found. As Nāgārjuna says (RA 36):

With these three paths mutually causing each other  
without a beginning, middle, or end,  
this wheel of cyclic existence  
turns like the wheel of a firebrand.

The twelve links of dependent origination are called links because they are connected and intertwined with each other. They follow one right after the other so quickly that, like a twirling firebrand, it is hard to tell where one set of twelve links stops and another begins. In fact, as we shall see, there are several descriptions of how a complete set of twelve links operates.

The links may be divided into projecting causes and effects and actualizing causes and effects: *Projecting causes* are links 1, 2, and 3a — ignorance, formative actions, and causal consciousness. *Projected effects* are links 3b through 7 — resultant consciousness, name and form, six sources, contact, and feeling. *Actualizing causes* are links 8 through 10 — craving, clinging, and renewed existence. *Actualized effects* are links 11 and 12 — birth and aging or death.

According to the explicit teaching in the *Rice Seedling Sūtra*, the projecting causes and effects and actualizing causes and effects occur over three lifetimes. Let's call our present life, life B. In a preceding life, life A, the projecting causes — ignorance, formative action, and causal consciousness — created the potency on the consciousness that projected a new birth, called life B. In the present life, life B, the projected effects — resultant consciousness, name and form, six sources, contact, and feeling — occur. At the time of dying in life B, the actualizing causes — craving, clinging, and renewed existence — actualize the potency of another karmic seed on the mind. This results in life C, the actualized effects of our future life — birth, aging, and death.

### EXPLICIT PRESENTATION

LINKS	RELATING TO WHICH LIFE	LIFE THEY OCCUR IN
Projecting causes 1–3a	B	A
Projected effects 3b–7	B	B
Actualizing causes 8–10	C	B

There is no fixed time between lives A and B. Lives B and C are consecutive.

In the explicit presentation, the links from two different sets of twelve links are presented together. That is, two distinct sets of causality of two different lives are intertwined, with links 1–7 describing the evolution of life B and links 8–12 pertaining to the evolution of life C. For the production of life B, only links 1–3a are explicitly presented, and for the production of life C, only links 8–10 are explicitly presented. In actuality, both lives B and C have three projecting causes and three actualizing causes; the ones not explicitly mentioned are inferred. Similarly, only some of the resultant links for life B are explicitly mentioned (links 3b–7) