguided person grasps the snake's coils or its tail, enabling the snake to turn its head

around and bite him. The poison that this person sought to make into medicine now makes him suffer. Similarly, a person may hear or read the Dharma but not think about it clearly. He thereby injects his own preconceptions into the teaching, twisting the meaning to conform to his ideas, which are based on attachment and animosity. Or, due to ignorance, he misunderstands the actual meaning of the teachings and practices that. This person may also have the wrong motivation, learning the Dharma for the sake of criticizing others or winning a debate. Sadly, a person who incorrectly grasps the teachings often does not realize he is doing so and instead proceeds to share his distorted understanding with others, harming not only himself but others as well. This damage may affect many future lifetimes.

On the other hand, intelligent people grasp the snake's head, and by pressing it in a certain way, extract the poison and make it into medicine. Similarly, wise disciples learn the Dharma and examine the meaning with wisdom. Through wise investigation, they will come to correct conclusions and accept the teachings. Their motivation is to derive spiritual benefit, and they succeed in doing this, thus bringing happiness to themselves and others for a long time to come. The Buddha concludes the simile with this advice (MN 22.12):

When you understand the meaning of my statements, remember it accordingly; and when you do not understand the meaning of my statements, then ask either me or those monastics who are wise about it.

We, too, should ask our teachers and other senior Dharma students when we do not understand a teaching. Even when we think we understand a teaching properly, it is always good to check our understanding with those who are more knowledgeable and skilled in practice than we are. In that way, the Dharma will be wonderful medicine that cures our own and others' suffering.

In case someone misunderstands the simile of the snake and thinks that Dharma is something to grasp onto and identify with, the Buddha continues the sūtra using the simile of the raft. This simile illustrates that, having understood the teachings correctly, we should use them to cross the ocean

of saṃsāra and reach the shore of nirvāṇa, without clinging to the teachings unnecessarily.

A traveler comes across a large body of water. The bank where he stands is dangerous, but the far side is safe. Since there is no ferry, he binds branches together to make a raft and, holding onto the raft correctly, paddles to the other shore. Feeling relieved upon safely reaching the other shore, the traveler should not hoist the raft on his shoulder and carry it around because of attachment to the raft. The sensible thing to do is to set the raft down and go on his way.

Similarly, we are on the frightful, dangerous bank of the ocean of saṃsāra, the other side is nirvāṇa, and the raft to carry us there is the Dharma. When learning the Dharma, we must make sure we hold it correctly. However, once we attain liberation, we will not be attached to the Dharma, cling to an identity of being a Dharma practitioner, or boast of our attainment to others. Just as the purpose of the raft is to cross dangerous water, not to have something to carry around with us, the purpose of the Dharma is to liberate us from cyclic existence, not to give us an identity to grasp with attachment. The Buddha says (MN 22.14):

When you know the Dhamma to be similar to a raft, you should abandon even the Dhamma; how much more so what is contrary to the Dhamma.

The Pāli commentary indicates that here *Dhamma* refers to serenity and insight. Practitioners should not get attached to even the peace of serenity and the sublimity of insight, let alone cling to wrong views such as thinking attachment to sensual pleasure is not an obstruction on the path. While exerting effort to cultivate serenity and insight is essential, we should not cling to the peacefulness that these states bring, but continue to practice until we gain complete liberation.

The Buddha makes a similar point in the *Greater Discourse on the Destruction of Craving (Mahātaṇhāsankhaya Sutta)*, where he questions the monastics regarding their understanding of how the four nutriments perpetuate the five aggregates of saṃsāra. The monastics assure him that they have understood with proper wisdom not only how the aggregates arise

because of the four nutriments but also how they cease when their respective nutriments cease. The Buddha replies (MN 38.14):

Monastics, purified and bright as this view is, if you adhere to it, cherish it, treasure it, and treat it as a possession, would you then understand that the Dhamma has been taught as being similar to a raft, to be used for the purpose of crossing over, not for the purpose of grasping? — “No, venerable sir,” [replied the monastics].

A view may be correct and sublime, but if we treat it as a personal possession, create an identity out of it, or adhere to it with attachment, we have missed the boat. However, going to the other extreme and thinking we can cross the water without a raft is unwise, as is casting the raft aside before we have reached the other side. Open-minded and intelligent disciples will discern the correct view and then contemplate and meditate on it without clinging to it with attachment.

Leaving the raft behind after reaching the other shore does not mean that those who are liberated give up the Buddha’s teachings and do whatever they like. They show their incredible gratitude and reverence for the Dharma by teaching others and guiding them on the path.

By means of the similes of the snake and the raft, we see the importance of making ourselves into suitable vessels to receive and hold the Dharma. While having a fully qualified spiritual master is necessary to progress on the path, it is not sufficient. The more that we put effort into developing correct understanding and good qualities, the more our spiritual mentor will be able to lead us on the path to awakening.

## REFLECTION

---

1. What are the five qualities of an excellent disciple? How will developing each one help you on the path?
  2. What ideas do you have to increase the five qualities of a suitable disciple in yourself?
  3. What have you learned from the simile of the snake and the simile of the raft?
-

## 5 | Relying on Spiritual Mentors

**A**T PRESENT we have a precious human life complete with access to Dharma teachers and teachings. This fortunate situation came about due to great merit that we created in previous lives. Not wanting to waste the efforts of our previous lives, we should take advantage of this rare opportunity by learning and practicing the Dharma. If we are too busy to attend Dharma teachings while both we and our teachers are alive, we may later regret having lost the chance.

In a Pāli sūtra there is the story of a spirit who had full confidence in Bhikkhunī Sikkhā and lamented that the people of Rājagaha did not take advantage of the teachings she gave. Even though a large assembly was present at a teaching, he was eager for more beings to benefit, and so went around the town of Rājagaha chanting (SN 10.9):

What has happened to these people in Rājagaha?  
They sleep as if they've been drinking mead.  
Why don't they attend on Sikkhā  
as she teaches the deathless state?

But the wise, as it were, drink it up —  
that [Dhamma] irresistible,  
ambrosial, nutritious —  
as travelers do a cloud.

Dharma teachings are more life sustaining than ordinary food and drink. The more we imbibe the Dharma, the more joy fills our minds and hearts. With this in mind, we now turn our attention to how to cultivate a good relationship with our spiritual mentors, the ones who kindly instruct us on the path.

## *The Benefits of Relying on Spiritual Mentors*

Some people translate the term *bshes gnyen bsten pa* as “guru devotion.” This English term may be misleading, evoking the image of blindly surrendering to a holy authority figure, which is certainly not the intended meaning. *Bshes gnyen* means spiritual friend or spiritual mentor. *Bsten pa* means to rely or depend on. For our Dharma practice to be successful, we must properly rely on a wise and compassionate spiritual mentor and guide.

Before engaging in any activity, it’s helpful to know the advantages of doing so and the disadvantages of not doing so or doing it improperly. Many benefits accrue from properly relying on a spiritual mentor or mentors.

- Our thoughts and words will become virtuous because we will follow our spiritual mentor’s wise advice.
- For the same reason, we won’t bring suffering on ourselves or others.
- We will complete the two collections of merit and wisdom and attain full awakening by following reliable teachings.
- We will be able to work for the benefit of sentient beings, including those who have entered wrong paths.
- Because our spiritual mentor teaches us how to purify our negativities, we will exhaust destructive karma that would have ripened in lengthy, unfortunate rebirths. It may instead ripen in this life as comparatively mild discomfort or harm.
- Due to the important role our spiritual mentors play in our lives, we will create great merit, more than is created by making offerings to limitless buddhas.
- By properly relying on our spiritual mentors in this life, we will meet qualified spiritual mentors in future lives.
- Our good qualities will increase, and we will accomplish the welfare of ourselves and others.
- Under our teachers’ compassionate guidance, we will feel supported and inspired in our practice.

All of the benefits come about because we listen with an open mind to teachings from a qualified spiritual mentor and put them into practice. However, if we despise, disdain, or reproach our spiritual mentors, many disadvantages accrue. We will have to endure unfortunate rebirths because of the destructive karma we create from insulting or getting angry at them. We will experience harm and illness in this life. Our good qualities will degenerate and no new good qualities will arise because we won't practice the Dharma. In short, none of the advantages will accrue to us, while their opposites will.

#### REFLECTION

---

1. Imagine your spiritual mentors appearing in the space in front of you and looking at you with kindness.
  2. Contemplate each advantage of properly relying on a spiritual mentor.
  3. Contemplate the disadvantages of not relying on a spiritual mentor or of improperly relying on one.
  4. Conclude with a determination to rely on a spiritual mentor with a pure heart and to follow his or her instructions in a systematic way.
- 

### *Cultivate Trust by Seeing Their Qualities*

We rely on our spiritual mentors in two ways: through our thoughts and our actions. Relying on them through our thoughts entails cultivating two attitudes: trust and faith in our mentors, which are developed by reflecting on their good qualities, and appreciation and respect for them, which arise from reflecting on their kindness to us.

Faith moistens our minds and makes it receptive. It also energizes us to accomplish our goals. The *Ten Teaching Sūtra* (*Daśadharmaka Sūtra*) says (LC 1:80):

Faith is the best of vehicles,  
definitely delivering you into buddhahood.

Therefore, persons of intelligence  
rely on the guidance of faith.

Virtues will not arise  
in those who have no faith,  
just as green sprouts do not grow  
from seeds scorched by fire.

Common faith is faith we have in a particular teacher, although we may not be his or her student at this time. It is called common because it is shared by those who are his disciples and those who are not. Uncommon faith is the faith held by a teacher's students. With such trust and faith, we feel close to our teachers, which enables them to influence us in constructive ways.

Trust is generated by reflecting on our teachers' qualities and the role they play in our lives, which is similar to the role the Buddha would play if he were alive today. Our spiritual teachers play a singular role in our lives, for they are the ones who teach, guide, and encourage us along the path. Through their actions they evince the conduct of realized beings. Without their compassionate assistance, it would be extremely difficult for us to cultivate wisdom and to progress toward awakening. The more we practice, the closer we become to our mentors' minds and the Buddha's mind, strengthening and increasing our faith in the teachings and, by extension, in those who teach and guide us.

An example of this is the young spiritual seeker Sudhana, the main character of the *Array of Stalks Sūtra* (*Gaṇḍavyūha Sūtra*). Sudhana earnestly sought to learn the bodhisattvas' practices. Each spiritual mentor he went to taught him a portion and then referred him to another spiritual mentor to continue his learning. As Sudhana learned and practiced the bodhisattva deeds, his regard for his spiritual mentors increased. Here is the scene in which Sudhana approaches Avalokiteśvara, the twenty-seventh of his fifty-three mentors:

Transported with joy on seeing Avalokiteśvara, his eyes fixed on him, his mind undistracted, full of the energy of faith in the spiritual mentor, thinking of seeing spiritual mentors as at once

seeing buddhas, thinking of the reception of the multitudes of all truths as originating in spiritual mentors, thinking of the attainment of all virtues as deriving from spiritual mentors, thinking of how hard it is to meet spiritual mentors, thinking of spiritual mentors as the source from which the jewels of knowledge of the ten powers are obtained, thinking of spiritual mentors as the source of vision of inexhaustible knowledge, thinking that the growth of the sprouts of goodness depends on spiritual mentors, thinking that the door of omniscience is revealed by spiritual mentors, thinking that the way to enter the ocean of great knowledge is pointed out by spiritual mentors, thinking that the accumulation of the store of omniscience is fostered by spiritual mentors, Sudhana approached Avalokiteśvara.<sup>29</sup>

By reflecting on our teachers' qualities, ethical conduct, kindness, meditative abilities, and so on, we will have a positive view of them. Our trust and inspiration will increase and our minds will be receptive to their teachings. This is not blind faith, because there are reasons to hold this person in high regard and to have confidence in his or her ability to guide us on the path.

However, if we don't use our capacity for critical thinking to contemplate the reasonings proving emptiness and instead employ it to analyze the faults of our spiritual mentor, we put ourselves in the precarious position of possibly angrily cutting off the relationship with our mentor and abandoning Dharma practice. We are the ones who suffer the most, should this happen. The benefit or loss that accrues to us in our relationship with our spiritual mentor depends on which qualities we choose to focus.

We may have more than one spiritual mentor; it is up to us. Atiśa had over 140 mentors, while Dromtonpa had less than five. Since it is important to have a positive regard for our teachers, if we have an extremely critical and judgmental mind, it may be better to have fewer teachers.

Having faith and respect for teachers sitting on high thrones, whom we seldom see, is easy. It is much more challenging to appreciate the teacher who gives us daily or weekly Dharma teachings and to whom we offer

service. We tend to treat that mentor like an old friend and cease to appreciate his or her qualities and kindness. Because we may easily start to criticize his habits or stop listening to his advice, we must take special care in our relationships with the teachers we see often to ensure that our attitude and behavior do not sabotage this most precious relationship.

Since we learn by observing the example of others, reflecting on our teachers' positive qualities will inspire us to make an effort to develop them ourselves. If we have the opportunity to live near our teachers and help them with various projects, we will witness Dharma lived in daily life by observing how our teachers treat people and manage a variety of situations judiciously and compassionately. Learning by observing a wise practitioner is a precious opportunity, one that cannot be gained by reading a book.

Whether or not our teachers are highly realized, we benefit by seeing them in a positive light. If we think someone is an ordinary person, even if he or she teaches us a profound topic, we will not listen or take their words seriously. But if we think an awakened being is teaching us, we will listen carefully and put the teachings into practice. In this way trust and faith in our spiritual mentors supports us in our practice and uplifts us when we feel discouraged.

## *Cultivate Appreciation and Respect by Seeing Their Kindness*

Countless buddhas have appeared in the past, and of these, Śākyamuni Buddha is the kindest to us because he expounded the teachings in our world. Although we did not have the fortune to receive teachings directly from him or from the lineage of sages in India and Tibet that carried his word to the present day, our spiritual mentors act as messengers delivering these priceless teachings to us. Through their kindness we have access to the vast and profound teachings that show us the path to awakening.

Due to our teachers' kindness, we now have the opportunity to gain some Dharma understanding, leave positive imprints on our mindstream, and gain realizations. Although our parents and close friends love us and wish us well, they do not have the ability to lead us out of the morass of

samsāra. The kindness of our spiritual mentors — who alone have the knowledge and skill to guide us — is incomparable. The *Ten Teaching Sūtra* says (LC 1:83):

Develop the following ideas with respect to your teachers: I have wandered for a long time through cyclic existence, and they search for me. I have been asleep, having been obscured by confusion for a long time, and they wake me . . . I have entered a bad path, and they reveal the good path to me. They release me from being bound in the prison of samsāra . . . They are the rain clouds that put out my blazing fire of attachment.

Thinking of the kindness of our teachers in this way, heartfelt gratitude, appreciation, and veneration will naturally arise for them. This joyful attitude removes obstacles and facilitates our practice. The *Array of Stalks Sūtra* expresses the immense kindness of our spiritual mentors (LC 1:83–84):

The teachers are those who protect me from all miserable rebirths; they cause me to know the equality of phenomena; they show me the paths that lead to happiness and those that lead to unhappiness; they instruct me in deeds always auspicious; they reveal to me the path to the city of omniscience . . . they cause me to enter the ocean of the sphere of reality; they show me the sea of past, present, and future phenomena; and they reveal to me the circle of the āryas' assembly. The teachers increase all my virtues. Remembering this, you will weep.

Sudhana reflects:

I, Sudhana, have come here  
thinking one-pointedly, “These are my teachers, instructors in the  
teachings,  
the ones who totally reveal the good qualities of all things  
and then fully teach the bodhisattva way of life . . .

“These bodhisattvas have caused my mind to develop,  
they have produced my awakening as a bodhisattva,  
therefore, these, my teachers, are praised by the buddhas.”  
With such virtuous thoughts, I have come here.

“As they protect the world, they are like heroes;  
they are captains, protectors, and refuge.  
They are an eye providing me with happiness.”  
With such thoughts, I respect and serve my teachers.

## REFLECTION

---

1. Had you not met your spiritual mentors, what might your life be like now? What would you be doing? What might the state of your mind be?
  2. Among all those whom you hold dear and who love you, do any of them have the ability to guide you on the path to full awakening?
  3. What do the Dharma teachings mean to you? How valuable are they? Allow yourself to feel gratitude and respect for those who have taught you.
- 

## *Seeing Spiritual Mentors as Buddhas*

Because of the influence of Vajrayāna in all four Tibetan Buddhist traditions, disciples are instructed to cultivate the perception of their gurus as buddhas. It is important to understand this correctly in order to avoid confusion. In the context of tantra, seeing the guru as the Buddha is important. A guru who is able to give all four empowerments of highest yoga tantra based on his or her own experience is definitely a buddha, and seeing him or her as a buddha is reasonable. Some gurus who give empowerments do not have that experience, but if we see them as buddhas, it increases our concentration and enhances our meditative experience.

When we view our spiritual mentors as the Buddha, buddhahood does not seem so distant. We come to feel close to the Buddha and begin to think that awakening is possible and awakened beings actually exist. Although

not all spiritual mentors are buddhas — some of our mentors are ordinary beings — our practice will progress well from maintaining a positive view of them. For example, in the past the presidents of a country were fully qualified — they were honest, responsible, and cared for the citizens. Later on the quality of the presidents declined. Nevertheless, we see these people as presidents because they have that title, perform that function, and represent our country. We respect them but do not blindly follow them.

The teaching to see the spiritual mentor as the Buddha is borrowed from highest yoga tantra and is often taught earlier on the path to prepare disciples to receive tantric empowerments. However, this teaching is not appropriate for beginners because it is open to misunderstanding. As noted above, the Fundamental Vehicle and Perfection Vehicle do not instruct us to view our teacher as a buddha, although we may personally choose to do so.

We Tibetans say that it's best not to bring the topic of seeing the spiritual mentor as the Buddha to the debate ground because the argument cannot be sustained. In a debate, one monk once asked another, "Some texts say that our spiritual mentors are buddhas. Do you agree?" The second monk replied affirmatively. Then the first monk asked, "You have disciples here in the monastery. Are you also a buddha?" at which point the second monk was chagrined because he knew he was not.

Tsongkhapa's presentation of relying on a spiritual master in the *Lamrim Chenmo* is well balanced, and if we follow that, less confusion will arise. He says (LC 1: 81–82):

Moreover, pay attention to the good qualities that the guru does have — such as ethical conduct, learnedness, and faith — and reflect on these qualities. Once you have become conditioned to this, you may notice that your guru has a small number of faults. However, this does not impede your faith because you are focusing on the good qualities.

Tsongkhapa does not say to see our teacher's faults as good qualities or to see all his actions as perfect. In the *Lamrim Chenmo* he expounds very little on seeing the guru as the Buddha,<sup>30</sup> and when he does, his purpose is to prevent us from damaging our relationship with our guru. He encourages

us to see their good qualities so that we will benefit from their teachings and guidance.

We should avoid fanciful ideas, such as thinking, “Since my mentor is a buddha, he doesn’t get sick,” and not call the doctor when he is ill. We live in the conventional world and must act appropriately. If our teacher makes a mistake while reading a text or explaining its meaning, it is fine to respectfully point it out. We should avoid thinking that since he is an omniscient buddha he should know the way to a distant place, and then become disillusioned when he asks us directions.

Also to be avoided is idealizing our spiritual mentors. There is a Tibetan saying, “A student who is too devoted makes the lama into a hypocrite.” The lama cannot possibly live up to the glowing acclaim the disciple has spread about him or her in the community. Having an idealistic attitude sets us up for disappointment. It is impossible for anyone to continually fulfill our unrealistic expectations.

The measure of gaining proper reliance on the spiritual masters is wholeheartedly appreciating their good qualities and not focusing on their weaknesses. In general, seeing the spiritual mentor as a buddha is a form of useful and constructive imagination; in most cases it is not a reliable cognizer. Even though there are definitely ordinary beings and bodhisattvas among those who teach the Dharma, regarding our teachers as buddhas, listening to their teachings, practicing accordingly, and respectfully serving our mentors enables us to be more receptive to teachings and wise advice and to experience many other positive results.

The meditation to see our spiritual mentors as buddhas is similar to the meditation to imagine the entire Earth covered with skeletons: both involve imagination that is consciously cultivated and will have a beneficial effect on our minds. Ignorance is not the cause of imagining bones covering the ground, so this is not a wrong consciousness. We intentionally meditate in this way to derive benefit; in this case, the reduction of attachment to our body and to saṃsāric existence. Similarly, while our spiritual mentors may or may not be buddhas, we benefit from thinking of them as such because it makes us listen attentively to their teachings and take their Dharma instructions seriously.

If our mind seizes every opportunity to find imperfections in our spiritual mentors, it is helpful to reflect, “Why am I here? It is not to notice my teachers’ shortcomings but to learn from their good qualities.” This brings us back to the reason we are practicing the Dharma.

Should we see flaws in our teachers we can transform them into a learning experience. If our teacher behaves rudely, we think, “This is how I look when I am rude.” This way we will learn from the situation. If we can’t give our spiritual mentors — who have more good qualities than faults — space to be human, it will be difficult to develop tolerance and forgiveness toward sentient beings who have many faults.

Sometimes the “faults” we find in our mentors are actually differences in personal preference. Our teacher likes to wake up early; we like to sleep late. Our mentor loves butter tea; we think it’s unhealthy. Our teacher likes to have a long teaching session with no breaks; we prefer shorter ones with a lot of breaks. None of these are ethical faults on the part of the teacher. Observing how we make differences into faults gives us insight into our habitual way of thinking that needs to be corrected.

We should not force ourselves to see our spiritual mentor as the Buddha out of fear of creating destructive karma or “doing it wrong.” Past masters recommend this practice because they benefited from it. If we try following their advice, we may see a favorable effect. But if this feels uncomfortable, we can turn our minds to topics that inspire us.

## *The Role of Devotion*

The spiritual mentor is often said to be the root of the path, in that this relationship nourishes and stabilizes our practice. But just as a plant also depends on a seed, water, fertilizer, and warmth, we need additional conditions to grow in the Dharma, such as purification and accumulating merit; listening to teachings; cultivating renunciation, bodhicitta, and the correct view; and practicing the three higher trainings and the six perfections. If only respecting and serving our spiritual mentors were adequate for attaining awakening, the Buddha would not have taught a myriad of other practices.

The above is a general explanation applicable to the great majority of people. There are a few cases in which a specific individual, because of his or her very strong devotion and singular karmic connection with a special teacher, is liberated by means of an encounter with that spiritual mentor. Such a situation depends on a highly qualified disciple encountering a highly realized spiritual mentor. In such a case, if the disciple has deep devotion for the spiritual master, it is possible that the grosser levels of mind are neutralized and the subtlest mind becomes active. With this comes the understanding and experience of emptiness. Genuine compassion arises toward sentient beings who are totally immersed in *duḥkha* and ignorant of that fact. Here compassion arises automatically as a byproduct of the subtle mind experiencing emptiness.

There are stories of a few exceptional disciples, and I have met a few individuals who have had profound experiences or have gained realizations through an encounter with their teacher. Their faith in their spiritual mentor was so strong that it was as if they had fallen unconscious. But when they revived from this unconscious state, it was apparent that they had had a deep experience of clear light.

Someone may ask, “Is such a thing possible if the teacher is not highly realized but the disciple has tremendous faith?” Both the spiritual mentor and disciple must be fully qualified for this to occur. If the teacher is not, how could that person spark in a disciple’s mind a realization that is not present in his or her own mind?

Most of the exceptional cases of gaining realizations primarily through faith are found in the Kagyu and Dzogchen lineages, where devotion is emphasized. A quotation from a Kagyu text says there is no doubt about the possibility of being liberated through devotion and veneration. This refers to those few individual cases in whom all the causes and conditions have come together for this to happen. Applying this notion to the general Buddhist population would be a mistake. If everyone could be awakened only through intense devotion, there would be little difference between Buddhism and theistic religions. Furthermore, the Buddha would not have given teachings that constitute more than one hundred volumes in the Tibetan canon. Here we again see that the teachings and modes of practice relevant to specific individuals differ from those given in the general system

of Buddhist teachings and practice. It is important not to confuse these. The teachings of the Nālandā tradition are given from the perspective of the general structure of the path and pertain to practitioners in general, whereas these exceptional cases apply primarily to mahāsiddhas.

## *Relying on Spiritual Mentors in Our Actions*

Having contemplated how to rely on spiritual mentors through our thoughts, we now turn to relying on them through our actions. There are three principal practices.

First, we make material offerings to our spiritual mentors. Because of their qualities, kindness, and the important role they play in our lives, our mentors are potent objects with which we create karma. By making offerings we create great merit, which we dedicate for the awakening of all sentient beings. From the side of spiritual mentors, the quality or quantity of offerings must not influence the diligence with which they guide disciples. Geshe Sharawa, one of the twelfth-century Kadam geshe, said that a spiritual mentor who pays attention to the offerings he or she receives is not a suitable teacher for a disciple aspiring to full awakening.

Second, we respect and serve our mentors, offering our time and energy to assist in their various projects to benefit others. Offering service also includes tending to their personal needs, such as cooking, cleaning, running errands, and caring for them when they are ill.

Third, we offer our practice, meaning that we practice according to our mentors' instructions. This is the best offering, far excelling the first two, because it involves taming our minds by putting the Dharma instructions into practice. Doing this is the offering that most pleases our spiritual mentors.

The Pāli scriptures say that the seven trainees — approachers and abiders who are stream-enterers, once-returners, and nonreturners, and approachers to arhat who have realized impermanence, duḥkha, and selflessness and have some realization of nirvāṇa — serve the Teacher, the Buddha, with acts of love. Arhats, who have eliminated all afflictions and causes for cyclic existence, completely serve the Teacher with acts of love.

When addressing a group of self-indulgent and lax monastics who did not keep the precepts well or make effort in the practice, the Buddha said (MN 70.26):

Even with a [non-Buddhist] teacher who is concerned with material things, an heir to material things, attached to material things, such haggling [by his disciples] would not be proper: “If we get this, we will do it; if we don’t get this, we won’t do it.” So what [should be said when the teacher is] the Tathāgata who is utterly detached from material things?

Even in the case of a non-Buddhist teacher who seeks material gain with attachment, it is not suitable for students to be demanding or rebellious, following the teacher’s instructions only if it pleases their self-centeredness and not following when they don’t feel like it. Needless to say, this should not be the behavior of disciples who have an actual tathāgata as their teacher. We must recall that our teachers instruct us for our benefit, not theirs. Wanting to progress on the path, we should listen well to the teachings and put them into practice so as not to waste either our teachers’ efforts or our own time. The Buddha continues (MN 70.27):

For a faithful disciple who is intent on fathoming the Teacher’s dispensation, it is proper that he conduct himself thus: “The Blessed One is the Teacher, I am a disciple; the Blessed One knows, I do not know.” For a faithful disciple who is intent on fathoming the Teacher’s dispensation, that dispensation is nourishing and refreshing. For a faithful disciple who is intent on fathoming the Teacher’s dispensation, it is proper that he conduct himself thus: “Willingly, let only my skin, sinews, and bones remain, and let the flesh and blood dry up on my body, but my energy shall not be relaxed so long as I have not attained what can be attained by human strength, human energy, and human persistence.” For a faithful disciple who is intent on fathoming the Teacher’s dispensation, one of two fruits may be expected: either final knowledge here and now or, if there is a trace of clinging left, [the state of a] nonreturner.

Our spiritual mentors' kindness in teaching us and caring for us is like that of the Buddha toward his disciples. To benefit from our mentors' guidance, we should abandon all arrogance and competitiveness and be humble and receptive. With sincere aspiration to gain realizations, we should let go of all worldly distractions and focus intently on Dharma study and practice. In that way, we will gain realizations and become bodhisattvas and eventually buddhas.

## *Behavior toward Spiritual Mentors*

Generating faith by reflecting on our teachers' qualities and generating gratitude and respect by reflecting on their kindness are the method to rely on our teachers mentally. As we become habituated to these attitudes, they will be reflected in our actions. When we admire and trust someone, we automatically want to live in a way that pleases him or her. In the Dharma this means training our mind through the systematic approach of the three higher trainings, the six perfections, and tantra.

Some sādhanas — meditation or ritual texts — especially those of guru yoga, say, “May I do only what pleases you [the spiritual mentor].” This phrase improperly understood can generate misconceptions. In some cultures, pleasing someone may be a way to curry a powerful person's favor or to avoid their punishment. A student with such a preconception may seek to please his teacher by offering goods or service with the wish to create merit, but also with the hope to receive recognition or appreciation. If the teacher doesn't reciprocate with sufficient appreciation, the disciple feels offended. It is important that we understand that *pleasing our guru* means to transform our mind into the path.

Some people appear to be devoted, humble disciples in their teachers' presence, but in other situations are obnoxious and rude. Others seek to please the teacher because he is holy, but are inconsiderate to other disciples and sentient beings in general. These behaviors are inappropriate. Assisting sentient beings and treating them well is one aspect of pleasing our guru because it fulfills his or her purpose of benefiting others.

We should avoid being possessive of our teachers or jealously competing with other disciples for their attention. Nor should we use them

to increase our sense of self-importance. Geshe Potowa reflected (LC 1:87):

We present-day followers do not value the teachings at all, but only value the guru's assigning status to us as demonstrated by each cup of tea that the guru gives us. This is a sign of our deep corruption.

Following our teachers' instructions is a skill we must develop. Sometimes we are resistant to advice that does not please our self-centered thought. Other times we take the advice out of context, thinking that an instruction to an individual student should be generalized to everyone. It is important to differentiate general advice that is applicable to everyone and advice meant for a specific individual. If someone walking on a narrow path between two precipices is too close to the left side, we call out, "Go right!" But if the person is too near the right side, we shout, "Go left!" Taken out of context these instructions seem contradictory, although they are not. To avoid confusion, we should inquire about the context in which an instruction was given and to whom it was given.

It is important to respect and to follow the advice of the resident teacher in the place where we live, even though that teacher may not be our principal mentor. The resident teacher heads the community, and for the sake of community harmony as well as for our own spiritual benefit, we should follow her guidance.

When we begin to give Dharma talks, we must avoid competing with our teachers, thinking, "More students come to my Dharma talks" or "I'm a more eloquent speaker than my teacher." Also to be avoided is trying to prove to our spiritual mentors how learned and articulate we are. In all ways, we should be genuinely humble and fully aware that any Dharma we know is due to their kindness and fortitude in teaching unruly disciples like us. Sometimes we may become frustrated or angry and blame our spiritual mentor for our unhappiness. At these times it is especially important to remember that our unhappiness is due to our previous destructive behavior that left karmic latencies on our consciousness, and our anger is due to the seed of anger within ourselves. We are responsible for our emotions, so rather than blame our mentor, it is wise to look inside ourselves and apply Dharma antidotes to our afflictions.

Usually after we calm down, we will feel regret for any harsh words we spoke to our mentors or misleading statements we may have made to cover up our faults. It is wise to go to our teacher and apologize so we can start afresh.

If we have difficulties in our relationships with our spiritual mentors, it could be due to relating to them in an improper way in previous lives. Engaging in purification practices with a strong determination to restrain from such actions in the future will help us clear these obstacles.

## REFLECTION

---

1. How would you benefit from having an open and honest relationship with your spiritual mentor?
  2. Contemplate and make examples of specific ways to make offerings to your spiritual mentors of material goods, service, and your practice.
  3. What are appropriate ways to behave with your mentors?
  4. What are inappropriate ways? How can you protect against engaging in them?
- 

We may encounter situations in which we hold different opinions from our teachers. We may be a vegetarian, but our teacher is not; we may think one political policy would be effective, while our teacher favors another. These are issues of personal preference. Respecting our mentor does not mean we have to agree on every issue. We must remember that we came to our spiritual mentor to learn the path to awakening, not to learn cosmology or debate human rights.

Even the Buddha's disciples didn't always agree with him. For example, one day the Buddha said to his close disciple, "Kassapa, you are getting old now. You've been wearing coarse and uncomfortable robes made of rags. Wear nicer robes offered by lay followers. Instead of eating food gathered only on alms rounds (*pinḍapāta*), accept lay followers' invitations to eat at their homes. Also, dwell in a simple residence, not in the forest." Kassapa replied that he wished to continue these ascetic practices not only because they were conducive for his own practice but also because future

generations would follow his example and derive benefit from them. The Buddha affirmed that this was Kassapa's way of caring for the welfare and happiness of others, his way of demonstrating compassion for the world (SN 16.5). Kassapa respectfully explained to his spiritual master, the Buddha, the reasons for not following his instructions. Seeing the virtue in Kassapa's explanation, the Buddha approved of his actions. There was no contention or resentment, only love between them.

Even advanced disciples may have differing views from their teachers on important issues, such as the correct view of emptiness. Atiśa's respect for his spiritual mentor Serlingpa was incomparable, but he did not follow him in every respect. Serlingpa espoused Cittamātrin tenets, while Atiśa held the Madhyamaka view. This difference did not impinge on the closeness of their mentor-disciple relationship.

Mipham Rinpoche composed a Dharma text and one of his disciples from Amdo wrote a critique of it. Someone questioned the disciple, "How can you critique your guru's work?" to which the disciple responded, "If something unacceptable is said, someone has to counter it." Similarly, even though the *Sūtra Unraveling the Thought* is the Buddha's teaching, Nāgārjuna and other sages critiqued it, saying its meaning is interpretable, not definitive.

In my own case, I had a difference of opinion with my junior tutor, Trijang Rinpoche, concerning the practice of Shugden. I explained to him my reasons for not doing this practice and for discouraging others from doing it. Trijang Rinpoche understood, and there was no damage in our relationship. I still hold him in the highest regard, and my faith in him has not decreased at all.

## *Preventing Difficulties*

All Buddhist traditions have faced difficulties with teachers who do not behave properly or abuse their status to gain offerings, respect, or sex. This is totally against the Dharma and harms not only the other person(s) involved but also the teacher and the existence of the Dharma. Some unfortunate situations have occurred in the West and Taiwan regarding a

few teachers in the Tibetan tradition. This has caused great confusion and feelings of hurt and betrayal in students' minds.

Many of these problems have arisen because the transmission of Tibetan Buddhism abroad is in its early stages. There is no central organization that affirms people's suitability to teach, so it is possible for unqualified people to go abroad and set up a Dharma center. Some people who would never be in a position to give teachings or initiations in the Tibetan community suddenly become "great lamas" in other countries. This is admirable if it is someone who remained humble and did not have the opportunity to show their great qualities in the Tibetan community. But if someone is merely taking advantage of being in another place to promote themselves, it is sad.

Once in another country, these people are separated from the support — and watchful eyes — of their peers and teachers. Isolated and perhaps lonely, they are flattered by the attention and offerings showered on them by devotees. This is no excuse for their poor behavior; everyone is responsible for their own actions. However, having two or three Tibetans of the same sex — or Westerners in the case of Western teachers — living at a Dharma center could help prevent temptation.

Because Buddhism is new in the West, students do not know how to evaluate a teacher's qualities and may rush into a guru-disciple relationship without adequate knowledge. Some students see Tibetans as exotic and mysterious — akin to the Western fascination with Shangri-La. Such an attitude is akin to blind faith and is not conducive for establishing a healthy mentor-disciple relationship. Monastics studying at the monastic universities in India have a much more realistic attitude about their teachers.

Because students are new to Buddhism, they may have blind devotion and obedience to spiritual mentors. Hearing about the great merit gained from making offerings to spiritual mentors, they may give them many donations and gifts — things that someone living in India would not have. The teacher becomes spoiled by the gifts and esteem of the students, and if he is not careful, this could lead to his taking advantage of well-meaning students.

I have received many letters from people in other countries asking me to do something about this, but it is not in my control. Tibetan Buddhism is

not organized like the Catholic Church with a pope and Vatican administration. I cannot make someone return to India or force him to stop wearing robes. When I teach, I give clear instructions about suitable behavior for teachers, both monastic and lay. If people do not listen to me then, it is doubtful that they will heed instructions from my office or the Department of Religious and Cultural Affairs.

As Buddhism becomes rooted in other cultures and people understand it better, they will know the criteria for qualified teachers and will examine potential teachers with care; they will enter into guru-disciple relationships with greater understanding and clarity. In addition, more teachers will live and travel abroad, and people will be able to choose among them.

When looking at damaging situations that have arisen in previous years, I believe both sides have responsibility to prevent such happenings in the future. A spiritual mentor is responsible for his or her behavior. A student is responsible for not going along with any improper behavior on the teacher's part. So education is needed on both sides. Until now, no special training is given to people who become spiritual mentors; their spiritual training is seen as sufficient. Compassion and altruism are the very nature of Buddhist practice. If teachers have cultivated these, they will not abuse their influence on others. I hope Tibetan monasteries will speak more directly to their members about the challenges of living in the West and in Taiwan. Lay Tibetan teachers should seek out ways to prepare themselves to teach in different cultures.

## *Unusual Behavior*

Some past Buddhist siddhas behaved in unconventional ways — they drank alcohol and had consorts. These siddhas were fully realized lay practitioners who could discern what was of long-term benefit to self and others, and their actions were in accord with training on the completion stage of highest yoga tantra. They could demonstrate miraculous abilities, which allayed the public's concerns about their level of realization. For example, they could cause an apple to fall from a tree a distance away and then make the apple go up and reattach to the tree, and Bhikṣuṇī Lakṣmī is said to have cut off her head and then reattached it.

Nowadays there are very few people who are qualified to practice in this way, and because of the difference in society, such conduct is harmful to the Dharma. Nevertheless, some people act in an unconventional manner and proclaim realizations, but do not have any demonstrable exceptional qualities to display in order to confirm their spiritual attainments. Even if they did, I wonder if it would be wise in today's society to show them. The siddhas of old generally displayed their miraculous powers to small, select groups of people who had the karma to benefit from seeing them. Today such an event would be flashed around the world by modern telecommunications. Reporters would want to interview the siddhas and companies would ask them to promote their products. I doubt such attention would be beneficial to either the Buddhadharma, the siddha, or society. Even if our realizations are equal to those of divine beings, our behavior should conform to convention.

Padmasambhava said that as we perfect our realization of emptiness, our respect for karma and its effects and for ethical conduct correspondingly increases. Gaining the correct view is not easy; many misunderstandings about emptiness exist. A prominent one is to claim that since everything is empty, there is no good or bad, and that someone who realizes emptiness is beyond ethical precepts. Some people state this on the basis of faulty reasoning; others because they have had some sort of experience in meditation that is a "wrong realization." They then use this as a rationalization to take advantage of others or to justify enjoying sense pleasures.

Although conventional phenomena do not appear to someone who is in nondual meditative equipoise on emptiness, that does not mean they are nonexistent. Conventionalities exist and the law of cause and effect functions, no matter what our level of realization. If the people who say there is no good and no bad really believe that in their hearts, why do they gravitate toward sense pleasures and self-indulgent behavior? They would not discriminate between attractive and unattractive things at all. If they had genuinely realized nonduality, they would eat poor-quality food, live in the streets and help the poor, do relief work in war zones, and serve others who are suffering. All these situations would be the same to them.

The Buddha was always humble, and he is our Teacher. He worked hard on the path — he lived simply, mixed with everyone, and practiced continuously. Many people nowadays think they are more privileged than the Buddha and do not need to live and practice as he did. In fact no one is above the Buddha; we should follow his example.

Everyone is accountable for his or her behavior, and the practice of tantra is never an excuse for unethical behavior. The *Six-Session Guru Yoga* says, “I shall abandon the four roots, liquor, and unsuitable activities.” The *Kālacakra Tantra* states that the ideal lay tantric practitioner should follow the monastic discipline, except for wearing robes and participating in monastic ceremonies. That means that an ideal lay tantric practitioner would be celibate and abstain from intoxicants.

Although a small amount of alcohol is placed on the altar during some tantric rituals, only a few drops should be consumed after doing the meditation dissolving it into emptiness and transforming it into pure nectar. Recreational drinking by teachers or students at Dharma centers is inappropriate and should be abandoned.

In our present situation of cyclic existence, we are constantly deceived by the false appearances of objects that seem to exist inherently. Our afflictions arise on the basis of these false appearances. Dharma practice is designed to stop false appearances and the grasping at them. What, then, is the purpose of deliberately cultivating more false appearances through taking intoxicants?

Although some highly realized yogis and yoginīs in the past drank and sometimes took on the appearance of being drunk, they were exceptional practitioners with direct nonconceptual realization of emptiness. For them, ingesting feces, urine, and alcohol were all the same. However, I do not think most practitioners nowadays would drink urine or eat feces with the same enthusiasm they have when drinking alcohol!

On a very advanced level of highest yoga tantra, the joining of the male and female organs is a technique for making the subtlest mind manifest and using it to realize emptiness. Here the physical body is used as a mechanical device for furthering insight. Ordinary lust and uncontrolled emission or orgasm are absent. This union is a method for overcoming ordinary desire. It is not free license to indulge in sexual intercourse with everyone. In the

past, in Tibet a practitioner had to demonstrate supernatural powers, such as flying through the sky, to qualify to train in such practice. If the person was a monastic, he or she would disrobe first and then do this practice in a circumspect manner.

Tantric precepts govern this practice and practitioners must adhere to them. Tantra is a higher practice, which implies that a person who takes tantric ethical restraints has sufficient control over his or her body, speech, and mind to keep the Vinaya and bodhisattva ethical restraints, which are comparatively easier to keep. People who find it difficult to observe the five lay precepts are not suitable vessels for tantric practice because they lack the restraint needed to fulfill the tantric precepts and pledges.

It may happen that an unmarried teacher meets an unmarried student. If the relationship develops in a normal way, with mutual agreement and respect, and they decide to marry, it is fine. These two people treat each other equally, so there is no difference in power or status when deciding to have sexual relations. The teacher is not on a throne then! However, if the teacher is with one student one month and another the next, that is not right. Coercing or forcing sexual contact is wrong. Teachers should not manipulate a student into having a sexual relationship by saying she has the signs of being a *ḍākinī* or has great Dharma potential, or that having sex with him is a special blessing. Some people who have been sexually abused by Buddhist teachers give up their faith and respect for the Buddha. This makes me very sad.

Some texts make statements such as, “See all actions of your spiritual mentor as perfect” and “Follow your mentors’ instructions exactly with complete devotion.” These statements are made in the context of highest yoga tantra and apply to exceptional cases in which both the spiritual master and the disciple are highly qualified — for example, Tilopa and his disciple Nāropa, and Marpa and his disciple Milarepa. If we are not the caliber of Nāropa and our mentor does not have the qualities of Tilopa, these statements can be greatly misleading. Hearing stories of Tilopa’s seemingly abusive treatment of Nāropa — instructing him to jump off a cliff and so forth — and Marpa instructing Milarepa to build stone buildings and then tear them down, some people think that following their teachers’ instructions includes allowing themselves to be abused. This is not the case

at all! Marpa told Milarepa, “Do not treat your students like I treated you or the way the great Nāropa treated me. Such practice should not be continued in the future.” This is because it is very rare to find both a teacher and a disciple who have realizations comparable to those great masters.

I have had many teachers whom I value greatly, but I cannot accept seeing all their actions as perfect. When I was in my teens, my two regents fought with each other in a power struggle that involved the Tibetan army. When I sat on my meditation seat, I felt both teachers were extremely kind and had profound respect for them; their disagreements did not matter. But when I had to deal with the difficulties caused by their dissension, I said to them, “What you are doing is wrong!” I did not speak out of hatred or disrespect, but because I love the Buddhadharma, and their actions went against it. I felt no conflict in loyalty by acting in this way. In our practice we may view the guru’s behavior as that of a mahāsiddha, but in the conventional world we follow the general Buddhist approach, and if a certain behavior is harmful, we should say so.

The advice to see all the guru’s actions as perfect is not meant for general practitioners. Because it is open to misunderstanding, it can easily become poison for both mentors and students. Students naively whitewashing a teacher’s bad behavior by thinking anything the guru does must be good gives some teachers a free hand to misbehave. On the teacher’s part, poor behavior is tantamount to drinking the hot molten iron of the hellish states, and it contributes to the degeneration of the Dharma in the world. Only in particular situations and to particular practitioners should it be taught that all the guru’s actions are perfect. Buddhism is based on reasoning and wisdom and must remain so.

Because I frequently give Dharma teachings, many people place great faith in me. But for many years I was also their secular leader. If they saw every action I did as perfect, it would adversely affect the administration. It was important for them to share information and ideas with me and not simply acquiesce to everything I said out of respect.

If you have taken someone as your spiritual mentor and discover he is engaged in some questionable behavior, you may stop attending his teachings. Avoid disrespect or antipathy; anger will only make you miserable. The *Kālacakra Tantra* advises maintaining a neutral attitude and

not pursuing the relationship any further. Keep your distance and cultivate relationships with other teachers, but do not angrily denounce this person. He benefited you in the past, and it is appropriate to acknowledge and appreciate that even though you do not follow him now.

## *Resolving Problems*

Just as there are these three types of spiritual mentors and three ways of relating to them, there are three ways of responding if our mentor asks us to do something outside the general framework of the Buddhadharma — any action that contradicts the Dharma or reasoning. According to Vinaya, we should not follow that advice and should express our reason to our teacher. According to general Mahāyāna, if an instruction conforms to the Buddhist path, follow it; otherwise, do not. According to Vajrayāna, if your guru gives an instruction that does not accord with the Dharma, that is illogical, or that you are incapable of doing, do not follow it. Explain your reasons and discuss the situation with your teacher. This advice comes directly from the Buddha and is found in the scriptures. Tsongkhapa explains (LC 1:86):

*Question:* We must practice in accordance with the gurus' words. Then what if we rely on the gurus and they lead us to an incorrect path or employ us in activities that are contrary to the three ethical restraints? Should we do what they say?

*Reply:* In this regard, Guṇaprabha's *Vinayasūtra* states, "If the abbot instructs you to do what is not in accord with the teachings, refuse." Also the *Cloud of Jewels Sūtra* (*Ratnamegha Sūtra*) says, "With respect to virtue, act in accord with the gurus' words, but do not act in accord with the gurus' words with respect to nonvirtue." Therefore you must not listen to nonvirtuous instructions.

Nevertheless it is improper to take a guru's wrong actions as a reason to misbehave yourself, such as disrespecting or despising your guru. Rather, excuse yourself politely and do not engage in what you were instructed to do. The *Fifty Verses of Relying on a Spiritual Master* says:

If you cannot reasonably do as the guru has instructed,  
excuse yourself with soothing words.

A story in the *Jātaka Tales* tells of Śākyamuni Buddha's previous life as a bodhisattva-disciple of a teacher who told his students that stealing was virtuous. While the other students nodded in agreement and prepared to fulfill their teacher's instruction to rob others, the bodhisattva sat quietly. Asked to explain his silence and lack of enthusiasm, he said that stealing was unethical and contradicted the general conduct explained in the teachings. The teacher, who had been testing the students, then praised him.

If you think the advice of your teacher is unskillful or unwise even though it may be ethical, explain your way of thinking and discuss the issue with the teacher. It is appropriate to ask questions in order to clear your doubts. This leads to better communication, fewer misunderstandings, and may increase your respect for your teachers.

In 1993 at a conference with Western Buddhist teachers in Dharamsala, Western teachers told me of a few Buddhist spiritual mentors whose behavior regarding finances, sexual relationships, and so on deeply disturbed people and gave the wrong impression of Buddhism. I told them that these "teachers" do not follow the Buddha's teachings. I encouraged them to speak frankly with these teachers, and if they do not listen, then they should make their behavior public. Although these teachers do not care about the Buddha's teaching, perhaps they will care about their reputation and change their ways. Some people ask me to speak to these teachers, but that has little effect. If they do not listen when I give teachings and if they do not respect the Buddha's teachings, they will not listen if I give them personal advice.

You may wonder what to do if a friend is a student of a teacher whose ethical conduct is questionable. Tantric teachings speak of the destructive karma created by separating a mentor and student, yet you want to prevent your friend from harm. If you see that your friend's relationship with a teacher is definitely harmful, it is suitable to warn him or her, simply stating facts in a nonjudgmental manner. But if that relationship is not harmful, it is best to leave things alone. The key to whether you create the negative karma of separating a disciple and teacher lies in the motivation. Actions

motivated by an angry, judgmental attitude are to be avoided, whereas those based on compassion and tolerance are encouraged.

When Tibetan teachers ask you to raise money or give donations to their monasteries, use your discriminating wisdom. In some cases a legitimate need exists and the funds will benefit people. In that case, it is good to help support worthwhile projects if you can. But when such funds will be used for other purposes, such as buying unnecessary consumer goods for the teacher's family or sending them on a holiday, there is no need for you to give.

As with most problems, the best approach is to take steps to prevent them. I recommend preparing Tibetan teachers to teach in other countries, establishing support systems so that they are not cut off from their peers while teaching abroad, and ensuring that they have enough time for their own Dharma practice.

Also, I suggest educating Westerners on the qualities of good spiritual mentors, the meaning and purpose of the mentor-disciple relationship, and constructive modes of dealing with uncomfortable requests. Of course, both parties need to learn, reflect, and meditate on the Buddhadharma and to adhere to the basic Buddhist tenets and guidelines for ethical behavior. When they do, spiritual mentors and disciples alike benefit, as will many other living beings.

## *When Our Spiritual Mentors Pass Away*

Because our spiritual mentors are valuable in our lives and dear to us, when a spiritual mentor passes away we will probably feel a great loss. When Dromtonpa was dying, he lay his head in the lap of one of his close disciples, the great scholar Potowa. Saddened by the fact that his teacher was leaving, Potowa was crying, and a tear fell on Dromtonpa. Drom looked up and asked, "Why are you crying?" Potowa responded, "Up to now, I've had you as my guru, so there was always someone I could ask questions and seek counsel and guidance from. But now you are leaving, and I will have no one to clarify points of doubt and guide me on how to practice."

Dromtonpa counseled Potowa, “You do not need many gurus. From now on, seek your guru in the Tripiṭaka, the three baskets of scriptures. The sūtras, tantras, treatises, and commentaries by the great sages will be your teacher and spiritual guide. Rely on them, because I would give you no advice different from that of the Buddha and the great masters.” This advice is important for us to bear in mind.

It is beneficial to repeatedly make aspirational prayers to meet qualified Mahāyāna spiritual mentors in the future and to accumulate merit and wisdom, which are the causes to be cared for by such mentors, until we reach full awakening.

## *Advice to Spiritual Mentors and Disciples*

Years ago I heard about an abbot in Kham, Tibet. Some visitors came to see him. He was not there and his attendant told the visitors, “He has gone to scare the people in the nearby town.” It seems that this lama told people they would go to hell if they didn’t heed his instructions. This is not the Buddhist way.

I would like to speak frankly to both spiritual mentors and Dharma students. From 2012 to 2015 I taught the eighteen lamrim texts. Some of these texts emphasize that the guru is Vajradhara, and if you don’t listen to your guru’s instructions, you will be born as a hell being. What is all this about? The Buddha never said if you don’t listen to his teachings and don’t do as he says you will be reborn in hell! The Buddha said we should not accept teachings with blind faith but through having investigated and analyzed them. This is the true way to follow the Buddha’s teachings.

If something doesn’t hold up to reasoning, we should not accept it unless it can legitimately be interpreted to mean otherwise. For this reason even some Nālandā masters rejected statements in the sūtras. After examination I eschewed the traditional cosmology with Mount Meru at the center. When I said this during teachings in South India, some monks were initially uncomfortable. How can the Dalai Lama reject Mount Meru? But no one could say I was no longer a good Buddhist because I disagreed with Vasubandhu on that topic. Our having freedom to examine the teachings is

wonderful; this is a special quality of Buddhism that the Buddha himself encouraged.

Nowadays we need to introduce people to the Dharma by teaching the two truths and the four truths of āryas so that people will understand the real teachings of the Buddha. Contemplating those topics gives people confidence; they will understand the Dharma and appreciate their precious human lives. With faith based on reasoning and understanding, they can later learn the ten powers of a buddha based on understanding the *tathāgatagarbha*, the potential to become a buddha. Otherwise it seems that the teacher is imposing beliefs on disciples and threatening them with a hellish rebirth should they have doubts. It also appears that some teachers impose the notion that the guru is the Buddha on disciples who do not understand the true Dharma, and in this way manipulate disciples.

If you study well, you will gain confidence in the Dharma based on understanding. A teacher who encourages you to think about the teachings is a good teacher. People who want to teach the Dharma must have knowledge and experience and act with integrity. The more respect a spiritual mentor receives, the humbler he or she should become. Mentors must discipline their body, speech, and mind by practicing the three higher trainings and should not be content with a partial understanding of the Dharma. Since there are false gurus, students must check carefully.

In short, we need to be twenty-first century Buddhists. Following tradition and believing with blind faith is the old way. To be Buddhists now, we must have a fuller knowledge of Buddhism, especially the Nālandā tradition, which presents the Dharma in a systematic fashion. Nālandā masters refute wrong views, establish their own views, and then clarify any remaining questions. We must read, study, and hear teachings on the texts by these great Indian masters and then use our human intelligence to the maximum to investigate their meanings.

For forty years now, I have urged monasteries that principally perform rituals to do more study. I've made sure that the nuns have access to higher studies and have encouraged lay Buddhists to study as well. When you learn the Dharma, don't limit yourself to what is said in the textbooks of your own monastery. Study broadly.

## 6 | How to Structure a Meditation Session

### *Types of Meditation*

OUR HAPPINESS AND SUFFERING is directly related to the objects our mind focuses on and our thoughts and interpretations of them. A mind habituated to focusing on our own or others' faults, exaggerating them, and angrily complaining about them is an unhappy mind. A mind steeped in seeing others' kindness, appreciating it, and wishing them happiness is a peaceful mind. Mental purification is needed to release destructive mental habits and cultivate beneficial ones. Transformation occurs through familiarizing ourselves with wholesome objects and beneficial perspectives.

Familiarization occurs in both formal meditation sessions and in the time between sessions when we go about our daily life activities. Because our unsatisfactory experiences in cyclic existence have no break, neither should our efforts to transform our mind and free it from afflictions. As long as we are under the influence of ignorance and karma, it is necessary to make continuous effort on the path and to discipline and transform our mind in both meditation sessions and break times.

There are several ways of speaking about the various types of meditation. One way is in terms of stabilizing and analytical meditation. *Stabilizing meditation* (T. 'jog sgom) channels the energy of the mind and generates single-pointedness. It enables the mind to remain on a virtuous object, such as the Buddha, or a neutral object, such as the breath, for as long as we wish without distraction or laxity, and it enhances our concentration (*samādhi*). Concentration brings many benefits: it enables us to investigate objects such as impermanence and emptiness intensely and to familiarize ourselves with virtuous emotions such as love and compassion without distraction.

*Analytical meditation* (T. *dpyad sgom*) enables us to penetrate and understand an object. Meditation on emptiness cannot be done unless we understand what emptiness is and can identify it correctly. Reasoning is necessary before we can progress to direct nonconceptual perception. Analytical meditation is also used with other lamrim topics — precious human life, death, the qualities of the Three Jewels, and so forth. Here we contemplate the various points the Buddha and great masters have employed to explain these topics. Reflecting on the points one by one can bring deep, transformative understanding.

Both stabilizing and analytical meditation can be done in one meditation session. For example, we reflect on the qualities of our precious human life with analytical meditation. Understanding the purpose and rarity of our precious human life, we automatically feel extremely fortunate, like a beggar who has found a jewel. We then concentrate on that feeling with stabilizing meditation to integrate the experience with our mind. This enables us to remember the preciousness of our life in the break times and influences the choices we make in life. Similarly, analytical meditation is employed to refute inherent existence and leads to a correct understanding of emptiness. We then focus on this absence of inherent existence with stabilizing meditation to accustom our mind to it.

Another way of discussing meditation is meditation on an object and meditation to transform our subjective experience. In *meditation on an object*,<sup>31</sup> we work to apprehend a particular object — impermanence or emptiness, for example — that we haven't previously apprehended. Investigating that object with wisdom, we cultivate a correct ascertainment of it and then familiarize ourselves with that. The mind meditating on impermanence first focuses on a particular thing, such as the body, and then develops an understanding of its attribute of impermanence — the body's momentarily changing nature — which we haven't previously realized. The meditating mind realizes the body's impermanence, and impermanence becomes that mind's apprehended object.

The meditation on emptiness is similar. Emptiness is an object we haven't perceived previously, and the meditating mind endeavors to understand and then see it more clearly. First we obtain a rough idea of the lack of inherent existence, then we apprehend it with a correct inferential

cognizer. Finally, we remove the veil of the conceptual appearance and cognize emptiness directly.

In *meditation to transform our subjective experience*,<sup>32</sup> we mold the mind into a particular subjective experience. Compassion is not a separate object that we try to ascertain, as in meditation on an object. Rather, we want to transform our mind into the subjective experience of compassion. To do this, we contemplate sentient beings' kindness and their duḥkha. A wish for them to be free from duḥkha and its causes arises in us, whereby our subjective mental experience becomes compassion. Through familiarization with this experience over time, our compassion gains in strength, until eventually it arises naturally whenever we see a sentient being. To cultivate faith, fortitude, and love, we similarly meditate to transform our subjective experience.

When meditating on compassion, the observed object of our meditation is sentient beings who experience any of the three types of duḥkha. The aspect is the wish to free them from this duḥkha. Compassion does not apprehend freedom from suffering. It is an aspiration and a heart-transforming experience.

Another type of meditation involves visualization, for example, imaging a Buddhist deity and its maṇḍala (environment). Imagining being and acting like a buddha encourages us to create the causes to become one.

Meditation sessions enable you to deepen your understanding and intensify your concentration on the meditation object. In the break times when eating, walking, or engaging in daily life activities, do not forget the meditation topics. With a corner of your mind recall what you have meditated on. You may wish to choose one lamrim topic each day, meditate on it in the morning, and view your experiences that day through the lens of that topic. One day dwell on precious human life — investigate it during meditation sessions and be aware of your fortune and the opportunity it provides during the day. The next day focus on death and impermanence, and as you go about your daily activities, recall that you and the people and environment around you are transient. In this way, avoid becoming attached to anything. The following day, focus on refuge, and so on, cycling through the lamrim topics. In this way, integrate the meaning of each lamrim topic into your life day by day.

You may prefer to focus on one lamrim topic for a week or even a month before going on to the next. This enables you to go more deeply into each one. Alternatively, focus on the topic that seems most appropriate to help subdue the afflictions likely to arise that day, tailoring your practice to your needs each day.

Regularly reading texts about your meditation topic and discussing it with Dharma friends are also helpful. This is like keeping a fire's embers glowing overnight so that the fire is easy to start the next morning. Similarly, cultivating mindfulness of a lamrim topic during break times invigorates and intensifies our meditation sessions and aids our mental development.

In this way, gradually develop your mind. I often advise my friends, including those doing long retreats, not to expect spiritual development to occur in only a few years. The key is to make effort daily so that over time gradual change occurs. We progress toward our long-term goal of buddhahood day by day.

#### REFLECTION

---

1. Review the meaning of meditation on an object and meditation to transform our subjective experience. Make examples of each.
  2. Review the meaning of stabilizing and analytical meditation. Make examples of how you could employ those in your practice.
- 

## *Meditation on the Lamrim*

Having a consistent and continuous meditation practice produces stable changes in our mind. I would now like to outline how to do a regular daily meditation practice based on the lamrim — stages of the path — in the hopes that you will implement this for your own and others' benefit. With a strong foundation gained through meditation on the lamrim, your natural perspective on life will be the Buddhist worldview, and your character will be shaped by the aspirations for liberation, bodhicitta, and wisdom.

Some people prefer to read a Dharma book, review notes taken during oral teachings, listen to recordings, or watch videos of Dharma talks before meditating so they can meditate on the meaning of what they just studied. Other people prefer to meditate first and study later. Such time for study, reflection, and meditation is important for your emotional, physical, and spiritual health. Make a place for this quiet time in your life and let it become a habit. You'll experience the benefits.

The best time for meditation is in the early morning as the mind is clearer and sharper than and not yet distracted by the day's activities. Familiarizing yourself with wholesome thoughts and emotions in the morning influences how you live the rest of the day, especially if you generate bodhicitta, which opens your heart to all sentient beings, and remember that people and things are transient and lack an independent nature, which reduces your grasping. If your schedule doesn't permit you to meditate in the morning, meditate at another time in the day when you can relax and will not be interrupted.

Although meditating for an hour is good, if that is not possible, do what is comfortable for you. Conclude before you feel tired so that you will have a positive feeling about meditation. Pushing yourself to meditate for longer than you are comfortably able to will make your mind resistant to future practice. Ten minutes of good-quality meditation is better than sitting for an hour with a distracted or sleepy mind. However, a person who is very busy and has little fortitude will find meditation almost impossible. He should do just a short prayer and then finish. That's best.

To get up early, we may have to sacrifice late-night activities in order to go to bed earlier. This may be easier for me to do because I live in a monastic environment in Dharamsala, an Indian town that is fairly quiet in the evening. In other places, there is entertainment and social life, so sticking to a regular schedule of daily meditation may be more challenging. Just as daily meals and exercise are necessary to keep our body healthy, daily spiritual practice is essential for our mental well-being and progress toward awakening.

Meditation sessions consist of three parts: the preparation, actual practice, and conclusion. The *preparation* involves taking refuge in the Buddhas, Dharma, and Saṅgha; generating the bodhicitta motivation to

attain full awakening for the benefit of all sentient beings; and purifying and creating merit. The *actual practice* is meditating on the lamrim topic for that session. At the *conclusion*, dedicate the merit created to attain buddhahood and lead all sentient beings to awakening as well.

Try to avoid developing bad habits in your meditation. As in other activities, correcting a bad habit in our meditation practice is more difficult than establishing a new habit. Pay attention to the meditation instructions and do your best to follow them; if necessary, you can adjust them slightly to suit your personal needs and situation.

## *The Six Preparatory Practices*

When describing how to structure a meditation session, lamrim texts begin with the six preparatory practices that are done before the actual practice. These are: cleaning the room and arranging the altar, making offerings, sitting in the correct meditation position, taking refuge and generating bodhicitta, contemplating the seven limbs, and requesting inspiration from our root and lineage spiritual mentors

### *Cleaning the room and arranging the altar*

Begin by cleaning the room and arranging the altar to enhance the environment in which you meditate and beautify the place where you will invite the buddhas and bodhisattvas to come. Cleaning the environment is analogous to cleansing your mind and making it more receptive. Meditating in an uncluttered and peaceful room is best, not in the same room as the television, computer, or your children's toys. However, if that is not possible, do your meditation session in whatever space is available. It is not necessary to have a separate room for meditation.

On a table, set up the symbols of the Buddha's body, speech, and mind: a statue, a Dharma text, and a stūpa, respectively. Place the image of Śākyamuni Buddha in the center, as he is the founder and source of the teachings. I am sad to see that nowadays some people place meditational deities and not the Buddha at the center of their altars, as if they value the meditational deities more than the Buddha. Seeing the Buddha's image

reminds you of his qualities, which gladdens and motivates your mind. Avoid buying costly Buddha images with the motivation to show them off to friends, and cultivate an attitude of respect for all Dharma items.

### *Making offerings*

Making offerings enables you to create vast merit and cultivate the mind that delights in giving. Offer items that are pure in two regards. First, they are procured honestly, through right livelihood. Avoid obtaining offerings — or for that matter, daily life requisites — through the five wrong livelihoods of flattery, hinting, giving a small gift in the hopes of receiving a large one, coercion, or hypocrisy. Second, the offerings are given with a pure motivation — a sincere wish to practice the Buddhadharma for the sake of all beings — not simply to receive some benefit for this life alone or to have a beautiful altar.

We may offer things from our own culture and items easily available in the place where we live. It is not necessary to imitate Tibetan-style offerings. In Tibet we made food offerings and tormas (ritual cakes) out of tsampa (barley flour) because it was readily available. But in the West tsampa is hard to come by, and it seems strange to eat one thing and offer something else to the Three Jewels, so offer fruit, cookies, and other foods that you consider delicious instead of tormas made of tsampa. I do this too when traveling in other countries.

Most important, the offerings to the buddhas and bodhisattvas should be the same or better quality than what we eat. Avoid making lavish offerings with the hidden motivation of eating them later. Tibetans know that tsog offerings will later be distributed to the assembly, so they use delicious ingredients to make them. But the tormas that will not be eaten are made of cheap ingredients and sometimes taste so bad that no one would even want to eat them! This is not as it should be.

Arrange the offerings nicely with respect for the Three Jewels and with the motivation that the Buddhadharma long endure and sentient beings benefit from it. Whether we are able to offer a lot or a little, our motivation is most important because it is the purity of our intention that determines the value of our actions. Although Milarepa was impoverished, he gained

high realizations because of his strong faith, correct motivation, and joyous effort.

### *Sitting in the correct meditation position*

If you can, sit in the seven-point position of Buddha Vairocana as outlined in the *Explanatory Tantra Vajramālā*. Sitting in this way enables the body to remain firm and the mind steady. It also aids the flow of the subtle energies in the body.

1. Sit on a cushion of whatever shape and size works best for you with your legs in the vajra position — the left foot on the right thigh and the right foot on the left thigh. If this isn't possible, other cross-legged positions are fine. Some people find sitting on a slanted meditation bench enables their back to be straight and is easier on their knees. You may also sit on a straight-backed chair with your feet flat on the floor.
2. Put your right hand on top of the left, palms up. Touch the thumbs together lightly and put your hands in your lap near your navel.
3. Keep your shoulders level.
4. Straighten your back.
5. Tuck your chin in slightly so that the tip of your nose is aligned with your navel, but do not let your head droop.
6. Keep your lips and teeth natural, with your tongue on the upper palate to prevent thirst as well as excess saliva.
7. Direct your eyes toward the tip of your nose. If this is difficult, direct your gaze downward in front of you without focusing on anything specific. As your mind becomes more concentrated, you will cease to notice what comes into your field of vision.

Keeping your eyes slightly open when you meditate prevents drowsiness. If your eyes are focused on an attractive object, distraction will easily arise, so place them on a neutral object. Although your eye consciousness may see this object, do not focus on it or let the mental consciousness — the meditating consciousness — get involved with it. Do not intentionally close your eyes, but if they naturally close, it is fine. If you

become accustomed to meditating with your eyes slightly open, restraining your senses in break time will be easier because you are already used to ignoring sense data. The position of the eyes may differ according to the practice. When doing the Kālacakra practice, the eyes are open and look up; in Dzogchen, the eyes are open and look straight ahead.

Your physical position should be firm yet relaxed; avoid tensing your muscles. Sitting erect helps the mind to be clear and alert, while lying down often leads to falling asleep. However, this may not be true for people with different habits or cultural backgrounds, so judge this for yourself.

Depending on the layout of the room, facing east is recommended because the sun rises there and light uplifts your mental attitude and dispels mental sluggishness. Sitting in a well-lit room also serves that purpose if you struggle with drowsiness. If your mind is easily excited, you may face the wall, but otherwise it is not necessary to do that.

The Vairocana posture is sometimes said to have eight points. In this case, calming the mind by observing the breath is added to the above seven. This is especially helpful to do if your mind is agitated. Breathe in and out in a natural, even rhythm without undue noise or effort. Do not force your breath. Place your attention on the breath, experiencing and observing each breath, without letting the mind stray to other objects. If you get distracted by a sound, thought, or physical sensation, simply acknowledge it, and then return your attention to the gentle flow of the breath. In this way, let your mind calm down in preparation for taking refuge and generating bodhicitta.

Meditation on the breath may be done in several ways and for different purposes in both Buddhist and non-Buddhist contexts. Here it is done to calm the mind before meditating on the stages of the path. Meditations to develop serenity and insight using the breath as the object of meditation will be discussed later.

After observing the breath for a few minutes, examine your mind to see if any afflictions are present. If they are, reflect that you have experienced so much misery in this and previous lives by following attachment, anger, and confusion. Make a firm determination not to get entangled with them, but to do your practice with focus.

*Taking refuge and generating bodhicitta*

The process of taking refuge and generating bodhicitta begins with visualizing the Buddha, Dharma, and Saṅgha in the space in front. You may do the simple visualization of Śākyamuni Buddha, thinking he is the embodiment of all the Buddhas, Dharma, and Saṅgha, or the complex visualization with the lineage teachers, deities, bodhisattvas, and so on surrounding the central figure of Śākyamuni Buddha. When meditating mainly on the method side of the path — the cultivation of renunciation, bodhicitta, and the like — you may want to visualize Avalokiteśvara and Maitreya near the Buddha, and when developing wisdom, you can imagine Mañjuśrī next to the Buddha. When facing obstacles, such as illness or injury, visualize Tārā seated near the Buddha, and so on.

Visualization is an imaginative process done in our minds. Do not think you should “see” things as you do when your eyes are open; we are generating mental images in our mind’s eye. For beginners these images will be vague, but as we progress and develop familiarity with visualization, they will become more vivid.

You may wonder why Tibetan Buddhism encourages visualization. Imagining the holy beings naturally makes us reflect on their awakened qualities; thinking that we are in their presence creates a feeling of closeness with them. All of this strengthens our faith and confidence in the Three Jewels, which are more important than the clarity of the visualization. To review, there are three types of faith: inspired, aspiring, and believing faith.<sup>33</sup> We cultivate inspired faith by discerning and reflecting on the wonderful qualities of the Three Jewels, making our mind inspired with a vivid reflection of their qualities. To this joyous state of mind, we add understanding of the four truths of āryas, which leads us to be convinced that the Three Jewels — particularly the Dharma Jewel, which consists of the third and fourth truths — are nondeceptive objects of refuge that we can fully rely on to guide us to liberation and awakening. This is believing faith. Strengthening this faith, we gain stronger determination and do not simply admire or believe in the Three Jewels but aspire to become like them. This is aspiring faith, which gives us great enthusiasm to practice.

To engage in the uncommon Mahāyāna practice of taking refuge, in addition to visualizing the Three Jewels in front, imagine all sentient beings surrounding you. Recalling that they are experiencing various types of

duḥkha in cyclic existence, generate strong compassion that wants them to be free from all duḥkha. While chanting the refuge verse, think that you are leading them in turning to the Three Jewels for refuge.

Some people think that generating compassion is useless because it is impossible to eliminate suffering completely. Remembering that all afflictions can be eliminated and that all beings have the potential to become buddhas clears this misconception. Other people fear that thinking about others' suffering will cause them to feel hopeless and fall into despair. Should this happen, our focus has shifted from compassion for others to personal despair that wants to protect ourselves from witnessing anything discomfoting. To renew our compassion, we should return our focus to sentient beings and recall the joyous and skillful ways in which the Three Jewels continuously work to benefit them. This gives us hope and inspires us to work for the welfare of others.

Reflecting in this way, our compassion for sentient beings and faith in the Three Jewels become so strong that we want to express them by reciting “I take refuge in the gurus. I take refuge in the Buddha. I take refuge in the Dharma. I take refuge in the Saṅgha.” These words reflect our inner feelings of faith and determination.

Some people ask why “I take refuge in the gurus” is added, since Buddhists have three objects of refuge, not four. The spiritual master is the one who introduces us to the Three Jewels, and due to his or her kindness, we are able to learn and practice the path and eventually become the Three Jewels. To emphasize the importance and kindness of our spiritual mentors, especially in tantric practice we include them when taking refuge. Here the guru is seen as inseparable with the Buddha.

Recite each line of the refuge several times before going on to the next. This is more effective than reciting all the lines together several times. While reciting each line, focus on light streaming from that refuge object into you, purifying all negativities you have created in relation to that refuge object and bringing its inspiration into you. In this or previous lives, we may have angrily criticized our spiritual teacher or defamed the Buddha. We may have deprecated the Saṅgha with our sarcastic remarks.

Perhaps we criticized subtle points of the Dharma thinking they are just Tibetan culture, or said that the Dharma is not a correct path because it does

not agree with our ideas. Before we can accurately discriminate what is Asian culture and what is the Buddha's teachings, it is unwise to dismiss certain teachings, "This doesn't pertain to me. It is only meant for Tibetans." Similarly, it is not wise to declare, "The Buddha didn't teach this and that" simply because we do not feel comfortable with that teaching. It is wiser to maintain an open mind and think, "I do not understand this point and will continue to learn and think about it until I reach a clear understanding. In the meantime, I will practice the teachings that I understand because doing so benefits me."

Negativities in relation to the Saṅgha are created by criticizing āryas or the monastic community. Since we ordinary beings are not capable of discerning the spiritual levels of others, it is wiser to avoid hostile judgment concerning anyone, as this interferes with our refuge and creates destructive karma. Avoid making sweeping statements about the Saṅgha, for example, saying that monasticism is useless and outdated, that monastics are parasites on society, or that celibacy is unhealthy. Such misconceptions make me sad. Our teacher, Śākyamuni Buddha himself, was a monastic, and he established the monastic community for a good purpose. Due to the kindness of the Saṅgha, the teachings exist in pure forms today and we are able to encounter them. Respecting the precepts that exist in the monastics' mindstreams enables us to benefit from their good example of ethical conduct.

When visualizing white light flowing from each refuge object into you and all sentient beings around you, think that the negativities created in relation to that refuge object are purified. Then imagine golden light streaming from them into you and all sentient beings, inspiring your minds with their good qualities. In this way, form a pure and strong connection to the Three Jewels.

After taking refuge, generate bodhicitta. Cultivating the proper motivation for our meditation is extremely important, because the result of our spiritual practice accords with our motivation for doing it. Although your bodhicitta may at present be contrived and generated only with effort, do not despair. By reflecting on bodhicitta repeatedly, you will gradually become more accustomed to it, until eventually this altruistic intention will arise effortlessly within you.

At this point, pause and be aware of the status of the I who is taking refuge and aspiring to awaken. How does this I exist: Does it have an inherent nature or does it exist dependent on other factors?

Now, with firm aspiration to follow the guidance of the Three Jewels for the benefit of all sentient beings and with a sincere wish to become the Three Jewels, dissolve the refuge objects into you by imagining that they melt into light and dissolve into the Buddha, who, in turn, dissolves into light that absorbs into your midbrow. The dissolving of the refuge objects into you is not like butter melting on a dish, where the butter and dish remain separate. Rather, reflect that we ordinary beings and the Buddha have the same nature. Just as the Buddha's mind is empty of inherent existence, our mind is also free from inherent existence. This is the meaning of the statement, "The buddhas and sentient beings are of equal taste in emptiness." Just as the buddhas were able to attain awakening because they had the natural Buddha nature and the transforming buddha nature, we have the same buddha nature that they have. Just as the buddhas were once ordinary beings who practiced the Dharma diligently, removed their faults, and developed all good qualities, we, too, can do this by putting energy into cultivating the path.

Reflecting on these similarities between the buddhas and sentient beings leads us to contemplate the ultimate nature of all existents — emptiness. This is the real meaning of the Buddha dissolving into us. At this point, do not focus on the qualities of the Three Jewels, but on their emptiness of inherent existence, which is the same as your ultimate nature. When meditating on emptiness, conventional objects such as buddhas and sentient beings do not appear to the mind, so do not see yourself and the refuge objects as separate; you have become nondual in emptiness. At this point, dwell in emptiness according to your present understanding of it.

After a while, within this emptiness of true existence, your wisdom realizing emptiness appears in the form of the Buddha with a body made of golden light. Imagine that, as the Buddha, you radiate light that purifies and inspires sentient beings, transforming them into buddhas and their environments into pure lands — places where all conditions are conducive for Dharma practice. Allow your mind to rest in this vision of all sentient

beings being liberated from cyclic existence due to your having guided them with compassion.

Then reflect that sentient beings still live in conflict because they lack the four immeasurables — equanimity, love, compassion, and joy. Equanimity is the wish for all beings to be free from bias, attachment, and anger. Love is the wish for them to have happiness and its causes. Compassion is the wish that they be free from *duḥkha* and its causes. Joy is the wish that they never be separated from sorrowless bliss.

Meditate on these four immeasurables to reinforce your feeling of connection and involvement with others. This will help you to avoid harming them and to engage in benefiting them in your daily life. Although these practices are done at the level of imagination, they plant seeds in our mindstreams that enable us to act in this way.

### *Contemplating the seven limbs*

Before contemplating the seven limbs, we imagine the merit field (*punya-kṣetra*). A field of merit is so-called because in it we plant the seeds of virtue that will bring good results. Here the field of merit is the assembly of our root spiritual mentors, the lineage spiritual mentors, meditation deities, buddhas, bodhisattvas, solitary realizer and śrāvaka arhats, heroes (*dākas*) and heroines (*dākinīs*), and Dharma protectors. As the details of this visualization and the way to contemplate its meaning have been described extensively in other texts, I will not go into detail about them here.

Having imagined the holy beings in the space in front of us, we then cultivate the seven practices in their presence. These are prostrating, making offerings, confessing our negativities, rejoicing in goodness and virtue, requesting Dharma teachings, requesting the Buddha to remain in our world, and dedicating the merit.

The purpose of these seven limbs is to purify our mindstream and create merit so that our meditation session will be effective and we will gain deeper understanding and experience of the stages of the path. The importance of purification and creation of merit cannot be overestimated.

You may recite a long or short version of the seven limbs while contemplating its meaning. A short version is:

Reverently I prostrate with my body, speech, and mind,  
and present clouds of every type of offering, actual and mentally  
transformed.

I confess all my destructive actions accumulated since beginningless  
time,

and rejoice in the virtues of all holy and ordinary beings.

Please remain until cyclic existence ends,

and turn the wheel of Dharma for sentient beings.

I dedicate all the virtues of myself and others to the great awakening.

*Prostrating* reduces our pride and increases our humility. Making the excellent qualities of the holy beings vivid in our minds, it strengthens our aspiration to practice the path to develop those same qualities ourselves. Prostrations are done mentally by remembering the good qualities of the Three Jewels, verbally by praising these qualities with our speech, and physically by bowing down to show our respect.

*Making offerings* reduces attachment and stinginess and increases our generosity and delight in giving. Offer actual objects on the altar — fruit, flowers, lights, incense, water, perfume, and so on — and mentally offer beautiful objects that we possess or forests, wildflowers, and other places of natural beauty that are possessed by others. When making mental offerings, imagine objects of incomparable beauty that fill the universe, offer them to the Three Jewels, and imagine them experiencing bliss from receiving your offerings.

Offer your Dharma practice — your effort, understanding, and virtue — by imagining them in the form of magnificent objects that you present to the merit field. This is the supreme offering that pleases the buddhas and bodhisattvas because it contributes to their aim of liberating all sentient beings.

As Śāntideva stresses in *Engaging in the Bodhisattvas' Deeds* (*Bodhicaryāvatāra*), making offerings is necessary to accumulate the merit that supports us in generating bodhicitta and attaining full awakening. High bodhisattvas, such as Samantabhadra, emanate a vast display of sumptuous and glorious items that they offer to all the buddhas and bodhisattvas in all the pure lands throughout the universe. While we are currently unable to

emanate these elaborate offerings, visualizing them brings great benefit because they are free from the attachment we may have for our possessions. In addition, since visualized offerings are mentally fabricated and do not exist in the way they appear, it is easier to contemplate that phenomena arise due to designation by name and concept and thus are empty of inherent existence. You may want to meditate using the verses of offering that Śāntideva wrote in chapter 2 of his inspiring book.

*Confessing negativities* is done through the four opponent powers. We have engaged in countless physical, verbal, and mental deeds motivated by ignorance, animosity, and attachment. The seeds of these misdeeds ripen in unpleasant or painful experiences, obscure our minds from gaining realizations, and limit our ability to benefit others. To purify them, first generate a sense of regret for the harm you have inflicted on yourself and others through your destructive behavior. Regret is the main cause to purify destructive actions, and the stronger it is, the stronger will be the second power, the determination to restrain from such actions in the future. This step gives you the inner strength to begin changing your ways and counteracting habitual harmful behavior.

Third, take refuge in the Three Jewels, which purifies destructive actions created in relation to the Three Jewels, and generate bodhicitta, which purifies negativities created in relation to other sentient beings. Taking refuge and generating bodhicitta transforms the harmful or ignorant attitude you previously had toward holy beings and sentient beings into a virtuous mental relationship with them. After confessing your faults, it is helpful to do the taking and giving (*T. tong len*) meditation, which will be described later.

Fourth, apply remedies to those destructive actions by engaging in constructive actions, for example, bowing to the Three Jewels, reciting mantras, making offerings, circumambulating holy objects, meditating on emptiness, generating bodhicitta, doing volunteer service at a charity, Dharma center, or monastery, or helping others in other ways.

*Rejoicing in your own and others' virtue* is the fourth limb. Doing this is an excellent method to fill your mind with hope and joy and overcomes competition and jealousy. Reflect with joy on the virtues you and others have created in this and previous lives and at all the goodness in the world.

Rejoicing in your own virtue invigorates and multiplies it so that it will increase day by day. Also admire and rejoice in the virtues of people you know and those you don't, reflecting repeatedly on their constructive thoughts, feelings, words, and deeds. Rejoicing in the virtues and spiritual attainments of the buddhas, bodhisattvas, solitary realizers, and śrāvakas throughout all time and space creates vast merit. If you and others are of similar levels on the path, by rejoicing at their virtue you accumulate merit equal to theirs. If they are of lesser attainment, your rejoicing creates more merit than their original virtuous action. The practice of rejoicing is praised because through making a small effort, great merit is accumulated.

*Requesting Dharma teachings* counteracts abandoning the Dharma and creates the cause to receive teachings in the future. We must not take our present good fortune of encountering teachers and teachings for granted, but appreciate and take advantage of them; requesting teachings is one way to do this. Requesting the buddhas to turn the wheel of Dharma — to teach us the path to awakening — also creates the cause to receive teachings in the future. Whenever possible attend Dharma discourses given by qualified spiritual mentors. As a beginner, study books that give you a general overview of the path. As you advance, delve into the sūtras, the great Indian commentaries, and commentaries by other Buddhist sages.

*Requesting the buddhas to remain until cyclic existence ends* helps to purify negativities created in relation to our spiritual mentors and the buddhas and increases our understanding of the importance of having excellent spiritual mentors. With heartfelt sincerity, request the emanation bodies of buddhas not to pass into parinirvāṇa, but to remain in the world to guide sentient beings according to their various dispositions and tendencies.

To conclude the seven-limb prayer, *dedicate the merit* accumulated from the above practices for the full awakening of yourself and all others. Imagine your merit transforms into offerings that you present to the Three Jewels and to sentient beings.

### *Requesting inspiration*

Requesting inspiration increases our connection to the lineage of practitioners who have preceded us and who have done what we aspire to do. It also invigorates our confidence and enthusiasm to practice the

Dharma. While reciting the “Supplication for the Three Great Purposes,” visualize light and nectar flowing from the lineage teachers into you and all the sentient beings around you (LC 1:98):

Please inspire me and all mother sentient beings to quickly abandon all flawed states of mind, beginning with not respecting our spiritual mentors up to grasping the true existence of persons and phenomena. Please inspire us to easily generate all flawless states of mind, beginning with respecting our spiritual mentors up to knowing the reality of selflessness. Please inspire us to quell all inner and outer hindrances.

People ask, “If buddhas help sentient beings impartially and their awakening activities are spontaneous, why do we need to request inspiration?” Receiving the inspiration of the buddhas is a dependent process that relies on their ability to help as well as our receptivity. Our turning to them for refuge and making sincere requests opens our mind to receive their awakening influence. A large, shady tree naturally has the ability to protect us from the sun, but we have to go and stand under it. Receiving inspiration and the buddhas’ awakening influence depends on the combination of the tree of their compassion and our sitting under it.

Now imagine that all the figures in the merit field dissolve into the central figure of Śākyamuni Buddha, who then comes on top of your head, facing the same direction as you. Again imagine light flowing from the Buddha into you. This light purifies all negativities and fills you with all the blessings, inspiration, and understanding of the Buddha. Feel Buddha’s compassion for you and his willingness to guide you to awakening. As you meditate like this, recite the Buddha’s name mantra, *om mune mune mahamuneya svāhā*, as much as possible.

After reciting the mantra, do a glance meditation on the stages of the path to awakening by reviewing the principal meditations in a brief form. Reciting a short lamrim text such as the “Foundation of all Good Qualities,” “Parting from the Four Attachments,” “Three Principal Aspects of the Path,” or “Thirty-Seven Practices of Bodhisattvas” enables us to briefly reflect on all the stages of the path and imprint them in our mindstreams.

Then, with the Buddha on the crown of your head, begin the actual meditation session. With lowered eyes, turn your mind inward to reflect on the lamrim topic you have chosen for that session. Make examples from your life in which these teachings apply and could help you.

### *The Actual Session and Dedication at the Conclusion*

The majority of meditations on the stages of the path involve analytical meditation on the topic followed by stabilizing meditation on the conclusion we have reached. Before meditating on a topic, have in mind an outline of the major points and then ponder them in order, one by one. Until you become familiar with a topic, make an outline of its points by referring to this book and add pertinent points from other lamrim books. If you read, listened to, or watched a teaching on the topic before the meditation session, jot down a brief outline of salient points to meditate on. Use reasoning and logic to understand the meaning of each point, and make examples from your life that pertain to the points. In this way, conviction in their veracity will arise. In addition, you will gain familiarity with the topics so that you will be able to remember and apply them during your daily life.

When you reach a conclusion through your reflection or a strong understanding of the topic arises in your mind, cease analytical meditation, and with stabilizing meditation focus your mind one-pointedly on the meaning you discovered or the experience you gained. Employing both analytical and stabilizing meditation to the topics in this way is important for gaining and sustaining an understanding of the path.

For example, to meditate on precious human life, first make an outline of the eight freedoms and ten fortunes and add other pertinent points. Then do the six preparatory practices. Next contemplate the points one by one, thinking about them logically and relating them to your life. When you feel a sense of appreciation for your life and an eagerness to use it for Dharma practice, you have reached the proper conclusion. At that point, stop thinking about the points and let your mind dwell on the fact that you have a precious human life and the feeling of being extremely fortunate.

When you are interested in the lamrim topics, your reflection and analysis will keep your attention on the subject. That helps bring your mind

to a focused state. If you find stabilizing meditation difficult because your mind is easily distracted, put more emphasis on checking meditation.

Near the end of the session, it is helpful to relate the topic to the method and wisdom aspects of the path — bodhicitta and the wisdom realizing emptiness, respectively. For example, if your meditation topic is the ten nonvirtues, first reflect on them in terms of your own life. Then reflect that like you, other sentient beings have engaged in these nonvirtues and will have to experience their results. Generate the wish to become a buddha in order to lead them on the path to liberation so they will be free from experiencing painful results and the afflictions that cause them. Then reflect that all these karmas and their results are empty of true existence. They arise and function dependently, like a dream, and do not exist in the way they appear.

When you have meditated on a particular topic sufficiently, imagine the Buddha on your head dissolves into you, merging with your mind at your heart cakra at the center of your chest. Feel that your mind and the Buddha's mind are inseparable.

As mentioned previously, do not expect instant results or fantastic peak experiences. Instead, be satisfied with gradual growth in your compassion and wisdom and seek stable, steady change. By meditating consistently, your understanding will deepen over the months and years.

At the conclusion of a session, dedicate the merit created from your meditation to attain awakening for the benefit of all sentient beings. The primary purpose of dedicating the merit is to make the results of our virtue inexhaustible, lasting until all sentient beings attain full awakening. While the merit can still bring good results before awakening, it will not be exhausted until awakening is attained. By connecting even small virtue to the wider vision of the awakening of all sentient beings, you bring an extraordinary dimension to this small action. It immerses your mind in bodhicitta, increases your generosity, and expands your rejoicing at virtue.

In addition, seal the dedication by reflecting that you as the agent, the merit you are dedicating, the awakening you are dedicating to attain, and the sentient beings you wish to benefit are all empty of existing from their own side, but exist dependently. As Nāgārjuna says in *Praise to the Supramundane (Lokāṭīstava 9)*:

There exists no agent, no subject too;  
no merit [exists], they arise through dependence.  
“Though dependently arisen, they are unborn,”  
so you have proclaimed, O Master of Words.<sup>34</sup>

While none of the elements of a dedication — the person, merit, and so forth — exist inherently, they exist nominally by being merely designated by name and concept. Their emptiness of inherent existence and their conventional existence are not contradictory. Reflecting in this way increases our understanding of the compatibility of emptiness and dependent arising and prevents us from becoming arrogant.

## *Interrelationship of the Lamrim Topics*

Analytical meditation on these lamrim topics is critical at all levels of the path. It transforms our mind by giving us an overview of the entire path and establishing the Buddhist worldview firmly within us. It engenders great conviction in the path and a correct motivation for spiritual practice. While other forms of meditation may make us feel good in the moment, if they do not increase our understanding of the undesirable nature of cyclic existence and our wish to be free from it, our motivation and enthusiasm for practice will flag. Analytical meditation makes our motivation strong and stable, and with such a motivation our analytical and stabilizing meditation on emptiness will bear fruit. We will be able to enter the Vajrayāna, practice it correctly, and attain awakening.

The order of the topics in the stages of the path are skillfully arranged to gradually lead your mind to deeper understandings, so try to meditate on them in order. Of course, if you face a certain problem and know that a particular meditation will help calm your mind, do that meditation even if it isn't in sequence.

Repeatedly cycle through the sequence of meditations. Grounding yourself in the initial meditations will facilitate understanding the later ones. Going directly to the advanced meditations is not helpful for our overall development. Once you have a heartfelt understanding of one topic, don't just leave it be and go on to the next. Continue to review your

understanding and stabilize your experience, even though your focus has shifted to the next topic.

The meditations of the three levels of practitioners are intertwined and cross-fertilize one another. Our understanding of the earlier topics sets the stage for the later ones, and our understanding of the later ones enriches our experience of the earlier ones. For example, precious human life appears early in the lamrim, but the more we have a feeling for the bodhicitta meditations, the more we will see our human life as precious because it provides us the opportunity to develop bodhicitta. While the perfection of fortitude is explained in the path of the advanced practitioner, we must learn and practice fortitude from the beginning because we must lessen our anger in order to abandon destructive actions.

Some lamrim topics come up repeatedly in the sequence each time we explore them in more depth. Ethical conduct first appears in the topic of karma on the initial level; it appears again as the higher training in ethical conduct on the intermediate level, and again on the advanced level with the bodhisattvas' perfection of ethical conduct. Each time our understanding of what to practice and abandon is refined.

After gaining a firm understanding of the lamrim through study, reflection, and meditation, some practitioners may wish to direct more energy to developing serenity through perfecting their stabilizing meditation. Others may wish to focus more on the meditations regarding the thirty-seven harmonies with awakening, while others may prefer to emphasize insight into emptiness or tantric practice. These decisions are best made in consultation with a spiritual mentor.

## *Breaks between Meditation Sessions*

Our meditation sessions and our daily life activities flow together, one following the other without pause. To indicate this relationship, the great masters call our daily life activities “break times between meditation sessions.” Both play a role in our spiritual life. Meditation sessions give us the opportunity to practice in a more focused way. Daily life activities provide the chance to test how well we have integrated the meditation topics into our lives. We may meditate on fortitude in the morning, but the

real test is when we have to deal with a difficult person. Observing the thoughts and emotions that arise in our minds during the day will give us an idea of the qualities we need to strengthen in order to counteract the afflictions that arise frequently in our minds.

Spiritual practice does not occur only when we recite a text or meditate, but also while we walk down the street, clean our room, and interact with others. Dharma practice involves watching our mind and keeping it in a wholesome state no matter what we are doing. We can practice anywhere and at any time.

What we do during the break times between meditation sessions influences our meditation sessions. For this reason, great practitioners advise moderation in food and sleep, guarding the sense doors, and acting with introspective awareness while engaging in daily life activities.

### *Food*

What we eat influences our mental state. The food should be nutritious and easily digestible. We should eat a moderate amount: eating too much makes the mind drowsy; eating too little makes the body weak. In *Middle Stages of Meditation (Bhāvanākrama II)* Kamalāśīla encourages practitioners to have a vegetarian diet. In general, this is conducive for being clear-minded when meditating, although depending on someone's physical condition, taking meat may be necessary. Drinking alcohol, taking recreational drugs, or misusing prescription drugs are out of the question if we want to concentrate the mind, and smoking is similarly to be abandoned.

If attachment to food arises, as it can easily do when we limit other distractions, think of what the food looks like after it is chewed and after it is digested; think of the excrement that food produces. Contemplate how much of our precious human life is involved in procuring, preparing, and eating food as well as cleaning up afterward. Some people spend hours discussing the foods they like and planning what to eat, yet we often hardly taste the food because we are talking to a friend or reading while eating. The pleasure of eating ends quickly, and sometimes we feel worse from having overeaten.

Offering our food to the Three Jewels before we eat is meritorious and allows us to pause and reflect. In the Chinese tradition, five points are

recited before eating and are contemplated while eating:

1. I contemplate all the causes and conditions and the kindness of others by which I have received this food.
2. I contemplate my own practice, constantly trying to improve it.
3. I contemplate my mind, cautiously guarding it from wrongdoing, greed, and other defilements.
4. I contemplate this food, treating it as wondrous medicine to nourish my body.
5. I contemplate the aim of buddhahood, accepting and consuming this food in order to accomplish it.

In the Tibetan tradition, verses of homage and offering are commonly recited before the main meal.

Great compassionate Protector,  
all-knowing Teacher,  
field of merit and good qualities vast as an ocean —  
to the Tathāgata, I bow.

Through purity, freeing from attachment,  
through virtue, freeing from the unfortunate states,  
unique, supreme ultimate reality —  
to the Dharma that is peace, I bow.

Having freed themselves, showing the path to freedom too,  
well established in the trainings,  
the holy field endowed with good qualities —  
to the Saṅgha, I bow.

To the supreme teacher, the precious Buddha,  
to the supreme refuge, the holy precious Dharma,  
to the supreme guides, the precious Saṅgha —  
to all objects of refuge we make this offering.

May we and all those around us

never be separated from the Three Jewels in any of our lives.  
May we always have the opportunity to make offerings to them,  
and may we continuously receive their blessings and inspiration to  
progress along the path.

By seeing this food as medicine,  
I will consume it without attachment or complaint,  
not to increase my arrogance, strength, or good looks,  
but solely to sustain my life.

At the conclusion of a meal Tibetan monastics make offerings to the hungry ghosts and recite homages to the buddhas. We then dedicate for the welfare of those who offered our food.

May all those who offered me food attain the happiness of total peace. May all those who offered me drink, who served me, who received me, who honored me, or who made offerings to me attain happiness that is total peace.

May all those who scold me, make me unhappy, hit me, attack me with weapons, or do things up to the point of killing me attain the happiness of awakening. May they fully awaken to the unsurpassed, perfectly accomplished state of Buddhahood.

By the merit of offering food, may they have a good complexion, magnificence, and strength. May they find foods having hundreds of tastes and live with the food of samādhi.

By the merit of offering drink, may their afflictions, hunger, and thirst be pacified. May they possess good qualities such as generosity and take a rebirth without any sickness or thirst.

The one who gives, the one who receives, and the generous action are not to be observed as truly existent. By giving with impartiality, may the benefactors attain perfection.

By the power of being generous, may they become buddhas for the benefit of sentient beings, and through generosity may all the beings who have not been liberated by previous conquerors be liberated.

By the merit of this generosity, may the nāga kings, gods having faith in the Dharma, leaders who support religious freedom, benefactors, and others living in the area live long, enjoy good health and prosperity, and attain lasting happiness.

Due to this virtue, may all beings complete the collections of merit and wisdom. May they attain the two buddha bodies resulting from merit and wisdom.

### *Sleep*

Sleep allows the body to rest, which makes it more serviceable for engaging in virtuous activities. Sleeping in moderation produces good results. Too much sleep makes the mind dull, and too little is also not good. Sleeping during the middle part of the night is advised, as is rising early. It is best to sleep in the “lion position,” on your right side, with the left leg on the right, and your right hand under your right cheek. This helps to maintain mindfulness during sleep and to prevent nightmares and nonvirtuous dreams.

Sleep is a changeable mental factor; it becomes virtuous when we fall asleep with a positive thought or intention. Meditating, reading a Dharma book, or contemplating a wholesome topic before going to sleep helps us do that, as does thinking, “I will sleep to rest my body and mind so that I can wake up refreshed and continue practicing the Dharma.”

If an affliction arises as you are falling asleep or when you are dreaming, notice it and let it go. Do not indulge in thoughts of attachment or anger while falling asleep. If you do, those thoughts and images will occupy your mind for many hours while you sleep, making your sleep nonvirtuous. In addition, your mind will be restless or in a bad mood when you awake.

When you lie down, imagine the Buddha sitting on your pillow and lay your head in his lap. Visualize very gentle, peaceful light flowing from the Buddha into you as you fall asleep. This will prevent your sleep from being too heavy and enable you to awake without grogginess. Make a determination to arise when you are rested, without oversleeping. Also generate the intention to maintain a wholesome mental state the next day.

The *Flower Ornament Sūtra* contains verses that bodhisattvas contemplate as they fall asleep, dream, and wake up:

“May all sentient beings attain the dimension of reality of a Buddha.”  
This is the aspiration of a bodhisattva when going to sleep.

“May all sentient beings realize the dreamlike nature of things.”  
This is the aspiration of a bodhisattva while dreaming.

“May all beings awake from the sleep of ignorance.”  
This is the aspiration of a bodhisattva when waking up.

“May all beings attain the buddha’s form bodies.”  
This is the aspiration of a bodhisattva when getting up.

If you have received empowerment and instructions in highest yoga tantra, do the practice of transforming sleep into the truth body, dreaming into the enjoyment body, and waking up into the emanation body. Training in this practice now is of great benefit at the time of death.

### *Activities*

During your daily activities, continue to contemplate the lamrim topics. Some people go through the lamrim topics sequentially, seeing everything they encounter in a day in terms of the topic of meditation that morning. Doing this makes it easier to return to the experience of these topics in meditation sessions. In break times, be mindful of your precepts and ethical values — remembering them throughout the day — and apply introspective awareness to monitor if you are living according to them. In this way your mind will be in a wholesome state when you next meditate. However, if break times are passed in distraction — gossiping, singing, reading magazines, or watching violent films — these images and memories will plague your meditation. Please observe your own experiences to see if this is true.

## *Making Requests, Receiving Blessings, and Gaining Realizations*

The topic of requesting and receiving inspiration from the buddhas is not easy to understand, so I would like to explain it further. To gain realizations of the path, we need to create the causes — both the principal causes and the cooperative conditions that support the principal causes. The principal causes to progress on the path are receiving teachings from a qualified teacher, reflecting and meditating on them, and putting them into practice in daily life. Creating these main causes is essential. Without our sincere and consistent practice, our mind won't be transformed even if all the buddhas came before us.

The cooperative conditions that help the principal causes to ripen into the resultant realizations of the path may be external or internal. External cooperative conditions include being in the presence of our spiritual mentor, staying at a holy place such as a monastery or temple, living with other sincere Dharma practitioners, and meditating in front of an image of the Buddha.

An analogy is helpful to understand how an external condition can help to deepen our Dharma understanding. If we know nothing about ecology, we won't understand much by hearing an expert respond to questions about it. But if we already have some background yet lack clarity on this subject, the words of an expert will dispel our doubts and clarify our understanding.

Similarly, we may have some knowledge about a Dharma topic, but don't understand it well. If someone who has meditated deeply on the topic discusses it, the combination of our knowledge and the words of a compassionate and wise person will give rise to an understanding that we did not have before. The basic cause is our own knowledge; the other person's words lift our understanding to another level.

Our daily Dharma studies and practices establish the groundwork so that being in holy sites or in the presence of our spiritual mentors will effect experiences and realizations in our minds. We may recite the verses to generate bodhicitta every day, but not feel much when we do, even though we have admiration for bodhicitta. Then one day, while repeating the same verses in the presence of our spiritual mentor, the words have a totally new

effect on our mind and deep feelings of compassion and altruism blossom in us. Similarly, we may study and reflect on emptiness often but reach a mental roadblock that we cannot seem to get beyond. When we meditate on emptiness under the bodhi tree in Bodhgaya, that obstacle disappears and our understanding of emptiness becomes clearer. The inspiration of our spiritual mentor and the blessing of the site of the Buddha's awakening are cooperative conditions; the indispensable principal cause is our effort to practice sincerely. Without this, such experiences do not magically happen.

If we have knowledge of the Buddha's qualities as well as strong confidence that awakening is possible, our mind is more receptive to the Buddha's awakening influence at pilgrimage sites. We cannot force ourselves to have faith in the Three Jewels; stable faith is gained through learning and reflection. If a person has little interest in the Dharma or minimal faith in the Buddha, although a good imprint is left on her mindstream by going to Bodhgaya, very little else will happen. She may spend a lot of time drinking tea and visiting tourist shops!

Internal cooperative conditions include purification and collection of merit, as explained above in the seven-limb prayer, as well as requesting our spiritual mentors, buddhas, meditation deities, and bodhisattvas to bless and inspire our minds. Several factors, such as the qualities of the person(s) we request and how we make the request, play a role.

Realized beings possess marvelous qualities that enable them to influence others in a positive way. In contrast, ordinary people and worldly gods cannot inspire our mind very much. If you visualize President Franklin Roosevelt and make a strong request to realize great compassion, what happens? Maybe psychologically someone could be helped a little, but aside from that, nothing else occurs because the person you request for spiritual inspiration is an ordinary being. Contrariwise, due to their great accumulation of merit and the force of their boundless compassion, buddhas and bodhisattvas have a certain power or energy that can affect our minds in a positive way.

People who accept the Mahāyāna doctrine of the four buddha bodies have a sense of the abilities the awakened ones possess to guide and inspire us. Even if we see the Buddha as a historical person who lived on this earth, it is clear that he was an extraordinary human being who accumulated great

merit and had profound realizations. The depth of the Buddha's compassion and the extent of his skillful means and wisdom are evident in his life story. A person of such magnificent qualities must have abilities to benefit others that the rest of us lack.

In our daily practice, we request all holy beings in the merit field to come to the place where we meditate. From their side, invitations are unnecessary. These requests are done to benefit us, so that we turn our attention to them and feel their presence. But beings who lack spiritual realizations cannot come even if we invite them, unless we send a car to pick them up! We may sincerely pray for President Roosevelt to come to our meditation place, but he cannot do so. If we invite worldly gods and spirits to come, they will not know an invitation has been extended, and even if they know, there is not a lot they can do to help us gain Dharma realizations.

How does someone gain the ability to bless another's mind? On the mundane level, we see that some people have unusual abilities, such as the ability to hypnotize others. From the Buddhist viewpoint, this is due to karma they created in previous lives. If some ordinary people have the ability to influence the minds of others in an unusual way, then surely those with great spiritual realizations and compassion must be able to do so. By means of their awakening activities, buddhas spontaneously and effortlessly act to benefit all beings according to their level of receptivity.

The power of the buddhas' realizations, compassion, and awakening activity alone is not enough to effect change in us. If the conditions are not ripe within us, very little occurs. Just as the sun shines everywhere, but only upturned vessels are filled with sunlight, the buddhas' awakening influence is always present, regardless of whether we believe it exists, practice the teachings, or visualize the buddhas and request their inspiration. From our side, doing these activities makes our minds more receptive to receive their awakening influence. Receiving inspiration is a dependent arising; it depends on the state of our mind as well as on the wisdom, compassion, and power of the awakened ones.

How we make the requests is also important. The more focused and clear our visualization of the Buddha is, the more we feel that we are in his

presence. This facilitates our experiencing the Buddha's inspiration and blessing.

The Buddhist concept of "blessing and inspiration" cannot be understood with sensory direct perception. It depends in part on our conviction in the possibility of awakening, and thus the possibility of developing the effortless, spontaneous awakening activities that can spark realizations in receptive beings. If we have confidence that we can awaken, it is not difficult to know that others have awakened before us and have gained these special abilities. In short, the deeper our refuge in the Three Jewels, the more we will make effort to transform our minds and the greater our receptivity to the buddhas' awakening activities will be.

Requesting the Buddha for inspiration to generate bodhicitta or realize emptiness is different than requesting an external creator for blessings. Buddhists with a proper understanding see the Buddha as our Teacher. We know that the Buddha is not omnipotent, that our past actions condition our present experiences, and that we are responsible for our actions. Those petitioning an external creator believe that everything is in his hands and depends on his will. Although both Buddhists and those of other faiths may request inspiration or blessing from holy beings to become more loving, their way of requesting, their notion of to whom they pray, and their understanding of the process of prayer differ.

## 7 | Mind, Body, and Rebirth

**B**ECAUSE OUR MIND is the ultimate source of our happiness and suffering and by transforming the mind we attain awakening, understanding the mind is essential. The topic of the mind and its potential was introduced in *Approaching the Buddhist Path*, the first volume of the Library of Wisdom and Compassion, and in this chapter we will explore the nature of the mind, its relationship with the brain, and rebirth more deeply.

### *Sentience, Mind, and Brain*

The mind's nature is clarity and cognizance. *Clarity* refers to the immateriality of the mind, the fact that it cannot be apprehended by our physical senses and is not made of atoms. Clarity also indicates the mirror-like quality of the mind, the fact that it can reflect objects. Dharmakīrti says (PV):

Therefore my own mind is clear  
by virtue of its own nature of clarity;  
by virtue of other (objects) being transferred and illuminated in it,  
this makes it clear too.<sup>35</sup>

In addition, clarity means the fundamental nature of the mind is not affected by defilement (PV 2.208a–b):

The nature of mind is clear light.  
The defilements are adventitious.<sup>36</sup>

*Cognizance* refers to the mind's ability to engage with its object. Together clarity and cognizance allow for the appearance of objects to arise and for objects to be known and experienced. The presence of a mind is the difference between a living being and a corpse. In his struggle to clarify

how we know anything exists, Descartes said, “I can doubt the existence of the body, but I know I exist because I am conscious.” In short, the nature of consciousness is to be aware and to know objects (PV):

Consciousness apprehends objects,  
apprehending them as they exist;  
it arises in the nature of the objects,  
it is generated by them as well.

A sentient being (*sattva*) is any being with a mind who is not a buddha. Everything that is biologically alive is not necessarily sentient. Bacteria and viruses are biologically alive, but we do not know whether they have mind, the presence of which is indicated by the ability to experience pain and pleasure. Most Buddhist thinkers believe they do not. Animals and insects, however, do. Computers may have artificial intelligence that enables them to respond like a human being, but they do not experience pain and pleasure and are not sentient beings. However, if one day computers become capable of being a physical support for consciousness and a sentient being creates the karma to be born in one, a computer could be a sentient being!

Some material substances, such as plants, may appear to have consciousness although they do not. A Venus flytrap — a flower that catches and ingests insects — is able to detect the presence of flies and moves to trap them. However, movement is not a sufficient indicator for the presence of mind. Some plants may grow better when people talk to them, but that too isn't proof that they cognize phenomena and experience pleasure and pain as sentient beings do. Their growth could be due simply to biological functions, just as a sunflower turning toward the sun is explained through biological functions.

Some sūtras mention that in a few cases spirits are born in trees, rocks, or wood. These are the spirits' homes, not their bodies. Still, those sentient beings may be disturbed if their home is damaged.

While the brain is material in nature, the mind is not. The mind lacks shape and color and cannot be perceived by scientific instruments. Like other produced phenomena, the mind is impermanent in that it changes moment by moment, although it is eternal in that it has no end. When it is

obscured by afflictions and other defilements, it is said to be the mind of a sentient being; when all obscurations have been removed, it becomes the mind of a buddha.

Just as our body has many parts — arms, legs, internal organs — and diverse characteristics — hardness, fluidity, mobility, heat, and space — so too there are many types of mind: gross and subtle levels of mind, primary consciousnesses and the mental factors that accompany them, sense consciousnesses and the mental consciousness, and so forth. In the case of human beings, many of these types of mind depend on the body and brain, but some do not seem to. Our sense consciousnesses depend on the sense faculties, nervous system, and brain as well as on an external object. Due to the contact of a flower with a healthy eye faculty, a visual consciousness that sees its color and shape arises. If the eye faculty malfunctions or is absent, the visual consciousness cannot arise. Likewise, if the area of the brain that is related to visual consciousness is damaged, we cannot see. Here I speak generally, for as far as I know, scientists have not determined whether just one part of the brain facilitates sight or if other parts of the brain can assume that function if the first part is damaged. Buddhist science adds that the arising of visual consciousness also depends on a preceding moment of mind; physical elements alone cannot cause or constitute cognition.

Other mental states seem to arise through a different process. Memories of the past or imagination of the future often seem to pop into our mind without an external object stimulating them. Once we remember or imagine something, the brain responds. Here the mental function appears to come first and the effects on the brain and the body follow. The scientists I have spoken with affirm this sequence, but according to current scientific belief that the mind is an emergent property of the brain, it should not occur. Scientists are also baffled by the case of a forty-four-year-old French civil servant who is missing 90 percent of his brain but functions normally.<sup>37</sup> This does not accord with their theory that consciousness is an emergent property of the brain.

In one study neuroscientists observed people's brains before and after they were taught a certain meditation practice. They detected noticeable changes in their brains after doing the meditation practice for some time.

Scientific studies have also shown that some aspects of the brains of experienced meditators differ from those of ordinary people. These findings demonstrate that just as changes in the brain may affect the mind, training the mind can effect changes in the brain. Causation can go both ways.

Distinctions between mental states cannot be made at the level of brain functions only. Experiments have demonstrated that the same area of the brain is activated when a person sees an object and when he mentally thinks about that object. Similarly, the pain centers in the brain are activated both when we actually experience pain and when we see someone else in pain. Clearly there is a real experiential difference between seeing something with our eyes and thinking about it, although the brain does not seem to distinguish the two. This indicates that brain functions alone are not responsible for everything about human experience and perception.

When a meditator practices one-pointed concentration and attains serenity (*śamatha*), she develops physical and mental pliancy and experiences a particular type of physical and mental bliss. Through this, she attains deep levels of meditative absorption, such that she does not hear a loud sound nearby. Although she did not make a special effort to change her brain, because her brain plays a role in the development of serenity, some changes may have taken place in its function and structure owing to the development of physical and mental pliancy and bliss. Using scientific instruments to investigate this would be intriguing.

Along this line, genes received from our parents may have some influence on our mental disposition. However, I do not believe that the diversity of human dispositions, interests, and attitudes is due principally to our genetic composition. The habitual thoughts, emotions, and actions of a person's mind earlier in this life and in previous lives, as well as the imprints left on his mindstream, play a role. The vast majority of parents tell me that each of their children has a different personality and habits from birth. They say that babies are not blank slates conditioned only by their genes and the events of this lifetime.

Events at the time of death also make us question if the mind always depends on the brain. Within a few minutes of the breath stopping, brain functions also cease, and the person is pronounced clinically dead. However, I know of many cases in which consciousness is still present. In

2001 someone who appeared to be an ordinary monk died at Delek Hospital, just down the road from where I live in Dharamsala. After his breath stopped, there was no rigor mortis and seven days passed before his body began to decay. Only then did they realize that he was meditating during this time.

Tibetans have observed that experienced meditators may remain in meditation for several days without their body decaying. My senior tutor, Kyabje Ling Rinpoche, remained sitting upright in meditation for thirteen days after his breath, heart, and brain functions stopped. Once he had completed his meditation, his body slumped over and death occurred. I also saw a picture of an elderly Mongolian monk who stayed in meditation (*T. thug dam*) for twenty-five days after his breath ceased.

Buddhists attribute this to the existence of the subtlest mind, the mind of clear light, which can function separate from the brain and may remain in the body for some time after physical death. If the subtlest mind did not exist, it would be difficult to account for the fact that when one person's vital signs cease, the body decays immediately and when another's cease, it does not. It would be good for scientists to investigate this.

Some years ago, some scientists brought an instrument to Delek Hospital to observe the brain functioning of proficient meditators while they were dying and after their vital signs ceased. But as often happens, things do not turn out as planned, and no meditators died during the time the scientists were there!

However, one time they were successful. After some scientists set up equipment in a Tibetan hospital in India, a previous Ganden Tripa (head of the Geluk tradition) died. His body remained fresh without decaying for three weeks. During this time, scientists put electrodes on his head and recorded data about his brain functions. This made them think that a subtle "energy" that does not depend on the body might exist.

A few people have clear memories of previous lives and on occasion some have prescience of future events. These extraordinary events are beyond current scientific theories, but they support the Buddhist explanation that different types and levels of mind exist. Some are related to and dependent on the body, while some can function independently of the

body and physical sense organs. This is because the mind and body have different continua: the body is material, whereas the mind is not.

Although science and Buddhism share many similarities, such as the investigative approach, some of their underlying premises differ. First, the source or foundation of cognitive processes is seen differently. Science believes that all mental processes derive from the physical organ of the brain, whereas highest yoga tantra asserts that all mental processes — sense perceptions, emotions, intellect, coarse as well as subtle mental functions — derive from the primordial mind of clear light, the subtlest mind that is independent of the brain.

This leads to a second difference. Buddhism doesn't see the mind as limited to the body and accepts past and future lives. It believes that our actions (karma) in one life can affect our future circumstances, perceptions and emotions, and can influence which body, with its unique genetic makeup, we take in future lives. Science currently states that either the mind is the brain or it is an emergent property of the brain. Since the brain exists only in this life, most scientists have not considered investigating the possibility of the influence of past and future lives and focus only on what is noticeable in this life.<sup>38</sup> If their basic assumptions were different, scientists might make unexpected discoveries.

The differences between Buddhism and science should not be points of contention, but rather areas in which we come together to do further research and investigation. Both Buddhism and science have the common aim to know the truth about how things exist and to conduct research that can be verified by experience. Both seek to benefit people, and neither follows blind belief.

Due to recent scientific discoveries of correlations between the body — especially our genes and brain — and the mind, there is a trend in society to think of mental and emotional difficulties as caused by these physical components. Although alcoholism and certain mental illnesses may correlate with particular genes or certain neurological functions, I (Chodron) believe that it could be damaging to assume that these are causal factors and minimize the social, mental, and emotional factors involved. An alcoholic could easily come to think, “It is hopeless to try to quit drinking because my alcoholism is due to my genetic makeup, which cannot be

changed.” Someone who loses his temper and behaves violently could believe, “My brain is wired this way. There’s not much I can do to change until medical scientists make a pill that will alter my brain chemistry.”

Physical and mental disorders and their causes are multifaceted. The more we remain open to this, the more we will be successful in treating them. Genetic factors, biochemical processes, brain structure and functioning, as well as social, economic, dietary, mental, and emotional factors must all be factored in. Remedies, too, can be multifaceted. Such an approach, I believe, leads to more social and personal reflection and responsibility.

## *The Nature of Mind*

While we may easily say the words, “the mind is mere clarity and cognizance,” it is difficult to actually have a notion of what the mind is — let alone to perceive its clear and cognizant nature. Although the clarity and cognizance of the mind are present in every moment of mental activity, we are not aware of them. What prevents this? A consciousness is usually identified in relation to its object — the visual consciousness perceiving blue or the mental consciousness thinking about a table. When a consciousness engages with its object, it appears in the aspect of that object.<sup>39</sup> Because of the mind’s involvement with that object, it is obscured from perceiving the actual nature of the mind.

The mind is usually invaded by a host of constructive and destructive thoughts that concern external objects and people we have perceived or experienced. These cloud the clear and cognizant nature of the mind, preventing us from perceiving it. When the flow of thoughts slows down, it is possible to see into the depths of the mind — its clear and cognizant nature that is like a still pool of water. One technique for discovering the conventional nature of mind is to prevent the mind from arising in the aspect of those objects and to stop all conceptual thoughts regarding past and future events. To do this, first generate a strong determination not to let your mind be disturbed by sense perceptions such as sounds or thoughts. Let your mind rest without being overrun by sensory perceptions or ideas. At first it may seem that more thoughts than usual arise, but this is not the

case. It is simply that in your daily life you do not pay much attention to how many thoughts there are!

Continuing to meditate in this way, you will gradually be able to keep the mind at a distance from sense objects, and the barrage of thoughts will diminish and eventually cease. By the mind not arising in the aspect of those objects, the clear nature of mind will become apparent. When you experience your mind in the absence of thoughts about the past and the future, you will have a sense of vacuity, which is the gap between the mind and those objects. This vacuity is not the ultimate nature of mind — the mind's emptiness of inherent existence — nor is it nothingness as in blank-mind meditation.

Once you experience that vacuous state of mind, try to meditate or remain in it. Eventually you will have a feeling that the mind is something like a mirror with infinite dimensions. At that time, the nature of the mind itself is clear. Yet whenever the mind contacts an object, a reflection immediately arises. In this way, understand the mirror-like clarity of the mind. The mind remains clear by nature even though reflections of phenomena may appear in it.

In addition, practice being aware of the moment when you are just beginning to sleep and the moment just after waking up. At both these times, the cognitive faculties are not fully engaged. In the moment just after waking, sleep has ceased. Your mind is in a neutral state, not crowded with thoughts and emotions. If your physical condition is normal and fresh, you may have some feeling of the clarity of mind at that time. Try to remain in that state, although it is not easy. Experiment with this and see what happens. Some experience of the mind should come, perhaps even an experience of the grosser level of clear light.

Having some experience of the conventional nature of mind is valuable for knowing that mind exists, which helps you to understand the continuity of mind from one life to the next. It also gives you a better idea of what is meant when we say that Dharma practice is about working with our mind. Although meditating on the clear nature of the mind is not a unique Buddhist practice — it is common with Hindus and perhaps some other religious traditions as well — it is useful for showing us another aspect of our experience.

Some years back I did a one-month retreat in Ladakh, India. When I meditate, I usually have a statue of the Buddha in front of me. The Buddha is my “boss,” a very loving and gentle boss. This particular statue was painted gold, and while colorful areas in general are attractive and can stir up the mind, the gold had come off of one part of the statue. Initially I focused my attention at this more neutral area. Then I lowered my eyes, let go of memories of the past, and stopped imagining and planning the future. Eventually, a little experience of the clarity and cognizance of the mind came. This is an experience; we are not saying to ourselves in words, “The mind is clear and cognizant.” With that little glimpse, I was then able to be aware of when my mind began following a sound or chasing a thought. I could recognize where the mind was going and what was distracting it, as well as when it was at rest — clear and concentrated. But after that one-month retreat, I resumed my usual busy duties and came back to my original state! Nevertheless, this experience was valuable.

## *Rebirth: Past and Future Lives*

The mind of each individual forms its own continuum with one moment of mind producing the next moment of mind. As an impermanent phenomenon, it is produced by causes that precede it. The substantial cause of one moment of mind — the main cause that actually transforms into the resultant next moment of mind — is the previous moment of mind in the same continuum. Although the gross body and gross mind influence each other, they cannot be the substantial cause of each other because they do not share the same nature. The body is material in nature, the mind is not. Dharmakīrti tells us (PV 2.165):

That which is not a consciousness itself  
cannot be the substantial cause for another consciousness.

This can be understood by three principles of causality from Asaṅga’s *Compendium of Knowledge*:

1. An effect cannot arise without a cause, and every effect is preceded by its own cause. There is no absolute creator that is the original

source of all existents because such a creator would not have a cause and would have arisen causelessly, which is impossible. This refutes causeless production.

2. An effect cannot arise from a permanent cause. Permanent phenomena do not change, and to produce an effect, change is necessary. The cause must cease for the effect to arise.
3. A cause must have the potential to produce a particular effect; an effect cannot arise from a discordant cause. Daisies cannot grow from tomato seeds. The substantial cause of form is previous moments of matter or energy, and the substantial cause of mind is previous moments of mind. These last two principles refute cases of impossible production: a permanent cause cannot produce a result, and a discordant cause — something that does not have the ability to produce a particular result — cannot produce that result.<sup>40</sup>

Applying these principles to the arising of consciousness, we find that the sperm and egg, which are the substantial cause of the body, are unsuitable to be the substantial cause of the mind, which is not form. The substantial cause of the sperm and egg can be traced back to the Big Bang (or to space particles if we use the Buddhist paradigm), in which case the Big Bang would also be the ultimate substantial cause of our mind. In this case, consciousness would have been present in the dense matter preceding the Big Bang. Since it was the ultimate cause of the entire physical universe, everything — rocks, water, fire, and so forth — should be conscious and would experience pleasure and pain. But we would feel quite strange accepting that each and every rock, water molecule, or carbon atom has consciousness and is a living being.

If we said instead that consciousness emerged from matter after a period of time, then did consciousness appear in all material particles? If not, what would make consciousness emerge from some particles but not others? Along this line, if scientists could construct a brain, would that brain be conscious? Would it be a person who experiences happiness and suffering?

If our mind came from our parents' minds or if our mind were a collection of different parts of the minds of people who died before our birth, many logical inconsistencies would arise. Because each individual

has his or her own mindstream or mental continuum, we can remember events from our past and will experience the results of our own actions, not those of another person. These would be impossible if our mind were composed of fragments of our parents' or other peoples' minds. Instead we should be able to remember their past. We should also have the knowledge they have accumulated thus far in their lives and our emotional makeup would closely resemble theirs. But we see that this is not the case.

If an external creator or prior intelligence created the universe, that creator would not have a cause because it would have preceded all existence. Without a cause, how could such a creator arise? If it did not arise due to a cause, it would be permanent and could not create effects, such as the universe and the beings in it. A permanent creator cannot change, and creation involves change. If we said the creator was both permanent and impermanent, that too is contradictory, for one thing cannot simultaneously possess opposite traits. If we said the creator or prior intelligence alternated being permanent and impermanent, that too would present problems: a permanent phenomenon would need a cause to become impermanent, and no such cause exists. Further questions also arise: why would a creator or prior intelligence create suffering?

Someone once asked me if neural pathways could be the means by which karma was imprinted on the mindstream, such that the deeds of one life would influence events in another life. This is not possible because brain activity ceases at death. The brain does not come with us into the next life.

Applying these principles of causality to matter and consciousness, rebirth can be established without having to resort to blind faith or reliance on scriptural authority. The only possible cause of our mind is a previous moment of mind, the mind of the person we were in our previous life.

## REFLECTION

---

1. Everything that functions arises from a cause. Just as our body arose from a cause, so did our mind.
2. Consider the three principles of causality. The only cause that could produce a moment of mind is a previous moment of mind.

3. The mind that joined with the fertilized egg to create a living being must have been a mind from a living being who had lived before and had recently died.
- 

Human beings have long discussed the beginning of the universe and of mind in particular. From a Buddhist perspective, there is no beginning to either of these because all functioning things arise from their causes. Those causes arise from their causes, and so on, back ad infinitum. Positing a first moment of consciousness is logically untenable. If there were a first moment, it would either arise without a cause or arise from a discordant cause. Neither of these is possible.

If we assert a beginning point before which nothing existed, we must say that sentient beings were born without cause. That is difficult to accept, for without causes producing effects, nothing could operate. Farmers would not have to plant seeds to grow a crop, children would not need to be educated, and we would not take medicine to cure our illnesses. Although we may not know all the causes and conditions of a particular thing or event, it definitely arose due to them.

Some people reject past and future lives, for the reason that they do not see them. However, not perceiving something does not negate its existence. Cats and birds see things and dogs smell odors that we do not. On the other hand, evidence exists for future lives. If we investigate the nature of mind, we understand that it is a continuity. Like all things, the mind exists because its causes exist. The continuity of a thing ceases only when its causes are exhausted or when a strong counteractive agent that can stop it is applied. In the case of a mindstream, neither of these is the case. No agent exists that can cease the continuity of mind. When it separates from this body, its continuity goes on to the next life. At the time of death, the coarser levels of mind, which depend on the physical body, dissolve. An extremely subtle consciousness — the primordial clear light mind — which can function apart from the coarse body, manifests, and this acts as the substantial cause for the mind of the next life. In the end, the only plausible explanation is the beginningless and endless continuity of moments of mind.

Another factor that supports the existence of rebirth is that people remember past lives. Although I have no clear memories of my previous lives, according to my mother and members of the search party who

identified the Fourteenth Dalai Lama, when I was very young I spoke quite clearly about my past life. Sometimes I have had the same dreams; they are vague recollections of some previous lives — as a Tibetan, Indian, and on one occasion Egyptian. But then the memory faded.

Our not remembering previous lives does not refute their existence. I don't think any of us remembers our experience in the mother's womb, yet we were undoubtedly there. It is difficult to recall experiences from previous lives because memory is formed with the gross levels of consciousness, which are dependent on the body and brain. The latencies of memories going with our mental consciousness may not be very strong, and upon taking a new rebirth, our attention is directed toward the present life, not the previous one.

Nevertheless, the accounts of many people who remember their previous lives have been verified. I heard of an Indian girl who described her previous life. She was a young girl in that previous life and died suddenly, so the natural process of dissolution of the levels of consciousness did not take place, which may be a factor in her being able to remember her previous life. Being very young, her memory was clearer, whereas older children may not remember their previous life because their grosser-level mind is fully developed and their subtle mind has become inactive.

It is possible through meditation to make grosser-level minds inactive and to activate subtler levels of mind. I met a Kagyu lama who was a very nice monk. Although he was not learned, he was very sincere and jovial and we became close friends. One time he was very serious and told me stories about studying with his tutor as a child. Even though he would deceive his tutor and play tricks on him, after his tutor passed away he remembered him with gratitude. One time, he had such a strong experience when recalling his tutor's tremendous kindness that he almost fainted. At the time of fainting, the coarser level of mind became inactive and a subtler mind arose. This mind then remembered his previous life.

We don't need to prove the existence of previous lives to someone who is able to recollect past lives; for her they are evident phenomena. However, for people who do not have such recollection, the existence of previous lives is a slightly obscure phenomenon, which can be proven with

reasoning. Dharmakīrti does this in chapter 2 of his *Commentary on Reliable Cognition*, based on the continuity of consciousness. This is the argument I made above.

For something to exist, it is not necessary that the majority of people know about it and agree on it. There may be certain species of plants and animals that only very few people on the planet know, but they exist. Similarly, not everyone needs to agree that rebirth exists in order for it to exist.

Even if you cannot ascertain the existence of future lives, you can tentatively accept it without any harm. Wishing to create the causes for fortunate future lives, you will endeavor to subdue your afflictions and cultivate your good qualities. This, in turn, will help you to be happier in the present because you will experience things freshly, without the confusion of attachment and anger. If you find it difficult to accept past and future lives, set the topic aside and focus on being a good person in this life. Do not create trouble for others, and use your life to bring calm and peace in your own mind and in the world. This is more important. If, at the time of death, you find there is no future life, nothing has been lost. But if you find there is, at least you have prepared for it by living a good life now. This is better than someone who accepts future lives but does not behave properly in his daily life and thus makes problems for himself and others.

The Kālāmas were a people confused by the claims of various teachers and unsure what to believe. The Buddha taught them meditation on the four immeasurables — love, compassion, joy, and equanimity. Once they experienced for themselves the immediate benefits of these, they were joyous. The Buddha then pointed out the benefits they accrue by cultivating positive states of mind, whether or not rebirth exists (AN 3.65):

This noble disciple, Kālāmas, whose mind is in this way without enmity, without ill will, undefiled and pure, has won four assurances in this very life . . . (1) If there is another world, and if there is the fruit and result of good and bad deeds, it is possible that with the breakup of the body, after death, I will be reborn in a good destination, in a heavenly world . . . (2) If there is no other world, and there is no fruit and result of

good and bad deeds, still right here, in this very life, I maintain myself in happiness, without enmity and ill will, free of trouble . . . (3) Suppose evil [results] befall one who does evil. Then, when I have no evil intentions toward anyone, how can suffering afflict me, since I do no evil deed? . . . (4) Suppose evil [results] do not befall one who does evil. Then right here I see myself purified in both respects.

In essence, if there turns out to be no future lives, we do not have to worry that we have wasted our time cultivating beneficial mental states through practicing the Buddha's teachings, because we have already experienced benefits in this life. Furthermore, if future lives exist, we have made good preparation for them and need not fear at the time of death.

#### REFLECTION

---

1. Tentatively accept the existence of past and future lives.
  2. Do you see any disadvantages to doing this?
  3. Does it help you to understand certain events, memories, or thoughts in your life?
- 

### *The Buddha Responds to Questions about Rebirth*

In the *Sūtra Responding to a Query about What Happens after Death* (*Āyusṣatti-yathākāra-paripṛcchā Sūtra*), the Buddha responds to questions that his father, King Śuddhodana, poses about death, dying, and rebirth. The following is a summary of their exchange.<sup>41</sup>

*After death, do we cease to exist like a fire that has burned out?*

No, one life follows the next, just as the sun rises again after it has set and new plants grow in an area after a natural disaster. If there were no rebirth, all living beings would have been completely extinguished by now.

*Will sentient beings be born in similar forms in their future lives, or can they be born in other forms that are different from their present ones?*

Sentient beings are born according to the force of their virtuous and nonvirtuous actions. Depending on which karmic seeds ripen at the time of death, their next rebirth may be in any realm. Human beings whose virtuous karma ripens may be born as devas, while those whose nonvirtuous karma ripens at the time of death may be born as animals.

*In their future lives, do sentient beings have the same family members as in this life?*

No, we consider ourselves relatives and recognize each other based on our present bodies. When we pass away, we relinquish these bodies and take new ones. We will be unable to recognize each other and have no basis on which to consider ourselves relatives then.

*Are people born in the same economic class with the same wealth or lack thereof as in this life?*

Even within this one life, we see affluent people become poor and the poor become wealthy; our socioeconomic status is temporary and impermanent. Generosity is the cause of wealth, whereas miserliness and theft are the causes of poverty. Some people, both the rich and the poor, practice generosity continuously. Those whose financial status vacillates considerably may practice generosity sporadically or may regret their previous acts of giving. Persistent miserliness and stealing — including embezzling money, cheating others in business deals, and so forth — can result in poverty over many lifetimes. However, if someone regrets and purifies these actions, the results will not be experienced.

*Sometimes people dream about their deceased relatives and friends. Are their relatives actually appearing and communicating with them in these dreams?*

When we dream of deceased loved ones, it is just a case of past latencies being activated. The person we dream about is not present. He or she is not having the same dream, and even when alive, we don't experience each other's dreams. If someone dreams about us, we are not in his dream doing what he dreams we are doing. The dream is due to the ripening of latencies on his mindstream.

Suppose someone lives in a very luxurious house and later moves to another place. Her previous house is torn down to build another building. She may have a very clear dream of the house, so clear that she feels that she is actually in it. Yet this is just her dream; it is a product of activated latencies. Dreaming of the deceased is similar. That dear one no longer has his previous body; he has already taken rebirth in accordance with his karma. Our dream of him is simply the maturation of latencies on our mind.

*Sometimes people offer and dedicate food and drink to their dead relatives so they will have these to consume for a long time. Does this help the deceased relatives?*

It is not possible for the deceased to consume these things gradually over time for centuries and eons, since there is no cause that can make these things last that long. We may put food out in our home for people in distant lands who are hungry, but they do not receive it. It is even less likely for someone who is separated from their previous body to partake of the food and drink their living relatives dedicate to them.

*Does that mean that all acts of dedicating useful items such as food, vehicles, clothes, and ornaments to the deceased are meaningless?*

The best way to benefit deceased loved ones is to do virtuous activities and dedicate the merit for their good rebirth and progress on the path to awakening.

*Sentient beings who commit nonvirtuous actions such as killing their parents are certain to experience horrible consequences of*

*their actions. Is there a way for them to attain a happy rebirth?*

If they genuinely believe in the law of karma and its effects and sincerely purify their wrongdoings, those nonvirtuous actions will be purified. At the time of death, if they regret their past unwholesome actions and generate genuine admiration and take refuge in the buddhas and bodhisattvas, the unwholesome actions will be purified and they could take rebirth in the higher realms.

Do not think that there are no future lives. Do not cling to worldly pleasures or anything in cyclic existence. When we transmigrate from one life to the next, there is nothing permanent that goes on to the next life. Nor does everything discontinue, becoming nonexistent. Our future rebirth is not the work of an external creator, it is not a whim of the self, and it does not occur without any cause. Rebirth takes place due to the coming together of causes and conditions, such as afflictions and the karma created by them.

*How rebirth occurs without a permanent self or soul and without the work of an external creator is difficult to understand. It is also hard to comprehend that everything does not cease at death and that rebirth isn't simply random and causeless. Please give some examples to help us understand.*

Having some basic information about the rebirth process first will help you understand the examples:

- Everything about this life does not discontinue and cease altogether in order for rebirth to exist.
- No permanent entity transmigrates to the next life.
- Transmigration to another life occurs in dependence on this life.
- We are not born in this life because we wished for it.
- We are not born in this life because of having prayed to an external creator.
- We are not born due to wishing to be born wherever we like.
- We are not reborn due to wishing that causes and conditions don't affect our rebirth.

- It is not the case that nothing remains after death when the physical and mental aggregates disintegrate.
- There is no “kingdom of death” in which people reside forever after death without taking rebirth.
- The consciousness of the next life is connected to the consciousness of the present life in that it is a continuation of that mind.
- The body of the present life and of the future life do not exist simultaneously. Neither do the mental aggregates of the two lives.
- We are not reborn with similar physical characteristics in one life after the next; someone who is beautiful in one life will not necessarily be beautiful in the next.
- We are not necessarily born in the same realm in the next life; a human being will not necessarily be reborn as a human being. The future life depends on the karma created in this life and the karma that ripens at the time of death.
- A virtuous action cannot propel an unfortunate rebirth, and a nonvirtuous action cannot propel a fortunate one.
- Many consciousnesses do not arise from a single consciousness.
- Someone cannot be born in a fortunate realm without having engaged in virtuous actions and cannot be born in an unfortunate state without having created nonvirtuous actions.
- A birth is not the handiwork of an independent, external creator.

Eight examples seen together will convey an idea of how rebirth occurs:

1. A student learning from her teacher’s lectures represents the next life being affected by the present one.
2. A lamp being lit from another lamp indicates that while a new life begins, nothing permanent is transmitted and that the next life depends on a cause.
3. A reflection in a mirror illustrates that the next life comes about due to the existence of the previous one. Although nothing is transferred from one life to the next, the next rebirth is assured.
4. Embossed impressions and designs emerging from stamps indicates that we are reborn according to the actions we have done.

5. Fire produced by a magnifying glass demonstrates that the next life could be in a realm different from this life, just as the fire is different from the magnifying glass.
6. Sprouts growing from seeds shows that one doesn't disintegrate and cease to exist at death.
7. Salivating from the mention of something that tastes sour indicates taking rebirth by the force of our previous actions, not by choice, wish, or whim.
8. An echo illustrates that we take rebirth when conditions are ripe and no obstacles are present. Also, the future life is neither identical with nor completely different from the present one.

Although each example illustrates an important point about rebirth, there is the possibility that we misunderstand it. Therefore, one example acts to correct the possible misinterpretation of another:

1. From the example of a student learning from the lectures of a teacher, we may think that a being takes rebirth into the next life without its previous consciousness having ceased. To counteract this, the example of the seed shows that the cause must change to produce its result. Similarly, a permanent self or soul does not transmigrate from one life to the next. Rather the last moment of consciousness in this life must cease for the first moment of consciousness in the next life to arise.
2. From the example of both lamps being present when one is lit from the other, we may think that the same body and mind exist in both this and the next life. The example of the echo prevents this misunderstanding because an echo is neither produced without someone making a noise nor simultaneous with the noise. The initial noise is not the same as the echo of it.
3. From the example of a reflection in a mirror, we may think that we have the same physical characteristics in previous and subsequent lives. The fire being produced by the magnifying glass corrects this because the fire and the magnifying glass look quite different.
4. From the example of embossing stamps, we may think that we are born in the same realm after death. The example of the student

learning from the lectures of a teacher remedies this because the teacher, who represents this life, and the student, who represents the next life, are not the same.

5. From the example of the magnifying glass, we may believe that a virtuous action could lead to birth in an unfortunate state and a nonvirtuous action to rebirth in a fortunate state. The example of one lamp being lit from another remedies this by showing that the result is concordant with the cause. Just as one light gives rise to another, virtuous and nonvirtuous actions propel results concordant with them, a fortunate or unfortunate rebirth, respectively.
6. From the example of the seed, we could infer that one consciousness could give rise to numerous consciousnesses. The example of an embossing stamp prevents this misinterpretation by showing that regardless of the design of a stamp, it impresses that very same design, not many other signs on the clay.
7. From the example of sour taste, we may think that someone could have a good rebirth even if he had not acted virtuously and someone could have an unfortunate rebirth without having acted nonvirtuously. The example of the mirror counteracts this by illustrating that the image in the mirror exactly reflects the object.
8. From the example of an echo, we may think that no one is born unless the creator wished it, just as an echo is not heard unless a person has made a noise. The example of the sour taste counteracts this because only someone who has eaten something sour before would salivate at the mention of sour food. Likewise, only someone who has earlier indulged in afflictions and created polluted karma would be subject to a conditioned birth, not others.

Having a basic understanding of rebirth, we see our present life as one among many — it is a product of our previous lives, and during it we create causes for our future lives, liberation, and awakening. We will now look at the great opportunity this present life presents us for spiritual practice.

Contemplate each of these examples to get an accurate idea of how rebirth occurs, remembering that since they are examples, they do not correspond in all aspects with what they are exemplifying.

---

## 8 | The Essence of a Meaningful Life

**V**ISUALIZING THE BUDDHA during the preparatory practices prompts us to reflect on his ultimate attainment — full awakening with its magnificent physical, verbal, and mental qualities. This, in turn, causes us to contemplate the path leading to that state, a path that Śākyamuni Buddha taught from his own experience. Since attaining the awakened state is our ultimate purpose, we want to learn and practice the same path the Buddha did. Cultivating bodhicitta is an essential element of this process.

Within the three levels of being — initial, intermediate, and advanced — the method to cultivate bodhicitta and the bodhisattva's deeds is contained in the advanced level. To make ourselves capable of engaging in these more advanced practices, we must first train in the preceding practices. Of these, the most important center around ceasing our obsession with the pleasures of cyclic existence and aspiring for liberation, which are contained in the intermediate level. But to relinquish attachment to all of cyclic existence, we must first stop attachment to the pleasures of this present life and aspire to have a good rebirth in the future. To do this, we engage in the initial-level practices.

Although liberation and awakening are our ultimate purposes, attaining them in one life is extremely difficult, although not impossible. Certain tantric practices, when done by well-prepared and qualified practitioners, can bring awakening in this life. But generally speaking, completing the path requires many lifetimes. For our spiritual development to proceed smoothly, we need to ensure that we have a series of successive precious human lives in order to practice the Dharma continuously over many lifetimes. For this to occur, we must create the causes, which are included in the practices of the initial practitioner. For this reason, too, the initial practices are extremely important to obtain our ultimate goal.

*Precious Human Life*

Whatever activity — mundane or spiritual — we do in life, self-confidence is a crucial internal factor to accomplish it. We must have conviction and trust ourselves, believing that we can successfully complete that work. Developing self-confidence and appreciation of our potential are the chief purposes of contemplating our precious human life. As we do this meditation, the conviction that we can definitely transform our mind and gain spiritual realizations will grow.

Recognizing the potential of our precious human life is essential; without it we may spend a lot of time complaining about upsetting events around us, from personal problems to environmental destruction and war. Consistently focusing on misfortune prevents us from seeing the good in the world, and this narrow and unrealistic vision hinders our well-being as well as our enthusiasm for Dharma practice.

Not every human life is a precious human life. A variety of conditions must be present in order to have a precious human life that can be used in a meaningful way. When the Buddha was alive in India, people had access to an awakened teacher, but not everyone was interested in hearing his teachings, and among those who were, some had previous commitments or health conditions that impeded them from doing so. Sadly, these people had human lives, but not precious human lives.

A precious human life is free from eight impediments and endowed with ten fortunes.<sup>42</sup> Of the eight unfavorable states, four are rebirth in nonhuman states. Although these rebirths are temporary, the person is impeded from practicing for their duration.

1. Facing intense physical torment, hell beings (*nāraka*) are unable to direct their minds to spiritual practice.
2. Hungry ghosts (*preta*) are distracted from spiritual practice by extreme hunger and thirst, as well as by their constant search for food and drink and the frustration of not being able to procure them.
3. Animals are eaten by other animals higher on the food chain, often mistreated by humans, and are mentally incapable of understanding Dharma teachings.
4. Those born as discriminationless (*asaṃjñika*) gods — a type of god in the fourth dhyāna of the form realm — have almost no mental activity during that life. Born there because of having cultivated the

meditative absorption without discrimination in the previous life, their only moments of clear discrimination occur at the time of their birth and death.<sup>43</sup>

A precious human life is also free from four disadvantageous human conditions:

1. Living in a barbaric, uncivilized society or in a country where religion is outlawed.
2. Living where the Buddha's teachings are not available or during a time when the Dharma has not been taught.
3. Being severely mentally or physically impaired, so that our ability to learn and practice the teachings is extremely restricted.
4. Instinctively holding wrong views, making our mind unreceptive to examining new explanations of *duḥkha*, its causes, cessation, and the path leading to that cessation.

When meditating on the eight unfavorable conditions, do not simply think of other people born in those states, but imagine living in those circumstances yourself. Then recall your current freedom from those limitations and appreciate the excellent conditions you now have.

Then reflect on the ten fortunes you presently have. Five of these are personal and five come from society. The five personal fortunes are:

1. Being a human being with human intelligence that enables you to learn, reflect, and meditate on the Buddhadharma.
2. Living in a central Buddhist region, one where the four types of Buddhist disciples are found — male and female fully ordained monastics and male and female lay followers with the five precepts. In terms of Vinaya, a central country is one where a saṅgha of four or more fully ordained monks or nuns lives and performs the three major Vinaya ceremonies: fortnightly confession, rains retreat, and the invitation for feedback at the conclusion of the retreat.
3. Having a healthy body and mind.
4. Not having committed five actions of immediate retribution (*ānantaryakarma*): killing one's father, mother, or an arhat, drawing blood from a buddha, or causing a schism in the saṅgha.

5. Having belief in things worthy of respect, such as the Vinaya as the basis of Dharma practice, and the Three Baskets of teachings on ethical conduct, concentration, and wisdom.

The five fortunate factors coming from society are living at a place and time when:

6. A buddha is present in the world.
7. The Buddha has taught and is still teaching the Dharma. Although these two conditions are not strictly fulfilled now, there are presently qualified spiritual mentors who give the teachings of Śākyamuni Buddha, and this suffices for fulfilling these two conditions.
8. Those teachings still exist and are flourishing. The transmitted Dharma of the Three Baskets exists and is propagated, and the realized Dharma of true cessation and true paths exists in the mindstreams of living practitioners. There is a living tradition of spiritual mentors who can impart the teachings orally and through their example.
9. There are spiritual mentors, monastics, and other like-minded people who follow the Buddha's teachings and inspire us by showing that the Buddhadharma is a living tradition.
10. There are benefactors who offer the four requisites for life: food, shelter, clothing, and medicine.

Reflect individually on each of these points and see that you have an advantageous situation and all the necessary conditions for serious practice. Allow this to gladden your mind and give you great enthusiasm and self-confidence.

People who have not thought about rebirth very much may not be able to clearly ascertain the freedoms and fortunes of a precious human life. Nevertheless, there are common points on which everyone can agree. We know that Śākyamuni Buddha lived and taught in ancient India and that many Buddhist sages such as Nāgārjuna, Asaṅga, and Śāntideva gained extraordinary qualities by following in his footsteps. Their pure ethical conduct, meditative experience, wisdom, and great humility are evident in

their life stories and the treatises they authored. These and many other Buddhist sages did not become renowned by becoming war heroes or financial tycoons. Rather, they observed a life of restraint and humility and benefited others. Through this, without seeking fame, they became well-known role models for subsequent generations of practitioners.

If we reflect on the nature of their precious human lives and our own, we do not find much difference. Everyone has the same human potential. As human beings, we have unique intelligence compared with other life forms, regardless of our nationality, gender, race, ethnicity, sexual orientation, social class, religion, and so on. Everyone has the same Buddha nature. Siddhārtha Gautama was an ordinary person just like us. By tapping into and using his human potential in the right way, he became a buddha and was able to greatly benefit sentient beings living at that time as well as those in many centuries to come. Even today, we hear of and encounter people who offer great service and benefit to humankind. We have the ability to do the same.

I have found in my discussions with people that many suffer from low self-esteem and self-hatred. When we reflect on our spectacular good fortune in having a precious human life, these distorted conceptions vanish. We have all eighteen factors of a precious human life, so obviously we are a worthwhile and adequate person. We created tremendous constructive karma in previous lives to have our present opportunity, so we are capable of Dharma practice. We have all necessary conditions to progress on the path and accomplish our spiritual aims in this life, so seeing the future as bleak is unrealistic. Consistent meditation on precious human life prevents us from such self-defeating and inaccurate ways of viewing ourselves. To the contrary, it generates great enthusiasm for Dharma practice.

### *Rare and Difficult to Attain*

The Buddha did not exaggerate when he said that receiving all the conditions necessary for a precious human life is not easy. Looking at the current world population, we may think a human life is easy to come by. However, not all human beings have the eighteen qualities of a precious human life that give them the best opportunity to practice the Dharma.

Some people lack interest in spiritual matters, others cannot meet qualified teachers and teachings. Some people live without religious freedom, others face hindrances, such as starvation, war, illness, and injury, that make practice extremely difficult. Contemplating that lacking even one of the eighteen conditions interferes with all others bearing fruit helps us to see that we are extremely fortunate and must not take this opportunity for granted, but use it to create the causes for full awakening. *Array of Stalks Sūtra* speaks of the difficulties of attaining each condition of a precious human life.

It is hard to avoid unfavorable conditions. It is hard to find a human birth. It is hard to remove error and doubt about the right opportunity. It is hard also to find a buddha in the world. It is hard also to have all our sense faculties in order. It is hard also to hear the Dharma teaching of a buddha. It is hard also to meet people of truth (holy beings). It is hard also to find authentic spiritual masters. It is hard also to receive genuine guidance and instruction. It is hard also to live right in the human world (have right livelihood). It is hard also to carry out the Dharma in all respects.<sup>44</sup>

We must look inside and ask ourselves, “Do we have all the factors that guarantee having a similar precious human life in the future?” Firm ethical conduct, training in the six perfections, and sincere dedication prayers are needed, as are cultivation of stable faith and correct wisdom. Ethical conduct is the cause for a human rebirth. Training in the six perfections results in having the conducive circumstances to practice the Dharma — generosity in this life results in receiving food, shelter, clothing, and medicine in future lives, and joyous effort in this life enables us to accomplish our goals in future lives. Sincere dedication prayers to have a series of precious human lives so that we can attain full awakening direct our merit so that it will ripen accordingly.

In this context, living in pure ethical conduct refers chiefly to abandoning the ten destructive pathways of actions — killing, stealing, unwise sexual behavior, lying, creating disharmony, harsh words, idle talk, coveting, maliciousness, and wrong views. It also involves taking and

keeping any of the prātimokṣa ethical codes — those for monastics or lay followers. Doing this requires some conviction in the infallibility of the law of karma and its results.

We know that every conditioned phenomenon arises due to its preceding causes and conditions. This is the general interdependent nature of causes and effects. Within that exists one type of cause and effect — karma and its results. Karma — sentient beings' volitional physical, verbal, and mental actions — depends on our virtuous and nonvirtuous motivations and produces our experience of happiness and suffering.

All sentient beings — except those in the formless realm — have a body. While the body itself is produced by external causes, such as the sperm and egg of our parents, which body our mindstream is born into depends on the quality of our mind and the kinds of karmic seeds left on our mindstream in the past. By acting constructively in this life, we create beneficial mental habits and leave many seeds of virtuous actions on our mindstream. When we die, some of these will ripen, enabling us to take a precious human life for many lifetimes to come, enabling us to continue our spiritual development with minimum interruption. For this reason, spiritual practice, which concerns working with our mind and its intentions, is important. We are responsible for accumulating sufficient causes to produce future precious human lives like the one we have now.

Reflecting in detail on the specific causes for a specific rebirth leads us to the very subtle and profound functioning of karma and its effects — the specific action an individual did in a certain lifetime that is now ripening in a particular event. This is an extremely obscure topic, one only omniscient buddhas know clearly and perfectly. At present, we must depend on scriptural authority to understand it.

Nevertheless, we can understand the general functioning of karma and its results. We know that constructive acts bring happy results and destructive acts bring suffering results. Reflecting on the actions we've done throughout our lives and the various intentions that motivated them, can we say with conviction, "I definitely have created all the causes and conditions for a precious human life and have purified all opposing ones?" Most of us find it difficult to say this with complete conviction because we have done actions we now regret. Transforming our mind by practicing the

Dharma affords us the opportunity to change this situation by accumulating merit, purifying negativities, and gaining realizations. Understanding the potential and preciousness of human life to do this and the difficulty of receiving this opportunity in the future, we should avoid wasting our life in frivolous pursuits and engage in Dharma practice now.

## *Taking the Essence of Our Precious Human Life*

If something is true but does not have much to do with our daily experience, knowing it is not important, and our lack of understanding does not bring great problems. But knowing the great value of our precious human life is crucial to this and future lives. Unaware of this fact, we will not see our present lives as significant and filled with opportunity, and risk wasting the chance to create the cause of happiness for a long time to come. Instead, we will mindlessly follow our self-centered thoughts, which will lead us to unfortunate rebirths. But once aware of the rarity of a precious human life, the difficulty of attaining it, and the amazing things we can do with it, we will no longer think our lives are meaningless.

All living beings seek happiness and peace, and I believe attaining this is the purpose of human life. Happiness and peace depend on hope. People lose hope when their lives do not go smoothly or they fail to actualize their expectations. Some people become depressed and some look to suicide for relief, which doesn't stop their pain. But when we understand that creating the causes for peace and happiness are within our ability, despondency cannot take root.

There are two types of happiness: temporary and long-lasting. Experienced while we are in cyclic existence, temporary happiness includes the attainment of higher rebirth as a human being or god. Long-lasting happiness is liberation and awakening, which are attained through spiritual practice. The way to make our life meaningful and to attain these two kinds of happiness is by engaging in sincere spiritual practice, specifically the practices of beings of initial, middle, and advanced levels; that is to say, we must aspire to attain liberation, generate bodhicitta, and ascertain the correct view of emptiness. If we have learned the Dharma and are skillful,

no matter our situation in life, where we are, or what time it is, the potential to enrich ourselves through Dharma practice is always present.

Spiritual practice involves some form of renunciation. Misidentifying what to renounce, some people think they must give up happiness and undergo hardship and suffering by accepting extra problems and miseries that they did not have before. If this were so, no sensible person would want to practice the Dharma.

The Buddha does not direct us toward suffering; rather, he shows us the path to be free from misery. He does this by explaining that the roots of suffering — ignorance, animosity, and attachment — are to be renounced, and the causes of happiness — generosity, fortitude, compassion, and so on — are to be adopted. He teaches a gradual path so that we can practice according to our capability at any particular moment. In this way, his followers embrace a way of life in which they eliminate all suffering and its causes step by step, beginning with gross ones and proceeding to subtle ones. In addition, they cultivate happiness, starting with temporary happiness and progressing up to the ultimate happiness of buddhahood.

From this, we see that the purpose of spiritual practice is to bring a sense of internal peace, well-being, and fulfillment. Although our ultimate goal is full awakening, the most urgent and immediate happiness to work for is that of future lives, and for that reason practitioners endeavor to create the causes and conditions to have precious human lives and abandon causes that create the contrary.

## *Eight Worldly Concerns*

Although we have such precious potential, we often fail to recognize it, or even if we do, we are often distracted and do not utilize it. Our tendency to pay more attention to gaining immediate happiness and avoiding unpleasant situations is often stronger than a clear awareness that sees the value of creating the causes for a fortunate rebirth, liberation, and awakening. Our chief obstacles at present are subsumed in the eight worldly concerns — four pairs of delight and dejection that produce attachment and anger. The Buddha said (AN 8.6).<sup>45</sup>

Gain and loss, disrepute and fame, blame and praise, pleasure and pain. These eight worldly concerns revolve around the world, and the world revolves around these eight worldly concerns.

Attachment arises toward one part of each pair: material or financial gain, good reputation or image, praise and approval, and pleasure, especially from sights, sounds, smells, tastes, and tactile sensations. Aversion arises toward the other part of each pair: lack of money and possessions, a notorious reputation, blame and criticism, discomfort or pain.

Illustrations of these eight abound in our daily lives. We try to arrange our lives to come in contact with attractive objects and people, tantalizing sense experiences, sweet ego-pleasing words, money, possessions, and so forth. We complain when these do not meet our standard or when we encounter their opposite. Being preoccupied with these eight — which center on our own happiness in only this life — we become very reactive to our environment and the people in it. This emotional reactivity — clinging to what we like, pushing away what we don't — brings difficulties in this life and impedes actualizing our long-term Dharma goals.

### *Financial and material gain and loss*

The first pair of delights and dejections involves our relationship with money and possessions. We are elated when we have a lot of money, nice clothes, a comfortable house, a new car, and good sports equipment, and we become upset when we are unable to procure the things we desire, when they are destroyed, or when they are taken away from us. Sadly, many people measure their success in life by their material wealth. No matter how much they have, they are never satisfied and never feel fully successful.

Of course we need to take care of the practical aspects of our lives, but if we pay undue attention to material possessions and finances, we become a slave to them. Once we are entrapped by their lure, contentment evades us; quarrels ensue as we try to procure more and better and protect what we already have. We become arrogant toward those who have less, jealous of those who have more, and compete with equals, trying to prove our worth by having more than them.

Attached to financial and material gain, we work long hours and plan big projects to make us rich. Unless we are able to use the money wisely to benefit others, the process of gaining wealth consumes our time and energy so that we have little left for practicing Dharma. In the process of accumulating wealth, our ethical discipline is easily corrupted. Those who are greedy become involved in activities that harm individuals and society and that result in scandals and prison terms.

Unfortunately, some lamas and geshees initially live a simple life, studying and practicing diligently. They are very humble and not at all arrogant. Later, when they have many disciples, especially wealthy ones, they become ostentatious. They forget the many years of sacrifice they went through for the Dharma and are corrupted by seeking wealth and fame. We must be attentive not to do this ourselves.

### *Good and bad reputation and image*

We feel elated when we are well-known and have a good reputation and dejected when our image is damaged. Continually preoccupied by what others think of us leads to self-preoccupation and emotional instability. We pay a lot of attention to appearances, and lacking sincerity, we use others for our own advantage. Many people succeed in achieving a good reputation or a high rank, but lack internal peace and true friendships.

People are attracted to a famous person because of his or her reputation. Whether or not that person has something valuable to contribute to society is another question. Without being impressed with titles, honors, or power, we are better off looking at each person as another human being who has the Buddha nature and seeks happiness and not suffering, just like us.

As a monastic, I am not so concerned about gain and loss of wealth. However, as the Dalai Lama, I sit on a high throne when I teach, and sometimes in a corner of my mind the thought arises, "I hope people respect me." When explaining the Dharma, I sometimes wonder, "Does the audience like this talk?" Sometimes our minds are invaded by defiled thoughts: "What a great practitioner I have become! I hope others notice!" It is important to free our minds from expectations of receiving offerings, respect, and appreciation when we share the Dharma. We should talk about our faults and let others speak of our good qualities.

Of course we must prepare before giving a Dharma talk, but if we are too concerned with our delivery or how the audience receives the teaching, there is danger that our talk is for show. Instead of being apprehensive about what others will say about us, we should generate a sincere motivation at the beginning: “Although I do not know much, I will explain what I understand.” Then we will not be nervous and will speak truthfully. If people ask questions that we cannot answer, we simply say that we do not know and use it as an opportunity to learn more.

A member of my staff chided me, saying that I don’t prepare my speeches well enough. Perhaps he would like me to make more astute comments about complex topics. However, I feel more genuine when I talk about what I practice and live myself. When I do that, I’m not worried about whether or not others like my talk.

One time a reporter from an important paper in New York interviewed me and asked how I would like to be remembered in history. I told her, “This is not my concern. I am a Buddhist practitioner and am not interested in such things.” But she kept asking me until I got impatient and said, “I don’t think about that!”

Being concerned with present reputation or our name in history is foolish. We will not be alive to enjoy our reputation in history, so why worry about it? A good reputation doesn’t get us any closer to awakening. Our image is not important, but our motivation is. If our motivation is insincere, then even if everyone praises us, the glory will not last long. But if we are sincere and straightforward, we will communicate well with others. Eventually they will accept and appreciate our intentions, and that respect will last over time.

Buddha Śākyamuni was never concerned about his name or fame, but after nearly twenty-six centuries, people still love and respect him. Even non-Buddhists appreciate his message of nonviolence and compassion. Great masters such as Nāgārjuna remained simple Buddhist monks, however learned they became. Of course, when they debated the meaning of the teachings, they became animated and spoke forcefully; but this was not done out of arrogance or desire. Some present geshees are like that. In their ordinary life, they are so humble that we may even doubt whether they

can walk properly. But when they go into the debating courtyard, they suddenly become active and assertive.

Look at the great Indian sage Śāntideva. From his writings we know that he was an intelligent, realized practitioner. But in his daily life, he was so humble that people thought he only ate, slept, and defecated. However, we see in the ninth chapter of *Engaging in the Bodhisattvas' Deeds* that in debate he could be relentless and fierce in counteracting wrong conceptions. Once when he taught emptiness, he floated upward in space until he finally disappeared and only his voice could be heard, displaying a superpower that flabbergasted the audience!

### *Praise/approval and criticism/disapproval*

We love when people we like comment on our good qualities or competent work and we become depressed when they point out our faults, criticize us, or blame us for things we may or may not have done. Due to this delight and dejection, our emotions vacillate drastically, as does our self-image.

In an effort to win the approval of others and avoid their disapproval, we may sacrifice our ethical standards to win their favor, succumb to peer pressure to fit in, and make unwise decisions that have long-term consequences. In the hopes of winning someone's approval, we try to become what we think they think we should be. In the process of doing so, we lose touch with what we really think and feel, and live in fear of accidentally doing something that would annoy the other person and garner their criticism.

When meeting new people, we usually present our good side and may exaggerate our qualities to win their approval and affection, often not realizing the extent of our deceit and pretension until later. Once they like us, we may take their friendship for granted and stop being so considerate of them. As a result, they criticize us, we feel hurt and resentful, and difficulties in the relationship ensue. Our self-confidence plummets because it was based on the praise of others and not on our honest self-assessment. Sometimes we become confused and don't know what to believe about ourselves because one person praises us and another criticizes us for the same action, in quick succession.

I have found that it is better for everyone involved to be sincere, frank, and natural with others. I show what I am and do not pretend to be otherwise, no matter what others think or say about me. Being free of attachment to praise and reputation gives us the ability to relate as one human being to another.

When I was in China in 1954, I met with some members of the Communist Party. They spoke to the point, our discussions were very frank, and I liked some of them, at least for a while. But other officials were too polite. They were trying to impress me, and that made me suspicious of their purpose.

The eight worldly concerns are sneaky, even when we try to create virtue. Excellent practitioners will sometimes notice in the back of their minds the thought wishing to receive praise, respect, or offerings. Worse yet are those who try to impress others with their knowledge or ability to perform rituals. Some get enamored with their own charisma. In fact praise doesn't benefit us in a substantial way: it doesn't increase our longevity, intelligence, or good health, nor does criticism impede these. The law of karma and its effects is our true witness: others may sing our praises, but we still have to experience the results of the destructive actions we created. Other people may criticize us, but they cannot destroy our merit or cause us to be reborn in an unfortunate rebirth. Our infatuation with praise and accolades is like thinking a rainbow has some substance. The great Nyingma practitioner, Longchen Rabjam, said:

See the equality of praise and blame, approval and disapproval, good  
and bad reputation,  
for they are just like illusions or dreams and have no true existence.  
Learn to bear them patiently, as if they were mere echoes,  
and sever at its root the mind that clings to an I or a self.<sup>46</sup>

### *Pleasure and pain*

So many of our actions are fueled by attachment to pleasurable sights, sounds, odors, tastes, and tactile sensations, such as feeling warm on a cold day and cool on a hot day, and aversion for their opposites — grating noises, disgusting food, sleeping on a bed that is too hard or too soft, and

witnessing alarming sights. Securing the former and avoiding the latter becomes the purpose of most of our daily life activities. Yet as hard as we try, we are never able to make our lives entirely comfortable, which leaves us feeling grouchy and complaining. Our unhappiness does not come from inability to control the environment so that we have only pleasant sensory experiences, but from internal emotions of strong craving and aversion. Minus the craving and aversion, we may still have preferences, but are able to accept what life brings us. Our frustration and worry decrease, giving way to enjoying what is instead of pining for what isn't.

This pair may also be described as attachment to success and aversion to failure. Rather than allow our mind and self-esteem to vacillate according to these, we can maintain a balanced attitude by contemplating interdependence. Success does not depend on us alone; the efforts of many people are involved, so arrogance is uncalled for. Failure may be due to mistakes or to external circumstances that we cannot control. Learning from our mistakes is useful and accepting that we cannot control the world is practical. Both of these will calm our mind.

## *Disadvantages of the Eight Worldly Concerns*

When we speak of Dharma as distinct from non-Dharma, the line of demarcation is the presence or absence of the eight worldly concerns. If our action is motivated by attachment to only the happiness of this life, it is considered non-Dharma. Actions motivated by the aspiration to have a fortunate rebirth, to attain liberation, or to attain buddhahood are Dharma actions. This does not mean that secular people or those of other religions do not create virtue. Anyone can refrain from harming others, cultivate a kind heart, and create merit through generosity, forgiveness, and compassion.

In the Pāli canon (AN 8.6) the Buddha explains that the eight worldly concerns are encountered by both uninstructed worldly people and by knowledgeable āryas, but there is a big difference between how these two groups respond. When ordinary people receive gain, fame, praise, and pleasure, they do not reflect on these as being impermanent and subject to change; they do not know them as they are in reality. Instead ordinary

beings are delighted and their common sense is swept away by elation. When they meet with the opposite of these four — loss, disrepute, blame, and unpleasant sensations, they become dejected. Obsessed with their likes and dislikes, they continue to revolve in cyclic existence, with its birth, ageing, sickness, and death, and to be tormented by pain, grief, and despair. Their minds are never peaceful, as they desperately try to procure everything that appears to bring them happiness and vehemently reject the reality of painful situations.

When instructed āryas come upon these concerns, however, they understand the four pleasant ones to be transient and changing. Understanding them as they really are — impermanent, unable to provide lasting happiness, and lacking their own independent essence — their minds remain balanced. They do not become upset when loss, blame, disrepute, and unpleasant sensations come their way. Giving up attachment to likes and aversion to dislikes, they seek a higher happiness — that of liberation — and create the causes to be free from cyclic existence. Speaking of the eight worldly concerns, the Buddha observes (AN 8.5):

The wise and mindful person knows them  
and sees that they are subject to change.  
Desirable conditions don't excite his mind,  
nor is he repelled by undesirable conditions.

He has dispelled attraction and repulsion;  
they are gone and no longer present.  
Having known the dustless, sorrowless state,  
he understands rightly and has transcended [cyclic] existence.

The eight worldly concerns center around attachment to the pleasures of just this life. While this life is important, clinging to its pleasures is problematic. The Buddha does not say that pleasure is bad or evil. Pleasure is what it is — a nice experience that lasts a short while. It is fine to enjoy the good things we encounter. But becoming attached to them is another matter, because the attachment — and the aversion that arises when we cannot get what we like — causes problems in this and future lives and

distracts us from fulfilling our spiritual yearnings. For this reason, the Seventh Dalai Lama said:<sup>47</sup>

Fantasies about material objects and the winds of [tendencies toward] the eight worldly concerns are completely misleading. Because of clinging to things that give only temporary fulfilment, at death one is weighed down with the pain of a mind empty [of virtue].

The Fourth Pañchen Lama, Losang Chokyi Gyaltsen, said true practitioners of Mahāmudrā see that the eight worldly concerns are like dramas of madness and prefer solitude — “solitude” meaning separating the mind from ignorance, animosity, and attachment.

In our attempts to obtain the four factors that superficially seem to bring happiness in only this life and to distance ourselves from the four undesirable ones, we create a great deal of negative karma. To protect our reputation, we talk behind others’ backs; to get more money, we cheat others or get involved in illegal business dealings; to win someone’s approval or praise, we lie, hiding our mistakes and making up successes that we lack. In the long run, due to the functioning of karma and its effects, these actions bring suffering on us. Although seeking the eight worldly concerns seems to bring us happiness superficially, in the long term it brings more misery. The eight worldly concerns make our viewpoint very narrow and self-centered. We become blind to karma and its effects and ignore the need to create the causes for well-being in future lives. Aspiring to liberation or awakening is far from our mind.

The eight worldly concerns obstruct us from genuine Dharma practice. Most of our distractions in meditation involve the eight worldly concerns. When our mind wanders while listening to teachings, our attention has strayed to one of these eight. We postpone positive deeds, such as generosity or helping others, because our time is occupied with these eight. For these reasons, Dharma practitioners are warned about seeking the temporary happiness of *only* this life, not because it is bad or “sinful” but because it impedes us from actualizing the spiritual realizations that will bring long-term happiness.

Attachment to the pleasures of only this life breeds dissatisfaction. However much we have, it is not enough. Even wealthy people don't feel satisfied with what they have. No matter how much our loved ones praise us, we still want more. We long for another reward, trophy, or public acknowledgement of what we have accomplished. True satisfaction eludes us.

When we have worldly success, we easily become arrogant and haughty, flaunting our success and ignoring the needs of others. Therefore mind training texts say that it is better to meet difficulties, for they make us humble and more compassionate. Difficulties flatten our haughtiness, and we learn to respect the concerns and feelings of others. Difficulties also deepen our refuge in the Three Jewels and spur us to be mindful of karma and its effects.

Giving up attachment to the pleasures of only this life and the eight worldly concerns does not mean that we neglect ourselves and become a pauper. Some people make a big display of having renounced the world, but remain attached to their reputation as a renunciant! We need a certain amount of possessions and financial support to function in society. Having wise friends and maintaining our health facilitate Dharma practice. Problems arise when we are attached to these and seek them to the exclusion of all else.

Relinquishing attachment and aversion does not entail having a dull and boring life. Rather, our life becomes fuller because being free from the push and pull of delight and dejection, we are able to appreciate whatever comes our way. Instead of thinking, "I can only be happy when I'm near this one special person," we become more open and enjoy the company of many others.

In brief, the problem does not rest in the experience of pleasure or the objects that seem to bring pleasure. It is clinging to the pleasure that is the troublemaker. The Buddha says (AN 6.63):

They are not sensual pleasures, the pretty things in the world;  
a person's sensual pleasure is lustful intention;  
the pretty things remain just as they are in the world,  
but the wise remove the desire for them.

In the *Inquiry of Ugra Sūtra (Ugrapariṣcchā)* the Buddha gives excellent guidance on how to deal with our addiction to the eight worldly concerns:

Being free of attachment and aversion [the bodhisattva] should attain equanimity with respect to the eight worldly concerns. If he succeeds in obtaining wealth, or a spouse, or children, or valuables, or produce, he should not become arrogant or overjoyed. If he fails to obtain all these things, he should not be downcast or distressed. Rather he should reflect as follows: “All conditioned things are illusory and are marked by involvement in fabrication. Thus my father and mother, children, spouse, employees . . . friends, companions, kinsfolk, and relatives — all are the result of the ripening of actions. Thus they are not mine, and I am not theirs.

“And why? Because my father, mother, and so on are not my protector, refuge, resort, place of rest, island, self, or what belongs to the self. If even my own perishable aggregates, sense sources, cognitive faculties and their objects are not me or mine, how much less are my father, mother, and so on me or mine, or I theirs? And why? Because I am subject to my actions and heir to my actions, I will inherit [the results of] whatever I have done, whether good deeds or bad. I will taste the fruit of every one of them and will experience the ripening of each one. Because these people are also subject to their actions and heir to their actions, they too will inherit [the results of] whatever they have done, whether good deeds or bad. They will experience the ripening of every one of them and will taste the fruit of each one.

It is not my business to accumulate nonvirtuous deeds for their sake. All of them are a source of pleasure now, but they will not be a source of pleasure later on. Instead, I should devote myself to what is really mine — to the virtues of generosity, discipline, self-restraint, fortitude, good character, exertion, vigilance, and the accumulation and production of the [seven] awakening factors. That is what is actually mine. Wherever I may go, these qualities will go with me.”<sup>48</sup>

Using our human intelligence to accomplish long-term benefit for ourselves is valuable, whereas focusing on just our own short-term interests is limited. Even businesspersons who are nonbelievers know that being

short-sighted and impatient is a disadvantage to achieving their goals. If this is true for obtaining good results in this life, it is even truer for actualizing our spiritual goals. Thus when we experience suffering and are deprived of sensory pleasures, wealth, praise, and fame, we should maintain a long-term perspective and practice fortitude so that we can tolerate these temporary situations in cyclic existence. Such fortitude maintains our spiritual resolve without feeling defeated or upset, no matter what we encounter. But when we are focused on only our immediate happiness and benefit, we are perpetually dissatisfied and create much destructive karma.

Our precious human life presents us with great opportunities. If we use our energy only to get delicious food, attractive clothing, a good income, a great reputation, and popularity, we waste our human potential. Using our human intelligence to improve only our external situation but not the state of our mind and heart does not do justice to our extraordinary intelligence. Simply helping our friends and harming our enemies wastes our human potential and does nothing to distinguish us from animals who also care for their dear ones and harm those who threaten them. We must not limit our human life to just these activities. Spending our lives striving only for the eight worldly concerns leaves us regretful at the end of our lives, for none of these is of any use to us at the time of death or afterward. We regret wasting a little money, but we should regret even more wasting our lives seeking only comfort, prestige, romantic love, and so forth.

What, then, can human beings do that animals and insects cannot do? We can transform, discipline, and train our minds and hearts. We can understand teachings on ethical conduct and the method to cultivate love and compassion. We can realize the nature of reality, which will liberate us from all *duḥkha*. Channeling our energy into actualizing our peerless potential is truly worthwhile.

Each sentient being wants happiness. A worldly perspective leads us to believe that it is found by possessing certain things, being close to specific people, and gaining acceptance and reputation. A Dharma perspective proposes seeking happiness in transforming our mind and heart and cultivating our wisdom and good heart. Dharma practitioners seek happiness in a more reliable way by expanding our motivation to include the long-term welfare of all sentient beings. The Buddha speaks of the joy a

sincere practitioner derives from Dharma practice (MN 27.14–15): by living ethically, “he experiences within himself a bliss that is blameless.” Living an ethical life enables us to be free from guilt and remorse and to feel good about our actions. By restraining the sense faculties so that the mind is not continuously running here and there in search of temporary pleasure, “he experiences within himself a bliss that is unsullied,” that arises from acting with mindfulness and introspective awareness.

By cultivating contentment, we experience the internal peace of accepting ourselves. The practice of bodhicitta opens our hearts with love and compassion toward all beings, producing great joy in the mind. By acting for the benefit of others, we gain the satisfaction of making a positive contribution to the welfare of others. The practice of stabilizing meditation leads to the attainment of higher states of concentration. The joy and bliss that arise in them are free from attachment to the desire realm and invigorate the mind. Realizing the true nature of all phenomena and integrating it in our lives brings a peace that cannot be destroyed. The union of clear light mind and illusory body in tantric practice produces the magnificent bliss of full awakening. The Buddha spoke of giving up attachment to the pleasures of this life in order to lead us on the path to more stable and profound states of fulfillment that can be actualized only by Dharma practice. Sentient beings naturally seek happiness and there is nothing wrong with having it. We want to free ourselves from attachment to inferior states of happiness that are in the nature of *duḥkha*. Rather than seek situations and things that at first appear wonderful but eventually become troublesome, it is wiser to generate spiritual happiness that is based on more stable, realistic, and beneficial states of mind.

## 9 | Looking beyond This Life

**T**O ATTAIN a fortunate rebirth, liberation, and full awakening, we must have heartfelt aspirations and a firm commitment to engage in the practices that bring these about. Understanding the benefits of attaining those aims and the disadvantages of not attaining them fosters a pure motivation. Contemplating the drawbacks of being born as one of the three unfortunate classes of beings and the opportunities for spiritual progress with a fortunate rebirth will motivate us to keep good ethical conduct, practice the six perfections, and dedicate the merit for a precious human life. Reflecting on the faults of cyclic existence and the difficulties of being under the power of afflictions and karma motivates us to counteract these. Contemplating the kindness of sentient beings and their *duḥkha* generates the aspiration for awakening.

As described above, the biggest obstacle to attaining our spiritual aims is our obsessive preoccupation with the eight worldly concerns, which lead us to engage in destructive actions and distract us from creating virtue. The most effective way to initially subdue the eight worldly concerns is to reflect on impermanence and death. The *Dhammapada* counsels (168–74):

This world is blind! There are so few who see things as they truly are. Come, take a good look at this world, pretty like a king's chariot. Though fools become immersed in it, for the wise there is no attachment. See how it is like a bubble! See how it is like a mirage! The king of death does not see one who regards the world in this way. Rouse yourself and don't be lazy! Follow the good ways of Dhamma.

*Gross and Subtle Impermanence*

As the first of the sixteen aspects or key points of the four truths and the first of the four seals that mark a teaching as Buddhadharma, impermanence is an essential point to contemplate on the path. Impermanence has two levels: subtle and gross. Subtle impermanence refers to the fact that every conditioned phenomenon changes and does not endure to the next moment. Its very nature is transient: the subtle particles composing an atom are in constant motion; each moment of mind ceases and gives way to the next.

Gross impermanence refers to the ceasing of the continuity of an object: a chair breaks, a human being dies. Initial-level practitioners meditate on gross impermanence to help them to evaluate their priorities in life by seeing the impermanent nature of the happiness of just this life and the eight worldly concerns. Not thinking that we will die one day, we think, “I need this and that because I’m going to live.” Focusing on the pursuit of money, fame, praise, success, and comfortable experiences — all of which do not last long — we neglect to prepare to depart this life and go on to the next. Awareness of the fleeting nature of life spurs us to engage in what is beneficial for this life as well as what is meaningful for lives to come. A lamrim text encourages us to think of impermanence in five ways.

1. The *impermanence of destruction* refers to the annihilation of something that existed. For example, the twin towers in New York were decimated, and death is the cessation of a person’s life force.
2. The *impermanence of cultural trends and attitudes* points to the changes occurring in society. One hundred years ago, women had few options in life outside of marriage and family. Now more opportunities are available to them and society benefits from their contribution. Centuries ago democracy was virtually unheard of. Now it is a value in many cultures.
3. The *impermanence of separation* indicates that whatever comes together must separate; it is impossible to always remain together. Relationships transform over time, and people who were close at one time later go their own ways. Organizations and companies form and dissolve, their employees going in many different directions.
4. *Sudden impermanence* is the fact that circumstances can change quickly and unexpectedly. We get up in the morning expecting to

have certain experiences and meet particular people, but plans change on short notice. While we can easily adapt to some sudden changes, others, such as a mass shooting or the death of a dear one in a car accident, are difficult to adapt to.

5. The *nature of impermanence* refers to the fact that everything that arises due to causes and conditions is transitory in nature. Whether we want it to be stable and predictable or wish it to change quickly, change is its very nature.

## REFLECTION

---

1. Review the five points above one by one and make examples of them from your life.
  2. Notice the effect this has on your mind.
- 

## *Learning from Our Own Mortality*

Contemplating death is neither morbid nor unrealistic. To the contrary, it helps us prepare for death and live with more wisdom and kindness. This meditation has three points: death is definite, its time is uncertain, and at the time of death only the Dharma can help us. Each point has three subpoints and a conclusion; together these lead us to a realistic and beneficial perspective on what is important in life.

### *Death is definite.*

Death is the cutting off of the life faculty; it occurs at the time that the continuities of body and mind are disjoined. The continuity of the body is a lifeless corpse; in general, the continuity of the mind enters an intermediate state, and then ordinary beings take rebirth in another coarse body. The only exceptions are meditators who have deep concentration and are reborn in the form or formless realms, a person who will be born in a pure land, a tantric practitioner who gains spiritual realizations at the time of death, or an ārya who has control over the rebirth process. Death occurs owing to

four situations: (1) Exhaustion of the life span. The karma that brought about that life is exhausted, and that lifetime ceases. (2) Exhaustion of merit. Merit is required to stay alive once we are born, and when it runs out, death occurs. The karma that maintains the life span may still be intact, but the person lacks the merit to receive food, shelter, clothing, or medicine, and death occurs. (3) Both of the above occur simultaneously. (4) Ripening of destructive karma. Even though the life span and merit may not be exhausted, the seed of a strong destructive karma ripens and cuts short the life span, bringing an untimely death due to an accident or unexpected illness.

The three subpoints that help us understand the certainty of our death are:

1. Everyone who is born dies; death is a natural result of birth. Death is common to all beings; it is the great equalizing factor, for no one can avoid it. Wealth, fame, intelligence, love, or power — none of these can prevent death — and even holy beings and great leaders die.
2. When the time of death arrives, our life span cannot be extended. There is nowhere to go to avoid death; beings in every realm of cyclic existence die. Moving to another place, finding another doctor, and changing our medicine may prolong our life awhile, but cannot prevent death.
3. We will die even if we have not had the time to practice the Dharma. As each moment passes, we approach the end of our life, and the time available for Dharma practice is brief and consumed with other activities. When we're young we go to school and play, in our adult years we have a family and work, in our senior years we spend time caring for our health.

While most of us intellectually know that we will die, our inner feeling is that death will not come to us: "Others will die, but not me." How wrong that is! Śāntideva cautions us (BCA 2.39):

Remaining neither day nor night,  
this life is always slipping by

and never lengthening.

Why will death not come to one like me?

Given that there is no way to avoid death, wouldn't it be beneficial to prepare for death so that we will not be caught unawares when it happens? The best way to prepare for death is to practice the Dharma — to transform our mind by pacifying afflictions and cultivating good qualities. Doing this, we will be more peaceful at the time of death and our future rebirth will be better.

The conclusion to reach from this meditation is: Since death is definite and practicing the Dharma will benefit us in this life, at the time of death, and in future lives, we resolve to definitely transform our minds through putting the Buddha's teachings into practice.

### *The time of death is uncertain.*

Although we feel we will not die anytime soon, in fact we do not know when death will come. Although we plan for our old age, we may not live that long; there is no guarantee that we will be alive tomorrow. Contemplate:

1. The life span of human beings in our world is indefinite, and people die at all ages. We may believe that death will come only after we have accomplished certain career goals or after we've enjoyed watching our children grow up or traveling to faraway places, but in fact we don't know when we will die. Whenever it is, we will surely be in the middle of doing something that will be left unfinished. Some people die on the way to work, others while eating, some simply between one breath and the next.
2. Many circumstances lead to death and fewer lead to survival. Great effort is required to stay alive: we must feed our body and protect it from heat, cold, disease, and injury. It takes a lot of planning and effort to keep this body alive, whereas if we did nothing, our body would simply die of dehydration or starvation.
3. Even things meant to protect life, such as medicine, food, shelter, and transportation, can inadvertently cause death. Microscopic viruses and bacteria may cause death, small pieces of metal can kill

us. Our physiological systems are delicate and easily become unbalanced, leading to illness and death. While medical science has made tremendous advancements, it has not been able to stop death, and sometimes the treatment we take for illness has side effects that hasten death.

It is to our advantage to prepare ourselves for death, whenever it will come. The way to do this is by developing a stable spiritual practice now so that we will accumulate as much virtue and Dharma understanding as possible while alive. This also makes it more likely that we will have a virtuous mental state should death come suddenly. Āryaśūra warns us:

Between the two — tomorrow and the next life —  
which will come first is uncertain.

Therefore, do not make effort in the means for tomorrow;  
it is right to make effort for the welfare of the next life.<sup>49</sup>

Conclusion: Seeing that the time of death is uncertain let's start transforming our minds today. Since death may come at any time, we cannot afford to postpone our Dharma practice until conditions are more suitable. The only time we will ever have for practice is now.

### *Only Dharma helps at the time of death.*

At the time of death, our wealth, fame, friends, relatives, social status, awards, and even our body cannot help us. None of them can come with us into our future lives; they are all left behind as we separate from everything that is familiar. However, the karmic seeds of destructive actions that we have done to procure and protect our wealth, dear ones, and body follow the mindstream (*cittasaṃtāna*) as it goes on to the next life. Only the positive mental qualities we have built up during our lives and the karmic seeds of constructive actions are able to ease our mind at the time of death and ensure fortunate future lives. To understand this, reflect:

1. Money and possessions are of no help at the time of death. We may work very hard while alive to amass money and material goods, but all of them remain behind. We may have created great destructive

karma to procure and protect our money and possessions, but our wealth in this life is useless in the next. We go to the next life with only the karmic seeds and habitual tendencies we have built up while alive.

2. Friends and relatives cannot prevent our death no matter how much they love and respect us. We may have been constant companions for decades, but separation is guaranteed because everything that comes together must separate. Separation at the time of death can be excruciating when we are very attached to others.
3. Not even our body is of benefit. We have spent so much of our lives taking care of this body, but at the time of death it abandons us, becoming a corpse that remains here while the mindstream goes on alone to future lives. All the pleasures this body enjoyed are last night's dream, but the karma we created to secure them goes with us.

Śri Jagan-mitrananda's *Letter to King Moon (Candrarājalekha)* says (LC 1:158):

Divine one, no matter what fortunes you have gained,  
when you depart to another rebirth,  
as though conquered by an enemy in the desert,  
you are alone without children or queen,  
without clothing, without servants,  
without kingdom, and without palace.

Though you have limitless power and armies,  
you will not see or hear them.  
Eventually not even one being or thing  
will follow you in an everlasting way.  
In brief, if you lack even a name at that time,  
what need is there to speak about anything else?

Śāntideva counsels (BCA 2.33, 34, 36, 38):

The untrustworthy lord of death without waiting  
whether or not something has been done;<sup>50</sup>  
whether one is sick or otherwise, suddenly comes;  
do not be complacent about life.

Leaving all behind, I must depart alone.  
Through not having understood this  
I committed various kinds of negativities  
for the sake of my friends and foes . . .

Just like an experience in a dream,  
whatever things I enjoy  
will become a memory.  
Whatever has passed will not be seen [again].

Thereby, through not having realized  
that I will suddenly vanish,  
I committed many negativities  
through ignorance, attachment, and hatred.

Our worldly actions are like ripples in water, one leading to the next. Our mind distracted by the endless worldly activities in our lives, we have little time for Dharma practice before death arrives. At that time regret overwhelms us as we realize that time could have been spent cultivating wisdom and cutting the root of saṃsāra.

In addition, many of our constructive actions are polluted by the eight worldly concerns; creating the image of being an excellent practitioner, we hunger for praise, offerings, and reputation. Unaware, we miss the chance to prepare for death. There is a story about a man who slipped while walking on the edge of a cliff. He broke his fall by catching hold of a root. Looking up, he saw a strawberry, and yearning for the pleasure of its taste overwhelmed him. Meanwhile a rat was busy gnawing the root. Distracted by desire for the strawberry, he did not protect himself and fell to his death as the root broke.

Oblivious of the effects our actions have on others and ourselves, we often act impulsively and grasp whatever will fulfill our needs and wants in the present moment. But when we arrive at the end of our lives and look back — or even if we look back now at what we did for the last ten years — which of our actions were really valuable? I have never heard of a dying person regretting that they did not work more overtime. Remembering this, let's be mindful and make wise decisions now, steering our energy toward Dharma practice, an activity that will bring ourselves and others benefit for a long time to come.

Although many great masters may recite prayers for our good rebirth, perform *powa* (transference of consciousness) after our death, or give us instructions to recognize the bardo (intermediate state between one life and the next) after the breath has stopped, it is far more effective to have studied and practiced the Dharma we learned while alive. If we don't pay attention to these masters' instructions while we are alive, what makes us think that we will listen to them when we're dying?

We can pay people to do many things for us — to mow the lawn or to prepare a report. But we cannot hire someone who will eat for us so that we feel nourished. As with eating and sleeping, creating virtue and abandoning nonvirtue are activities we must do ourselves. Knowing that only the Dharma benefits us at death, generate the determination to practice it purely, free from the influence of the eight worldly concerns.

Whereas death arrives effortlessly, spiritual development requires effort. We cannot wait and hope that with the passage of time we become more disciplined, loving, and compassionate. Only through careful training can we develop these qualities. Although our body may get old, weak, and eventually stop functioning, our afflictions will not decline and disappear with time. In fact sometimes they grow stronger, and some people become more bitter, angry, or emotionally dependent as they age. The afflictions remain fresh and energetic unless we make an effort to counteract them.

Years ago I visited Thailand, where many monasteries have a skeleton near the meditation hall. One monastery had a display with photographs of the stages of a rotting corpse. Seeing these reminded me that I too will die, and keeping that vividly in mind spurs me to transform my mind.

## *Other Life Forms*

After death, the continuity of our consciousness does not stop. Although the coarse sense consciousnesses cease as we go through the death process, the extremely subtle mind continues to the next life. What kind of life will we have in our next rebirth? We don't need to ask a fortune teller; the Buddha explained that according to the law of karma and its effects, virtuous actions bring fortunate rebirths as human or celestial beings (*devas*), whereas nonvirtuous ones lead to unfortunate ones as an animal, hungry ghost, or hell being. Since none of us wants an unfortunate rebirth, it behooves us to create the causes for a good rebirth now.

We may wonder: We know that humans and animals exist, but do the other classes of beings actually exist? Is the description of the unfortunate states to be taken literally? Neither reasoning nor direct experience is able to establish the nonexistence of these realms. Using reasoning to establish their existence is difficult, and we ordinary beings do not have the clairvoyance to determine whether such rebirths exist. In this case, we can rely on reliable scriptural quotations.

Sūtras in all three Buddhist canons — Pāli, Chinese, and Tibetan — speak of other life forms in the universe: in the *Jewel Sutta* (*Ratana Sutta* Sn 2.1), one of the most well-known sūtras in the Pāli canon, the Buddha addresses spirits who are making trouble for the Licchavi clan. The *Sutta of Fools and Wise Men* (*Bālapaṇḍita Sutta* MN 129) speaks of rebirth as hell, animal, and deva or celestial beings, and the *Sutta of the Divine Messengers* (*Devadūta Sutta* MN 130) describes the hell beings in detail.

If you have difficulty accepting scriptural quotations, I recommend remaining undecided yet open-minded. Continue to study and practice the Buddha's teachings, implementing what is useful in your life and leaving the rest aside for the time being. However, if you say, "I don't believe that other realms exist," consider the I that states this. Is that I omniscient? Is whatever that I thinks always accurate?

Personally speaking, although I do not take the descriptions of the hellish states in the *Treasury of Knowledge* literally, I believe the possibility that such states exist is real. From my own experience, I know that when the mind is disciplined and its positive qualities enhanced, having special

experiences is possible. Similarly, when the mind is undisciplined and obscured by negative tendencies, suffering and problems occur. By seeing the interrelationship of the mind and our experiences, I have an inkling that other life forms — those in both pure lands and hellish states — exist.

In some cultures, people accept the existence of spirits and hungry ghosts, and some people even report seeing them. Although this is not generally the case in the West, some Westerners talk about UFOs and report being visited by beings from outer space. In other cultures, people who have similar experiences describe them as encountering spirits or hungry ghosts. In Tibet some people had a special capacity to see some of these spirits that are not normally seen by people. One of my childhood bodyguards could do this.

We may not believe in the existence of other classes of beings because we do not see them; but once we see them, we will have already been born there and it will be too late. Therefore, although we may not be convinced that hell beings and hungry ghosts exist, I recommend provisionally accepting their existence because doing so will make us more mindful of the consequences of our actions before doing them. Should such rebirths exist, we do not want to create the causes leading to them. On the other hand, if such rebirths do not exist, we have not lost anything by refraining from destructive actions!

We know the animals exist and can observe animals' lives. They are clouded by ignorance, and many are exploited by human beings or killed for food or hides. Domestic pets may have comfortable lives, but they are incapable of studying, thinking about, and meditating on the Dharma. If we try to teach our pet cats the value of abandoning killing, they cannot understand at all!

We also see people and events right now that resemble life in these other states. Some human beings act worse than animals, inflicting harm and suffering on others far beyond what any animal could do. Consider those who ran concentration camps during World War II, those behind the Cultural Revolution, and those conducting terrorist activities internationally. That human beings inflict such harm on other human beings leaves us stunned; we cannot find any suitable explanation for such horror. Yet we know that it is a reality. Likewise, we may not easily believe in the

existence of unfortunate states and the suffering experienced in them, but these exist. Since powerful destructive actions produce strong suffering in future lives, it makes sense that human beings who inflict great pain on others would be born in unfortunate states.

In the *Sutta to the Dog-Duty Ascetic* (*Kukkuravatika Sutta* MN 57), the Buddha speaks in a compassionate yet matter-of-fact way about the possibility of rebirth in unfortunate states as a result of our destructive actions and shows that this can be prevented. As did many others, two ascetics in ancient India acted like animals, thinking that it would bring them fortunate rebirths. Approaching the Buddha, Seniya, acting like a dog, and Puṇṇa, behaving like an ox, asked him what their future lives would be. The Buddha did not want to answer, but when pressed he explained (MN 57.5):

Here, someone develops the ox-duty . . . the ox-habit . . . the ox-mind . . . the ox-behavior fully and uninterruptedly. Having done so, on the dissolution of the body, after death, he reappears in the company of oxen. But if he has such a view as this: “By this virtue or observance or asceticism or holy life I shall become a [great] god or some [lesser] god,” that is a wrong view in his case. Now there are two destinations for one with wrong view, I say: hell or the animal state. So if his ox-duty succeeds, it will lead him to the company of oxen; if it fails, it will lead him to the hellish state.

These ascetics had faith in karma and its results, and by hearing that their practice was based on wrong views that would lead them to horrible rebirths, they sobbed and had deep regret for their actions. The Buddha then taught them about karma and concluded, “Thus I say beings are the heirs of their actions.” Both of them became the Buddha’s disciples, and by meditating with strong determination Seniya became an arhat in that life.

The purpose of contemplating the suffering of these migrations and the possibility of being reborn there is not to fill us with irrational panic, emotional fear, and immobilizing dread. Rather, it impels us to practice so that we will not create the causes for such births and will direct our energy in a positive direction instead.

If we are reborn as a hell being, hungry ghost, or animal, will we be able to endure the sufferings? Unpleasant as it may be, contemplating such topics is essential because we can act to prevent these types of rebirth. If we do not think about them and consequently do nothing to prevent them, once we are born in those unfortunate states very little can be done to ease the suffering.

Thinking that unfortunate migrations are in some faraway place and have nothing to do with us is unwise. None of us knows when we will die, and as ordinary beings without spiritual realizations, we have no guarantee that we will not take birth in one of these unfortunate states. Looking carefully at the actions we have done throughout our lives, we see there is a real possibility that we will face an unfortunate rebirth, one where there is not only great misery but also no opportunity to meet the Dharma. We have the opportunity now with our precious human lives to engage in abundant constructive actions that will lead to future happiness in cyclic existence and the ultimate happiness of liberation and awakening. Please keep this in mind and let it motivate you to live with wisdom and compassion now. Reflect on impermanence and death and make a strong determination to overcome the eight worldly concerns that could impede you from doing this.

The Buddha once asked his disciples, “Which is greater, the little bit of soil under my fingernail or the great earth?” They responded that the soil under his fingernail is trifling, whereas the earth is huge. The Buddha then advised them (SN 20.2):

So too, those beings who are reborn among human beings are few. But those beings who are reborn elsewhere than among human beings are more numerous. Therefore you should train yourselves thus: “We shall dwell diligently.”

## *Fear or Hope at Death?*

If our lives have centered primarily around the eight worldly concerns, our mind becomes familiar with nonvirtue. While dying, attachment to self arises, and wanting security and not suffering, we cling to what is familiar

— our body, mind, and so forth. Then fearing that we will cease to exist at death, we crave another body.

In contrast to this panicked fear, if while we are alive we generate a “wise fear” of death, we will be able to set our priorities wisely and make our lives meaningful. The wise fear is aware of the danger of destructive karma ripening at the time of death and propelling us to an unfortunate rebirth. It sharpens our mindfulness, motivates us to practice virtue, and enables us to prevent that danger. This “fear” is similar to the mental state when we merge our car into highway traffic: aware of the possibility of having an accident, we are cautious, which prevents an accident. Wise fear inspires us to set clear priorities, so that we make our life meaningful and do not waste it on unimportant activities. Our life becomes very vibrant and vital as we live each moment fully, aware that the only time we can practice the Dharma is now. Due to practicing diligently, we will be free of fear and regret at the time of death. As the great yogi Milarepa said:

In horror of death, I took to the mountains —  
again and again I meditated on the uncertainty of the hour of death.  
Capturing the fortress of the deathless unending nature of mind;  
now all fear of death is over and done.

Upon seeing a stray horse and an empty chariot, the Buddha’s disciple Mahānāma noted that his mindfulness of the Three Jewels became muddled. He remembered that he too would die, and although he was a stream-enterer and had no reason to fear death, he became concerned about his future rebirth. The Buddha assuaged his fear by reminding him that the virtue he had created will propel his mind upward on the path (SN 55.21):

Don’t be afraid, Mahānāma! Your death will not be a bad one, your demise will not be a bad one. When a person’s mind has been fortified over a long time by faith, ethical conduct, learning, generosity, and wisdom, right here . . . [his body may be destroyed]. But his mind, which has been fortified over a long time by faith, ethical conduct, learning, generosity, and wisdom — that goes upward, goes to distinction.

Death is a normal part of life, something that we must face as long as we are in cyclic existence. To me, leaving this body and going to the next life resembles shedding old clothes and putting on new ones. For practitioners who have trained their minds well while alive, the experience of death can be profound and transformative. Our present body feels solid, heavy, and burdensome. In addition, our gross consciousnesses are dependent on the brain, which limits our mental functions. When our mind separates from the body, it is freer and can be utilized more effectively if we are well trained. Practitioners with very deep meditative experience can control their death and the process of rebirth. Although these people are rare, they show us the potential of the mind. As mentioned before, my teacher, Kyabje Ling Rinpoche, meditated sitting upright for thirteen days after his bodily functions had ceased. Death was joyful and spiritually satisfying for him.

Highest yoga tantra includes a meditation in which death, bardo, and rebirth are taken as the path to the truth body, enjoyment body, and emanation body of a buddha. In the generation stage this is done by imagination; by working with the subtlest wind and mind during the completion stage, these three buddha bodies can be actualized. In my daily practice, I do this meditation at least six times a day to prepare for death, making my mind very familiar with the natural process of death. However, if I was in an airplane that is going down, I don't know how I would feel! I am curious to discover how much of what I am currently practicing I will be able to implement at the time of death. I have no doubt that the force of serious training during life, complemented by pure ethical conduct, bodhicitta, and some understanding of emptiness, will be beneficial at that time.

## *The Death Process*

Highest yoga tantra explains the death process in great detail. Eight steps occur as the body gradually loses its ability to support coarse levels of consciousness and as the mind becomes increasingly subtler until the subtlest mind, the fundamental, innate clear light mind, dawns. That is the

actual moment of death. In the next moment, the mind leaves the body and enters the bardo; at that time, the person is dead.

As each element dissolves — that is, as it loses its ability to support consciousness — our aggregates weaken and we have an inner appearance to the mind.

1. When the earth element dissolves into the water element, the body becomes thinner, the form aggregate — the body — weakens, and the person has an inner shimmering appearance like a mirage.
2. When the water element dissolves into fire, the mouth becomes dry and the skin puckers. The feeling aggregate loses the ability to experience pleasant, unpleasant, and neutral feelings, and the person has an inner appearance of smoke.
3. When the fire element dissolves into the wind element, the heat in the body diminishes. Sometimes the heat leaves beginning with the feet and going upward, other times from the head down. The aggregate of discrimination subsides, and the inner appearance is of sparks of light, like fireflies.
4. When the wind element dissolves into space or consciousness, the external breath stops. The aggregate of miscellaneous factors loses power, and there is an appearance of a small, dim candle flame about to go out. At this point, breathing has stopped completely, the body grows cold, and the coarse consciousness has been absorbed. Doctors pronounce the person dead, but from a Buddhist viewpoint, the consciousness has not yet left the body.
- 5–7. Now the coarser winds — inner energies that serve as the mount of consciousness — begin to dissolve. As with the previous stages of dissolution, the time it takes to pass through the next three phases varies with the person, the cause of death, and the person's spiritual training. These three phases are inner appearances to the mind, named: (5) the vivid white appearance, which resembles the bright light of the full moon; (6) the red increase appearance, like the orange-red color of the sky at sunset; (7) the black near attainment of complete darkness.
8. Now the subtlest mind, the fundamental, innate clear light mind, manifests — this is the actual moment of death, although the

subtlest wind-mind is still present in the body — and a well-trained practitioner will meditate on emptiness. There is no rigor mortis and there may be a slight sense of heat if we hold our hand above the person's heart cakra at the center of her chest. During this time, the relationship between the body and mind has not been severed, and the body does not decay. It is better to avoid touching or moving the body at this time.

Most sentient beings do not recognize the clear light of death and this phase passes quickly. When the mind leaves the body, small traces of a white or red substance at the nostrils or sexual organ may be seen. The body begins to decay and can safely be moved. For ordinary beings, this usually occurs within three days after the breath has stopped. If a person dies in an accident, the consciousness generally leaves the body quickly.

Some practitioners, especially those who have practiced highest yoga tantra, may meditate in the clear light for several days. I heard of some Tibetans monks who, after being tortured in Chinese prisons, sat cross-legged in their cells and remained meditating in the clear light of death for some time. Thinking that Buddhism was just blind faith and superstition, the Chinese Communist guards were surprised and speechless. For people who practice the Dharma sincerely and continuously, dying is not a frightening event but a joyful experience and an optimal time for meditation.

After separating from the body, the eight signs occur in the reverse order as a slightly coarser mind arises in the bardo. If we will be born in a fortunate birth, it will seem like we are walking on a luminous path surrounded by beauty. If we are headed toward an unfortunate birth, we will have the vision of walking in a gloomy place with fearful images and will experience fear and suffering. It is said that butchers who have not purified their acts of killing will see the images of animals they have slaughtered running toward them.

Bardo beings can travel uninterruptedly from one place to another. Those who will be born in similar realms can see one another, and people with clairvoyant powers can also see bardo beings. For ignorant sentient beings, the bardo can be a frightening and confusing time.

## *Helping Ourselves and Others at the Time of Death*

Our attitudes shape our experiences. Some people avoid thinking about difficulties such as illness, aging, and death. But these are bound to happen, and accepting and preparing for them in advance enables our mind to be calmer when they occur.

There are different levels of preparation for death. While some rare and exceptional practitioners with deep meditative experience can control the process of death and rebirth, ordinary people like me prepare for death as part of our daily meditation practice. If death comes in the next few months or years, I am not afraid and even have some confidence. According to reasoning and some unusual experiences I've had, I have a 95 percent belief in future lives. But there's still a little doubt about the various experiences at the time of death.

As creatures of habit, we tend to die in the way we live. If we are not in the habit of acting kindly during our life, it will be unlikely that we will think to hold virtuous thoughts in mind or engage in virtuous actions as we are approaching death. For that reason, leading a good life by not harming others and helping them as much as possible is the best preparation for our death and future lives and enables us to die without regrets. In our daily life, and especially as we approach death, we should forgive people who have harmed us, engage in purification practice, recollect the Buddha, and meditate on love, compassion, and wisdom.

The best way to help friends and family prepare for death is to encourage them while they are alive to abandon nonvirtue and engage in purification to avoid unfortunate rebirths, and to create virtue to ensure that they have causes for a good rebirth. Encourage them to be generous and kind to others and to forgive others and not hold grudges. Avoid involving them in divisive speech, harsh speech, or idle talk. In this way, they will create merit and will have no regrets when they die.

The most prominent thought while we are actively dying yet still conscious stimulates the ripening of a karmic seed that will project us into a specific rebirth. If we die with strong attachment for our loved ones, possessions, or reputation, or with great anger toward our enemies, seeds of destructive karma will ripen. If our mind is virtuous owing to having trust

in the Three Jewels, cultivating compassion for sentient beings, or contemplating the nature of reality, constructive karma is activated, and we will take a fortunate rebirth. Once the dying person has passed through the first four stages of the death process, the mind is in a neutral state and the karma projecting the next life is already beginning to ripen.

Vasubandhu said that consciousness can be virtuous, nonvirtuous, or neutral at the moment of death, depending on the person's thought at that time. His half-brother Asaṅga explained that whereas the coarser states of mind can be virtuous, nonvirtuous, or neutral, the subtle consciousness present at the time of death is neutral. In tantric texts, the Buddha explains that whereas the coarse consciousnesses can be virtuous, nonvirtuous, or neutral, the subtlest consciousness can never be nonvirtuous. This is because the eighty conceptual thoughts — most of which are nonvirtuous — function only in coarse states of mind, which cease before the subtlest mind arises at the actual moment of death. Through profound yogic methods, the subtlest consciousness, also called the fundamental, innate mind of clear light, which is ordinarily neutral, can be transformed into a virtuous state.

The best procedure to follow at the time of death depends on the person. In general, as someone approaches death, avoid disturbing her mind with unnecessary emotional outpourings, spiritual ideas that will confuse her, or idle talk. Help her to recall something virtuous — the Three Jewels, compassion, generosity, and so on — with which she is already familiar. Encourage her to rejoice in her own and others' virtues. If she has no religion, gently speak to her about forgiveness, love, compassion, and hope — qualities that everyone appreciates and that will make her mind virtuous.

No matter what religion a dying person follows, encourage her to do the practices with which she is familiar. Encourage a Christian to forgive others, develop a kind heart, pray to God, and think of Jesus's benevolent qualities. Speak to a Jew, Hindu, or Muslim according to the beliefs and concepts of his religion. These are more familiar and comforting to the dying person, and will facilitate his leaving this life peacefully. Never try to convert another person on his deathbed.

Some people have heard of the *Tibetan Book of the Dead* (*Bar do thos grol chen mo*), which describes a specific meditation done in the Nyingma

tradition for those who have received empowerment into that practice and practiced it while alive. It is not the case that the visions of peaceful and wrathful deities and maṇḍalas described in this text occur to everyone at the time of death or in the intermediate state. Practitioners familiar with the practice described in the *Tibetan Book of the Dead* may have those appearances after death and use them in meditation. Hearing this text could possibly confuse a dying person who is unfamiliar with that practice. Therefore I recommend encouraging dying people to think of the religious figures and the qualities of the holy beings that inspire them personally and to develop a kind heart toward all sentient beings. It is not appropriate to introduce a complex meditation with unfamiliar and often fierce-looking figures to a dying person.

Buddhists can do a variety of practices, depending on their level of practice. Remind a dying Dharma friend of a practice she has trained in and guide her through it if she wishes. When it is our turn to die, we should likewise focus on a familiar practice. Since our mental power and alertness decrease at the time of death, forcing ourselves or others to do a new practice at that time will be confusing. Beneficial practices for Buddhists to do while dying include taking refuge in the Three Jewels, which enables our mind to relax and rest in a virtuous state, which is conducive for the ripening of constructive karma, which in turn will propel our mindstream to take a good rebirth. Developing a kind heart, generating bodhicitta, and doing the taking and giving meditation at the time of death also places our mind in a positive and fearless state. Reflecting on emptiness calms grasping and fear, enabling us to peacefully let go of this life.

We may also think of the Buddha or our meditational deity and imagine light and nectar flowing from that Buddha into us, purifying our destructive karma and inspiring our mind with realizations. Advanced practitioners, who have the proper empowerments and have practiced tantra during their lifetimes, should reaffirm the bodhisattva and tantric ethical codes and then do deity yoga, meditate with the wisdom of inseparable bliss and emptiness, or meditate to take death, bardo, and rebirth into the path to the three buddha bodies.

We should dedicate all the merit we have created during our lifetime for the awakening of ourselves and all sentient beings. We should pray to be

born in a body and environment where we can meet and properly rely on fully qualified Fundamental Vehicle, Mahāyāna, and Vajrayāna spiritual mentors, learn under their guidance, and practice without obstacles. In short, we must do what is suitable to our level of mind and to the circumstances we are in. Whatever we do, we should be content and focus on that practice as best as we can without having doubts that perhaps we should be doing another, more effective practice.

In the *Sutta on Reappearance by Aspiration (Sankhārupapatti Sutta)*, the Buddha offers advice on how to direct the mind toward the type of rebirth we seek (MN 120.2–3). He begins:

Monastics, I shall teach you reappearance in accordance with your aspiration . . . A monastic possesses faith, virtue, learning, generosity, and wisdom. He thinks, “Oh, that on the dissolution of the body, after death, I might reappear in the company of well-to-do nobles!” He fixes his mind on that, establishes it, develops it. These aspirations and this abiding of his, thus developed and cultivated, lead to his reappearance there.

This is an example for someone who wishes to be born in an upper socioeconomic class as a human being. The Buddha says the same for those who want to be reborn as various gods in the desire realm. In all these cases, to intentionally direct our mind toward a specific rebirth, it is necessary to cultivate five qualities — faith, virtue, learning, generosity, and wisdom — during our life. Faith is confidence in the Three Jewels and the law of actions and their result. Virtue is the collection of merit created by keeping precepts, making offerings, sharing our wealth, cultivating fortitude, and so forth. Learning is gained by listening to teachings, reading Dharma books, reflecting on their meaning, and discussing the Dharma with others. Generosity is based on lack of attachment to material goods and distancing ourselves from the eight worldly concerns. Wisdom is the wisdom understanding karma and its effects and the emptiness of inherent existence. Having cultivated these qualities and become familiar with them when alive, at the time of death we generate a strong aspiration for a particular type of rebirth.

To be reborn in any of the four dhyānas or four formless absorptions, we must attain that specific level of dhyāna or meditative absorption as a human being. If we wish to be born in one of the pure abodes where nonreturners dwell, we must develop the union of serenity and insight on selflessness and attain the fruit of a nonreturner before death. If we complete the path to arhatship, we will attain the elimination of all pollutants at the time of death. Those wishing to be reborn in the pure land of Amitābha or another buddha will generate that aspiration at the time of death, thus directing their minds to that rebirth. Lower-level bodhisattvas will direct their aspirations toward whatever rebirth seems most conducive for accomplishing the bodhisattva path, while ārya bodhisattvas will be able to voluntarily choose their reappearance for the benefit of sentient beings.

Having these precious instructions, we should do our best to implement them now in order to prepare for death. Since death is certain, but its time uncertain, let's be prepared.

During the death process and for seven weeks afterward, meditations and prayers done for the deceased can positively influence their consciousness so that the virtuous karma the person had previously created will ripen. This is most effective when the people have a good karmic connection — for example, spiritual mentor and disciple, parent and child, relatives or friends. It is also helpful to donate the person's belongings to his or her spiritual mentors, charities, monasteries, or Dharma centers, and dedicate the merit of this generosity for the person to take a fortunate rebirth with all conducive circumstances to practice the Dharma.

## *Powa, Transference of Consciousness*

Powa is a practice for transferring the consciousness at the time of death so that it will take a precious human life or be reborn in the pure lands. Pure lands are places created by the unshakable resolve and merit of buddhas where all external conditions are conducive for Dharma practice. There are two forms of powa, one found in the mind-training teachings, the other in tantra.

In the *Seven-Point Thought Transformation*, the fourth point, “elucidating a lifetime's practice,” describes a practice of transference of

consciousness based on bodhicitta called the five forces. Familiarizing ourselves with the five forces while alive will make practicing them at the time of death much easier and give us a sense of joy at the time we die. Bodhicitta gives us courage to work for sentient beings; it makes our life meaningful and dispels all despair. Who wouldn't want to have this mental state when dying?

The first of the five forces, the white seed, is done before actively dying when the mind is clear and can make decisions. Create merit and free your mind from attachment to possessions by giving them away. Forgive all those who have harmed you intentionally or unintentionally and apologize to all those whom you have harmed. If it is not possible to apologize directly to a person, reconciling with them in your mind is more important. Also recall that there is no sense worrying about what happens to your body after death; it is simply a lump of organic matter. Accept death as a natural part of life.

Second is the force of aspiration. Do the seven limbs: visualize prostrating and making offerings to your spiritual mentors and the Three Jewels, confess and restore all broken precepts and degenerated ethical restraints, and dedicate all your merit by aspiring, "During death, bardo, and rebirth, may I never be separated from the practice of bodhicitta. May I always be guided by qualified spiritual mentors who lead me to cultivate bodhicitta."

Third is the force of destruction. Seeing that grasping the self, possessions, friends, and relatives as inherently existent is the chief cause of cyclic existence, try to eradicate it by contemplating impermanence and emptiness. Make a strong determination not to let your mind fall under the influence of ignorance, animosity, and attachment.

Fourth is the force of motivation. This is a strong intention to practice bodhicitta during death, bardo, and rebirth. Develop a strong motivation to practice the two bodhicittas: conventional bodhicitta (the altruistic intention), and ultimate bodhicitta (the wisdom realizing emptiness). Aspire never to be separated from the mind-training practice and the two bodhicittas in any of your lives.

Fifth is the force of acquaintance or familiarity. At the time of death, do the taking and giving practice to increase your love and compassion.

Especially think of taking on the pain of others who are dying and transforming your body and merit into whatever others need and giving it to them. Meditate on emptiness, especially the absence of an inherently existent person who is dying. Meditation on the empty nature of mind is also helpful, so recognize all that appears as simply appearance to the mind, not as things to react to or grasp onto.

The *King of Concentration Sūtra* says:

Migrators in cyclic existence are like dreams;  
no one is [inherently] born here and no one [inherently] dies;  
no [inherently existent] sentient being, human, or living being is  
found.

These things are like bubbles, plantain trees,  
illusions, flashes of lightning,  
[reflections of] the moon in water, and mirages.  
In this world, no one [inherently] dies and passes,  
or transmigrates to another life.

If possible, lie in the lion position — the position the Buddha rested in when he passed away: Lie on your right side with your right hand under your cheek. Extend your legs and place your left hand on your left thigh. Then relax the mind and practice as outlined above.

The tantric powa practice involves a practitioner ejecting his or her consciousness out of the body through the top of the head and transferring it to a pure land. Among the different levels of powa, the supreme is when a realized yogi on the completion stage of tantra actualizes the clear light and then arises in the impure illusory body instead of the bardo. This is a rare occurrence.

Powa enables a skilled practitioner to take a rebirth with excellent conditions for Dharma practice. After 1959, some Tibetans who were to be imprisoned by the Chinese communists made their consciousnesses leave their body through powa rather than be subjected to imprisonment. By means of meditation and visualization techniques, they severed the connection between their body and subtlest mind and projected the subtlest mind into a pure land where they could continue practicing the path.

As taught in the tantric texts, powa is to be done by the practitioner himself when he is about to die. To be able to meditate in this way at the time of death, one must receive empowerment and train in powa while one is healthy and alive. While training in powa, it is also essential to do the practice of a long-life deity. A person who has not practiced powa consistently while alive will not be able to perform it when dying.

When a practitioner, through meditation, has attained some control over the wind-energy in the body and mastery over his mind and feels that death is imminent and cannot be avoided, he transfers his consciousness to a pure land. He does this while he still has enough physical energy and mental concentration to properly perform the practice. If he waits until the body is weak, transferring the consciousness could be difficult. But doing it too soon resembles suicide, so great skill is required to perform powa at the proper time. If the powa practice is done irresponsibly or without the proper motivation, there is danger of inadvertently shortening one's life. Although the person does not go through the eight dissolutions in a prolonged manner, they do occur in the proper sequence.

Powa is not a substitute for practicing the Dharma daily. Tantric practitioners should continue practicing taking death, bardo, and rebirth into the three buddha bodies. If, at the time of death, they are not able to actualize the path itself, they do powa in order to carry on Dharma practice continuously in their future life. Powa is specifically for those who have engaged in serious tantric practice during their lives. If you neglect to purify negativities, accumulate merit, and meditate on renunciation, bodhicitta, and emptiness while alive, and at the time of death ask a lama to do powa for you, it is difficult. Without your own effort to practice the Dharma, if you want someone to miraculously transfer your consciousness to a pure land when you die, you will be disappointed. You should be very careful.

Many Tibetan families, and now some non-Tibetan ones, ask a practitioner to perform this ritual at the time of their loved one's death. Although it is customary to do this in the Tibetan community, realistically speaking it has little value if the dying person lacks familiarity with the powa practice and the person doing it lacks a deeper experience of it. Under these circumstances, doing powa becomes a dry ritual. Of course it still has some value because people repeat mantras and recite holy scriptures, which

creates a peaceful feeling in the room of the dying person and can help him or her let go of this life more easily.

Although powa is principally meant for a practitioner to transfer his own mind at the time of death, an experienced powa practitioner may be able to help a dying person transfer his consciousness. Powa is done just before the person dies or at the time he is dying. As a result of the expert powa practitioner's influence, the dying person may develop some determination or inspiration, or may have a new spiritual experience. If the dying person has trained in powa when he was alive and healthy, it is easier for the expert powa practitioner to help him at the time of death. This is a proper way to practice powa.

Some people become excited at the prospect of powa, especially because the physical signs such as fluid or swelling at the crown can appear when they practice. This is due to the impact of the winds in the body. It is not indicative of high realization. The real determination of our future rebirth is the karma we create. Observing proper ethical discipline, applying the antidotes to the afflictions, purifying destructive karma, and practicing the six perfections are guaranteed methods for having a good rebirth. If we do not do these, even if a very high lama does powa at our bedside as we die, he can do very little to help us. He can say *hic* and *phey* to transfer our mind to a pure land many times during the ritual, but if we have not created merit and purified destructive karma while alive, these just become the cries of a miserable dying person.

In short, depending on the person, different meditations could be practiced at the time of death. People who are more familiar with the five forces will do that. Others who have trained well in taking death, intermediate state, and rebirth into the path to the three buddha bodies will practice that. Those who are well-trained in powa can rely on that method. The main point is that whatever practice we do should be done with bodhicitta. It should transform our mind and place it in a virtuous state at the time of death.

## 10 | Karma and Its Effects

HAVING FOUND a precious human life, we now have a choice: Will we create the causes for suffering or will we create the causes for happiness? If we decide to do the latter, the most urgent thing to do is abandon the ten nonvirtues and engage in the ten virtues — to observe karma and its effects. Doing so will bring happiness in this life and fortunate rebirths in future lives, and will establish the foundation of liberation and full awakening.

Since karma and its effects is a very obscure topic, traditional lamrim texts speak of refuge at this point because knowing the qualities of the Three Jewels generates faith in the teachings. This, in turn, helps people to accept the teachings on karma. However, many people nowadays find the qualities of the Three Jewels to be subtle and difficult to understand and the cause-and-effect approach of teachings on karma to be practical. For this reason, we will discuss karma and its effects now, and the qualities of the Three Jewels when we discuss true paths and true cessations.

There are many types of causality — biological, chemical, psychological, and so forth — of which the law of karma and its effects is one. *Karma* literally means action and refers to sentient beings' intentional physical, verbal, and mental actions. Our actions matter: they not only influence others in this life but also result in our own experiences in this and future lives. The results of our actions depend on our intentions, in that actions done with a virtuous intention bring happy results and those motivated by nonvirtuous intentions bring unpleasant results.

Human intelligence makes us particularly qualified to discriminate between constructive and destructive, beneficial and harmful, what to practice and what to abandon. Animals do not have such discriminative wisdom. As human beings, simply surviving or seeking a healthy, happy life is not fully making use of our potential. We must look deeper and ask, “How did this human being — me — come into existence? How can I make my life meaningful? What happens after I die?” This leads us to investigate

causality — both the external systems of cause and effect detailed in science and the internal system of cause and effect — the law of karma and its effects. These two systems are harmonious, and I do not find any contradiction between the laws of nature, scientific findings on Darwinian evolution, and the law of karma and its effects.<sup>51</sup>

## *The Law of Karma and Its Effects*

It is helpful to review the three characteristics of all systems of causality mentioned in chapter 7: (1) Effects arise from causes and cannot arise without causes. A tree grows from a seed and cannot grow without a seed. (2) Causes are impermanent because the arising of an effect necessitates the cessation of the cause. The seed ceases and changes into a sprout and then a tree. (3) Effects must be concordant with their causes; only a specific cause can produce a specific result. Pine trees grow from pine seeds, not from daisy seeds. Furthermore, one cause alone cannot produce an effect; cooperative conditions are needed. The seed grows into a tree only when there is sufficient water, fertilizer, and heat.

We can see the specific causes of many external things. However, if we search for the causes of those causes, and the causes of those causes, going back to the origin of this universe, we will not be able to pinpoint precisely each and every cause and condition. Although the details of all the causes of the Big Bang are too vast and complex for us to understand, we would not feel right saying that the universe arose without causes. We know that its development follows particular laws of nature — certain systematic ways of growth and decay — even though we may not be able to discern each unique cause and condition.

Similarly, on the internal level sentient beings' experiences of happiness and suffering arise from preceding causes and conditions. Secular society usually traces these to genetic or environmental factors and does not consider the law of karma and its effects. Bringing in the ethical dimension of our mental intentions gives us a fuller picture of both sentient beings' experiences and the environment they inhabit.

As a natural process that functions whether or not a person believes in it, the law of karma and its effects was not created by the Buddha. Nor does

the Buddha judge people according to their actions and punish or reward them. When someone suffers from illness in which his unwholesome karma plays a causal role along with other factors, it does not mean that he deserves to suffer or that he made himself sick. Nor should we ignore those who are injured or oppressed by unjust social structures, thinking that helping them would interfere with their karma. This is a poor excuse for our lack of compassion. Needless to say, those holding such attitudes create destructive karma themselves.

It is important to avoid superimposing concepts from theistic religions on the Buddhadharmā. The Buddha is not a creator. Karma and its effects are not a system of reward and punishment. It is simply a natural law: happiness is a result of virtue; suffering is the result of nonvirtue.

Nowadays we may hear the word “karma” used in a flippant way. For example, when asked, “Why did my business fail when it seemed to have everything required for success?” someone may dismiss it by replying, “It’s karma,” meaning, “I don’t know. It was fated and nothing can be done about it.” These are inappropriate usages of the word “karma.”

The principal meaning of karma is volitional action — a physical, verbal, or mental action done with intention. The Buddha says (AN 6.63):

It is intention, bhikkhus, that I call kamma. For having willed,  
one acts by body, speech, or mind.

All karmic paths originate with the mind (*Dhammapada* 1.1–2):

Mind is the forerunner of all [miserable] states.

It is mind that leads the way.

Just as the wheel of the oxcart follows

the hoof of the ox,

so suffering will surely follow

when we speak or act impulsively

from an impure state of mind.

Mind is the forerunner of all [happy] states.

It is mind that leads the way.

Just as our shadow never leaves us,  
so well-being will surely follow  
when we speak or act  
from a pure state of mind.

Not every instance of the mental factor of intention (*cetanā*) creates karma, but intention (volition) is always necessary for the creation of karma. Mental factors such as anger, attachment, and love also play a role in the creation of karma. While karma may be physical, verbal, or mental, all actions can be traced back to an intention in our mind. Our body and mouth do not move on their own, they act spurred by an intention in our mind. The mind is the root of all our actions and the source of the happiness and suffering that result from them. When we carefully observe our own experience, we will see how true this is. For example, with a particular intention we adopt a certain behavior in the early part of our life. While some of its effects may manifest immediately, some may ripen only decades in the future. Likewise, our motivation in the morning sets the stage for what we experience and how we act later in the day. When we're in a bad mood, we meet more obnoxious people (funny that they all show up that day!) and we act rudely. These examples illustrate causality within this life. When we talk about karma and its effects, it primarily concerns causes created in one life bringing results in future lives. In both cases, we see that our happiness and suffering are not the effect of an external creator, nor are they causeless. They come about because of our intentions and actions. Our experience of happiness and suffering is in our own hands.

An understanding of karma and its effects will have a direct effect on our choices, decisions, and actions in daily life. We will become more conscientious and mindful. Instead of putting energy into overcoming adversaries and competing with rivals, we will choose to cultivate cooperation, tolerance, and forgiveness.

The Buddha has vast knowledge and understanding of the functioning of karma. While we limited sentient beings do not have the capacity to specify the exact interplay of karmic forces and other causes and conditions at work in a specific event, we can gain a general understanding by studying and reflecting on the teachings. This topic is very practical and

directly applicable to our lives. The Buddha emphasized the importance of understanding karma (MN 135.20):

Beings are the owners of their kamma, heirs of their kamma; they originate from their kamma, are bound to their kamma, have their kamma as their refuge. It is kamma that distinguishes beings as inferior and superior.

With compassion, the Buddha shared his understanding of karma with us by recommending we abandon certain actions and engage in others. When we put his advice into practice, we become empowered to stop the causes of suffering and create the causes of happiness.

## *General Characteristics of Karma*

Karma has four general characteristics. Understanding these provides us the basic framework to understand karma and its effects.

1. *Karma is definite* in that happiness comes from previously created constructive actions and suffering comes from previously created destructive ones. It never occurs the other way around. An action is not inherently good or bad, but is designated as virtuous (*kuśala*), nonvirtuous (*akuśala*), or neutral in relation to the result it brings. Abhidharma (ELP 597) says:

Karma that yields happiness is virtuous karma. Karma that yields the unhappiness of suffering is nonvirtuous karma. The other karma, which creates a neutral feeling, is the other, neutral karma.

Pāli commentaries explain nuances of the terms *virtue* and *nonvirtue*. From a psychological and spiritual viewpoint, nonvirtue (*akuśala*) indicates something that is psychologically or spiritually unhealthy. From an ethical perspective, it is to be censured and shown disapproval. From the standpoint of its cause, it is produced by defilements, and from the viewpoint of its result, it produces suffering. Contrarily, virtue is spiritually

and psychologically healthy and beneficial, ethically commendable, not produced under the influence of gross defilements, and leads to fortunate results. The Buddha explains (SN 22.2):

If, friends, one who enters and dwells amid unwholesome states could dwell happily in this very life, without vexation, despair, and fever, and if, with the breakup of the body, after death, he could expect a good destination, then the Blessed One would not praise the abandoning of unwholesome states. But because one who enters and dwells amid unwholesome states dwells in suffering in this very life, with vexation, despair, and fever, and because he can expect a bad destination with the breakup of the body, after death, the Blessed One praises the abandoning of unwholesome states.

If, friends, one who enters and dwells amid wholesome states would dwell in suffering in this very life, with vexation, despair, and fever, and if, with the breakup of the body, after death, he could expect a bad destination, then the Blessed one would not praise the acquisition of wholesome states. But because one who enters and dwells amid wholesome states dwells happily in this very life, without vexation, despair, and fever, and because he can expect a good destination with the breakup of the body, after death, the Blessed One praises the acquisition of wholesome states.

The *Questions of the Bodhisattva Suratā Sūtra* (*Suratāparipṛcchā Sūtra*) says:

As in planting, happiness and misery  
are effects from the deeds performed.  
How can a bitter seed  
yield a sweet fruit?

Seeing this universal truth,  
the wise should think:  
evildoing brings painful effects,  
while good deeds always lead  
to peace and happiness.<sup>52</sup>

It may seem that some people experience satisfaction after engaging in destructive actions such as taking revenge on another person. The immediate pleasure they experience is due to their distorted way of thinking while the result of their present action will be suffering in the future. Similarly, someone may go through physical difficulties doing prostrations but the long-term result of this action will be happiness.

2. *Karma is expandable* in that a small action can bring a large effect in the same way that a small seed can produce a large tree. Understanding this protects us from being complacent, thinking, “This is only a tiny action. I don’t need to bother with it.” Instead, we will take care to avoid small destructive actions and engage in small constructive ones. The *Groups of Utterances (Udānavarga)* counsels (LC 1:211):

Like a poison that has been ingested,  
the commission of even a small negativity  
creates in your lives hereafter  
great fear and a terrible downfall.

As when grain ripens into a bounty,  
even the creation of small merit  
leads in lives hereafter to great happiness  
and will be immensely meaningful as well.

3. *We will not experience the effect of an action we have not done.* If we have not created the cause to experience a contagious disease, we will not contract it, even though others around us may. If we do not create the causes to attain awakening, we will not, even though we make many prayers to the Buddha to gain realizations. Udbhaṭṭasiddhasvāmin’s *Praise of the Exalted One (Viśeṣastava)* says (LC 1:214):

The brahmins say that virtue and negativity  
may transfer to others, like giving and receiving a gift.  
You [Buddha] taught that what one has done does not perish  
and that one does not meet with the effects of what one has not done.

4. *Karmic seeds do not get lost or magically vanish.* The effect of an action will be experienced unless it is counteracted. *Bases of Discipline (Vinayavastu)* says (LC 1:214):

Even in one hundred eons  
karma does not perish.  
When the circumstances and the time arrive  
beings surely feel its effects.

Unless a karmic seed is counteracted, it will one day bring its result. Seeds from destructive actions are inhibited from ripening by the four opponent powers explained below. Seeds from constructive actions are thwarted by anger and wrong views.

Although karmic seeds do not get lost, events are not predetermined. The ripening of karma is an interdependent occurrence, with many contributing factors and variables. We do not know what the future will be until it happens.

## *Specific Characteristics of Karma*

The main focus of initial-level practitioners is to bring about a series of precious human lives in the future so that our Dharma practice can continue without interruption. This entails understanding the specific characteristics of karma: harmful karmic paths that cause unfortunate rebirths or otherwise hinder our ability to practice, and constructive karmic paths that bring fortunate rebirths and circumstances conducive for Dharma practice. In this light, the Buddha outlined ten nonvirtues to abandon and ten virtues to practice. These ten subsume the significant karmic paths to pay attention to, although they do not encompass all physical, verbal, and mental actions. The Buddha set these out (AN 10.178):

What is the bad? The destruction of life, taking what is not given, unwise sexual conduct, false speech, divisive speech, harsh speech, idle talk, covetousness, maliciousness, and wrong views . . . And what is the good? Abstinence from the

destruction of life, from taking what is not given, from unwise sexual conduct, from false speech, from divisive speech, from harsh speech, from idle talk, noncovetousness, goodwill, and right views.

The Buddha continues, describing these two sets of karmic paths respectively as ignoble and noble, harmful and beneficial, non-Dharma and Dharma, polluted and unpolluted, blameworthy and blameless, tormenting and untormenting, leading to suffering and to happiness, building up the round of rebirth and diminishing it, to be abandoned and to be cultivated.

Of the ten nonvirtues, three are done physically: killing, stealing, and unwise and unkind sexual behavior. The Buddha describes them (AN 10.211):

There is a person who destroys life; he is cruel and his hands are blood-stained. He is bent on slaying and murdering, having no compassion for any living being.

He takes what is not given to him, appropriates with thievish intent the property of others, be it in the village or the forest.

He conducts himself wrongly in matters of sex: he has intercourse with those under the protection of father, mother, brother, sister, relatives, or clan, or of their religious community, or with those engaged to a fiancé, protected by law, and even with those betrothed with a garland.

Four nonvirtues are done verbally: lying, divisive speech, harsh speech, and idle talk. The Buddha expounds on these (AN 10.211):

There is one who tells lies. When he is in the council of his community or in another assembly, or among his relatives, his guild, in the royal court, or when he has been summoned as a witness and is asked to tell what he knows, then, though he does not know, he says, “I know”; though he does know, he says, “I do not know”; though he has not seen, he says, “I have seen”; and though he has seen, he says, “I have not seen.” In that way he utters deliberate lies, be it for his own sake, for the sake of others, or for some material advantage.

He utters divisive words: what he hears he reports elsewhere to foment conflict there; and what he hears elsewhere he reports here to foment conflict here. Thus he creates discord among those united, and he incites still more those who are in discord. He is fond of dissension, he delights and rejoices in it, and he utters words that cause dissension.

He speaks harshly, using speech that is coarse, rough, bitter, and abusive, that makes others angry and causes distraction of mind.

He indulges in idle chatter: he speaks what is untimely, unreasonable, and unbeneficial, having no connection with Dhamma or Vinaya. His talk is not worth treasuring, it is inopportune, inadvisable, unrestrained, and harmful.

When these four are done by writing, signaling, typing, or nodding the head, they are considered nonvirtues of speech because they involve communication.

Three nonvirtues are done mentally: covetousness, malice, and wrong views. The Buddha describes these (AN 10.211):

There is a person who is covetous; he covets the wealth and property of others, thinking, “Oh, that what he owns might belong to me!”

There is also one who has malice in his heart. He has depraved thoughts such as, “Let these beings be slain! Let them be killed and destroyed! May they perish and cease to exist!”

He has wrong views and perverted ideas, such as, “There is no ethical value in a gift, offering, or sacrifice; there is no result or recompense from constructive or destructive deeds; there is neither this world nor another world (i.e., no rebirth); there are no duties toward mother and father; there are no spontaneously reborn beings; and there are no ascetics and brahmins in this world, living and conducting themselves rightly, who can explain this world and the world beyond, having realized them by their own direct knowledge.

While covetousness, malice, and wrong views are associated with attachment, animosity, and confusion, respectively, they are more specific and intense forms of those afflictions. The mental factor of attachment becomes the karmic path of covetousness when it has the wish to take

possession of property belonging to others. Covetousness is not a random thought of attachment, but the greedy desire to possess something that belongs to someone else. This desire has been cultivated and increased by repeatedly thinking how nice it would be to have that object and planning how to obtain it. This thought now has the power to generate a rebirth. It may also instigate someone to steal or lie to obtain the object coveted.

The mental factor of anger becomes the karmic path of malice when it wishes to inflict harm on another living being or wishes that person to suffer by another means. The milder anger that simply wants to avoid someone we just quarreled with is not the karmic path of malice.

The mental factor of wrong views becomes the karmic path of wrong views when it strongly holds an incorrect view, such as believing the Three Jewels, the four truths, and the law of karma and its effects do not exist. Here someone defiantly thinks, “It doesn’t matter if I exploit the other person. I won’t suffer any consequences,” “Killing heretics is virtuous,” or “Neither rebirth nor liberation exists.” Such ignorant views lead to unfortunate rebirths in future lives.

The first six nonvirtues directly harm others. Although idle talk does not directly harm others, it provokes people to act in ways that do. The harmful effects of the ten nonvirtues are evident, even to animals. If someone takes away an animal’s food — an act that resembles stealing — the animal is miserable. If someone shouts at an animal, it is unhappy. Once someone begins to covet the possessions of others, even his or her close friends are wary and keep a distance. Someone who uses their sexuality unwisely or unkindly loses the trust of others. This is the experience of sentient beings in general; it doesn’t matter if they are religious practitioners or not. To stop engaging in the nonvirtuous actions that no one likes, we have to counteract the three poisons that motivate them. Since doing that takes time, we begin by restraining our physical and verbal actions that directly harm others.

Four branches must be present for a complete destructive karmic path to be committed: (1) the *basis* is the object or sentient being acted on, (2) the *attitude* has three parts: correct discernment of the object, the presence of an affliction, and the motivation to do the action, (3) the *performance* of the action, and (4) the *completion* of the action, which entails our accomplishing our purpose and being satisfied with the outcome.

## *Killing*

1. Basis: A sentient being other than yourself who is alive. A sentient being is any being who has a mind — excluding a fully awakened buddha — who feels happiness and pain.
2. Attitude: (a) Discerning a living being as a living being and correctly identifying the living being to be killed. (b) Any of the three poisons of attachment, animosity, and confusion, such as attachment to eating that being's flesh, hatred toward an enemy, or confusion, thinking that animal sacrifice is virtuous. (c) The desire to kill.
3. Action: Taking the life of a living being or causing or asking someone else to kill by weapons, poisons, or other forms of violence. This includes most cases of abortion, euthanasia, and assisted suicide.
4. Completion: That being dies before we do. Suicide is not a complete action.

## *Stealing: Taking what hasn't been freely given*

1. Basis: Object belonging to another person.
2. Attitude: (a) Correctly identifying the object to be stolen. (b) Any of the three poisons, such as attachment to the object; animosity wishing to destroy the wealth of an enemy; ignorantly thinking that overcharging a customer, taking things from our employer, or cheating the government is fine. (c) The desire to take that object although it has not been freely given.
3. Action: Taking or asking someone else to take the object through force, stealth, or deception; includes not paying taxes, fees, tolls, and fares, and not returning objects we borrowed.
4. Completion: Moving the object and/or thinking that it is now ours.

## *Unwise and unkind sexual behavior*

1. Basis: The partner of another person, someone who does not consent, is celibate, is a close relative, or a child. If you are in a

relationship, going outside that relationship. Having intercourse in a temple or monastery or near your teacher or the saṅgha.

2. Attitude: (a) Correctly identifying the person with whom you wish to have intercourse. (b) Any of the three poisons: with attachment, using others for your own sexual pleasure without caring for their feelings; angrily raping the partners or children of an enemy; ignorantly thinking sex is a high spiritual practice, that it's chic to have extramarital affairs, or that having protected sex isn't necessary when there is the possibility of sexually transmitted diseases.
3. Action: Meeting of the two organs.
4. Completion: Pleasure is experienced; climax is not necessary.

### *Lying*

1. Basis: What is seen, heard, distinguished, and cognized, and what is not seen, heard, distinguished, and cognized. The person lied to is a human being other than oneself who is capable of understanding. Heaviest is lying to our spiritual teachers and parents.
2. Attitude: (a) Misrepresenting what we have seen, heard, distinguished, or cognized, or their opposites. (b) Any of the three poisons: with attachment, gaining something from that person or protecting our own reputation, angrily wanting to deceive, ignorantly thinking there is nothing wrong with lying. (c) The desire to make the other person believe what is false.
3. Action: Speaking, writing, or gesturing what we know to be untrue for personal gain, knowingly misleading others; heaviest is lying about our spiritual attainments. All four verbal actions are paths of actions whether we do them ourselves or tell others to do them.
4. Completion: The other person understands what we have said. If the other person doesn't understand, it is idle talk.

### *Divisive speech*

1. Basis: People who are friendly or who are disharmonious.

2. Attitude: (a) Correctly identifying the people to be separated. (b) Any of the three poisons: with attachment, wanting a couple to split so you can be with one member or criticizing a competitor so you will get the promotion or close a deal; with animosity or jealousy, wanting to stir up trouble; ignorantly causing disunity among those of another religion in order to convert them. (c) The desire to separate or cause friction between others.
3. Action: Causing disunity among friends or preventing those who are not harmonious from reconciling — it doesn't matter whether what we say is true or not. Worst is causing disunity in the saṅgha.
4. Completion: The other person understands what you have said; if they don't it is idle talk.

### *Harsh words*

1. Basis: A sentient being who will be hurt by your words. Heaviest is abusing your spiritual teacher. Swearing at a machine is not included.
2. Attitude: (a) Correctly identifying the person you want to hurt. (b) Any of the three poisons: with attachment, criticizing others in order to be accepted by a group of people; angrily denigrating the enemy so that others will side with us or to rouse troops to fight; ignorantly thinking we are clever or witty. (c) The desire to speak harshly and make someone feel bad.
3. Action: Criticizing, insulting, ridiculing, maliciously teasing, verbally abusing, angrily blaming, humiliating someone privately or in front of others.
4. Completion: The other person understands what was said.

### *Idle talk*

1. Basis: A topic without meaning or importance.
2. Attitude: (a) Knowing the topic we wish to speak about. (b) Any of the three poisons: with attachment, flattering and hinting to get something; angrily wanting to disturb someone; ignorantly wanting to pass the time. (c) The desire to speak this way.

3. Action: Gossiping, telling stories, joking without a good purpose, praying for terrible things to happen, wailing, teaching the Dharma to someone lacking interest or respect, reciting liturgies of other religions for no good reason, repeating jingles and slogans, grumbling, bickering over meaningless things, talking about entertainment, sports, politics, crime, and so forth without a good reason.
4. Completion: Saying the words out loud. It is not necessary that anyone hears or understands.

### *Covetousness*

1. Basis: Possessions or wealth of another person. Worst is desiring offerings made to holy beings and the saṅgha.
2. Attitude: (a) Correctly identifying the object, (b) any of the three poisons, (c) the desire to make that object your own.
3. Action: Thinking “I will obtain this,” and planning how to obtain it.
4. Completion: The determination to obtain the object. To be complete, five factors are necessary: being very attached to your possessions, wanting to accumulate more, longing to examine and experience the possessions of others, thinking that what another person has should be yours, and lacking integrity and not wanting to be free from the faults of covetousness.

### *Malice*

1. Basis: A sentient being. Worst is malice toward holy beings and the saṅgha.
2. Attitude: (a) Correctly identifying the person you want to hurt, (b) any of the three poisons, (c) the wish that someone else suffer and experience problems.
3. Action: Thinking “I will make them suffer.”
4. Completion: Deciding to inflict harm and planning how to do it. To be complete, five factors are required: animosity supported by the strong projection of negative qualities on the cause of the harm, impatience with the one harming you, resentment based on distorted

attention on the cause of your anger, thinking “How wonderful if this person were harmed or suffered,” and lacking integrity and not wanting to be free from the faults of malice.

### *Wrong views*

1. Basis: Something pertaining to the Dharma that is true and exists.
2. Attitude: (a) Perceiving something that exists to be nonexistent, (b) any of the three poisons, (c) the desire to deny the existence of the Three Jewels, four truths, karma and its effects, and so forth.
3. Action: Adopting a wrong view. This has four types: (a) disparaging causes: thinking virtuous and nonvirtuous behavior don't exist, (b) disparaging effects: the results of this behavior don't exist, (c) disparaging activities concerning karmic seeds, rebirth, and taking spontaneous birth, and (d) disparaging existent phenomena: thinking buddhas, bodhisattvas, arhats, and so forth do not exist.
4. Completion: Deciding your wrong view is definitely correct. It must have five factors: confusion that doesn't understand phenomena, an argumentative attitude delighting in disparagement, a stubborn attitude due to reflecting on incorrect teachings, denying that the Three Jewels or karma and its effects exist, and lacking integrity and not wanting to be free from the faults of wrong views.

There are many other wrong views, but these are the worst because they undermine our roots of virtue and encourage us to do whatever we like without considering the destructive effects.

Although each of the ten can be initiated with any of the three poisons, killing, harsh words, and malice are completed exclusively with animosity. Stealing, unwise and unkind sexual behavior, and coveting are completed with attachment. Wrong views are completed with confusion. Lying, divisive words, and idle talk may be completed with any of the three afflictions.

According to the *Treasury of Knowledge*, some of the ten nonvirtues are karma (actions), some are karmic paths, some are afflictions, and some are more than one of these.<sup>53</sup> The mental factor of intention is *karma*. The

intention to take life is the karma of killing and the intention to vent our anger through harsh speech is the karma of harsh speech. The three mental nonvirtues — covetousness, malice, and wrong views — are not karma; they are strong forms of the *afflictions* of attachment, animosity, and confusion, respectively. Karma (mental factor of intention) and afflictions are mutually exclusive. Afflictions are the cause of karma; they are forerunners that give rise to intentions. Strong attachment sparks the intention for unwise or unkind sexual behavior. Strong animosity provokes the intention to create disharmony between people through speaking divisively. Strong ignorant wrong views may instigate intentions to engage in any of the ten nonvirtues.

When the ten nonvirtues are done with all branches intact, they become *karmic paths* (*karmapatha*), indicating that they are conduits leading to future rebirths. They are also called karmic paths because they are either the cause of an intention or the path that intention travels to perform an action. The three mental nonvirtues are karmic paths because they cause an intention and because they lead to unfortunate rebirths. The seven nonvirtues of body and speech are karmic paths because they are the path that intention travels to carry out the intention and they are also the paths to unfortunate rebirths. These seven are also karma. The First Dalai Lama instructs (ELP 617):

If one asks: Why are these ten called karmic paths? From the three of mind, the intention embarks on its path, so they are paths. The seven of body and speech are also karma, and because they are the paths on which the intention embarks, they are called karmic paths.

	KARMA	KARMIC PATH	AFFLICTION
<i>Mental factor of intention</i>	yes	no	no
<i>Seven physical and verbal nonvirtues</i>	yes	yes	no
<i>Three mental nonvirtues</i>	no	yes	yes

We commonly speak of the ten destructive actions and the ten constructive actions. However, technically, although all ten are karmic paths, not all of them are karma or action. The *Treasury of Knowledge* says, “Three are [only] paths, seven are [not only paths, but are] also actions.” It also says, “Covetousness and so forth are not actions.”

Encouraging or asking others to act destructively also creates destructive karma. If other factors are equal, the karma is heavier when we do the action ourselves because it requires more energy to overcome whatever hesitancy we may have had to do the action. Nevertheless, we create a complete karma when we ask someone to do the action and he or she does it. Leaders of companies, organizations, and governments need to be aware of this when they give instructions and set policies. Likewise, when we ask a family member or friend to lie on our behalf and that person does so, both of us create the destructive karma of lying. The same holds true for virtuous actions. Encouraging others to act constructively creates constructive karma for ourselves as well as for them. However, the virtue is heavier if we make an offering than if we ask someone else to do it for us.

Rejoicing at the harmful actions of others is tantamount to doing them ourselves. We can accumulate a great deal of destructive karma rejoicing in others’ harmful deeds when we listen to the news, and great stores of merit are generated by rejoicing in the virtues of the buddhas, bodhisattvas, arhats, āryas, and all ordinary beings.

A person can accumulate the karma from eight of the ten nonvirtues simultaneously: at the same time he is coveting another’s partner and having sex with her, the people whom he asked to kill, steal, lie, speak divisively, speak harshly, and talk idly are doing what he asked.

Because the motivation plays such an important role in the ethical dimension of an action, it is not always possible to distinguish a constructive or destructive action on the basis of the action alone. We may chat with colleagues at work for the purpose of establishing pleasant relationships with them. This is different from chatting with them in order to make ourselves look good, denigrate others, or waste time.

Instead of following every urge that enters our mind, it behooves us to be aware of what motivates us to act. We may be so charmed with a person or an object that we are oblivious to our intentions as we interact with them. Meanwhile attachment is rising in our mind and before we know it, we are coveting the object or the person's company. Similarly, while a colleague is giving us feedback about our work, we become defensive. Unaware that we've become angry, we do not notice our intention to speak harshly and soon we are astonished to find ourselves in a nasty argument with that person. Lacking mindfulness and introspective awareness of our intentions and afflictions, we find ourselves in difficult situations now and create destructive karma that will cause suffering in future lives. However, by repeatedly renewing our mindfulness of constructive actions and activating the introspective awareness that monitors what we are thinking, saying, and doing, we will be able to direct our body, speech, and mind with wisdom and kindness.

Taking and keeping precepts helps us to abandon nonvirtue by making us more mindful of how we would like to behave and how we are actually behaving. Holding precepts increases our conscientiousness and respect for ethical conduct. It also stops confusion in challenging situations because we reflect that previously, with a clear mind, we saw the disadvantages of this action and took a precept to abandon it.

Some actions have both constructive and destructive elements and bring mixed effects. For example, someone gives a donation to build a hospital for the poor with the thought that his name will appear on a plaque that lists donors. Although his motivation is nonvirtuous, the action benefits others. Alternatively, the thought could be virtuous but the action nonvirtuous: a teacher is motivated by affection and care for a student, but speaks harshly in order to motivate him to overcome his laziness. Some actions, such as

sweeping the floor, that are done with an intention that is neither constructive nor destructive, bring neutral results.

The question also arises whether not helping someone can create negative karma. Here we must take into consideration the person's motivation as well as the situation. For example, two people are quarreling. One onlooker thinks, "My intervention could aggravate the situation," while another thinks, "Getting involved is very inconvenient for me." Neither of these people intervenes, but they create different karma.

Sometimes other people may become angry at us while, from our side, we had no intention of harming them. This even happened to the Buddha: Some villagers, upon seeing the Buddha and saṅgha enter their village to gather alms, were furious because they mistakenly thought the Buddha was simply living off their hard work. Although the Buddha was the object of their hostility, his action was not destructive. He had no intention to harm those people or to make them angry.

On the other hand, if someone deliberately antagonizes another person with the thought to upset him or willfully tries to make someone overly dependent and attached to him, his actions are destructive because a harmful intention was present.

There is much to ponder regarding the ten nonvirtues, and doing a review of our lives will enable us to identify habitual destructive actions that we need to purify and to prevent doing in the future.

#### REFLECTION

---

1. At this very moment you are creating the causes for what you will become and the events you will experience. What kind of future do you want to create for yourself?
  2. Which actions do you need to engage in to bring about that future?
  3. Which actions must you abandon?
  4. Make a determination to set healthy and meaningful goals and to act in an ethical and kind manner in order to attain them.
-

## *Constructive Actions*

The Buddha emphasized the disadvantages of poor ethical conduct and the benefits of good ethical conduct (DN 16.1.23–24):

Householders, there are these five perils to someone of poor ethical conduct, of failure in ethical conduct. What are they? First, he suffers great loss of property through neglecting his affairs. Second, he gets a bad reputation for immorality and misconduct. Third, whatever assembly he approaches . . . he does so diffidently and shyly. Fourth, he dies confused. Fifth, after death, at the breaking up of the body, he arises in an unfortunate state, a bad fate, in suffering and hell. These are the five perils to someone of poor ethical conduct.

Householders, there are these five advantages to someone of good ethical conduct and of success in ethical conduct. What are they? First, through careful attention to his affairs he gains much wealth. Second, he has a good reputation for morality and good conduct. Third, whatever assembly he approaches . . . he does so with confidence and assurance. Fourth, he dies unconfused. Fifth, after death, at the breaking up of the body, he arises in a good place, a heavenly world. These are the five advantages to someone of good ethical conduct and of success in ethical conduct.

We restrain ourselves from acting harmfully to benefit ourselves and others, not by thinking that the Buddha commanded us to do so. For example, our doctor may advise us to have a low-fat diet. Even though we like food with a lot of fat, we follow his advice not out of duty but because we know it is for our long-term benefit. Abandoning destructive actions because we know their harm is like a clever animal who sees some food but does not eat it because he senses it may be a trap that will bring him suffering.

When a mosquito lands on your arm, instead of swatting it, shoo it away. This action of refraining from killing is constructive karma and is the cause for attaining a precious human life. I must admit, however, that sometimes mosquitoes really irritate me, and I'm tempted to slap them!

Nevertheless, I restrain myself and later am happy that I did. Then I ask my attendant to please put better screens on the windows!

The ten paths of constructive actions are consciously restraining ourselves from engaging in the ten destructive ones. When faced with a situation in which we could lie, we remember its disadvantages and decide not to do it. Abstaining from a nonvirtuous action itself is virtuous karma. The Pāli tradition delineates three types of abstention that apply to the seven physical and verbal nonvirtues:

1. *Natural abstention* is restraining ourselves from nonvirtuous actions because we have learned as children to avoid them. Our parents taught us not to lie, and knowing that lying is not good, we developed the habit of speaking truthfully. While virtuous, this restraint is not necessarily stable. If we face strong peer pressure or lose mindfulness, we may act destructively.
2. *Abstention by adopting precepts* occurs by consciously and deliberately taking precepts to abstain from harmful actions. These precepts include the five lay precepts, monastic precepts, and the eight one-day precepts. Alternatively, we may make a strong determination to restrain from the seven physical and verbal nonvirtues. Taking precepts reinforces natural abstention because when we are tempted to act harmfully, remembering the precepts and our preceptor strengthens our resolve to act virtuously.
3. *Abstention through eradication* is accomplished by attaining the ārya path — stream-enterer and above — and eradicating particular defilements. As we eliminate levels of defilement from our mind, they no longer cause us to transgress precepts.

The three mental paths of virtue are three virtuous mental factors when they are strongly developed. Noncovetousness is the mental factor of strong nonattachment. It is not just the absence of attachment but a mind that actively does not seek more and better. It temporarily frees the mind from greed and leads to generosity and the relinquishment of sensual desire. Nonmalice is the mental factor of strong nonhatred. This is not just the absence of hatred, but loving-kindness. Nonconfusion prevents and counteracts confusion. It is related to right view and wisdom and

understands that our actions have an ethical dimension and bring results that we ourselves will experience.

The Buddha also describes the ten virtues as doing constructive actions (AN 10.211). Someone who abstains from killing “dwells compassionately toward all living beings.” Abandoning divisive speech means “he unites those who are divided and encourages those who are in harmony.” Someone who relinquishes harsh speech speaks words that are “gentle, pleasant to hear, endearing, heartwarming, courteous, agreeable to many folk, pleasing to many folk.” Abandoning idle chatter, a person “speaks at the right time, in accordance with facts, and of matters that are beneficial . . . His talk is opportune, helpful, moderate, and meaningful.” Someone who abandons maliciousness “has pure thoughts and intentions such as, ‘May these beings be free from enmity, free from anxiety! May they be untroubled and live happily!’” In short, doing the opposite of the ten paths of destructive actions also constitutes practicing the ten paths of constructive actions. We mindfully save life, protect others’ property, and promote fidelity in relationships. We speak truthfully, harmoniously, kindly, and at appropriate times. Our thoughts are generous, friendly, and wise.

The Pāli tradition further lists ten bases of meritorious deeds (*dasapuñṇakiriyavatthu*) to practice (CMA 209): generosity, ethical conduct, meditation, reverence, service, dedicating merit, rejoicing in others’ virtue, listening to Dharma teachings, teaching the Dharma, and straightening out our views (developing correct views).

Contemplating the various harmful and wholesome actions enables us to develop wisdom that knows what to abandon and what to practice. This wisdom enables us to make wise decisions in our lives and eliminates the confusion of not knowing what is best to do. In doing so, it prevents problems and remorse.

Soon after the Buddha’s son Rāhula became a monk, the Buddha explained to him that there are three phases to any action — the time before doing the action, the time of doing it, and the time after completing it — and counseled Rāhula to act only after repeated reflection, rather than impulsively (MN 61). Before beginning the action, the Buddha advised asking ourselves two questions that would enable us to decide wisely whether to do this action or not: (1) Will this action that I wish to do bring

harm to myself, to others, or to both? What will be the most likely immediate result and long-term results of this action? Even if the action seems insignificant and won't adversely affect someone else, will it corrupt my mind in a way that will later lead my ethical conduct to degenerate? (2) Is this a nonvirtuous action that will bring painful results? Here the quality of our motivation is a crucial factor, so we should examine as honestly as we can what our actual intention is.

While doing the action, we should continue to hold these questions in our mind. If we see that the action will bring harm to ourselves or others or if we determine that it is nonvirtuous, we should stop immediately. It may seem strange to stop what we are saying in midsentence, but it is better than finishing the comment and having to deal with the painful consequences afterward.

After we have completed an action, we should review it with the two questions as our guide. If we realize in hindsight that it was nonvirtuous, we should reveal and confess it in our evening purification practice or tell a wise Dharma friend or our Dharma teacher. Then we should make a strong determination not to do that action again and undertake restraint. But if we realize that the action was constructive, we should rejoice, dwell happily, and continue training in that way.

## *The Weight of Karma*

Not all constructive and destructive actions are equal in terms of the weight of the latencies they leave on our mindstream or the strength of the experiences they bring. Tsongkhapa cites five criteria that make destructive actions heavy:

1. *The strength of our attitude* — for example, lying with a strong wish to cause another harm — is heavier than acting with a weak intention.
2. *The method of doing the action* includes doing the action repeatedly, doing it ourselves, encouraging others to do it, delighting in it, planning it for a long time, and relishing having

done it. An example is killing someone by first humiliating and torturing him.

3. *The lack of an antidote* makes a destructive action heavier. Examples include when the person does little if any constructive actions at other times, repeatedly engages in harmful actions, is not interested in avoiding harmful actions or purifying them once they have been committed, and has little sense of their own moral integrity or consideration for others. However, the destructive action of someone who tries to live ethically, is respectful to those worthy of respect, has knowledge of the Dharma, or has attained realization will be lighter because that person also has accumulated merit or will purify the nonvirtue.
4. *Holding wrong views* makes the action heavier than doing it with ordinary ignorance or confusion. Euthanizing an animal with the thought to put it out of its misery is not as heavy as doing it with the strong view that rebirth and karma and its effects do not exist. In the latter case, the person is philosophically convinced that a harmful action is without fault.
5. *The object of the action* is important. Criticizing our parents, spiritual teachers, those with Dharma realizations, and the poor or needy is much heavier than criticizing others. Our parents are strong objects for the creation of karma owing to their kindness in giving us life. Spiritual teachers are powerful objects because they lead us on the path, and the poor and sick are strong objects because of their need. However, owing to the power of holy objects, any action done in relation to high bodhisattvas or images of buddhas and bodhisattvas has one aspect that can be the condition for attaining liberation. Killing a human being, a large animal, a fetus, relatives, or holy beings is heavier than killing others.

Generally speaking, of the seven physical and verbal nonvirtues, killing is the heaviest, with each successive nonvirtue being lighter than the previous one. This order is dependent on the amount of suffering the other sentient being experiences. Everyone cherishes his or her life more than anything else and suffers most when it is taken from them, while the

suffering we experience from idle talk is minor. Of the three mental nonvirtues, wrong views are heaviest, then malice, and finally covetousness.

Although idle talk is the lightest of the three verbal nonvirtues, it is dangerous because it gives rise to so many other afflictions. When someone relates a story of either romance or war, both the storyteller and the listener generate attachment or anger, which in turn could provoke them to act with harm verbally and physically. For this reason, spiritual masters recommend that when with others, we should guard our speech, and when alone, we should guard our mind.

Other factors may make both constructive and destructive actions more powerful.

- *Frequency* — such as losing our temper often — creates heavy destructive karma, while repeatedly being patient with others creates strong virtue.
- *Regretting* harmful actions leads us to do purification, which lessens the power of the karmic seeds. However, regretting constructive actions decreases the power of the seeds of those actions.
- *Rejoicing* at both our harmful and helpful actions makes them more powerful.
- *A strong motivation* increases the strength of our actions. For this reason, acting when our mind is overwhelmed by jealousy, anger, or resentment is not wise. However, cultivating a strong motivation of compassion and bodhicitta each morning will positively affect all the virtuous actions we do that day.
- Constructive actions done by *those holding precepts* are more powerful than those done by people without the precepts. The more precepts we hold, the stronger the results of our virtuous actions. A fully ordained monastic's generosity creates more powerful constructive karma than that of someone without precepts. The constructive actions of those holding bodhisattva's precepts are stronger, while virtuous actions done by those with all three ethical codes — prātimokṣa, bodhisattva, and tantra — are even greater.
- *Acting out of ignorance* is lighter than doing the action with awareness of the karmic consequences of our actions. Young

children swatting insects without understanding that killing is harmful is not as heavy as the same action done by someone who knows that killing is nonvirtuous and either doesn't care or is overwhelmed by mental afflictions.

- *Mental illness* that obscures the mind lessens the strength of destructive actions. The Vinaya takes this into consideration when determining whether someone commits a full transgression of a root downfall such as killing a human being. A monastic who intentionally engages in and completes a root downfall is no longer a monastic and is expelled from the saṅgha. However, if a monastic suffering from severe mental illness does such an action, it is not considered a full transgression.
- The *general mental constitution* of a person influences the weight of an action as well as its results. If we put a lump of salt in a small cup of water, the water will be very salty and undrinkable, whereas if we put it in the river Ganges, it won't influence the water much. Similarly, when a person who is “undeveloped in body, virtuous behavior, mind, and wisdom . . . creates a trifling bad kamma, it leads him to hell,” whereas when a person who “is developed in body, virtuous behavior, mind, and wisdom . . . creates exactly the same trifling bad kamma, it is to be experienced in this very life, without even a slight [residue] being seen, much less an abundant [residue]” (AN 3.100). Because of the great virtue in the latter person's mindstream, the destructive action does not grossly affect his character. He will experience an unpleasant result of the action in this life and there will be no further suffering residue to be experienced in future lives. The opposite occurs with a person of little virtue.

The question of the weight of naturally negative actions — such as killing and stealing — created by those with precepts can be looked at from different perspectives. Tsongkhapa said (LC 1:233):

Therefore, the Buddha said that nonvirtues are light for the knowledgeable who regret their former nonvirtuous actions, restrain themselves from future nonvirtuous actions, do not

conceal their negativities, and do virtuous actions as remedies for those nonvirtuous actions. However, nonvirtues are weighty for those who make a pretense of being knowledgeable and do not do these actions but belittle them and engage consciously in nonvirtuous actions.

Those living in precepts of any kind are continuously creating constructive karma as long as they are not transgressing a precept. Two people may be sitting in a room talking, one holding the precept to abandon killing, the other not. Neither of them is killing. The person with the precept is continuously creating the constructive karma of not killing because she is acting in accord with her virtuous intention to abandon killing, while the other person is not creating such karma. This is one advantage of living in precepts. However, if a person with precepts consciously engages in nonvirtuous actions and does not purify or have regret, the karma is heavier.

Understanding the factors that make an action more potent enables us to maximize the power of our virtue and inhibit the strength of our nonvirtue. Mindfulness of these factors induces deeper introspective awareness that monitors our thoughts, words, and deeds. Together this mindfulness and introspective awareness make our lives more vibrant and meaningful.

Without confidence in the law of karmic causality, it is extremely difficult to gain higher realizations on the path. Nāgārjuna told us (RV 5):

Due to having faith [in karma and its effects], one relies on the  
practices;  
due to having wisdom, one truly understands.  
Of these two, wisdom is foremost,  
but faith must come first.

While the wisdom realizing emptiness is foremost in that it overcomes the ignorance that is the root of saṃsāra, we need to create the cause for a series of fortunate births in saṃsāra during which we can practice the path. Without belief in karma and its effects, we do not evaluate our actions and motivations and carelessly engage in many destructive actions that lead to unfortunate rebirths. In such births, we will be unable to meet the Dharma, let alone cultivate liberating wisdom. It will also be difficult to create virtue

that will bring fortunate rebirths in the future. However, having even a general understanding and confidence in the functioning of karma and its effects gives us the ability to control our future by practicing virtue and abandoning nonvirtue.

## *Discerning Virtuous from Nonvirtuous Actions*

Discerning virtue from nonvirtue can initially be difficult. Applying the above four criteria of the ten paths of nonvirtue to the ten paths of virtue is very helpful. Nāgārjuna's guideline regarding our motivation is also pertinent (RA 20):

Attachment, animosity, confusion,  
and the karma that arises from them are nonvirtuous.  
Nonattachment, nonanger, nonconfusion,  
and the karmas that arise from them are virtuous.

Attachment has a specific meaning in Buddhist texts, where it is defined as a mental factor that, when referring to a polluted object, exaggerates its attractiveness and then wishes for and clings to it. "Polluted" means associated with ignorance and associated with cyclic existence. This includes our five psychophysical aggregates and the large majority of things around us. Attachment is afflictive, biased, and unrealistic, and actions done under the influence of sensual attachment are destructive. They lead to unhappiness in future lives and prevent our gaining spiritual realizations.

Sometimes it is difficult for us to distinguish attachment from genuine love and appreciation. One clue that attachment is present is when we initially think something is very wonderful and later find it boring or even disgusting. This indicates that initially we were exaggerating the attractiveness of the person, object, place, idea, and so forth. For example, when we see a new car in the showroom, it appears wonderful and we proudly show it off to our friends after we buy it. But after some time the car becomes uninteresting and we seek something new and exciting. This indicates we had an unrealistic view of the car and had exaggerated its ability to provide us continuous pleasure.

Anger is easier to recognize when it surges in our mind, but sometimes we are resistant to seeing that it is afflictive and motivates destructive karma. Instead we justify our anger as necessary to protect our own interests.

Confusion — ignorance about what is virtue and what is not — is also difficult to recognize. We easily believe our own or others' incorrect ideas about what to practice and what to abandon, and in the process engage in many damaging actions, thinking that they are virtuous. Only later do we see our lack of clarity involving ethical conduct.

Nonattachment, nonanger, and nonconfusion are not the lack of the three poisons, but mental factors that are their opposites. Nonattachment is a balanced, open attitude; nonanger is love; nonconfusion is wisdom. The three “nons” are virtuous mental factors and the actions motivated by them are also virtuous.

Observing our mind closely with mindfulness and introspective awareness, both in meditation and in daily life, helps us to recognize these mental states in our own experience. This takes time, but is very worthwhile because discerning virtue from nonvirtue in our own mind is essential to abandoning destructive karma and creating constructive karma.

## *Karma and Current Ethical Issues*

Many ethical issues pertinent in the modern world have surfaced during my discussions with Dharma students and scientists, and people are interested in the Buddhist perspective on these. While some of these issues did not exist at the time of the Buddha due to lack of scientific knowledge, others did. Of those that did, some were of concern to ancient Indian society, others were not. Because Buddha and the great Indian sages did not tackle some of these ethical concerns directly, I will share my perspectives on them based on Buddhist principles.

Although several of these issues have become politicized, here I am regarding them solely as ethical issues. My intention is not to cause controversy but to encourage compassion for everyone involved in difficult

situations. Only by listening and working together — not by hostile rhetoric or aggressive actions — can sensitive issues and difficulties be resolved.

As a human community we must think carefully and choose wisely what scientific and technological research to engage in for the betterment of sentient beings. We must reflect on the possible long-term consequences of medical and chemical research, knowing that the threats of biological and chemical warfare are real. What follows are some thoughts about specific issues.

*Scientific research.* Distinguishing the ethical status of an action simply by looking at the action itself is difficult because the actor's motivation is a key factor. A seemingly "beneficial" act done with a harmful intention produces suffering in the long term for the one who did it and usually harms others in the present. On the other hand, a forceful action may appear harmful, but if carried out with an altruistic motivation, it will be constructive. In the case of scientific research, not only the action but also the motivation must be taken into consideration.

Scientists must consider the long-term effects of their research on sentient beings and their environment. Pursuing scientific research simply out of curiosity to see how something operates or to invent interesting new devices is too simplistic a motivation. I do not know if scientists who researched atomic power sufficiently considered how governments could use the results of their work. Although scientists may expect good to come from their research, the actual outcome of their scientific investigation is not always clear. Scientists with a sincerely compassionate motivation and a sense of responsibility for the long-term implications of their research will make careful decisions about what to research.

Almost everything has advantages and disadvantages. Our concern should always be what will bring the greatest good to the greatest number of living beings. We should take the time to assess a situation as best as we can given our present knowledge and follow what is most beneficial, even if in the short term there are a few difficulties.

People often assume what is best for the economy, earns more income for their company, secures more political power, results in fame, or increases military might is most beneficial. These are not valid criteria for determining benefit; they are short-sighted and biased, and adhering to them

could easily bring us — as individuals and as members of the human species — more suffering. We must consider that each and every sentient being wants happiness and freedom from suffering.

*Genetic engineering.* In one sense genetic engineering resembles already accepted procedures. Kidney, heart, and liver transplants are now common practice, and patients benefit tremendously from these. By extension, scientists could conceivably alter certain genetic components that are instrumental in causing diseases.

Much caution and forethought of all the implications are required, however. Just as a high degree of knowledge about possible outcomes of an organ transplant and ways to counteract damaging side effects is necessary before transplanting an organ, such forethought regarding the benefits and the byproducts of genetic engineering is necessary before proceeding with this research. This forethought involves not just a few people — such as a governmental commission or a committee of scientists — but all of us because genetic manipulation can potentially have an enormous effect on living beings. What could be the long-term effect on our bodies of eating genetically altered food? What could be the political, economic, social, and ethical ramifications of creating genetically designed children? As a human community we must discuss these questions and make wise decisions together.

*Embryos from in-vitro fertilization.* How to handle extra embryos after in-vitro fertilization has to do with how we define life. From a Buddhist viewpoint, sentient life — as distinct from mere biological life — involves the presence of consciousness. But when does consciousness enter the body? Most Buddhist texts agree that consciousness joins with the fertilized egg, but they don't specify if that occurs before or after the fertilized egg is implanted in the womb. However, once the sperm, egg, and consciousness are together and the cells start to multiply in the womb, a sentient being exists. We do not know if consciousness joins with an egg during in-vitro fertilization before it has been put in the womb.

Much discussion revolves around what to do with the excess fertilized eggs after in-vitro fertilization that enables a childless couple to have a child. Should they be used for stem cell research? Should they be discarded? Given to another couple who wants to have a child? Kept

indefinitely at a very low temperature? If those eggs have consciousness, do those sentient beings then suffer from cold? These questions are difficult to answer. I encourage doctors as well as couples to contemplate these issues before having in-vitro fertilization so that they do not suffer from confusion if faced with this situation.

*Stem cell research.* Research on stem cells harvested from human embryos could potentially bring cures for diseases and new ways to heal injuries. Genetic research could include tests to see if embryos had genetic defects that could later lead to debilitating diseases. But what is the effect of such research on the beings who inhabit those embryos? What kind of karma is created by doing this research? Will the knowledge derived from it bring happiness or may it create more misery and confusion? We need to investigate these issues and make wise decisions.

Some people accept that insects and animals have some form of sentience, but believe that since human beings have greater intellectual capabilities, they are superior. Others say that all sentient beings are similar in wanting happiness and not wanting suffering, and thus it is unsuitable for human beings to use animals for scientific research. Is it beneficial to harm some beings in order to devise ways of helping others? Unfortunately, we cannot ask the beings in the embryos or in the animal bodies if they agree to offer their lives for the potential benefit of others.

*Cloning.* Similar considerations about the presence of consciousness affect the issue of therapeutic cloning, in which scientists create a new human being with the same genes as another person, such that the clone's organs could be harvested and transplanted into the cloner. But Dolly, the cloned sheep, was a different sentient being with a different mindstream than her cloner. In the case of human beings, I don't think the clone would agree to donate his or her organs to the cloner or vice-versa. Unless we consider various ramifications and make wise, thoughtful decisions, we may become so enamored with science and technology that in the pursuit of happiness we create more problems.

*Birth control and abortion.* The presence of consciousness in a zygote also affects decisions regarding birth control and abortion. Birth control that inhibits the fertilization of the egg is fine. But once the egg is fertilized and a consciousness has entered, deliberately stopping the pregnancy is

considered the destructive action of taking life. Situations such as the child being born severely disabled or the mother's life being at stake need special consideration. Although abortion in such cases still entails the taking of life, the motivation is different and usually involves regret and sadness, making the karma lighter.

Overpopulation is a genuine concern in our world. As a society and as individuals, we must be responsible for the future of our planet. Birth control that prevents conception rather than terminates pregnancy is best. Giving a child up for adoption is another worthy option. My hope is that we can inculcate a sense of responsibility in young people (and adults too), so that they will use their sexuality wisely. Overestimating the value of romantic love and rushing into sexual relationships often leave people emotionally hurt or facing an unwanted pregnancy. In general, we need to bring compassion to cases of unwanted pregnancy. Rather than judge and blame the people involved, we need to help them resolve the situation as best as possible.

*Assisted suicide.* It may happen that a family member has a terminal illness and, experiencing great pain, asks for help in terminating his or her life. Assisted suicide is difficult and complicated; interestingly, a somewhat similar situation arose during the Buddha's lifetime. A monk was meditating on the unattractiveness of the body. Misunderstanding the purpose of the meditation, which is to reduce lust, he grew so disgusted with his body that he was miserable day and night. He asked another monk to kill him to free him from his body. The other monk did, and when the Buddha heard about this, he established the precept to abandon taking life and encouraging death.

Making a decision to put someone out of their suffering is difficult when we do not know where he or she will be reborn. When we take rebirth into account, we see that assisted suicide does not stop all suffering.

I would encourage someone with a terminal illness to see herself as more than just her disease. She is still a whole person with great human potential. Spiritual practice can still go forward even when one is terminally ill. At the times her mind is clear, she can direct it toward cultivating love and compassion, even if she is suffering physically. Friends and relatives

can encourage her to see that her life still has meaning and purpose even when her body is incapacitated or in pain.

On the other hand, someone may be in a coma with brain damage and no hope of recovery. Because he lacks proper mental functions, even if he is reminded of positive thoughts, the benefit is minimal or none. In addition, the family experiences great distress and society expends resources to keep the person alive. Such situations may be an exception, and it is understandable if the family allows the person to die naturally.

*Suicide.* Like other forms of taking life, suicide is considered killing. It is not a full karmic path, because the object of the action must be a person other than ourselves and the completion of the act means the victim dies first. Buddhism does not say a person who attempts suicide is evil and will be punished. However, it is a self-centered action that does not take into account the feelings of friends and family and how much they will suffer if one commits suicide.

Someone once told me that he longed for the peace of death because our world, with all its problems, is so difficult to bear. If we could be assured that in death we would find lasting happiness and peace, his wish might have some reason. However, we lack that guarantee. Death is not a cure for pain.

Meanwhile, because we are alive now, we can do something to resolve our difficulties and to contribute to the betterment of the world. The more we recognize the purpose and value of our precious human life, the more we will find meaning in our life and the more we will appreciate our good fortune to have this wonderful human brain and human heart. With these, we can practice the path to awakening, eliminating all problems. We need to cultivate a long-range perspective, patience, and confidence. With these, we can abandon despair, see the goodness around us, and know that we can make our life worthwhile.

*The death penalty.* Criminal actions that harm others create destructive karma. Using methods that are both wise and compassionate, as a society we must do our utmost to prevent it and to offer sympathy and support to families who grieve the loss of their loved ones or property. However, we must ask if executing the perpetrator dissipates the grief of the victims and their families.

Death is something that none of us wants. When it takes place naturally, it is beyond our control, but when death is willfully and deliberately inflicted, it is tragic. Whether death is caused illegally or legally — as in the case of the death penalty — negative karma is created. Even if we don't consider the karmic consequences in future lives, many disadvantages of the death penalty are evident now. A society may allow the death penalty in order to punish offenders, prevent them from reoffending, and deter other possible offenders. Research has shown, however, that executing offenders does not accomplish these aims.

I believe that human beings are not violent by nature. Unlike tigers, we are not naturally equipped with sharp teeth and claws for killing. The basic nature of each sentient being is pure. Human beings become violent owing to their afflictions, which exist in all of us. From this viewpoint, each of us has the potential to commit a crime as long as ignorance, hostility, attachment, and jealousy are within us. How, then, can we self-righteously condemn others as evil? Our own disturbing attitudes and emotions won't be overcome by executing others.

What is deemed criminal varies greatly from country to country. To use the death penalty as a punishment for such diverse actions is subjective and unreasonable. Furthermore, if we wish to deter criminal activity and prevent harmful activities, society must take care of children and ensure they receive a good education.

Executing human beings is an especially severe punishment because it is so final. A human life is terminated, and the executed person is deprived of the opportunity to change and to compensate for the harm he caused. However deplorable the act a person may have committed, everyone has the potential to improve and correct himself. I am a great admirer of Mahatma Gandhi's policy of *ahimsā*, or nonviolence. I appeal to those countries that employ the death penalty to observe an unconditional moratorium. At the same time, I encourage citizens and governments to give more support to education and to encourage a greater sense of universal responsibility for all beings in children and adults.

*Vegetarianism.* Eating meat involves the destructive action of killing even if we are not the butcher or fisherman. Being vegetarian is best,

although it depends on our health. The Buddha specifically forbade his followers to eat meat in three circumstances (MN 55.5):

Jivaka, I say that there are three instances in which meat should not be eaten: when it is seen, heard, or suspected [that the living being was slaughtered for one's consumption]. . . [I] say that there are three instances in which meat may be eaten: when it is not seen, not heard, and not suspected [that the living being was slaughtered for one's consumption].

Mahāyāna scriptures prohibit eating meat irrespective of those three situations, although there are a few exceptions.

In previous years, I would drive by poultry farms on the way to visit Tibetan settlements in South India. Hearing the chickens squawk in fear and seeing the horrible conditions in which they lived upset me greatly. When I heard that Tibetans ran these enterprises, I asked them to close them down and seek other employment. I am very happy that they have complied.

When I grew up in Tibet, the custom was to serve great amounts of meat during feasts and ceremonies. Thinking of so many animals being killed distressed me. In addition, it is unfitting for Buddhist practitioners who say they are practicing compassion to eat other beings' flesh. In Tibet and now in India I repeatedly said that this must stop, and now most monasteries do not serve meat during public gatherings. Similarly, only vegetarian food should be served at gatherings at Dharma centers. Otherwise, it is strange for people to hear teachings on compassion and then eat meat during the breaks between teachings!

Many people can be vegetarians without adverse consequences to their health. They take care of their diet and live in a place where they can procure healthy food. I would prefer to be a vegetarian. However, after some time of not eating meat, I fell ill with jaundice and traces of it remained as a chronic health problem. My doctors advised that, due to my strenuous schedule, I should eat meat. Although I aspire and would prefer to be totally vegetarian, now I must accept being a part-time vegetarian.

If those with health problems find it difficult to avoid eating meat, eating the flesh of large animals will prevent fewer living beings from

dying. Eating small animals, such as shellfish and chicken, causes many beings to be killed for just one meal.

*Neutering pets.* From one perspective, spaying and neutering animals is seen as cruel. But from a broader perspective, when there are so many dogs and cats that they all suffer, don't have enough to eat, and spread disease to one another, then there may be a good reason to spay and neuter animals. This is now done in Dharamsala, where I live.

*Sexual ethics.* Sexual ethics falls within the general rubric of nonharmfulness, which is the fundamental principle in defining ethical conduct. The fundamental activity to abandon is adultery because it causes confusion and jealousy for the two people involved and for their families. The specific details of unwise and unkind sexual behavior are related to the culture and values of a particular society at a particular time.

In ancient times going to a prostitute was not considered sexual misconduct if the customer paid her properly. However, present societal values by and large consider prostitution exploitation of vulnerable people. Young girls are sold into prostitution and runaway teenagers are manipulated into it. Single mothers living in poverty turn to sex work to put food on the table for their children. It is not the women and children who are at fault here, but the pimps and johns who keep the system going with the excuse of helping them by providing income. If men's intention were to help women and children, then they would give them a safe place to live, an education, and job training. Prostitution is also a social issue rooted in poverty and lack of respect for other human beings.

If a person voluntarily chooses to earn their livelihood through sexual services and these services do not damage oneself or others in the short term or long term, the situation would not be considered sexual misconduct.

Gays and lesbians are widely accepted in Western societies, and there is increasing support of their equal rights in housing, employment, marriage, military service, participation in religion, and so on. In these societies, homosexuality would not be considered unwise and unkind sexual behavior when practiced in a respectful relationship and with protection against sexually transmitted disease. The main point, whether one is straight or gay, is not to hurt others either emotionally or physically through one's sexuality. Everyone is advised to avoid sexual relations that are

manipulative, inconsiderate, or that could be emotionally or physically damaging to one or both parties. Safe sex with the use of condoms is a priority in upholding the Buddhist principle of nonharming.

Nowadays pornography is widespread, especially via the Internet. Material that reduces human beings to sexual objects harms both the viewer and the viewed. It stimulates undue lust that easily leads to inappropriate sexual behavior, especially in the case of child pornography. Instead of receiving love and support from adults, these young people are objectified and seen as the sexual playthings of lustful adults. Their self-esteem is severely damaged and they lose trust in adults. Spouses may be offended and lose respect for their beloved life partner who looks at pornography.

The state of mind that objectifies others and makes them into sexual objects for one's own pleasure is the opposite of the love and compassion we are trying to cultivate on the spiritual path. It inhibits opening our hearts toward others and destroys our happiness now and in the future.

# 11 | Results of Karma

**T**HROUGH OUR INTENTIONS and our actions, we create our experiences. Each of us experiences the results of intentional actions we have done. The Buddha explains (AN 3.34):

Whatever kamma an ignorant person [has done]  
born of attachment, anger, and confusion,  
whether what was fashioned by him be little or much,  
it is to be experienced right here:  
there exists no other site [for it].

*Right here* means in ourselves. We cannot transfer our karma to others so they experience the result, nor do we experience the result of others' actions. The results of our actions are concordant with their causes: if we create the cause for happiness, we experience happiness; if we create the causes for pain, that is what we will experience. The Buddha says (MN 136.6):

Having done an intentional action by way of the body, speech, or mind [whose result is] to be felt as pleasant, one feels pleasure. Having done an intentional action by way of body, speech, or mind [whose result is] to be felt as painful, one feels pain. Having done an intentional action by way of body, speech, or mind [whose result is] to be felt as neutral, one feels neutral.

Experiencing the long-term results of our actions does not contradict the fact that our actions influence others here and now. Giving another person food, we temporarily cure his hunger as well as create the cause to have resources in our future lives. Dedicating virtuous actions for a dear one who is deceased may affect that person's rebirth in a positive way. Similarly, the

Buddha's awakening was a result of his own efforts, but we also share the good fruits of his accumulation of merit over three countless great eons. In all these examples, one person's karma has not been transferred so that another person experiences its result. Rather, as sentient beings we are interdependent, and the actions of one person may activate the ripening of another person's karma.

The karmic result corresponds to the ethical nature of the action, which is primarily determined by the intention that motivated it. Actions done with a good motivation bring agreeable results for the person who does them, and actions done with destructive motivations bring miserable results in the long term. Actions may have immediate results that do not correspond with the ethical quality of the intention; these immediate results are not karmic results. For example, with the intention to help, Jeff gives some money to a friend. The next day someone steals the money, buys alcohol, and then injures someone in a car accident. Jeff's action was still a virtuous one, although it had an immediate, unintended suffering result.

### *Three Results of Karma*

Our actions bring several results: some are immediate results, others are karmic results that ripen later. When we are angry and speak harshly to someone, we immediately feel uneasy and experience an unpleasant reaction from the other person. In addition, the mental action of malice and the verbal action of harsh speech leave karmic seeds (latencies) on our mindstream. After a few years, lifetimes, or even eons, those seeds will ripen in our experiencing unpleasant events.

The scriptures speak of three results that come about due to actions done with all four branches (basis, attitude, performance, completion) accomplished: the ripening result (*vipākaphala*), causally concordant result (*niṣyandaphala*), and environmental result (*adhipatiphala*).

To be a *ripening result* four factors are required: (1) The cause is either virtuous or nonvirtuous. (2) The result is connected with the continuum of sentient beings. (3) The result comes after the cause. (4) The result itself is neutral, neither virtuous nor nonvirtuous.<sup>54</sup>

An example of a ripening result is the human psychophysical aggregates — form, feeling, discriminations, miscellaneous factors, and consciousnesses — we appropriated in our present life. Their cause was virtuous karma and they are connected with the continuum of a sentient being. Our rebirth came after its karmic cause, and our body itself is neutral, neither virtuous nor nonvirtuous. Āryadeva says (CŚ 297):

Suffering is a ripening  
and thus is not virtuous.  
Similarly, birth too is not virtuous,  
being a ripening [result] of actions.

Suffering arises due to nonvirtuous causes, but itself is neutral. Similarly, the body of a new life is a result of virtuous or nonvirtuous karma, but itself is ethically neutral. In general, a heavy destructive action brings rebirth as a hell being, a middle one brings rebirth as a hungry ghost, and a minor one results in rebirth as an animal.<sup>55</sup>

With the exception of the causally concordant behavioral result, all other results are neutral. How we respond to suffering and happiness and to the different situations in which they occur creates the causes for more future results. As causes, these actions may be virtuous, nonvirtuous, or neutral; they leave karmic seeds on our mindstream and these produce more rebirths and the experiences we encounter in them.

The *causally concordant result* is usually experienced when we are again born as a human. It is of two types: (1) The *causally concordant experiential result* is our experiencing circumstances similar to what we caused others to experience. Killing results in experiencing injury, illness, or a short life. Generosity brings resources. (2) The *causally concordant behavioral result* is the tendency to behave in the same way in the future. Someone who lies in this life will have the tendency to lie and deceive others in future lives, whereas someone who trains in truthful speech will readily speak truthfully in future lives.

Each nonvirtue also gives an *environmental result*, affecting the ambiance in which we live. The chart will help you see the results of the ten

nonvirtues at a glance. The causally concordant behavioral result is not listed because it is the tendency to do that same action again.

ACTION	CAUSALLY CONCORDANT EXPERIENTIAL RESULT	ENVIRONMENTAL RESULT
Killing	Short life, poor health.	Place with strife and war. Food and drink aren't healthy, medicine is not potent.
Stealing	Poverty, our things are stolen or we don't have the power to use them.	Poor place with many dangers, droughts, or floods, poor harvests, natural disasters.
Unwise and unkind sexual conduct	Disagreeable or unfaithful spouse, marital disharmony.	Life in a dirty place with poor sanitation, a foul odor, and misery.
Lying	Others slander and deceive us, don't believe or trust us, accuse us of lying when we are telling the truth.	Place with disharmony in the workplace, deceitful people, corruption in society, and you feel afraid.
Divisive speech	Lack of friends, people don't like to be with us, we are separated from spiritual masters and Dharma friends, have a bad reputation.	Rocky, uneven land with cliffs, place where travel is difficult, dangerous.
Harsh words	We are insulted, blamed, and criticized even when we speak with a good intention; others misunderstand us.	Barren, dry place that is inhabited by uncooperative people and has thorns, sharp stones, scorpions, and dangerous animals.
Idle talk	People do not listen to our words or value what we say, others laugh at us.	Drab place with an unbalanced climate where fruit does not ripen at the proper time, wells go dry, flowers and trees don't blossom.
Covetousness	We have intense desires and cravings, can't complete projects or fulfill	Small crops; our property, belongings, and the environment constantly deteriorate; isolated and poor place.

	our wishes and hopes, our ventures fail.	
Malice	We feel great hatred, fear, suspicion, guilt, paranoia, and fright for no obvious reason.	Place with epidemics, disputes, dangerous animals, and poisonous snakes; wars and calamities, unpleasant food.
Wrong views	We are very ignorant and dull mentally, have difficulty understanding the Dharma, take a long time to gain realizations.	Few crops, lack of a home and protector; natural resources are exhausted, springs go dry, polluted environment, chaotic society.

Nāgārjuna outlines the effects that will occur in future lives by engaging in harmful actions now. Some of these results may also occur in this life (RA 14–19).

Due to killing one is born with a short life span;  
 due to violence one encounters much torment;  
 due to stealing one becomes impoverished;  
 due to adultery one has enemies.

By lying one becomes reviled;  
 through speaking divisively, one loses friends;  
 due to speaking harshly, one hears unpleasant sounds;  
 from engaging in idle talk, one's words will be disregarded.

Covetousness destroys one's desired objects;  
 malice is said to bestow fear;  
 wrong views lead to evil worldviews;  
 consuming intoxicants brings mental confusion.

Through not giving gifts one is poor;  
 wrong livelihood results in getting tricked;  
 arrogance leads to a lowly station;  
 jealousy brings about unattractive appearance.

From anger comes a bad complexion;

stupidity from not questioning the wise.  
These are the effects when one is [reborn as] a human,  
but prior to all of them is a bad rebirth.

Such are widely known to be the ripening results  
of these [actions] that are called the nonvirtues.  
For all of the virtuous actions  
there are the opposite effects.

## REFLECTION

---

1. Reflect on your life, noting your habitual actions and any strong karmas you may have done.
  2. One by one, consider what their ripening result, causally concordant results, and environmental result will be.
  3. Be aware that through your choices and actions, you are creating the causes for your future.
  4. Have the sense of your life being a conditioned event, and you are the one creating the conditions.
- 

Sūtras and texts all agree on which actions are virtuous and which are not, although they may have slightly different presentations of their specific results. Also, some texts describe karma in a simplistic manner, as if only one action produced a complex situation. It is helpful to remember that the purpose of these statements is to give ethical direction to average people in ancient times and that the precise functioning of karma is a complex matter.

An action with all three parts complete — preparation (the branches of the basis and attitude), performance, and culmination — can produce all three results over a period of lives. The First Dalai Lama explains (EPL 623):

If one asks: What is the reason that all the karmas yield the three [results]?

In the case of killing, for example: by the preparation one causes another to suffer [which yields the ripening result], in the actual act one kills [which yields the causally concordant result], and subsequently one

has extinguished [the victim's] vitality [which yields the environmental result]; therefore [each action] yields three types of fruit.

This does not mean that the preparation alone produces the ripening result and so forth, for a karma has to have all these branches complete to give rise to all these results. Linking parts of the action to specific results is a matter of emphasis.

One destructive action may bring many effects, and some effects may last for a long time. The same is true regarding constructive actions. In other cases, many karmas come together to make one effect.

Although karma and its effects have been presented primarily in terms of nonvirtuous actions, the same four branches are necessary to complete constructive actions and the same factors apply to make a constructive action heavy. The results of virtuous karma are the opposites of those for nonvirtuous actions. It is important for us to contemplate the ten virtues, the branches that make them complete, the factors that increase their strength, and the various results that come from them.

The *Shorter Exposition of Action* (*Cūḷakammavibhanga Sutta*, MN 135) speaks of pairs of opposite actions and their contrasting results. In each pair, the destructive action leads to an unfortunate rebirth and the constructive one to a fortunate rebirth. When we later are born human again, we will experience the causally concordant and environmental results of the action. Injuring sentient beings brings poor health and illness; refraining from causing injury brings good health. An angry and resentful character leads to being ugly; refraining from anger, hostility, and resentment — especially when criticized — results in being attractive. Envy and begrudging the achievements and honors of others lead to having little influence and people not listening to or paying attention to our words. Refraining from envy leads to gaining influence and respect. Stinginess leads to poverty; generosity brings wealth. Being obstinate and arrogant and not showing respect to those worthy of respect results in a lack of social status and educational and employment opportunities. Being free from obstinacy and arrogance and showing respect to those worthy of respect brings high status and many valuable opportunities. Being uninterested in discerning virtue from nonvirtue and what to practice from what to abandon on the path leads

to being dull and stupid. Being interested in these, inquiring, and learning about them brings wisdom.

Is whatever we experience — pleasant, painful, or neutral — caused by previously created karma? Although karma is not always the direct cause of our experience, it is involved. The Buddha elucidates (SN 36.21):

Bile, phlegm, and also wind,  
imbalance [of the three] and climate too,  
carelessness and assault,  
with kamma as the eighth.

Some painful feelings occur from imbalance in the three humors — bile, phlegm, wind, or all three together — while others have to do with change in climate, reckless behavior, or assault. We know this from our own experience, and it is considered true in the world. In saying this, the Buddha does not dismiss the role of karma in producing painful feelings. Rather, he rejects the claim that karma is the one and only direct cause for all painful feelings and affirms that karma plays a role in the feelings directly caused by the humors and external circumstances. Karma is given as the eighth cause of painful feelings, possibly indicating its dominant role when no physical disease or injury can be found as the immediate cause of a person's pain. The Abhidharma explains that all painful physical feelings are due to karma, although they are not necessarily produced only by karma.

Our motivation influences the result of our actions. Even fabricated bodhicitta is a powerful motivation for engaging in the ten constructive karmic paths. Tsongkhapa explains (LC 1:239):

The *Sūtra on the Ten Grounds* says that those who have cultivated these ten [virtues] through fear of [the dangers of] cyclic existence and without [great] compassion, but following the words of others, will achieve the fruit of a śrāvaka. There are those who are without [great] compassion or dependency on others, and who wish to become buddhas themselves. When they have practiced the ten virtuous [paths of] actions through understanding dependent arising, they will achieve the state of a solitary realizer. When those with an expansive attitude

cultivate these ten through [great] compassion, skillful means, great aspirational prayers, in no way abandoning any living being, and focusing on the extremely vast and sublime wisdom of a buddha, they will achieve the ground of a bodhisattva and all the perfections. Through practicing these activities a great deal on all occasions, they will achieve all the qualities of a buddha.

## *The Ripening of Karmic Seeds*

Our mindstream is home to countless karmic seeds. Our future rebirth is not due to the sum total of all these seeds, but to whichever seed or seeds ripen just prior to our death. Cooperative conditions — such as our present thoughts and emotions and the events around us — influence which karmic seeds ripen in the present. Just as a daisy seed will not grow into a daisy without proper fertilizer, heat, and water, karmic seeds will not ripen without certain conditions being present in our lives. A virtuous mental state enables seeds of constructive actions to bear results, while nonvirtuous thoughts and emotions fertilize the seeds of nonvirtuous karma. Drinking and taking recreational drugs establishes conditions in life that facilitate the ripening of the seeds of destructive actions.

Vasubandhu commented on which karmic seed is most likely to ripen at the time of death (ADKB):

Actions cause fruition  
in cyclic existence — first the heavy,  
then the proximate, then the habituated,  
then what was done earlier.

In general, heavy karma will ripen before lighter karma. If two heavy karmas are equal in weight, the one whose potential was reinforced nearer to the time of death will ripen first. If the potentials are equal, the action that is more habitual will ripen first. If the person is equally habituated to both actions, the one that was done first (earlier) will ripen.

The Pāli commentator Buddhaghosa describes the order in which karma producing rebirth ripens at the time of death in a slightly different order (Vism 19.15). Heavy karma, be it virtuous or nonvirtuous, will ripen first. The heaviest virtuous karma is the attainment of one of the dhyānas; the heaviest nonvirtuous karmas are the five actions of immediate retribution: killing one's mother, father, or an arhat, wounding a buddha, and causing a schism in the saṅgha.

If there is not an exceptionally heavy karma, an action done very habitually will ripen. Paying attention to our habitual behaviors is important. Having a regular daily meditation practice, making offerings, praising others, and reflecting on the four immeasurables are good habits to develop. Habitually lying to others, losing our temper, and cheating others become strong karmic forces that will propel us into an unfortunate rebirth if they ripen at death.

In the absence of a habitual karma, a death-proximate karma — an action that is vividly remembered just before death — will ripen. The memory is so strong that it pushes the mind in that direction.

Reserve karma is any other karma not included above that is strong enough to bring a rebirth. In the absence of any of the above three, a karma that has been done often will ripen at the time of death and project the next rebirth.

The ripening of one karmic seed temporarily prevents the ripening of another. The ripening of the seed of a heavy karma means the seed of a lighter karma cannot ripen at that time. When a karma to be reborn in the formless realm ripens, all karmic seeds that could bring painful results are temporarily unable to ripen because beings in the formless realm do not experience feelings of pain. Those seeds remain on the person's mindstream until suitable conditions manifest for them to ripen. Similarly, when a karmic seed to be reborn as a hungry ghost bears its result, karmic seeds to receive wealth are temporarily blocked from ripening. These seeds are not destroyed or lost, but will ripen later when appropriate conditions are present.

Our karma will definitely bring results unless the seeds are inhibited from ripening. When the four opponent powers are applied to nonvirtues sincerely and diligently, those seeds will become unable to bear a result or

will ripen in minor suffering. Similarly, when strong anger or wrong views manifest in our mind, they impair the ability of seeds of virtue to ripen: these seeds will either not be able to ripen or will bring only a minor result. In both these cases, the karmic seeds have not been totally eradicated: they are still present, but like damaged seeds, they are unable to bring their full results. If the purification or the anger is very strong, the potency of the karmic seed is so damaged that even when appropriate conditions are present, it will not bear any result, just as a burned seed cannot grow even when water, fertilizer, and sunshine are present. However, only direct, nonconceptual realization of emptiness fully removes seeds of destructive karma.

When cooperative conditions are not present, karmic seeds may exist in someone's mindstream but be impeded from ripening. For example, someone on the fortitude stage of the path of preparation has not yet abandoned the seeds for unfortunate rebirths, but these seeds cannot ripen into such rebirths because of the power of this person's inferential realization of emptiness.

The *Questions of Upāli Sūtra* (*Upālipariṣcchā Sūtra*) speaks of a case in which a monastic with pure behavior holds malice toward another monastic with pure conduct. It says his "great roots of virtue are diminished, thoroughly reduced, and completely consumed." *Diminish* means that the result of great virtue becomes less and the duration of its happy result is shorter, but not all the good effects are stopped. *Reduce* means it can bring only a small pleasant result, and *consume* indicates that a result cannot ripen at all.

On the other hand, the *Teaching of Akṣayamati Sūtra* (*Akṣayamatinirdeśa Sūtra*) says that one of the benefits of dedicating merit for awakening is that the merit will not be consumed until awakening is attained, just as a drop of water that has flowed into the ocean will not be consumed. The *Array of Stalks Sūtra* (*Gaṇḍavyūha*) states that bodhicitta and virtues associated with it cannot be extinguished by afflictions or polluted actions.

How are we to understand these seemingly inconsistent passages? Saying that merit dedicated for awakening will not be consumed until awakening is attained means that this merit will not finish bearing its effects

until then. However, that does not mean that anger and wrong views cannot damage it. Although they cannot destroy the merit completely, they can interfere with when, how, and for how long it ripens. Nevertheless, the results of that merit, although impeded, will not finish until awakening has been attained. Anger can render merit that has not been dedicated for awakening incapable of bearing any result. For this reason, dedicating our merit for full awakening is extremely important.

Saying that bodhicitta and the virtues associated with it cannot be extinguished by afflictions or polluted actions means that afflictions and karma cannot harm bodhicitta to the same extent that bodhicitta can harm them. It does not mean that afflictions and destructive karma cannot damage our bodhicitta and the virtues associated with it at all. Anger can harm our bodhicitta in two ways: we will not be able to generate new paths quickly but will have to again accumulate the merit that produces them, and we will experience the undesirable effects of nonvirtue.

In addition to anger and wrong views, in the *Compendium of Training* (*Śikṣāsamuccaya*) Śāntideva points out other actions that damage the virtues of one following the bodhisattva path: staying with householders who have strong attachment to material possessions and entertainment, boasting about spiritual attainments we do not have, and abandoning the Dharma by neglecting the Buddhadharma and making up our own version of the Buddha's teachings. These actions also impede our progress along the path, even if we do virtuous practices. Studying this text as well as Nāgārjuna's *Compendium of Sūtras* (*Sūtrasamuccaya*), which also discusses the bodhisattva path, is very helpful.

Contemplating how the ripening of karma can be affected by counteracting forces makes us more conscientious. This, in turn, strengthens our mindfulness and introspective awareness in daily life. We become aware that getting angry is completely counterproductive. This increases our inner strength to set anger aside, just like a person seeing a delicious-looking sweet quickly puts it down upon hearing that it is laced with poison.

Since karma influences our experience of happiness and suffering, its ripening strongly influences our feeling aggregate. Although we often discuss karma ripening as the four effects discussed above, the reason we

find some results desirable and others not is because of the experiences of happiness or misery they bring us. The situations we encounter in life as well as the pleasant, unpleasant, and neutral feelings we experience in them are related to our previous actions.

While encountering people who criticize us is due to our destructive karma of harsh speech, sometimes we hear criticism where there is none. In this case our feeling of being hurt is due to our misinterpretation of the event. As we become more familiar with the practice of mind training, which encourages us to view situations from more positive perspectives, the experience of mental pain declines. In fact, if we practice well, even if people wish to hurt our feelings we won't feel hurt.

We may find that certain emotions or intentions easily and frequently arise in our minds. This is a result of habits in previous lives. Someone who angers easily has a strong habit with this emotion. Should the anger grow to become physical violence, the physical deed may be related to previous karma, since the causally concordant behavioral result of violence is the tendency to do the action again.

Some children like to kill insects or torment animals. This is another instance of a causally concordant behavioral effect of killing. Other children naturally help others from a young age, even though their parents did not explicitly teach them. This behavior, too, is a causally concordant behavioral result. In addition, these children were habituated with certain emotions — anger or compassion — in previous lives.

We can apply our understanding of karma when watching the news or hearing of the good and bad experiences of others. Here we reflect on the types of actions people have done that created the causes for their present pleasurable and miserable experiences. In a natural disaster, many people lose their lives and property. What kind of actions could have caused this? Many first-responders and neighbors come to their aid and there is an outpouring of donations to help them resettle. What actions caused them to receive this help? What will be the long-term results for the people who offered aid? This is a very practical way to contemplate karma and apply our understanding to our lives.

When doing this, as noted above, do not fall into a wrong understanding of karma and its effects by thinking that others deserve to suffer or are

morally inferior because they are suffering. Suffering comes as a result of our actions, not as a reward or punishment for them. Since all of us have created destructive karma in this and previous lives, judging others as morally inferior and ourselves as superior is absurd. A person and his actions are different. The action may be harmful, but the person is not evil — each of us has the potential to become a fully awakened buddha.

Some people question, “Is helping suffering people interfering with their karma?” Such thinking is foolish. Compassion is the appropriate response to misery, and we should always reach out to aid those who are suffering. The notion of karma must never be used to justify oppression or apathy in the face of problems that can and must be corrected. If we remain idle, we create the karma to not receive help when we are in misery.

#### REFLECTION

---

1. Think of some of the good circumstances you have in your life, for example, health, sufficient wealth, family, education, friends, hobbies, satisfying work, opportunities to hear Dharma teachings, connection with the monastic saṅgha, and so on.
  2. Think of the types of actions you must have engaged in during previous lives to create the causes for these excellent circumstances.
  3. Rejoice at the virtue you created and make a strong determination to engage in virtuous activities in this life to make preparation for good future lives where you will be able to continue your Dharma studies and practices.
- 

### *Definite and Indefinite Karma*

Some actions are definite (*niyata karma*) to produce a result unless that karmic seed is impeded from ripening; others are indefinite (*aniyata karma*) in that their producing a result is not certain. *Levels of Yogic Deeds* (*Yogācārabhūmi-śāstra*) explains (LC 1:240):

Karma whose results are definite to be experienced are actions that are consciously done and accumulated. Karma whose

results are not definite to be experienced are actions that are consciously done but not accumulated.

Definite karma are actions that have been done (*krta*) and accumulated (*upacita*); their results are certain to be experienced unless they are purified in the case of destructive actions or impeded by anger or wrong views in the case of constructive actions. *Done* means we consciously thought about or set something into motion physically or verbally. *Accumulated* means that we had an intention to act. All virtuous and nonvirtuous mental actions are accumulated. No one can force us to engage in mental actions.

It is not certain that results will be experienced from actions that have not been both done and accumulated. The four possibilities between done and accumulated are given below, together with examples.

*Karma done but not accumulated* are the ten following actions. They are not certain to bring results; their motivation is weak or has changed since the time the action was done. Almost all other actions aside from these ten are accumulated karma. Here we can see the great impact motivation has on our actions and their results.

1. *Actions done in dreams.* We dream of making offerings to the Buddha or of killing an enemy. If, upon waking, we rejoice at virtuous actions in a dream, we create virtuous mental karma; if we regret them, the karma is nonvirtuous. Rejoicing at destructive actions in a dream creates nonvirtuous mental karma; regretting those actions and making a strong determination not to do them in waking life is virtuous mental karma.
2. *Actions done unknowingly.* Believing the art supplies on the table are for everyone to use, we take them without knowing that they in fact belong to a particular person.
3. *Actions done unconsciously.* We accidentally step on an insect without any conscious intention.
4. *Actions done without intensity or continuity.* We off-handedly utter a few words of idle talk or chit-chat for a short time.
5. *Actions done mistakenly.* Someone wishes to steal a book, but steals a box instead; someone intends to praise one person, but mistakenly praises another.

6. *Actions done forgetfully.* We tell a friend that we will not share his comments with others, but forgetting that we said this, we tell others.
7. *Actions done unwillingly.* Someone has no wish to kill another person but is forced at gunpoint to do so.
8. *Actions that are ethically neutral.* Walking, sweeping, reading, driving, cycling, eating, sleeping.
9. *Actions eradicated through regret.* Although in general we speak truthfully, we lie to someone and later have strong regret.
10. *Actions eradicated with a remedy.* Seeing the disadvantages of killing, we no longer wish to go fishing, hunting, or take the life of any living being and take a precept to abandon killing. Alternatively, we weaken worldly attachments by attaining dhyānas or eradicate the seeds of those destructive actions by direct perception of emptiness.

*Karma that is both done and accumulated* are the main causes producing a rebirth and are not included in the ten above. In general, their four branches are complete and their result is certain to be experienced. These karmas have six characteristics (EPL 652):

1. The action is done deliberately, not impulsively or coercively against our will.
2. All parts of the action are complete. This eliminates situations such as trying to kill someone, but only injuring them, or thinking to attend Dharma teachings, but not going.
3. We do not regret the action afterward.
4. No antidote is applied to purify the karma.
5. We rejoice at having done the action.
6. The result is certain to be experienced.

Although actions with all four branches complete are definite karmas, they may not be strong enough to propel a rebirth. For example, the motivation is very weak or the action insignificant. *Karma that is not done but accumulated* is, for example, plotting for a long time to rob someone and then deciding against it, or dreaming of helping others and rejoicing

when we wake up. *Karma that is neither done nor accumulated* is having no intention to cause an accident, but almost hitting another vehicle when driving.

Definite actions are certain to bring results unless we apply counterforces to them. *Definite* does not mean that events are predetermined or fated and therefore there is no purpose exerting energy to oppose them. Purifying destructive karmas by means of the four opponent powers is effective in lessening or stopping the result.

## *When Karma Ripens*

In terms of when karma ripens, definite karma may bear results in this life (*dr̥ṣṭa dharma karma*), the very next life (*upapadya*), or lives subsequent to that (*aparaparyāya*). Karma that is the second of the twelve links will ripen in the next life or one after that. Actions that ripen in this life are those that are very strong owing to the special qualities of the field — for example, holy beings — or the strength of our intention. *Levels of Yogic Deeds* lists four pairs of actions that may ripen in the same life as they are created:

1. Nonvirtuous actions done with strong attachment to our body and virtuous actions done with strong disinterest in our body.
2. Nonvirtuous actions done with great malice toward others and virtuous actions done with heartfelt compassion for them.
3. Nonvirtuous actions done with deep malice and lack of respect for the Three Jewels or our spiritual mentors and virtuous actions done with deep confidence and regard for them.
4. Nonvirtuous actions done with intense animosity toward those who have been kind to us, such as parents and teachers, and virtuous actions done with an intense wish to repay their kindness.

In general, the results of heavy constructive and destructive karmas may be experienced in the same life in which they are created, whereas karmas that are slightly less heavy are likely to be experienced in the very next life. Karmas that are not as heavy as those are experienced in lives after that.

The Pāli Abhidharma also discusses karma that ripens in this life, in the next life, and in lives subsequent to that, and adds another option, karma that becomes defunct.<sup>56</sup> *Karma that ripens in this life* brings its result in the same life in which it was created. If such karma fails to encounter cooperative conditions for its ripening, it becomes defunct and does not ripen at all. *Karma that ripens in the very next rebirth* must produce its result in the next life. If it does not meet the conditions to ripen then, it becomes defunct. *Karma that ripens in subsequent lives* is karma that ripens whenever suitable conditions come together in any life subsequent to the next one. This karma becomes defunct only with the attainment of final nirvāṇa, when an arhat passes away. Contrary to the description in the Sanskrit tradition, the Pāli Abhidharma says that in order of its strength, karma that ripens in subsequent lives is the strongest, followed by karma that ripens in the next life, with karma that ripens in this life being the weakest.

*Defunct karma* is not a specific class of karma but describes karma that could have ripened but does not owing to a lack of appropriate conditions. For example, karmic seeds remaining on the mindstreams of arhats become defunct when they die and enter nirvāṇa without remainder.

How is the idea of “defunct” karma reconciled with the Buddha’s explanation that the results of our actions will definitely be experienced? The Buddha says (AN 10.217):

I declare, monastics, that actions willed, performed, and accumulated will not become extinct as long as their results have not been experienced, be it in this life, in the next life, or in subsequent future lives. As long as these results of actions willed, performed, and accumulated have not been experienced, there will be no making an end to suffering, I declare.

This statement applies to karmas that are capable of yielding results (*vipakarahakamma*). Within the certainty that destructive actions will produce misery, never happiness, and constructive actions will lead to happiness, never suffering, there is some flexibility as to how, when, and if a karma ripens. Just as undamaged seeds that have the capability to grow

will sprout when planted in fertile soil with sufficient water, so too will seeds of constructive and destructive karmas bring their results when planted in the mindstream of an ordinary being.

Nevertheless, as a conditioned phenomenon, the ripening of karma can be affected by other forces. If this were not the case and karmic seeds could never be modified, we could never reach the end of *duḥkha* because the karma to be experienced would be endless. The Buddha elaborates (AN 3.34):

[However,] once greed, hatred, and confusion have vanished, that action is thus abandoned, cut off at the root, made barren like a palm-tree stump, obliterated so that it is no more subject to arise in the future.

It is like seeds that are undamaged, not rotten, unspoiled by wind and sun, capable of sprouting and well-embedded: if a person were to burn them in fire and reduce them to ashes, then winnow the ashes in a strong wind or let them be carried away by a swiftly flowing stream, those seeds would be radically destroyed, fully eliminated, made unable to sprout, and would not be liable to arise in the future.

When ordinary beings later become arhats, their polluted karma — be it virtuous or nonvirtuous — may still ripen as pleasant or unpleasant experiences when they are alive. When they pass away and attain *nirvāṇa* without remainder, all polluted karma becomes defunct.

Other circumstances can also render karma defunct. The *Book of Analysis (Vibhaṅga)* explains that there are certain cases in which a constructive or destructive karma will not bring a result. Four factors may prevent this.

1. The *realm of rebirth*. A destructive karma is due to ripen in the next existence as an unfortunate rebirth, but the person creates a powerful constructive karma that causes her next life to be in a fortunate rebirth. Blocked from ripening, that destructive karma “dries up” and does not ripen.
2. The *person’s physical body or possessions*. A constructive karma in the person’s mindstream has the tendency to ripen in a particular rebirth, but the person has a weak body or lacks the requisites to

sustain his life. The situation of his body and possessions inhibits the constructive karma from ripening.

3. *The time.* A constructive karma has the tendency to ripen in a certain rebirth but the person is born in a time of war, drought, or economic depression. Since the cooperative conditions for the ripening of this constructive karma are not present at that time, the karma loses its effectiveness and does not ripen.
4. *Personal effort.* Someone may have a destructive karma on her mindstream that is due to ripen in premature death, but she makes wise choices, behaves ethically, puts herself in good situations, and cultivates friendships with ethical people. As a result, the destructive karma lacks the conducive circumstances to ripen. However, if she drinks and drives, she provides ample opportunity for that destructive karma to ripen. Although we do not have much control over the first three factors, by living wisely here and now we can influence which karmic seeds in our mindstreams will ripen.

## *How Karma Functions*

With respect to how karma functions, the Pāli Abhidharma describes four types (CMA 200): productive, supportive, obstructive, and supplanting karmas. *Productive karmas* are the virtuous or nonvirtuous intentions that produce the aggregates of a rebirth. This includes the body and mind at the first moment of the new life as well as mental states and aspects of the body, such as the sense faculties, that develop later on.

*Supportive karma* does not produce its own result but supports the production or duration of the result of another karma by creating conducive circumstances for the other karma to ripen. After a virtuous karma results in our having a fortunate rebirth, supporting karma could extend our life span, prolong a disease caused by a nonvirtuous karma, or lengthen the time that we experience happiness or misery.

*Obstructive karma* also does not produce its own result but interferes with the ripening of another karma, making its result weak or shorter in duration. If we had created the constructive karma to receive an inheritance,

obstructive karma would prevent us from claiming it. If we had created the destructive karma to have a severe illness, obstructive karma could mitigate the effect so that we have a mild stomachache instead.

*Supplanting karma* is virtuous or nonvirtuous karma that cuts off the ripening of a weaker karma and ripens in its place. Unlike obstructive karma, supplanting karma does not simply interfere with the ripening of another karma but actually ripens instead of it. A destructive karma may be about to ripen at the time of death, but through a change of circumstances a stronger supplanting constructive karma ripens instead. A particular karma may perform any of these four functions at different times.

## *The Benefits of Contemplating Karma and Its Effects*

Contemplating karma and its effects helps us to see ourselves, our experiences, and our lives as dependent on a variety of factors: they arise and cease due to causes and conditions. They are neither random nor predetermined — both of those positions contradict conditionality. This awareness of conditionality prepares us to later study the twelve links of dependent origination that describe how we are born into saṃsāra and how to free ourselves from it. It also prevents us from slipping into nihilism when we study and meditate on the emptiness of inherent existence: the fact that people and things arise and change due to causes and conditions assures us that they exist.

When we experience adversity, life seems unfair and we ask, “Why me?” When we have knowledge of how the law of karma and its effects operates we understand that we created the causes for our experiences. The mind-training teachings suggest that we reflect on the karmic causes of our problems because it helps us to accept responsibility for our actions and stop blaming others for our unhappiness. Recalling that we have acted destructively humbles our arrogance and leads us to change our attitudes and behavior.

Our mindstream resembles a garden with a variety of seeds planted in it. Depending on which seeds are watered, particular plants will grow at that time. The other seeds are still in the ground; they will ripen whenever the proper amount of water, fertilizer, and heat are present. Similarly, karmic

seeds from numerous actions we have done in previous lives and this life are on our mindstream. Our present thoughts and actions act like water and heat causing specific seeds to ripen. Gambling waters the seeds of destructive karma, making it easier for us to have financial problems. Speaking with kindness will water seeds of virtuous karma, making it easier for them to bear their results.

The maturation of karma is not fatalistic; we have some ability to influence which seeds ripen. We also see that our lives are not the sum total of all actions we have ever done, but depending on which karmic seeds ripen we can go from a good situation to an unpleasant one and back again quickly. We also get a sense of the incredible swirl of countless causes created in previous lives that come together to bring about just one event in our lives. The intricacy and complexity of the functioning of karma and its effects is far more than we can currently grasp. Nevertheless, learning the general and specific characteristics of karma and its results aids us in making wise decisions.

Once we break our leg, we cannot unbreak it, although we can work skillfully with the situation to minimize the pain. Similarly, once karmic seeds have ripened, we cannot undo their results. Understanding this, we will accept unpleasant events in our lives rather than rail against them and make effort to create constructive karma when dealing with difficult situations. If we give way to anger and the wish to retaliate against the driver of a car that rear-ended us, we compound our misery in the present and create more destructive karma, the result of which we will have to experience in the future. However, if we remain calm and speak respectfully to the person, we avoid creating more causes for suffering.

In short, Buddhaghosa indicates the strong role karma plays in our lives (Vism 19.18):

Kamma-result proceeds from kamma,  
result has kamma for its source,  
future becoming springs from kamma,  
and this is how the world goes around.

# 12 | The Workings of Karma

OUR ACTIONS CAN BE classified in several different ways. Learning these enriches our understanding of karma and its effects, which, in turn, helps us to be more mindful of thoughts, words, and deeds.

## *Projecting and Completing Karma*

Projecting and completing karma are differentiated by the types of results they bring. *Projecting karma* ripens in rebirth in a saṃsāric realm with the five aggregates of a desire-realm or form-realm being or the four aggregates of a formless-realm deva. It is the second of the twelve links of dependent origination. *Completing karma* determines the specific attributes or experiences in that life. The projecting karma of ethical conduct leads the mind to be born with human aggregates, and the completing karma of speaking kindly to others makes the body attractive.

All four branches must be complete for an action to become projecting karma, but this is not necessary for a completing karma. In births resulting from either virtuous or nonvirtuous projecting karma, we can experience the results of either virtuous or nonvirtuous completing karma. The chart gives some examples of possible results.

	VIRTUOUS PROJECTING KARMA	NONVIRTUOUS PROJECTING KARMA
<i>Virtuous completing karma</i>	Human life with eight freedoms and ten fortunes	Pampered pet
<i>Nonvirtuous completing karma</i>	Human life lived in poverty	Beasts of labor

While projecting karma determines the type of body we appropriate — human, animal, and so forth — completing karma affects such factors as the genetic predispositions of the body and whether those predispositions are activated.

Vasubandhu says that a projecting karma produces only one rebirth and only one rebirth arises from a projecting karma, whereas Asaṅga states that one projecting karma can produce one or many rebirths and many karmas can produce one or many rebirths.

The results of many completing karmas are experienced in one life. Someone may be born in a war-torn country because of one nonvirtuous completing karma, but receive shipments of food, medicine, and clothing resulting from virtuous completing karma. Circumstances in our lives may frequently change depending on the completing karma that ripens at any particular time.

## *Collective and Individual Karma*

Sentient beings are social and often act together. We belong to various groups and work, play, practice Dharma, and raise the next generation together. As such, we experience common results together. Asaṅga's *Compendium of Knowledge* discusses various possibilities of how this occurs.

Some actions are done collectively by a large group; they result in experiences shared by everyone in that group, such as living in the same country or experiencing a natural disaster. Collective karma is also created in small groups: The people attending Dharma teachings or a soccer game create collective karma. All the participants will experience a similar result in a future group situation.

We also create individual karma when we are part of a group; this results in experiences that are not shared by others. Everyone at a Dharma teaching creates virtuous group karma because the purpose of the gathering is virtuous. Within that group, one person listens attentively and thinks, “These teachings are important and I want to practice them.” Another person with a wandering mind thinks, “I wonder what’s for lunch?” In the

future, these two people will find themselves in a similar agreeable situation but will experience it differently because of the individual karma they created. Similarly, as the result of collective karma they created together, many people may be in a place plagued by an epidemic, but owing to individual karma, some will fall ill while others won't.

It is important to be heedful of the groups that we choose to join and the purposes for which they are established because we reap the result of the collective actions of that group that correspond to the purpose of the group. The First Dalai Lama says (EPL 614):

If one asks: In the course of a war and so forth, if one person kills another, does the karmic path arise only for that single person?

No. In a war and so forth, since they are all there with the same purpose of killing, they all have the karmic path in the same way as the killer.

While sitting in a crowd of thousands who have gathered to hear His Holiness teach, I (Chodron) marvel at the opportunity to be part of a group that has formed for the purpose of developing compassion and attaining awakening. The collective karma created by this group is very different from a group whose purpose is to increase the value of a company's stock.

Sometimes without choice we find ourselves part of a group whose purpose or activities we do not agree with. For example, we may be the citizen of a state that employs capital punishment. If we do not endorse this activity, we do not create this particular collective karma. Being clear and aware of our intentions in such situations is extremely important so that we can skillfully guide our creation of karma.

## *Naturally Nonvirtuous Actions and Proscribed Actions*

Karma is also divided into naturally nonvirtuous (*prakṛti-sāvadya*) actions and actions proscribed by the Buddha (*prajñaty-avadya*). Those that are naturally nonvirtuous — such as the ten nonvirtues — are so-called because they are done with a nonvirtuous motivation, their nature is nonvirtuous,

and they have the potential to produce suffering results. Whoever does them — whether that person is monastic or lay — creates nonvirtue (*akuśala*) and negativity (*pāpa*) and will experience unpleasant results.<sup>57</sup>

Actions proscribed by the Buddha are those regulated by precepts, such as the *prātimokṣa* precepts of monastics. Some of these actions are not naturally nonvirtuous and do not necessarily involve an afflictive motivation; they may also be done with a neutral or constructive motivation. Examples are singing, dancing, watching entertainment, wearing perfumes, ornaments, and cosmetics, eating after midday, and handling money.

When those who hold monastic precepts transgress a precept, they commit an offense or downfall (*āpatti*) by engaging in an action proscribed by the Buddha. To purify this, they must confess and apply the appropriate method as prescribed in the *vinaya*. For this reason, it is very important for monastics to attend a *poṣadha* rite with four or more fully ordained monastics. Depending on the gravity of the offense, the way of making amends differs. Someone committing a remainder offense must enter a period of penance in which he or she temporarily relinquishes monastic privileges. A monastic who obtains an article by wrong livelihood must relinquish the article. Minor offenses are purified by confessing them to another monastic who is free from that transgression.

If the transgressed precept regulates an action that is naturally nonvirtuous, such as killing an animal or telling small lies, the monastic creates negativity and needs to apply the four opponent powers to purify this karma in addition to amending the offense by confessing to the *saṅgha*.

Even if the action itself is not naturally negative, people engaging in it — whether they hold precepts or not — may still create negativity if they have a nonvirtuous intention while doing the action. A monastic who handles money with contempt for the precepts creates negativity as well as an offense that must be confessed to the *saṅgha*. Similarly, when monastics motivated by attachment or anger eat in the evening, they must rectify both the negativity as well as the offense. If they eat after noon under circumstances in which the Buddha allowed them to eat — for example, the monastic is ill, working for the *saṅgha*, or traveling — there is no offense or negativity. If none of those extenuating circumstances apply and the

monastic eats because she sees the food as medicine to keep her body healthy so she can practice the Dharma, there is an offense but no negativity.

In brief, in a case where the offense also creates negativity — such as a monastic lying — the negativity and the offense are one nature but nominally different. As such, they are purified by different methods. When offenses have been confessed to the saṅgha with the prescribed ritual, they are said to have been purified. However, the negativity can only be purified through sincere application of the four opponent powers. On the other hand, if the person purifies the negativity by engaging in the four opponent powers, but does not confess the offense and make amends to the saṅgha and attend poṣadha, the offense remains and obscures the mind. Until the person confesses and makes amends, he is not fit to carry out certain monastic activities such as giving ordination. If the person is not conscientious, these offenses may later lead him to engage in negativities or create further offenses.

## *Intention Karma, Intended Karma, and Mental Karma*

Karma is of two types, intention karma (*cetanā-karma*) and intended karma (*cetayitvā karma*). Vasubandhu explains (ADK):

Karma gives rise to the diversity of the world.

It is [of two kinds], intention [karma] and what it produces [intended karma].

Intention is mental karma:

[the intended karma] it produces is physical and verbal karma.

These [physical and verbal karmas] consist of perceptible and imperceptible [karma].

*Intention karma* is mental karma, specifically the mental factor of intention. Once a strong intention has arisen in the mind, physical and verbal actions — intended karma — follow. Physical and verbal actions

may be either perceptible karma (*vijñapti*) that reveals the person's intention or imperceptible karma (*avijñapti*) that does not. For example, when strong malice is present in our mind, the mental factor of intention that accompanies it is mental karma. That intention to harm another person leads us to speak spitefully to him; our voice uttering the snide comment is perceptible verbal karma. The harsh tone of our voice reveals our intention to hurt him.

Asaṅga says (ADS):

What is mental karma? It is a mental action that conditions the mind; it consists of meritorious, demeritorious, and immutable [actions].

Mental karma (*manas karma*) is the mental factor of intention, which accompanies a primary mind and is included in the fourth aggregate (miscellaneous factors). When the mental factor of intention accompanies a primary mental consciousness that is also accompanied by a virtuous mental factor, such as faith or love, it becomes constructive karma. That intention is mental karma and intention karma.

Similarly, the intention that accompanies a primary mental consciousness that is also accompanied by a nonvirtuous mental factor, such as attachment, resentment, or discouragement (which is a form of laziness), is destructive karma. The intention is mental karma and intention karma, and the nonvirtuous mental factor is an affliction.

Intentions — intention karmas — produce intended karmas (*cetayitvā karma*), which are physical and verbal actions. Motivated by the intention that shares the same primary mental consciousness as attachment, someone engages in the verbal intended karma of lying in order to get what he wants. Motivated by the intention that shares the same primary mental consciousness as vengeance, someone may kill another person who speaks divisively about her to ruin her reputation.

A strong mental intention that instigates lying and a strong mental intention that abandons lying are both the mental factor of intention and intention karma. The former is accompanied by a nonvirtuous mental factor such as anger, the latter by a virtuous one such as integrity. When either intention is accompanied by the other branches that form a complete karmic

path, it becomes the second link of dependent origination and has the power to propel a rebirth in cyclic existence. The physical or verbal actions that are brought about by these mental karmas are intended actions.

## *Physical and Verbal Karma, Perceptible and Imperceptible Forms*

All Buddhist schools agree that karma is connected to our intentions. Sautrāntikas, Cittamātrins, and Svātantrikas say that all karma of body, speech, and mind is the mental factor of intention. The mental factor of intention that motivates an action is intention karma, and the mental factor of intention at the time of doing the physical or verbal action is intended karma. For them both intention karma (mental karma) and intended karma (physical and verbal actions) are intentions.

Vaibhāṣikas say that karma can be of two kinds: intention karma, which is the mental factor of intention, and intended karma, which is karma of body and speech. The karmas of body and speech are of two types: perceptible forms (*vijñapti*) and imperceptible forms (*avijñapti*). *Perceptible physical karma* is “the shape of the body when it is motivated by an intention and is moving, for example, when prostrating or killing . . . perceptible verbal karma is the sound of the voice,” for example, when lying or speaking kindly. The shape of the body and the sound of our voice are forms, and they “are perceptible forms in that they enable others to understand our motivation” for doing the action (EPL 558–59). Perceptible forms may be virtuous, nonvirtuous, or neutral.

Imperceptible forms are subtle forms that are not perceivable by the sense faculties and that arise only when a person has a strong intention. They are either virtuous or nonvirtuous. Neutral actions lack the powerful intention necessary to bring forth an imperceptible form. Imperceptible forms continue to exist no matter if the person is conscious, sleeping, or engaged in other actions. An example is monastic precepts.

Imperceptible forms are obscure phenomena, established by reliable cognizers depending on authoritative scripture. Chim Jampelyang in

*Ornament of Abhidharma (mngon pa'i rgyan)* quotes a sūtra that establishes their existence:

All forms are subsumed in three types of form: (1) forms that are visible and obstructive, (2) forms that are invisible but obstructive, and (3) forms that are invisible and nonobstructive.

An example of *visible and obstructive forms* is a table. It can be perceived by the eye consciousness and obstructs the space it occupies so that other things cannot occupy that space at the same time. Examples of *invisible but obstructive forms* are sounds, tastes, and odors; they cannot be seen by the eye but are obstructive. The sound of people laughing is obstructive because it prevents our hearing someone who is whispering. An example of *invisible and nonobstructive forms* is imperceptible forms. Vaibhāṣikas assert that only imperceptible forms are examples of the third type of forms, whereas Prāsaṅgikas include other phenomena such as dream objects.<sup>58</sup>

The *Treasury of Knowledge* speaks of three types of imperceptible forms: ethical restraints, antirestraints, and other imperceptible forms.

1. Ethical restraints (*saṃvara*) constrain us from afflictive activity. They are of three types: prātimokṣa restraints, concentration restraints, and unpolluted restraints. (a) Prātimokṣa restraints are of eight types: the precepts of male and female fully ordained monastics, training nuns, male and female novices, male and female lay followers with the five precepts, and lay followers with the eight one-day precepts. When we take the precept not to kill, steal, and so forth, an imperceptible form arises in us that acts like a dam that helps us restrain from doing that destructive action. These ethical restraints remain until they are completely broken, voluntarily relinquished, or we die. (b) The concentration restraint is possessed by beings who have meditative stability arising from concentration. (c) The unpolluted restraint is possessed by āryas in meditative equipoise. When āryas are in meditative equipoise, their right speech and right action — two factors of an ārya's eightfold path — are imperceptible forms that are unpolluted by ignorance.

2. Antirestraints (*asaṃvara*) are the opposite of restraining from destructive actions. They arise due to someone's strong intention to act destructively and remain until that person gives up that profession and its motivation or until he dies. Examples are the antirestraints of a butcher or exterminator.
3. Other imperceptible forms arise by depending on holy objects, making firm promises, and acting with strong reverence or other positive motivations. The *Scripture on Discernment (Vinayavibhaṅga)* describes seven virtues derived in relation to substances (*aupadhika puṇya kriyā vastu*) that are meritorious imperceptible forms: offering a residence to the saṅgha, offering a prayer hall to the saṅgha, offering cushions or seats for the prayer hall, offering food regularly to the saṅgha, offering food to travelers and guests, offerings useful items to the sick and to medical professionals, and offering food to the saṅgha at the monastery if it is difficult for the monastics to go on alms round because of inclement weather. The Buddha praised these virtues as being "of great fruit, highly beneficial, splendid, and enormous in nature." The merit of those who offer these will "unceasingly increase at all times, whether they are walking, sitting, sleeping, or waking."

Our intention in making these seven offerings is that others will use them to create merit. Whenever they do so, we accumulate a virtuous imperceptible form. This imperceptible form continues until we die, unless it vanishes because we have strong afflictions or the prayer hall and so forth is destroyed. At our death the imperceptible form is lost, but its having-ceased (*naṣṭa*) goes on to future lives.<sup>59</sup> When suitable conditions arise, it will ripen and bring its happy result.

Another example of the third type of restraint is the imperceptible form that arises when we ask someone to perform a constructive or destructive physical or verbal action. For example, a military commander accumulates the karma of killing by ordering his soldiers to kill the enemy. Although he does not kill with his own hands, he accumulates the nonvirtuous imperceptible form of killing each time one of his soldiers kills. The military commander will experience the suffering result of these actions of

killing, as will the soldiers. When we tell friends and relatives to give donations to those in need, charities, and temples, we accumulate virtuous imperceptible forms when they make the offerings.

Vasubandhu cites the above two situations — creating merit through certain material objects and accumulating karma when we order or ask others to perform an action — as reasons to prove the existence of imperceptible forms. Without imperceptible forms, our merit from offering the seven substances could not increase if later our mind were in a nonvirtuous or neutral state. Without the existence of imperceptible forms, we could not accumulate nonvirtue if our mind were in a virtuous state at the time someone we told to steal goes out and robs. This is because we cannot accumulate destructive karma when our mind is in a virtuous state and cannot accumulate merit when our mind is in a nonvirtuous state.

Furthermore, while in meditative equipoise on emptiness on the path of seeing, āryas possess all branches of the eightfold path. If there were no imperceptible forms, they could not possess right speech, right action, and right livelihood at that time. Also, the fact that precepts and ethical restraints are imperceptible forms enables them to act as a dam that impedes transgressions.

While the explanation of imperceptible forms is found in the *Treasury of Knowledge*, a text expressing Vaibhāṣika and Sautrāntika tenets, many Tibetan scholars say it is also accepted by Prāsaṅgikas. To support this, they point to a passage in the *Discrimination of the Five Aggregates*, a text attributed to Candrakīrti that describes imperceptible forms as “any form that is a phenomena source that is neither visible nor obstructive and can only be perceived by the mental consciousness, such as ethical restraints, antirestraints . . .”<sup>60</sup>

By saying that physical and verbal karmas are the mental factor of intention, Sautrāntikas, Cittamātrins, and Svātantrikas have difficulty explaining what physical actions are and how physical movement of the body is karma. The Prāsaṅgika presentation is more aligned with conventions. They say that in the action of prostrating, there is the physical karma that is a perceptible form — the form of the body moving. In addition, there is an intention that motivates that action, and that intention is the mental karma of prostrating. All tenet schools agree that the second link

of dependent origination is the mental factor of intention (when the other branches of a karmic path are complete). The karma of harsh words or the karma of saving someone's life is the mental factor of intention that motivates those actions; this intention leaves the karmic potential that brings forth a new rebirth.

According to Vaibhāṣikas and Prāsaṅgikas, imperceptible forms belong to the aggregate of form but are forms for mental consciousness (*dharmāyatanarūpa*). As such, they are included in the phenomena source (*dharmāyatana*), not the form source (*rūpāyatana*).

I have a theory to explain why Vaibhāṣikas and Prāsaṅgikas agree that physical and verbal actions are form, whereas the other schools say they are intention. Vaibhāṣikas are not very analytical; they understand things according to worldly conventions and the perceptions of ordinary people. In worldly conventions, we say, “I heard her speak the truth. We saw him beat the dog.” On the basis of these ordinary conventions, we speak of physical and verbal actions as things that we see and hear — as forms.

Sautrāntikas, Cittamātrins, and Svātantrikas posit things on the basis of their being objective phenomena that exist from their own side. The originator of the Svātantrika school, Bhāvaviveka, said in the *Blaze of Reasoning*:

We also actually impute the term “self” to [the mental] consciousness conventionally . . . because [the mental] consciousness takes rebirth, it is said that it is the self.<sup>61</sup>

All schools who accept rebirth say that the self transmigrates. People who are unable to posit phenomena as existing by mere designation usually posit the mind — specifically the mental consciousness — to be the self, since it, and not the body, is what transmigrates. Within the mental consciousness, only the mental factor of intention can be pointed to as being karma. Why? When these people analyze actions while considering them to be objectively existent, they see that unless an intention is involved, an action cannot be karma. A boulder rolling downhill is action, but not karma. Thus they point to the mental factor of intention as the karma and not the physical and verbal actions per se.

According to Prāsaṅgikas, if we analytically search for something that objectively exists beyond the conventional norm, we cannot find anything. They thus accept things as existing merely by convention, and conventionally we say we perceive physical and verbal actions through our senses. For this reason, Prāsaṅgikas accept physical and verbal karmas to be form.

## *Gloomy and Bright Karmas and Their Effects*

The Buddha spoke of four kinds of karma (MN 57.7):<sup>62</sup>

There are these four kinds of karma declared by me after I had realized them for myself by direct knowledge. What four? There is gloomy karma with gloomy results; there is bright karma with bright results; there is karma that is gloomy and bright with gloomy and bright results; there is karma that is neither gloomy nor bright, with neither gloomy nor bright results, which leads to the destruction of karma.

1. Nonvirtue is *gloomy karma with gloomy fruition*. It is afflictive by nature and produces disagreeable results in one of the three unfortunate states. Born there, afflictive contact arises, leading to afflictive painful feelings such as feelings experienced in the hell states.
2. *Bright karma and bright fruition* is virtue included in the form realm. The mental states of beings in this realm are either virtuous or neutral; their nonvirtuous mental factors have been temporarily suppressed, so their actions do not produce the *duḥkha* of pain.<sup>63</sup> Form-realm beings do not experience unpleasant feelings. Bright karma is created in a mindstream that is not mixed with negative thoughts; it brings a pleasant result that is unmixed with suffering in that being's mindstream.
3. *Gloomy-bright karma with gloomy-bright fruition* is the virtue of the desire realm. While this karma is bright in that it is virtuous, it arises in a mindstream that also has nonvirtuous thoughts, making it

gloomy-bright virtue. It yields pleasant results, but the mindstream in which it ripens also experiences painful feelings, making its result gloomy-bright. Human beings, some beings in the unfortunate states, such as pet animals, and some devas experience this.

4. *Unpolluted karma* is neither gloomy nor bright. Cyclic existence is perpetuated by polluted karma. Wise ones, who have realized emptiness directly, do not create polluted karma and free themselves from uncontrolled rebirth. Vasubandhu says (EPL 675, n 118):

Unpolluted karma causes the termination and the elimination of those three [types of] karma . . . Since it is contrary to entering into [the process of cyclic existence, unpolluted karma] is not included within the [three] realms; therefore it has no fruition [in saṃsāra].

In the consciousness that is an ārya's true path realizing emptiness nondually, the mental factor of intention is unpolluted karma. Arhats and pure-ground bodhisattvas also create unpolluted karma when they engage in other activities in post-meditation time. Such karma is unpolluted in that it is not created under the influence of ignorance; it is never nonvirtuous and does not generate causes for rebirth. It is the remedy to the above three types of karma, leads out of cyclic existence, and gives rise to true cessations and nirvāṇa. Until arhats leave their body, they will experience the results of previous karma, some of which may be painful. However, they do not react to pain by generating more afflictions, and thus do not accrue new karma.

Unpolluted karma also refers to the subtle intention that arhats and bodhisattvas on the pure grounds must generate for their physical, verbal, and mental actions owing to the presence of cognitive obscurations in their mindstreams. Unpolluted karma and the latencies of ignorance give rise to the mental body of arhats and bodhisattvas on the pure grounds. Buddhas do not have unpolluted karma because they have eliminated the cognitive obscurations. Being effortless and spontaneous, their actions are called awakening activities (T. *'phrin las*). These compassionate actions are a special type of activity that is effective because of buddhas' great virtue. Their ability to successfully use awakening activities to benefit sentient

beings depends on the accumulation of merit by those sentient beings and their karmic connection with the buddhas.

In terms of highest yoga tantra, the mind of someone experiencing the fourth-stage actual clear light has the mental factor of intention, which could be considered unpolluted mental karma. When this person emerges from the actual clear light, he or she immediately manifests a pure illusory body, which is unpolluted in the sense that the mind associated with it is free from afflictive obscurations. This illusory body is considered a physical phenomenon, so perhaps its actions could be considered unpolluted karma of the body and speech.

## *Purifying Destructive Karma*

With only a superficial glance, we may believe our actions are basically virtuous, but if we closely observe our physical, verbal, and mental activities we may find that our motivations for constructive action are often weak, the actions are done hurriedly or distractedly, and we forget to dedicate the merit. Constructive actions require much effort on our part, like a tired donkey carrying a heavy load uphill. On the other hand, when faced with circumstances in which acting negatively could bring immediate benefit to our selfish aims, we easily engage in destructive actions, like water flowing downhill. We have strong habits with such behavior from previous lives. Understanding this, mindful observance of our ethical standards and purification of past misdeeds becomes imperative to avoid pain and to secure happiness.

The *Sūtra Showing the Four Dharmas (Caturdharmanirdeśa Sūtra)* reveals an excellent practice for purifying all destructive actions — the four opponent powers — which were described briefly in chapter 6 (LC 1:252):

Maitreya, when a bodhisattva mahāsattva possesses these four powers, they will overcome any negativities they have done and accumulated. What are they? They are the power of regret, the power of the antidote, the power of resolve, and the power of reliance.

First learn to accurately assess your actions, accept responsibility for your misdeeds, admit them, and regret them. Strong regret is the key to purification, for without it there is no motivation to counteract negativities. Regret is not guilt, so do not despise yourself thinking that the more you berate yourself the more you atone for your misdeeds.

Make an effort to understand how you became involved in these negativities by reflecting, “Was my interpretation of the situation accurate or was it skewed by my self-centeredness? What was my motivation? How were my body, speech, and mind involved in this action? Do I engage in this action often? Did I rejoice afterward?” Then contemplate, using your Dharma knowledge, how you could think about and deal with a similar situation should it happen in the future. Such in-depth reflection will help you to uncover destructive emotional, verbal, and physical behaviors, and by understanding these, you can begin to change them.

In chapter 2 of *Engaging in the Bodhisattvas’ Deeds*, Śāntideva proposes many points to reflect on that evoke our regret. If we were to die at this moment, the seeds of these harmful actions would be on our mindstream, so alarmed at the prospect of experiencing an unfortunate rebirth, we should regret our nonvirtues and turn to the Three Jewels for guidance. Engaging in destructive actions out of attachment for friends and family is futile, considering that we will have to separate from them, and our destructive karma will continue with us into our next life. Misdeeds bring frightening results in this and future lives, so this is no time to be complacent. In this way, express regret (BCA 2.28–29):

Since beginningless cyclic existence,  
in this life and in others,  
unknowingly I committed negativities  
and caused them to be done [by others].

Overwhelmed by the mistakes of ignorance,  
I rejoiced in what was committed,  
but now, seeing these mistakes,  
from my heart I confess them to the Protectors.

Second, perform virtuous actions as an antidote to your misdeeds. Although all virtuous actions fulfill this, six practices in particular are recommended:

1. Recite, study, or contemplate sūtras, especially the Perfection of Wisdom Sūtras (Prajñāpāramitā Sūtras) and the *Sūtra of the Golden Light* (*Suvarṇaprabhā Sūtra*).
2. Meditate on emptiness by contemplating Nāgārjuna’s teachings or the *Heart Sūtra*.
3. Recite mantras containing the names of the buddhas, such as the Vajrasattva mantra.
4. Make buddha images and statues, create altars and shrines, and build stūpas or monasteries.
5. Make offerings to the buddhas and bodhisattvas.
6. Recite the names of buddhas, for example, the names of the thirty-five buddhas.

Prostrating to these buddhas with reverence for their excellent qualities while reciting their names is especially powerful. Meditation on bodhicitta — even for a few minutes — and engaging in actions motivated by bodhicitta have the power to purify the seeds of destructive karma created over eons. Other remedial actions are making donations to charities, monasteries, or spiritual practitioners; doing volunteer work in a hospital, Dharma center, or other health facility; and printing Dharma books for free distribution.

Third, make a strong determination to abandon such actions in the future. This fortifies your inner strength to oppose habitual destructive ways of thinking and acting and to change your ways; it is like making New Year’s resolutions, only you should keep these! If you cannot resolve to abandon certain actions forever, resolve to avoid them for a certain period of time. During that time, be very conscientious to avoid the action. This will give you confidence, and then you can extend the time some more.

Fourth, reestablish good relationships with the objects of our destructive actions — holy objects such as the Buddha, Dharma, and Saṅgha, or our spiritual mentors, or sentient beings. By taking refuge, we reaffirm our connection with the Three Jewels and our spiritual mentors. By generating

bodhicitta, we replace the negative intentions that caused us to harm others with positive feelings toward them.

The order of the four opponent powers may vary according to the specific purification practice you do. In Prostrations to the Thirty-Five Buddhas, first you take refuge and generate bodhicitta, then prostrate as the remedial action, followed by generating regret and resolve to avoid repeating the actions. In the Vajrasattva practice the order is taking refuge and generating bodhicitta, regret, reciting Vajrasattva's mantra as the remedial action, and resolving not to do the action again.

As ordinary beings we don't know where we will be reborn, and the time between this life and an unfortunate rebirth is one breath. If we don't purify our misdeeds and work hard to prevent an unfortunate rebirth before we die, it may be a long time before we have the opportunity to practice the Dharma again.

It's important to do purification before the seeds of harmful actions ripen; once a cup is broken, we cannot unbreak it. Similarly, doing pūjās after a suffering result has occurred cannot undo the present suffering, although it will create virtue that could reduce future suffering. The efficacy of the pūjā depends on a variety of factors, including the potency of the karmic seeds that are about to ripen.

Making specific predictions about the extent to which negativities have been reduced or eliminated is difficult and depends on many factors, such as the intensity of the regret, the sincerity of our resolve to refrain from repeating the action, the concentration with which we did the remedial behavior, and the sincerity of our refuge and bodhicitta. It also depends on whether we did the four opponent powers over a long or short period of time and whether all four opponent powers were applied or only some.

Although purification done by ordinary beings does not remove karmic seeds from the mindstream, it weakens them so that their results will be less intense or will last for a shorter period of time. Instead of experiencing a car accident, we may trip and stub our toe. Rather than suffering from domestic disharmony for years, we may endure it for only some weeks or months. Instead of being born in an unfortunate state, we may fall ill in this life. Understanding this, we will not become upset when we fall ill or encounter unpleasant situations. Instead we will think, "How fortunate that a powerful

destructive karma is now ripening. Compared to the intense suffering I would have experienced for a long time had it ripened in an unfortunate rebirth, I can manage the current misery.” Seeing the situation in this way protects our mind from creating more negative karma by angrily reacting to problems. It enables our mind to remain unperturbed by this comparatively small suffering that will soon end.

Purification can also prevent the coming together of the cooperative conditions for a karma to ripen. Purification may “burn” the karmic seeds so that they do not bring a result, but only by realizing emptiness directly is the potency to produce unfortunate rebirths completely eliminated. It is good to seal purification practices, as well as all our virtuous practices, by contemplating emptiness and dependent arising. We do this by reflecting that the I who created the destructive action, the action itself, its karmic seed, and so forth arise dependently and yet are empty of inherent existence. Similarly, the person doing the purification practice, the action of purifying, and the karmic seeds that are purified lack inherent existence but exist dependently. Although all the factors involved in creating nonvirtue and in purifying negativities lack inherent existence, they still exist and function on the conventional level, and so purification is important.

Doing the four opponent powers repeatedly may bring certain signs of purification or the reduction of the strength of the seeds of destructive actions. We may repeatedly dream of being with our spiritual mentor or the saṅgha, or in a temple. Dreaming that we walk on a mountain or see the rising of the sun or moon may also indicate purification. This does not mean that every dream involving these is a sign of purification; dreams are due to a variety of factors. Changes in daily life occurrences also indicate purification. Whereas previously our mind was often unclear and heavy, now we are more attentive when listening to Dharma teachings or studying. We understand the meaning more easily and have deeper meditation experiences. Our mind is less resistant to the Dharma and integrating the Dharma in our lives becomes much easier.

While purification is always possible and advisable, avoiding destructive actions is better. We may glue a cup back together, but it’s better not to have broken it to start with. However, when strong negative emotions, mental obscuration, lack of mindfulness or conscientiousness, or

carelessness overpower us and we act negatively, it's important not to despair but to remember that we can purify these actions, and then put energy into doing so. This not only aids our spiritual practice but also helps us psychologically by reducing guilt and making us more honest with ourselves.

Being indolent in purifying our nonvirtue only harms us. I find it amusing, yet sad, that although some people call themselves Buddhists, they heed the advice of fortune tellers more than the teachings of the omniscient Buddha. The Buddha warned us that suffering will come from our harmful actions, yet we ignore this and think there is no need to exert so much energy to purify our karma by doing the four opponent powers. But if a fortune teller tells us that we will fall ill unless we do a particular antidotal activity, we are eager to follow his instructions. It should not be like this!

## *Creating Our Future*

Contemplating karma and its effects makes us question if doing something simply because it feels good in the moment or brings us temporary benefit is wise. Drinking liquor may make us temporarily feel good, but we also say and do many foolish things. Initially certain actions may benefit our self-centered aims, but their karmic consequences in the long run will bring suffering. On the other hand, waking up early in the morning to do our meditation practice may be uncomfortable now, but it brings so many beneficial results later. Being honest in business may initially bring less profit, but it will result in greater security and wealth later.

The Buddha suggested that we consider the long-term karmic effects of our actions in order to evaluate if we are creating the causes for the kind of future we want to have. Reflecting deeply and in detail about the effects of karma will increase our motivation to become more mindful and conscientious regarding our behavior, speech, and thoughts. Such reflection also gives us a more expansive view of how things operate. Instead of simply considering the immediate effects of our actions, strong as they may be, we begin to care about even more potent effects that can ripen years or even lifetimes in the future.

The Buddha outlined excellent advice for how to make a decision or tackle a difficult situation: if an action brings both long- and short-term benefits, do it. If it brings long-term benefit, but temporary discomfort, doing it is still worthwhile. But if it brings immediate happiness yet causes suffering as the long-term karmic effect, then avoid it. If it brings misery now and in the future, definitely avoid it.

These teachings on karma are not theoretical; they relate to our daily life activities when we continually engage in actions that become the causes for pain or for happiness and awakening. Although understanding the detailed workings of karma and explaining them by reasoning alone is difficult, accepting the natural law of karma and its results is supported by more valid reasons and fewer logical inconsistencies than other explanations. Knowing this, be confident in thinking, “Having attained a precious human life, I have the potential and the responsibility to create the causes for happiness, and I will do this.”

## *Who Creates Constructive Karma?*

Scriptures say that the demarcation between Dharma and non-Dharma actions is the presence or absence of the eight worldly concerns. They further say that Dharma motivations begin with the aspiration for a good rebirth, followed by the determination to be free from cyclic existence and attain liberation, and culminate in bodhicitta.

However, people can create constructive karma without believing in rebirth or having a Dharma motivation. For example, at the time of the Buddha, an old man wanted to become a monk, but Śāriputra could not determine if he had created enough merit to receive ordination. The Buddha, with his supernatural power that sees the karma of all sentient beings, observed that in a previous life, the old man had been a fly on a piece of cow dung that floated in water around a stūpa. Although this tiny insect did not have the motivation to take a human rebirth and become a monk, through contact with this holy object he accumulated the merit that enabled him to be ordained. Such merit is called the “root of virtue concordant with liberation,” which arises when sentient beings have contact with powerful holy objects.<sup>64</sup> This is a unique kind of dependent arising

wherein the object becomes powerful owing to the buddhas' and ārya bodhisattvas' inconceivable collection of merit and to their altruistic aspiration that anyone who even sees, hears, thinks about, or contacts them receives benefits that will ripen in awakening.

Non-Buddhist practitioners who develop very high states of meditative concentration also create constructive karma that brings fortunate rebirth in the form and formless realms in their next lives, where they experience the bliss that arises from deep states of samādhi.

Many human beings act with kindness. They may know nothing about karma or future lives yet feel compassion for those who are suffering and help them motivated by genuine care. They work hard without getting angry or complaining; they are honest and respect those worthy of respect. Some care for the ill and elderly, others teach children or work to prevent global warming. Some seek protection for wildlife and endangered species, others strive for human rights. Such actions create merit leading to a good rebirth.

Mother Teresa was not Buddhist; she did not necessarily accept rebirth, although she probably aspired to be born in heaven. Her dedication to the welfare of the poor was extraordinary, and the actions she did to care for them were certainly virtuous. She created much merit that will certainly bring happy results.

The law of karma and its results functions whether someone believes in it or not. Similarly, whether someone believes that gravity exists or not, she still walks on the ground because of its power. Someone who does not know what constitutes nonvirtue may still engage in destructive actions and experience their painful results even if he does not consider his actions unethical.

Secular ethics is a useful guideline for those who do not adhere to any spiritual path and want their daily actions to be beneficial. Their main aim is their own interests in this life, but they consciously focus on not harming others when fulfilling this aim. In this way, even if not all of their daily actions are virtuous, at least they will be neutral and some will be virtuous. Animals, too, create constructive and destructive karma. Their ignorance, however, hinders them from deliberately refraining from harmful acts and engaging constructive ones.

Needless to say, someone who gives a gift to bribe another person is not practicing generosity. Similarly, harming one living being in order to give to another is not the practice of generosity, nor is giving weapons the practice of generosity.

In the early years of the Communist Party in China, some of its members had a real sense of altruism and dedicated their entire lives to improving the welfare of the peasants and the poor. This was virtuous. Unfortunately, they were biased, and with hatred destroyed the lives and possessions of the educated and the wealthy. These Communist officials had two contradictory emotions: compassion for the poor and animosity toward the rich. These mutually opposed emotional states constitute two separate mental states; one motivates virtuous activities, the other nonvirtuous actions. They create different karma depending on which mental state motivates them to act at a particular time and what act they do. Such situations are not unique to Communist officials. We see this happens quite often in our own lives as well.

## *The Complexity of Karma*

Some accounts of karmic events are puzzling. For example, Śāntideva relates the story of Śāriputra relinquishing bodhicitta. Śāriputra was a bodhisattva on the path of accumulation, whose bodhicitta was not stable. Once, another person returned Śāriputra's generosity with ingratitude, provoking Śāriputra to give up bodhicitta. Scriptures say that after generating bodhicitta, if someone relinquishes it, he is reborn as a hell being. Yet Śāriputra achieved arhatship in that life.<sup>65</sup> How can this be explained? Śāntideva responds by saying that the complex workings of karma are beyond our understanding; only the buddhas' wisdom comprehends it fully.

Another story says that Nāgārjuna died from decapitation as a result of karma he created in a previous life when he accidentally cut off the head of an ant with a scythe. Explaining this story in the context of the general Buddhist understanding of karma is difficult, considering that one sūtra says that Nāgārjuna was a highly realized bodhisattva. He was renowned as a great practitioner and teacher of *Guhyasamāja Tantra*, and in *Ocean of*

*Reasoning*, Tsongkhapa spoke of him having fully developed bodhicitta and wisdom realizing emptiness. If such an outstanding person as Nāgārjuna with these magnificent qualities was unable to achieve buddhahood in a single lifetime, then the teaching in the *Guhyasamāja Tantra* that attaining awakening in a single lifetime is possible must be a fairy tale. In this light, we see that the story about him being decapitated because of having inadvertently killed an ant cannot be taken in a literal or ordinary way.<sup>66</sup>

In the *Sublime Continuum*, Maitreya said that the Buddha, while not wavering from absorption in emptiness, appears in diverse emanations. From this perspective, Śākyamuni Buddha was an emanation body. Emanation bodies come from the enjoyment body, and this, in turn, is a manifestation of the truth body. Therefore, the Buddha was awakened before he appeared in our world in the form of the prince from Kapilavastu. All the activities and events in his life were in fact demonstrations done intentionally to teach us. From this perspective, it could be that Nāgārjuna was already a buddha and the story of his death was a demonstration done to teach us.

The law of karma and its effects is very subtle, and its intricacies are beyond our understanding; only an omniscient buddha is able to know these fully. Since the Buddha is not present here and now, we cannot ask him for clarification regarding the subtle aspects of karma. Buddhaghosa says (Vism 19.17):

The succession of kamma and its result . . . is clear in its true nature only to the Buddha's knowledge of kamma and its result, which knowledge is not shared by disciples.

Vasubandhu agrees (ADKB):

Nobody but the Buddha understands in its entirety karma, its infusion, its activity, and the fruit that is obtained.<sup>67</sup>

When discussing karma and how it ripens, the number of complications is enormous. Unfortunately, my head is too small for this vast expanse of knowledge. Now I see the truth in Milarepa's statement, "I don't know about the complex issues of *Parchin* (lit. "crossing to the other shore"); it

explains the bodhisattvas' paths and practices), but if you can move from saṃsāra to nirvāṇa, then you have indeed gone to the other shore. I don't know about the complications of Vinaya (lit. "taming," and refers to monastic precepts and rites), but if this very crude mind of yours is tamed, then this is Vinaya."

## *Creating the Causes for Higher Rebirth, Liberation, and Awakening*

Nāgārjuna sets out the aims of the spiritual path (RA 3–4):

That [disciple] first [practices] the Dharma of higher rebirth;  
afterward comes the highest good,  
because, having obtained higher rebirth,  
one proceeds in stages to the highest good.

Here, [we] maintain that higher rebirth is happiness,  
and highest good is liberation.  
In brief, the method for attaining them  
is summarized as faith and wisdom.

Can people who are not Buddhist create constructive karma for higher rebirth and the highest good of liberation and awakening? For an action to become the cause for upper rebirth, it is not necessary that the person doing it have the motivation to attain that state, but for an action to become the cause for the ultimate spiritual aims of liberation and awakening, the person must have the intention to attain those states.

Candrakīrti says that ethical conduct is a cause for higher rebirth, liberation, and full awakening (MMA 24):

For common beings, those born from the word [śrāvakas],  
those set toward solitary awakening, and  
those conqueror's heirs [bodhisattvas], a cause of the highest good  
and higher rebirth is none other than proper ethical conduct.

Tsongkhapa comments in *Illuminating the Thought*, a commentary to Candrakīrti's *Supplement*, that this does not exclude other virtuous actions from being causes of higher rebirth and highest good.

There are, however, many other causes that are not ethical conduct. Thus this means that to achieve special higher states and the highest good, a definite relation with ethical conduct is necessary. If ethical conduct is forsaken, there is no way that these can be accomplished.<sup>68</sup>

There are three causes for a precious human life: (1) *Observance of pure ethical conduct* entails, at the least, avoiding the ten destructive paths of actions and practicing the ten constructive ones. It is the projecting cause that makes us take rebirth as a human being. (2) *The cultivation of other virtuous qualities* is the practice of generosity, fortitude, meditation, and so on. It brings conducive circumstances for Dharma practice: done with proper motivation, generosity is the cause for wealth; ethical conduct brings good health, long life, and good relationships; fortitude produces an attractive appearance; joyous effort enables us to be able to attain our goals. Concentration maintains our positive motivation, and wisdom enables us to choose qualified spiritual mentors and understand the Dharma correctly. (3) *Powerful dedication prayers* direct our constructive karma to ripen in a precious human life. Having these good circumstances in future lives will enable us to continue on the path to awakening with ease. Planting the karmic seeds to have them is done in this life.

Without living ethically and observing karma and its effects, a fortunate rebirth is not possible. The First Dalai Lama says (EPL 655):

As it says in (Āryadeva's) *The Four Hundred*: "By ethical conduct one goes to a high rebirth; by the view one goes to the supreme state." For the purpose of obtaining higher rebirths, ethical conduct is foremost.

To attain liberation, in addition to renunciation of saṃsāra and the determination to attain nirvāṇa, we must have the wisdom realizing emptiness. Renunciation and the aspiration for nirvāṇa give us the

motivation to practice the path of cleansing the mind of ignorance, which is the root of saṃsāra. The wisdom realizing emptiness is the actual realization that overcomes ignorance. The Buddha’s teachings describe how to cultivate renunciation and wisdom realizing emptiness; we should examine if other paths contain these teachings.

To attain buddhahood, two critical factors are required: bodhicitta and the wisdom realizing emptiness. As above, the wisdom realizing emptiness is necessary to cleanse the mind of all ignorance, which keeps us bound in cyclic existence, and its latencies, which inhibit the mind from knowing all existents. Bodhicitta gives us the aspiration and energy to create the vast merit necessary to attain full awakening. Here, too, the Buddhadharma teaches us how to cultivate these two factors, and we need to examine if other paths also contain these teachings.

When we speak of higher spiritual goals such as liberation and awakening, the meaning of “Dharma” becomes more specific. It must be the teachings and the path that lead to nirvāṇa and awakening. In this context, actions motivated by attachment to rebirth in cyclic existence and actions done without the correct understanding of emptiness are not suitable.

The attainment of full awakening requires the bodhicitta motivation. After all, how could there be a buddha who lacks compassion and the altruistic intention? In *Bodhisattva Grounds (Bodhisattva Bhūmi)*, Asaṅga says that someone who has fully dedicated his or her body, speech, and mind for the welfare of sentient beings continuously holds the thought to do all actions totally for the benefit of all sentient beings. With such an intention, she has no fault or infraction in the bodhisattva training and she creates great virtue. Śāntideva says (BCA 1.18–19):

And for those who have perfectly seized this mind,  
with the thought never to turn away  
from totally liberating  
the infinite forms of life,

from that time hence,  
even while asleep or unconcerned,

a force of merit equal to the sky  
will perpetually ensue.

Kedrup, one of Tsongkhapa's foremost disciples, once praised Tsongkhapa, saying, "Your simple act of breathing accumulates enormous virtue." I don't think this means that Tsongkhapa has bodhicitta manifest in his mind each time he breathes, thinking, "I inhale to become a buddha for the benefit of sentient beings." Rather, all of his actions — including eating, sleeping, and so on — are motivated by or associated with powerful bodhicitta. Nāgārjuna says (RA 483):

Like the earth, water, wind, and fire,  
medicinal herbs, and the trees in the wilderness,  
may I always freely be an object of enjoyment  
by all beings as they wish.

If someone conjoins bodhicitta with the wisdom directly realizing reality, he or she is on the path to fulfilling the collections of merit and wisdom and becoming a buddha.

## *A Deeper Perspective on Causality*

Karma and its effects is sometimes taught in simple terms to new audiences in order to communicate the importance of ethical conduct. As a result, some people may think about karma and its effects in a very simplistic way, as in "I hit you this life and you will hit me in the next life." As we've seen, the effect of an action is dependent on many conditions and factors. In this light, it is important to view karma and its effects within the broader perspective of dependent arising and emptiness.

Dependent arising is the innermost treasure of the Buddha's teaching. By understanding it, practitioners are able to gradually accomplish their temporary and ultimate aims. Happiness in saṃsāra — including higher rebirth — comes about by understanding the dependent arising of karma and its effects. This understanding forms the basis for adopting the ethical

conduct of restraining from destructive actions and engaging in constructive ones.

However, understanding dependent arising in terms of karma and its effects — or causal dependence in general — is not the complete understanding of dependent arising. Animals also understand cause and effect to some extent. If we investigate the meaning of causal dependence further, how do we account for the fact that a cause produces an effect? Why is one event dependent on certain other specific events and not on others? This points to a deeper way to understand cause and effect. If cause and effect existed inherently, they would have a fixed essence; they would be self-enclosed entities that could not interact with other things. For cause and effect to function, things must be interrelated, and thus the very nature of things must be dependent. Having the nature of dependence, one thing can produce another, and a cause and its effect are related.

Causes do not depend on their effects in a temporal sense — we know that causes precede the effects that depend on them — but they do depend on effects in terms of their identity. Without there being a potential effect, something cannot be identified as a cause. The very identity of something as a cause depends on its effect; cause and effect are defined in terms of each other. Because they are mutually dependent, they do not possess an inherent essence. They exist in dependence on term and concept; they exist by dependent designation. If they had any findable nature, they could not be related as cause and effect. Nor could their identity be mutually defined in terms of each other.

In this way, understanding dependent arising in terms of cause and effect leads to the deeper understanding of phenomena as empty of inherent existence and to the understanding that phenomena are mutually dependent and exist by dependent designation. Comprehending this will enable us to counteract ignorance and attain liberation.

## *The Path of the Initial-Level Practitioner: A Conclusion*

This completes the topics of the path in common with the initial-level practitioner. As a preliminary to the path in common with the middle-level practitioner and the path of the advanced practitioner, it cannot be omitted or ignored. This practice is said to be “in common with” the initial-level practitioner in that we do not seek good rebirths as an end in themselves. Our final aim is full awakening; we keep this bodhicitta motivation in mind from the first step on the path until the last.

Cherish your precious human life and the possibilities it grants you, and be aware that it is hard to obtain and does not last long. Train yourself to catch your proclivities for the eight worldly concerns and use awareness of your mortality to make wise choices about how to use your time and resources. Contemplate karmic causality to encourage yourself to create the causes for happiness and abandon the causes for suffering. By properly meditating on these topics and integrating them into your life, you will create a strong foundation for the practices to come and make your life meaningful.

# Notes

1. In the Pāli tradition, the four seals are not mentioned in the context of distinguishing a teaching as Buddhist. However, there is overlap between the first three seals and three characteristics of saṃsāric phenomena found in the Pāli suttas, and the peaceful state of nirvāṇa is certainly spoken of in the Pāli suttas.
2. *Treasury of Knowledge* and *Lamrim Chenmo* consider unintentional actions such as accidentally stepping on an insect to be a type of karma whose result is not definite to be experienced.
3. In some cases ignorance (*avidya*) and confusion (*moha*) are synonymous, both referring to not understanding or misapprehending the ultimate nature of reality. In other cases, as is the situation here, confusion refers to not understanding or misunderstanding karma and its effects, and ignorance refers to not understanding or misapprehending the ultimate nature of reality.
4. Jeffrey Hopkins, *Maps of the Profound* (Ithaca, NY: Snow Lion Publications, 2003), 948. For more on the Prāsaṅgika view of reliable cognizers, see 947–55.
5. Candrakīrti's list of four reliable cognizers differs from the list that Dharmakīrti set forth, which is commonly taught in Mind and Awareness (*Lorig*) courses in Tibetan monastic universities. What constitutes each type of reliable cognizer differs as well. Usually people first learn the seven types of awarenesses according to Dharmakīrti's presentation, where reliable cognizers are of two types: direct and inferential. Inferential reliable cognizers are of three types: factual inferential cognizers, inferential cognizers based on renown, and inferential cognizers based on belief. Dharmakīrti also asserts a fourth direct cognizer — apperception. In this book we are following Candrakīrti's presentation.
6. These four reliable cognizers were commonly accepted in ancient India by both Buddhist and non-Buddhist schools. In addition to direct perceivers and inferential cognizers, which the Vaiśeṣika school accepted, the Sāṃkhya school added reliable cognizers depending on scripture and the Nyāya school added reliable cognizers using an example or analogy.
7. Comprehended objects are objects cognized or known by a reliable cognizer.
8. Chokyi Gyaltzen, *Presentation of Tenets* (*Grub mtha'i rnam bzhag*), [http://www.glensvensson.org/uploads/7/5/6/1/7561348/presentation\\_of\\_tenets.pdf](http://www.glensvensson.org/uploads/7/5/6/1/7561348/presentation_of_tenets.pdf).
9. This is according to Jamyang Shepa's *Great Exposition of Buddhist and Non-Buddhist Views on the Nature of Reality*. Chokyi Gyaltzen says there are two divisions of direct reliable cognizers: nonconceptual and conceptual. The two presentations come to the same point.
10. Some people may initially have difficulty accepting the Buddha being a credible person as a valid reason for accepting a scriptural statement. Dharmakīrti agrees that this is not an indisputable reason. While we can prove the possibility of awakening by inference, we ordinary beings do not have the ability to know incontrovertibly that a specific individual is indeed awakened. Still, examining the Buddha's qualities enables us to make an informed decision to give credence to his statements.
11. Translated by John Dunne.
12. Yojana is a Vedic measurement.
13. See the story of the Kālāmas in *Approaching the Buddhist Path*, 126.

14. In philosophical texts, consciousness is equivalent to knower (T. *rig pa*) and awareness (T. *blo*). The meaning of *rigpa* in Dzogchen is different, and both *rig pa* and *blo* can be translated into English in several ways.
15. Absorption without discrimination (*asaṃjñāsamāpatti*) and absorption of cessation (*nirodhasamāpatti*) are not minds but are designations for states where consciousness does not function because something temporarily inhibits its arising. According to Vasubandhu, the mental consciousness is not present at this time.
16. T. W. Rhys-Davids, *The Questions of King Milinda* (New York: Dover Publications, 1963).
17. In the Sanskrit tradition, life faculty (*jīvitendriya*) is classified as an abstract composite. As the state of living, it is the basis for consciousness and warmth.
18. According to the Pāli Abhidhamma, mindfulness accompanies only a virtuous mind.
19. These three understandings are also called the “three wisdoms.” Many scholars say that serenity is necessary for the understanding arising from meditation to be present. For example, the wisdom arising from meditation on emptiness arises together with the union of serenity and insight on emptiness, not before.
20. “View of a personal identity” is also translated as “view of the transitory collection” or “view of the perishing aggregates,” which are more literal translations of the Tibetan term. Here “aggregates” and “collection” refer to the five psychophysical aggregates. They are perishing and transitory because they change in each moment. According to the lower schools, the aggregates are the observed object of the view of a personal identity, whereas according to the Prāsaṅgikas, the aggregates are the basis of designation of the I, and the mere I is the observed object of the view of a personal identity. The lower schools say the view of a personal identity grasps the person to be self-sufficient and substantially existent.
21. Translators from Pāli often translate this term as “view of rules and rites” and explain it as meaning dogmatic clinging to ethical precepts and religious observances.
22. This term has also been translated as “meaning generality” and “mental image.”
23. There are three types of conceptuality — a conceptual consciousness apprehending: (1) A sound generality. The reverberation of the sound “pot” is in our mind, although we don’t know what it refers to. (2) A conceptual appearance (meaning generality). An image of the pot appears to our mind, although we don’t know the term “pot.” (3) The sound generality and conceptual appearance suitable to be mixed. We associate the conceptual appearance of pot and the term “pot.” We may think by using the sound of words, pictures, or both. Correct conceptual consciousnesses are determinative knowers — they think, “This is such and such.”
24. Elizabeth Napper, *Traversing the Spiritual Path*, ed. Jeffrey Hopkins (UMA Institute for Tibetan Studies, <http://uma-tibet.org>, January 2016), 204.
25. According to Dr. Jeffrey Hopkins, his teacher Geshe Gedun Lodro said that from the viewpoint of a conceptual appearance being the opposite of what is not the object, it is permanent. However, from the perspective of a conceptual appearance being a mental creation, it is a functioning thing; for example, when we visualize a meditational deity, the conceptual appearance of the deity has an effect on our mind.
26. All Mahāyāna practitioners practice the Perfection Vehicle, including those who also practice the Vajra Vehicle. Here the Perfection Vehicle and the Vajra Vehicle are considered to be separate branches of the Mahāyāna in order to illustrate some of their differences.
27. Matthieu Ricard, *On the Path to Enlightenment* (Boston: Shambhala Publications, 2013), 150.
28. Maitreya’s text is written from the Yogācāra-Svātantrika Madhyamaka viewpoint. Here the higher training in wisdom realizes the selflessness of persons — the lack of a self-sufficient,

substantially existent person. The seventh quality refers to realizing the two types of selflessness of phenomena as asserted by the Cittamātrins. According to the Prāsaṅgikas, both the third and seventh qualities refer to realizing the emptiness of inherent existence of persons and phenomena.

50. *Lord of death* is anthropomorphizing mortality.
51. For a more detailed explanation of His Holiness’s views on the interface of evolution and karma, see *The Universe in a Single Atom: The Convergence of Science and Spirituality* (New York: Morgan Road Books, 2005).

52. Garma C. C. Chang, ed., *A Treasury of Mahāyāna Sūtras: Selections from the Mahāratnakūta* (University Park: The Pennsylvania State University Press, 1983), 244.
53. LC 1:227.
54. Cittamātrins and below say that the cause of a ripening result must be either polluted virtue or nonvirtue, whereas Mādhyamikas assert that the causes of a ripening result and that result itself may also be unpolluted virtue accumulated by ārya bodhisattvas. They cite a buddha's signs and marks as an example; they are the virtuous ripening results of the unpolluted uninterrupted paths of the ten grounds. (Causes for a buddha's signs and marks may also be created while we are ordinary beings, as explained in the *Precious Garland* and the *Ornament*.) Similarly, Mādhyamikas say that the unpolluted ripening results of ārya bodhisattvas — their being born wheel-turning monarchs and lords of certain realms — come from unpolluted causes created on the bodhisattva path.
55. The *Sūtra on the Ten Grounds* reverses the last two results.
56. Defunct karma corresponds with indefinite karma — karma that is not certain to ripen or whose time of ripening is uncertain — in the Sanskrit tradition.
57. Negativity includes the ten nonvirtues, other destructive actions, and nonvirtuous mental states. Negativity and nonvirtuous karma are not synonyms. For example, anger is a negativity but is not a nonvirtuous action because it is an affliction.
58. Only Vaibhāṣikas and Prāsaṅgikas accept imperceptible forms, but the way they assert them differs. Vaibhāṣikas say they are substantially established, whereas the Prāsaṅgikas do not. The other tenet schools do not accept imperceptible forms.
59. A having-ceased is the potential that brings the result of that action. It will be explained in a later volume.
60. Not all scholars agree that Candrakīrti is the author of this text. Also, not all Tibetan scholars agree that Prāsaṅgikas accept imperceptible forms.
61. Jeffrey Hopkins, *Tsong-kha-pa's Final Exposition of Wisdom* (Ithaca, NY: Snow Lion Publications, 2008), 41.
62. These four are also mentioned in the First Dalai Lama's Abhidharma commentary (EPL 607–8).
63. Even Brahmā's arrogance — due to his mistakenly thinking that he created the universe — is neutral.
64. This special root of virtue is described in the scriptures in the context of differentiating virtue concordant with liberation, which is a synonym for the path of accumulation, and the root of virtue concordant with liberation, which is created owing to the power of the holy object and becomes a cause for liberation. Whereas virtue concordant with liberation requires that the person has the aspiration for liberation, the root of virtue concordant with liberation does not.
65. The great twentieth-century Theravāda meditator Ajahn Mun in Thailand had taken the bodhisattva ethical restraints in a previous life and relinquished them in this life. Yet he is said to have attained arhatship in this life.
66. Karma is defined as intention. Some stories — such as this story about the cause of Nāgārjuna's death — suggest that karma may be accrued even when no intention is present. We cannot say with complete conviction that these stories are false, because the subtle workings of karma are beyond our comprehension. In some cultures, such startling stories play an important role in helping people to understand the importance of conscientiously observing karma and its effects.

# Glossary

*abstract composites (viprayukta-saṃskāra)*. Impermanent phenomena that are neither forms nor consciousnesses.

*actual clear light (of the fourth stage)*. A stage on the completion stage of highest yoga tantra in which all winds have been dissolved in the indestructible drop at the heart and the fundamental, innate clear light mind directly perceives emptiness.

*afflictions (kleśa)*. Mental factors that disturb the tranquility of the mind. These include disturbing emotions and wrong views.

*afflictive obscurations (kleśāvaraṇa)*. Obscurations that mainly prevent liberation; afflictions and their seeds.

*aggregates (skandha)*. The four or five components that make up a living being: form (except for beings born in the formless realm), feelings, discriminations, miscellaneous factors, and consciousnesses.

*analytical meditation (vicārabhāvanā, T. dpyad sgom)*. Meditation done to understand an object.

*appearing object (T. snang yul)*. The object that actually appears to a consciousness. The appearing object of a conceptual consciousness is a conceptual appearance of something.

*apprehended object (muṣṭibandhaviṣata, T. 'dzin btangs kyi yul)*. The main object with which the mind is concerned, that is, the object that the mind is getting at or understands. Synonymous with engaged object.

*arhat*. Someone who has eliminated all afflictive obscurations and attained liberation.

*ārya*. Someone who has directly and nonconceptually realized the emptiness of inherent existence.

*bardo (antarābhava)*. The intermediate state between one life and the next.

*basis of designation*. The collection of parts or factors in dependence on which an object is designated.

*bodhicitta*. A main mental consciousness induced by an aspiration to bring about the welfare of others and accompanied by an aspiration to attain full awakening oneself.

*bodhisattva*. Someone who has spontaneous bodhicitta.

*causally concordant behavioral result*. Karmic result in which our action is similar to an action we did in a previous life.

*causally concordant experiential result*. Karmic result in which we experience circumstances similar to what we caused others to experience.

*causally concordant result*. The karmic result that corresponds to its cause. It is of two types: the result similar to the cause in terms of our experience and the result similar to the cause in terms of our habitual behavior.

*cognitive faculty (indriya)*. The subtle material in the gross sense organ that enables perception of sense objects; for the mental consciousness, it is previous moments of any of the six consciousnesses.

*cognitive obscurations (jñeyāvaraṇa)*. Obscurations that mainly prevent full awakening; the latencies of ignorance and the subtle dualistic view that they give rise to.

*collection of merit (puṇyasambhāra)*. A bodhisattva's practice of the method aspect of the path that accumulates merit.

*comprehended object (prameya, T. gzhal bya)*. That which is the object known or cognized by a reliable cognizer.

*conceived object (T. zhen yul)*. The object conceived by a conceptual consciousness; synonymous with the apprehended or engaged object of a conceptual consciousness.

*conceptual appearance (artha-sāmānya)*. A mental image of an object that appears to a conceptual consciousness.

*conceptual consciousness (kalpanā)*. A consciousness knowing its object by means of a conceptual appearance.

*conceptual fabrications*. False modes of existence and false ideas imputed by the mind.

*consciousness (jñāna)*. That which is clear and cognizant.

*consequence (prasaṅga)*. A statement used in debate to show the other person the contradiction present in his or her belief.

*conventional existence (saṃvṛtisat)*. Existence.

*conventional truths (saṃvṛtisatya)*. That which is true from the perspective of grasping true existence.

*cyclic existence (saṃsāra)*. The cycle of rebirth that occurs under the control of afflictions and karma.

*death (maraṇabhava)*. The last moment of a lifetime when the subtlest clear light mind manifests.

*definite karma*. Actions that are consciously done and accumulated (there was an intention to act) whose results are definite to be experienced.

*definitive sūtra (nītārtha sūtra)*. Sūtras that mainly and explicitly teach ultimate truths.

*dependent arising (pratītyasamutpāda)*. This is of three types: (1) causal dependence — things arising due to causes and conditions, (2) mutual dependence — phenomena existing in relation to other phenomena, and (3) dependent designation — phenomena existing by being merely designated by terms and concepts.

*desire realm (kāmadhātu)*. One of the three realms of cyclic existence; the realm where sentient beings are overwhelmed by attraction to and desire for sense objects.

*deva*. A being born as a heavenly being in the desire realm or in one of the meditative absorptions of the form or formless realms.

*dhyāna*. A meditative stabilization in the form realm.

*direct reliable cognizer (pratyakṣa-pramāṇa)*. A nondeceptive awareness that knows its object — an evident phenomenon — directly, without depending on a reason.

*duḥkha*. Unsatisfactory experiences of cyclic existence.

*Dzogchen*. A tantric practice emphasizing meditation on the nature of mind, practiced primarily in the Nyingma tradition.

*eight worldly concerns (aṣṭalokadharmā)*. Material gain and loss, disrepute and fame, blame and praise, pleasure and pain.

*emanation body (nirmāṇakāya)*. The buddha body that appears as an ordinary sentient being to benefit others.

*emptiness (śūnyatā)*. The lack of inherent existence and true existence.

*enjoyment body (saṃbhogakāya)*. The buddha body that appears in the pure lands to teach ārya bodhisattvas.

*environmental result*. The result of karma that influences what environment we live in.

*evident phenomena (abhimukhī)*. Phenomena that ordinary beings can perceive with their five senses.

*existent (sat)*. That which is perceivable by mind.

*extreme of absolutism (śāśvatānta)*. The extreme of eternalism; believing that phenomena inherently exist.

*extreme of nihilism (ucchedānta)*. The extreme of nonexistence; believing that our actions have no ethical dimension; believing that nothing exists.

*five actions of immediate retribution (ānantaryakarma)*. Killing one's mother, father, or an arhat, wounding a buddha, and causing a schism in the saṅgha.

*form body (rūpakāya)*. The buddha body in which a buddha appears to sentient beings; it includes the emanation and enjoyment bodies.

*form realm (rūpadhātu)*. The saṃsāric realm in which beings have bodies made of subtle material; they are born there due to having attained various states of concentration.

*formless realm (ārūpyadhātu)*. The saṃsāric realm in which sentient beings do not have a material body.

*four seals (caturmudrā)*. Four views that make a philosophy Buddhist: all conditioned phenomena are transient, all polluted phenomena are duḥkha, all phenomena are empty and selfless, nirvāṇa alone is true peace.

*four truths of the āryas (catvāry āryasatyāni)*. The truth of duḥkha, its origin, its cessation, and the path to that cessation.

*full awakening (samyaksambodhi)*. Buddhahood; the state in which all obscurations have been abandoned and all good qualities developed limitlessly.

*Fundamental Vehicle*. The path leading to the liberation of hearers and solitary realizers.

*grasping inherent existence*. Grasping persons and phenomena to exist truly or inherently. Synonymous with grasping true existence.

*grasping true existence (true grasping, satyagrāha)*. Grasping persons and phenomena to exist truly or inherently.

*hell being (nāraka)*. A being born in one of the unfortunate classes of beings who suffer intense physical pain as a result of their strong destructive karma.

*highest yoga tantra (anuttarayogatantra)*. The most advanced of the four classes of tantra.

*hungry ghost (preta)*. A being born in one of the unfortunate classes of beings, who suffers from intense hunger and thirst.

*ignorance (avidyā)*. A mental factor that is obscured and grasps the opposite of what exists. There are two types: ignorance regarding ultimate truth and ignorance regarding karma and its effects.

*impermanence (anitya)*. The transient quality of all compositional phenomena and functioning things. Coarse impermanence can be known by our senses; subtle impermanence is something not remaining the same in the very next moment.

*inattentive awareness*. A consciousness that doesn't ascertain its object, even though that object is appearing to it.

*inferential reliable cognizer (anumāna-pramāṇa)*. An awareness that knows its object — slightly obscure phenomena — nondeceptively, purely in dependence on a reason.

*inherent existence (svabhāva)*. Existence without depending on any other factors; independent existence.

*interpretable sūtra (neyārtha sūtra)*. A sūtra that speaks about the variety of phenomena and/or cannot be taken literally.

*karma*. Intentional action; it includes intention karma (mental action) and intended karma (physical and verbal actions motivated by intention).

*karmic seeds*. The potency from previously created actions that will bring their results.

*latencies (vāsanā)*. Predispositions, imprints, or tendencies.

*liberation (mokṣa)*. The state of freedom from cyclic existence.

*Mahāmudrā*. A type of meditation that focuses on the conventional and ultimate natures of the mind.

*meditative equipoise on emptiness*. An ārya's mind focused single-pointedly on the emptiness of inherent existence.

*mental direct reliable cognizers.* Nondeceptive mental awarenesses that know their objects by depending on another consciousness that induces them.

*mental factor (caitta).* An aspect of mind that accompanies a primary consciousness and fills out the cognition, apprehending particular attributes of the object or performing a specific function.

*mind (citta).* The part of living beings that cognizes, experiences, thinks, feels, and so on. In some contexts it is equivalent to primary consciousness.

*mindstream (cittasaṃtāna).* The continuity of mind.

*mistaken awareness.* An awareness that is mistaken in terms of its appearing object.

*monastic.* Someone who has received monastic ordination; a monk or nun.

*Mount Meru.* A huge mountain at the center of our world system, according to ancient Indian cosmology.

*nirvāṇa.* The state of liberation of an arhat; the emptiness of a mind that has been totally cleansed of afflictive obscurations.

*nonabiding nirvāṇa.* A buddha's nirvāṇa that does not abide in either cyclic existence or personal liberation.

*nonconceptual consciousness.* A consciousness that knows its object directly, not by means of a conceptual appearance.

*nonduality.* The nonappearance of subject and object, inherent existence, conventional truths, and conceptual appearances in an ārya's meditative equipoise on emptiness.

*nonexistent (asat).* That which is not perceivable by mind.

*observed object (ālambana, T. dmigs yul).* The basic object that the mind refers to or focuses on while apprehending certain aspects of that object.

*permanent (nitya).* Unchanging, static. It does not mean eternal.

*permanent, unitary, independent self.* A soul or self (*ātman*) asserted by non-Buddhists.

*person (pudgala).* A living being designated in dependence on the four or five aggregates.

*polluted (āśava).* Under the influence of ignorance and its latencies.

*powa.* A practice for transferring the consciousness at the time of death so that it will take a precious human life or be reborn in a pure land.

*Prāsaṅgika Madhyamaka.* The Buddhist philosophical tenet system whose views are most accurate.

*prātimokṣa.* The different sets of ethical precepts for monastics and lay followers that assist in attaining liberation.

*primary consciousness (vijñāna).* A consciousness that apprehends the presence or basic entity of an object; they are of six types: visual, auditory, olfactory, gustatory, tactile, and mental.

*pure land*. Places created by the unshakable resolve and merit of buddhas where all external conditions are conducive for Dharma practice.

*reliable cognizer (pramāṇa)*. A nondeceptive awareness that is incontrovertible with respect to its apprehended object and that enables us to accomplish our purpose.

*reliable cognizer based on an example*. Inferential cognizers that realize their object by understanding that it is similar to something else.

*reliable cognizer based on authoritative testimony*. An inferential cognizer knowing very obscure phenomena that cannot be established through direct perceivers or other inferential reliable cognizers, but only by depending on the authoritative testimony of a trustworthy source, such as a credible person or scripture.

*ripening result (vipākaphala)*. The karmic result that is a rebirth; the five aggregates a being takes.

*Sautrāntika*. A Buddhist tenet school that espouses Fundamental Vehicle tenets. It is considered higher than the Vaibhāṣika school.

*scriptural authority*. Relying on a scripture that has met three criteria that deem it reliable.

*self (ātman)*. Refers to (1) a person, or (2) inherent existence.

*self-grasping (ātmagrāha)*. Grasping inherent existence.

*self-sufficient substantially existent person (T. gang zag rang rkya thub pa'i rdzas yod)*. A self that is the controller of the body and mind. Such a self does not exist.

*sense direct reliable cognizers*. Incontrovertible awarenesses that know their objects — sights, sounds, smells, tastes, and tangible objects — directly by depending on a physical cognitive faculty.

*sentient being (sattva)*. Any being with a mind, except for a buddha.

*six perfections (ṣaḍpāramitā)*. The practices of generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom that are motivated by bodhicitta.

*slightly obscure phenomena (parokṣa)*. Phenomena that can initially be known only by using factual inference.

*solitary realizer (pratyekabuddha)*. A person following the Fundamental Vehicle who seeks liberation and who emphasizes understanding the twelve links of dependent arising.

*śrāvaka (hearer)*. Someone practicing the Fundamental Vehicle path leading to arhatship who emphasizes meditation on the four truths of the āryas.

*stabilizing meditation (T. 'jog sgom)*. Meditation to focus and concentrate the mind on an object.

*superknowledge (abhijñā)*. Special powers gained through having deep states of concentration.

*Svātantrika Madhyamaka*. A philosophical tenet system that is not as accurate as the other branch of Madhyamaka, the Prāsaṅgika.

*syllogism (prayoga)*. A statement consisting of a subject, predicate, and reason, and in many cases, an example.

*taking and giving (T. tong len)*. A meditation practice for cultivating love and compassion that involves visualizing taking on the suffering of others, using it to destroy our self-centered attitude, and giving our body, possessions, and merit to others.

*tathāgata*. A buddha.

*thesis (pratijñā)*. What is to be proven — the combination of the subject and the predicate — in a syllogism.

*thing (bhāva)*. Something that performs a function.

*three criteria for existent phenomena*. It is known to a conventional consciousness; its existence is not invalidated by another conventional reliable cognizer; it is not invalidated by a mind analyzing emptiness.

*three criteria of a correct inference or syllogism*. Presence of the reason in the subject, pervasion or entailment, and counterpervasion.

*true cessation (nirodhasatya)*. The cessation of a portion of afflictions or a portion of cognitive obscurations.

*true existence (satyasat)*. Existence having its own mode of being; existence having its own reality.

*true grasping*. See “grasping true existence.”

*truth body (dharmakāya)*. The buddha body that includes the nature truth body and the wisdom truth body.

*twelve links of dependent arising*. A system of twelve factors that explains how we take rebirth in saṃsāra and how we can be liberated from it.

*two truths (satyadvaya)*. Ultimate truths and veil (conventional) truths.

*ultimate bodhicitta (paramārthabodhicitta)*. Direct nonconceptual realization of emptiness in the continuum of an ārya bodhisattva.

*ultimate truth (paramārthasatya)*. The ultimate mode of existence of all persons and phenomena; emptiness; objects that are true and appear true to their main cognizer.

*unfortunate states (apāya)*. Unfortunate states of rebirth as a hell being, hungry ghost, or animal.

*unpolluted (anāsrava)*. Not under the influence of ignorance.

*unreliable awareness*. An awareness that does not correctly apprehend its object and cannot help us accomplish our purpose. These include correct assumers, inattentive perceivers, doubt, and wrong awarenesses.

*Vaibhāṣika*. A Buddhist tenet school that espouses Fundamental Vehicle tenets. It is considered the lowest tenet school.

*veiled truths (samvrtisatya)*. Objects that appear true to ignorance; objects that appear to exist inherently to their main cognizer, although they do not; synonymous with conventional truths.

*very obscure phenomena (atyantaparokṣa)*. Phenomena that can be known only by relying on the testimony of a reliable person or a valid scripture.

*view of a personal identity* (view of the transitory collection, *satkāyadrṣṭi*). Grasping an inherently existent I or mine (according to the Prāsaṅgika system).

*Vinaya*. Monastic discipline.

*white appearance, red increase, and black near attainment*. Three subtle minds that manifest after coarser minds have been absorbed and before the subtlest clear light mind arises.

*wrong or erroneous awareness (viparyaya jñāna)*. A mind that is erroneous with respect to its apprehended object, and in the case of conceptual cognizers with respect to its conceived object.

*yogic direct reliable cognizers*. Nondeceptive mental consciousnesses that know their objects by depending on a union of serenity and insight.

## About the Authors

THE DALAI LAMA is the spiritual leader of the Tibetan people, a Nobel Peace Prize recipient, and an advocate for compassion and peace throughout the world. He promotes harmony among the world's religions and engages in dialogue with leading scientists. Ordained as a Buddhist monk when he was a child, he completed the traditional monastic studies and earned his geshe degree (equivalent to a PhD). Renowned for his erudite and open-minded scholarship, his meditative attainments, and his humility, Bhikṣu Tenzin Gyatso says, "I am a simple Buddhist monk."

Peter Aronson

BHIKṢUṆĪ THUBTEN CHODRON has been a Buddhist nun since 1977. Growing up in Los Angeles, she graduated with honors in history from UCLA and did graduate work in education at USC. After years studying and teaching Buddhism in Asia, Europe, and the United States, she became the founder and abbess of Sravasti Abbey in Washington State. A popular speaker for her practical explanations of how to apply Buddhist teachings in daily life, she is the author of several bestselling books, including *Buddhism for*

*Beginners*. She is the editor of Khensur Jampa Tegchok's *Insight into Emptiness*. For more information, visit [sravastiabbey.org](http://sravastiabbey.org) and [thubtenchodronbooks.org](http://thubtenchodronbooks.org).

# SAMŚĀRA, NIRVĀṄA, AND BUDDHA NATURE

The Dalai Lama and Thubten Chodron

THE LIBRARY OF WISDOM AND COMPASSION : VOLUME 3

## Advance Praise for SAṂSĀRA, NIRVĀṆA, AND BUDDHA NATURE

“*Saṃsāra, Nirvāṇa, and Buddha Nature* is the third volume in the series of books coauthored by Venerable Thubten Chodron and His Holiness the Dalai Lama. This has proven to be a remarkable partnership, producing lucid, accessible articulations of Buddhadharma and demonstrating the relevance of philosophy to practice. The present volume ably advances the project begun in the first two volumes and expands its scope enormously. His Holiness and Ven. Thubten Chodron together set out a comprehensive vision of the nature of saṃsāra and nirvāṇa, of the Buddhist understanding of the nature of mind, and of the path to liberation grounded in the realization of our buddha nature. The philosophical analysis is precise and comprehensive. The application to personal practice is insightful, direct, and easy to apply. This is a wonderful example of how Buddhist philosophy and Buddhist practice can be integrated.”

— Jay L. Garfield, Doris Silbert Professor in the Humanities, Smith College and Harvard Divinity School

“This third volume in the Wisdom Publications series *The Library of Wisdom and Compassion* presents an in-depth examination of the idea of ‘buddha nature’ and explores and illustrates how the mind itself serves as the basis for both our suffering and our liberation. Helpful reflections throughout the text guide our journey. These are truly textbooks tailored for our times.”

— Jan Willis, author of *Dreaming Me: Black, Baptist, and Buddhist — One Woman’s Spiritual Journey*

“This third volume of the marvelous *Library of Wisdom and Compassion* series provides an exploration of saṃsāra — the painful cycle of unenlightened existence — as well as its causes and how to attain freedom from it. The final sections contain a beautiful elucidation of the nature of the mind and its potential — buddha nature — signifying that every living being has the ability not only to be free of suffering and its causes but also to attain full awakening. The material in this volume is invaluable for those who sincerely wish to understand the Buddhist path and begin following it.”

— Venerable Sangye Khadro, author of *How to Meditate*

## THE LIBRARY OF WISDOM AND COMPASSION

*The Library of Wisdom and Compassion* is a special multivolume series in which His Holiness the Dalai Lama shares the Buddha's teachings on the complete path to full awakening that he himself has practiced his entire life. The topics are arranged especially for people not born in Buddhist cultures and are peppered with the Dalai Lama's unique outlook. Assisted by his long-term disciple, the American nun Thubten Chodron, the Dalai Lama sets the context for practicing the Buddha's teachings in modern times and then unveils the path of wisdom and compassion that leads to a meaningful life, a sense of personal fulfillment, and full awakening. This series is an important bridge from introductory to profound topics for those seeking an in-depth explanation from a contemporary perspective.

This series is an important bridge from introductory to profound topics for those seeking an in-depth explanation from a contemporary perspective.

---

“This book is a veritable tour de force in its explanation of the role of the mind in saṃsāra and the realization of nirvāṇa, which is the mind's own ultimate nature. In its examination of buddha nature—spanning early discussions of the mind's potential in the Pāli canon through to the teachings of Dzogchen, the Great Perfection—it casts a bright light to dispel the darkness of materialism, which deludedly reduces the mind to a mere epiphenomenon or emergent property of the brain. Books such as this are urgently needed to trigger a true revolution in the mind sciences.”

—B. Alan Wallace, founder and president,  
Santa Barbara Institute for Consciousness Studies

**HIS HOLINESS THE DALAI LAMA** is the spiritual leader of the Tibetan people, a Nobel Peace Prize recipient, and a beacon of inspiration for Buddhists and non-Buddhists alike. He has persistently reached out across religious and political lines and has engaged in dialogue with scientists in his mission to advance peace and understanding in the world. In doing so, he embodies his motto, “My religion is kindness.”

[About the Authors](#)

## Preface

THE FIRST VOLUME of *The Library of Wisdom and Compassion, Approaching the Buddhist Path*, explored the Buddhist view of life, mind, and emotions. It provided historical background, introduced us to a systematic approach to the spiritual path, and discussed how Buddhist ideas could pertain to contemporary issues. The second volume, *The Foundation of Buddhist Practice*, discussed gaining nondeceptive knowledge, rebirth, spiritual mentors, and how to structure a meditation session. From there we considered the essence of a meaningful life and karma — the ethical dimension of our actions. If we use our lives wisely and make good ethical decisions, our deaths will be free from regret and fear. Having fortunate rebirths in the future, we will have conducive circumstances to continue our spiritual practice.

A fortunate rebirth is definitely desirable, but it is still within cyclic existence (*saṃsāra*), bound by ignorance, afflictions, and polluted karma. The unsatisfactory circumstances (*duḥkha*) of *saṃsāra* are immense and, knowing that, we seek to free ourselves from it. To do so, we must know its causes and whether those causes can be ceased. When convinced the causes can be stopped, we learn the path to eradicate them. Knowledge of guideposts along the way is helpful, as is continuously keeping our goal — the genuine peace and freedom of *nirvāṇa* for all living beings — in mind. Self-confidence and joyous effort are good friends on our journey to buddhahood.

While ostensibly this volume is about *saṃsāra* and *nirvāṇa*, it is actually about our minds — our minds that are sometimes tumultuous and at other times peaceful. Although our minds are always with us and are the basis of designation of the person, I, our minds remain a mystery to us. How can it be both the basis for the extreme *duḥkha* of *saṃsāra* and the incredible bliss and fulfillment of *nirvāṇa*?

Knowledge of the two types of buddha nature answers this question. One is the naturally abiding buddha nature — the emptiness of inherent existence of our minds — which has always been and will always be the ultimate nature of our minds. The second is the transforming buddha nature — the mind whose continuity goes on to awakening but at present is not yet freed from defilement.

This mind serves as the basis for the emptiness that is the naturally abiding buddha nature. These two types of buddha nature are already present within us. The afflictions are not embedded in our minds; our minds are obscured by defilements but are not the nature of defilement. These obscuring factors can be forever eliminated by applying suitable antidotes.

This buddha nature is an indelible part of us. Each sentient being has it, so no matter how low we or others may fall as a result of our afflictions, afflictions and suffering are not our nature. We are worthwhile beings who deserve happiness. Our buddha nature can never be lost and we do not need to prove ourselves to anyone. The unpurified mind is saṃsāra; the purified mind is the basis of nirvāṇa. All that is needed is our confidence and sincere effort to follow the path, purify our buddha nature, and cultivate awakened qualities. These are the topics of the present volume.

## *How This Book Came About*

The prefaces of volumes 1 and 2 — *Approaching the Buddhist Path* and *The Foundation of Buddhist Practice* — contain longer explanations of the origin of the Library of Wisdom and Compassion. To give a brief account, it began with my requesting His Holiness in 1995 to write a short text on the stages of the path (*lamrim*) that lamas could use when teaching serious students new to Buddhism. Much to my surprise, His Holiness responded by saying that a larger book needed to be compiled first. Because the existing lamrim texts are excellent, there was no need to repeat them. This book needed to be different: It must contain material from the philosophical treatises so that readers will gain a deeper and more detailed explanation of the important points. It must contain material from the Pāli Buddhist tradition so that Tibetan Buddhists will have a more expanded view of the Buddha's teachings that will lessen sectarianism and help students to appreciate the Buddha's remarkable skill and versatility in instructing people with diverse interests, aptitudes, and dispositions.

Using material from His Holiness's teachings in Asia and the West, I began writing. I also compiled questions from his non-Tibetan disciples to ask during the series of interviews that occurred over the years. These questions dealt with topics that the authors of lamrim texts either assumed readers already knew or didn't discuss because they weren't pertinent at that time or in that culture. The book was also designed to clarify misunderstandings that arise when the meaning from another faith is superimposed onto Buddhism — for example, when people mistakenly understood karma and its effects to be a system of reward and punishment, as in theistic religions.

His Holiness often invited two, three, or four geshes to join the interviews, and engaged them in intriguing discussions about the topics I raised. The section on karmic seeds and having-ceaseds in chapter 5 of this volume came from such an interview. I asked about the similarities and differences between karmic seeds and having-ceaseds and a lengthy energetic discussion, punctuated with much laughter, followed. The discussion and debate continued after the session with His Holiness as I asked the geshes more questions over tea. At the end, we concluded that there were many more questions and points of debate to explore.

While writing, it sometimes seemed that I was “translating from English into

English.” The philosophical texts are lengthy, filled with debates, and often have sentences that are one page long. We had to extract the important points and express them in easy-to-understand English, including background material when necessary and examples to help the reader understand. As the manuscript increased in length, we realized that instead of being a book it would become a series.

In oral teachings, His Holiness weaves various topics together in a way that we listeners may not have considered before, opening up new meanings and perspectives. He also goes from simple to complex topics and back again in a matter of minutes, making one talk pertinent for both beginners and advanced practitioners. He doesn’t expect us to understand everything at the first explanation and knows that our understanding will grow slowly as new layers of meaning are revealed to our minds as a result of our purification, collection of merit, study, and reflection. For this reason, the volumes in this series are meant to be read again and again, so that each time you will discover new gems. The books may also be read individually if you are interested in a particular topic, or be used as a resource when you need to look up specific points.

## *Overview of Saṃsāra, Nirvāṇa, and Buddha Nature*

This book will lead us through a fascinating journey regarding our present situation and the possibility of attaining unsurpassed awakening where all *duḥkha* and its causes have been forever ceased and all excellent qualities have been developed limitlessly. Underlying both our *saṃsāra* and *nirvāṇa* is the fundamental innate clear light mind that by nature is empty of inherent existence. When obscured by defilements, it is buddha nature; when purified of defilements, it is the truth body (*dharmakāya*) of a buddha.

The book begins with an examination of the self: Is there a self? Does it have a beginning and an end? This leads into a discussion of the four truths — *duḥkha* (unsatisfactory circumstances), its origin, its cessation, and the path to that cessation — in both its coarse and subtle forms. We then delve into each truth, examining its four attributes, which reveals misunderstandings we may have about them and how to remedy those misconceptions.

With a clearer understanding of the four truths, in chapter 2 we look closely at true *duḥkha* — the realms of *saṃsāric* existence and our experiences in them.

This exposes the many repugnant faults of saṃsāra and gives us a lens through which to see our present situation as it is. Chapter 3 identifies the chief causes of duḥkha — the six root afflictions. Investigating more closely, we find many other defilements obscuring our mindstreams. These bring psychological disturbances and have physical ramifications. This chapter provides a mirror for us to identify disturbing emotions and afflictive views that may otherwise go unnoticed.

In chapters 4 and 5 we examine the origins of duḥkha more thoroughly: the factors causing the arising of afflictions, feelings accompanying various afflictions, and temporary antidotes to subdue afflictions. We also learn about seeds of afflictions that provide continuity between one instance of an affliction and the next, latencies of afflictions that obscure the mind even after the afflictions have been eradicated, and karmic seeds and having-ceaseds that connect an action with its result. Chapter 6 deals with the way karma affects the evolution of the universe and our bodies.

The twelve links of dependent origination — which describe how rebirth in saṃsāra occurs and how the chain of events leading to it can be cut — is an important teaching in both the Pāli and Sanskrit traditions. With it comes the question, “Who revolves in cyclic existence and who is liberated?” which leads us to investigate the nature of the person. Chapters 7 and 8 explore the afflictive side of dependent origination and encourage us to renounce duḥkha and aspire for liberation, as explained in chapter 9. Chapters 10 and 11 describe the purified side of dependent origination, focusing especially on nirvāṇa, the ultimate true cessation. True path will be explained extensively in volume 4.

In order to aspire to liberation, we must know that liberation is possible. Elaborated on in chapter 12, this depends on understanding both the conventional and ultimate natures of our minds. If defilements were embedded in the nature of the mind, liberation would be impossible. Similarly, if the mind existed inherently, it could never change, and trying to attain liberation and awakening would be fruitless. But thankfully none of these is the case. Since ignorance is a faulty mind, it can be removed by correct wisdom.

Chapters 13 and 14 come from some of the most vibrant interviews with His Holiness, where he traced the explanation of true cessation from the first turning of the Dharma wheel to its more elaborate form in the second turning. He also traced the explanation of true path — the mind that realizes emptiness — from the Sūtra to the Tantra perspective, as hinted at in the third turning of the Dharma wheel. Listening to this was confusing and enlightening at the same

time; there is a lot of profound meaning in these chapters that opens the way to gaining conviction that awakening is indeed possible.

## *Please Note*

Although this series is coauthored, the vast majority of the material is His Holiness's instruction. I researched and wrote the parts pertaining to the Pāli tradition, wrote some other passages, and composed the reflections. For ease of reading, most honorifics have been omitted, but that does not diminish the great respect we have for these most excellent sages and practitioners. Foreign terms are given in parentheses at their first usage. Unless otherwise noted with "P" or "T," indicating Pāli or Tibetan, respectively, italicized terms are Sanskrit. When two italicized terms are listed, the first is Sanskrit, the second Pāli. For consistency, Sanskrit spelling is used for Sanskrit and Pāli terms used in common language (nirvāṇa, Dharma, arhat, and so forth), except in citations from Pāli scriptures. *Śrāvaka* encompasses solitary realizers, unless there is reason to specifically speak of them. To maintain the flow of a passage, it is not always possible to gloss all new terms on their first use; a glossary is provided for you at the end of the book. "Sūtra" often refers to Sūtrayāna and "Tantra" to Tantrayāna. When these two words are not capitalized, they refer to two types of discourses: sūtras and tantras. Unless otherwise noted, the personal pronoun "I" refers to His Holiness.

## *Appreciation*

I bow to Śākyamuni Buddha and all the buddhas, bodhisattvas, and arhats who embody the Dharma and with compassion teach it to us unawakened beings. I also bow to all the realized lineage masters of all Buddhist traditions through whose kindness the Dharma still exists in our world.

Since this series will appear in consecutive volumes, I will express my appreciation of those involved in each particular volume. This volume, the third in *The Library of Wisdom and Compassion*, is due to the talents and efforts of His Holiness's translators — Geshe Lhakdor, Geshe Dorji Damdul, and Mr. Tenzin Tsepak. I am grateful to Geshe Dorji Damdul, Geshe Dadul Namgyal,

and Ven. Sangye Khadro for checking the manuscript, and to Samdhong Rinpoche, Geshe Sonam Rinchen, and Geshe Thubten Palsang for clarifying important points. I also thank Bhikkhu Bodhi for his clear teachings on the Pāli tradition and for generously answering my many questions. The staff at the Private Office of His Holiness facilitated the interviews, and Sravasti Abbey and Dharma Friendship Foundation kindly supported me while I worked on this series. Mary Petruszewicz skillfully edited this book, and Traci Thrasher was a tremendous help in gathering the photographs. I thank everyone at Wisdom Publications who contributed to the successful production of this series. All errors are my own.

Bhikṣuṇī Thubten Chodron

## Abbreviations

Translations used in this volume, unless noted otherwise, are as cited here. Some terminology has been modified for consistency with the present work.

- ADK *Treasury of Knowledge (Abhidharmakośa)* by Vasubandhu.
- ADS *Compendium of Knowledge (Abhidharmasamuccaya)*.
- AN *Aṅguttara Nikāya*. Translated by Bhikkhu Bodhi in *The Numerical Discourses of the Buddha* (Boston: Wisdom Publications, 2012).
- BCA *Engaging in the Bodhisattvas' Deeds (Bodhicaryāvatāra)* by Śāntideva.
- CMA *Abhidhammattha Saṅgaha* by Anuruddha. In *A Comprehensive Manual of Abhidhamma*, edited by Bhikkhu Bodhi (Seattle: BPS Pariyatti Editions, 2000).
- CŚ *The Four Hundred (Catuḥśataka)* by Āryadeva. Translated by Ruth Sonam in *Āryadeva's Four Hundred Stanzas on the Middle Way* (Ithaca, NY: Snow Lion Publications, 2008).
- DN *Dīgha Nikāya*. Translated by Maurice Walshe in *The Long Discourses of the Buddha* (Boston: Wisdom Publications, 1995).
- DS *Praise to the Sphere of Reality (Dharmadhātu-stava)* by Nāgārjuna.
- EPL *Elucidating the Path to Liberation: A Study of the Commentary on the Abhidharmakośa* by the First Dalai Lama. Translated by David Patt (PhD dissertation, University of Wisconsin–Madison, 1993).
- LC *The Great Treatise on the Stages of the Path (T. Lam rim chen mo)* by Tsongkhapa, 3 vols. Translated by Joshua Cutler et al. (Ithaca, NY: Snow Lion Publications, 2000–2004).

- LS *Praise to the Supramundane (Lokātītastava)* by Nāgārjuna.
- MMK *Treatise on the Middle Way (Mūlamadhyamakakārikā)* by Nāgārjuna.
- MN Majjhima Nikāya. Translated by Bhikkhu Ñāṇamoli and Bhikkhu Bodhi in *The Middle-Length Discourses of the Buddha* (Boston: Wisdom Publications, 2005).
- OR *Ocean of Reasoning* by rJe Tsong Khapa. Translated by Geshe Ngawang Samten and Jay L. Garfield (New York: Oxford University Press, 2006).
- P Pāli.
- PV *Commentary on the “Compendium of Reliable Cognition” (Pramāṇavārttika)* by Dharmakīrti. Hereafter *Commentary on Reliable Cognition*.
- RA *Precious Garland (Ratnāvalī)* by Nāgārjuna. Translated by John Dunne and Sara McClintock in *The Precious Garland: An Epistle to a King* (Boston: Wisdom Publications, 1997).
- RGV *Sublime Continuum (Ratnagotravibhāga, Uttaratantra)* by Maitreya.
- SN Saṃyutta Nikāya. Translated by Bhikkhu Bodhi in *The Connected Discourses of the Buddha* (Boston: Wisdom Publications, 2000).
- T Tibetan.
- Vism *Path of Purification (Visuddhimagga)* by Buddhaghosa. Translated by Bhikkhu Ñāṇamoli in *The Path of Purification* (Kandy: Buddhist Publication Society, 1991).

## Introduction

### *How to Study the Teachings*

**A**S WITH ALL activities, our attitude and motivation for learning and practicing the Buddhadharma affect the value of our action. Keeping six factors in mind will enable you to have a beneficial motivation. First, see yourself as a sick person who wants to recover. Our illness is cyclic existence and the duḥkha — unsatisfactory circumstances — that permeate it. Duḥkha includes being subject to birth, aging, sickness, and death under the influence of afflictions and karma, as well as not getting what we want, being separated from what we love, and encountering problems we don't want. Seeing ourselves as ill, we will approach the teachings with sincerity and receptivity.

Second, regard the teacher as a kind doctor who correctly diagnoses our illness and prescribes the medicine to cure it. Our saṃsāra is rooted in mental afflictions, the chief of which is ignorance that misapprehends the ultimate nature of phenomena. Although we want happiness, our minds are continually overwhelmed by attachment, anger, and confusion that cause us misery here and now and create the karma for future duḥkha.

Third, see teachings as medicine to cure our illness. The Buddha prescribes the medicine of the three higher trainings in ethical conduct, concentration, and wisdom, and the medicine of bodhicitta and the six perfections — generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom. Fourth, understand that practicing the teachings is the method to heal.

When we are ill, we naturally respect the doctor, trust the medicine, and want to take it, even if it doesn't taste so good. If we second-guess the doctor or complain about the medicine, we won't take it. Similarly, if we don't respect the Buddha and the Dharma, we won't practice. Likewise, if we have a prescription but don't fill it, or fill it but don't take the medicine, we won't recover. We must make an effort to learn and practice the Dharma and not simply collect statues, texts, and prayer beads. Curing the illness is a collaborative process between doctor and patient; we must both do our parts. The *King of Concentration Sūtra*

says (LC 1:60–61):

Some people are ill, their bodies tormented;  
for many years there is not even temporary relief.  
Afflicted with illness for a very long time,  
they seek a doctor, in search of a cure.

Searching again and again,  
they at last find a physician with skill and knowledge.  
Treating the patients with compassion,  
the doctor gives medicine, saying, “Here, take this.”

This medicine is plentiful, good, and valuable.  
It will cure the illness, but the patients do not take it.  
This is not a shortcoming of the doctor, nor the fault of the medicine.  
It is just the negligence of those who are ill.

I have explained this very good teaching.  
Yet if you, having heard it, do not practice correctly,  
then just like a sick person holding a bag of medicine,  
your illness cannot be cured.

Taking the medicine entails looking beyond the words we hear and trying to understand their deeper meaning. When that is clear in our minds, we must then consistently put it into practice. Then, and only then, will our disease of *duḥkha* and afflictions be cured. When taking ordinary medicine, we must follow the instructions properly and take the whole cycle. If we take the medicine for a few days and then stop, we won’t get well. Similarly, if we don’t like the taste of the medicine and so mix in all sorts of better-tasting things, we won’t recover. Our commitment to practicing the teachings as we are able to is a crucial element in our awakening.

Fifth, regard the buddhas as excellent, wise, and compassionate beings, and sixth, pray that the teachings will exist for a very long time so that many sentient beings can benefit from them.

Then cultivate an altruistic motivation, thinking, “I want to be free from the *duḥkha* of *samsāra* and will seek the Buddha’s medicine that, when practiced properly, will lead me to good health. But I am not the only sick person; countless sentient beings also wander in *samsāra* and suffer from the afflictions.

May I become a skillful and compassionate doctor like the Buddha, so that I can help all other sentient beings to be free from the duḥkha of saṃsāra.”

# 1 | The Self, the Four Truths, and Their Sixteen Attributes

**T**HE FOUR TRUTHS of the āryas are four facts that āryas — beings who directly see the ultimate nature of all persons and phenomena — know as true. These four truths establish the fundamental framework of the Buddhadharma, so a good understanding of them is essential. In this chapter we will look at the four truths in general, and in subsequent chapters will examine each one in detail.

The four truths describe the unawakened and awakened experiences of this merely designated self, so to begin with I would like to share some reflections on the self — the person who is reborn in cyclic existence, practices the path, and attains awakening.

## *Three Questions about the Self*

I enjoy interfaith gatherings and appreciate the genuine in-depth dialogue and cooperation that result from them. At one such gathering in Amritsar, India, each participant was asked three questions: Is there a self? Is there a beginning to the self? Is there an end to the self? Here are my thoughts.

### *Is There a Self?*

Most non-Buddhists assert an independent self — an *ātman* or soul — that takes rebirth. What leads them to say this? Although we know that our adult bodies did not exist at the time of our births, when we say, “At the time I was born . . .” we feel there was a self that was born and that this same self exists today. We also say, “Today my mind is calm,” indicating that our mind is different today than yesterday when it was disturbed. But we feel the I is the same as yesterday. When we see a flower, we think, “I see,” and it feels that there is a real person who sees it.

In all these cases, although we know that the body and mind change, we still

have the sense of an enduring I that is the owner of the body and mind. This is the basis for believing there is a permanent, unitary, independent self that goes to heaven or hell or is reborn in another body after death. From this comes the conclusion that there must be an unchanging, independent I that is present throughout our lives and remains the same although the mental and physical aggregates change. This I is the agent of all actions such as walking and thinking.

While both Buddhists and non-Buddhists accept the existence of the self, our ideas of what the self is differ radically: most non-Buddhists accept the existence of a permanent, unchanging soul or independent self, while Buddhists refute it. Although no Buddhist philosophical school asserts a permanent, unitary, independent self, these schools have various ideas of what the self is: the mental consciousness, the continuum of consciousness, the collection of aggregates, or the mere I that is merely designated. The Prāsaṅgika Madhyamaka, which is generally accepted as the most refined system of tenets, says the self is merely designated in dependence on the body and mind. Because the self is merely imputed, we can say, “I am young or old” and “I think and feel.” If the person were a completely different entity from the body and mind, it would not change when either the body or mind changes.

### *Is There a Beginning to the Self?*

Those who believe in an external creator assert an autonomous intelligence that does not depend on causes and conditions. This being, they say, created the world and the sentient beings in it. For many people the notion that God created life fosters the feeling of being close to God and willingness to follow God’s advice to be kind and refrain from harming others. Their belief in a creator spurs them to live ethically and to help others.

Some faiths such as Jainism and Sāṃkhya do not assert a creator, but I do not know if they believe the ātman has a beginning.

A repeated theme in Buddhism is dependent arising, one aspect of which is that functioning things arise due to causes and conditions. When explaining the twelve links of dependent origination, the Buddha said, “Because of this, that exists. Because this has arisen, that arises.” *Because of this, that exists* points out that things come into existence due to causes and conditions; they do not appear without a cause. If something has no causes, what makes it arise? If things do not depend on causes and conditions, why does a seed grow into a plant in the

spring but not in the winter? If our lunch came into being without a cause, it would arise without groceries, pots, or cooks! Therefore everything — the body, the mind, and the external universe — depends on causes and conditions.

*Because this has arisen, that arises* illustrates that causes, like their results, are impermanent. If causes did not change, they would continue to exist even after producing their results. However, for a result to arise, its cause must cease; for an apple tree to grow, the apple seed must cease. It is not possible for a permanent creator or prior intelligence to create the universe and beings in it without itself changing. Each person, thing, and event arises due to its own causes, which in turn have come about in dependence on their causes. There is no discernable beginning.

Furthermore, things are produced by their own unique causes, not by discordant causes — things that do not have the capability to produce them. It is not the case that anything can produce anything. A daisy grows from daisy seeds, not from metal. Our bodies and minds each have their own unique causes.

Causes depend on conditions to produce their results. If conditions were unnecessary, a sprout could grow in the dead of winter or in parched soil; it would not depend on warmth and moisture to grow. Multiple causes and conditions are necessary to bring a result.

Each cause not only produces its own results but also arose due to the causes that produced it. The sprout is the cause of the tree that grows from it as well as the result of the seed from which it grew. If an external creator were the cause of the universe, he or she would also have to be the result of a previous cause. He would be a caused phenomenon and could not exist independent of causes.

If Buddhists do not accept a self, who takes rebirth? Although the Buddha refutes a self that exists independent of all other factors, he accepts a conventional self that is dependent on causes, conditions, and parts. This self is designated in dependence on the body and mind, so the question of whether the self has a beginning depends on if the body and mind have beginnings. The body is material in nature. Scientists currently say that all matter can be traced back to the Big Bang. How did the Big Bang occur? There must have been some material substances, energy, or potential for matter that existed before the Big Bang, and conditions must have been such that it exploded. Here, too, we see that things must have causes that are affected by other conditions and therefore change and give rise to something new.

Our minds change moment by moment; the mind is impermanent and arises due to causes that have the ability to produce each moment of mind. The first

moment of mind in this life has a cause, because without a cause it could not exist. The cause of our minds was not our parents' minds, because both of our parents have their own individual continuity of consciousness, as do we. The substantial cause (*upādānakāraṇa*) of our minds — the cause that turns into the mind — cannot be our bodies or the sperm and egg of our parents, because the mind and body have different natures: the mind is formless and has the nature of clarity and cognizance, while the body has physical and material characteristics. The only thing we can point to as the cause of the first moment of mind in this life is the previous moment of that mind in the previous life. This continuity can be traced back infinitely, with one moment of mind producing the next moment of mind; there is no beginning.

---

## REFLECTION

Consider:

1. Everything that is produced arises from causes; nothing can arise causelessly.
2. Causes are impermanent; they must cease in order for their result to arise.
3. There is concordance between a cause and its result. A specific result can only arise from the causes and conditions that are capable of producing it.
4. Apply this understanding to the existence of the physical universe and of your mind.

---

### *Is There an End to the Self?*

Within Buddhism there are two positions regarding this question. Some Vaibhāṣikas say that when an arhat (someone who has attained liberation from saṃsāra) passes away (attains nirvāṇa without remainder of the polluted aggregates), the continuum of the person ceases to exist, like the flame of a lamp

going out due to lack of fuel. Because the polluted aggregates are produced by afflictions and karma, when arhats pass away there is no continuity of their aggregates, since their causes — afflictions and polluted karma — have been ceased. Because the aggregates are necessary for the existence of a person, they say that the person no longer exists.

There are difficulties with this assertion: when the person is alive, there is no nirvāṇa without remainder of the polluted aggregates, and when this nirvāṇa has been attained, there is no person who attained it. In that case, how could we say, “This person attained this nirvāṇa?”

Furthermore, there is nothing that can eradicate the mindstream — the continuity of mind. The wisdom realizing selflessness eradicates afflictive obscurations, but it cannot destroy the clear and cognizant nature of the mind. For this reason Mādhyamikas and most Cittamātrins assert that after a person attains parinirvāṇa — the nirvāṇa after death — the continuum of the purified aggregates exists. These purified aggregates are the basis of designation of that arhat; thus the person does not cease to exist when he or she attains parinirvāṇa. Motivated by compassion, bodhisattvas who have overcome afflictive obscurations continue to take rebirth in cyclic existence. The continuity of buddhas’ mindstreams also remain forever.

From the viewpoint of Tantrayāna, after an arhat passes away the subtlest mind-wind continues to exist and a person is posited in dependence on this. That self is called an *arhat*. Someone who has attained full awakening obtains the four bodies (here “body” means collection) of a buddha. Since the mind’s ultimate nature is emptiness, the emptiness of the awakened mind becomes the nature truth body — the final true cessation of a buddha and the emptiness of that buddha’s mind. The subtlest mind becomes the wisdom truth body — the omniscient mind of a buddha. The subtlest wind becomes the form bodies of a buddha — the enjoyment body and the emanation bodies. An *ārya* buddha — a person who is a buddha — exists by being merely designated in dependence on these four bodies.

## *The Four Truths*

In classical India, many spiritual traditions spoke about the unawakened state of saṃsāra and the awakened state of nirvāṇa, each tradition having its own

description of duḥkha, its origins, cessation, and the path leading to cessation. Saṃsāra means to be reborn with karmically conditioned aggregates. Specifically, it is our five aggregates, subject to clinging (*upādāna*) and appropriated due to afflictions and karma.<sup>1</sup>

Liberation is freedom from the bondage of rebirth with polluted aggregates, impelled by afflictions and karma. *Polluted* means under the influence of ignorance. Liberation comes about by ceasing the ignorance and karma that cause cyclic existence. The mind renouncing duḥkha and intent on liberation is a precious mind that needs to be cultivated with care. Renunciation does not mean relinquishing happiness; it is the aspiration for liberation, the determination to seek a higher and more enduring happiness than saṃsāra can offer.

The first teaching the compassionate Buddha gave was the four truths: true duḥkha, true origins, true cessations, and true paths. These four truths cover our present state, one that is replete with unsatisfactory conditions (*duḥkha*) and their origins, and presents an alternative: nirvāṇa (true cessations) and the path leading to that. The Buddha did not create the four truths; he simply described the truth about saṃsāra and its origins as well as the truth that a path exists to cease those and bring about nirvāṇa.

We may wonder why these truths are sometimes called the *four noble truths*. After all, what is noble about suffering? *Noble* indicates (1) they were directly realized and taught by noble ones — āryas, those who have realized the ultimate nature directly, and (2) knowing these truths ennobles us by enabling us to become āryas. They are called *truths* because it is true that duḥkha and its origins are to be abandoned and it is true that cessations and paths are to be adopted. These four are true according to the perception of the āryas, and they are true in the sense that they form a nondeceptive explanation that will lead us beyond suffering.

The Buddha spoke of the four truths in many sūtras. In the first turning of the Dharma wheel, the Buddha presented the four truths by means of three cycles: first he identified the *nature* of each truth, then he spoke of *how to engage* with each one, and finally he described the *result* of realizing each truth.

### *The Nature of Each Truth*

In terms of their nature, *true sufferings* (*duḥkha*) are the polluted aggregates that are principally caused by afflictions and polluted karma. More broadly, true duḥkha consists of polluted bodies, minds, environments, and the things we use

and enjoy. In *Compendium of Knowledge* Asaṅga says, “If one asks what is true duḥkha, it is to be understood both in terms of the sentient beings who are born as well as the habitats in which they are born.” The body and mind are internal true duḥkha because they are in the continuum of a person; the environment and the things around us are external true duḥkha, which are not part of a person’s continuum. All true origins are also true duḥkha, although not all true duḥkha is true origins. All afflictions are unsatisfactory, but our bodies and our habitats, which are unsatisfactory, are not causes of saṃsāra.

What propels this process of uncontrollably and repeatedly taking the psychophysical aggregates of a being of one of the three realms? It is the *true origins* of duḥkha — afflictions and polluted karma (actions). The chief affliction that is the root of saṃsāra is the ignorance grasping inherent existence — a mental factor that apprehends phenomena as existing in the opposite way than they actually exist. Whereas all phenomena exist dependently, ignorance apprehends them as existing independently. The Tibetan term for ignorance — *ma rig pa* — means not knowing. Even its name implies something undesirable that disturbs the mind and interferes with happiness and fulfillment. Since the cause of cyclic existence is inauspicious, its effect — our bodies, habitats, and experiences in cyclic existence — will not bring stable joy.

Ignorance narrows the mind, obscuring it from seeing the multifarious factors involved in existence. From ignorance stems various distorted conceptualizations that foster the arising of all other afflictions — especially the “three poisons” of confusion, attachment, and animosity. Afflictions in turn create karma that propels saṃsāric rebirth. In the context of the four truths, the Buddha identified craving as the principal example of the origin of duḥkha to highlight its prominent role.

*True cessations* are the exhaustion of true duḥkha and true origins. From the Prāsaṅgika viewpoint, they are the emptiness of an ārya’s mind, specifically the purified aspect of the ultimate nature of a mind that has abandoned some portion of obscurations through the force of a true path.

*True paths* are āryas’ realizations informed by the wisdom directly realizing selflessness. With the exception of ethical restraints that are imperceptible forms, true paths are consciousnesses. Pāli sūtras emphasize the eightfold path, which is subsumed into the three higher trainings, as the true path. Of the eight, right view — the wisdom realizing selflessness — is what actually cuts the root of cyclic existence.

The four truths comprise two pairs, each pair having a cause-and-effect

relation. True origins cause true duḥkha, and true paths bring about true cessations. Technically speaking, true cessation — nirvāṇa — is not an effect, because it is unconditioned and permanent.<sup>2</sup> However, attaining nirvāṇa is due to a cause, which is the true path. The Buddha goes into more depth about the nature of each truth in the *Establishment of Mindfulness Sutta* (DN 22:18–21):

And what, monastics, is the ārya truth of duḥkha? Birth is duḥkha, aging is duḥkha, death is duḥkha, sorrow, lamentation, pain, dejection, and despair are duḥkha. Encountering the undesired is duḥkha, being separated from the desired is duḥkha, not getting what one wants is duḥkha. In short, the five aggregates subject to clinging are duḥkha . . .

And what, monastics, is the ārya truth of the origin of duḥkha? It is that craving that gives rise to rebirth, bound up with delight and attachment, seeking fresh delight now here, now there: that is to say, sensual craving, craving for existence, and craving for nonexistence.

And what, monastics, is the ārya truth of the cessation of duḥkha? It is the remainderless fading away and ceasing, the giving up, abandoning, letting go, and detachment from it [craving].

And what, monastics, is the ārya truth of the way leading to the cessation of duḥkha? It is just this ārya eightfold path — namely, right view, right intention, right speech, right action, right livelihood, right effort, right mindfulness, right concentration.

To look more closely at the Buddha’s description of *true duḥkha*: We are already aware of the suffering involved in birth, sickness, aging, and death. *Sorrow* is our response to misfortune and disagreeable situations. When sorrow intensifies so that it becomes unbearable, we cry out or weep. This is *lamentation*. *Pain* refers to physical pain of whatever sort; *dejection* is mental pain, unhappiness, and depression. Due to pain or dejection, suffering becomes overwhelming and we *despair*, giving up hope because we see no recourse to solve our difficulties.

*Encountering the undesired* is meeting with what is disagreeable. However much we try to avoid difficulties, they keep coming in one form or another. We encounter relationship and financial problems as well as prejudice, injustice, and climate change.

*Being separated from the desired* occurs when we have what we like and

then are separated from it. Once we have friends, relatives, a job and income, a good reputation, and so forth, we do not want to lose them. Although we cling to these, it is impossible to hold on to them forever because they are transient by their very nature. The greater our attachment, the more painful our eventual separation from them will be. For this reason the Buddha said that worldly things are unsatisfactory and lack the ability to bring lasting happiness.

*Not getting what we want* is the situation of having unfulfilled wishes and needs. We seek good health, financial security, and stable relationships; we wish to stay young forever and have an excellent reputation. However much we want these, we cannot achieve them to a degree that fulfills us, and fall prey to frustration, moodiness, and despondency. This experience is common to the rich and the poor, the popular and the lonely, the healthy and the ill.

The above circumstances are fairly easy to discern in our lives. In them we find three types of *duḥkha*. There are (1) evident pain — the *duḥkha of pain* — and (2) the unsatisfactory situation of not being able to hold on to the pleasant — the *duḥkha of change*. (3) The basis upon which these arise is the body and mind — the five aggregates subject to clinging. Because we have these five aggregates, all the other unsatisfactory situations arise. This is the *pervasive duḥkha of conditionality*, which is intrinsic to the five aggregates that are clung to with ignorance.

The five aggregates are momentary processes, bound together in relationships of mutual conditionality. We believe ourselves to be independent persons, existing above and beyond the body and mind or existing within the body and mind and having control over them. This idea of being an independent self is delusion. Until now we have never examined how we grasp the self and simply assume there is a self in control of the aggregates.

When we look deeply into the nature of the five aggregates, we see that they are simply momentarily changing processes that are in a constant flux. They arise and pass away without interruption, giving rise to the next moment in the same continuum. What we consider to be the person consists of only momentary material and mental aggregates.

Our bodies and minds are transient by nature. There is no further cause or external condition for their changing and passing away other than their having arisen. The Buddha said, “Whatever has the nature of arising, all of it has the nature of ceasing.” This is subtle impermanence, and to realize it clearly through direct experience requires great mindfulness and concentration. This realization is very valuable because, when coupled with the understanding that our

aggregates will never be something secure that we can take comfort in, it leads us to seek the *origin of duḥkha* and to investigate if it can be eradicated and, if so, how.

Repeatedly taking the five aggregates occurs due to ignorance, craving, and karma. Not only are our present aggregates the product of past ignorance, craving, and karma, but they also become the basis in this life for the arising of more ignorance, craving, and karma, which lead to taking another set of five aggregates subject to clinging in the future, which are under the control of ignorance, craving, and karma.

In pointing to craving as the prime example of the origin of duḥkha in the above passage, the Buddha was not disregarding the role of ignorance, other afflictions, and karma. Ignorance obscures the mind from knowing things as they are, and within that unclarity, craving is an active force that creates duḥkha. It does this in several ways: First, craving arises toward whatever is pleasurable. It seeks out objects, cognitive faculties, consciousnesses, contacts, feelings, intentions, thoughts, and images that are agreeable. In short, craving makes us into addicts who perpetually seek more and better physical and mental pleasures. Causing us to cling to the objects that appear to give us pleasures, craving breeds dissatisfaction and a sense of lacking. Thinking that gratifying all our desires will bring us happiness, we find ourselves immersed in cheating, lying, backbiting, and other harmful behaviors. In sum, craving lies behind much of the karma that projects rebirth in cyclic existence.

In addition to motivating many of the destructive actions we engage in during our lives, craving arises forcefully at the time of death, ripening the karmic seeds that project the next rebirth. As death approaches, craving seeks to preserve our sense of being an independent person; we do not want to separate from the body and mind of this life that are the basis for fabricating an independent self. However, during the death process, the body's ability to act as the support for consciousness ebbs, and craving gives rise to clinging, which propels the mind to seek rebirth in another body. According to the karmic seeds fertilized by craving and clinging, the mind connects to another body at the moment of rebirth. For human rebirths, this is the moment of conception. When consciousness joins the fertilized egg, all five aggregates of the next rebirth come into existence together. The fertilized egg is the body; and along with consciousness come feeling, discrimination, and miscellaneous factors, thus forming the basis of the person of the new life.

The *true cessation of duḥkha* is the relinquishment of the afflictive

obscurations, especially craving. In our daily lives, we may experience facsimiles of cessation — for example, the peace and relief we feel when we let go of having our way or of insisting on being right and having the last word in an argument. While the final true cessation is nirvāṇa, āryas attain several partial cessations while on the path each time they abandon a certain portion of afflictions and their seeds.

The Pāli tradition speaks of four types of cessation; not all of these are nirvāṇa:

(1) *Cessation by factor substitution* (P. *tat anga nirodha*) occurs after we have cultivated the antidote to a particular affliction and temporarily eliminated it. When angry, we meditate on fortitude, and when filled with sensual craving, we contemplate the unattractiveness of the body. By substituting a virtuous state of mind for a nonvirtuous one, there is a cessation by factor substitution.

(2) *Cessation through suppression* (P. *vikambana nirodha*) is the result of attaining the meditative absorptions. Strong samādhi temporarily overcomes the manifest forms of the five hindrances and other defilements (P. *saṃkleśa, saṃkilesa*), bringing the peace and bliss of concentration. Since the defilements are not active during meditative absorption, it seems that they have been eradicated. However, they have only been suppressed and their seeds remain in the mindstream.

(3) *Cessation through eradication* (P. *samucheda nirodha*) is the cessation attained through penetrative wisdom that cuts off the defilements so that they can never arise again. This cessation is attained beginning at the stage of stream-enterer (path of seeing), progresses through the stages of once-returner and nonreturner (path of meditation), and culminates in arhatship (path of no more learning).

(4) The *ultimate cessation of defilement* (P. *achanta nirodha*) as explained in the Pāli tradition is the reality that is the ultimate absence of all defilements. Cutting off defilements completely depends on a reality that is completely free from defilements, a reality that is ever-existing, unconditioned, and unborn. It is the existence of this unborn state — the reality of nirvāṇa — that makes the eradication of all defilements possible.<sup>3</sup> This nirvāṇa is the object of penetrating wisdom. When wisdom sees the truth of nirvāṇa and actualizes true cessation, defilements are eradicated.

---

<sup>3</sup>

## REFLECTION

1. Remember a time when you applied an antidote to an affliction such as greed or the wish for revenge, and that affliction temporarily subsided.
2. Consider that it is possible for afflictions to subside for a longer period of time due to the force of having strong concentration that makes the mind extremely tranquil and peaceful.
3. Consider that it is possible to perceive reality directly and, by this, eradicate some level of defilement.
4. Consider that it is possible to deepen and stabilize that perception of reality so that all afflictive obscurations are eradicated such that they can never return.
5. Make a strong determination to do this.

---

True cessation is attained not by wishing or praying for it but by means of training the mind. The principal *true path* that trains the mind is the right view — the wisdom realizing selflessness. We must put energy into understanding the four truths, first intellectually, then experientially, and finally with penetrative wisdom. When a person on the śrāvaka path penetrates the four truths with direct realization, she becomes a stream-enterer and has entered the stream leading to nirvāṇa. She becomes an ārya who will proceed to nirvāṇa and never again be an ordinary being. When those following the bodhisattva path gain this realization, they become ārya bodhisattvas and will irreversibly proceed to full awakening.

### *How to Engage with Each Truth*

How do we engage with or practice the four truths? True duḥkha is to be fully known or understood, true origins is to be abandoned, true cessations is to be actualized, and true paths is to be cultivated. Maitreya's *Sublime Continuum* (*Ratnagoṭravibhāga, Uttaratantra*) says (RGV 4.57):

In the case of disease, we need to diagnose it, remove its causes, attain the happy state [of health], and rely on suitable medicine.

Similarly, we need to recognize our duḥkha, remove its causes, actualize its cessation, and rely on the suitable path.

### *The Result of Each Truth*

In terms of the resultant understanding of the four truths, true duḥkha is to be fully understood, but there is no duḥkha to understand; true origins are to be abandoned, but there are no origins to abandon; true cessation is to be actualized, but there is no cessation to actualize; and true paths are to be cultivated, but there are no paths to cultivate.

This may be understood in two ways. The first is common to all Buddhist schools: once we have completely understood duḥkha, there is no more duḥkha to understand; once we have totally overcome its origins, there are no more causes of suffering to overcome; once we have perfectly actualized cessation, our liberation is complete and there are no more cessations to actualize; and once we have fully cultivated the path, there is nothing more to cultivate.

According to the uncommon Madhyamaka approach, the Buddha is referring to the ultimate nature of the four truths, their emptiness. His thought is that it is possible for us to overcome true duḥkha and its origins and to actualize true cessations and true paths because their very nature is empty of inherent existence. Since they are primordially empty and have never existed inherently, duḥkha and its origins can be eliminated, and true cessations and true paths can be actualized. Their ultimate nature, emptiness, is also called *natural nirvāṇa*, and this allows for us to attain the three other types of nirvāṇa: nirvāṇa without remainder, nirvāṇa with remainder, and nonabiding nirvāṇa.<sup>4</sup>

According to the Madhyamaka approach, true duḥkha is to be fully understood on the conventional level, but on the ultimate level there is no true duḥkha. That is, true duḥkha exists on the conventional level by being merely designated by concept and term, but on the ultimate level there has never been inherently existent true duḥkha; true duḥkha is naturally empty of inherent existence. It is similar for the other three of the four truths: they exist conventionally, but ultimately cannot be found by ultimate analysis.

### *The Coarse and Subtle Four Truths*

According to the Prāsaṅgikas' unique presentation, the four truths have both a

coarse and a subtle form. Vasubandhu's *Treasury of Knowledge* (*Abhidharmakośa*) and Asaṅga's *Compendium of Knowledge* (*Abhidharmasamuccaya*) described the coarse four truths: True duḥkha is all unsatisfactory circumstances arising from grasping a self-sufficient substantially existent person. True origins are grasping a self-sufficient substantially existent person and the afflictions and polluted karma arising from this grasping. True cessations are the abandonment of the duḥkha and origins that arise from grasping a self-sufficient substantially existent person. True path is the wisdom that sees the absence of a self-sufficient substantially existent person. This is the view held by the lower philosophical tenet systems.

The subtle four truths are described by the Prāsaṅgikas: True duḥkha is the unsatisfactory circumstances that are rooted in grasping inherent existence and karma. True origins are grasping inherent existence of persons and phenomena and the afflictions and polluted karma that arise from this grasping. True cessations are the complete eradication of these, and true path is the wisdom realizing the emptiness of inherent existence. As true origin, grasping inherent existence is much subtler and more tenacious than grasping a self-sufficient substantially existent person. It is also more difficult to identify when meditating on selflessness.

Ordinary beings can directly realize coarse selflessness — the lack of a self-sufficient substantially existent person. But this realization alone cannot remove the root of cyclic existence, the ignorance grasping inherent existence. At best, it can temporarily abandon coarse self-grasping and the afflictions that depend on it. Therefore the wisdom realizing the lack of a self-sufficient substantially existent person is not an actual true path capable of cutting the root of cyclic existence, and the cessation of this grasping is not an actual true cessation. Here we see the far-reaching implications of the Prāsaṅgikas' way of positing the object of negation and the importance of identifying it correctly in order to cultivate the wisdom that sees it as nonexistent.

## *The Sixteen Attributes of the Four Truths of Āryas*

The sixteen attributes of the four truths are found in the *Treasury of Knowledge*, Asaṅga's *Śrāvaka Grounds* (*Śrāvakabhūmi*), and Dharmakīrti's *Commentary on Reliable Cognition*. They are taught to protect sentient beings from duḥkha by helping them to develop wisdom and insight (*vipaśyanā*). Each truth has four

attributes, which counteract four distorted conceptions about each truth. In addition to eliminating these sixteen misconceptions, which are obstacles to attaining liberation, the sixteen attributes establish the existence of liberation and the method to attain it. Each attribute is a quality of that truth and reveals a specific function of that truth.

If you have doubts regarding the possibility of eradicating duḥkha forever and if you wonder if nirvāṇa exists and if it is possible to attain it, contemplation on the sixteen attributes of the four truths will be very helpful. As we reflect on them, we may discover that we hold some of the misconceptions that are refuted. Making effort to understand the sixteen attributes will help us to dispel these, clearing the way for wisdom to arise.

Unless otherwise noted, the sixteen attributes are presented according to the common view acceptable to all Buddhist tenet systems. The unique Prāsaṅgika meaning is also presented when it differs from this.<sup>5</sup> Please note that while each truth is often stated in the singular (e.g., true origin), it has many components, so sometimes it is expressed in the plural (true origins).

### *Four Attributes of True Duḥkha*

True duḥkha (*duḥkha-satya*) is the polluted aggregates principally caused by afflictions and karma. They include internal true duḥkha, such as our polluted bodies and minds, and external true duḥkha, such as our habitats and the things in it.

The four attributes of true duḥkha — impermanent, duḥkha (unsatisfactory), empty, and selfless — counteract four distorted conceptions (*ayoniśo manaskāra*) or conceptualizations (*vikalpa viparyāsa*) — believing impermanent things to be permanent, things that are by nature unsatisfactory to be pleasurable, the unattractive to be attractive, and what lacks a self to have one.<sup>6</sup> The Buddha said in *Distortions of the Mind* (AN 4.49):

Perceiving permanence in the impermanent,  
perceiving pleasure in what is duḥkha,  
perceiving a self in what is not-self,  
and perceiving beauty in what is foul,  
beings resort to wrong views,  
their minds deranged, their perception twisted.

Such people are bound by the yoke of Māra<sup>7</sup>  
and do not reach security from bondage.  
Beings continue in saṃsāra,  
going repeatedly from birth to death.

But when the buddhas arise in the world  
and send forth a brilliant light,  
they reveal this teaching that leads  
to the stilling of duḥkha.

Hearing it, wise people regain their sanity.  
They see the impermanent as impermanent,  
and what is duḥkha as duḥkha.  
They see what is not-self as not-self,  
and the unattractive as unattractive.  
By acquiring the right view,  
they overcome all duḥkha.

The four attributes of true duḥkha counteract the four distorted conceptions.<sup>8</sup> Understanding the first two attributes prepares us to realize the last two, which are the main antidotes that bring true cessations. While our physical and mental aggregates are pinpointed as an example of true duḥkha because they are the basis of designation of the self, the explanation pertains to everything conditioned by afflictions and karma.

1. The physical and mental aggregates are *impermanent* (*anitya*) because they undergo continuous, momentary arising and disintegrating.

Overwhelmed by ignorance, we apprehend transient things — such as our bodies, relationships, and possessions — as unchanging, stable, and enduring, and expect them to remain the same and always be there. We do not feel that we are going to die — at least not any time soon. Believing that we are the same person we were yesterday, we expect our lives to be constant and predictable. We are surprised by a car accident or a sudden change in our conditions at work. As a result of holding what is impermanent to be permanent, we don't prepare for death or future lives by avoiding harmful actions and engaging in constructive ones. Telling ourselves we will practice Dharma later when we have more time, we waste our precious human lives.

Coarse impermanence is perceptible by our senses: the sun sets, a building is

constructed and later decays, babies become adults and then die. All of these coarse changes happen due to subtle impermanence — changes occurring in each moment. These subtle changes are built into the nature of conditioned things; no other external factor is necessary to make things arise and cease in each moment.

Arising is something new coming into existence, abiding is the continuation of something similar, and ceasing is the disintegration of what was. These three occur simultaneously in each moment. From the moment something arises, it is changing and ceasing. There is no way to halt this process or take a time-out. Because everything changes in each moment, there is no stability or security to be found in saṃsāra. Understanding this gives us a more realistic view of life. This, in turn, helps us to release attachment to saṃsāric enjoyments and birth in saṃsāra in general, and frees our mind to seek a more reliable happiness that comes from Dharma practice.

2. The aggregates are *unsatisfactory by nature* (*duḥkhatā*) because they are under the control of afflictions and karma.

Believing that what is unsatisfactory by nature — food, possessions, reputation, friends, relatives, our bodies, and so forth — is actual pleasure and happiness, we jump into the world of transitory pleasures expecting lasting joy. Viewing our bodies to be a source of great pleasure, we expend great effort to secure and experience sensual delights. In doing so we consume more than our fair share of the Earth's resources and spend a lot of time chasing illusions. In actuality, our bodies have constant aches and pains and are seldom comfortable for long. If we saw them more realistically, we would keep them healthy in order to use them to practice the Dharma, but we would not expect true happiness from them.

Contemplating that the objects, people, and activities we see as enjoyable are actually unsatisfactory in nature because they are under the influence of afflictions and karma remedies the distorted belief that they are a source of secure happiness. What we commonly call pleasure is actually a state where one discomfort has decreased and a newer discomfort is just beginning. For example, when we've been standing a long time, sitting brings a feeling of relief and pleasure. But slowly, the discomfort of sitting increases, and after a while we want to stand up and walk around.

Our aggregates are subject to the three types of duḥkha mentioned above — the duḥkha of pain, which is physical and mental pain; the duḥkha of change, in

which pleasurable circumstances do not last; and the pervasive duḥkha of conditioning, a body and mind conditioned by afflictions and karma. This last one is the source of the first two. Afflictions and karma condition our experiences, and without choice, our bodies fall ill, age, and die. Our minds are overwhelmed by disturbing emotions such as despair and rage. Understanding that whatever is under the power of afflictions and karma cannot be a source of lasting joy, we release unrealistic expectations and distance ourselves from the useless pursuit of clinging to saṃsāric pleasures. Instead we direct our energy toward actualizing true cessations.

The attributes of impermanence and duḥkha are linked. Āryadeva says (CS 50):

The impermanent is definitely harmed.  
What is harmed is not pleasurable.  
Therefore all that is impermanent  
is said to be duḥkha.

Gyaltsab explains:

Whatever is impermanent, such as the body, which is a maturation of polluted past karma and afflictions, is definitely damaged by factors causing disintegration and therefore produces aversion. Anything affected by causes of harm, whose character is to produce aversion, is not pleasurable. Therefore all that is impermanent and polluted is said to be duḥkha, just as anything that falls into a salt pit become salty.

Impermanent and polluted things, such as our bodies, are under the influence of afflictions and karma that cause them to disintegrate. An aged or dead body is considered undesirable and unclean, just as beautiful flowers are ugly when they decay and rot. Anything that disintegrates under the influence of afflictions and karma and produces aversion and distaste in us is by nature duḥkha. It lacks a findable essence; it is empty. Seeing this leads to disenchantment with saṃsāra and inspires us to turn our attention to liberation.

3. The aggregates are *empty* (*śūnya*) because they lack a permanent, unitary, and independent self.

The third distorted conception holds what is foul — specifically our bodies

— as beautiful. Our own and others’ bodies are filled with ugly substances — blood, bones, muscles, organs, tissue, excrement, and so on. Because of ignorance, we preen our own bodies and see others’ bodies as desirable and lust after them. Needless to say, our infatuation with the body is misplaced and leads to disappointment and misery.

There are two aspects to seeing the aggregates as unattractive. The first focuses on the body and sees that its organs, fluids, and so forth are foul. No one finds the inside of the body gorgeous, and we clean away everything that the body excretes. The second understands that since the aggregates are impermanent and are unsatisfactory by nature, the body is unattractive and our afflictive thoughts are undesirable. As such, our saṃsāric aggregates are not worth craving and clinging to, for they lack the capacity to bring us enduring well-being. This inspires us to turn our attention to creating the causes for liberation.

The aggregates being empty refutes the permanent, unitary, independent self or ātman as conceived by the non-Buddhists. *Permanent* here means the self is eternal and does not change from one life to the next. *Unitary* means not made of parts, and *independent* in this context means not depending on causes and conditions. Such a self or soul has a nature that is entirely different from that of the aggregates: it is forever unchanged, monolithic, all-pervasive, and completely separate from conditioned phenomena. The aggregates, in contrast, change, consist of parts, and are influenced by causes and conditions. The aggregates cannot possibly be such a self. The attribute of empty also refutes the existence of an independent creator who is unchanging, monolithic, and not affected by causes and conditions.

How does the third attribute — empty — counteract the notion of the body as attractive? Our mistaken belief that the foul body is attractive and pure involves holding the person and the aggregates to be separate when in fact they are the same nature. During the Buddha’s time, people adhered strongly to the caste system and the brahmins prided themselves on being pure because they were born from Brahmā’s mouth, while those of lower castes were born from lower parts of Brahmā’s body and thus were considered impure. Brahmins maintained strict rules of cleanliness to the extent that they did not touch the bodies of lower-caste people, eat with them, or use the same utensils. The Buddha opposed the caste system and the notion of a “pure self” that was its basis. By teaching that there is no pure, eternal, monolithic self that is separate from the aggregates, he pointed out that all saṃsāric bodies — no matter what

caste people belonged to — were unattractive and impure.

Although Prāsaṅgikas agree with the above, their unique viewpoint of the third attribute is expressed in the following syllogism: The aggregates are *empty* because of arising dependently. This expresses the emptiness of inherent existence of phenomena. If the subject were the person, it would express the emptiness of the person. The reason — dependent arising — proves the emptiness of both the person and the aggregates because in both cases inherent existence is being negated. The reason in this syllogism could also be “because of depending on causes and conditions” or “because they depend on parts.”

4. The aggregates are *selfless* (*nairātmya*) because they lack a self-sufficient substantially existent person.

If a self-sufficient substantially existent person existed, it would be the same nature as the aggregates. When we say “I” or “my body and mind,” we have the impression that there is a self who is the owner and controller of the body and mind. This I instructs the mind to think and the body to move. Whereas we usually identify a person by seeing his body, hearing her voice, or thinking of her mind, a self-sufficient substantially existent person could be identified without cognizing any of the aggregates. The fourth attribute negates the existence of such a self.

According to Prāsaṅgikas’ unique view, a self-sufficient substantially existent self is a coarse object of negation, one that can be refuted by a conventional reliable cognizer. They assert that the fourth distorted conception is grasping all phenomena whatsoever as inherently existent, meaning they have their own intrinsic essence and exist under their own power, independent of all other factors. For Prāsaṅgikas emptiness and selflessness come to the same point.

The ignorance that grasps inherent existence is a big troublemaker. Based on it, we incorrectly consider ourselves to be self-enclosed entities, become attached to our individual well-being, and see everything in relationship to ourselves. Grasping inherent existence stimulates distorted conceptualization, which projects attractiveness and ugliness on people and things that don’t have them. As a result, we become indignant when criticized and arrogant when praised. This leads to manipulative behavior, personal anguish, societal discord, and vicious wars. It is important to understand this by examining our own experiences.

Because all phenomena are baseless — they lack an inherent nature — it is

possible for the wisdom realizing the emptiness of inherent existence to overcome and dispel self-grasping ignorance, which holds phenomena to exist inherently. Seeing with wisdom that all persons and phenomena are selfless — that they lack inherent existence — is the path freeing us from saṃsāra.

In conclusion, based on not knowing the four attributes of true duḥkha, the four distorted conceptions arise in our minds one after the other. They give rise to afflictions, which instigate disturbing mental, verbal, and physical actions, which in turn leave karmic seeds on our mindstreams. Some of these karmic seeds ripen at the time of death and cause our next rebirth; others ripen in our future lives, affecting our environments, habits, and the experiences we undergo. This is the meaning of being under the control of afflictions and polluted actions, and it clearly illustrates that we are not free to experience the joy and fulfillment we seek. We must understand the four distorted conceptions well in order to overcome them, just as in ordinary warfare one has to learn about one's enemies in order to defeat them.

The four attributes of true duḥkha build on one another. Our bodies and minds change moment by moment. This is their nature; once they arise, no further cause is needed to make them change. Knowing this contradicts the belief that they are static and unchanging.

Impermanent things are produced by causes and conditions; our aggregates are controlled by their causes — afflictions and karma — which are ultimately rooted in ignorance. Anything caused by or rooted in ignorance is unsatisfactory; this is the pervasive duḥkha of conditioning. Once we understand this, no matter how beautiful, pleasurable, and enticing things may appear, we know they are not worthy of our clinging to them.

The first two attributes center on the aggregates being dependent on causes and conditions. They lead to understanding the last two attributes that deny the existence of any kind of independent self or person. We aren't free from these aggregates, so how could there be a permanent, unitary, independent self that is a different entity from the aggregates? We cannot prevent our bodies and minds from aging and dying, so how could there be a self-sufficient substantially existent person that controls the aggregates?

Whether we initially approach the four attributes from the viewpoint of reasoning or meditation, we must later combine the knowledge gained from both to attain a yogic direct reliable cognizer that realizes impermanence, duḥkha, emptiness, and selflessness. This mind is a mental consciousness that is a union

of serenity and insight that directly realizes these four attributes.

Reflecting on the four attributes of true duḥkha makes us yearn to be free from our polluted aggregates and to attain nirvāṇa, a state of true freedom. The practice of the four establishments of mindfulness is one way to realize the four attributes of true duḥkha and to overcome the four distorted conceptions. Mindfulness of the body overcomes holding it as attractive; mindfulness of feelings overcomes seeing the aggregates as pleasurable and desirable; mindfulness of the mind counteracts grasping a permanent, unitary, independent self; and mindfulness of phenomena leads us to understand selflessness. The realization of subtle emptiness and subtle selflessness frees us from the bonds of cyclic existence.

DISTORTED CONCEPTIONS OF TRUE DUḤKHA		ATTRIBUTES OF TRUE DUḤKHA <i>The polluted aggregates are</i>
1.	Believing impermanent things to be permanent	Impermanent, because they undergo continuous, momentary arising and disintegrating
2.	Believing unsatisfactory things to be pleasurable	Duḥkhatā, because they are under the control of afflictions and karma
3.	Believing the unattractive to be attractive	Empty, because they lack a permanent, unitary, and independent self
4.	Believing what lacks a self to have a self	Selfless, because they lack a self-sufficient substantially existent self

---

## REFLECTION

1. Remember a situation in which you had strong animosity toward someone. Observe how you believed that person to be fixed and unchanging. It seems as if all he has ever been or done is condensed as that horrible person who harmed you.
2. Ask yourself if this is true. Is the person frozen in time like this? Or does he change depending on causes and conditions? Is there an independent person who always has been and always will be the image you currently have of him?
3. Seeing that the person is neither permanent nor independent, allow your

anger to dissipate. Enjoy the feeling of being free from hurt and anger.

---

### *Four Attributes of True Origins*

True origins (*samudaya-satya*) — afflictions and karma — are the principal causes of true duḥkha. Actions come from afflictions, especially craving and ignorance, the root of all afflictions. Buddhist tenet systems have various ideas of what ignorance is and how it relates to the view of a personal identity. These will be explained later.

A prominent example of afflictions is craving (*trṣṇā*), a strong liking for an object and unwillingness to let it go. Looking closely at our life experiences, we see that much of our suffering is due to craving — holding on to something or someone outside of ourselves as the source of happiness, security, and success. Craving creates feelings of dissatisfaction and inadequacy, so that no matter what we accomplish or possess, or who loves and appreciates us, we still feel discontent, pervaded by the longing for more and better.

The four attributes of true origins are cause, origin, strong producers, and conditions.

1. Craving and karma are the *causes (hetu)* of duḥkha because they are the chief causes of duḥkha.

Our suffering is not haphazard but has causes — craving and karma. Under the control of ignorance, we crave to experience pleasant feelings and crave to not experience painful ones. This leads us to act, creating karma. Craving also spurs different karmas to ripen into their results, especially during the dying process. This attribute refutes the idea that duḥkha is random or causeless, as asserted by the Materialists (Cārvāka), a philosophical school in ancient India. By rejecting the law of karma and its effects, many Materialists denied ethical responsibility and lived hedonistic lifestyles, indulging in sense pleasures with little thought of the long-term effects of their actions on themselves or others.

2. Craving and karma are *origins (samudaya)* of duḥkha because they repeatedly produce all of the diverse forms of duḥkha.

Afflictions and karma create not just a portion of our mental and physical misery but all of it in the past, present, and future. Understanding this dispels the idea that duḥkha comes from only one cause, such as an external deity or a

primal cosmic matter. If duḥkha rested on only one cause, cooperative conditions would be unnecessary, in which case either that cause would never produce a result or it would never stop producing a result. If a sprout depended only on a seed and nothing else, the seed would continually grow because the change of seasons would not affect it at all; or it would not grow at all because the presence of warm weather, water, and fertilizer would not affect it. Duḥkha depends on the coming together of many changeable factors. It is not predestined or fated.

Seeing the diverse forms of duḥkha that sentient beings repeatedly experience under the control of afflictions and karma can be shocking at first. However, since they are conditioned phenomena, when conditions change or cease, duḥkha will similarly change or cease.

3. Craving and karma are *strong producers (prabhava)* because they act forcefully to produce strong duḥkha.

We tend to think that our problems come from causes outside of ourselves — an external creator or another person. When some people experience illness or accidents, they attribute it to God, who willed that event. On a more mundane level, we blame our unhappiness on other people or external circumstances. This way of thinking locks us into a victim mentality where we believe we are unable to change our experiences because they are caused by someone outside of ourselves. Understanding the third attribute dispels the notion that duḥkha arises from discordant causes — for example, the motivation of an external creator.

Afflictions and karma bring intense duḥkha in both lower and higher realms, and they forcefully keep us bound in saṃsāra. When we understand that afflictions and karma are the actual origins of our problems, we accept responsibility for our actions and our lives. We become empowered, knowing that we have the ability to change our situation and create the causes for the happiness we want. Having correctly identified the origins of our misery, we learn, reflect on, and meditate on the Dharma to counteract afflictions and purify karma. Understanding this stimulates us to dispel these origins of duḥkha.

4. Craving and karma are *conditions (pratyaya)* because they also act as the cooperative conditions that give rise to duḥkha.

Craving and karma are not only the primary causes of duḥkha but also the cooperative conditions that enable karma to ripen. When craving manifests in our minds, it acts like fertilizer enabling karmic seeds to ripen. Understanding

that duḥkha depends on causes and conditions dispels the notion that it is fixed and unalterable and counteracts the idea that duḥkha is fundamentally permanent but temporarily fleeting — that is, thinking our unsatisfactory state cannot be overcome even though there are temporary times of reprieve. When the causes and conditions are eliminated, the resultant unsatisfactory and suffering experiences will also cease. Knowing this brings resilience to our Dharma practice.

Contemplating these four attributes strengthens our determination to abandon true origins.

<b>DISTORTED CONCEPTIONS OF TRUE ORIGINS</b>		<b>ATTRIBUTES OF TRUE ORIGINS</b> <i>Afflictions (especially craving) and karma are</i>
1.	Believing that duḥkha is random or causeless (Cārvāka)	Causes of duḥkha, because they are the chief causes of duḥkha
2.	Believing that duḥkha comes from only one cause	Origins, because they repeatedly produce all the diverse forms of duḥkha
3.	Believing that duḥkha arises from discordant causes, such as an external creator (Vaiśeṣika)	Strong producers, because they act forcefully to produce strong duḥkha
4.	Believing that duḥkha is fundamentally permanent but temporarily fleeting (Nirgrantha)	Conditions, because they act as cooperative conditions that give rise to duḥkha

---

## REFLECTION

1. Examine the role of craving in your life. What do you crave? Do these things actually satisfy you when you get them?
2. Does craving come from outside yourself? Is it from a creator, another person, the object you crave? How is craving related to ignorance?
3. What do you do under the influence of craving? What are the results of these actions?
4. Make a strong determination to overcome ignorance and craving by practicing the path.

---

## *Four Attributes of True Cessations*

True cessations (*nirodha-satya*) include the cessations of various levels of afflictions that are actualized as we progress through the paths to arhatship and full awakening. Prāsaṅgikas add to this that a true cessation is the purified ultimate nature of the mind that has removed that level of afflictions.

An arhat's true cessation of all afflictions and karma causing saṃsāric rebirth is taken as the example. This true cessation in the continuum of an arhat is the cessation of innate (*sahaja*) afflictions that have existed since beginningless time and acquired (*parikalpita*) afflictions that were learned from incorrect philosophies.

Prāsaṅgikas assert that the true cessations of the coarse four truths are not actual true cessations because eliminating the ignorance grasping a self-sufficient substantially existent person does not eradicate true duḥkha and its origins, although it will temporarily stop the manifest coarse afflictions explained in the two *Knowledges*. They also assert that a buddha's true cessation is also the cessation of the cognitive obscurations that prevent full awakening.

The four attributes of true cessation address concerns that you may have. If you believe that afflictions exist inherently in sentient beings, so that a state of final peace is impossible, reflect on the first attribute. If you wonder if heaven is better than nirvāṇa, contemplate the second attribute. If you think that nirvāṇa isn't total freedom, reflect on the third attribute. And if you wonder if it's possible for nirvāṇa to deteriorate, contemplate the fourth attribute.

The four attributes of true cessation are cessation, peace, magnificence, and definite emergence (freedom).

1. Nirvāṇa is the *cessation* of duḥkha (*nirodha*) because it is a state in which the origins of duḥkha have been abandoned, and it thus ensures that duḥkha will no longer arise.

Thinking that afflictions are an inherent part of sentient beings, some people believe that trying to eliminate them is futile. They do not try to remedy their situation and consequently continue to be reborn in cyclic existence. Understanding that attaining true cessations is possible by eliminating afflictions and karma dispels the misconception that liberation does not exist, immediately freeing us from a defeatist, and often cynical, attitude.

2. Nirvāṇa is *peace (śānta)* because it is a separation in which afflictions have been eliminated.

Unable to correctly identify the qualities of liberation, some people mistake other polluted states, such as meditative absorptions in the form and formless realms, as liberation. Although these meditative absorptions are much more tranquil than our human existence, they have only suppressed manifest afflictions and have not eliminated subtle afflictions and their seeds from the root. Not understanding that nirvāṇa is ultimate peace, people do not try to attain it and are satisfied with a temporary, superior saṃsāric state. This attribute counteracts the belief that states polluted by ignorance are nirvāṇa. People who are convinced of the harm of afflictions and karma know that their cessation is a state of peace and joy that will not vanish.

3. Nirvāṇa is *magnificence (praṇīta)* because it is the superior source of benefit and bliss.

Because nirvāṇa is completely nondeceptive and no other state of liberation supersedes it, it is supreme and magnificent. Nirvāṇa is total freedom from all three types of duḥkha. Knowing this prevents mistaking certain states of temporary or partial cessation as nirvāṇa. It also prevents thinking that there is some state superior to the cessation of duḥkha and its origins. Someone who mistakes a saṃsāric state as liberation will follow a detour that does not lead to their destination. For example, someone who enjoys the tranquility of suppressing the conceptual mind in blank-minded meditation does himself a disservice, because nirvāṇa will elude him.

4. Nirvāṇa is *freedom or definite emergence (niḥsaraṇa)* because it is total, irreversible release from saṃsāra.

Nirvāṇa is a definite abandonment because it is an irrevocable release from saṃsāra's duḥkha. This counters the mistaken notion that nirvāṇa can degenerate. Because nirvāṇa is the elimination of all afflictions and karma causing saṃsāric rebirth, there no longer exists any cause for such rebirth or for the suffering it entails.

Contemplating these four attributes encourages us not to stop partway but to continue practicing until we actualize full nirvāṇa.

**DISTORTED CONCEPTIONS OF TRUE  
CESSATIONS**

**ATTRIBUTES OF TRUE CESSATIONS**  
*Nirvāṇa — an arhat's true cessation of all  
afflictions and karma that cause saṃsāric*

		<i>rebirth through the force of antidotes — is</i>
1.	Believing that liberation does not exist	Cessation of duḥkha, because it is a state in which the origins of duḥkha have been abandoned
2.	Believing that other polluted states (such as meditative absorptions in the form and formless realms) are liberation	Peace, because it is a separation in which afflictions have been eliminated
3.	Believing that a state of temporary or partial cessation is nirvāṇa/liberation	Magnificence, because it is the superior source of benefit and bliss
4.	Believing that nirvāṇa can degenerate, that it is reversible	Freedom, because it is total, irreversible release from saṃsāra

---

## REFLECTION

1. To get a small taste of what nirvāṇa could be like, imagine that an affliction such as anger is totally absent from your mind. No matter what someone says or does, no matter what happens, you will never get angry again.
  2. Nirvāṇa is the complete absence of all afflictions forever. Aspire to attain it.
- 

### *Four Attributes of True Paths*

The true path (*mārgasatyā*) is the wisdom realizing the sixteen attributes of the four truths, especially true cessation. Existing in the mindstreams of āryas of all three vehicles, true paths eradicate ignorance and other afflictions. When afflictions cease, polluted karma is no longer created and that which has already been created cannot ripen into a saṃsāric rebirth; liberation is attained.

The Pāli tradition says that the āryas' eightfold path constitutes true paths, while Prāsaṅgikas say it is an ārya's realization informed by the wisdom directly realizing the emptiness of inherent existence. The wisdom realizing emptiness is the principal true path because it views phenomena's mode of existence opposite to the way ignorance does. While ignorance grasps inherent existence, the

wisdom directly realizing emptiness realizes the absence of inherent existence. In this way, it is able to completely counteract ignorance and all afflictions rooted in it.

As above, these four attributes assuage doubts that we may have about the true path. If you fear that there is no path to peace, reflect on the first attribute. If you think that the wisdom realizing emptiness cannot counteract the afflictions, reflect on the second attribute. If you wonder if the wisdom realizing emptiness will actually eliminate all afflictions, ponder the third attribute. If you wonder if meditating with the wisdom realizing emptiness will bring nirvāṇa and not some other state, reflect on the fourth attribute.

The four attributes of true paths are path, suitable, accomplishment, and deliverance. These are explained according to the Prāsaṅgika viewpoint.<sup>9</sup>

1. The wisdom directly realizing selflessness is the *path (mārga)* because it is the unmistakable path to liberation.

This wisdom leads to liberation. Knowing this counters the misconception that there is no path to liberation from saṃsāra. People who believe no path exists will not venture to cultivate it and will remain endlessly trapped in cyclic existence.

2. The wisdom directly realizing selflessness is *suitable (nyāya)* because it acts as the direct counterforce to the afflictions.

The wisdom realizing selflessness is the suitable path leading to nirvāṇa because it is the powerful antidote that directly counteracts self-grasping ignorance and eliminates duḥkha. Understanding this eliminates the misconception that this wisdom is not a path to liberation. Having confidence that it is the correct path to nirvāṇa, we will be eager to cultivate the wisdom that knows the nature of bondage in and release from saṃsāra just as they are. This wisdom also knows the faults of the afflictions and the meaning of selflessness.

3. The wisdom directly realizing selflessness is *accomplishment (pratipatti)* because it unmistakably realizes the nature of the mind.

Unlike worldly paths that cannot accomplish our ultimate goals, the precious wisdom directly realizing emptiness leads to unmistakable spiritual attainments because it is an exalted wisdom that directly realizes the final mode of existence of the mind, its emptiness of inherent existence. In this way, it accomplishes the eradication of afflictions and attainment of liberation.

Understanding this counteracts the misconception that worldly paths eliminate duḥkha. Worldly paths are of many types, such as meditative absorptions that are mistaken for liberation. Blissful as they may be, they do not secure a true state of liberation. Some people practice the worldly path of extreme asceticism, mistakenly believing that harsh treatment of the body will eliminate craving for pleasure. This method does not bring the desired result, as the Buddha attested to by practicing — and then relinquishing — torturous asceticism for six years.

4. The wisdom directly realizing selflessness is the *way of deliverance (nairyāṇika)* because it overcomes afflictions and duḥkha from their root and brings irreversible liberation.

Inherent existence and noninherent existence are contradictory. By realizing the lack of inherent existence, the ignorance that grasps inherent existence can be conclusively removed. This wisdom is able to overpower ignorance because it knows things as they are, whereas ignorance relies on faulty fabrications. Because it definitely abandons all duḥkha and obscurations, this wisdom does not stop partway, but definitively delivers us from cyclic existence. This attribute counteracts the misconception that afflictions can regenerate and cannot be removed completely. It also counteracts the mistaken notion that while some paths may partially cease duḥkha, no path can cease it completely.

Contemplating these four attributes encourages us to meditate on true paths in order to destroy duḥkha and its origins and to actualize nirvāṇa.

<b>DISTORTED CONCEPTIONS OF TRUE PATHS</b>		<b>ATTRIBUTES OF TRUE PATHS</b> <i>The wisdom directly realizing selflessness is</i>
1.	Believing that there is no path to liberation	Path, because it is an unmistaken path to liberation
2.	Believing that this wisdom is not a path to liberation	Suitable, because it acts as the direct counterforce to the afflictions
3.	Believing that worldly paths (e.g., meditative absorptions) can eliminate duḥkha and are liberation	Accomplishment, because it unmistakably realizes the nature of the mind
4.	Believing that afflictions and duḥkha cannot be removed completely, or that once removed, they can reappear	Way of deliverance, because it overcomes afflictions and duḥkha from their root and brings irreversible liberation

## REFLECTION

---

1. Contemplate that true duḥkha — everything produced by afflictions and polluted karma — lacks any inherent essence.
2. Contemplate that all duḥkha as well as the origins of duḥkha depend on causes. Because they are dependent and do not exist under their own power, true duḥkha and true origins lack independent essence.
3. Contemplate the four attributes of true cessation. Abide in the certainty that nirvāṇa — a lasting state of peace and joy — can be attained, and let your mind be imbued with the optimism that brings.
4. Contemplate that true paths are also conditioned phenomena that depend on other factors. They too do not exist from their own side and thus are empty of inherent existence.

---

In conclusion, according to the Prāsaṅgika perspective, the entire complex of all sufferings and unsatisfactory circumstances of cyclic existence is rooted in self-grasping ignorance. This grasping at objective existence underpins our emotional reactions, such as craving, anger, jealousy, arrogance, guilt, and so forth. Cultivating the view of emptiness undermines this grasping and overcomes the four distorted conceptions. So there is a direct connection between the understanding of emptiness and our day-to-day engagement with the world.

While I have not realized emptiness directly, I can assure you that as a result of cultivating and deepening an understanding of emptiness and familiarizing myself with this understanding over time, I can see a progressive reduction of the influence of the afflictions that usually dominate our ordinary minds. There is a real impact and transformative power in this practice. If you make sincere effort to study, contemplate, and meditate on emptiness, the four distorted conceptions will no longer be able to nourish afflictions in your mind. When your afflictions have been eliminated, engaging in polluted actions ceases, and without these, rebirth due to afflictions and karma comes to an end.

## 2 | Revolving in Cyclic Existence: The Truth of Duḥkha

THE FOUR TRUTHS directly apply to our lives: they lay out the framework for understanding our situation and our potential. Having a general understanding of them, we will now go into more depth regarding each truth, beginning with the truth of duḥkha, the unsatisfactory circumstances in which we are bound. These include the three realms of saṃsāric existence into which we are born, the disadvantages of being born there, and the value of our human lives to reverse this situation.

### *Knowing Duḥkha for What It Is*

The Buddha said that true duḥkha is to be known, true origins are to be eliminated, true cessations are to be actualized, and true paths are to be cultivated. In specifying that true duḥkha is to be known, the Buddha was giving us an important message: unless we identify the unsatisfactory circumstances that afflict us, we will never attempt to free ourselves from them. If we don't know we are ill or deny the fact that we are, we will not go to the doctor or take the prescribed medicine. Meanwhile, an insidious disease will fester inside us.

In spiritual practice, the first step is to identify true duḥkha, the unsatisfactory situation in which we live. Once we know this, we will search out its causes, eliminate them by cultivating true paths, and actualize true cessations, the state of lasting peace and happiness that we want. When reflecting on the various types of duḥkha, keep in mind that the purpose is to generate the determination to be free from saṃsāra and attain liberation. Seeing others' duḥkha, with compassion we will want to help them attain liberation as well. Otherwise there is no purpose to reflecting on suffering.

Having properly identified our duḥkha, it is essential to cultivate the proper attitude toward it. Many of us, when confronted with pain or injustice, respond with anger or self-pity. We try to blame someone else for our misery. Meditating

on true duḥkha involves taking responsibility for our situation and our problems and dealing with them wisely.

We may think that we're already aware of our misery, so there's no need to contemplate it. Although we may be aware of our gross duḥkha, we probably are not aware of duḥkha's subtler levels. Until we recognize these, we won't seek to be free from them.

Initial-level practitioners identify the obviously painful suffering of unfortunate migrations and its causes — destructive actions. They wish to attain a good rebirth (the cessation of that suffering), and observe karma and its effects as the path to accomplish this. Nevertheless, these people do not yet understand the full meaning of duḥkha, nor can they actualize the full cessation of all duḥkha.

We may know the various divisions of duḥkha into three, six, and eight types and have intellectual knowledge of them, but real understanding comes from observing our own experiences — our bodies and minds, our lives and deaths. It involves facing the disparity between the belief that we are in control of our lives and the reality of what actually is.

When reflecting on duḥkha, keep in mind that understanding duḥkha and its origins is just the beginning. The Buddha also taught the last two truths, directing us to the state of genuine peace and showing us the method to attain it. With those, we will have a complete picture. As Buddhaghosa said (Vism 16.97):

The truth of duḥkha should be regarded as a burden, the truth of origin as the taking up of the burden, the truth of cessation as the putting down of the burden, the truth of the path as the means to put down the burden. The truth of duḥkha is like a disease, the truth of origin is like the cause of the disease, the truth of cessation is like the cure of the disease, and the truth of the path is like the medicine.

## *Realms of Existence*

As beings in cyclic existence, we are reborn in different realms (*dhātu*) of existence. A realm is primarily the five aggregates projected by our karma, although it also includes the environment. All of these are considered true duḥkha. One way of expressing the realms of saṃsāra is the schema of the three

realms (*tridhātu* or *trailokya*). Beings in the *desire realm* are completely immersed in objects that are attractive to the six senses. They are obsessed with fulfilling their desires by possessing these objects. This is the realm in which we presently live. The *form realm* comprises beings who have attained the four levels of single-pointed concentration or meditative stabilization (*dhyāna*, *jhāna*). The *formless realm* consists of beings in even deeper states of meditative absorption (*samāpatti*),<sup>10</sup> such that they do not have bodies. While these realms are manifestations of our karma, they are not merely projections of mind or metaphors for states we experience as human beings. When we are born in a realm, it appears as real to us as our present human life and environment appear to us now.

Sentient beings in saṃsāra can be subdivided into six classes (*ṣaḍgati*). From the highest to the lowest, they are devas (gods or celestial beings in the desire, form, and formless realms), asuras (anti-gods), human beings, hungry ghosts, animals, and hell beings. Sometimes the devas and asuras are considered as one, in which case there are five classes.

The three realms can be expanded into thirty-three classes of beings or planes of existence, which are listed from the highest to the lowest.<sup>11</sup>

#### (1) Formless Realm (*Ārūpyadhātu*)

33. Peak of Saṃsāra (Neither-discrimination-nor-nondiscrimination, *Naivasamjñānā-samjñāyatana* or *Bhavāgra*)
32. Nothingness (*Ākiñcanyāyatana*)
31. Infinite Consciousness (*Vijñānānantyāyatana*)
30. Infinite Space (*Ākāśānantyāyatana*)

Ordinary beings are born in these four realms due to invariable karma — that is, in the immediately preceding life, they attained the corresponding level of meditative absorption. Lacking a coarse body, these beings have only the four mental aggregates. They remain in deep states of meditative absorption for eons, experiencing no coarse suffering at all. These four meditative absorptions are distinguished based on the mental factor of discrimination that accompanies them, which becomes increasingly subtle, culminating in the peak of saṃsāra. These states are so subtle and blissful that some meditators confuse them with liberation. However, when the karma for these rebirths is exhausted, those beings take rebirth in the desire realm again, usually as hell beings, hungry ghosts, or animals.

(2) Form Realm (*Rūpadhātu*)

*Fourth Dhyāna (Caturthadhyāna)*

29. Highest Pure Abode (*Akaniṣṭha*)
28. Clear-Sighted (*Sudarśana*)
27. Beautiful (*Sudṛśa*)
26. Untroubled (*Atapa*)
25. Not Great (Free from Afflictions, *Avṛha*)<sup>12</sup>
24. Unconscious Beings without Discrimination (*Asamjñasattva*). Ordinary beings who have attained the fourth dhyāna and cultivate meditative absorption without discrimination are born here, where the beings are nonpercipient and have no mental activity except at the moments of birth and death.<sup>13</sup>
23. Great Fruit (*Bṛhatphala*)
22. Increasing Merit (*Puṇyaprasava*)<sup>14</sup>
21. Cloudless (*Anabhraka*)

Ordinary beings are born in these three dhyānas by the invariable karma of having previously attained that state of concentration.

*Third Dhyāna (Tṛtīyadhyāna)*

20. Devas of Refulgent Glory (*Śubhakṛtsna*)<sup>15</sup>
19. Devas of Measureless Glory (*Apramāṇaśubha*)
18. Devas of Limited Glory (*Parītaśubha*)

Ordinary beings are born in the third dhyāna by the invariable karma of having previously attained that state of concentration.

*Second Dhyāna (Dvītyadhyāna)*

17. Devas of Total Radiance (*Ābhāsvara*)
16. Devas of Limitless Radiance (*Apramāṇābha*)
15. Devas of Limited Radiance (*Parīttābha*)

These beings are born in the second dhyāna by the invariable karma of having previously attained that state of concentration.

*First Dhyāna (Prathamadhyāna)*

14. Great Brahmā (*Mahābrahmā*). Great Brahmā, who mistakenly considers himself the creator of the universe, dwells here.
13. Ministers of Brahmā (In Front of Brahmā, *Brahmapurohita*)
12. Retinue of Brahmā (Brahmā Type, *Brahmakāyika*)

These beings are born in the first dhyāna by the invariable karma of having previously attained that state of concentration.

The four dhyānas of the form realm differ in terms of the mental factors that accompany them.<sup>16</sup> The four formless absorptions differ in terms of their object. The depth of concentration increases as one ascends these eight meditative absorptions.

Only āryas who are not yet free from saṃsāra are born in the five pure abodes in the fourth dhyāna, although after nonreturners become arhats they dwell there until attaining final nirvāṇa. The cause for rebirth there is the cultivation of alternating concentrations. This is a practice done by āryas, which involves first entering an unpolluted fourth dhyāna, then a polluted dhyāna, followed by another unpolluted dhyāna. This is extremely difficult to do, and the number of times a yogi can go back and forth between unpolluted and polluted dhyānas determines which pure abode he or she will be born in. Āryas who have attained liberation do these meditations to distance themselves from afflictions even more and to experience bliss in this life.

Śrāvakas who are nonreturners take rebirth in the five pure abodes to experience the specific bliss of the pure abodes. Ārya solitary realizers are not born there because they pray in their last life to be born where there is no buddha. Ārya bodhisattvas are born in the pure abodes to benefit the śrāvaka arhats there by encouraging them to enter the bodhisattva path after they arise from their blissful meditation in nirvāṇa.

The five pure abodes are saṃsāric realms. These differ from both *nirmāṇakāya* (emanation body) pure lands — such as Amitābha Buddha's pure land Sukhāvātī and Akṣobhya Buddha's pure land Abhirati — and enjoyment body (*saṃbhogakāya*) pure lands, which are not saṃsāric realms. Several places have the name Akaniṣṭha. The Akaniṣṭha that is one of the five pure abodes is a saṃsāric abode, whereas the Densely Arrayed Akaniṣṭha is not: there a buddha's enjoyment body teaches ārya bodhisattvas.

According to the Pāli tradition, only arhats and nonreturners dwell in the five pure abodes. Those who become nonreturners in other realms are reborn in these pure abodes, where they attain arhatship. New arhats remain here until the end of

their natural lifespans and then attain parinirvāṇa.

According to the *Treasury of Knowledge*, the beings in the form realm lack the sense of smell and taste.<sup>17</sup> While they have some sensual desire for sights and sounds, it is weak — beings with strong desire are born in the desire realm. They do not sleep or eat, nor do they have sexual desire, because they do not have sexual organs in that realm. Their bodies are subtle forms made of the four elements. Their basic state of consciousness is samādhi, although they do emerge from it and interact with one another.

The form and formless realms are collectively known as the higher realms owing to the refined states of mind of the beings born in them. Beings are born in these realms by attaining various degrees of meditative absorption — for example, when they were human meditators. All of these meditative absorptions can be attained by human beings as well, in which case it is said that the person is in the desire realm because of being a human being, but has a form-realm sphere of consciousness (*vacaracitta*) because of the level of concentration they have attained.

### (3) Desire Realm (*Kāmadhātu*)

#### *Desire-Realm Devas (Kāmadhātudeva)*

11. Controllers of Others' Emanations Devas (*Paranirmitavaśavartin*) enjoy sense pleasures others create for them. Māra, the personification of delusion and desire, dwells here.
10. Devas Delighting in Emanations (*Nirmāṇarati*) enjoy the sense pleasures they created themselves.
9. Joyful Devas (*Tuṣita*) experience pure delight. According to the Pāli tradition, Maitreya (Metteya), the bodhisattva who will become the next wheel-turning buddha, dwells here, as do other bodhisattvas in the life prior to their becoming buddhas. The Sanskrit tradition says that Maitreya lives in the pure land Tuṣita, which is on the outskirts of the deva realm with the same name.
8. Suyāma Devas (*Suyāma*) live in the air and are free from all problems.
7. The Thirty-Three Devas (*Trāyastriṃśa*) is so-called because thirty-three young people were born there as a result of their meritorious actions. The leader of this group of youths became

the deva Śakra, who presides over this realm and is a devotee of the Buddha. Many devas dwelling here live in mansions in the air.<sup>18</sup> During one rains retreat, the Buddha went here to teach his mother, who had been reborn in this realm.

6. Devas of the Four Great Kings (*Cāturmahārājika*). The four great kings, who are Dharma protectors, rule this land. Their images are often near the door of Mahāyāna temples. The causes for rebirth here are ethical conduct and generosity.

#### *Other Desire-Realm Beings*

5. *Anti-gods* (asuras). Asaṅga includes the asuras in the deva realm and says that they experience great sense pleasure, even though they suffer from jealousy and constant battles with higher devas. The *Smṛtyupasthāna Sūtra* puts them with the hungry ghosts and animals.<sup>19</sup>
4. *Human beings* (*manuṣya*) have the necessary balance of happiness and suffering that is conducive for Dharma practice. The primary cause for rebirth here is ethical conduct.
3. *Animals* (*tiryāṅc*) suffer from hunger and thirst, being enslaved by human beings, and being eaten by others.
2. *Hungry ghosts* (*preta*) suffer from constant hunger and thirst that is never satisfied.<sup>20</sup>
1. *Hell beings* (*nāraka*) experience great physical pain due to heat, cold, and torture.

Unethical actions and wrong views are the primary cause for rebirth as a hungry ghost, animal, or hell being. Stinginess is especially affiliated with rebirth as a hungry ghost, while violent activities are associated with rebirth in the hells.

Rebirth in any of the six realms is not eternal. When the karma causing that rebirth is exhausted, the being is born in another realm. None of the realms are rewards or punishments. They are all simply results of our actions, our karma.

According to the Pāli tradition, *nāgas* (snake-like beings who live in or near water), *gandharvas* (celestial musicians), and *yakṣas* (tree spirits of varying degrees of ethical purity, who resemble goblins, trolls, and fairies) live in the Realm of the Four Great Kings. The *Treasury of Knowledge* says some yakṣas are in the deva realm and some are in the hungry ghost realm. Gandharvas are

included with the devas because they are the musicians of the devas. *Garuḍas* (large birds), *kiṃnaras* (beings who are half human and half horse), and *nāgas* are included among animals. *Piśāca* (a class of demons), *unmada* (crazy makers), *apasmāra* (forgetful makers), and *mātrka* (a type of wicked demon) are included with hungry ghosts.

These realms are actual realms of rebirth. We can get an idea of life in them by comparing them to some experiences that occur in the human realm. The Indian sage Kamalaśīla says:

Humans also experience the sufferings of hell beings and so forth. Those who are afflicted here by having their limbs cut off, being impaled, hanged, and so forth by thieves and the like, suffer like hell beings. Those who are poor and deprived and are pained by hunger and thirst suffer like hungry ghosts. Those in servitude and so forth, whose bodies are controlled by others and who are oppressed, suffer from being struck, bound, and so forth, like animals.<sup>21</sup>

The magnificent pleasures of the deva realms can be understood by comparing them to some of the greatest pleasures we human beings experience. However, these are simply analogies; they are not the actual experience. The actual bliss of the deva realms is beyond our imagination, as is the misery of the unfortunate realms.

Seeing the various realms as psychological states can be helpful for recognizing mental characteristics we may have. For example, the mental state of a hungry ghost is similar to that of a person who goes here and there looking for someone to love them, but is perpetually dissatisfied with every relationship. The mental state of a hell being resembles the mind of someone overwhelmed by fear, animosity, and violence. These human mental states could motivate actions that cause rebirth in those realms, but the actual realms are not simply psychological states of human beings.

In the *Treasury of Knowledge*, Vasubandhu states that the world with its realms and its sentient beings is created by karma and he describes the location of some realms in relation to our human realm. Although his account is contradicted by modern knowledge, that does not disprove the general existence of these realms. We know the animal realm exists. People with the paranormal power of the divine eye can see some of the other realms.

## *Three Types of Duḥkha*

When *duḥkha* is translated as suffering, people easily have the wrong idea that it refers only to pain. But unsatisfactory experiences are more than that. In a previous chapter, I briefly outlined the three types of *duḥkha* and now would like to explain them in more depth.

(1) The *duḥkha of pain* is the manifest physical and mental pain that all beings recognize as suffering. It includes suffering from heat, cold, hunger, thirst, stress, anxiety, depression, loneliness, and so forth.

(2) The *duḥkha of change* is subtler and more difficult to identify; it includes what worldly beings usually call happiness. Why is the happiness we experience when eating a good meal, hearing the music we like, or experiencing other sensual pleasures unsatisfactory? If they were truly pleasurable, the more we did them, the happier we would be. However, that is not the case. If we keep eating, we feel ill. Jogging after a long day sitting at work initially feels wonderful, but after a while we are tired and want to sit down. When we are lonely, seeing a friend initially alleviates the feeling of isolation and makes us happy. But if we stay with that person hour after hour, we get tired, bored, and want to be alone. When we don't have a high-status job, we want one. After we are promoted, we are initially happy but later resent having to work longer hours. Āryadeva comments (CS 37):

Pleasure, when it increases,  
is seen to change into pain.  
Pain, when it increases,  
does not likewise change into pleasure.

Examining the experiences we call happiness, we see that they are not true happiness. They feel good for a short while and then turn into overt discomfort or even pain. For this reason they are unsatisfactory in nature, and the Buddha with compassion directs us toward a more satisfying joy — the peace of liberation and awakening.

(3) The *pervasive duḥkha of conditioning* is even subtler and more difficult to identify. It refers to our five psychophysical aggregates — our bodies, feelings, discriminations, miscellaneous factors, and consciousnesses — that are unsatisfactory because they are produced by afflictions and karma. The result of our previous *samsāric* rebirths, our aggregates are the basis for our present

duḥkha when our destructive karma ripens as the physical and mental pain we experience in this life.

Although our bodies and minds may not experience pain at this very moment, with the slightest change in circumstances, they easily will. They have the potential to experience horrible pain. Also, our five aggregates propel us to create the causes for more duḥkha in the future. By reacting to the pain and pleasure of this life with afflictions such as attachment, anger, and confusion, we again create more karmic causes to take another saṃsāric rebirth where we will again experience all three types of duḥkha. Dharmakīrti says (PV):

Because they are the basis of faults [i.e., duḥkha] and also because they are under the power of [polluted] causes, they are duḥkha.

At present, we are under the illusion that happiness can be attained with this body. We cling to the hope that scientists will discover and root out the causes for depression, unhappiness, disease, substance abuse, aging, and death. While scientific endeavors have remedied much suffering, they cannot stop the basic causes of suffering because our body itself is unsatisfactory by nature. No matter how much a cook tries to slow the disintegration of rotten vegetables or covers them with delicious sauce, making a tasty dish out of them is impossible. Similarly, once we have taken a body and mind under the control of afflictions and karma, we are set up to experience duḥkha. For this reason our aggregates are considered unsatisfactory by nature. Āryadeva tell us (CŚ 32–33):

The body, however long one spends,  
will not in itself become pleasurable.  
To say its nature can be overruled  
by other factors is improper.

The high have mental suffering;  
for the common it comes from the body.  
Day by day, both kinds of duḥkha  
overwhelm people in the world.

When contemplating the three types of duḥkha and the disadvantages of cyclic existence, reflect that you have experienced these since beginningless time. These meditations on duḥkha are not idle speculation; being repeatedly subjected to the miseries of cyclic existence is serious. In the *Tears Sutta*, the

Buddha gave a series of vivid examples illustrating the length of time afflictions and karma have bound us in saṃsāra (SN 15.3).

The stream of tears that you have shed as you roamed and wandered through this long course [of saṃsāra], weeping and wailing because of being united with the disagreeable and separated from the agreeable — this alone is more than the water in the four great oceans. For a long time, monastics, you have experienced the death of a mother . . . father . . . brother . . . sister . . . son . . . daughter . . . the loss of relatives . . . the loss of wealth . . . loss through illness. As you have experienced this, weeping and wailing because of being united with the disagreeable and separated from the agreeable, the stream of tears that you have shed is more than the water in the four great oceans. For what reasons? Because, monastics, this saṃsāra is without discoverable beginning. A first point is not discerned of beings roaming and migrating hindered by ignorance and fettered by craving. For such a long time, monastics, you have experienced suffering, anguish, and disaster, and swelled the cemetery. It is enough to experience revulsion toward all formations, enough to become dispassionate toward them, enough to be liberated from them.

While such a message may initially be unpleasant to hear, the Buddha says it with compassion so that we can act now while we have the opportunity to remedy the situation and free ourselves from such misery.

### *Feelings, Afflictions, and Duḥkha*

Each of the three types of duḥkha is associated with a specific feeling: the duḥkha of pain with painful feelings; the duḥkha of change with pleasant feelings, because when we initially engage in certain activities or have particular possessions we feel happy; and the pervasive duḥkha of conditioning with neutral feelings, because all beings in cyclic existence experience this duḥkha even when they are not actively feeling pain or pleasure. We will explore this more in the practice of the four establishments of mindfulness in a future volume.

These feelings in turn prompt afflictions. Anger easily arises toward painful physical and mental feelings. Attachment manifests when pleasurable feelings are experienced; we crave these feelings, do not want them to cease, and cling to the objects that seem to cause them. Ignorance increases when neutral feelings are present because we hold the aggregates as permanent when in fact they are momentary.

Under the influence of these afflictions, we create karma. While attachment may fuel actions that lead to rebirth in any of the six classes of beings, anger makes us miserable in this life and creates the causes for unfortunate rebirths. Ignorance keeps us bound in cyclic existence, unable to help ourselves, let alone others.

Recognizing pleasant feelings as *duḥkha* enables us to release craving and clinging to them, and as a result, attachment subsides. Accepting that by nature our bodies are unsatisfactory makes it easier to avoid anger or anxiety with respect to painful feelings. Seeing that neutral feelings are transient in nature diminishes ignorance. In this way, although the three feelings may arise, we stop responding to them with attachment, anger, and ignorance, thus reducing the karma created by afflictions.

---

## REFLECTION

1. Think of a situation in which you felt happy. Observe how attachment arises for the pleasant feeling as well as for the people, objects, or situations that seem to cause it.
2. Observe the actions you do motivated by attachment. How do they cause problems in this life? How do they create karma for suffering in future lives? Think of the kinds of rebirth those actions could propel.
3. Contemplate that pleasant feelings are unsatisfactory in nature because they do not last and degenerate into pain if we keep doing the action over time. After contemplating the disadvantages of the *duḥkha* of change, observe your attachment subside. As your mind becomes more balanced, enjoy that peace.
4. While this peace is not the tranquility of *nirvāṇa*, it does give us the

knowledge that relinquishing attachment at any level makes the mind more peaceful.

---

## *Six Disadvantages of Cyclic Existence*

Not only is saṃsāra unsatisfactory in nature, it is also bereft of advantages. Nāgārjuna's *Letter to a Friend (Suhṛi-lekha)* speaks of six disadvantages of saṃsāra:

(1) There is no security or certainty. We may work hard for a certain goal, but unexpected hindrances block our attaining it. We may live in a pleasant environment and suddenly be forced to leave. Our situation can change dramatically in a short period of time. Our relatives and friends change from one life to the next; saṃsāra lacks consistency and predictability.

(2) We are never satisfied with what we are, do, or have. We always want more and better of whatever we find desirable. No matter what we have accomplished or how much we excel, we never feel good enough about ourselves.

(3) We die repeatedly, each time leaving behind everything and everyone we know. Everything we worked so hard for during our life cannot come with us to the next life. Death naturally follows birth, and when we die nothing from this life except our karmic seeds and mental habits accompany us.

(4) We are reborn in cyclic existence repeatedly with all the problems and struggles that exist in each life. Our saṃsāra is beginningless, and unless we exert effort to attain liberation, it will be endless.

(5) We repeatedly change status from superior to inferior and vice versa. In one life we may change social position, health, financial status, relationships, and so on. From one life to the next we may go from the deva realm to a hell realm to birth as a human or an animal.

(6) We experience suffering alone; others cannot experience it for us no matter how much they love us. We are born alone and die alone. Our feelings are felt by ourselves alone. While we may be inseparable from certain people during our lives, at death separation is guaranteed.

The Buddha did not point these disadvantages out so that we would become depressed. Rather, with compassion, he asked us to look closely at our

experiences in cyclic existence and see them for what they are. Knowing that we have the potential to be free from them, he then described their causes, the path to counteract them, and the state of liberation.

---

## REFLECTION

1. Contemplate each of the six disadvantages of cyclic existence, making examples of them from your life.
2. Contemplate that they originate in ignorance and that it is possible to eliminate ignorance through cultivating the wisdom realizing the emptiness of inherent existence.
3. Knowing you have the potential to attain nirvāṇa, generate a strong determination to be free from saṃsāra and attain liberation or full awakening.
4. Use this firm and clear aspiration to inspire your Dharma practice and clarify your priorities in life.
5. Observe that the eight worldly concerns become uninteresting when your sights are focused on higher aims such as the true freedom of nirvāṇa or full awakening.

---

### *Eight Unsatisfactory Conditions*

In describing true duḥkha in his first teaching, the Buddha said (SN 56.11):

Now this, monastics, is the ārya truth of duḥkha: (1) birth is duḥkha, (2) aging is duḥkha, (3) illness is duḥkha, (4) death is duḥkha, (5) union with what is displeasing is duḥkha, (6) separation from what is pleasing is duḥkha, (7) to not get what one wants is duḥkha, in brief (8) the five aggregates subject to clinging are duḥkha.

It is not difficult to make examples of these eight in our lives, for they describe much of what we experience on a daily basis. For many people, being able to acknowledge the presence of these unsatisfactory conditions in their lives is a relief. They no longer feel “something is wrong with me,” but know that all ordinary beings have these experiences. They see these events as part of life, not as punishments or personal failures.

At the beginning of our lives we are born. Coming out of the womb into a new environment is physically painful for the child as well as the mother. At the end of our lives we die, experiencing suffering mentally if not physically. Between these two are aging and illness, which are also undesirable experiences. On top of these, problems, which we don’t want, come uninvited. We exert great effort to have conditions that bring happiness, but our efforts are not always successful. Even when we do find good circumstances they change and we have to separate from what we like, or we are disappointed because they don’t bring the enduring happiness we expected. Clearly this situation is unsatisfactory. Our human potential must involve more than experiencing just this.

Our five aggregates subject to clinging are in the nature of *duḥkha*. They are a container in which past karma ripens, and the body in particular is the basis for aging, sickness, and death. Clinging to our present aggregates, our mind generates more afflictions, which create more karma, which causes future rebirths as well as pain and dissatisfaction during those lives. For example, being angry at our present problems, we may steal, lie, or criticize others, creating the karma to have more misery in the future. Clinging to worldly success in this life habituates us with this mental state, setting the stage for it to increase in future lives. In short, the aggregates are the basis in which the three, six, and eight types of *duḥkha* run rampant. Contemplating this deeply leads to the arising of a clear and powerful intention to renounce the bondage of *samsāra* and seek freedom.

## *Examining True Duḥkha via Ten Points*

In the *Śrāvakaḥūmi*, Asaṅga speaks of the four attributes of true *duḥkha* by way of ten points. Points 1–5 pertain to impermanence, points 6–8 to *duḥkha*, point 9 to emptiness, and point 10 to selflessness.<sup>22</sup>

1. To understand the *impermanence of change* — that is, coarse

impermanence — we examine changes that are easy to observe: our bodies are born and die; our health, appearance, and physiques may change suddenly as a result of injury or illness. Everything in our environment — trees, buildings, cities — and all the objects we use — food, transportation, buildings, medicine, and clothing — likewise are consumed or destroyed. The fleeting character of our happy, suffering, and neutral feelings and the swiftness by which our thoughts change from one moment to the next are also examples of coarse change. The objects we see, hear, smell, taste, touch, and think about all change, as do the cognitive faculties that enable us to apprehend them. Meditating on this in depth leads us to understand that all conditioned things are unstable and unreliable and therefore cannot bring us true satisfaction.

2. Reflecting on the *impermanence of perishability* leads to an inferential cognizer that knows subtle impermanence. Here we contemplate that the coarse change we see could not occur without imperceptibly subtle moment-to-moment change. Nothing can stop functioning things from changing. They need no cause other than their arising to bring their disintegration; perishing is in their very nature. We may think that a volcano erupts suddenly, when in fact the pressure inside it has been building imperceptibly for a long time. We see the sun rise and set, but it goes across the sky moment-by-moment. As Candrakīrti says:

Just as consciousness is momentary, all [other] conditioned things have the same momentary nature as the mind, because nothing obstructs the perishing of all conditioned things as soon as they appear and because the impermanence [of things] depends only upon [their] arising.<sup>23</sup>

The impermanence of perishability also points to the multiplicity of situations in which we sentient beings find ourselves and to the diversity of our physical beauty, intelligence, wealth, fame, lifespans, contentment, and so forth. The vastness of these alternatives are conditioned by the countless and complex virtuous and nonvirtuous karma we create, not by chance and not by the will of an external creator. By meditating on this, we develop the conviction that conditioned factors in one lifetime — specifically our physical, verbal, and mental actions — bring about our experiences in future lives.

3. To understand the *impermanence of separation*, we reflect on the changeability of our personal situation and the separation from desirable circumstances that we experience without choice. We are healthy and then fall

ill, we have freedom and then fall under the control of others, we have a happy family life but then circumstances change and it evaporates.

4. To reflect on the *impermanence of the dharmatā* or nature of things, we consider that while we may not be experiencing the impermanence of change or the impermanence of separation in this moment, we will in the future. There is no way to continue whatever good circumstances we presently have, for change is the nature of everything in saṃsāra.

5. The *impermanence of the present* is the perishability and separation that we presently undergo. Contemplating this reinforces the above contemplations, for we see that perishability and separation are occurring in this very instant.

These reflections on impermanence bring home the fact that every facet of our being and every aspect of our lives and our world is transitory and unstable. This leads to a sense of unease regarding life in cyclic existence. Contemplating the next three points — the three forms of duḥkha — will increase our discomfort with remaining in saṃsāra.

6. The *duḥkha of pain* is called “the aspect of being undesirable” because painful physical and mental experiences are unwanted. Still, they keep coming, counter to our wish for happiness.

7. The *duḥkha of change* is called “the aspect of fetters and bondage” because even when our bodies and minds experience pleasure, that pleasure leads to the fetter of craving, which in turn gives rise to the bondage of birth, aging, sickness, death, sorrow, lamentation, pain, grief, and despair.

8. *The pervasive duḥkha of conditioning* is called “the factor of our welfare not being secure” because even though we may experience a neutral feeling now, our aggregates are under the control of afflictions and karma. They possess the potential to experience the first two types of duḥkha with the slightest change of circumstances.

Understanding impermanence leads to understanding duḥkha. Birth in cyclic existence is unsatisfactory because it is permeated with unwanted change: aging, sickness, death, meeting with the disagreeable, separating from the desirable, and not getting what we want. Contemplating duḥkha on the basis of understanding subtle impermanence jars our complacency. A deep sense of vulnerability arises because happiness and suffering are entirely at the whim of afflictions and karma. In our ignorant state, we have so little control over these.

9. The *aspect of unobservability* refers to not being able to observe or discern a real self that exists separate from the aggregates. Here we contemplate that

there is no self over and above all the instances of each of the aggregates. For example, when we say “I see,” there is merely a visual object, the eye faculty, and an immediately preceding consciousness. Together they cause a visual consciousness that perceives the object. I and mine are mere names, mere figures of speech; the aggregates are not possessed by a real self. Nor can a person be found among the aggregates. There is no observable self that creates karma and experiences its results. There is no findable self that circles in saṃsāra or attains liberation. These conditioned aggregates are completely empty of a self.

10. The *aspect of a lack of independence* refers to the aggregates not being under the control of a self. The aggregates are dependent arisings that lack self-determination; they lack a controlling self.

The understandings of impermanence, duḥkha, emptiness, and selflessness evolve in that order. Subtle impermanence means the aggregates arise due to causes and conditions: specifically afflictions and karma. Those causes and conditions bring about the three types of duḥkha, which give rise to craving and thus renewed cyclic existence. Understanding the pervasive duḥkha of conditioning in particular leads us to examine the relationship between the aggregates and self, and therefore to understand emptiness and selflessness. As Dharmakīrti points out (PV 2:254cd):

For this very reason, the [Buddha] taught duḥkha through impermanence, and selflessness through duḥkha.

Why does true duḥkha receive so much attention? It would be so much more pleasant to think of light, love, and bliss. However, encouraging us to contemplate duḥkha is the best way for the Buddha to rouse us from our complacency so that we will take advantage of our amazing opportunity to practice the Dharma. Just as a person won't seek freedom if he is unaware that he is imprisoned or if he thinks prison is a comfortable environment, we will not seek liberation from cyclic existence without a clear awareness of what it is and why it is unsatisfactory. Deeply meditating on the above topics will energize us to turn away from the prison of saṃsāra and pursue the path to nirvāṇa.

---

## REFLECTION

1. Reflect on Asaṅga's ten points, one by one, making examples of each in

your life.

2. Focus on the conclusion that everything in cyclic existence is transient, unsatisfactory in nature, empty, and selfless.
  3. Aspire to attain liberation.
- 

## *Our Human Value*

Reflecting on the above descriptions of true duḥkha by applying them to our own lives and by observing the experiences of others is crucial for making this teaching come alive. By doing that, a sincere aspiration to be free from saṃsāra and attain liberation or awakening will arise in our minds. Those aspirations are the fuel for our Dharma practice. As our understanding of duḥkha gradually increases, so will our faith in the Three Jewels as qualified guides.

Slowly we awaken to the fact that money, social status, popularity, power, praise, and appreciation — while useful in this life — do not bring lasting happiness and instead bring more worries and difficulties. We begin to see that chasing them is like riding a roller-coaster or merry-go-round — it may temporarily seem thrilling, but at the end we are back where we started. Enduring peace still eludes us, and deep inside we still lack a stable sense of self-worth. No matter how much luxury surrounds us, how exciting our jobs are, how famous we are, or how many people love us, we still are not beyond aging, sickness, and death.

In response to this predicament, in their confusion some people self-medicate with any number of addictions — drugs, alcohol, work, sex, digital games, TV, gambling, shopping, and so on — but those only serve as short-term distractions that bring more suffering. Other people think life is meaningless and consider ending their lives. This is very foolish, for we all have great potential — the potential to become fully awakened buddhas, the potential to experience reliable joy and fulfillment.

When we analyze how suffering and happiness arise in our minds, we see that they come about from our actions, which are motivated by our disturbing emotions and distorted views. Without even considering past lives, we can see that the more subdued our minds are, the more peaceful and happy we are. Even

if our external environment is tumultuous, with inner mental peace we can transform external difficulties into the path to awakening by practicing mind-training teachings. But when our minds are upset, agitated, or obscured, we are miserable even when the external environment is fantastic. This clearly shows that happiness and suffering are related to our mental attitudes. Therefore training our minds is worthwhile.

By reflecting on *duḥkha* in this way, we become less infatuated with *samsāra* and turn our natural aspiration for well-being to *nirvāṇa*. Gyelsay Togme Zangpo's poem *The Thirty-Seven Practices of Bodhisattvas* (9) sums it up:

Like dew on the tip of a blade of grass,  
pleasures of the three worlds last only a while and then vanish.  
Aspire to the never-changing supreme state of liberation —  
this is the practice of bodhisattvas.

In describing his own spiritual journey before attaining awakening, the Buddha said (MN 26.13):

Before my awakening, while I was still only an unawakened bodhisatta, I too, being myself subject to birth, sought what was also subject to birth. Being myself subject to aging, sickness, death, sorrow, and defilement, I sought what was also subject to aging, sickness, death, sorrow, and defilement. Then I considered, thus: “Why, being myself subject to birth, do I seek what is also subject to birth? Why, being myself subject to aging, sickness, death, sorrow, and defilement, do I seek what is also subject to aging, sickness, death, sorrow, and defilement? Suppose . . . I seek the unborn supreme security from bondage, *nibbāna*. Suppose . . . I seek the unaging, unailing, deathless, sorrowless, and undefiled supreme security from bondage, *nibbāna*.”

While subject to the unsatisfactory circumstances of *samsāra*, we ignorant beings take refuge in people and things that are also subject to the vagaries of *samsāra*. What if we were to turn to the Three Jewels for refuge and seek *nirvāṇa* instead? Practitioners with this aspiration are not distracted by the appeal of *samsāra*'s pleasures, riches, power, and fame, and they easily stay focused on their spiritual aims. This leads to mental peace in this life as well as to liberation. Bodhisattvas expand on this aspiration for freedom to include all sentient beings

and generate bodhicitta, the aspiration for full awakening.

Lessening our attachment to saṃsāric pleasures does not mean having aversion toward our bodies, relationships, good food, praise, reputation, and other sense objects. These things, in and of themselves, are neither virtuous nor nonvirtuous; it is our craving for them that is the source of difficulties. The purpose of seeing the things of saṃsāra as unsatisfactory is to eliminate our craving for and clinging to them, because these emotions keep us bound in saṃsāra. To live in society, money and possessions are necessary. We can use them without attachment and share them with others to create merit. We human beings are social creatures and our lives depend on the kindness of others. We can appreciate the people in our lives and be compassionate toward them without being attached to them.

Relinquishing attachment to our bodies doesn't mean we ignore our health and neglect to go to the doctor and dentist. Our bodies are the physical support of our precious human lives that we use to practice the Dharma, so we must care for the body and keep it healthy. Caring for our bodies in a practical way is very different from indulging in sensual pleasures with attachment.

With all of this talk about duḥkha, we may mistakenly believe that Dharma practitioners must relinquish all of the usual activities that bring them happiness and instead practice extreme asceticism and self-denial. We may fear that there is no happiness to be experienced until we reach nirvāṇa. This is not the case at all. In fact, it is important to have a happy mind while practicing the Dharma. As we go deeper into practice, we realize that there are many types and levels of happiness and pleasure. Having food, shelter, clothing, medicine, and friends bring us some well-being — enough that we can practice the Dharma without being in dire suffering, which would make practice difficult. As we practice more, we discover the internal peace arising from living ethically and the pleasant, relaxed feeling that comes from improving our concentration. As we lessen our attachment and open our hearts to others, the joy derived from connecting with others on a heart level and acting with kindness toward them brings us a sense of fulfillment that is greatly superior to any sense pleasure that money and possessions can afford.

Although most people in the world have intimate emotional and sexual relationships, some people choose not to have them. This is a valid lifestyle choice, whether people are Buddhist or not, whether they are monastics or lay practitioners. They are not avoiding intimacy; they prefer to use their life energy doing other things that are more important to them. In short, giving up our

addiction to pleasure derived from external objects and people opens the door to experience other types of happiness.

Some people wonder if it's possible to become attached to the Dharma and crave liberation. Attachment is based on projecting or exaggerating qualities and then clinging to an object. In general it is not possible to exaggerate the excellent qualities of the Three Jewels, liberation, and full awakening. Furthermore, appreciation of the Dharma's excellent qualities and the aspiration to attain liberation are very different from being attached to them with obsessive longing or possessiveness.

If someone perchance builds an ego-identity, thinking, "*I* am a Buddhist and *my* religion is the best," he has not understood Buddhism very well. His attitude is not one of attachment to Buddhism; rather his mind is afflicted with self-grasping and arrogance.

### 3 | True Origins of Duḥkha

**W**E LIVE AMIDST true duḥkha day in and day out. It is our close companion, never letting us be peaceful in our own hearts or with others. Since we do not like duḥkha and want to be free from it, we must seek out its causes, examine whether they can be eliminated, and if so, learn the path to do so. The Buddha identified afflictions and karma as the true origins of duḥkha. Karma arises from afflictions, the chief of which is ignorance. In this chapter we will examine the defilements that are the origins of duḥkha. These mental factors keep us bound in cyclic existence and prevent our attainment of nirvāṇa and awakening.

Buddhist psychology is profound and reveals parts of our minds that we may have been oblivious to. Virtuous and variable mental factors were described in chapter 3 of the previous volume, *The Foundation of Buddhist Practice*. The following afflictive mental factors are explained in the context of factors that produce duḥkha and interfere with attaining liberation and full awakening.

It's important to approach the topic of afflictions with the correct attitude. Avoid using the various lists of defilements to criticize yourself, thinking, "I have so much anger. I'm also so jealous. What a bad person I am!" Remember that gaining knowledge about mental defilements gives us the power to free ourselves from them and arrive at a state of true peace. We have the potential to do this. Chapters 12–14 will discuss the possibility to attain liberation and our buddha nature that makes that possible.

Describing afflictions is similar to identifying the thieves in our house who have been masquerading as our friends while all the time stealing our happiness. When we know their characteristics, we can catch them, evict them, and lock the door behind them so they can never return. But unlike living thieves who can regroup later, once evicted, afflictions vanish completely.

Like all other phenomena, mental defilements are empty of inherent existence. They are transient like bubbles that quickly burst; they have no essence like the trunk of a plantain tree. Rather than think of anger, or any other affliction, as a solid emotion that is always lurking under the surface of your mind, ready to explode, spewing its vitriol, recognize that it exists by being

merely designated: in dependence on some moments of mind that share some common characteristics, we designate “anger.” That’s all anger is. It’s not a monster that is an inherent part of us; it is not who we are. We need to view our afflictions from two perspectives: on the one hand they are the source of our misery; on the other they lack essence and can be completely eradicated from our mindstreams. There are many ways of classifying mental defilements; we will begin with the six root afflictions, the most prominent group in the Sanskrit tradition.

## *The Six Root Afflictions*

Studying the laboratory that is our own mind, we notice that we can have radically different emotions at different times. We can be loving one moment and irritated the next. Some emotions arise more easily or are more habitual than others: our anger surges in a moment; fortitude is difficult to cultivate. Some emotions bring peace, others disturb our mental tranquility. The later are called *afflictions*. Asaṅga identifies these in his *Compendium of Knowledge* (LC 1:298):

An affliction is defined as a phenomenon that, when it arises, is disturbing in character and that, through arising, disturbs the mindstream.

Afflictions are distinct mental factors that, when they arise in our minds, cause our minds to be unpeaceful and unsubdued. Afflictions may be emotions, attitudes, or views, and they usually arise without our choice. The three principal afflictions are ignorance, anger, and attachment. Although compassion may disturb our minds, it isn’t an affliction. Genuine compassion — as opposed to pity, or personal distress when seeing others suffer — is deliberately cultivated for a good purpose and is supported by reasoning. Unable to ignore sentient beings’ *duḥkha*, compassion wishes them to be free of it. Our minds may be temporarily disturbed because our apathy has been challenged, but this type of mental disturbance spurs us to be more tolerant and kind; it makes our minds strong and determined to aid others and brings benefit to ourselves and others.

Afflictions, on the other hand, arise without good reasons and lack foundation in reality. Because we are habituated with afflictions, they arise

easily when we encounter certain conditions. They disturb the tranquility of the mind and have the long-term effect of increasing our problems and unhappiness. Unlike virtuous mental states such as integrity and compassion, afflictions lack mental clarity, and we often find ourselves justifying their presence: “I have a right to be angry because he criticized me unfairly.” But think about it: Why must we be angry when someone criticizes us? Is anger the only possible response to this situation? Does anger increase our ability to communicate well or destroy it? Questioning ourselves in this way clears away confusion and enables us to see the faulty “logic” behind the afflictions and thus to dispel them.

Afflictions give rise to actions that are considered destructive in all cultures — such as killing, stealing, and lying. These actions perpetuate the cycle of misery. Because they bring our ruin, we need to be aware of their nature, causes, functions, and disadvantages. If a country has an enemy that is destroying its well-being, it tries to learn everything it can about that enemy in order to combat it and prevent it from devastating the country. Similarly, we need to know everything we can about the enemy — the afflictions that destroy our own and others’ happiness. But simply learning about the afflictions is not sufficient; we must also combat them by hearing, thinking, and meditating on their counterforces as described in the Buddha’s teachings. Doing this is the crux of Dharma practice.

The Buddha listed eighty-four thousand afflictions, the most prominent of which are the root afflictions (*mūlakleśa*) and auxiliary afflictions (*upakleśa*). In the *Treasury of Knowledge*, Vasubandhu spoke of six root afflictions, the last one being afflictive views, which in turn is subdivided into five. In the *Compendium of Knowledge*, his older brother Asaṅga listed ten root afflictions — the first five that Vasubandhu listed plus the five afflictive views. Although the two lists come to the same point, there are some differences in how a few of the afflictions are described because the *Treasury of Knowledge* was written from the Vaibhāṣika viewpoint while the *Compendium of Knowledge* is from the Cittamātra viewpoint. In general we will follow the latter, except when the Prāsaṅgika presentation differs. This occurs mainly in the descriptions of ignorance and the view of a personal identity. The six root afflictions are attachment (*rāga*), anger (*pratigha*), arrogance (*māna*), ignorance (*avidyā*), deluded doubt (*vicikitsā*), and afflictive views (*kliṣṭadrṣṭi*).

## *Attachment*

Attachment is a mental factor that, based on distorted attention that exaggerates the attractiveness of a polluted object (an object under the influence of ignorance), wishes for and takes a strong interest in it. The object could be a material object, a person or a place, or it could be praise or an idea. Attachment functions to produce discontent and to perpetuate the cycle of existence. Looking at our own experiences, we can see how true this is.

This is a general description of attachment; there are many degrees and variations of attachment. Some instances of attachment that arise in daily life are greed that wants more than our fair share, attachment to our ideas that leads to stubborn insistence on being right, attachment to reputation, praise, pleasing sensory experiences, and so on. We also become attached to people, which leads to having unrealistic expectations of them or of our relationships with them. This in turn leads to disappointment and friction in those relationships, and feelings of bitterness or betrayal when the relationships don't continue as expected.

Covetousness is a coarse form of attachment. As one of the ten nonvirtues, covetousness easily leads to actions that directly harm others, such as stealing or unwise sexual relationships. Other afflictions derived from attachment are miserliness that doesn't want to share our possessions, haughtiness that is attached to our good fortune, and restlessness that distracts the mind to desirable objects during meditation.

Attachment and aspiration are distinct mental factors with different functions. Although both are attracted to their object, attachment is based on distorted attention that exaggerates its attractiveness or projects good qualities that are not there. Seeing the object inaccurately, attachment clings to it and does not want to be separated from it. We become attached to people, money and possessions, love and approval, good food and other pleasurable sensory experiences, and so on, and are certain that the good qualities we see inhere in that person or thing. If our perception were accurate, everyone should see the person or thing as attractive as we do and desire it as much as we do. Clearly that is not the case.

Aspiration focuses on its intended object and takes a strong interest in it, but it is not necessarily based on exaggerating or projecting the object's good qualities. The aspirations seeking a good rebirth, liberation, and full awakening are based on realistically seeing beneficial qualities that are present. In his *Abhidharma* text, the Tibetan scholar Chim Jampelyang (ca. 1245–1325) clarified that the aspirations for a fortunate rebirth, liberation, or awakening are virtuous; they are not attachment.

Furthermore, Vasubandhu said that objects giving rise to afflictions are polluted. Since buddhahood and the Three Jewels are unpolluted, they cannot induce afflictions in others' minds. If someone thinks, "When I'm a buddha, everyone will respect me," he suffers from attachment to reputation, not attachment to buddhahood.

Craving is a form of attachment and is usually seen as nonvirtuous. However, "craving" can refer to other forms of attachment that may be temporarily useful. For example, in the case of someone who is miserly and doesn't want to part with his possessions, the craving to be wealthy in a future life can motivate him to counteract his stinginess and become generous in this life. Even though this craving seeks happiness in saṃsāra, it is a step up from craving the happiness of only this life and thus is considered virtuous. For someone who lives an ethically corrupt life, desire to be reborn as a deva can induce him to relinquish harmful behaviors and keep precepts. Craving for the bliss of samādhi in the form and formless realms can inspire someone to cultivate concentration in order to be reborn in those realms. These types of attachment are useful in those specific situations. However, for someone intent on liberation, those same cravings are hindrances because they are enamored with saṃsāric pleasures.

Ānanda says that based on the craving for liberation — our highest spiritual aspiration, which is certainly virtuous — the unwanted forms of craving can be eliminated (AN 4.159, AN 2.145). The postcanonical Pāli text *Nettipakaraṇa* speaks of virtuous and nonvirtuous forms of craving and confirms that virtuous craving leads to the end of craving. For example, one monastic learns that another has become an arhat, and with the desire to attain arhatship too, she practices diligently and becomes an arhat, one who has abandoned craving. Similarly, a monastic motivated by arrogance thinks, "I am as capable as that person who attained arhatship." This propels him to make effort and he becomes an arhat, someone who has abandoned arrogance. This is similar to the idea of taking attachment on the path in Tantrayāna. Here attachment is employed to make manifest the subtlest mind and use it to realize emptiness and destroy all obscurations, including attachment.

How do we reconcile these examples with a statement of Nāgārjuna, the great second-century Indian sage who spread the Madhyamaka (Middle Way) view (RA 20ab)?

Attachment, anger, confusion,  
and the haves that arise from them are nonvirtuous

and the karma that arises from them are nonvirtuous.

“Attachment” here refers to selfish desire for material possessions, praise, good reputation, and pleasant sensory experiences. Such attachment often leads to nonvirtuous actions, while aspiration for the happiness of future lives can lead to virtuous actions. Anger and hatred, however, can never be the motivating factors for virtue; they always lead to nonvirtue. Here confusion refers not to the self-grasping ignorance that is the root of saṃsāra, but to the ignorance that does not understand karma and its effects. While self-grasping ignorance can also precede virtuous actions, the ignorance that has a skewed view of ethical conduct will lead to mental, verbal, and physical nonvirtuous paths of action.

Similarly, there are different ways to be “attached” to a beautiful statue of the Buddha. One person wants a beautiful statue to inspire his daily meditation practice. Another person wants the same statue to show off to his friends or to sell for a profit. These different motivations will bring different results in the present life and in future lives.

In short, “attachment” may have diverse meanings in different contexts. This is illustrated by the four types of clinging mentioned in the teaching *Parting from the Four Clings* that Mañjuśrī gave to the great Sakya lama Sachen Kunga Nyingpo:

If you cling to this life, you are not a true spiritual practitioner.

If you cling to saṃsāra, you do not have renunciation.

If you cling to your own self-interest, you have no bodhicitta.

If there is grasping, you do not have the view.

The first line indicates clinging to the happiness of this life, which is invariably an obstacle for Dharma practice. The presence or absence of this type of attachment is the demarcation between an action that is Dharma and one that is not. The second, clinging to cyclic existence, prevents us from embarking on the path to liberation, although it could lead to happiness within saṃsāra, as exemplified by the person who is attached to the bliss of samādhi and is born in the form or formless realms.

Clinging to our self-interest prevents us from entering the bodhisattva path, although it could support the attainment of arhatship — for example, by a person who clings to be free of saṃsāra and seeks his own liberation alone. The most deeply ingrained attachment is grasping inherent existence, which prevents the attainment of both liberation and full awakening.

The Tibetan term *chags pa* may also be translated as “attachment” and is sometimes used to indicate strong affection and care. In this sense, buddhas are “attached” to sentient beings, indicating that because of their strong compassion, they will never abandon sentient beings and will continuously work to lead them to temporal and ultimate happiness. This feeling of closeness and care that buddhas have for sentient beings is very different from attachment in the minds of sentient beings.

## *Anger*

Anger is a mental factor that, referring to one of three objects, agitates the mind by being unable to bear or through wanting to harm the object or person. The three objects can be expanded to nine: (1–3) he harmed me in the past, he is harming me now, he will harm me in the future; (4–6) she harmed my dear friend or relative, is harming them, will harm them; (7–9) he helped my enemies, is helping them now, will help them in the future. Here *enemy* includes people we don’t like or disagree with as well as those who harm us or interfere with our happiness. Anger functions to disturb our minds. As the basis for harming ourselves and others, it involves us in destructive actions and increases suffering in the world.

Anger is based on distorted attention that exaggerates or projects defects onto people and things. Our minds create many reasons to validate our anger and give us a false sense of power in situations where we feel afraid or hurt. Anger has many forms, and several other afflictions are derived from it, including irritation, annoyance, frustration, hatred, rebelliousness, belligerence, resentment, vengeance, spite, cruelty, violence, and jealousy.

Behind each episode of anger are many stories — conceptualizations proliferated by our minds — in which we impute motivations to people that they do not have, interpret actions from our own standpoint, and favor our own concerns while ignoring or demeaning the concerns of others. Although we may try to justify, rationalize, or deny our anger, the truth is that we are unhappy when our minds are overcome by anger. Sometimes we vent our anger to friends, hoping that they will take our side. (If they didn’t, how could they be our friends?) Other times we speak or act in ways that harm others. Here we can see the relationship of attachment and anger: the more distorted attention has exaggerated someone’s good qualities, increasing the strength of our attachment, the more distorted attention exaggerates that person’s bad qualities when he or

she doesn't meet our expectations. We become discontent, and this mental unhappiness inflames our anger, resulting in aggressive behavior that breaks the trust of the people we care about the most. Anger is a mental state, it is not the behavior. While some of us may not think of ourselves as angry because we don't throw things or scream at others, inside our anger rages. In these cases, ignoring the other person or refusing to have anything to do with them may be considered harmful behavior. We should not be fooled into thinking that passive behavior like withdrawing from a situation and refusing to communicate indicates a lack of anger.

Anger may also be a reaction to fear. When fearful we usually feel powerless, whereas anger gives us a false sense of power by sending adrenaline coursing through our body. Although anger may sometimes seem to make us courageous, our behavior when angry seldom remedies the problem and usually makes it worse.

### *Arrogance*

Arrogance is a mental factor that, based on the view of a personal identity that misapprehends how the I or mine exists, strongly grasps an inflated image of ourselves. It functions to prevent us from learning and increasing our virtue and causes us to disrespect or denigrate others. Vasubandhu mentions seven types of arrogance:

1. Arrogance thinking, "I am superior" in relation to someone who is "inferior." In this and the next two forms of arrogance, we compare ourselves with others in terms of wealth, looks, knowledge, social standing, athletic ability, fame, and other factors.
2. Arrogance thinking, "I am superior" in relation to someone who is our equal.
3. Arrogance thinking, "I am superior" in relation to someone who is better than us.
4. Arrogance that regards our aggregates and thinks, "I." This is also called the *conceit of I am (asmimāna)*. Based on self-grasping, we believe ourselves to be inherently existent and very important.
5. Arrogance that thinks we have good qualities that we don't have.
6. Arrogance thinking we are just a little bit inferior to someone who is

really wonderful. We may think, “In this group of esteemed people, I am the least qualified,” implying that although we are less than those who are experts, we are definitely better than the majority of other people. It also claims status by being associated with someone who is better than us: “I am the disciple of a truly great spiritual master.”

7. Arrogance thinking our faults are virtues; for example, an ethically degenerate person thinks he is upstanding and righteous.

In the *Precious Garland* Nāgārjuna (RA 407–12) delineates seven types of arrogance in a slightly different way, although the meaning is generally the same as above. The one exception is the arrogance of inferiority. Here Nāgārjuna describes it as the arrogance of disparaging ourselves and thinking that we are useless and incapable. The Pāli tradition agrees with Nāgārjuna’s gloss.

- (1) Concerning these, the [first] is called *arrogance*;  
it is where one thinks of oneself  
as even inferior to the inferior, equal to the equal,  
or greater than or equal to the inferior.
- (2) It is *presumptive arrogance* for one to presume  
that one is equal to someone who is better.
- (3) If one presumes oneself to be  
even better than one’s betters,  
this is *arrogance beyond arrogance*;  
thinking oneself to be even loftier than the lofty.  
It is excessively bad,  
like developing sores on top of one’s boils.
- (4) The five empty aggregates  
are called the [*aggregates*] *subject to clinging*.  
When one apprehends them as I,  
this is called the *conceit of thinking “I am.”*
- (5) To presume that one has attained a result  
that one has not attained is to have *conceited arrogance*.
- (6) The wise know that boasting

about one's negative deeds is *erroneous arrogance*.

- (7) Deriding oneself, thinking,  
“I cannot manage,”  
is the *arrogance of inferiority*.

Such are the seven forms of arrogance, in brief.

Arrogance blocks us from gaining new qualities; when we believe we are already top-notch, we are not receptive to learning. Instead we remain complacent, or even smug, without endeavoring to cultivate virtuous qualities. Arrogance due to our Dharma knowledge or accomplishments does not plague beginners; at that time we are aware of how little we know and how much we need to learn and practice. But after we have studied and practiced for a while, arrogance can easily set in and arrest our spiritual growth.

It is important to discriminate between arrogance and self-confidence. Arrogance is often a cover for insecurity, whereas self-confidence acknowledges our abilities without inflating them. Self-confident people have no need to boast of their achievements. Self-confidence, an essential factor on the spiritual path, should be nurtured. Having the thought “As I progressively practice the path, I’ll be able to accomplish all the bodhisattva activities” is a helpful and necessary attitude; it is not arrogance. Awareness of our potential boosts our enthusiasm to engage in Dharma study and practice. Similarly, rejoicing at our virtue with a sense of satisfaction, thinking, “I feel good because I kept my precepts in a challenging situation,” is not arrogance, it’s a way of reinforcing our virtue.

## *Ignorance*

Ignorance is an afflictive state of unknowing brought about by the mind’s lack of clarity regarding the nature of things such as the four truths, Three Jewels, and karma and its effects. It functions as the basis and root of all other afflictions and the afflictive actions and rebirths they produce. This is a general definition of ignorance accepted by all Buddhist tenet systems. However, each system has its own unique definition as well. Furthermore, the meaning of ignorance differs according to the context; some of these meanings are explained below. Unless otherwise noted, they accord with the Prāsaṅgikas’ view, which may or may not be shared by other systems. As we delve into the correct view of emptiness later in the series, the meanings of ignorance in the various schools will be clarified.

Ignorance (*avidyā*) is often, but not always, synonymous with confusion (*moha*).<sup>24</sup>

1. *Ignorance that is a mental factor* is ignorance as defined above.

2. *Ignorance of selflessness*, in the meaning common to all Buddhist tenet schools, does not understand the selflessness of persons.

3. *Ignorance of the ultimate truth* does not know the mode of existence of all persons and phenomena. This meaning is accepted by the Cittamātra and Madhyamaka schools. When this ignorance gives rise to afflictions that produce karma, which in turn projects rebirths in saṃsāra, it is ignorance that is the first link of dependent origination (see #6).

4. *Ignorance of karma and its effects* underlies all destructive actions, especially those that lead to unfortunate rebirths. It is not simply not knowing about karma and its effects, but either strong disbelief in it or temporary disregard for it. This ignorance cannot discern virtuous from nonvirtuous actions, does not accept that happiness comes from virtuous actions and unhappiness from nonvirtuous actions, or does not fully believe this. For example, under the influence of this ignorance we don't see the faults of engaging in business deals that deprive others of what is rightly theirs. We may generally believe in karma and its effects, but when given the opportunity for personal gain, we justify lying to obtain what we like (see #5).

5. *Ignorance that is one of the three poisons* of ignorance, attachment, and animosity is one of the three basic factors spurring the creation of destructive karma. This is ignorance of karma and its effects. Often translated as “confusion,” it accompanies all nonvirtuous mental states and is a cause of unfortunate rebirths.

6. *Ignorance that is the first link of dependent origination* starts a new set of twelve links that leads to rebirth in saṃsāra. Tenet systems have different assertions about this ignorance. According to the Prāsaṅgikas, it grasps our own I and mine as inherently existent, which is based on grasping our aggregates as inherently existent.

7. *Self-grasping ignorance* grasps persons and phenomena as inherently existent. It first grasps the aggregates as inherently existent, and on that basis grasps the person to be inherently existent. Self-grasping ignorance is synonymous with ignorance grasping inherent existence, ignorance grasping true existence, ignorance grasping things to exist from their own side, and so on. Sometimes when used loosely, “self-grasping ignorance” may refer to grasping a

self-sufficient substantially existent person.

8. *Ignorance of the four distorted conceptions* grasps the impermanent as permanent, that which is duḥkha by nature as pleasurable, the unattractive as beautiful, and that which lacks a self as having one. This description is accepted by all tenet systems.

9. In the Pāli tradition ignorance is explained as not knowing the four truths — the aggregates, their origin, cessation, and the way to that cessation (SN 22.135) — past and future lives, and dependent origination. In specific contexts, it is described as not knowing the impermanent nature of the aggregates (SN 22.126); not understanding the gratification, danger, and escape with respect to the five aggregates (SN 22.129); and so forth.<sup>25</sup> In all these cases, true knowledge — the mind that understands these clearly, as they are — is the opposite.

Vasubandhu states that ignorance (see #1) accompanies all afflictions.<sup>26</sup> Prāsaṅgikas assert that self-grasping ignorance provokes coarse afflictions but does not accompany them because the two have different functions. Self-grasping ignorance grasps its object as inherently existent, while attachment craves an object seen as attractive and desirable. Self-grasping ignorance arises first and attachment follows. Because they perform different functions and do not occur at the same time, Prāsaṅgikas say self-grasping ignorance and attachment do not share the same primary mind and do not accompany each other.

However, they say that self-grasping ignorance can accompany subtle afflictions because subtle attachment and anger have an element of grasping phenomena as inherently existent. Subtle attachment grasps its object as inherently desirable and craves to possess it. Subtle anger grasps its object as inherently undesirable and craves to be separated from it. These subtle afflictions are obstacles to attaining nirvāṇa, but do not necessarily hinder having a good rebirth. The lower schools do not consider subtle afflictions to prevent liberation because they assert inherent existence.

According to Prāsaṅgikas, ignorance (see #3, 7) grasps persons and phenomena as inherently existent. Grasping the self as self-sufficient and substantially existent is also a form of ignorance, but is not the ignorance that is the root of saṃsāra. The ignorance grasping inherent existence arises first, followed by the ignorance grasping the self as self-sufficient substantially existent. The former does not accompany the latter, because they grasp their object differently and do not occur simultaneously: the former grasps the self to

be inherently existent, the latter grasps the self to be self-sufficient substantially existent. Similarly, in cases when grasping a self-sufficient substantially existent person causes anger to arise, it does not accompany anger due to the different ways these mental factors grasp their object.

Technically speaking, self-grasping ignorance and self-grasping are not the same. *Self-grasping ignorance* refers to the mental factor of ignorance that grasps inherent existence, while *self-grasping* refers to the entire mental state — the primary consciousness and its accompanying mental factors that include self-grasping ignorance. In other words, when ignorance grasping inherent existence accompanies a mental state, all aspects of that mental state grasp inherent existence.

However, sometimes *self-grasping* and *self-grasping ignorance* are used interchangeably. In this case, the speaker's purpose is not to distinguish the mental factor from the entire mental state, but to identify inherent existence and how we grasp objects and people to exist in this way.

As you can see, the topic of ignorance is complex and we need a lot of wisdom to understand it!

### *Deluded Doubt*

Deluded doubt is a mental factor that is indecisive and wavers toward an incorrect conclusion concerning important spiritual topics such as the ultimate nature of phenomena, the four truths, Three Jewels, and karma and its effects. Keeping us in a constant state of uncertainty about what we believe, which path to follow, and what to practice, deluded doubt immobilizes and prevents us from going forward spiritually. Doubting ourselves, the path, and the result, we spin in circles and spend days, months, and years stuck in indecision. Deluded doubt is compared to trying to sew with a two-pointed needle: we accomplish nothing. It has only an acquired, not an innate, form.

Deluded doubt differs from doubt inclined toward the correct conclusion or doubt wavering in the middle. It differs from curiosity, which propels us to ask questions and learn more until we come to a sound conclusion.

---

## REFLECTION

1. Review each of the five afflictions above, one by one. Think of at least three instances when each affliction has arisen in your mind.
  2. What were the bare facts of the situation that sparked it? What did distorted attention add on to these bare facts, for example, by imputing qualities onto the object or person?
  3. What effect did that affliction have on your mind? How did it influence your deeds and words?
  4. Which Dharma points or teachings would help you to subdue that affliction?
- 

### *Afflictive Views*

The above five root afflictions are non-views, whereas the sixth, afflictive views, includes five erroneous views. These five erroneous views are forms of corrupt intelligence that either grasp the I to exist inherently or, based on that, develop further mistaken conceptions. They act as the basis for all problems caused by afflictions and all other mistaken outlooks and create turmoil in our lives. Wisdom is their antidote.

Saying these views are “corrupt intelligence” (T. *shes rab nyon mong chan*) means they are incorrect speculations or conclusions reached by incorrect analysis. They are unreliable minds that lack a realistic foundation. They are called intelligence (*prajñā*) because they distinguish their object and know its qualities; they are corrupt (*kleśa*) because they misapprehend their object. Although afflictive views are numerous, these five are prominent: view of a personal identity (*satkāyadr̥ṣṭi*), view of extremes (*antagrāhadr̥ṣṭi*), view holding erroneous views as supreme (*dr̥ṣṭi-parāmarśa*), view of bad rules and practices (*śīlavrata-parāmarśa*<sup>27</sup>), and wrong views (*mithyādr̥ṣṭi*).

### **View of a personal identity**

According to all Buddhist schools except the Prāsaṅgikas, the view of a personal identity is a corrupt intelligence that, referring to the mental and physical aggregates, grasps them to be either a self-sufficient substantially existent I or mine. According to the Prāsaṅgikas, it is a corrupt intelligence that, observing

the nominally existent I or mine, grasps it to exist inherently. Of the two self-graspings — of persons and of phenomena — view of a personal identity is included in self-grasping of persons. However, self-grasping of persons includes grasping all persons as inherently existent, whereas the view of a personal identity grasps our own I and mine as inherently existent.

The aggregates are collections of many moments or many parts; they are transitory, perishing in each moment. Translated literally, the Tibetan term for *satkāyadr̥ṣṭi* — *'jig tshogs la lta ba* — is “view of the transitory collection” or “view of the perishing aggregates.” Specifying that they are transitory or perishing shows they are not permanent; saying “aggregates” indicates they are plural, not unitary. The term itself eliminates the possibility of a permanent, unitary person based on the aggregates.

Whereas the I is imputed in dependence on the collection of aggregates, view of a personal identity holds it to exist as an independent entity. All Buddhist schools refute the belief in a permanent soul or self that is asserted by non-Buddhists. According to the lower Buddhist schools, view of a personal identity observes the aggregates and mistakenly believes them to be a self-sufficient substantially existent I and mine — a person that controls the aggregates and a person that owns the aggregates. Here the observed object (*ālambana*, T. *dmigs pa*) is the aggregates, and the apprehended object (*muṣṭibandhaviṣaya*, T. *'dzin stangs kyi yul*) and conceived object (T. *zhen yul*) are a self-sufficient substantially existent person. The view of a personal identity is mistaken with respect to its apprehended and conceived objects because it believes the aggregates to be a self-sufficient substantially existent person, although they are not.

According to the view unique to the Prāsaṅgikas, view of a personal identity observes the mere I and mine — the I and mine that exist by being merely designated in dependence on the aggregates — and erroneously grasps them to be inherently existent. Here the observed object is the mere I and mine, and the apprehended and conceived objects are an inherently existent I and mine. This view is erroneous with respect to its apprehended and conceived objects because it mistakenly grasps the mere I and mine to exist inherently, as an independent entity unrelated to any other factors. To Prāsaṅgikas, grasping a self-sufficient substantially existent I and mine is a coarse grasping. It is not an actual view of a personal identity, but is only imputed as such. The subtle view of a personal identity that grasps the I and mine to be inherently existent is the actual view of a personal identity. This has ramifications for the meditation on selflessness,

because realizing the selflessness that is the absence of only a self-sufficient substantially existent I and mine will not free us from saṃsāra.

Prāsaṅgikas assert that the view of a personal identity is a form of the ignorance that is the root of cyclic existence; it is an innate affliction that is present in all sentient beings, including babies and animals, as an instinctive sense of an inherently existent I and mine. Its artificial form is expounded and justified by incorrect philosophies.

The view of a personal identity has two facets, one grasping *I* as inherently existent (*ahaṃkāra*, T. *ngar 'dzin pa*) and the other grasping *mine* as inherently existent (*mamakāra*, T. *nga yir 'dzin pa*). *I* refers to the person, while *mine* refers to what makes things mine. Based on grasping *I*, grasping at *mine* or *my* arises. The *I* and *mine* are one nature but different isolates; they cannot be separated but are nominally distinct.

Our aggregates are examples of *mine* — conventionally the five aggregates are said to be mine; they belong to the I. However, grasping them to be inherently existent is self-grasping of phenomena. The view of a personal identity grasps the mere I to be inherently existent and views the aggregates as being under the control of this person who makes things mine.

Once we designate something as mine — be it our bodies, minds, material objects, ideas, or relationships — we relate to it in a very different way. If a new car on the showroom floor is dented, we aren't disturbed, but once we see this car as mine, we become incensed when a small scratch appears on it. *My* body being attractive or unhealthy invokes strong feelings of delight or worry; *my* ideas being accepted is a source of great pride.

Holding the strong notion of an inherently existent I, we cherish our selves more than anything else. Everything that gives us pleasure is seen as good; we cling to it and want more. All that interferes with our happiness or harms us is considered bad; we become hostile toward it and seek to destroy or avoid it. To obtain and protect our objects of attachment and to defend them against any harm, we engage in many destructive actions that harm others and plant seeds of destructive karma on our mindstreams that will ripen as future painful experiences.

Because the view of a personal identity is an erroneous consciousness that misapprehends the I, it can be eradicated through realizing the wisdom that knows how the I actually exists. Identifying the disadvantages of the view of a personal identity motivates us to cultivate this liberating wisdom.

Both the Pāli and Sanskrit traditions speak of twenty false views of a real self that stem from the view of a personal identity. *The Shorter Series of Questions and Answers (Cūlavedalla Sutta, MN 44)* records a lay follower questioning Bhikkhunī Dhammadinnā about how the view of a personal identity comes to be. She responds:

An untaught ordinary person who has no regard for āryas and is unskilled and undisciplined in their Dhamma . . . regards (1) the body as the self, or (2) the self as possessing the body, or (3) the body as [contained] in the self, or (4) the self as [contained] in the body. He regards feelings as the self, or the self as possessing feelings, or feelings as [contained] in the self, or self as [contained] in feelings. He regards discrimination as the self, or the self as possessing discrimination, or discrimination as [contained] in the self, or self as [contained] in discrimination. He regards miscellaneous factors as the self, or the self as possessing miscellaneous factors, or miscellaneous factors as [contained] in the self, or the self as [contained] in miscellaneous factors. He regards consciousness as the self, or the self as possessing consciousness, or consciousness as [contained] in the self, or the self as [contained] in consciousness.

Pāli commentaries explain these four positions for each aggregate using the example of the relationship between the self and the body:

1. Regarding the body as self is like regarding the flame of an oil lamp as identical to the color of that flame.

2. Regarding the self as possessing the body is like regarding a tree as possessing its shadow.

3. Regarding the body as being in the self or being part of the self or dependent on the self is like regarding the scent as being in the flower. In the Sanskrit tradition, the analogy is a bag (I) with many items (aggregates) in it.

4. Regarding the self as being in the body or part of the body or dependent on the body is like regarding a jewel in a box. In the Sanskrit tradition, the analogy is the self being like a lion in a forest.

Regarding the first three, we may think, “The flame is not identical to its color, a tree does not really possess a shadow, and the scent is not in the flower, but a jewel can be in a box. Since this last analogy is true, perhaps the self is in

the body.” To understand the analogy, we must ask ourselves if the relationship between the self and the body is like the relationship between a jewel and the box it is in. A jewel is a distinct phenomenon from the box and can be removed from the box and looked at alone without seeing the box. However, removing the self as an entity totally distinct from the body and looking at it in its own right, divorced from the body, is not possible because the self is dependent on the body. It is designated in dependence on the aggregates. Similarly, the lion is a distinct entity from the forest, whereas the I depends on the aggregates.

These twenty false views are not the view of a personal identity itself: the observed objects of the first and third are one of the aggregates and the observed objects of the second and fourth are the I. These false views are not innately grasping because, according to Prāsaṅgikas, view of a personal identity does not innately grasp the I as either inherently one with or entirely separate from the aggregates. Because the twenty false views present only these two possibilities and neither of them is how the view of a personal identity innately grasps the I, they are acquired false views. However, if the I inherently existed it would have to be one of four positions. Thus to refute the view of a personal identity, we must also refute these twenty.

### **View of extremes**

The view of extremes is a corrupt intelligence that, referring to the I and mine apprehended by the view of a personal identity, regards them in either an absolutist or nihilistic manner. Based on grasping the I as inherently existent, view of the extremes holds either (1) an absolutist perspective that the I exists as an eternal, immutable soul or self that continues in future lives, or (2) a nihilistic outlook that the I becomes totally nonexistent after death, there being no continuum of the mere I in future lives. View of the extremes prevents us from finding the middle way view, free from the two extremes of absolutism and nihilism. It also causes us to neglect creating the virtuous causes for higher rebirth and liberation.

The absolutist view is also called the view of existence, eternalism,<sup>28</sup> superimposition, or permanence because it projects a false mode of existence on the person. The nihilistic view is called the view of nonexistence, annihilation, or deprecation because it denies the continuity of the self that actually exists. In doing so, it negates future rebirth as well as the possibility of liberation and awakening. The Buddha spoke of this view, saying its holders think (SN 24.4),

“I may not be, it may not be for me, I shall not be, it will not be for me.”

By identifying the view of extremes as erroneous, the Buddha clarified that although there is no inherently existent person, a conventionally existent person — the mere I — that is reborn and can attain liberation exists.

### **View holding erroneous views as supreme**

The view holding wrong views as supreme is a corrupt intelligence that regards view of a personal identity, view of extremes, or wrong views as correct and supreme views, there being no higher views. It also views our own five aggregates as supreme, thinking there is no better body, feelings, and so forth. We ordinary beings easily become attached to our views, and the view holding wrong views as supreme functions to increase our attachment to erroneous views so that we arrogantly tout our wrong views as right ones. Holding erroneous views as supreme strongly holds to wrong views and serves as the basis for generating wrong views in this and future lives. It makes our minds very narrow and decreases our intelligence. While wrong views can be abandoned comparatively easily, when we hold them as supreme, they become deeply entrenched in our minds and thus more difficult to overcome.

The four distorted conceptions regarding true *duḥkha* correspond with the first three afflictive views: Viewing that which lacks a self as having one is view of a personal identity. Viewing the impermanent as permanent is the eternalistic extreme view. Viewing the foul body as clean and viewing what is in nature unsatisfactory as pleasurable are the view holding erroneous views as supreme.

### **View of rules and practices**

The view holding bad rules and practices as supreme is a corrupt intelligence that believes purification of mental defilements is possible by ascetic practice and inferior ethical codes that are inspired by erroneous views. It causes us to engage in useless actions that make us exhausted but bring no spiritual benefit.

View of rules and practices thinks that what are not causes for higher rebirth and liberation are causes for them and what is not the path to liberation is the path. Under its influence people engage in nonvirtue, believing it to be virtue, and follow a path they believe will lead to liberation that leads instead to unfortunate rebirths. Examples of this erroneous view include thinking that killing in the name of one’s religion will bring rebirth in a heavenly realm and that animal sacrifice pleases the gods and brings good fortune. Other instances

are believing that the perfect performance of a ritual alone, without any mental transformation, is the path to liberation; that negativities can be purified by bathing in or drinking holy water; and that attachment is abandoned by extreme asceticism, such as fasting for days on end, walking through fire, or lying on a bed of nails. Although these people aspire for liberation, their aspiration remains unfulfilled.

## **Wrong views**

Wrong views are a corrupt intelligence that denies the existence of something necessary to attain awakening that exists. This includes the denial of causes, saying that constructive and destructive actions don't exist; denial of effects, believing that the results of constructive and destructive actions don't exist; denial of functionality, believing that past and future lives are nonexistent; and denial of phenomena, asserting liberation, awakening, or the Three Jewels are nonexistent. These views are so damaging because when people hold them, they easily deny ethical responsibility for their actions and justify engaging in many destructive actions. Wrong views function to harm us because they serve as a basis for engaging in nonvirtue, cause us not to engage in virtue, and sever our roots of virtue. Adhering to wrong views cuts our opportunity to attain awakening.

In the *Supreme Net Sutta (Brahmajāla Sutta)* the Buddha spoke of sixty-two examples of wrong views advanced by various groups (DN 1.3.45–57):<sup>29</sup>

The Eternalists proclaim the eternity of the self and the world . . . those who are partly Eternalists and partly Non-Eternalists proclaim the partial eternity and the partial non-eternity of the self and the world . . . the Finitists and Infinitists proclaim the finitude or infinitude of the world . . . the Eel-wriggles resort to evasive statements . . . the Chance Originationists proclaim the chance origin of the self and the world . . . those who speculate about the past, having fixed views about the past . . . those who claim a doctrine of conscious postmortem survival . . . those who proclaim a doctrine of unconscious postmortem survival . . . those who proclaim a doctrine of neither-conscious-nor-unconscious postmortem survival . . . Nihilists proclaim the annihilation, destruction, and nonexistence of beings . . . (and) there are proclaimers [of a self that realizes] nibbāna here and now . . .

speculators about the future . . . speculators about the past, the future, or both . . .

As we can see, just as in modern times, at the Buddha's time too there were a plethora of views, each claiming to be the one correct truth.

The Buddha pinpointed three types of nihilistic views as views shunned by the wise because they do not bring liberation (MN 60, MN 76).

1. *Nihilistic view denying the continuation of the person after death* is often the result of a materialist outlook on life. In a modern context, it is thinking the mind is an emergent property of the brain, and since the brain ceases to function at death, so do the mind and the person. Since no one will experience the consequences of our actions in a future rebirth, as long as we avoid the authorities in this life, we won't experience any adverse repercussions from our nonvirtuous actions and therefore can do as we please.

2. *Nihilistic view denying the existence of constructive and destructive actions* negates ethical distinctions among actions. Killing and torturing others is not destructive, so no unpleasant results of engaging in such actions will follow. Generosity and kindness are not constructive, so there is no use engaging in them.

3. *Nihilistic view denying causation* holds that there are no causes or conditions for either the defilement or purification of sentient beings — sentient beings are defiled and purified by either chance or fate, and there is nothing we can do to prevent suffering or attain liberation. Some people may believe in the randomness of happiness and pain because they cannot see the link between causes created in one life bringing effects in another life. Alternatively, they are fatalistic and believe that everything is controlled by destiny or by the will of the creator.

The Buddha did not say these views are wrong because they contradicted his ideas but because they are based on misunderstanding, limited knowledge, or distorted thinking and will lead those who hold them to create the causes for their own future suffering.

Wrong views may be spoken of in two ways. In general, they include all five afflictive views. More precisely, they differ from other views because of their object: they negate the existence of past and future lives, the Three Jewels, and the law of karma and its effects. Denying cause and effect is a serious wrong view, one that cuts the root of virtue.

Wrong views in the context of the ten paths of nonvirtue and in the context

of the root afflictions differ slightly. The latter is more pervasive in that it includes not only negating what does exist — such as the Three Jewels and so forth — but also holding what does not exist — such as a creator god, or a metaphysical primal substance or universal mind — as the ultimate source of the world and the beings in it.

Wrong views cut the root of virtue gradually, not all at once. The roots of virtue decrease while the wrong views grow stronger. For example, although Sally practices generosity, her career does not advance. Meanwhile, she sees people who lie get promoted. The wrong view arises in her mind that it's useless to create virtue. Slowly this idea grows stronger, so that even if her teacher tries to explain that her hindrances are due to destructive karma from the past and her present constructive actions will bring agreeable results in the future, she doesn't listen. She completely dismisses the law of karma and its effects. Such an entrenched wrong view severs the root of virtue in her mind, destroying the seeds of virtue.

It is easy to glaze over wrong views in our own minds, believing them to be correct. Observing our views, assumptions, and beliefs and questioning their veracity helps us to become aware of wrong views we haven't yet recognized. People who were raised in another religion may find that deep in their minds they still hold beliefs they were taught as children — beliefs in a creator, a soul, reward and punishment for ethical and unethical behavior, and so on. These may distort our understanding of Buddhist concepts that sound similar, and they hinder our understanding the teachings correctly. Examining them closely and using reason to decide what we believe is important to resolve the confusion wrong views cause.

Wrong views are based on ignorance and arise due to incorrect logic. They are especially difficult to abandon because the mistaken reasons and beliefs that are their basis must be dismantled. Due to strong attachment, some people are reluctant to reexamine their cherished beliefs and are thus resistant to hearing reasons that refute the assumptions at their basis. But when we are open and someone points out to us the absurd consequences that result from our wrong views, we begin to reevaluate our beliefs. Once we doubt an incorrect view, we can use reasoning to generate a correct assumption and then an inferential understanding. As we do so, our minds become clearer and more peaceful.

Wrong views easily support unethical conduct. People who dismiss the law of karma and its effects and hold that there is no connection between our actions and our experiences may wave away any sense of responsibility for their actions.

They believe that they can do anything they wish — including extortion, rape, and brutality — because their actions will not adversely affect themselves, the only possible consequence being arrest by the police, which they try to avoid.

Wrong views prevent people from attaining realizations of the path, liberation, and awakening. Someone with strong belief in an external creator will find the doctrine of emptiness uninteresting and make no attempt to learn or understand it. Someone who believes that sentient beings are inherently selfish does not think training our minds in compassion is worthwhile and considers the cultivation of bodhicitta a useless pursuit.

All Buddhist tenet systems agree that these five views are afflictive in that they disturb the mind; view of a personal identity and view of the extremes are ethically neutral, but the remaining three are nonvirtuous. The tenet systems also agree that all five afflictive views are rooted in ignorance and have an element of not knowing the object. Prāsaṅgikas take it a step further and say that all afflictive views are forms of ignorance.

According to the *Treasury of Knowledge*, wrong views are a kind of corrupt intelligence. According to the *Compendium of Knowledge*, they are called *corrupt intelligence* but are not actually intelligence because intelligence must necessarily be virtuous and afflictive views are nonvirtuous. However, both texts agree that the mental factor of wrong views and the mental factor of ignorance do not have a common locus. According to the *Compendium of Knowledge*, the path of action of wrong views (the tenth nonvirtue) is the mental factor of wrong views and is not ignorance. Asaṅga says this because wrong views are corrupt intelligence, and ignorance, being obscuration and unknowing, is not.

---

## REFLECTION

1. Make examples from your own experience of times each of the five afflictive views have manifested in your mind.
2. Are these views easier or more difficult to notice than the first five afflictions?
3. What effect do afflictive views have on your Dharma practice?
4. What will help you to subdue them?

---

## *More Types of Defilements*

To broaden our perspective on true origins, we will now look at other ways the sūtras and Abhidharma texts of both the Pāli and Sanskrit traditions describe the afflictive mental factors that propel saṃsāra.

There are many classification systems, each one looking at the defilements from a slightly different perspective that emphasizes particular points. The auxiliary afflictions emphasize the relationship of secondary afflictions and root afflictions. Abandonment or reduction in the ten fetters delineate attainment of the stages of stream-enterer (*srotāpanna*), once-returner (*sakṛdāgāmin*), nonreturner (*anāgāmi*), and arhat. The pollutants are discussed in the context of their being the basic mental contaminants that keep sentient beings revolving in cyclic existence because they are so well-entrenched in the mind.

Sometimes the description of a defilement varies from one text or tradition to another. This gives us more information about that defilement and its functions, making it easier for us to identify it when it arises in our minds.

What follows are not simply lists of defilements but mirrors to our minds that help us to identify the various attitudes, emotions, and views that disturb our minds. These defilements cause us to experience unhappiness here and now and instigate the creation of destructive karma that brings unpleasant results in future lives. As you read the descriptions of the various defilements, pause after each one and make an example of it in your own experience. This will bring these lists alive for you and reveal them as an excellent tool for identifying factors that hinder your happiness and the fulfillment of your spiritual aims.

## *Afflictions*

In the Pāli sūtras the afflictions (P. *kilesa*) are mentioned often but are not itemized. Their enumeration is found in the *Vibhaṅga* and explained in the *Dhammasaṅgani*, both canonical Abhidhamma texts. The *Path of Purification* also discusses them, saying they are called *afflictions* because they themselves are afflicted and because they afflict their associated mental states (Vism 22.49).

They are ten in number:

(1–3) Greed (attachment, P. *lobha*), animosity (hatred, P. *dosa*), and confusion (P. *moha*) are called *roots* (P. *mūla*) because their presence determines the ethical quality of a mental state as well as the verbal and physical actions it motivates. Their opposites — liberality, loving-kindness, and wisdom — are the three roots of virtue. (4) Arrogance (P. *māna*) is one of the higher fetters, abandoned only at arhatship. On the basis of any of the five aggregates, which are impermanent, duḥkha, and not self, arrogance thinks, “I am superior, equal, or inferior.” (5) Afflictive views (P. *diṭṭhi*) are numerous but can be condensed into eternalism and nihilism. (6–8) Deluded doubt (P. *vicikicchā*), restlessness (P. *uddhacca*), and lethargy (P. *thina*) are three of the five hindrances (P. *nīvaraṇa*), which will be explained later. (9–10) Lack of integrity (P. *ahirika*) and lack of consideration for others (P. *anottappa*) are instrumental in creating destructive karma. Lack of integrity is directed inward. Under its influence, we do not respect our principles and precepts and thus do not abandon nonvirtuous thoughts and behavior.<sup>30</sup> Lack of consideration for others is directed outward and does not abandon nonvirtuous thoughts and behavior even though they adversely affect others and their faith. Some of the above correspond to root afflictions in the Sanskrit tradition, whereas others are considered auxiliary afflictions.

## *Underlying Tendencies*

The six root afflictions in the Sanskrit tradition are called underlying tendencies (*anusāya*, *anusaya*) in the Pāli sūtras (MN 18.8) and Abhidharma.<sup>31</sup> They are the same six, except attachment has been separated into two, making seven: attachment to sensuality (*kamaragā*), anger (P. *paṭigha*), views, deluded doubt, arrogance, existence (*bhavarāga*), and ignorance (P. *avijjā*). Vasubandhu lists the underlying tendencies in the same way.

Here *attachment to sensuality* is the attachment of the desire realm that hungers after sensory objects of the desire realm — sights, sounds, and so forth. *Attachment to existence* is attachment to birth in the form and formless realms; it is possessed by beings in all three realms who cling to the bliss of concentration. A human may abandon attachment for sensual objects in the desire realm but have strong attachment for meditative states in the form or formless realms. Beings born in the form realm are attached to existence in that realm or to

existence in the formless realm and will strive to actualize that level of meditative absorption. Beings born in the formless realm are attached to existence there, although not to existence in the desire or form realms. Because they still hanker for saṃsāric existence, they lack the aspiration for liberation and cannot attain nirvāṇa unless they relinquish that attachment.

Although the main afflictive mental factors are listed as both underlying tendencies and root afflictions, they are seen differently in the Pāli Abhidhamma than in the *Compendium of Knowledge*. In the Pāli tradition, *anusaya* literally means “to lie down or to sleep along with.” Firmly established in the mind, underlying tendencies “sleep alongside” the mental continuum, acting as the causes for manifest afflictions. They are latent dispositions present even in newborn infants that enable manifest afflictions to arise when the appropriate causes and conditions are present.

Although seven underlying tendencies are listed, all defilements have a dormant form that is also called an underlying tendency. These may be stronger or weaker depending on the person’s actions and thoughts. When a certain view or emotion repeatedly arises in our minds — and especially when we act on it — its underlying tendency increases in strength. Saying someone has a hot temper means that his underlying tendency for anger is strong.

When afflictions arise and we counteract them by applying the antidotes, their underlying tendencies weaken. Training our minds in correct ways of thinking increases the strength of the antidotal mental factors, transforming someone who has a hot temper into someone who is kind and patient. Underlying tendencies begin to be eradicated from our mindstreams when we attain the supramundane path and become stream-enterers. This corresponds to the path of seeing in the Sanskrit tradition.

Vaibhāṣikas consider the underlying tendencies and the afflictions to be the same, whereas Sautrāntikas say that latent attachment is an underlying tendency and manifest attachment is a full entanglement. This difference in interpretation arose as the Abhidharmikas tried to explain how an affliction could be manifest now, disappear in fifteen minutes, and manifest again tomorrow. Without a permanent self, what connects the previous instance of an affliction to a later one? Sautrāntikas say that the underlying tendencies are latent forces, like seeds that produce manifest afflictions when the right conditions are present. Since the afflictions, like consciousnesses, are impermanent, the underlying tendency of anger connects one instance of anger to another instance of anger the next day.

Vaibhāṣikas do not agree, saying that if these dormant potentials were

always alongside the consciousness, there could never be a virtuous mental state, because virtuous mental states and dormant potentials are incompatible. Thus they say the underlying tendencies and the afflictions are the same.

Another Abhidharma school (Yaśomitra says it is the Vātsīputrīya) asserts that the underlying tendencies are abstract composites (*viprayukta-samskāra*) — impermanent things that are neither form nor consciousness. Here the underlying tendencies are neutral — neither virtuous nor nonvirtuous — and could abide alongside any mental state.<sup>32</sup> This is similar to Tibetan thought on this topic: afflictions are mental factors. When a manifest affliction fades, a seed of that affliction remains. The seed is a neutral abstract composite. When the correct conditions come together, the seed turns into the manifest affliction, in this way connecting one instance of an affliction with a later instance. The same mechanism works for virtuous mental factors.

The Buddha noted three underlying tendencies as being particularly dangerous (MN 148.28):

When one is touched by a pleasant feeling, if one delights in it, welcomes it, and remains holding to it, the underlying tendency to attachment lies within one. When one is touched by a painful feeling, if one sorrows, grieves, laments, weeps, beating one's breast, and becomes distraught, the underlying tendency to anger lies within one. When one is touched by a neutral feeling, if one does not understand as it actually is the origination, disappearance, gratification, danger, and escape<sup>33</sup> in regard to that feeling, the underlying tendency to ignorance lies within one. Monastics, that one shall here and now make an end to duḥkha without abandoning the underlying tendency to attachment for pleasant feeling, without abolishing the underlying tendency to anger for painful feeling, without extirpating the underlying tendency to ignorance in regard to neutral feeling, without abandoning the ignorance [that is the root of saṃsāra] and arousing true knowledge — this is impossible.

Observing our lives, we clearly see that attachment immediately arises in response to pleasant feelings — for example, eating some tasty food; aversion arises in response to an unpleasant feeling, such as having a stomachache; ignorance arises in response to a neutral feeling. What is needed is wisdom, insight, and true knowledge to free our minds from these underlying tendencies.

However, these three underlying tendencies must not be abandoned in regard to all pleasant, unpleasant, and neutral feelings (MN 44.25–28). In fact, the joy (*prīti*) and bliss (*sukkhā*) experienced in the first dhyāna overpower the underlying tendency to sensual attachment. The unpleasant feeling from thinking about duḥkha overcomes the underlying tendency to anger by inspiring us to become a nonreturner. The neutral feeling in the fourth dhyāna leads to equanimity and employing that dhyāna to realize the four truths leads to arhatship.

Even before attaining insight and wisdom, we can temporarily lessen the underlying tendencies. When a pleasant feeling arises, be mindful of it but do not delight in it. Instead of clinging to and wanting more of that experience, simply let it be. In that way the underlying tendency to sensual attachment isn't activated. Similarly, practice observing unpleasant feelings, and by recalling their transience, don't arouse anger. Restraining our senses is also helpful because by decreasing contact with sensual objects, we experience fewer pleasant and unpleasant feelings and thus fewer instances of sensual attachment and anger.

## *Auxiliary Afflictions*

In the Sanskrit tradition, the *Compendium of Knowledge* presents twenty auxiliary afflictions (*upakleśa*) that disturb the mind. They are called *auxiliary* because they are close to or related to the root afflictions and are classified according to the root afflictions with which they are associated.<sup>34</sup>

### *Afflictions derived from anger*

1. Wrath (belligerence, *krodha*) is a mental factor that, due to an increase of anger, is a thoroughly malicious state of mind wishing to cause immediate harm.

2. Resentment (grudge holding, vengeance, *upanāha*) is a mental factor that firmly holds on to the fact that in the past we were harmed by a particular person and wishes to retaliate.

3. Spite (*pradāsa*) is a mental factor that is preceded by wrath or resentment, is an outcome of malice, and motivates us to speak harsh words in response to unpleasant words said by others.

4. Jealousy (*īrṣyā*) is a mental factor that, out of attachment to respect and material gain, is unable to bear the good qualities, possessions, opportunities, or virtue of others.

5. Cruelty (*vihimsā*) is a mental factor that, with a malicious intention that lacks any compassion or kindness, desires to harm, belittle, or disregard others. It is usually directed toward those we consider inferior to ourselves.

### *Afflictions derived from attachment*

6. Miserliness (*mātsarya*) is a mental factor that, out of attachment to respect and material gain, firmly holds on to our possessions with no wish to give them away.

7. Haughtiness (*mada*) is a mental factor that, being attentive to the good fortune we possess, produces a false sense of confidence or security that leads to complacency.

8. Restlessness (agitation, excitement, *auddhatya*) is a mental factor that, through the force of attachment, does not allow the mind to rest solely on a virtuous object but scatters it here and there to many other objects.

### *Afflictions derived from ignorance*

9. Concealment (*mraṅśa*) is a mental factor that wishes to hide our faults whenever another person with a benevolent intention free of attachment, confusion, hatred, or fear talks about such faults.

10. Lethargy (dullness, *styāna*) is a mental factor that, having caused the mind to become dull and thereby insensitive, does not comprehend its object clearly.

11. Laziness (*kausīdya*) is a mental factor that, having firmly grasped an object offering temporary happiness, either does not wish to do anything constructive or, although wishing to, is weak-minded. Laziness leads to excessive sleep, involvement with meaningless activities, and discouragement.

12. Lack of faith (lack of confidence or trust, *āśraddhya*) is a mental factor that, causing us to have no belief in or respect for that which is worthy of confidence — such as karma and its results and the Three Jewels — is the complete opposite of faith. It acts as the basis for laziness and disrespect.

13. Forgetfulness (*muṣitasmṛtitā*) is a mental factor that, having caused the

apprehension of a virtuous object to be lost, induces memory of and distraction to an object of affliction.

14. Non-introspective awareness (non-clear comprehension, *asamprajanya*) is a mental factor that, being an afflictive intelligence, has made no, or only a rough, analysis and is not fully alert to the conduct of our body, speech, and mind, and thus causes us to become carelessly indifferent.

### *Afflictions derived from both attachment and ignorance*

15. Pretension (*māyā*) is a mental factor that, being overtly attached to respect or material gain, fabricates a particularly excellent quality about ourselves and wishes to make it known to others with the thought to deceive them.

16. Deceit (dishonesty, *śāṭhya*) is a mental factor that, being overtly attached to respect or material gain, wishes to deceive others by hiding our faults or preventing others from knowing our faults.

### *Afflictions derived from ignorance, anger, and attachment*

17. Lack of integrity (*āhrīkyā*) is a mental factor that does not avoid destructive actions for reasons of personal conscience or for the sake of our Dharma practice. It is a supportive condition for all afflictions and the basis for not protecting our precepts.

18. Inconsideration for others (*anapatrāpya*) is a mental factor that, without taking others or their spiritual traditions into account, does not restrain from destructive behavior. It causes others to lose faith in us.

19. Heedlessness (negligence, *pramāda*) is a mental factor that, when we are affected by laziness, wishes to act in an unrestrained manner without cultivating virtue or guarding the mind from objects or people that spark afflictions.

20. Distraction (*vikṣepa*) is a mental factor that, arising from any of the three poisons, is unable to direct the mind toward a constructive object and disperses it to a variety of other objects.

The Pāli tradition lists sixteen auxiliary afflictions (P. *upakkilesa*) that are offshoots of the three root afflictions (MN 7.3). Many of these overlap with the twenty in the Sanskrit tradition.

1. Covetousness and greed (P. *abhijjhāvisamālobha*) are aspects of craving.

One commentary says covetousness is desire for and attachment to our own belongings, and greed is desire for and attachment to the belongings of others. Another commentary states that covetousness is attachment to an object that is suitable and has been obtained (e.g., coveting a new shirt that you need and obtain legally), while greed is attachment to an object that is unsuitable and has not been obtained (e.g., greedily desiring illegal drugs).

2. Malice (P. *vyāpāda*, *byāpāda*) is aversion that arises in nine cases when thinking, “He harmed me, is harming me, will harm me. He harmed, is harming, will harm those who are dear to me. He helped, is helping, will help my enemies.”

3. Wrath (P. *kodha*) is hatefulness and opposition that seeks to harm someone.

4. Resentment (P. *upanāha*) is accumulated anger and hostility. At first there is anger toward a person or situation. This anger persists and turns into resentment, which is continued animosity toward someone. Weighing us down emotionally and obscuring our mind spiritually, resentment grows when we insist on being right, make ourselves into a victim, or refuse to forgive.

5. Contempt (P. *makkha*) is ingratitude that denigrates those who have been kind to us. A spiritual mentor may help her student for many years, training and teaching him. But when the student becomes well-known and respected, he disregards his teacher and thinks, “She did nothing for me.”

6. Insolence (P. *paḷāsa*) is a sense of competitiveness that puts the other person down. We arrogantly consider ourselves to be above others who are more qualified.

7. Jealousy (P. *issā*) is resentment of the gain, honor, respect, esteem, veneration, and reverence shown to others.

8. Miserliness (P. *macchariya*) is stinginess and avarice. We cling to what we have and are unwilling to share our possessions, dwelling, food, reputation, praise, and so forth with others. We don’t want the people who praise us to meet others because they may praise them. We don’t want others to learn the Dharma because they may become as well respected as we are.

9. Pretension (P. *māyā*) craftily hides our faults and misdeeds. We do a nonvirtuous action and, not wanting others to know about it, pretend to be innocent.

10. Deceit (P. *sāṭheyya*) fraudulently claims excellent qualities, achievements, or status that are not so.<sup>35</sup> We pretend to be a loyal and dear

friend who will never let others down.

11. Obstinacy (P. *thambha*) is rigidity and inflexibility. Such stubbornness often arises when, being insecure, we seek to control a situation or insist that we are right.

12. Competition (P. *sārambha*) seeks to rival and outshine others. We see someone dressed nicely and want to get better clothes to show off; we hear someone is learned and want to demonstrate our knowledge in order to receive more praise and a better reputation. Although such competition is defiled, it is possible to “compete” in a positive way. We see someone who is generous, and with a giving heart we wish to match or surpass her gift; we meet someone who is learned in the Dharma, and with a sincere desire to learn ourselves, we aspire to learn the Dharma as well as she has.

13. Arrogance (P. *māna*) is being puffed up on account of our social class, education, possessions, and so forth. There are three types of arrogance: thinking (1) I am better than others, (2) I am just as good as they are, and (3) I am worse than them. In the Pāli tradition, arrogance is listed both as an underlying tendency and an auxiliary affliction.<sup>36</sup>

14. Conceit (P. *atimāna*) is extreme elevation of the mind. Haughty and dismissive of others, we are so wrapped up in our own greatness that others seem insignificant in comparison.

15. Haughtiness (P. *mada*). According to one commentary, it is similar to arrogance and conceit in that it concerns social class, clan, and so forth. The sūtras describe haughtiness as vanity in relationship to youth, health, and life. Young people are infatuated with their youth and think they will never get old, the healthy believe they will not become ill, and those who are alive think they will not die.

16. Heedlessness (P. *pamāda*) is the opposite of conscientiousness and allows the mind to roam among objects of sensual pleasure. Letting the mind be overwhelmed with afflictions without making any effort to restrain the mind, it leads to self-indulgent actions and ethical downfalls.

Of the sixteen auxiliary afflictions in the Pāli tradition, eight (wrath, resentment, jealousy, miserliness, deceit, pretention, haughtiness, and heedlessness) are auxiliary afflictions and one (arrogance) is a root affliction in the *Compendium of Knowledge*. Two (covetousness and malice) are two of the ten nonvirtues.

## REFLECTION

---

1. Some people have difficulty identifying emotions because when they were children their parents did not name emotions or discuss them very much.
  2. Some ways to learn to identify your emotions are to become aware of (a) sensations in your body, (b) the flow or “texture” of your breath, and (c) the “tone” or mood in your mind.
  3. Using the above techniques, try to identify instances of each of the auxiliary afflictions in your life.
  4. Examine the triggers that make the auxiliary afflictions arise. Examine the short- and long-term results of manifest auxiliary afflictions in your life.
  5. Develop a strong determination to counteract the auxiliary afflictions by cultivating mental states that see the object in the opposite way.
- 

## *Fetters*

The ten fetters (*saṃyojana*) are spoken about extensively in the Pāli tradition and in the *Treasury of Knowledge*. They are called *fetters* because they keep us bound to cyclic existence and impede the attainment of liberation. The first five are *lower fetters* because they bind us to rebirth in the desire realm. The last five are *higher fetters* that prevent a nonreturner from becoming an arhat.

(1) View of a personal identity grasps a true self with respect to the aggregates — for example, thinking one of the aggregates is the self, the self is separate from the aggregates, the self is vast and the aggregates exist within it, or the self exists within the aggregates.

(2) Deluded doubt is a vacillating mind that equivocates about issues important for liberation, such as doubting that the Buddha is awakened, that the Dharma is the ultimate truth and the path out of saṃsāra, and that the Ārya

Saṅgha has realized the Dharma.

(3) View of rules and practices clings to mistaken codes of ethics and mistaken practices as virtuous and as the path to awakening — for example, holding extreme ascetic practices of self-mortification, such as fasting for weeks or sitting in fire to be virtuous, or holding perfectly performed brahminic rituals to be the path.

(4) Sensual desire (*kāmacchanda*) is attachment to objects in the desire realm.

(5) Malice is the wish to harm another living being.

(6–7) Desire for existence in the form realm (*rūparāga*) and desire for existence in the formless realm (P. *arūparāga*) are attached to their respective realms and wish to continue to abide there. These correspond to the pollutant of craving for continued existence.

(8) Arrogance is the subtle, fundamental arrogance, the conceit of “I am” (*asmimāna*). This differs from view of a personal identity, which is a conceptual view holding a permanent, true self. After this view is eliminated, the thoughts “I am this” or “I am that” no longer arise, but the thought “I am” is still present. Even though a nonreturner knows this to be mistaken and does not hold on to the idea “I am,” the thought “I am” still arises spontaneously.

(9) Restlessness is present in any mind that is not liberated. This hindrance may still arise in nonreturners if they are not mindful and diligent, but they are able to overcome it quickly.

(10) Ignorance is the primordial ignorance that is the root of saṃsāra. It is blindness of the true nature, an obscuration that prevents us from seeing how things actually exist. Unlike the Prāsaṅgika, according to the Pāli tradition ignorance does not apprehend the opposite of how things exist.

The *Compendium of Knowledge* lists the fetters differently: attachment, anger, arrogance, ignorance, deluded doubt, afflictive views (view of a personal identity, view of extremes, and wrong views), holding wrong views as supreme, which includes the view of rules and practices, jealousy, and miserliness.

---

## REFLECTION

1. Choose one of the fetters that is obvious in your experience. Be aware of it in its latent, manifest, and motivating forms.

2. While eliminating its latent form requires insight into selflessness, what ideas do you have to inhibit it manifesting, or once it has manifested, from motivating your deeds and speech?
- 

## *Pollutants*

Pollutants (*āsrava*, *āsava*) perpetuate saṃsāra. Most Pāli sūtras mention three pollutants, although a late addition to the *Mahāparinibbāna Sutta* and the Pāli Abhidhamma literature speak of four.

(1) The *pollutant of sensuality* (P. *kāmāsava*) is a deeply rooted tendency for sensual desire that causes us to get tangled up with sensual objects. It corresponds to the fetter of sensual desire.

(2) The *pollutant of existence* (P. *bhavāsava*) is a deep, fundamental craving to exist in some form. This pollutant is particularly insidious because it propels the mind to take rebirth repeatedly in cyclic existence. It encapsulates the fetters of desire for existence in the form and formless realms.

(3) The *pollutant of ignorance* (P. *avijjāsava*) is a lack of knowing and understanding. Always present in saṃsāric beings, it sometimes surges and becomes very intense, inhibiting the mind from seeing reality clearly. The fetter of ignorance and the underlying tendency of ignorance are included in this pollutant.

(4) The *pollutant of views* (P. *diṭṭhāsava*) includes the fetters of view of a personal identity and view of rules and practices, and the underlying tendency to views. This pollutant is not included in the enumeration of pollutants in the early sūtras.

Pollutants are deeply rooted, primordial defilements that have kept us bound in saṃsāra without respite. Existing deep in the mind, they flow into conscious experience when provoked by contact with certain objects. For example, contact with pleasant sensory objects stimulates the pollutant of sensuality.

*Āsrava* was a word used by brahmins and ascetics before the Buddha. The Buddha gave the term a new meaning and delineated the first three pollutants. These are also forms of craving, each focused on its own object and functioning in its own way to keep us trapped in saṃsāra.

The *Treasury of Knowledge* lists three pollutants: (1) The *pollutant of desire*

*or attachment* includes the afflictions and full entanglements of the desire realm, except for ignorance. These are nonvirtuous. (2) The *pollutant of existence* is directed inward and is interested in birth in the form or formless realm. It is ethically neutral and includes the underlying tendencies and afflictions of the form and formless realms, except for ignorance. (3) The *pollutant of ignorance* is the ignorance of the desire, form, and formless realms. It is listed as a separate pollutant to emphasize that it is the root of saṃsāra and that when it is eliminated, the other pollutants also cease. These are called *pollutants* because they establish us in cyclic existence; they are called *outflows* because they flow out of the mind through the six sense sources.<sup>37</sup>

## *Hindrances*

Another group of obscurations explained in both the Pāli and Sanskrit traditions are the five hindrances: (1) sensual desire, (2) malice, (3) lethargy and sleepiness, (4) restlessness and regret, and (5) deluded doubt. They are called *hindrances* because they impede attaining the form- and formless-realm absorptions. These five are nonvirtuous and are found only in desire-realm beings. The five hindrances have been briefly discussed above in other classifications of defilements and will be explained in more depth when the method to gain serenity is presented.

In the above classifications of defilements, some defilements are found in multiple categories, others are present only once. Various forms of attachment, anger, and ignorance appear repeatedly, sometimes given different names or slightly different definitions. However, they still point to three strong tendencies of our minds that it behooves us to pay attention to.

When studying the defilements and observing how they function in our minds and the influence they have on our lives, it is important to remember that they are not embedded in the nature of our minds. Just as clouds in the sky obscure the clear nature of the sky but are not part of it, defilements obscure the clear light nature of the mind but are not embedded in that pure nature. Like the clouds, defilements can be removed. But unlike clouds, which can always reappear, when defilements are thoroughly cleansed from the mind, they can never return and the pure sky-like nature of the mind radiates forever unobscured.

## 4 | Afflictions, Their Arising, and Their Antidotes

AS WE'VE SEEN, when we delve into the categories and definitions of defilements according to various Buddhist traditions and tenet schools, the discussion becomes lengthy and complex. On the other hand, when we focus on the questions “What motivates me to act in ways that harm myself and others? What keeps me and others bound in cyclic existence?” the answer is succinct — afflictions rooted in ignorance. In this chapter we will learn more about how the afflictions operate.

### *Eighty-Four Thousand Afflictions*

We may wonder why certain disturbing emotions — such as fear, anxiety, frustration, insecurity, and depression — are not mentioned in the classifications of defilements, although they disturb our minds and interfere with Dharma practice. It could be that because of the structure of contemporary society and world events, these afflictions have become more pronounced. However, they did not go unnoticed by the Buddha, who spoke of eighty-four thousand afflictions. The groups in the previous chapter contain the most prominent afflictions that keep us revolving in cyclic existence. These other afflictions are among the eighty-four thousand and are subtypes of the prominent ones.

For example, fear, insecurity, and anxiety are related to attachment. Based on distorted conceptions that see what is impermanent as permanent and what is unsatisfactory in nature as happiness, we become attached to certain people or things. Fear arises over the possibility of being separated from the people, situations, and things we are attached to. Anxiety and insecurity manifest when we consider unknown future events, such as possibly losing our job, our marriage dissolving, or receiving an unwanted medical diagnosis. Although these events have not happened yet and may never happen, distorted conceptions and afflictions run rampant in our minds, making us miserable.

Another type of anxiety is related to doubt, but unlike the doubt that is a root affliction, this doubt does not contemplate issues important to spiritual practice.

Rather, we agonize over making decisions, wishing we could follow all the options simultaneously before choosing the best one. Plagued by doubt, we avoid making a decision and spin with anxiety. This, too, is related to attachment: our world has become narrowly focused on our own happiness and what benefits ourselves and the people we cherish. Our problem is that we don't know what will bring us the most happiness.

Depression that is not based on chemical activity in the brain or traumatic brain injury seems to be related to attachment. We want events to happen in ways that accord with our expectations and dreams, and we become despondent when they do not. That can lead to anger at ourselves and self-recrimination, both of which can contribute to depression.

Emotions such as depression, rage, and anxiety that manifests as hypervigilance may have multiple contributing factors — physical, sexual, or emotional abuse; combat trauma; poverty; prejudice and oppression; and irregularities in brain chemistry or traumatic brain injury, to name a few — so healing may require a multipronged approach. Within this, the Buddhist approach of analyzing the thoughts, mental habits, and so forth that lie behind disturbing emotions can be very helpful. If we attribute our problems only to external factors, healing can be difficult because we cannot undo past experiences. They happened and are over. Our present problems stem from unbeneficial ways of interpreting and responding to past events and present memories of them. By understanding the mistaken way in which disturbing emotions function and learning more realistic and beneficial ways of regarding situations, we can subdue these disturbing emotions and prevent the damaging behavior they can provoke.

When hearing our emotions analyzed in the above manner, we may feel piqued, thinking that the seriousness of our emotions is not being respected. As individuals we are very attached to what we term *my* emotions. Based on adhering to them as *mine*, we consider our emotions to be extremely serious, so much so that we feel hurt if others aren't as concerned with them as we are. While our emotions are important, it may not be for the reason we think. These emotions motivate our physical, verbal, and mental actions that not only affect us spiritually but also influence others around us. Our actions also influence our future lives. For these reasons, learning how to manage them effectively is important.

Some people are attached to predictability, even though *samsāra* is unpredictable in that previously created karma is continuously ripening. They

wish to control other people and situations and become frustrated when they cannot. However, we cannot make others do what we think is best, nor can we control the aging of our bodies or make the body immune to illness or injury. Our wish to control and the belief that we should be able to is associated with the view of a personal identity, especially the form that grasps at a self-sufficient substantially existent person. Tsongkhapa uses the analogy of a master and servant to illustrate this grasping: the self is like a master who controls and gives orders, and the body and mind, like servants, should obey. However, such a self-sufficient substantially existent person does not exist, so thinking that we should be able to control everything around us is definitely unrealistic.

When we look from a global perspective, it is evident that all these defilements are in one way or another dependent on the obscuring and misleading force of ignorance and view of a personal identity. These are the root of saṃsāra. Seeing their disadvantages, we become determined to cultivate the wisdom that will eradicate them. Knowing that all ordinary beings suffer from them, our hearts open in compassion for ourselves and others.

---

## REFLECTION

1. When afflictions that are not specifically named in the previous chapter arise in your mind, name them and observe how they function. See which of the root afflictions they are most closely related to.
2. Identify the distorted conceptions that lie behind that emotion.
3. Observe the other afflictions that arise either before or after it.
4. Question whether these afflictive emotions serve to promote your own and others' well-being. Think of which Dharma teachings you could contemplate that would help counteract these afflictive emotions.

---

*The Order in Which Afflictions Arise*

The way the order in which afflictions arise is presented depends on whether ignorance and view of a personal identity are regarded as separate. Seeing them as different mental factors, the two *Knowledges* say that ignorance is mental obscuration that cannot see things clearly. On the basis of ignorance, view of a personal identity mistakenly believes the aggregates to be a self-sufficient substantially existent person. All other afflictions follow from this. This is analogous to not being able to see clearly in a dark room (ignorance) and mistaking a rope to be a snake (view of a personal identity). Attachment, anger, and other afflictions swiftly follow. Vasubandhu lays out their sequential development in the *Treasury of Knowledge*: ignorance, doubt, wrong views, view of a personal identity, view of extremes, view of rules and practices, view holding wrong views as supreme, arrogance, attachment, hatred.

Initially from *ignorance* regarding the meaning of the [four] truths, *doubt* arises, wondering whether there is or is not duḥkha.

From that, by relying on an inferior spiritual friend, one engages in erroneous teachings and learning, which produce the *wrong view* that duḥkha does not exist.

From that arises the *view of a personal identity* that grasps the aggregates as I and mine.

From that arises the *view of extremes* that grasps the permanence or annihilation of the aggregates [that is, that the I exists as an eternal, immutable soul or that it ceases to exist after death].

From that arises the *view of rules and practices* that grasps the belief that there is purification from holding those extreme [views].

From that arises the *view holding wrong views as supreme*, because what was believed to provide purification [is held as a supreme view].

From that arise *arrogance* and *attachment* for one's own views and *hatred* that despises the views of others.

Sages such as Dharmakīrti and Candrakīrti and their followers, who assert that view of a personal identity is ignorance, present another sequence as outlined by Dharmakīrti in his *Commentary on Reliable Cognition* (LC 1:300).

Once there is a self, there is an idea of an other.

Discriminating self and other, attachment and animosity arise.

All of the faults come about

ALL OF THE FAULTS COME ABOUT  
in association with these.

Tsongkhapa expands on this (LC 1:300):

When the *view of a personal identity* [which is *ignorance*] apprehends the self, discrimination arises between self and other.

Once you have made that distinction, you become *attached* to what is associated with yourself and *hostile* toward that which pertains to others.

As you observe the self, your mind becomes inflated [with *arrogance*].

You develop a belief that this very self is either eternal or subject to annihilation [*view of extremes*].

You come to believe in the supremacy of a view of the self and the like [*view holding wrong views as supreme*], and you also come to believe in the supremacy of the detrimental practices associated with such views [*view of rules and practices*]. Similarly, you develop the *wrong view* that denies the existence of things such as the Teacher [Buddha], who taught selflessness and that which he taught — karma and its effects, the truths of the āryas, the Three Jewels, and so forth; or else you become *doubtful* as to whether such things exist or are real.

It is interesting to note that the Vaibhāṣika version of Vasubandhu places doubt and the various afflictive views before the disturbing emotions of attachment, anger, and arrogance, whereas in Dharmakīrti's version the disturbing emotions arise before the afflictive views and doubt.

## *Factors Causing Afflictions to Arise*

Some people assert that afflictions are an inherent part of human nature and, as such, are hardwired in our nervous system or genes. Although we may be able to modify their effects, we can never be free of them. From a Buddhist viewpoint, this is a narrow view of human potential that offers little hope for the improvement of humanity. As described in volumes 1 and 2 of the Library of

Wisdom and Compassion, the Buddhist view is that although coarse levels of consciousness and the brain are interdependent, they are not the same nature. Thus the subtlest minds are not bound by the physical limitations of our bodies and brains. In addition, as conscious phenomena, afflictions can be eliminated from the mindstream by applying their counterforces. They are not our inherent nature and liberation from afflictions is possible, as demonstrated by many highly realized practitioners throughout history.

The arising of afflictions in ordinary beings is to some extent related to our bodies. When we are physically weak or deprived of physical necessities, we are more susceptible to anger. We are more inclined toward attachment, especially sexual desire, when we are healthy and our bodies are comfortable. When we get angry, when we are hungry, or when we are depressed as a result of chemical imbalance in the brain, two factors are at work: one is our present physical situation, the other is the seed of afflictions in our mindstreams. Some people believe that scientists may one day be able to stop all disturbing emotions through medicines that regulate body chemistry and techniques that alter genetic makeup. However, as long as the seeds of afflictions are still present, afflictions will arise when suitable conditions come together. Afflictions can only be fully overcome through spiritual practice.

What are the principal factors that cause manifest afflictions to arise in our minds? Six conditions or a combination of them play a role.

(1) The *seeds of afflictions* are a prominent cause. Because they remain on our mindstreams and go from one life to the next, we are not free from afflictions. An external or internal factor can stimulate these seeds to give rise to manifest afflictions.

(2) *Contact with certain objects* can stimulate afflictions to erupt. Attachment arises when good food or an attractive person is in front of us; anger springs up when we are around people who disagree with our ideas or challenge our opinions.

(3) *Detrimental influences* such as bad friends have a strong influence on our way of thinking and behaving. Adults recognize the strong influence of peer pressure on children, but they seldom take stock of the extent to which their own emotions and behavior are affected by the wish to be part of a group and the desire not to be seen as strange or different from others. Seeking the approval or praise of people we care about or respect can make us compromise our ethical values if we are not mindful. If a close friend is upset with someone, we tend to get angry at that person as well. If a family member is strongly attached to a

particular political view, our attachment — or anger — toward it will easily arise.

(4) *Verbal stimuli* — news, books, TV, Internet, radio, magazines, films, social media, and so forth — impact our thoughts and emotions. In recent years the media has become a prominent conditioning force in our lives as we are exposed to hundreds, if not thousands, of advertisements each day. The daily news influences our thoughts and can easily provoke strong emotions. With the constant display of sexual images and violent pictures that we are exposed to from childhood, it is no wonder that attachment and hostility flare up so easily and frequently that we stop noticing them.

(5) *Habitual ways of thinking and habitual emotions* self-replicate in the future. The more familiar we are with certain afflictions and wrong views, the more we see them as true and reinforce them. Someone accustomed to concealing his or her faults and misdeeds will continue this mindset, making it more difficult to change. Resentment and belligerence arise easily in someone who is familiar with anger and has never applied counterforces to it. For this reason, it's advisable to learn and apply antidotes to our habitual afflictions and behaviors, because they are the most troublesome.

(6) *Distorted attention (ayoniśo manaskāra)* or distorted conceptions misinterpret events, superimpose attractive and unattractive qualities onto people and objects, and project motivations and meanings on other people's words and activities. This establishes the perfect setting for afflictions that haven't arisen to arise and for those that have arisen to increase. However, when we train our minds to observe sense objects with mindfulness and wisdom, afflictions that haven't arisen do not arise, and the ones that have arisen subside.

For example, based on seeing a car as inherently existent, we see its marvelous qualities as existing in the car itself. In fact, distorted attention has exaggerated the car's good qualities and ignored its faults, making the car appear 100 percent desirable in our eyes. Our attachment for it explodes and we *must* buy it. By pausing to do some analysis, we will begin to see that distorted attention is fabricating the car's qualities and desirability and our life will be fine without buying that car.

The surroundings in which we live may contain many of the objects, detrimental social influences, and verbal stimuli that trigger our afflictions. For this reason, the great masters advise avoiding environments that trigger our afflictions. This is done not because those objects or people are bad, but because our afflictions are as yet uncontrolled. Living in an environment where

distractions and commotion are minimal enables us to focus on developing counterforces to afflictions. Once these are strong, our external surroundings will not affect us as much.

---

## REFLECTION

1. What kind of media are you exposed to throughout your day — Internet, TV, news, movies, smartphone, computer, advertising, billboards, magazines, and so forth.
2. How does each of these influence your thoughts and the decisions you make? Do they have a deleterious effect? For example, how do the sex and violence in movies influence your mind? Do you compare your body with the pictures in magazines and other media and feel that you're not attractive? Does watching people fighting in movies rev up your adrenaline and provoke hostility in your mind?
3. What would a healthy relationship with the media look like in your life? What do you need to do to bring that about?

---

### *Feelings That Accompany Afflictions*

Previously we discussed one way in which feelings and afflictions are related: polluted feelings easily provoke afflictions to arise; when we are unhappy, anger and malice may soon follow. Here feelings are causes for afflictions. For this reason, we are advised to maintain a happy mind. In the second way, they are simultaneous — that is, feelings accompany afflictive mental states. Attachment in the desire realm is accompanied by pleasant feeling; anger and animosity are accompanied by unpleasant feeling. This may be one reason why we are less willing to apply the antidotes to attachment. Any of the three feelings — pleasant, unpleasant, or neutral — may accompany ignorance.

Mental happiness or unhappiness may accompany wrong views. If someone believes nonvirtuous actions have no result, he is happy; but if he thinks virtuous

actions bring no result, he is unhappy. Mental unhappiness accompanies doubt; being indecisive is unpleasant. A happy feeling accompanies arrogance and the other four afflictive views. However, if the mind of a person in the desire realm is unclear, all ten root afflictions are accompanied by a neutral feeling.

The Pāli Abhidhamma says that all consciousnesses rooted in anger are accompanied by mental unhappiness. That means that whenever our minds are unhappy, anger is present even at a subtle level, and this mental state is nonvirtuous.

To the contrary, virtuous mental states are accompanied by either a happy feeling or equanimity. Consciously steering our thoughts so that they are constructive brings not only happiness or equanimity but also creates virtuous karma. When we act with genuine generosity or ethical restraint, our mind is happy here and now and we create the cause for happiness in the future. Of course when training in these practices we may not be continually happy because afflictions sometimes interfere, but as we continue to practice, afflictions will wane and virtue and joy will increase.

Of the auxiliary afflictions and variable mental factors that become nonvirtuous, regret, jealousy, belligerence, harmfulness, resentment, and spite are accompanied by mental unhappiness. Miserliness, being an aspect of attachment, is accompanied by a pleasant feeling. Either mental happiness or unhappiness may accompany deceit, pretension, concealment, and sleep because when those four mental factors do not accomplish the purpose that is their object, the mind becomes unhappy.

Haughtiness is usually accompanied by happiness, although above the third dhyāna (P. *jhāna*), neutral feeling is present. Lack of integrity, inconsideration for others, lethargy, and restlessness may be accompanied by any of the five feelings — physical and mental happiness, physical and mental unhappiness, and neutral feeling. Neutral feeling may accompany any of the afflictions.

There is no physical or mental unhappiness in the form and formless realms, and their afflictions are ethically neutral because they are weak. Of the dhyānas, the first three are accompanied by the feeling of bliss (a type of happy feeling) and the fourth by a neutral feeling. Formless realm absorptions are accompanied by only neutral feeling.

---

## REFLECTION

1. Practice identifying the various virtuous and nonvirtuous mental factors as they arise in your mind.
  2. Observe the feeling that accompanies each one.
  3. How does the feeling of happiness that arises with attachment to sensual objects differ from the happiness that accompanies generosity or genuine affection?
- 

## *The Ethical Dimension of Afflictions*

Not all afflictions are nonvirtuous; by themselves, ignorance, view of a personal identity, and view of extremes are neutral. They are not nonvirtuous because by themselves they lack the capacity to produce pain. In addition, these three do not always give rise to nonvirtuous mental states.<sup>38</sup>

The *Treasury of Knowledge* speaks of mixed and unmixed ignorance. *Mixed ignorance* assists and accompanies the other five root afflictions and shares five similarities with them: they depend on the same cognitive faculty, have the same object, are generated in the same aspect, occur at the same time, and have the same entity.<sup>39</sup> Ignorance shares the same primary consciousness with all of the root and auxiliary afflictions. An example is the ignorance that shares a primary consciousness with attachment. This ignorance, as well as the primary consciousness and other mental factors accompanying it, become nonvirtuous by the power of attachment being nonvirtuous.

*Unmixed ignorance* doesn't share five similarities with any of the nonvirtuous afflictions and is ethically neutral. Examples of unmixed ignorance are the ignorance accompanying the view of a personal identity and the view of extremes, and the ignorance mistaking a pen for a stick.

The ignorance that is the first of the twelve links of dependent origination is unmixed ignorance. When it gives rise to anger, greed, or any other nonvirtuous mental factors, this new mental state is no longer the first link. This new mental state is accompanied by ignorance and is nonvirtuous due to the power of the other affliction that accompanies it. It leads to a nonvirtuous formative action that is the actual second link.

All afflictions of the desire realm are nonvirtuous, except unmixed ignorance, view of a personal identity, and view of extremes, which are neutral. All afflictions of the upper realms — the form and formless realms — are neutral. A degree of intensity is needed for an affliction to be nonvirtuous. Since the afflictions of beings in the upper realms are refined, they lack the intensity required to create nonvirtuous karma that ripens into painful experiences.

To apply this to the Prāsaṅgika view, the first-link ignorance that precedes a virtuous formative karma such as generosity is unmixed ignorance that grasps the agent, object, and action as inherently existent. It is ethically neutral. This ignorance gives rise to a virtuous mental state, such as compassion, that motivates the constructive karma of generosity, which is the second link. During the time of giving the gift, grasping inherent existence may continue, or we may simply apprehend ourselves, the offering, and the recipient without grasping them as either inherently existent or non-inherently existent. In the former case, the mental state grasping inherent existence is neutral and is a different mental state than the one that is generous, which is virtuous. Although the two mental states are closely related in time, they do not occur simultaneously.

## *Counterforces to the Afflictions*

Whether we follow a religion or not, we can see that afflictions interfere with our personal happiness as well as the well-being of society in general. Most harmful events among individuals, groups, or nations are rooted in ignorance and motivated by hatred, greed, arrogance, jealousy, and so forth. These afflictions are the causes of killing, robbery, sexual abuse, political and financial scandals, prejudice, injustice, and inequality. Problems in society — including in our institutional structures — are rooted in people's afflictive mental states. Although this is the case, when we face personal or societal problems, we seldom look in our minds for the source of the problem. It is time that we do.

The law of the land punishes people engaged in harmful actions in an effort to stop such behavior. Although punishment may make someone so uncomfortable or fearful that they temporarily stop a certain behavior, it does not bring about lasting change. That comes only from changing our mental attitude. Unless the deeper source of harmful activities is eliminated, they will continue in one form or another. We need to identify the source of problems — which lies in the unsubdued mind — and employ preventative and remedial measures to tame

our minds. This involves learning about the faults of afflictions and techniques to counteract them, applying these to our own minds, and sharing them with others. This can be done without using Buddhist vocabulary or religious concepts; it is common sense.

The first step in counteracting the afflictions is to notice when they manifest in our minds. While we may believe that we know ourselves well, our thoughts and emotions often go unnoticed. One factor contributing to this is the lack of mindfulness and introspective awareness — we neglect to focus our minds on what is beneficial and to monitor our minds' activities with wisdom. Sometimes we are distracted by sense objects and do not pay attention to our inner thoughts and emotions. Some people grew up in families where emotions and thoughts were not labeled or discussed, so they did not learn the vocabulary necessary to discuss the workings of their minds.

Here are some tips to help you identify thoughts and afflictions. First check in with your body; our physical sensations often tell us a lot about what is happening in our minds. When our hearts are racing, our faces flush, and our stomachs tight, chances are anger — which is often based on fear — is present. When our palms are sweaty and our breaths short, we are usually agitated or nervous.

Also check in with the mood in your mind. When thoughts about desirable objects are swirling in your mind, attachment is manifest. When you can't stand that someone else is better than you in a certain activity, that is jealousy. When you don't feel like doing anything but lounge around, that is the laziness of procrastination. When you put yourself down, that is the laziness of discouragement.

Also observe your behavior patterns; they can tell you if an affliction has arisen in your mind. If you find yourself going to the refrigerator repeatedly even though you aren't hungry, what affliction is present in your mind? If you continually check social media, what affliction is propelling this action? What are you really seeking when you engage in that behavior?

The next step is to differentiate constructive and neutral thoughts from afflictions. Some virtuous states of mind have “near enemies” — afflictions that are similar to them. Love and attachment are easily confused: both want another person to be happy. Love freely extends goodwill broadly to many people whereas attachment focuses on a small group of people and has expectations and strings attached. Righteous anger can be confused with compassion because they both seek to eliminate injustice and others' suffering. However, compassion

seeks the best outcome for all those concerned in a conflict whereas righteous anger wants to harm those whom we see as perpetrating harm.

Sometimes we must tease apart different facets of a mental state to identify an affliction. For example, a friend deliberately runs a red light when there are no extenuating circumstances. Some people become angry at the driver — the agent who did the action. Other people disagree with the action — heedlessly endangering others. The first is anger, the second is not. The more we can separate the person from his action, the more we can avoid anger at the person. This change in attitude enables us to have a reasonable discussion with him about the possible effects of running a red light.

Then reflect on the disadvantages of whatever affliction is plaguing you. That will give you determination to apply its counterforce.

When working to subdue our afflictions, it is best to choose the one that causes the biggest problems for us. Beginners in meditation often recognize that they have attachment to food, but that may not be the affliction that is most problematic for them. Anger may be a bigger problem because it interferes with our relationships at work and at home and fuels destructive behavior. Possessiveness regarding other people, lusting for sexual pleasure, or greed for money or social status may cause more difficulties in our lives and prompt more destructive karma than attachment to food. On the other hand, if you are overweight and in poor health and your doctor advises you to eat more healthily, attachment to food may be the affliction to work with first. If you work on the most problematic affliction at the outset of your practice, you'll see the positive effects Dharma practice has on your life.

One of the connotations of the word *dharma* is to hold back or to prevent. In the case of the Buddhadharmas, if we properly practice, it holds us back from saṃsāric duḥkha by subduing or destroying afflictions. The Dharma does this by providing the antidotes to these harmful mental factors. Everything taught in this book is meant to be a counterforce to the afflictions, their seeds, and latencies.

There are two types of counterforces. One is the all-encompassing counterforce that counteracts all afflictions. The other consists of counterforces that are specific to each affliction. The wisdom realizing emptiness is the all-encompassing counterforce that eradicates all afflictions. It directly opposes the ignorance grasping inherent existence, which is the root of afflictions. While ignorance grasps all phenomena, including the I, to exist inherently, the wisdom directly realizing emptiness apprehends the emptiness of inherent existence of all persons and phenomena. Because ignorance and wisdom are diametrically

opposed in the way they apprehend phenomena and because ignorance is an erroneous consciousness, wisdom can overcome ignorance. When ignorance is uprooted, all the afflictions that depend on it also cease.

Other counterforces do not have the ability to eliminate ignorance but are applied to individual afflictions. Since cultivating the wisdom realizing emptiness requires much time, we must learn and apply these more limited antidotes in the meantime to prevent our afflictions from getting out of hand. Some antidotes to cultivate:

- To counteract attachment, craving, clinging, and greed, reflect on the impermanence of whatever person or object you are attached to. Contemplating the unattractive aspects of the person or object also works well.
- When you crave for existence in saṃsāra, contemplate the disadvantages of saṃsāra. This powerful antidote will redirect our aspiration to liberation.
- To pacify anger and vengeance, cultivate fortitude.
- To remedy hatred, hostility, resentment, and so forth, meditate on loving-kindness.
- To counteract conceit, contemplate the detailed divisions of phenomena, such as the eighteen elements, the twelve sources, and the twelve links of dependent origination. Seeing the enormity of what there is to understand, self-importance is deflated. In addition, by examining all the components of the self, attachment to a real self will diminish.
- To counteract arrogance, reflect on the kindness of others. Seeing that our abilities, talents, and knowledge are due to the kindness of others deflates puffed-up pride.
- To reverse jealousy, rejoice at others' happiness, good qualities, good opportunities, and merit.
- To remedy anxiety and deluded doubt, observe the breath. Focus your attention on the gentle flow of your breath without allowing the mind to spin with fabricated, self-centered stories.
- When you are confused and cannot discern virtue from nonvirtue or what to practice from what to abandon on the path, study the sūtras and scriptures. They will provide excellent guidance.
- To lessen disturbing emotions in general, remember that they are not

you; they are not who you are and are not embedded in the nature of your mind.

At the initial stages of practice, lessening our afflictions is difficult. They seem to arise out of nowhere because we are so habituated to them. Our counterforces are weak, and time and continuous effort are needed to strengthen the antidotes and to develop positive qualities. Being patient with ourselves and going ahead with a determined, optimistic attitude are important to train our minds in new mental habits.

The above counterforces are temporarily effective for the specific affliction they counteract. To gain proficiency in them we must practice them regularly, especially when we are not in the heat of an affliction. Having a regular daily meditation practice, where you can imagine applying these techniques to situations you may encounter or have already encountered, is very effective in this regard.

The antidotes must be applied skillfully so that we don't go too far in the other direction. For example, the antidote to lust is reflecting on the foulness of the body. However, if done unskillfully, this could lead to hating our bodies or disparaging the person whose body we are attracted to. Similarly, if cultivated unskillfully, loving-kindness could lead to attachment.

While using these antidotes to temporarily reduce the force of coarse afflictions, we should also reflect on emptiness to cultivate the wisdom that will eliminate all afflictions forever. By combining single-pointed concentration with a correct understanding of emptiness, our wisdom will eventually become strong enough to uproot the afflictions and obscurations from the mind so that they never return.

---

## REFLECTION

1. Which affliction is the strongest and most frequent in your mind?
2. Contemplate its disadvantages in this life and for your spiritual path.
3. What is the temporary antidote to that affliction? Remember situations when that affliction was strong and contemplate its antidote. See if the force of the affliction subsides even a little. When it does, rejoice.

---

I came across an interesting passage written by the Kadampa master Togme Zangpo that called the view of a personal identity “the spear of the buddhas.” This is unusual because afflictions are typically said to lack any redeeming qualities. Here Togme Zangpo described a skillful way of using the view of a personal identity as a weapon to destroy the duḥkha caused by the view of a personal identity. Initially as beginners with strong self-grasping, we think, “I want to be free from saṃsāra.” Although this aspiration is afflicted by the view of a personal identity, it motivates us to learn, think, and meditate on emptiness, which will eventually destroy the view of a personal identity. Here we see that for some people at a certain point in their practice, grasping at a truly existent self could spur them to practice.

A similar idea is found in a Pāli sūtra. Explaining the Dharma to a bhikṣuṇī, Ānanda said (AN 4.159):

It has been said, “Bhikkhunī, this body has come into being through craving, yet based on craving, craving can be abandoned.” With reference to what was this said? In this case, a monastic hears it said, “They say that a monastic named so-and-so, by the destruction of the pollutants, in this very life enters and dwells in the unpolluted liberation of mind, liberation by wisdom, having realized it for himself by direct knowledge.” He thinks, “Oh, when shall I too realize the unpolluted liberation of mind, liberation by wisdom?” Sometime later, based on that craving, he abandons craving. It is on account of this that it was said, “This body has come into being through craving, yet based on craving, craving can be abandoned.”

Characterized by this body, which is in the nature of duḥkha, saṃsāra comes about through craving, yet when a monastic hears that another monastic has attained liberation, he craves to attain this too. Motivated by this new craving, he practices well and attains nirvāṇa, the destruction of all craving. In the passage following this, Ānanda says the same regarding arrogance. Here a monastic hears that another monastic has attained nirvāṇa and his pride is wounded because the other monastic attained it first. Arrogance arises in him, and not wanting to be outshone, he is energized to prove that he can attain nirvāṇa as well. This motivation of arrogance instigates him to practice in such a way that

all his arrogance is eradicated forever. Some teachers use a similar technique to energize lazy students on the debate ground. These are skillful ways to use afflictions to destroy afflictions.

When we first learn the Dharma, living without attachment seems impossible. We fear relinquishing attachment will turn us into uncaring, self-absorbed individuals. Thankfully, this is not the case. Some examples of how liberated beings respond to real human situations will give us a glimpse of what living with a transformed mind will be like.

Śāriputra, the Buddha's foremost disciple in wisdom, commented to some monastic friends that he wondered if there were anything in the world whose change or loss would cause him sorrow, lamentation, pain, or despair. Examining himself, he did not see anything that would destabilize his emotional balance. Ānanda, the Buddha's attendant, then asked him, "What would happen if our Teacher, the Buddha, were to undergo change and pass away? Wouldn't that cause you pain?" Śāriputra responded with all sincerity (SN 21.2):

Friend, even if the Teacher himself were to undergo change and alteration, still sorrow, lamentation, pain, displeasure, and despair would not arise in me. However, it would occur to me, "The Teacher, so influential, so powerful and mighty, has passed away. If the Blessed One had lived for a long time, that would have been for the welfare and happiness of the multitude, out of compassion for the world, for the good, welfare, and happiness of devas and humans."

Stunned with admiration, Ānanda responded that Śāriputra's emotional balance and compassion even at the time of losing the most important person in his life were due to the depth of his Dharma practice:

It must be because I-making, mine-making, and the underlying tendency to arrogance have been thoroughly uprooted in the Venerable Śāriputta for a long time that even if the Teacher himself were to undergo change and alteration, still sorrow, lamentation, pain, displeasure, and despair would not arise in him.

Śāriputra's equanimity in the face of his own personal loss was not due to repressing his emotions. The attainment of arhatship did not make him a cold person. He was certainly concerned and deeply moved by the prospect of the

Buddha's passing, but it was not out of self-interest, for he had forsaken all grasping to I and mine as well as relinquished the deeply rooted conceit thinking, "I exist." He was moved because he saw the benefit of the Buddha's presence in the world and the loss of his passing for all beings who need the Dharma. His sorrow was for others, not himself.

Interestingly, when Śāriputra heard that the Buddha would soon attain parinirvāṇa, he told the Tathāgata that he could not bear to witness the event and chose to attain parinirvāṇa himself before the Buddha.

## *Afflictions, Our Real Enemy*

When we face difficulties in life, we tend to attribute their causes to external factors: a friend's behavior, our employer's speech, governmental policies, and so forth. The Buddha questioned our assumption that the chief cause of our problems lies outside of ourselves; he pointed us back to our own minds, asking us to examine our thoughts and emotions to see how they create both internal unhappiness as well as disharmony in our relationships and in society. The disadvantages of distorted conceptions and disturbing emotions extend beyond this lifetime, adversely influencing all our lives. Śāntideva likened afflictions to vicious enemies whom, in our confusion, we treat as friends (BCA 4.28–30, 32–34).

Enemies such as craving and hatred  
are without arms, legs, and so on.  
They are neither courageous nor wise.  
How is it that they have enslaved me?

Dwelling in my mind, they ruin me;  
at their pleasure, they cause me harm.  
And yet I patiently endure them and do not get angry  
at my tolerance with this shameful and improper situation.

If all devas and humans were my enemies,  
even they would be unable to bring me to the fire of Avīci Hell.  
When encountered, it consumes even the ashes of Mount Meru.  
Afflictions, the mighty enemies, instantly throw me there.

All other enemies are incapable  
of remaining for such a length of time  
as can my afflictions, the enduring enemy  
that has neither beginning nor end [if left unopposed].

While in cyclic existence, how can I be joyful and unafraid  
if, in my heart, I readily prepare a place  
for this incessant enemy of long duration,  
the sole cause for the increase of all that harms me?

And how shall I ever have happiness  
if, in a net of attachment within my mind,  
there dwell the guardians of the prison of cyclic existence,  
these afflictions that are my butchers and tormentors in hell?

The afflictions don't have arms and legs; they cannot assault our bodies. Yet the harm they inflict on us is far worse than any external assailant or murderer. The worst thing other sentient beings can do is to take our lives, which indeed is horrible. But they cannot propel us into an unfortunate rebirth the way the afflictions can by motivating us to act nonvirtuously and to create the karma that propels us into rebirths of intense suffering.

Furthermore, harmful sentient beings will eventually die, while the afflictions have resided in our minds beginninglessly and will not depart of their own accord. They may even grow stronger. Seen this way, our patient acceptance of afflictions sabotages our own happiness. We will never have happiness as long as this enemy dwells cozily in our minds, constantly inflicting pain on us. We should be totally fed up with this situation and fight back. Śāntideva continues (BCA 4.39, 44, 46–48):

If even scars inflicted by meaningless enemies  
are worn upon the body like ornaments,  
then why is suffering a cause of harm to me  
while impeccably striving to fulfill the great purpose?

It would be better for me to be burned,  
to have my head cut off and be killed,  
rather than ever bowing down  
to those ever-present disturbing conceptions.

Deluded afflictions! When overcome by the eye of wisdom  
and dispelled from my mind, where will you go?  
Where will you dwell to be able to injure me again later?  
Weak-minded, I have been reduced to making no effort.

If these afflictions do not exist within the objects, the cognitive  
faculties, between the two or elsewhere,  
then where do they exist and how do they harm the world?  
They are like an illusion — thus I should dispel the fear within my  
heart and strive resolutely for wisdom.  
For no real reason, why should I suffer so much in hell?

Therefore, having thought about this well,  
I should try to put these precepts into practice just as they have been  
explained.  
If the doctor's instructions are ignored,  
how will a patient in need of a cure be healed by the medicine?

Proud of their combat, warriors wear their battle scars like medals. While combating this most insidious enemy, our afflictions, we must not shirk from any harm that may come about. We will never bow down to this enemy or accept defeat. For the benefit of all sentient beings, we will generate the wisdom realizing emptiness that will obliterate the afflictions such that they can never return.

Afflictions do not exist in external objects or in our cognitive faculties. Inherently existent afflictions are impossible to find; they are like illusions that lack a real essence and can be overcome. Therefore we must put the Buddha's teachings into practice, for they are the medicine that will heal all the injuries of cyclic existence.

---

## REFLECTION

1. Read and contemplate the above verses from *Engaging in the Bodhisattvas' Deeds* one by one, speaking to yourself just as Śāntideva speaks to himself.

2. Remember the afflictions are not who you are; they are not in the very nature of your mind and can be eliminated.
  3. Cultivate antipathy toward the afflictions and generate strong determination to become familiar with the antidotes to them through having a daily Dharma practice.
- 

Compassion acts like preventative medicine for many of our afflictions. The greater our compassion, the more peace we will experience. My personal experience is that meditating on the suffering of sentient beings and generating compassion for them helps me to develop inner strength. When inner strength and self-confidence increase, fear and doubt diminish. That makes us naturally more open to others. Others then reciprocate by being friendly, and this nourishes better communication and more positive interactions with them.

To the contrary, if we are full of partiality, fear, hatred, and doubt, the door to our heart is closed, and everyone we encounter appears suspicious to us. The sad thing is that we then believe that others are just as suspicious of us as we are of them. That creates distance between us, and this spiral fosters loneliness and frustration.

All of us, but especially the younger generation, has the responsibility to make sure that the world is a peaceful place for everyone. This can become reality if we all make an effort to cultivate compassion. Our educational system should focus not only on training the intellect but also on training the heart. Let's help future generations learn to be good citizens of the planet by modeling compassion and tolerance ourselves.

## 5 | Afflictions and Karma, Their Seeds and Latencies

**T**RUE ORIGINS of duḥkha are those phenomena that give rise to cyclic existence and are in the nature of duḥkha. True origins consist of afflictions — which are rooted in ignorance — and polluted karma — actions created under the influence of ignorance that produce the three types of duḥkha. Of afflictions and karma, afflictions are chief because they give rise to karma and also act as conditions for karma to ripen. Without the presence of afflictions, polluted karma cannot be created, and even if seeds of previously created karma remain in our mindstreams, they cannot ripen into duḥkha without the presence of afflictions.

In the context of the twelve links of dependent origination that describe how we cycle in saṃsāra, karma refers to volitional actions done under the force of afflictions that bring rebirth in cyclic existence. This is a more specific meaning of karma than used in volume 2, where we spoke of many kinds of actions, not all of which propel rebirth. To attain liberation — the stoppage of uncontrolled rebirth in saṃsāra — we need to eliminate the afflictive obscurations that cause it. These are ignorance, all the other afflictions that it produces, and the seeds of these afflictions.<sup>40</sup>

In this chapter we will investigate different types of afflictions and karma: acquired and innate afflictions, coarse and subtle afflictions, underlying and manifest afflictions, seeds and latencies of afflictions, seeds of karma, and having-ceased. Knowing these expands our understanding of the workings of our minds, the evolution of saṃsāra, and the path to liberation.

### *Acquired and Innate Afflictions*

Afflictions are of two kinds: innate and acquired. *Innate afflictions* have been with our mindstreams since beginningless time. We did not learn them from anyone and they continue from one rebirth to the next. Innate afflictions are

present in babies, animals, insects, and beings born in other saṃsāric realms. At no time in our wandering in saṃsāra have we been free from them.

*Acquired afflictions* are those learned in this lifetime through adopting the flawed reasoning of mistaken philosophies and ideologies. For example, we may study a philosophy that asserts a permanent soul or an inherently existent creator and come to believe the arguments presented for their existence. Innate and acquired self-grasping ignorance do not differ in terms of how they grasp the object — both grasp it as inherently existent. They differ in that innate self-grasping ignorance is deeply ingrained and arises frequently and spontaneously. Acquired self-grasping is learned in this life through reflecting on fallacious reasonings. Although innate self-grasping ignorance is the root of cyclic existence, the acquired version is especially insidious because it is based on thinking about how things exist in an incorrect manner and reaching erroneous conclusions. It may cause someone to cling to wrong views and be unreceptive to teachings on emptiness.

Strong clinging to identities of this life — our nationality, religion, ethnicity, race, class, educational level, gender, sexual orientation, and so forth — is an acquired affliction. We learned these identities in this lifetime and were taught to be attached to them. We then think, “I am a this-and-that and you should treat me in such-and-such a way.” While the specific identity is acquired, the mind that clings to “I am” is innate.

Acquired afflictions cannot come about without their innate forms. Acquired afflictions abound and cause horrible suffering. For example, innate anger exists in our mindstreams. If someone teaches us false reasons why a particular racial or ethnic group is inferior or violent, we may believe these and have strong prejudice and anger regarding anyone in that group. Holding the belief, “This land is mine because a religious scripture said so” is acquired attachment. Thinking, “Killing the enemies of my people is justified by this political theory or religious belief” is acquired hostility. “My racial or ethnic group is morally superior” is an example of acquired arrogance. Thinking, “The mind is the brain” is an acquired wrong view.

Although these particular manifestations of afflictions were not present in us at birth, they still can be extremely dangerous and harmful. When people are taught by friends, family, or society to adhere to acquired afflictions, wars, oppression, and environmental destruction easily follow.

Sages and tenet schools have differing views regarding when afflictions are abandoned on the path. According to the *Treasury of Knowledge*, all five

afflictive views and deluded doubt are abandoned on the path of seeing, while the other four root afflictions — attachment, anger, ignorance, and arrogance — are abandoned on the path of meditation as well.

According to the *Ornament of Clear Realizations* (*Abhisamayālaṅkāra*) and the Prāsaṅgika school, deluded doubt, wrong views, holding wrong views as supreme, and view of rules and practices are abandoned on the path of seeing, whereas the acquired forms of view of a personal identity and view of extremes are abandoned on the path of seeing and their innate forms are abandoned on the path of meditation. The acquired forms of all other afflictions are abandoned on the path of seeing and their innate forms are abandoned on the path of meditation. All afflictions have been eradicated at the time of becoming an arhat or an eighth-ground bodhisattva. Since direct realization of emptiness is needed to eliminate acquired afflictions, we should not underestimate their power to cause harm in this life and to create the causes to experience unfortunate rebirths.

The Pāli tradition does not have an explicit division into acquired and innate afflictions. However, some afflictions are said to be easier to eradicate than others: some are abandoned by seeing while others are abandoned later by meditation.<sup>41</sup> The former are overcome by stream-enterers, the latter by nonreturners and arhats. Since stream-enterers' realization of the unconditioned — nirvāṇa — is not as strong as that of nonreturners and arhats, the fetters they abandon through this first seeing of nirvāṇa — view of a personal identity, deluded doubt, and view of rules and practices — are not as ingrained as the rest of the fetters that are abandoned by meditation on the higher paths.

---

## REFLECTION

1. What is the difference between innate and acquired afflictions?
2. Make examples in your life of acquired afflictions — certain biases, prejudices, fears, resentments, or jealousies — that you learned from faulty philosophies or from listening to others who have those ideas.
3. Consider the many reasons why those beliefs are false. Try to view those people or places from a different perspective so that your mind can be clearer and free from anxiety, bias, and incorrect conceptions.

---

## *Coarse and Subtle Afflictions*

Coarse and subtle afflictions are spoken of primarily in the Prāsaṅgika school because its definitions of ignorance and the object of negation when meditating on selflessness are unique. Lower Buddhist schools say that the ignorance that is the root of saṃsāra grasps a self-sufficient substantially existent person, whereas Prāsaṅgikas assert it grasps inherent existence. For them, grasping a self-sufficient substantially existent person is a coarse affliction, as are the anger, attachment, and other afflictions based on it, whereas the ignorance grasping inherent existence as well as the afflictions based on it are subtle afflictions. Because the lower schools accept the inherent existence of persons and phenomena, they do not negate the afflictions based on it.

Most of the afflictions ordinary beings experience on a daily basis are coarse ones. There is nothing subtle about a person who is exploding with anger or one overwhelmed by greed. It is possible to notice the subtle afflictions only after realizing the lack of a self-sufficient substantially existent person.

## *Seeds, Latencies, and Having-Ceased*

In contemplating the Buddha’s teachings, ancient Indian sages discussed many topics. One concerned continuity: How does a karmic action created in one life bring a result in another life? How can a mental factor such as anger or compassion be present in our mindstreams one day, fade away, and then manifest again the next day? This is where latencies, seeds, and having-ceased come in.

In his autocommentary to the *Supplement*, Candrakīrti says “that which pollutes the mindstream and also leaves imprints and causes the continuation of something” is called a *latency*. Other English synonyms for *latency* are predisposition, habitual tendency, imprint, and propensity. Of the three types of impermanent phenomena — forms, minds, and abstract composites — seeds and latencies are abstract composites.

In *Illumination of the Thought*, Tsongkhapa said:

Of the two latencies — one that is a seed and the other that is non-seed — cognitive obscurations are the latter.

We can speak of latencies (*vāsanā*) in two forms: latencies in the form of seeds (*bīja*) and latencies in the form of potencies (*samartha*); the latter are called *non-seed latencies*. When the word *latency* is used in general, it refers to both seed and non-seed latencies. A seed is necessarily a latency, but a latency is not necessarily a seed; it could be a non-seed latency.

For the sake of ease, in English, we'll call non-seed latencies “latencies” to differentiate them from seeds.<sup>42</sup> *Seed* has the connotation of being the cause of something. *Latency* implies retaining the potential or energy of something. Although the mind that gives rise to seeds and latencies may be virtuous or nonvirtuous, seeds and latencies themselves are neutral.

### *Afflictions and Their Seeds*

Afflictions arise in our minds in a manifest and active form — we become angry, jealous, greedy, or lazy — and we act motivated by these manifest afflictions. However, even though we haven't eliminated anger from our mindstreams completely, we aren't always angry. We may be sitting calmly but when someone criticizes us, our anger is triggered and becomes manifest. What connects the prior and later instances of anger? This is the function of the seed of anger. When manifest anger subsides, the seed of anger remains on our mindstreams. The seed provides for the continuity of anger in our mindstreams even when anger itself isn't manifest. The seed of anger is not anger; it is not an affliction, although it is the substantial cause for anger to arise again. Both anger and the seed of anger are afflictive obscurations and are not fully abandoned until we attain liberation or the eighth bodhisattva ground.

We cannot simultaneously experience two manifest mental states that are contradictory — we cannot be angry and loving at exactly the same moment. When we are loving, anger is not manifest in our minds, but we haven't totally eliminated anger from our mindstreams either. The seed of anger remains on our mindstreams when love is manifest, and it connects one instance of anger to the next.

Both innate and acquired afflictions have an aspect that is manifest and an aspect that is a seed. Manifest innate attachment arises in our minds from seeing an attractive object; it is a consciousness, whereas its seed — the potential set on

the mindstream from a previous moment of attachment that can produce a future moment of attachment — is an abstract composite, an impermanent phenomenon that is neither form nor consciousness.

Manifest acquired afflictive obscurations are afflictions that are manifest in the mind due to learning incorrect ideas. If we read about a cosmic mind from which our minds originate at birth and dissolve back into at death, and then believe that exists, that wrong view is a manifest acquired affliction. The seed of that is a potential that can produce another moment of this incorrect belief in the future.

The seed of anger is not what psychologists call repressed anger. Having the seed of anger does not mean that there is low-grade anger in our minds all the time. Rather, it simply means that the potential to become angry again exists in our mindstreams, even though we are not angry now.

Similarly self-grasping isn't always manifest in our minds, but its continuity hasn't been eliminated; it is present in the form of a seed. When we encounter certain conditions — for example, someone falsely accuses us of bad behavior — this seed causes self-grasping to arise as a manifest mental state. In the same way, during the white appearance, red increase, black near attainment, and clear light of death of samsāric beings, self-grasping is not manifest although it is present as a seed. Because it has not yet been abandoned, self-grasping will reemerge in manifest form in our future lives.

There are also seeds for virtuous consciousness. These enable us to experience manifest faith, wisdom, concentration, and compassion today and again tomorrow, even though they were in seed form while we were asleep.

Reflection on the existence of the seeds of afflictions keeps us humble. After working hard to subdue a particular affliction, we may think, “That one is taken care of. I don't need to continue working on it.” But my (Chodron's) experience is that when we think like that and become a little smug, the affliction will once again surge up strongly when we least expect it. Because seeds of afflictions remain on our mindstream, complacency is ill advised, whereas humility brings the heedfulness necessary to stay on track in our practice.

The Pāli tradition speaks of underlying tendencies as connecting one instance of a root affliction with a later instance. It also explains that fetters and other defilements exist on three levels: (1) As underlying tendencies (P. *anusaya*), they are latent potencies in the mind. (2) As manifest fetters (P. *pariyuṭṭāna*), they actively enslave the mind. (3) As motivating forces (P. *vītikkaṃa*), they motivate nonvirtuous actions of body and speech.

When we ordinary beings are not resentful, the underlying tendency of resentment still exists in our mindstreams. Someone criticizing us triggers this seed or underlying tendency and we become resentful; this is manifest resentment. If we leave our resentment unchecked and neglect to apply an antidote, it will increase and motivate us to say cruel words or plot how to harm someone. This is the motivating level of resentment.

A monk at the Buddha's time believed that fetters existed in a person's continuum only when they were manifest and active. If that were the case, the Buddha replied, then a newborn infant would not have the view of a personal identity because she doesn't even have the notion of a personal identity. But the underlying tendencies to the view of a personal identity are present in her mindstream. Similarly, a newborn does not have the notion of "teachings," yet the underlying tendency to doubt the teachings is in him. Infants and all other beings who have not attained stream-entry have the five lower fetters because they have the underlying tendencies for them. The commentary says that the underlying tendencies and the fetters are not distinct; a defilement is called an underlying tendency in the sense that it has yet to be abandoned and still resides in the mindstream; it is called a fetter in the sense that it binds us to cyclic existence (MN 64).

The higher training in ethical conduct helps us to restrain defilements before they can motivate destructive physical and verbal actions. The higher training in concentration suppresses the manifest level of defilements, although it alone cannot eradicate them because they still exist as underlying tendencies in the mind. Only an ārya's higher training in wisdom can eradicate the underlying tendencies completely.

### *Latencies of Afflictions*

Latencies of afflictions are predispositions, imprints, or tendencies on the mindstream. Subtler than the seeds of afflictions, the latencies of afflictions do not give rise to manifest afflictions. They are cognitive obscurations that are possessed by all sentient beings, including arhats and pure-ground bodhisattvas (bodhisattvas of the eighth, ninth, and tenth grounds who have purified their continuums of afflictive obscurations). The latencies of self-grasping ignorance give rise to the appearance and "perception"<sup>43</sup> of inherent existence. Latencies of ignorance and of afflictions also obscure the mind from directly seeing the two truths simultaneously. The latencies of attachment and other afflictions cause

arhats to behave in peculiar ways sometimes: they may spontaneously jump, speak harshly, or have unclear clairvoyance, even though they lack any afflictive motivation. This latency is more like habit. At buddhahood all cognitive obscurations as well as all latencies of afflictions have been eliminated forever, so that a buddha's body, speech, and mind are completely free from impediments and endowed with all excellent qualities.

### *Karmic Seeds and Latencies and Their Purification*

Although the seeds and latencies of afflictions are different things with different functions, the seeds and latencies of karma are the same: they are the legacies of nonvirtuous actions and polluted virtuous actions that have the capacity to give rise to suffering and happiness in saṃsāra. Their fruits are ripening results, causally concordant behavioral and experiential results, and environmental results. Karmic seeds that cause rebirth in saṃsāra are true origins but are not afflictive obscurations. While they are not eliminated at arhatship, these seeds can no longer ripen because craving and clinging, the factors that stimulate their ripening, have been eradicated.

In the context of the ten paths of nonvirtue, the three that are done by mind — covetousness, malice, and wrong views — are afflictions, so when they cease they leave seeds of afflictions on the mind. The mental factor of intention that shares the same primary consciousness with those afflictions is karma, and that intention leaves seeds of destructive karma on the mindstream. The mental paths of virtue — noncovetousness, nonmalice, and correct views, which are not just the absence of covetousness and so forth, but mental factors that are the opposite of them — leave the seeds of those virtuous mental factors when they cease, and the intentions that accompanied them leave seeds of constructive karma.

In the chapter on fortitude in the *Supplement*, Candrakīrti speaks of the great adverse results that arise from one bodhisattva becoming angry at another. These range from the destruction of virtue created over thousands of eons, to suffering experiences, to obstructions preventing advancement to higher paths. Even when neither the angry person nor the person he is angry with are bodhisattvas, anger can destroy the roots of virtue. The *Questions of Upāli Sūtra* (*Upāliparipṛcchā Sūtra*) speaks of three levels: the roots of virtue being “diminished, thoroughly reduced, and completely consumed.” “Diminish” means the increase of roots of great virtue dwindles, but the pleasant results are not destroyed. “Reduced” means that the pleasant results are minimal, and “completely consumed”

indicates that the virtuous karma cannot ripen. With the last, the potency of the seed to bring pleasant results is destroyed, not the seed itself. These seeds of virtue are those from the collection of merit — created by generosity, ethical conduct, fortitude, and other compassionate actions. They are not seeds of virtue from the collection of wisdom, which are created by meditating on selflessness and emptiness, and by arranging for texts on these topics to be taught.

The *Ākāśagarbha Sūtra* says that transgressing the root bodhisattva precepts destroys previously created roots of virtue, and Śāntideva's *Compendium of Instructions* warns that spending time with benefactors with the motivation to receive gifts from them, bragging that we possess spiritual attainments that we lack, and abandoning the Dharma by giving incorrect teachings but saying they are the Buddhadharma also destroy our roots of virtue and impede our progress on the path.

The question arises: The *Teachings of Akṣhayamati Sūtra* (*Akṣayamatīnirdeśa Sūtra*) says that just as a drop of water that falls in the huge ocean is not consumed until the ocean dries up, so too merit derived from actions motivated by bodhicitta and dedicated for awakening are not exhausted until awakening. If this is so, how can anger destroy this virtue?

The analogy of the drop of water in the ocean indicates that the merit of those actions is not exhausted when its effects arise; that merit will continue to bear fruit until awakening. Nevertheless, these roots of virtue may still be harmed by anger.

In the case of purifying nonvirtue, when we ordinary beings apply the four opponent powers, we impede the ripening of seeds of destructive karma by diminishing, reducing, or completely consuming their potency, as described above. Depending on the strength of the four opponent powers, the potency of the seed may decrease or the coming together of the cooperative conditions for the seed's ripening may be delayed. If purification is strong, the potency of the seeds — their negativity (*pāpa*) — is disabled, although those deactivated seeds remain on the mindstream, like burnt rice seeds that remain in the ground. The seed is there but it cannot bear a result even if suitable conditions occur. Purification by means of the wisdom directly realizing emptiness, which begins with the path of seeing, is the most powerful purification. It thoroughly destroys those seeds of nonvirtue.

Vaibhāṣikas and Sautrāntikas say that it is not possible to purify seeds of destructive karma completely; some result must be experienced. As proof, they recount a sūtra passage attesting that the Buddha experienced pain after stepping

on a thorn due to a subtle remaining karmic seed. Similarly, they say that Maudgalyāyana's tragic death in which he was beaten by robbers was due to previous destructive karma, the seeds of which remained on his mindstream even after he attained arhatship. Cittamātrins and Mādhyamikas, however, assert that all seeds of destructive karma can be completely purified so that no suffering ever results from them.

Seeds and latencies are abstract composites; they are neither form nor consciousness. Of the five aggregates that are the basis of designation of a person, they are included in the fourth aggregate, the aggregate of miscellaneous factors. While the actions and afflictions that create seeds and latencies may be virtuous or nonvirtuous, the seeds and latencies themselves are neutral.

### *Having-Ceased*

Most Buddhist schools explain the process by which karma gives rise to its results in terms of karmic seeds: affirmative phenomena that have been placed on the mindstream. They do this because they consider the *having-ceased* (*naṣṭa*) of an action to be a permanent phenomenon and, as such, unable to produce a result. Prāsaṅgikas, however, assert that it is the having-ceased of an action that connects the action with its results.

What is a having-ceased? During the time an action exists, it disintegrates in each moment. All Buddhist schools accept that the disintegration or ceasing (*vyaya*) of a thing is a function of the causes that gave rise to that thing. An action ceases or is ceasing, and when its ceasing is complete, it has ceased. At that time, the action is no longer happening in the present; it is past. For example, we have the intention to speak and our voice continues for a while; during that time the intention and our voice are ceasing. But when they both stop, they have ceased and are now past phenomena. Most Buddhist schools say that the having-ceased that follows the disintegration of a thing is permanent, uncaused, and therefore unable to produce an effect.<sup>44</sup> Nāgārjuna, however, says that just as the disintegration of an action — its act of ceasing — is a function of causes and conditions, so too is its having-ceased. The having-ceased of an action is a state of destruction that remains — the state of the action's having ended. This having-ceased has the potential to bring a result in the future. According to Prāsaṅgikas, a having-ceased is an impermanent phenomenon, which regenerates in each moment until it produces its result in the future.

In his commentary to Nāgārjuna's *Sixty Stanzas of Reasoning*, Candrakīrti

explains why the having-ceased of an action is a conditioned phenomenon and a functioning thing. Just as the process of arising (*jati*) — the arising or production of a thing from its cause — is a conditioned phenomenon, in the same way, the arisen (T. *skyes pa*), which is the accomplished act of arising, is also a conditioned phenomenon. Therefore since the disintegration of a thing is a conditioned thing, the having-ceased, which is the complete act of disintegration, should also be a conditioned phenomenon. Being a conditioned phenomenon that arises due to an action, the having-ceased of that karma is able to connect that action to its result, which will occur in the future.

Both a karmic seed and a having-ceased remain when an action is completed. Since the action is impermanent, it ceases and is followed by a having-ceased. The action also itself gives rise to a seed, which has potency. Both the having-ceased and the karmic seed contribute to the arising of the karmic result.

Thus the potential of the physical karma of prostrating is passed on in two ways: as a latency or seed that is left by the mental factor of intention that motivated that physical action, and as a having-ceased of the perceptible form that is the physical action of prostrating. The second link of dependent origination, formative action, for the action of prostrating consists of both of those.

After an action has finished, its karmic seed is placed on the mental continuum. The having-ceased of a karmic action is present with the mental consciousness. However, we don't say it was *placed on* the mental consciousness. Both having-ceasings of karmas and karmic seeds bear their results when the proper conditions have assembled.

What happens to the karmic seeds and having-ceasings when an ārya is in meditative equipoise that directly realizes emptiness? At this time, her mental consciousness is unpolluted because it is totally absorbed in emptiness with no conceptual elaborations at all. An unpolluted mind cannot be the carrier of polluted karmic seeds and having-ceasings. Buddhist tenet schools have different explanations, but Candrakīrti's is the most coherent. He distinguishes between the temporary and the long-term bases of seeds and latencies. The temporary basis is the mental consciousness. After the action has ceased, the seed is placed on the mental consciousness. The continual or long-term basis is the mere I — the conventional self that exists by being merely designated. This self is a mere convention; it carries the karmic seeds and so forth when an ārya is in meditative equipoise directly realizing emptiness. Although the mere I is not findable when searched for with ultimate analysis seeking its ultimate mode of existence, it still

exists nominally. It goes from life to life, carrying with it karmic seeds as well as the seeds and latencies of afflictions. Just as the mere I, which is the basis of the seeds and latencies, cannot be found by ultimate analysis, neither can the latencies, seeds, and having-ceaseds. They, too, are empty of inherent existence yet exist nominally and dependently.

---

## REFLECTION

1. What are karmic seeds and how do they function?
  2. What are seeds of afflictions and what are latencies of afflictions? How do they differ?
- 

### *Other Types of Latencies*

Other types of latencies influence our experience as well. One type involves dreams, memories and mental objects. For example, we see a person during the day, and the latency of seeing him is placed on our mindstreams. Then at night we dream about that person. Similarly, memory is influenced by latencies; we see a flower and later remember it. In this case, the visual consciousness has placed a latency on our mindstreams. When we do meditation retreat, we may notice that as our minds become quieter, memories of people and events that we have not thought about in years surface. These are due to latencies.

Sense faculties also leave latencies on the mindstream that make it possible for new sense sources to arise in future lives. Beings born in the formless realm do not have physical forms and thus lack sense faculties. However, after they die from that realm and are born again in the desire realm, the latencies of the sense faculties that have been on their mindstreams become the substantial cause for their five sense faculties in the desire realm.

### *Latencies and Ideas in Other Religions and in Psychology*

Those of us exposed to ideas in non-Buddhist faiths and in modern psychology often ask if latencies are comparable with notions in these other disciplines. What follows are some general thoughts on two ideas: original sin and the unconscious.

### *Original Sin*

Some newcomers to Buddhism ask if our discussion of afflictions and karma being carried from one life to the next resembles the doctrine of original sin taught in other faiths. These teachings are very different. Original Sin is taught within a theistic framework. In brief, according to Augustine, God created the world and the first humans. Adam and Eve were disobedient, and subsequent generations of human beings inherited this sin through the act of procreation. Jesus was born to overcome human beings' innate tendency for evil and sin and to reconcile them with God. Cessation of sin depends on the great sacrifice Jesus made.

In contrast, in Buddhism there is no notion of a creator or an initial act of disobedience. Ignorance, afflictions, and saṃsāric rebirth have existed beginninglessly. They continue in the mindstream of an individual and are not inherited by his or her biological offspring. The Buddha held that sentient beings' basic nature is neutral and pure; it is not inherently defiled and sentient beings have the potential to become fully awakened. Afflictions and karmic seeds are adventitious and can be completely removed by the internal method of meditating with the wisdom realizing emptiness. Each of us must cultivate this wisdom ourselves; it is not something another being, however divine, can do for us.

In theistic religions, sentient beings can approach God but not become God. The Buddha said that by following the correct path, sentient beings can thoroughly cleanse all seeds and latencies of afflictions and karma from their mindstreams. Each of us has the potential to become a fully awakened buddha.

### *The Unconscious*

Spoken about by Sigmund Freud just before the turn of the twentieth century, the unconscious is thought to be an area of the mind composed of feelings, ideas, animal-like instincts, fears, and hopes that are not allowed expression in conscious awareness. These things may manifest and express themselves in

other ways, such as dreams, anxiety, psychosomatic illnesses, and phobias. Some unconscious material is inhibited or modified by the superego in the process of socialization, enabling us to live with others more harmoniously.

Carl Jung hypothesized the existence of a collective unconscious that consists of thoughts and feelings common to humanity. This unconscious material is often expressed in myths, legends, fairy tales, archetypes, and religious stories that contain common themes. The collective unconscious is sometimes seen as a storehouse of ancient wisdom passed on from generation to generation.

The preconscious is the area of the mind having thoughts and feelings that are below the level of immediate conscious awareness but that can come into conscious awareness through the focusing of attention. Do any of these psychological theories compare to the Buddhist notion of consciousness and the seeds and latencies on it?

The Buddhist explanation of mind does not contain an exact equivalent to the Western notion of the unconscious. In an attempt to draw some possible parallels, we may speak of the Buddhist view of different levels of consciousness — coarse and subtle. The Buddhist descriptions of underlying afflictions and latencies of afflictions may also have some resemblance to the Jungian idea of the unconscious. However, none of these precisely match either the psychoanalytic meaning of the unconscious or the more common use of the word *unconscious* to mean lack of conscious awareness, thought, or intention.

According to the Buddha, all phenomena are potentially knowable by our minds. Much of what psychology views as unconscious or preconscious material becomes fully conscious as our minds become clearer through meditation. As our mindfulness and introspective alertness increase, we see aspects of our minds — such as preconceptions, fears, assumptions, feelings, and emotions — that have been present but not previously perceived or acknowledged. Furthermore, advanced practitioners gain certain superknowledges (psychic powers) through cultivating single-pointed concentration and can directly perceive previous lives and other events not consciously known before. In this sense Buddhism might say that everything in our experience of this and previous lives is preconscious in that by focusing our attention and concentration in specific ways, it may be consciously known.

## *Virtue, Nonvirtue, Merit, and Roots of Virtue*

The principal cause of happiness is virtue and the chief cause of suffering is nonvirtue. Being able to discern the difference between these two so that we can practice the former and abandon the latter is essential for making wise choices in life and for accomplishing the path to liberation and awakening. In general, virtue is that which brings an agreeable result and nonvirtue is that which brings a disagreeable result. Here virtue includes constructive intentions and actions. These leave seeds of virtue on the mindstream, and these seeds bring agreeable results.

While mental states and actions may be virtuous or nonvirtuous, the seeds of karma and latencies of afflictions are neutral. This is because virtue and nonvirtue are linked to our intention; an action becomes virtuous or nonvirtuous primarily due to our intention. Seeds and latencies, however, do not have that strong active intentional element and are therefore neutral. Thus we speak of the seeds of virtuous karma, for example, not the virtuous seeds of karma; we talk about the latencies of nonvirtuous afflictions, not the nonvirtuous latencies of afflictions.

Similarly, the pleasant or unpleasant ripening results of virtue and nonvirtue are neither virtuous nor nonvirtuous. Being born in a healthy human body is a result of virtue, but the body itself is ethically neutral. Possessing wealth is an agreeable result of the virtuous action of generosity but being wealthy itself is neither virtuous nor nonvirtuous.

What does virtue refer to? Asaṅga's *Compendium of Knowledge* speaks of five types of virtue:

(1) *Natural virtues* include the eleven virtuous mental factors — faith, integrity, consideration for others, nonattachment, nonhatred, nonconfusion, joyous effort, pliancy, conscientiousness, nonharmfulness, and equanimity. These are called natural virtues because their nature is virtuous; they naturally bring pleasing results.

(2) *Related virtues* are primary consciousnesses and mental factors that become virtuous because they are accompanied by virtuous mental factors. When compassion is present, the mental primary consciousness and the mental factors of intention, feeling, and so forth that accompany it become virtuous.

(3) *Subsequently related virtues* are seeds and latencies of virtue established by virtuous consciousnesses and mental factors, and virtuous actions; for

example, the karmic seed created by the mind of generosity. Seeds and latencies are not actual virtues; this is an example of the name of the cause (the virtuous path of action) being given to the effect (the seeds and latencies of virtue).

(4) *Virtues due to motivation* are physical and verbal actions motivated by the naturally virtuous mental factors. The action of making a donation to a charity is a physical virtue when done with a generous motivation.

Vaibhāṣikas and Prāsaṅgikas assert that virtue includes both minds and forms. They consider virtues due to motivation — physical and verbal actions motivated by virtuous mental states — to be virtues. Since prātimokṣa precepts are form according to these two schools, the precepts are virtuous forms. According to Sautrāntikas, Cittamātrins, and Svātantrikas, only minds can be virtues.

(5) *Ultimate virtue* is emptiness because realizing it eradicates all obscurations and enables virtue to flourish. Emptiness, however, is not an actual virtue because it is permanent and itself does not produce results.

This list of virtues is not exhaustive. Other virtues include, but are not limited to, a buddha's speech and the thirty-two signs and eighty marks of a buddha.

Even a moment of a natural virtue can have far-reaching results. When the mental factor of conscientiousness arises in the mind, the primary consciousness and mental factors associated with it all become virtuous. The physical and verbal actions done with that motivation are also virtuous. While the karmic seeds of those actions are neutral, they carry the potency for agreeable results to arise, and for that reason they are subsequently related virtues although they are not actual virtues.

Commensurate with the five virtues, there are five nonvirtues:

(1) Natural nonvirtues are mental factors such as attachment, anger, jealousy, and resentment that are nonvirtuous by nature.

(2) Related nonvirtues are the mental primary consciousness and mental factors that accompany a naturally nonvirtuous mental factor.

(3) Subsequently related nonvirtues are latencies left on the mind by nonvirtuous minds and mental factors. They are not actual nonvirtues but are ethically neutral.

(4) Nonvirtues due to motivation are physical and verbal actions done with a nonvirtuous motivation.

(5) Ultimate nonvirtue is, for example, saṃsāra, which breeds nonvirtue

although it is not an actual nonvirtue.

In general, virtuous karma and merit are synonymous. In the context of saṃsāra, they are actions that have the ability to bring favorable results. Calling an action virtuous or meritorious emphasizes that it is psychologically healthy and ethically irreproachable. In terms of spiritual progress, virtuous actions enrich the mind, establishing the foundation for generating the realizations and excellent qualities of arhats, bodhisattvas, and buddhas. In the context of the two collections of merit and wisdom, merit is that which has the capacity to give rise to the form body of a buddha.

In general, the expression *root of virtue* refers to a virtuous mental factor, although it also seems to indicate seeds of virtuous karma. Śāntideva's *Engaging in the Bodhisattvas' Deeds* and Candrakīrti's *Supplement* contain extensive discussion about anger destroying the roots of virtue. When anger destroys the roots of virtue, or when wrong views or other heavy nonvirtuous actions cut the root of virtue, it prevents future agreeable results from coming about even when suitable circumstances are present.

When human beings cut the root of virtue, it affects only the root of virtue related to the human realm; the root of virtue of the higher realms remains. They may still encounter fortunate conditions in the future and regain their root of virtue.

---

## REFLECTION

1. Review the different types of virtue. Which are actual virtue and which are just called virtue? Make examples of each in your life.
  2. Review the different types of nonvirtue. Which are actual nonvirtue and which are simply called nonvirtue? Make examples of each in your life.

## 6 | Karma, the Universe, and Evolution

**T**RUE DUḤKHA includes sentient beings and our environment. In preceding chapters we discussed our unsatisfactory state as sentient beings and our life experiences as well as the true origins of these: ignorance, afflictions, and polluted karma. In this chapter we'll look more closely at how the true origins of duḥkha bring forth the environments in which we sentient beings dwell.

### *The Origin of the Universe*

Similar to today, a vibrant topic of discussion among both religious and secular people in the Buddha's time centered on the origin and destruction of the universe. As recorded in the sūtras (MN 63), they asked: Was the universe eternal or not eternal, transient or permanent, finite or infinite? Did the universe have a beginning or was it beginningless? The Buddha refused to answer these questions because the people who asked them were thinking in terms of an inherently existent universe. No matter how the Buddha could have responded, they would have thought that either the universe existed inherently or did not exist at all. Because holding either of these views would have harmed them, the Buddha chose not to respond. At other times the Buddha refused to comment on the origin of the universe because it was not relevant to the alleviation of duḥkha and attainment of liberation. Abhidharma texts and the *Kālacakra Tantra*, however, commented on the evolution of the universe in conventional terms. Nowadays scientists research these same topics, leading to fascinating dialogues between Buddhists and scientists, some of which I have attended.

There are several approaches that could be taken regarding the origin of the universe: first we must investigate if it was created by a cause or if it arose causelessly. Most people find causeless or random production unacceptable because in our everyday lives we witness effects arising from causes. Furthermore, it would be difficult for anything to function and change if it lacked causes and conditions; permanent phenomena cannot interact with other things to produce something new.

Among those who accept that the universe arose due to causes, there are different assertions. Theistic religions such as Judaism, Christianity, Islam, and some branches of Hinduism speak of an external creator. Most scientists attribute the origin of the universe to the Big Bang, some asserting that one Big Bang began all existence, others saying there may have been several Big Bangs as different universes began. Non-theistic Sāṃkhya (a Hindu philosophical school) and some other traditions speak of a primal substance out of which

everything was created. Buddhists speak of the interplay between the laws of nature and the law of karma and its effects.

Difficulties arise when we posit one original cause or event as the source of the universe with its mass, space, and time. If there were a single, initial cause for all existence — be it a cosmic substance, dense matter, or preceding Intelligence — what triggered that one cause to give rise to the universe with all of its complexity and diversity? Change — such as the production of a universe — involves a complex interplay of many factors that influence one another. Since even the existence of something small like a flower involves multiple causes and conditions, needless to say, this is the case with more complex entities such as the universe.

Because things depend on causes and conditions they change; whatever arises necessarily depends on the causes and conditions that produce it. This is the law of causality, a natural law of the universe that describes how things arise and produce results. Within this general law of causality, Buddhaghosa's commentary on the Dīgha Nikāya, *Sumaṅgala-vilāsinī*, speaks of five specific types of causality:<sup>45</sup>

1. *Inorganic causality* (P. *utu niyāma*) is the causality occurring with inorganic matter as described by physics, astronomy, and inorganic chemistry. It includes the causal functioning of subatomic particles as well as the causality involved with grosser matter such as the weather and aerodynamics.

2. *Biological causality* (P. *bīja niyāma*) involves organic forms — for example, the causality involved with genes, chromosomes, and biological processes in the plant and animal worlds.

3. *Psychological causality* (P. *citta niyāma*) deals with the complex interactions among various types of consciousnesses and mental factors — for example, how sensory cognizers occur, how mental consciousness arises in reaction to them, and how memory comes about.

4. *Karmic causality* (P. *kamma niyāma*) concerns volitional actions done by sentient beings and their karmic effects. Our actions have an ethical dimension that naturally influences the rebirth we take as well as our experiences, habitual actions, and environment.

5. *Natural phenomenal causality* (P. *dhamma niyāma*) concerns certain natural phenomena such as the wondrous events that occur when a bodhisattva descends into his mother's womb in his last rebirth, attains awakening, turns the wheel of Dharma, and passes away (attains parinirvāṇa). These include events

such as the earth quaking and a great light appearing in the world system. Such things occur *dhammatā*, or naturally.<sup>46</sup> The causality of the twelve links of dependent origination is natural phenomenal causality epitomized by the Buddha's words, "When that exists, this comes to be. From the arising of that, this arises. When that does not exist, this does not come to be. When that ceases, this ceases."

This causality is the natural order of things in the universe. Although the other four types of causality are actually types of natural phenomenal causality, only those causal relations that do not fall within those four are included in natural phenomenal causality.<sup>47</sup>

These five types of causality are explained to show that there is no external creator of the universe or of sentient beings. Rather, all things arise and cease continuously in dependence on their causes and conditions. While each of the five has its own sphere of operation, they are interconnected and influence one another.

## *Mind and the External World*

Abhidharma texts speak of countless world systems, but I'm unsure if a world system is equivalent to a solar system, galaxy, or universe. In any case, Mahāyāna sūtras and the *Kālacakra Tantra* speak of vast world systems throughout infinite space. At any particular time, some world systems are arising, some abiding, some disintegrating, and others remaining dormant. In this view, there is no absolute beginning. There is simply the beginningless interplay of various factors that make world systems arise, abide, disintegrate, and remain dormant.

Buddhist thinkers speak of conditioned phenomena — things that are impermanent, composed of parts, and conditioned by other factors — as being of three types: form, mind, and abstract composites such as time. What is the relationship between form — the material building blocks and resultant compounded things in the external universe — and mind, with its thoughts, feelings, and intentions? When we speak of the development of a world system and the evolution of life in particular, what is the relationship between mind and form?

I will share my thoughts about this. These are by no means definitive

conclusions but hopefully they will spark some curiosity among both those with scientific inclinations and those with spiritual dispositions.

The general Buddhist view is expressed by the First Dalai Lama in his commentary on the *Treasury of Knowledge* (EPL 556):

If one asks: This manifold world which has been explained — the environment and the sentient beings living in it — where does it come from?

It does not arise without cause or from a discordant cause because it arises occasionally. And it does not arise from [the creator god] Īśvara and so forth because it arises gradually. As it says this, if one asks, from what does it arise? The manifold world of the environment and the sentient beings living in it arise from karma.

The manifold world is comprised of the environment and the sentient beings living in it. The world did not arise without a cause because everything that functions must arise from causes. It did not arise from a discordant cause because a specific effect can arise only from the causes and conditions that have the ability to produce it. If causality were arbitrary, then anything could produce anything, and by studying Italian, we could learn to speak Chinese. The fact that something arises only at some times (occasionally) means that it arises only when all of its causes and conditions have come together. The world is not created from a creator such as Īśvara because if it were, it would arise all at once, whereas the world and the sentient beings in it evolved gradually. The source of the world and the sentient beings who inhabit it is karma — volitional actions originating in the minds of sentient beings.

Although Vasubandhu stated in the *Treasury of Knowledge*, “The manifold world arises from karma,” he and other Abhidharma authors did not detail the exact process through which this occurs. The broad concept is that through the interdependence of material substances and sentient beings’ karma, the world evolved in such a way that it could support the various life forms that live in it.

In a Sūtrayāna context, Candrakīrti noted in his *Supplement*, “From the mind the world of sentience arises. So too from the mind the diverse habitats of beings arise.” The Cittamātra school understands this literally and developed a philosophical system that denies the existence of external objects and instead asserts that both the perceiving consciousness and perceived object arise from

the same latency on the foundational consciousness. The Madhyamaka school disagrees. Although it refutes an objectively existent world “out there” that is unrelated to sentient beings’ minds, it asserts external objects, saying that sentient beings’ intentions create karma, which influences their resulting body-mind complex and their external habitat.

In Vajrayāna, the *Guhyasamāja Tantra* speaks about the inseparability of the subtlest mind and the subtlest wind (*prāṇa*). The subtlest wind is not the gross wind that blows leaves, nor is it the subtler energy, or *qi*, in our body. It is an extremely subtle wind or energy that is inseparable from the subtlest mind. The wind is the aspect of movement, the mind is the aspect of cognizance. This subtlest mind-wind is not within the range of what scientific instruments can measure. In general it is dormant throughout the lives of ordinary beings and becomes manifest only at the time of death or as a result of yogic practices that involve absorbing the coarser levels of wind and mind. From the perspective of highest yoga tantra, although the coarse mind and coarse form (the body) are different substances with different continuums, at the subtlest level of mind and form they are one nature — the subtlest mind-wind.

The *Kālacakra Tantra* speaks of the connection between the elements in our bodies and those in the external world and the analogous relationship between the movement of celestial bodies and changes within our bodies. Since our body and mind are related, these changes in the external and internal elements affect the mind. Conversely, the mind, especially its intentions (karma), influences our bodily elements and by extension the elements in the larger universe.

The *Kālacakra Tantra* explains that when a world system is dormant only space particles, which bear traces of the other four elements, are present. These elemental particles are more like attributes than distinct material substances. The material things in our environment are composed of these elements in varying degrees. As part of composite objects such as our bodies or a table, the earth element provides solidity, the water element fluidity and cohesion. The fire element gives heat and the wind element enables movement. The elements develop progressively in both the universe and our bodies: first space, then wind, fire, water, and earth sequentially. At the time of a human being’s death, the elements absorb — they lose the power to support consciousness — in the reverse sequence.

Similarly, when a world system collapses and comes to an end the elements composing it absorb into each other in this reverse sequence — earth absorbs into water, water into fire, fire into wind, and wind into space. Unobservable by

our physical senses and lacking mass, space particles are the fundamental source of all matter, persisting during the dormant stage between one world system and the next and acting as the substantial cause for the coarser elements that arise during the evolution of the next world system.

Space particles are not like the partless particles asserted by non-Buddhist schools that assert ultimate, partless, unchanging building blocks out of which everything is constructed. Nor are they inherently existent particles. They exist by being merely designated in dependence on the potency for the other four elements.

The external five elements are related to the corresponding inner five elements that constitute the body. These, in turn, are related to the subtlest wind that is one nature with the subtlest mind. The subtlest mind-wind is endowed with a five-colored radiance that is the nature of the five dhyāni buddhas and the five wisdoms. In this way, there is correspondence between the external world and the innermost subtlest minds of sentient beings. The five subtle elements in the body evolve primarily from the subtlest wind (one that is part of the subtlest mind-wind) of that sentient being. The five subtle elements in turn bring forth the coarse five elements in the body and in the external universe.

Thus from a tantric perspective, all things evolve from and dissolve back into this inseparable union of the subtlest mind-wind. The subtlest mind-wind of each individual is not a soul, nor does it abide independent of all other factors. The relationship between the mind, the inner five elements, and the five elements in the external universe is complex; only highly realized tantric yogis are privy to a full understanding of this.

The karma of the sentient beings who will be born in that universe are the cooperative conditions for that universe. When their karmic latencies begin to ripen, the space particles are activated, and they give rise to the wind element, the motion of pure energy. Fire, water, and earth elements sequentially and gradually arise after that.

I believe that the evolution from space particles into the manifold phenomena of a universe and those phenomena's devolution into space particles at the end of a universe could be related to the Big Bang theory. However, I don't think that there was one space particle in the center that exploded to produce everything. With further investigation, perhaps a correlation could be made between space particles and some theories of physics and astronomy.

The elements of an individual's body are related to his or her personal karma and subtlest mind-wind. The larger external universe is the environmental effect

of the collective karma of the sentient beings who enjoy it. The collective karma of the sentient beings who dwell in a universe influence the way the coarse elements evolve to form that universe. In other words, the universe and sentient beings exist in dependence on each other. Sentient beings cannot exist without the environment in which they live and that environment cannot exist without the sentient beings whose karma played a role in its creation.

The relationship between the mind and the subtle elements is the domain of highly realized meditators with single-pointed concentration. According to scriptural sources and the experience of highly realized yogis, someone who has subdued his or her mind and developed a certain level of control over his or her inner elements can also control the external elements. This accounts for the stories we hear of people who can walk on water, fly in the sky (without boarding a plane!), and travel beneath the earth.

### *The Laws of Nature and the Law of Karma and Its Effects*

The laws of nature and the law of karma and its effects operate in their own domain, although they intersect at key times. Not everything in sentient beings' lives and environments can be reduced to the functioning of either natural laws or karma. Natural laws function such that once particular processes are set in motion, they will produce certain effects. Karma enters the picture when sentient beings' intentions and their happiness and suffering are involved.

For the most part the natural laws of physics, chemistry, and biology that guide the interactions of external elements are involved in the development of our world system. However, sentient beings' minds, through the ripening of their karma, seem to exert influence at two points. The first is when the karma of the sentient beings who have the potential to live in a particular world system sparks the initial development of that world system. From the perspective of the scientific model, the collective karma of a huge number of sentient beings could influence the occurrence of the Big Bang. From the perspective of the model presented in the *Kālacakra Tantra*, the collective karma of all those sentient beings would stimulate the potencies of solidity, fluidity, heat, and motility existing in the space particles in between world systems so that coarse elements appear.

The second point at which karma could come into play is when the elements

of a universe have evolved to the point where they can support sentient life. Here, karma could act as the instigating factor for previous inanimate forms to become the bodies of sentient beings — that is, mindstreams could enter these forms to produce sentient beings with bodies and minds. The evolution of various species would subsequently occur.

Another way to describe this process is in terms of substantial causes and cooperative conditions. Both are necessary whether we speak of natural laws or karmic law. A substantial cause is what actually transforms into the result; cooperative conditions are the causes that assist this process. For example, wood is the substantial cause of a table, and the people who built it as well as the nails that hold it together are cooperative conditions. Because everything that is produced must have previous causes that are concordant with it, I believe that the continuum of material existed before the Big Bang. This material was the substantial cause of the world system that developed after the Big Bang. Similarly, in the *Kālacakra Tantra* space particles existed before the formation of our world system; they were the substantial cause for all the material in this world system. Regardless of which model we accept, the karma of the sentient beings who will be born in that world system acts as a cooperative condition for these material elements to appear, coalesce, and form a world system. Karma could similarly enable them to become the bases for sentient life.

## *Karma and Our Present Environment*

To review, there is a connection between the formation and evolution of the external world and the karma of sentient beings who will inhabit it. There is also a connection between the elements of the external world and those constituting our physical body. These, in turn, are related to subtler elements and subtler winds that themselves can be traced to the subtlest mind-wind. Karma — which primarily refers to sentient beings' intentions and the paths of action they motivate — may be the link between sentient beings' minds and the external world. Karma is related to the subtle winds in sentient beings' bodies, which in turn are related to the five inner elements. These correspond to the five external elements in the environment. Understanding the subtle winds spoken of in the tantric texts will help us understand this relationship. This is my opinion; more research is necessary.

As mentioned before, only a buddha can know the intricacies of karma,

which include how karma affects the evolution of a world system and the sentient life in it. For us limited beings, it is hard to know where natural laws stop and the law of karma takes over, where the law of karma stops and natural laws take over, and where the two influence each other. For that reason, we should avoid making hard and fast distinctions regarding the interface of these two. Nevertheless, some general guidelines can be discerned.

In terms of the origin and development of a particular world system, there are two times when sentient beings' karma may exert an influence: at the very beginning of that world system when the coarse elements are arising, and later when the combinations of those elements are suitable to act as the bodies for sentient beings. In terms of the development of specific environments and climates in which sentient beings now live, karma could play a role in two ways. First, the karma of the people presently living in and experiencing a place — for example, Dharamsala, where I live — contributed to its development millions of years ago when it was forming. Only nowadays, in this lifetime, do they experience the effect. We may wonder: How could their karma have ripened so long ago before they were born here? An analogy is helpful. Before moving into a house, the future occupants design the floor plan and begin constructing it. Later, when the house is ready, they occupy it and experience that environment. Similarly, when this planet was forming, no sentient beings lived on it. But since there were sentient beings who would take birth here, their karma influenced the way the planet would evolve.

Second, a particular environment is influenced by the karma of the people who live in that place now but were not among the initial karmic contributors to the development of that climate and environment a long time ago. These sentient beings later accumulated karma similar to that of the initial karmic contributors and thus came to live in that place and experience that climate at this time. For example, after Dharamsala's specific climate had already come into existence, another group of people accumulated the karma that could produce this sort of climate. This group did not have a direct connection to the development of Dharamsala's climate thousands of years ago, but due to their actions, which were similar to the karma of the previous group of people, they came to live in this place. The karma of the first group actually contributed to the development of Dharamsala's climate and environment. The karma of the second group did not contribute directly but participated in it, since they live there. Both groups of people created the causes to experience that environment, but in different ways.

To use an analogy, many people start a business in Europe. Another person

in the same field intends to seek employment in the United States. However, she happens to be in Europe and takes a job in the company established by the other people. Although she joins it later, she still contributes to the company's work.

Karma was not the only cause for Dharamsala's climate to develop the way it did; the laws of inorganic, physical causality were definitely involved. Nature has a certain autonomy that does not depend on karma. The tree we see over there grew from its seed. I doubt anyone's karma was involved in that. Similarly, the growth of some leaves today and others next week is due to the functioning of biological systems, not karma.

But this tree is in front of me and I can use and enjoy it. As soon as the tree is related to a sentient being and his or her happiness or suffering, the karma of that particular sentient being enters the picture.

Beautiful plants and colorful flowers grow in the garden where I live. They certainly are related to the karma of the sentient beings who use and enjoy them and who experience pleasure and pain in relationship to them. Human beings enjoy their beautiful colors and smell, bees imbibe nectar from the flowers, birds use the trees as their shelter, insects munch on the plants. The collective karma of all these beings contributed to the existence of these plants. This karma was created by the minds of the sentient beings involved. Nevertheless, since the plants consist of material substances, their growth depends on nature's biological laws. Karma does not transform into the water and fertilizer that make the plants grow.

Natural disasters such as earthquakes, hurricanes, and tsunamis are produced by the functioning of the laws of nature. Our karma does not make them happen. However, the fact that certain people are there when such events happen is due to their karma. A volcano explodes due to physical factors such as the build-up of pressure under the Earth's surface; this is not the result of karma. But the fact that some sentient beings are near that volcano and are injured or even die as a result of its explosion is related to the karma of those sentient beings. Other sentient beings, who did not create the karma to be harmed in that way, are not near the volcanic explosion.

Similarly, droughts and floods can be understood in terms of external causes, but insofar as they affect sentient beings, those beings' karma is involved. For example, a community of people that has intense and pervasive hatred may, in this or future lives, inhabit a place during a severe drought and famine. Their being present and experiencing suffering from this are effects of their karma. Similarly, people who consciously pollute the environment now create the

karmic cause to suffer from living in a polluted environment in future lives.

Although we often speak of karma as actions created in previous lives, it also refers to the actions we do today. Our present motivations and choices directly affect the external world. We must not think that everything is due to our actions in previous lives and ignore the effects of our present actions. When we dump toxic wastes into our environment, we experience the result in this lifetime. When we do not share resources, the world becomes turbulent now. Our intentions and actions during this lifetime are causing global warming.

### *Karma, Instinctual Behavior, and Our Bodies*

Both science and Buddhadharma agree that sentient beings have certain instinctual behaviors, but how they account for them varies. Science looks to genetic makeup for answers, while the Buddhist sage Bhāvaviveka said that calves instinctually look to their mother for milk because of latencies on their mindstreams from previous lives when they had acted in a similar way. One effect of karma is the tendency to do the action again, which accounts for many instinctual behaviors.

Nevertheless, certain instincts are related to the type of body a sentient being has. We are in the desire realm, where the bodily constituents of beings are such that desire is dominant. Thus we have many biological needs and desires, and our minds crave these.

Some animal species are vegetarian, others eat meat. This is not primarily due to karma, but to the physical conditions of their bodies — their genetic makeup and biological functions. However, the existence of these types of animal bodies on this planet is related to the general, collective karma of the sentient beings on this planet. The fact that a particular sentient being is born in a carnivore's body is a ripening result of that person's individual karma.

The functioning of the biological systems of an individual's body relates more to natural biological laws than to karma, although karma is involved when that person experiences pain or pleasure from his or her body. Our discomfort when we have a cold is due to our karma. Our catching a cold depends on the presence of the virus near us, sanitation in the area, the state of our immune system, and to some extent our karma. However, our hand being the nature of matter and our minds being the nature of clarity and cognizance are not due to

karma. These are simply the nature of those phenomena.

The possibility of having a specific combination of genes in a fertilized egg is one in seventy trillion. Why a particular sentient being's mindstream is attracted to that particular zygote and is born in it is a result of his or her karma. My being born in this body is an effect of my karma, but my body itself is due to the sperm and egg of my parents. My height is due to my genes and diet, but my being born in a body with these genetic predispositions was influenced by my karma.

It is important to distinguish the role of karma vis-à-vis the general characteristics of a species and the experiences of an individual in that species. For example, it is doubtful that human beings having hair and fish having scales is related to karma. Human beings having hair is due to natural biological forces. However, my being born in a body with genes causing baldness is a result of my individual karma. Still, that the evolution of human bodies in general occurred the way it did — with the potential to be bald — was in part a function of the collective karma of the sentient beings who had created the causes to be born in these bodies, which includes me. As you can see, this is a complex topic! The extent to which the various systems of cause and effect — physical, biological, psychological, karmic, and so forth — are interrelated and influence one another is not easy to delineate.

Although Darwin's theory of evolution does not address the issue of what sentience is or how beings' mindstreams came to be associated with the various physical structures that are their bodies, it can explain the general physical evolution of the various forms of life on our planet. Buddhists would add that the karma of the sentient beings who will be born in those bodies influenced the types of sense organs and some of the features of the bodies in the various realms.

Some Buddhist scriptures and cultural legends describe other versions of evolution. According to the *Treasury of Knowledge*, the first human beings, whose minds were less afflictive than ours, had bodies made of light. But as their thoughts degenerated and they became greedy, their bodies became coarser and eventually were composed of material as they are now. Yet another view is the Tibetan legend that the Tibetan race came into being through the union of an ogress and a monkey. This is a compromise between the Darwinian theory that humans descended from apes and the scriptural view that the first humans had bodies of light!

More research is needed. I hope the above discussion will stimulate you to

do further investigation and to understand the complexity of interdependence.

## 7 | Revolving in Cyclic Existence: The Twelve Links of Dependent Origination

**T**HE PROCESS OF REBIRTH in saṃsāra is illustrated by the Wheel of Life. This painting of the samsaric cycle of existence has its origins in the time of the Buddha when the king of Vatsā, Udāyana, presented a jeweled robe to the king of Magadha, Bimbisāra. Bimbisāra consulted the Buddha about an appropriate gift to send in return, and the Buddha recommended a painting of the Wheel of Life that has the verses below written on it. Upon contemplating the Wheel of Life, King Udāyana attained realizations.

Practicing this and abandoning that,  
enter into the teaching of the Buddha.  
Like an elephant in a thatch house,  
destroy the forces of the lord of death.

Those who with thorough conscientiousness  
practice this disciplinary doctrine  
will forsake the wheel of birth,  
bringing duḥkha to an end.

The wheel consists of a series of concentric circles held in the mouth of the anthropomorphized lord of death, who symbolizes our impermanent nature. The center circle contains a pig, snake, and rooster, signifying the three poisons of ignorance, animosity, and attachment, respectively. Each animal has the tail of another in its mouth, indicating that they mutually reinforce each other, although in some paintings the tails of the snake and rooster are in the pig's mouth, showing that ignorance is the root of all afflictions.

The next circle has two halves: the left half (as we look at the painting) is light with happy beings ascending to fortunate rebirths; the right is dark with suffering beings descending to unfortunate rebirths. The imagery indicates that dependent on ignorance we create virtuous and nonvirtuous karma that lead to agreeable and disagreeable births.

These births are the five classes of being — devas (including asuras), humans, animals, hungry ghosts, and hell beings. They are shown in the next circle, which is divided into five sections. The outermost circle has twelve sections, each one illustrating one of the twelve links of dependent origination.

Above and outside the wheel clutched by the lord of death is the Buddha pointing to the radiant full moon: he shows us the path to nirvāṇa. The two verses cited above encourage us to follow this path to free ourselves from all duḥkha forever.

## *Dependent Arising*

Dependent arising<sup>48</sup> is one of the most essential teachings of the Buddha. He expressed its overriding principle (MN 79:8):

When this exists, that comes to be; with the arising of this, that arises. When this does not exist, that does not come to be; with the cessation of this, that ceases.

When the causes and conditions for something are assembled, that thing will arise. The Buddha employs this principle in a variety of circumstances, including his discussion of social turmoil and social benefit. However, since the Buddha's main concern was with sentient beings' bondage in saṃsāra and liberation from it, one of his main teachings on conditionality is the twelve links of dependent origination (*dvādaśāṅga-pratītyasamutpāda*). These twelve describe the causal process for rebirth in saṃsāra and the unsatisfactory experiences that ensue. They also show the way to attain liberation from this vicious cycle.

The twelve links are prominent topics for study and contemplation in both the Pāli and Sanskrit traditions. The Buddha spoke of them extensively in Pāli sūtras, especially in the *Connected Discourses on Causation* (*Nidānasamyutta*, SN 12), and in Sanskrit sūtras, particularly in the *Rice Seedling Sūtra* (*Śālistamba Sūtra*). An extensive explanation of dependent origination according to the Pāli tradition is found in chapter 17 of *The Path of Purification* as well as in Abhidharma texts. In the Sanskrit tradition extensive commentary can be found in Asaṅga's *Compendium of Knowledge* (*Abhidharmasamuccaya*). Chapter 5 of Maitreya's *Ornament of Clear Realizations* explains how to meditate on the twelve links in forward and reverse order, and chapter 3 of

Vasubandhu's *Treasury of Knowledge* contains the Vaibhāṣikas' explanation of the twelve links. Chapters 24 and 26 of Nāgārjuna's *Treatise on the Middle Way* (*Mūlamadhyamakakārikā*) establish the conventional existence of the twelve links while refuting their inherent existence.

The Buddha presented dependent origination in a variety of ways. Sometimes he began with the twelfth link, aging or death, and worked backward (SN 12.2). This perspective begins with our present experience of aging and leads us to inquire as to how we arrived at it. Other times he began with ignorance and explained the links in forward order, culminating with aging or death (SN 12.1). In yet other sūtras, the Buddha began in the middle of the sequence and went either forward to aging or death or backward to ignorance (MN 11).

Although the Buddha did not explicitly teach emptiness when he taught the twelve links, he set out the basis on which we can understand it: everything that exists dependent on other factors is empty of having its own inherent nature, and everything that is empty exists dependent on other factors. Contemplating the first level of dependent arising — causal dependence — helps us to create the causes for higher rebirth by abandoning nonvirtue and practicing virtue. Contemplating a deeper level of dependent arising — dependent designation — leads us to realize emptiness and to attain liberation and awakening. Whether we seek a higher rebirth or highest goodness, understanding dependent arising is important and the teachings on it are precious.

Although the realization of the emptiness of inherent existence will free us from saṃsāra, we cannot dive into meditation on emptiness immediately. We must first eliminate coarse wrong conceptions, such as believing that our lives and our duḥkha are just random occurrences or that they arise from an external creator or from another incompatible cause. Contemplating causal dependence through the twelve links helps us to counteract these misnomers and to become familiar with dependent arising, the principal reason proving the emptiness of true existence. In the *Rice Seedling Sūtra*, the Buddha said:

Monastics, he who understands this rice stalk can understand the meaning of dependent arising. Those who know dependent arising know the Dharma. Those who know the Dharma know the Buddha.

*Dependent arising* is an abbreviation for “dependent and related arising.” In the context of the twelve links, *dependent* means that the arising of each link

depends on the previous one. *Related* indicates that if one link does not exist, the next cannot arise; there is a relationship between the two links. Each set of twelve links contains the causes and results associated with one birth, although a complete set of twelve links may occur over two or three lifetimes. The twelve links are ignorance, formative actions, consciousness, name and form, six sources, contact, feeling, craving, clinging, renewed existence, birth, and aging or death. To fully understand each link, we need to understand its relation to both the link that precedes it and the link that follows it. The Buddha calls on us to contemplate: What is the origin of each link? What is its cessation? What is the path leading to that cessation?

In explaining the forward and reverse series of causation for both saṃsāra and liberation, the Buddha does not imply that any one link arises as a result of only the preceding link. Rather, a momentum builds up as the various factors augment and reinforce one another. In short, both saṃsāra and liberation depend on many interconnected causes and conditions.

## *How Cyclic Existence Occurs*

When speaking of the twelve links, terminology is used in a specific way. For example, the link of ignorance refers to a specific instance of ignorance, not to all ignorance. The links of formative karma and consciousness refer to specific instances of these, not to all karma or all consciousnesses. Not all the types of craving and clinging described under the links of craving and clinging are instances of those two links.

The following explanation is from the Sanskrit tradition. A brief explanation of the Pāli tradition's perspective on a link is mentioned in cases where it differs or adds a unique perspective.

### *1. Ignorance (avidyā)*

The ignorance that is the root of saṃsāra is beginningless. The Buddha said (AN 10.61–2):

A first beginning of ignorance, monastics, cannot be discerned, of which it can be said, “Before that, there was no ignorance and it came to be after that.” Though this is so, monastics, yet a specific

condition of ignorance is discerned.

Although ignorance and cyclic existence are beginningless, in the evolution of a particular lifetime, ignorance is its initial cause. There are various explanations of what this ignorance is. Some say it is obscuration; others say it actively misapprehends how the person exists. Some say it observes the aggregates and conceives them to be a self-sufficient substantially existent person; others assert that it observes the mere I and grasps it to be an inherently existent person. Some associate the view of a personal identity with ignorance; others say they are unrelated mental factors.

According to the view held in common by all tenet schools and the Pāli tradition, first-link ignorance is the lack of understanding of the four truths of the āryas and of the three characteristics of conditioned phenomena — impermanence, duḥkha, and not-self — that leads to rebirth in saṃsāra. According to the Prāsaṅgikas, it is a moment of the innate ignorance grasping the person as inherently existent that leads to rebirth in saṃsāra.<sup>49</sup>

Vasubandhu, Asaṅga, and Dharmakīrti assert that the false conception of the self regards the aggregates and believes them to be a self-sufficient substantially existent person, whereas Prāsaṅgikas assert that the view of a personal identity observes the nominally existent I — the mere I — and grasps it to be inherently existent. Owing to the difference in their assertions about first-link ignorance, these masters have different assertions regarding what the wisdom realizing selflessness apprehends.

Vasubandhu and Asaṅga agree that first-link ignorance is an unknowing, a lack of clarity. However, Vasubandhu says that ignorance grasps the opposite of proper knowledge — in this case it grasps a self-sufficient substantially existent I — whereas Asaṅga asserts that ignorance does not grasp things as existing in a way opposite to how they exist. According to Vasubandhu, ignorance is similar to seeing a coiled rope at twilight: unable to see it clearly, we misconstrue it to be a snake. In the same way, due to the obscuring force of ignorance, how the aggregates exist is not clear and we suppose them to be a self-sufficient substantially existent person.

Vasubandhu's *Treasury of Knowledge* says, "Ignorance is like an enemy or a falsehood." An enemy is not just the lack of a friend, nor is it an unrelated object like a peach. It is the very opposite of a friend. Similarly, ignorance is not simply the lack of wisdom, nor is it an unrelated object. It is antithetical to wisdom.

Vasubandhu says that because the view of a personal identity is a form of

intelligence — albeit an afflictive one — it cannot be ignorance. Ignorance accompanies the view of a personal identity, but the two are distinct mental factors. An innate affliction, ignorance is overcome only on the path of meditation, while the view of a personal identity is eliminated on the path of seeing. The primary mental consciousness that is accompanied by both ignorance and view of a personal identity has one facet that does not know the object accurately (ignorance), while simultaneously another facet apprehends the aggregates in a distorted manner and grasps them to be a self-sufficient substantially existent person (the view of a personal identity).

Asaṅga says that ignorance is like darkness that obscures seeing reality. It does not grasp the aggregates as existing in a contrary way, whereas view of a personal identity does. For this reason, he says view of a personal identity is not ignorance. He agrees that the view of a personal identity is a form of afflictive intelligence, but does not accept it as the mental factor of intelligence, because intelligence must necessarily be virtuous and the view of a personal identity is neutral.

Dharmakīrti says that the opposite of the wisdom realizing selflessness is the view of a personal identity, which he identifies with ignorance (PV). Ignorance observes the five aggregates and grasps them to be a self-sufficient substantially existent person.

Here, the antidote, wisdom, is understanding the truth, the meaning of the selflessness of persons. Its opposite is the view of a personal identity, which grasps a self of persons.<sup>50</sup>

All faults without exception arise from the afflictive view of self. That is ignorance.<sup>51</sup>

According to Prāsaṅgikas, the view of a personal identity and ignorance both grasp their object as existing inherently, and for that reason the view of a personal identity is a form of ignorance. First-link ignorance is the view of a personal identity; it is an innate self-grasping that has been present since beginningless time and gives rise to formative karma that projects a rebirth in cyclic existence. It is not acquired self-grasping that is due to familiarity with incorrect philosophies, nor is it the mental factor of ignorance, which is much broader and includes ignorance regarding karma and its effects. Ignorance grasps the inherent existence of persons and phenomena, whereas the view of a

personal identity grasps the inherent existence of only our own I and mine. All beings except arhats, bodhisattvas on the eighth ground or higher, and buddhas have ignorance, but only ordinary beings — those below the path of seeing — have first-link ignorance. Āryas of the three vehicles who have not eradicated all afflictive obscurations have ignorance; however, it is not strong enough to produce karma that projects a saṃsāric rebirth and thus it is not first-link ignorance.

First-link ignorance is the specific moments of ignorance grasping inherent existence and the view of a personal identity that lie behind the motivation, performance, and completion of a virtuous or nonvirtuous karma powerful enough to project a rebirth in saṃsāra. It is not other moments of ignorance or other types of ignorance that occur in our lives. In short, first-link ignorance is the view of a personal identity that newly motivates its (that set of twelve links') second branch, formative action. This ignorance actively grasps the self as existing in a way it does not. It is the root of saṃsāra, the principal cause of rebirth in cyclic existence.

The notion of grasping inherent existence may seem abstract to us at first, but it is our frequent experience. When intense craving arises in us, the I appears to be independent of all other factors and we apprehend it as existing in this way. “I must have this!” When anger rules our minds, the self appears very solid, as if it existed under its own power. “That disturbs *me!*” The I seems to be somewhere within our bodies and minds, but also separate from them. This grasping is a troublemaker; it instigates and empowers afflictions that create karma, which ripen in lower rebirths. It also instigates polluted virtuous motivations, which bring higher rebirths, but still keep us bound in saṃsāra. It is a false view because when we examine how the I exists, we see it is not our minds, our bodies, the collection of body and mind, or something apart from them. The I exists by mere designation.

Vaibhāṣikas, Sautrāntikas, Cittamātrins, and Svātantrikas say first-link ignorance grasps a self-sufficient substantially existent person. This is the *root of saṃsāra* that must be eliminated to attain liberation. Cittamātrins and Svātantrikas also assert self-grasping of phenomena that must be eliminated to attain full awakening. They consider this to be the *ultimate root of saṃsāra*. For Cittamātrins the ignorance grasping a self of phenomena that is the final root of saṃsāra holds subjects and objects to be different entities and holds phenomena to exist by their own characteristics as the referents of their names. For Svātantrikas, the final root of saṃsāra is the ignorance grasping the true

existence of all phenomena.

Prāsaṅgikas identify a subtler ignorance as the root of saṃsāra — the ignorance that grasps persons and phenomena to exist inherently. The view of a personal identity that grasps the I and mine is preceded by and dependent on the ignorance grasping the aggregates as inherently existent. Nāgārjuna says (RA 35):

As long as the aggregates are grasped [as inherently existent],  
so long thereby does the grasping of I exist.  
Further, when the grasping of an [inherently existent] I exists,  
there is [formative] action, and from it there also is birth.

Grasping the aggregates as inherently existent gives rise to grasping the I that is merely designated in dependence on them to exist inherently. Based on the view of a personal identity that grasps our I as inherently existent, we create karma that projects rebirth in saṃsāra. Ignorance afflicts transmigrating beings because it obscures seeing the right view that directly perceives the emptiness of inherent existence.

### *How Ignorance Leads to the Creation of Karma*

The *Treasury of Knowledge* speaks of two motivations for an action: (1) The *causal* or *initial motivation* (*hetu-samutthāna*) is the first motivation to act. It may occur a long time before the action is done. (2) The *immediate motivation* (*tatkṣaṇa-samutthāna*) occurs at the time of the action. Ignorance of the ultimate nature (ignorance grasping inherent existence) is the causal motivation for all polluted karma in general and for all formative actions that project rebirth in saṃsāra in particular.

When the immediate motivation, which occurs subsequent to the causal motivation, is an affliction such as attachment, anger, jealousy, or arrogance, the formative karma will be nonvirtuous. When the immediate motivation is virtuous — such as faith, integrity, or compassion — the formative karma will be virtuous. In short, first-link ignorance and the view of a personal identity are always neutral; the virtuous or nonvirtuous mental factors that arise after them determine the ethical value of the actions that follow.

As the initial motivation, first-link ignorance is the principal driving force that leads to formative karma. Distorted conceptions may arise after it —

grasping the impermanent as permanent, what is duḥkha by nature as happiness, the unattractive as attractive, and the selfless as having a coarse self. Distorted attention that exaggerates the good or bad qualities of an object may also arise. Due to these distorted conceptions, the immediate motivation such as ignorance of karma and its effects coupled with other afflictions arise. With attachment we plan, connive, and manipulate to get the objects of our desire; we then lie or steal to make them ours. When our desires are thwarted, anger arises and develops into malice. We plan and act out retaliatory actions, mistakenly believing that anger protects us. Attachment and anger in the above examples are not a distinct link; some sages consider them part of the first link, others say they are the second link.

The causal motivation of first-link ignorance does not necessarily lead to nonvirtuous karma. When the immediate motivation is free from the ignorance of karma and its effects and is a virtuous mental state, the subsequent action will be virtuous. Examples are making offerings with faith, protecting life with compassion, and restraining from the ten nonvirtues.

The above is the technical description of causal and immediate motivations. Another way of using these terms is broader. Here *causal motivation* refers to the initial virtuous, nonvirtuous, or neutral thought to do an action sometime in the future, and *immediate motivation* is the intention at the time of doing the action.

In this case, both the causal and immediate motivations for an action are usually virtuous, nonvirtuous, or neutral, although sometimes they may differ. As part of our practice of training in bodhicitta, upon awakening each morning we generate contrived bodhicitta: “Today I will do all actions with the aspiration to attain full awakening to benefit all sentient beings.” This is the causal motivation for all our actions that day. However, we often forget our altruistic intention, and the immediate motivation for many of our actions is attachment, animosity, jealousy, and so on. In this case, the immediate motivation determines the ethical value of the action, which is nonvirtuous. Nevertheless, generating bodhicitta in the morning is worthwhile because it lessens the strength of our destructive actions and reminds us to purify afterward. In addition, it plants seeds on our mindstreams so that one day we will have uncontrived, spontaneous bodhicitta. Sometimes the force of our compassionate motivation in the morning stays with us during the day, transforming many of our actions into virtue. High bodhisattvas’ causal and immediate motivations for all actions are the same.

One action or mental state cannot be the cause of both saṃsāra and nirvāṇa. In general, any action that is instigated by ignorance is the cause of saṃsāra, even though the motivation may be virtuous, such as a similitude of the determination to be free from saṃsāra or the compassionate wish to help someone. Actions sustained by the power of the basis — referring to actions involving holy objects — are exceptions to this. Actions done with faith in the Three Jewels — such as making offerings, bowing, and meditating on their excellent qualities — are virtue concordant with liberation.

---

## REFLECTION

1. Observe your thoughts during the day and identify the causal and immediate motivations for your actions.
2. Try to identify the ignorance of the ultimate nature. Then observe if misconceptions and instances of distorted attention arise.
3. Periodically during the day stop and examine your mental state: Is it virtuous, nonvirtuous, or neutral? Is it creating the cause for happiness, suffering, or neither?

---

### 2. *Formative Action (saṃskāra karman)*

Formative actions afflict transmigrating beings because they plant polluted karmic seeds on the consciousness. Formative action is the intention (mental karma) or the physical or verbal action that is newly formed by first-link ignorance. It produces the mental and physical aggregates of a future birth in cyclic existence. In the context of the twelve links, formative action or karma refers specifically to volitional actions that bring rebirth as their result, not to all actions in general. These polluted virtuous and nonvirtuous intentions are expressed through the three doors of our bodies, speech, and minds in our deeds, words, and thoughts.

Formative actions are either virtuous or nonvirtuous; neutral mental states do not have the force to produce a rebirth because they lack a clear intention. The completion of the action produces a karmic seed that has the potency to bring a

rebirth. This karmic seed is placed on the third link, causal consciousness. When nurtured by the eighth and ninth links — craving and clinging — the karmic seed will blossom into the tenth link, renewed existence, which in turn gives rise to the next birth. Both the seed and the resultant aggregates are ethically neutral.

Prāsaṅgikas say that in addition to the seed, the action also produces a having-ceased, a functioning thing that indicates the action happened and has stopped. Like karmic seeds, having-ceaseds are neutral. The having-ceased of an action and the karmic seed are activated by craving and clinging and lead to renewed existence.

Second-link formative action — our mental intentions and physical and verbal actions — is the direct cause of a future rebirth; it is a path of action with all four branches complete, which projects a fortunate or unfortunate rebirth. Other karmas that do not have all four branches or that are weaker complete that rebirth by influencing other conditions and events, such as our experiences, the environment we inhabit, and our habitual physical, verbal, and mental tendencies.

The term “formative action” may also be translated as “conditioning action,” implying that it creates or composes something else, in this case a future rebirth. *Conditioning action* excludes unpolluted actions and neutral actions that are incapable of projecting a new birth with polluted aggregates.

Formative actions are of three types: demeritorious, meritorious, and invariable.

(1) *Demeritorious karma* is created under the influence of ignorance of ultimate truth and ignorance of karma and its effects; the motivation is one directed toward our own selfish happiness in this life. Created only in the desire realm, demeritorious karma leads to an unfortunate rebirth as a hell being, hungry ghost, or animal. Here the disadvantages of the eight worldly concerns become obvious. While it may be difficult to overcome our habituation to them, it is possible. By gradually steering our minds to more virtuous intentions, we will definitely decrease our misery now and in future lives.

(2) *Meritorious karma* is the virtuous karma created in the desire realm that leads to a fortunate rebirth in the desire realm. Such karma, created under the influence of first-link ignorance and virtuous mental factors, is created by Buddhists and non-Buddhists alike.

To create this meritorious karma, our motivation must be free from the eight worldly concerns that seek our selfish happiness of only this life. Our motive

may be to live ethically and with kindness because those are our values. Someone who believes in rebirth may be motivated to take a higher rebirth with wealth and power. Although this is a worldly aspiration, it is free from attachment to the happiness of only this life and is a Dharma action and meritorious karma. Dharma practitioners who seek liberation or buddhahood want to have a series of higher rebirths in order to have a good basis to accumulate all the causes to fulfill their spiritual aims. Their actions done with that motivation are also meritorious.

(3) *Invariable karma* brings rebirth as a deva in the form or formless realms. These actions are created under the influence of first-link ignorance by a mind that has attained a form or formless realm meditative absorption that has not degenerated before the person dies.

Invariable karma leading to rebirth in the first three dhyānas where the feeling of happiness is present is motivated by a thought that is disinterested in lovely sense objects and primarily seeks the pleasurable feelings born from concentration. Someone who has reversed attachment for sense pleasure and grown tired of the bliss of the first three dhyānas seeks the feeling of equanimity. With this motivation she creates invariable karma that brings rebirth in the fourth dhyāna and the four formless realms. In these meditative states, the roughness of meditative bliss has been suppressed and the far-superior feeling of equanimity is experienced.

Invariable karma is so-called because it creates the cause to be born in that specific meditative absorption and no other. It may be the first, second, third, or fourth dhyāna of the form realm or a meditative absorption of infinite space, infinite consciousness, nothingness, or peak of saṃsāra (neither-discrimination-nor-nondiscrimination) in the formless realm. For example, a human being lacking Dharma realizations who develops the absorption of the second dhyāna and whose concentration has not degenerated before she dies will experience the craving and clinging of the second dhyāna at death. These will ripen that karmic seed, and she will be reborn in that very dhyāna, not in any other. In this sense that karma is invariable.

Each time we engage in an action supported by ignorance that has a clear intention and is either virtuous or nonvirtuous, we create the beginnings of a new set of twelve links. Which karmic seed and having-ceased ripen to bring the next rebirth depends on other factors such as the strength of the karma and our state of mind at the time of death. A new rebirth is not the sum total of all the karma we have ever created. Only one karma — or in some instances a few karma —

determine the realm of our next rebirth.

How karma created to be reborn in the desire realm ripens may vary. The ripening of karma in the desire realm can be affected by the person's thoughts just before death, prayers of spiritual mentors, the circumstances of prospective parents, and occurrences in the *bardo* (the intermediate stage between death and the next life). If conditions change, upon a mini-death<sup>52</sup> in the bardo the karma that would bring rebirth as a dog may become inactive, and another karma that brings rebirth as a human being may ripen instead. Karma to be reborn as a human could ripen as rebirth in Amitābha's pure land if at the moment of death the person, either by her own power or by the influence of a spiritual friend, directs her mind toward Amitābha and his pure land.

Contemplating the first two links increases our renunciation of saṃsāra and motivates us to live ethically. We become more interested in learning about emptiness because the wisdom realizing the ultimate truth can eliminate the ignorance that is the root of saṃsāra and bring liberation.

---

## REFLECTION

1. What are the different types of formative actions?
  2. Trace the process of their arising from ignorance to afflictions to action. Make examples from your life.
  3. As you go through the day, be aware that your actions that are complete with all four branches are creating causes for your future lives.
  4. How does this awareness change how you think and what you do?
- 

### 3. *Consciousness (vijñāna)*

Third-link consciousness is primarily to the polluted mental consciousness that has just joined to the next birth under the control of afflictions and karma. Third-link consciousness does not refer to all consciousnesses. It is not a sense consciousness, nor is it the consciousness of a buddha, pure-ground bodhisattva, or arhat, because they are no longer reborn under the power of afflictions and

karma. Third-link consciousness afflicts transmigrating beings because it leads to the next rebirth.

The third link refers only to the mental consciousness of two specific moments:

(1) The *causal consciousness* is the moment of consciousness on which the karmic seed created by a formative action is placed. This consciousness is neutral and the seed of a virtuous or nonvirtuous karma infuses or “perfumes” it. The continuum of the causal consciousness carries the seed until the time it ripens as the new rebirth; at that time, it becomes the resultant consciousness.

(2) The *resultant consciousness* is the first, brief moment of mental consciousness at the beginning of a new life. In the next moment the fourth link, name and form, arises. In terms of most human lives, the resultant consciousness occurs at the moment of conception. We don’t know if conception occurs before the fertilized ovum implants in the uterus or at the time it does. It is also hard to say when the resultant consciousness occurs in cases of in vitro fertilization. However, it is clear that without the presence of a mental consciousness, the mere physical joining of a sperm and ovum will not become a human being.

What carries the karmic seeds until they bring their results is a widely discussed topic among Buddhist schools. In the context of the twelve links, the causal consciousness plays this role. The Vaibhāṣika, Sautrāntika, and Svātantrika schools assert the continuity of the mental consciousness to be the third-link consciousness. Unlike other Buddhist schools that assert six consciousnesses — visual, auditory, olfactory, gustatory, tactile, and mental — Cittamātra Scriptural Proponents assert eight consciousnesses, the previous six plus the afflictive consciousness and foundation consciousness (*ālayavijñāna*). The foundation consciousness, or storehouse consciousness, is the repository of all karmic seeds and assumes the role of the third-link consciousness. These Cittamātrins assert such a foundation consciousness because they say there must be a stable mind that carries karmic seeds from one life to the next. Also, there must be something that the word *I* refers to, something that is the person.

Prāsaṅgikas disagree, saying that in the long term the mere I carries the karmic seeds. They assert this because a nominally existent person exists when the action is created and when the action bears its result, so this mere I must be the basis for infusion of the karmic seed. The mere I is impermanent and cannot be found under ultimate analysis; there is nothing to point to and say “this is the person” other than the person that exists by mere imputation. Although the mere I carries the karmic seeds over a long period of time, the mental consciousness

carries them temporarily. The mental consciousness cannot be the constant carrier because at the time a person directly realizes emptiness the mind is unpolluted, and polluted seeds cannot be associated with this unpolluted mind. Therefore the mere I carries the karmic latencies during this time.

### *Consciousness according to the Pāli Tradition*

According to the sūtra explanation, third-link consciousness refers specifically to the consciousness that initiates the new life, the rebirth-linking consciousness (P. *paṭisandhicitta*) that follows the death consciousness and connects the mindstream from the previous life to the new life. This consciousness is illusory, like an echo, a light, a seal impression, or a shadow; it does not come here from the previous life yet it arises due to causes in previous lives.<sup>53</sup> The consciousness of the next life is not the same as the previous life's consciousness, nor it is totally unrelated. If they were identical, one could not cause the other. If they were totally unrelated, there would not be a continuum.

In the new life, consciousness simultaneously gives rise to the mental aspect of existence, which is called *name*, and animates the new physical *form*. In scientific terms, for a human rebirth, consciousness links with the fertilized ovum, making it become the body of a living being. Name consists of the five omnipresent mental factors of feeling, discrimination, intention, contact, and attention.<sup>54</sup>

In addition to this developmental perspective, consciousness conditions name and form whenever we cognize an object. The five factors of name depend on consciousness and cannot occur without it. Even in deep sleep, fainting, coma, or meditative absorption, consciousness is present, although it is a subtle type of consciousness that is not aware of the external world.

The Pāli Abhidharma explains that consciousness and name and form are *co-nascent*, meaning that they arise simultaneously like fire and its heat. In addition, consciousness and name and form are *mutual conditions* in that each conditions and supports the other, like two sticks leaning on each other to stand upright.

While the sūtras speak of six types of consciousness, emphasizing that each type of consciousness is responsible for cognizing its own corresponding object, consciousness also performs another role: it maintains the continuity of an individual's existence within any given life from birth until death and then beyond. It carries with it memories, karmic seeds, habits, and latencies, connecting different lives and making them a series such that future lives relate

to previous ones.

#### *4. Name and Form (nāma-rūpa)*

Name and form afflict transmigrating beings because they hold the object of clinging, the body. *Name* refers to the four mental aggregates — feeling, discrimination, miscellaneous factors, and primary consciousnesses — and *form* is the body. The link of name and form exists during the time after the link of resultant consciousness and before the link of the six sources. Third-link consciousness is a condition for form because this body becomes a living body only when consciousness is present. When the “name” or mental aspect of this life ceases, the person’s rebirth ends and the body remains a lifeless corpse. While the cognitive faculties remain after death, they cannot connect an object and preceding moment of consciousness to produce cognition because consciousness is no longer associated with the body.

The mental and physical aggregates — our minds and bodies — of this life are the polluted ripening result of karma. As such, they are produced by afflictions and karma. They are the basis of the duḥkha we experience in the present life, and because of attachment to them, afflictions arise, creating more karma that results in further rebirths.

In the case of human birth, fourth-link name and form refer to the five aggregates from the time just after conception until the time the five sense organs begin to develop. *Form* is the embryo that begins to grow in the womb. It consists of the four great elements — earth, water, fire, and air — and forms derived from them, such as color, smell, and so forth. The four great elements are metaphorical designations for the different qualities of matter. Earth is the solid aspect, the property of resistance and hardness. Water is the fluid and cohesive aspect that enables things to stay together. Fire is the quality of heat and energy, and air represents mobility, contraction, and expansion. Beings in the formless realm lack a body and have only the seed of form.<sup>55</sup>

*Name* refers to the four mental aggregates because they engage with objects with the help of names and terms. Just after conception only the mental and tactile consciousnesses arise because in the embryo only the mental and tactile faculties are present.<sup>56</sup>

#### *Name and Form in the Pāli Tradition*

Name (mentality) and form (materiality) are major aspects of our experience. *Form* is the four great elements forming the body. *Name* is a collective term for the other three mental aggregates (feeling, discrimination, and miscellaneous factors) and the five mental factors (contact, feeling, discrimination, intention, and attention) that accompany consciousness and are indispensable to making sense of and naming things in the world around us. When the object, cognitive faculty, and corresponding consciousness come together, *contact* is essential for any cognition. Once contact has occurred, *attention* functions to bring the mind to the object. Then *feeling, discrimination, and intention* arise as ways of experiencing and relating to the object. Although all five mental factors are present, the strength of each one will vary according to the mental state. When strong pain or pleasure is foremost, feeling is more prominent; when we are examining something and noting its characteristics, discrimination is stronger. When we are making plans and deciding what to do, intention is foremost.

Why are contact and feeling included in name when name is earlier in the causal sequence than the links of contact and feeling? Why are feeling, discrimination, and miscellaneous factors part of name as well as objects known by the mental source, which is part of the next link, the six sources? Different instances of these mental factors are spoken of in each link. While one instance of contact and feeling occur simultaneously with the link of name, another instance of contact follows name and form, and another instance of feeling follows that instance of contact. Similarly, one instance of the three mental aggregates may be included in name and form, while another instance is the object known by the mental source.

### 5. *Six Sources (ṣaḍāyatana)*

The fifth-link six sources are the six cognitive faculties that exist in the nature of the polluted ripening result (the five aggregates) during the time after the link of name and form has occurred and before the link of contact has come about. In the case of a human rebirth, the six internal sources — eye, ear, nose, tongue, body, and mental cognitive faculties — develop in the womb. They enable us to cognize the six external sources — visible forms, sounds, odors, tastes, tactile objects, and phenomena. The phenomena source (*dharmāyatana*) is objects of mental consciousness that are perceptible by mind but are not included in the first five external sources. It includes the aggregates of feeling, discrimination, and miscellaneous factors, and various subtle forms — such as dream objects

and prātimokṣa ethical restraints — that cannot be known through the five physical senses.

The cognitive faculties are subtle sensitive forms located in the larger organs listed above, such as the eyeball. They function to connect an object and consciousness so that cognition of the object occurs. The six are called *sources* because they are the sources for the arising of the six consciousnesses. If a sense faculty is injured and unable to function, the corresponding sensory function is also impaired. The body source is on the skin and inside certain areas of the body. It enables us to experience smooth and rough, hard and soft, and hot and cold, as well as hunger and thirst. The mental faculty is not form; it consists of the six consciousnesses that enable a later moment of mental consciousness to know objects.

The tactile and mental faculties are present from conception onward. The remaining four cognitive faculties come into being as the embryo develops. When the six cognitive faculties have formed this link is complete, and the new being has the potential to experience objects through the coming together of the object, cognitive faculty, and preceding moment of consciousness.

Sentient beings are born in four ways: by womb, egg, heat and moisture, and spontaneously. When beings such as devas and hell beings are born spontaneously, all cognitive faculties are complete, and they are fully equipped to interact with their environment.

A question arises: Do all twelve links pertain to rebirth in the three realms — desire, form, and formless? Vasubandhu's *Treasury of Knowledge* says that since beings in the form realm are spontaneously born and do not go through development in the womb, they lack the link of name and form because all their cognitive faculties are present at the time of conception. He also says that there is no occasion for the link of name and form or for five of the six sources for beings in the formless realm because they do not have bodies. Because they have only the mental source, they experience only ten links.

Asaṅga differs, saying all twelve links are present in births in all three realms. Name and form are partially present in the form realm, and in the formless realm, the link of name and form consists of only the mental consciousness. The link of six sources is partially present because the mental source exists although the sense sources do not.

The six sources afflict transmigrating beings because they complete name and form, thereby creating the potential for awareness of objects to arise.

## *The Six Sources according to the Pāli Tradition*

The fifth-link six sources are the six internal cognitive faculties that join the object and the consciousness to produce contact, the sixth link. The way that the six sources arise from name and form can be understood in two ways: the development immediately after conception and the conditioning that occurs in any cognition.

Using the example of a human being, in *the developmental model* name and form refer to the psychophysical organism that was conceived in the mother's womb and is beginning to evolve. At the moment of conception the consciousness from the previous life enters the fertilized ovum. That is called "name and form taking place in the womb."

At this time, the consciousness from the previous life becomes the mental source, and with it arise the other three mental aggregates and the five omnipresent mental factors that constitute name. In this way, name becomes the condition for the mental sense source. The mental functioning of this newly conceived being is rudimentary.

After conception, the fertilized ovum becomes the body, which is made up of the four elements and form derived from the elements. As a tiny embryo, it has the tactile sense source (tactile faculty) and is capable of experiencing hardness, softness, smoothness, roughness, hot, cold, and so on. As the embryo develops, certain cells begin to specialize and the eye, ear, nose, and tongue sense sources arise. These are not the coarse physical organs but rather subtle sensitive material within them that is able to connect the object and consciousness to produce contact and cognition. In this way, form is the support of the six sense sources. If name and form are cut off — for example, in a miscarriage — the new human being ceases and the six sources do not develop.

Regarding the *conditioning that occurs in any cognition* in our daily lives, there is a complex interconnected web of factors that must come together as name and form for a particular sense source to exist and produce contact. In a visual cognition, the visual consciousness and the mental factors that make up name arise dependent on the eye source. That requires the existence of our eyeballs, which are made of the four elements and their derivatives. The eye source could not function if the body were not alive, and that requires the presence of consciousness and its accompanying mental factors. It is in that way that name and form condition the six sense sources.

Name — the mental aspect of living beings — depends on form — the body.

The functioning of the body as a living organism depends on the presence of consciousness and the five omnipresent mental factors. Buddhaghōṣa says (Vism 18.36):

They cannot come to be by their own strength,  
or yet maintain themselves by their own strength.  
Relying for support on other states,  
weak in themselves, and formed, they come to be.  
They come to be with others as condition;  
they are aroused by others as their objects;  
they are produced by object and condition,  
and each by something other than itself.

And just as people depend upon  
a boat for traversing the sea,  
so does the mental “body” need  
the physical body for occurrence.  
And as the boat depends upon  
the people for traversing the sea,  
so does the physical body need  
the mental “body” for occurrence.  
Depending each upon the other,  
the boat and people go on the sea.  
And so do mind and body both  
depend the one upon the other.

Included in the mental source is the *bhavaṅga*, or subliminal consciousness. Spoken of in the commentaries and the *Abhidhamma*, but not the *sūtras*, the *bhavaṅga* is a passive, underlying stream of consciousness from which active consciousness arises. It occurs in the absence of any cognitive process and serves to connect all the active states of consciousness; however, it is not a permanent consciousness or self. It is included in the mental source because due to it, active mental consciousness arises. At the microscopic level of individual mind moments in the waking state, the mind could be going in and out of the *bhavaṅga* so quickly that we do not notice it. During sleep, the mind is in *bhavaṅga* for a longer time, emerging to dream and then returning to dreamless sleep with the *bhavaṅga*. The *bhavaṅga* is also present when fainting.

## 6. Contact (*sparśa*)

Contact is the polluted mental factor that, due to the convening of the three — the object, cognitive faculty, and consciousness — causes the object to be experienced as pleasant, painful, or neutral through its own capability and that exists after the link of six sources has occurred and before the link of feeling has come about. Contact afflicts transmigrating beings because it connects the object, cognitive faculty, and the consciousness, so that beings dualistically discriminate.

In general, a consciousness comes about because of three conditions: (1) The *observed object condition* (*ālambana-pratyaya*) is the object that causes a consciousness to be generated in its aspect — for example, in the aspect of blue or of a sound. (2) The *dominant condition* (*adhipati-pratyaya*) is the cognitive faculty that causes its corresponding consciousness to apprehend its corresponding object and no other. The dominant condition for sight — the eye faculty — enables a visual consciousness to apprehend color and shape, but not smell or taste. (3) The *immediately preceding condition* (*samanantara-pratyaya*) is the previous moment of consciousness that allows the next moment of consciousness to arise as something that cognizes objects.

When these three come together, contact arises. Because there are six objects (form, sound, smell, taste, touch, and phenomena), six cognitive faculties (eye, ear, nose, tongue, body, and mind), and six consciousnesses (visual, auditory, olfactory, gustatory, tactile, and mental), there are six types of contact. Contact acts as the basis for and leads to the feeling that exists in the next moment.

## 7. Feeling (*vedanā*)

Feeling is the polluted mental factor that experiences the object as pleasurable (happy), painful (suffering), or neutral through its own capability, by depending on its cause, the link of contact. *Feeling* here does not mean emotion; rather, it is the pleasant, unpleasant, or neutral experience that comes about just after any of our cognitive faculties contact an object and produce a consciousness cognizing that object. Feeling afflicts transmigrating beings because it experiences the polluted feelings of pleasure and pain.

While feeling is usually categorized as of three types — pleasure, pain, and neutral — or of five types — physical pleasure, mental happiness, physical pain, mental pain, and neutral — here in the explanation of dependent origination it is

of six types: the feelings arising from eye, ear, nose, tongue, tactile, and mental contact. While many other mental factors, such as discrimination and intention, also arise in response to contact, the Buddha singled out feeling because it leads most directly to craving. This is evident in our lives: experiencing pleasure leads to craving for more pleasant feelings, experiencing pain sparks craving to be separated from such undesirable feelings, and experiencing neutral feeling prompts craving for it not to diminish. The latter especially applies to beings in the fourth dhyāna and above who have only neutral feeling and do not wish the peace it brings to cease.

Ignorance, karma, and causal consciousness project a rebirth that begins with the resultant consciousness and continues as the body develops during the links of name and form and the six sources, so that contact and feeling occur. Feeling is one of the chief ways that karma ripens: virtuous actions produce pleasant physical and mental feelings and nonvirtuous actions produce painful physical and mental feelings. On the one hand, feelings are the result of an evolutionary process beginning with ignorance and karma. On the other hand, they initiate a new chain of events because they instigate craving. Craving, which is also reflected in emotions such as attachment and anger, creates more karma. In this way, saṃsāra perpetuates itself.

If we observe our experience closely, we will notice how many feelings we experience, one after the other, during the day. We will also notice how reactive we are to those feelings. Our craving to have pleasure and to avoid pain is strong, affecting our moods and motivating most of our actions. The idea of experiencing pleasure from our morning cup of coffee or tea gets us out of bed in the morning. Seeking the happiness that comes from having money and possessions, we go to work. Craving to be free of pain, we defend ourselves against criticism and lash out at anything that hurts or even inconveniences us.

The space between feeling and craving is one of the places where the forward motion of dependent origination can be broken. Feelings naturally arise when contact with external objects or internal objects such as memories, ideas, and plans occurs. By being aware of feelings and noting them with introspective awareness, it is possible to prevent craving from arising in response to them. We practice observing feelings without reacting to them, observing where they come from, where they abide, and where they go. We study the seemingly instantaneous reactions we have to different feelings and how our craving for unpleasant feelings and craving to be free from unpleasant feelings control our lives.

Only feelings accompanied by ignorance cause craving. When ignorance has been eliminated, feelings are present but craving does not arise. Arhats, pure ground bodhisattvas, and buddhas also experience feelings, but since their feelings are not the result of a process initiated by ignorance, they are blissful.

The feelings experienced by an awakened one are inconceivable for us ordinary beings. During the Buddha's lifetime, a great drought and famine afflicted the land. The saṅgha received no alms, until one man who owned horses gave the monks some fodder to eat. The fodder tasted disgusting to the monks, but the Buddha ate it contentedly. One monk, overcome with sadness that the Buddha had to endure such foul food, said, "What a desperate situation that the Blessed One has only this vile fodder to eat!" The Buddha lovingly responded, "Please don't worry," and taking a small part of the fodder from his mouth, gave it to the monk to eat. Chewing it, the monk was astonished to taste what had become delicious divine food owing to its contact with the Buddha's senses.

---

## REFLECTION

1. Observe your feelings with mindfulness and introspective awareness and identify pleasant, unpleasant, and neutral feelings.
2. Be aware that they arise after contact with an object.
3. Watch how instantly craving arises for pleasant feelings to continue and for unpleasant feelings to cease.
4. How do all these feelings, as well as the craving they provoke, affect your life? How do you respond to them?
5. Are there certain objects that it would be helpful for you to avoid temporarily so that you can work on reducing the craving that results from contact with them?

---

### 8. *Craving (tṛṣṇā)*

Craving is a mental factor that, by depending on the link of feeling, does not wish to separate from its object. Eighth-link craving occurs specifically while we are actively dying and is a form of attachment that arises strongly while the body weakens and the coarse consciousnesses still function. This craving does not wish to separate from our possessions, our dear ones, our body, and the ego-identity we have constructed during this life. Craving afflicts transmigrating beings by making the next rebirth closer.

In general three types of craving arise during the course of our lifetimes:

(1) *Craving for pleasant feeling* arises through the contact of our cognitive faculties with particular sense objects and does not want to separate from pleasurable feelings and the attractive objects and people that stimulate them. The Buddha compares giving in to craving to a person who drinks an exquisitely delicious drink knowing it contains poison. We become like laboratory rats who exhaust themselves tapping on a lever although they very rarely get a grain of rice for their effort.

(2) *Craving for existence* arises while dying because of terror that the continuity of the self will cease. Fearing that we will no longer exist, craving for saṃsāric aggregates surges.

(3) *Craving for nonexistence* desperately seeks separation from painful feelings. When the mind contacts an undesirable object, pain arises. This gives rise to craving for the pain to become nonexistent; we want to be released from the painful feeling and the object or person that triggered it. An extreme instance of this craving yearns for the self to become totally nonexistent at the time of death — a mistaken, nihilistic notion that could lead to suicide and bring devastating results.

The three types of craving are also described in relation to the three feelings: (1) craving not to be separated from pleasurable feelings, (2) craving to be separated from painful feelings, and (3) craving for neutral feeling not to diminish — that is, for neutral feelings not to degenerate into painful feelings.

In our daily lives, we can witness feeling giving rise to craving. We crave the pleasant feelings and the possessions, people, situations, talents, and opportunities that appear to generate them. We crave to be separated from anything that disturbs our peace, including ideas and policies we disagree with. Craving clearly demonstrates the unsatisfactory nature of cyclic existence — we always want something, are fearful of losing what we like, and are impatient to be free of what we don't like.

Once craving arises with respect to any of the three feelings, it swiftly leads to clinging to that feeling and to the object that seems to bring it. This, too, is easy to observe in our lives. We experience pleasure from being praised. Enjoying it, we crave more. When craving increases, clinging arises as we wish to hear more ego-pleasing words and to be with the people who say them.

From another perspective, craving is of six types: craving for visible objects, sounds, smells, tastes, tangibles, and phenomena. The latter are objects of mental consciousness and include conceptual appearances of the objects perceived by the five senses, thoughts, images, fantasies, ideas, feelings, and emotions. Craving is described in terms of its six objects because it arises from feeling, feeling from contact, and contact from the sense sources; each of those links is delineated as six in dependence on the six objects.

Developing mindfulness and wisdom to identify and counteract the different types of craving is essential. To do this, contemplate the various things you encounter and think about. Consider that they are merely fleeting conventions. They have no inherent essence. There is no “me,” no “them.” In this way, practice viewing all mental states and objects as transient. Let them go without attaching to them.

Beings who are free from craving experience whatever feelings arise in their minds with equanimity rather than with dissatisfied or fearful reactivity. Freedom from craving does not mean our lives become boring. Rather, there is now mental space for constructive aspirations — to develop wisdom, love, and compassion, and to benefit sentient beings — that are not influenced by ignorance.

### *Craving according to the Pāli Tradition*

*Craving for sense pleasure* is described the same as in the Sanskrit tradition. *Craving for existence* seeks rebirth in any of the three realms. It accompanies the view of permanence (eternalism), which adheres to the notion of a permanent, unitary, independent self or soul that continues on, unchanged, after death. Most societies and religions throughout history have held an eternalistic view of one kind or another, and such a view is deeply ingrained in people who were taught as children that there is a permanent soul.

*Craving for nonexistence* accompanies the nihilistic view, which believes that when the body ceases to function after death, the self or person is totally annihilated. This view may arise in someone who falls into despair or cynicism

and concludes that since death is inevitable and everything ceases at death, it is pointless to prepare for future lives or seek liberation. This view may also arise in someone who adheres to a materialistic doctrine that negates any existence after death. Thinking that total obliteration of existence is peaceful, such a person craves to cease completely at death.

All these forms of craving are manifestations of ignorance. A monk once asked the Buddha, “Who craves?” The Buddha replied that this question was not suitable. Rather than try to isolate a self that craves, it is appropriate to investigate, “What is the condition for craving?” Since craving arises dependent on feeling, we need to apply mindfulness, introspective awareness, and wisdom to our feelings, observing them as they are and doing our best not to react to them with any of the three types of craving.

---

## REFLECTION

1. The space between feeling and craving is a weak spot in the twelve links. If we can learn to experience pleasant and painful feelings without reacting to them with craving, we can cease the production of formative karma.
2. Observe how easily and habitually each type of craving arises in response to a particular feeling.
3. Practice simply experiencing the feeling without craving for it to last longer or to cease immediately. Cultivate wise equanimity, not ignorant indifference, to feelings.

---

### 9. *Clinging (upādāna)*

Clinging is attachment that is the strong increase of craving. As it becomes increasingly evident that the aggregates of this life will be forfeited, craving gives rise to clinging — strong attachment for new polluted aggregates.

While a person is dying, he may have an illusory appearance of his next life and where he will be reborn. Even if someone will be born in an unfortunate

realm, the illusory appearance of that place will be agreeable; he craves birth there, which leads to clinging to be born there. This nourishes the karmic seed previously placed on the causal consciousness, so that the karma is transformed into the link of renewed existence. Similarly, in terms of taking a fortunate rebirth, the dying person is attracted, for example, to an appearance of a precious human life. Craving and clinging arise for that, causing the seed of a virtuous karma to ripen and bringing the link of renewed existence for this fortunate rebirth.

This process occurs while a person is actively dying, while the mind still has coarse recognition and the person can recall things. From the perspective of the death process described in highest yoga tantra, craving and clinging occur prior to the white appearance, while the coarse mind is still functioning. When the coarse mental aggregates absorb, the mind is unable to remember virtue and nonvirtue, and the link of renewed existence has come about. In this way, clinging afflicts transmigrating beings because it prepares for the next life in saṃsāra.

Arhats have many karmic seeds that have the potential to bring a rebirth, but these cannot ripen because arhats have eliminated craving and clinging.

In the bardo someone who will be reborn as a human being sees the sperm and ovum of her parents, mistakenly believes the parents are in union, and craves and clings to be there. Clinging to the fertilized ovum, the person wants to be in that body and not to lose it. The consciousness enters the fertilized ovum, creating a mass that is conducive for the arising of the cognitive faculties.<sup>57</sup>

Clinging can nourish a karmic potency at other times of our lives. Frequently generating the aspiration to be reborn with a precious human life helps to nourish the karmic seeds on our mindstreams that will bring this about. Karmic seeds may be nourished by other means as well. If we have created the karma for a precious human life, all the other virtuous activities we do in life — making prostrations and offerings, studying and practicing the Dharma — help to nourish that potency. The craving and clinging that arise while we are actively dying are not a manifest thought, “I want this in the future,” that is formed with effort. Craving and clinging are innate; ordinary beings experience them while they are dying whether or not they believe in rebirth.

In general, four types of clinging may arise during our lifetimes (MN 11.9):

(1) *Clinging to sense pleasures and desirable objects* arises easily for us beings in the desire realm and dominates our lives. One of our cognitive faculties contacts an object that sparks the experience of pleasure or happiness.

Attachment arises followed by clinging to the pleasant feeling and the object that triggered it. Beings in the form and formless realms have suppressed clinging to sense pleasure, yet clinging to the intense bliss or peace of meditative absorption still arises in them.

Clinging to sensual pleasure lies behind most of the karma we human beings create. It motivates us to lie, cheat, backbite, and speak harshly to procure and protect the things we desire. It lies behind most of the scandals we read about. Besides harming ourselves and leading to unfortunate rebirths, it adversely affects others, even leading people to lose faith in those who occupy positions of authority and respect.

Some people who have the correct view of karma and its results want to enjoy sensual pleasures in future lives. They asked the Buddha how to attain heavenly rebirths or how to meet their spouse again in a future life. The Buddha taught ethical conduct, generosity, and kindness, which they happily practiced to attain their goal.

(2) *Clinging to views* clings to the view of extremes, the view holding wrong views as supreme, and wrong views, especially the wrong view disparaging karma and its effect, the existence of past and future lives, and so forth. Clinging to views easily leads to dogmatism, attachment to one's own religion, and denigration of other religions to the extent that one forces one's religious views on others either by verbal coercion or threats of violence.

(3) *Clinging to a doctrine of self* is the view of a personal identity that grasps the I and mine to exist inherently. Clinging to the self is the force behind our afflictions and lies behind most of our self-centered actions that create destructive karma. It arises throughout our lives and is especially powerful as we are dying. This clinging may also adhere to a permanent self or soul or to a self-sufficient substantially existent I and mine. It may also motivate virtuous actions; some people keep ethical conduct because they want their eternal self to be born in a heavenly realm.

(4) *Clinging to rules and practices* arises as a result of holding wrong views about *duḥkha* and its causes. It causes us to have distorted notions of ethical conduct or the path to liberation. These include advocating extreme self-mortification by fasting for a long time, sitting in fire, and going naked in the cold. It may also lead to unethical actions such as sacrificing animals to have good fortune, thinking that the flawless performance of rituals causes liberation, or conflating meditative absorption with liberation.

These four types of clinging focus predominantly on distorted ideas and do

not include all types of clinging.

### *Clinging according to the Pāli Tradition*

Craving can also mean to thirst for something we do not yet have, and clinging can also imply holding on to what we already have. The three types of craving — for sensual pleasures, existence, and nonexistence — are generally directed toward what we do not yet have, while the four types of clinging — for sensual pleasure, views, doctrines of self, and view of rules and practices — are usually directed toward what we already hold.

The three types of craving and four types of clinging are related. Craving for sensual pleasure produces clinging to sensual pleasure. Craving for sensual pleasure may influence us to cling to certain views. Thinking that the purpose of life is simply to enjoy sensual pleasures could lead us to breach ethical conduct by stealing, lying, or having an affair. Craving for sensual pleasure in future lives could lead to holding the view of rules and practices, for example, believing that killing infidels will bring a heavenly rebirth with many sensual pleasures.

Craving for existence, which accompanies the eternalistic view, easily leads to clinging to a doctrine of self as well as clinging to views. Craving for nonexistence, which often accompanies the nihilistic view, could lead to clinging to views and to the view of rules and practices. For example, thinking that nothing exists after death, someone could think that it doesn't matter how they act as long as the authorities do not find out.

Clinging to wrong views, views of rules and practices, and view of a personal identity are abandoned at stream-entry when the fetters of doubt, view of rules and practices, and view of a personal identity are eliminated. Clinging to sense pleasure decreases when one becomes a once-returner and is abandoned when one becomes a nonreturner. Only arhats have abandoned all clinging.

---

## REFLECTION

1. Identify moments of each of the four types of clinging in your experience.

2. How do they affect your life?
  3. What ideas do you have for counteracting them?
- 

### *10. Renewed Existence (bhava)*

Renewed existence is the factor existing in the nature of the ripening aggregates (the body and mind of the future life) bound by afflictions, which is the potential of karma made stronger by craving and clinging. As a cause of birth, it refers not to the state a being will be born into but to the karmic force that leads to rebirth in that state. Renewed existence occurs the moment that all the causes for the future life have been completed in this life; it is the ripening of the karmic seed that is just about to produce the next life. The karma that projects the rebirth was the second link. It ceased and its continuation exists as a having-ceased and a karmic seed. Renewed existence is the fully nourished karmic seed and that karma's having-ceased that have the potential to produce a new birth in cyclic existence.

The link of renewed existence occurs in two stages. The *entering stage* is the fully nourished potency that is directed toward the next life. It occurs in the present life before death. The *entered stage* is the fully nourished potency during the bardo between two lives. There are three kinds of renewed existence corresponding to the three realms of saṃsāric existence: desire realm, form realm, and formless realm renewed existence.

Renewed existence is a case of giving the name of the result to the cause. For example, after planting a sprout, we say, "I planted a tree," giving the name of the resultant tree to the sprout that was its cause. Renewed existence is analogous to a seed (link 2) planted in a field (link 3) that is nourished by water and sunshine (links 8 and 9). The potential of the seed is now ready (link 10) to become a sprout (link 11).

Formative action and renewed existence are the same karma at different times. They differ in that formative action has not been activated by craving and clinging and is not immediately able to project another birth.

In terms of rebirth in the form and formless realms, a meditator must gradually prepare to attain the next higher meditative absorption of those realms. Each of the four dhyānas and the four formless absorptions have seven preparations (*manaskāra*)<sup>58</sup> — stages of contemplation that aid in attaining the

next level of meditative absorption. Form realm renewed existence is the dhyāna that a meditator has attained in this life that will bring rebirth in that specific dhyāna in the next life. Formless realm renewed existence is the level of formless realm meditative absorption that a meditator has reached in this life that will propel her to be reborn in that specific formless realm in the next life.

While tenth-link renewed existence occurs while actively dying, in general there are four types of renewed existence, each of them occurring under the control of afflictions and karma: (1) *Renewed existence of birth* leads to the consciousness joining to the next birth under the control of afflictions and karma. (2) *Renewed existence of death* is the last moment of this life. (3) *Renewed existence of the bardo* occurs when the consciousness joins to the intermediate state under the control of afflictions and karma. At this time one has a subtle body similar to the body of the next birth. The bardo lasts the maximum of seven weeks and is considered part of the next life. (4) *Renewed existence of the previous time* begins the moment after the link of birth, lasts during the lifetime, and ends at death. Here *previous* means prior to death of that life.

Not only do ignorance and formative action bind us to saṃsāra, so do the craving, clinging, and renewed existence that occur while actively dying. These last three force the consciousness to join to the next body. In this way, afflictions and karma tie the merely designated self to cyclic existence. Wherever consciousness goes, the self goes, because consciousness is the principal basis of designation of the self.

Renewed existence afflicts transmigrating beings because it makes the resultant rebirth definitely occur.

### *Renewed Existence according to the Pāli Tradition*

In the Pāli tradition also, renewed existence is the name of the result being given to the cause. *The Path of Purification* distinguishes two aspects of renewed existence. These are the same karma in different stages of ripening.

(1) *Karmically active renewed existence* is intention and the mental factors of covetousness and so forth conjoined with those intentions. The formative karma of meritorious, demeritorious, and invariable karma (link 2) is a condition giving rise to karmically active renewed existence, which is the karma that, as a condition for the next life, is ready to bring that new rebirth. It is of three types, corresponding to the three realms.

Nonvirtuous actions are desire realm renewed existence and lead to

unfortunate rebirths as hell beings, hungry ghosts, and animals. Mundane virtuous actions such as the ten virtues are also desire realm renewed existence, but they bring rebirth as human beings and devas. Form realm renewed existence is any of the dhyānas that people have attained, mastered, and continued until the time of death. Formless realm renewed existence is any of the formless realm absorptions that are attained, mastered, and preserved until death. Form and formless realm rebirths last for eons, but when that karma is exhausted those beings take birth in less favorable circumstances.

(2) *Resultant rebirth renewed existence* is the four or five aggregates subject to clinging and projected by karma. This is the moment of rebirth as well as the entire existence in which we experience the many diverse results of our previous actions. Birth is the beginning of the resultant rebirth existence, aging is the continuation of that existence, and death is the end of that particular resultant rebirth existence.

During the time of the resultant rebirth existence, we sentient beings, through our choices and decisions and the actions that express them, create many new karmas that will lead to future rebirths in saṃsāra. Although these choices and decisions are influenced by our previous actions, they are not completely determined by them. We have the freedom to make responsible choices and to either nourish or counteract our tendencies toward various intentions.

In short, karmically active renewed existence is the causal karmic energy that projects a rebirth, and resultant rebirth existence is the resultant rebirth that is attained.

---

## REFLECTION

1. Imagine your death and the dying process.
2. Based on how you have lived and on your habitual tendencies, what types of craving and clinging are likely to arise in your mind at this time?
3. What kind of thoughts and aspirations would you like to have while you are dying? Recall that these will influence which karmic seeds are nourished and become renewed existence.

4. How can you train in these thoughts and aspirations now so that your mind will be in a virtuous state then?
- 

### *11. Birth (jāti)*

Birth is the aggregates that exist in the nature of the ripening result bound by afflictions and joined to a new life in saṃsāra under the control of afflictions and karma. Ordinarily we think of birth as a baby coming out of the mother's womb, breathing on her own, and beginning her life. From a Buddhist perspective, birth is the first moment of the new life. For mammals this occurs when the consciousness joins with the fertilized ovum. The resultant consciousness — the second part of link 3 — is the continuation of the mindstream of a being who has left its former body. This consciousness brings with it all the karmic seeds and latencies of afflictions that were present in the previous life. These will condition many aspects of the new being: which body with its specific genetic makeup he will take rebirth in, his upbringing and experiences, and his tendencies in the new life.

The link of birth lasts only a moment; from the second moment onward, aging or death occurs. Birth is the cause of aging and death. The Buddha makes the point that without being born, we would not age and die (DN 15.4):

If, Ānanda, there were no birth at all, anywhere, of anybody or anything: of devas in the deva-state, of gandhabbas . . . , of yakkhas . . . , of hungry ghosts . . . , of humans . . . , of quadrupeds . . . , of birds . . . , of reptiles to the reptile state, if there were absolutely no birth at all of all these beings, then with the absence of all birth, the cessation of birth, could aging and death appear? — “No, venerable sir.” Therefore, Ānanda, just this is the root, the cause, the origin, the condition of aging and death — namely, birth.

In society birth is usually seen as auspicious and people joyously welcome the birth of a child. We are blind to the inevitable result of birth — aging and death. When we train our minds to see the complete picture of life — birth, aging, sickness, and death — our aspiration will turn toward liberation.

As noted above, birth may occur in four ways: from the womb, egg, heat and moisture, and spontaneously. Hell beings, devas, and bardo beings are born

spontaneously without having to go through a developmental process. Some hungry ghosts are born from the womb, others are born spontaneously. Animals are born from the womb, egg, and, as in the case of insects, from heat and moisture. There are instances of human beings being born in all four ways.

Rebirth afflicts transmigrating beings because it brings aging and death, which are the essential *duḥkha* of transmigrating beings.

### *Birth according to the Pāli Tradition*

There is a debate, beginning with the early Buddhist schools and continuing to this day, about whether there is a period of time between the death of one life and the following rebirth. Although no clear statement is found in the Pāli sūtras, some passages suggest this. It makes sense that in some cases, time is necessary for the suitable immediate conditions to come together for a birth that accords with the ripening karma of renewed existence. If the parents of the next life are in different places at the moment someone dies, a period of time is needed for them to come together again.

Birth, aging, and death have different meanings according to the context. In the *Vibhaṅga*, the second book of the Pāli Abhidhamma, *birth* refers not to birth in one of the three realms but to the arising of a mind-moment. *Aging* refers to the impermanence intrinsic in all conditioned phenomena, not to gray hair, aches, and pains. Death is that mind-moment's cessation, not the upcoming separation of body and mind. Each presentation is valid and useful, but they should not be confused with each other or used to invalidate the other.

### *12. Aging or Death (jarāmaraṇa)*

Aging and death are the result of birth. Aging is the body and mind that decay under the control of afflictions and karma. Death is the cessation of a similar type of mental and physical aggregates; it is the mind's separation from the body under the control of afflictions and karma. This link is called aging *or* death because some beings die before becoming aged. The Buddha says (SN 12.2):

The aging of beings in the various orders of beings, their growing old, brokenness of teeth, grayness of hair, wrinkling of skin, decline of vitality, degeneration of faculties — this is called aging. The passing of beings from the various orders of beings, their perishing,

breakup, disappearance, dying, completion of time, breakup of the aggregates, laying down of the carcass — this is called death.

Being under the influence of afflictions and karma, our bodies become ill, age, and die without choice. Contemplating this enables strong renunciation of saṃsāra's duḥkha to grow in our minds.

Aging can be spoken of in two ways: (1) *Progressive aging* occurs each moment of life, beginning the moment after conception. It is not the case that we grow up and aging starts at an amorphous future date. Rather, from the moment after conception onward, we are aging and nearing death. (2) *Deterioration* is aging with the discomfort and fear that accompany old age.

The *Sūtra on the Ten Grounds (Daśabhūmika Sūtra)* says:

Death has two functions: (1) it causes a conditioned phenomenon to disintegrate, and (2) it brings about the cause of the continuation of ignorance.<sup>59</sup>

Death itself is a conditioned phenomenon, a result of birth. It causes a life to cease and, for ordinary beings, it enables ignorance and saṃsāric rebirth to continue.

Between aging and death is lamentation, sorrow, not getting what we seek, being separated from what is dear, encountering and being forced to endure what we do not like, being disillusioned when events do not occur as wished, and being unable to control the experiences and events we encounter in life. Reflecting on this closely, we begin to see cyclic existence for what it is: unreliable and repugnant.

The link of aging or death includes all our experiences of the duḥkha of pain and the duḥkha of change, which result from the preceding link, birth. This points to a deeper level of duḥkha — the pervasive duḥkha of conditioning, which is the underlying basis for all other duḥkha. Here, the eleventh link, taking birth under the control of ignorance and karma that entails assuming new polluted aggregates that are the basis for more duḥkha, is the primary meaning of pervasive, conditioned duḥkha.

Where does birth come from? From the preceding link, renewed existence. This comes from its preceding link, clinging. Clinging is the mind that seeks a new set of aggregates; it arises from craving, which does not want to separate from its object. Craving arises in response to pleasant, unpleasant, and neutral

feelings that are experienced owing to contact — the coming together of the cognitive faculty, the object, and the consciousness. Contact comes from the sensory six sources — eye, ear, nose, tongue, body, and mental — and these arise from name and form, the five aggregates. Name and form arise from consciousness, which appropriates the new form. Third-link consciousness is the consciousness on which a karmic seed has been placed. It arises from formative action, which is produced by ignorance. The entire unsatisfactory sequence of the twelve links of dependent origination is rooted in ignorance. To be liberated from this cycle, we must generate the wisdom realizing emptiness that uproots this ignorance.<sup>60</sup>

---

## REFLECTION

Beginning with ignorance, slowly contemplate each link and investigate:

1. What is the nature or meaning of this link?
  2. What is its function?
  3. What is its cause? How is it related to the preceding link?
  4. What is its result? How is it related to the subsequent link?
  5. What is the antidote that will stop this link?
-

## 8 | Dependent Origination: Cycling in Saṃsāra

HAVING LEARNED the meaning of each of the twelve links individually, we will now look at various descriptions of how they function together to produce rebirth in saṃsāra. This will help us to understand clearly our situation in cyclic existence and inspire us to be conscientious and mindful of our thoughts, words, and deeds so as to avoid creating causes for unfortunate rebirths. It will also energize us to engage in purification practices to prevent the seeds of destructive karma from ripening as unfortunate rebirths. Furthermore, it will arouse our enthusiasm to learn about, contemplate, and meditate on emptiness in order to free ourselves from cyclic existence. Then, when we think of sentient beings bound in the cycle of innumerable sets of twelve links, compassion and bodhicitta will grow in our hearts.

### *How the Twelve Links Produce a Life*

In verse 2 of the *Heart of Dependent Origination* (*Pratītya samutpāda hṛdaya kārikā*), Nāgārjuna says (LC 1:322):

The first, eighth, and ninth are afflictions.

The second and tenth are karma.

The remaining seven are duḥkha.

Of the twelve links, three — ignorance, craving, and clinging — are afflictions. Two — formative action and renewed existence — are karma. Seven — consciousness, name and form, six sources, contact, feeling, birth, aging or death — are suffering results. The three afflictions and the two actions are true origins of duḥkha and the seven results are true duḥkha.

Looked at from the broad perspective of continual rebirth in saṃsāra, each of these three groups causes the others, with no fixed order. Afflictions cause karma, which bring about duḥkha, unsatisfactory results. Included in these results are the mental aggregates, among which afflictions and karmic seeds are
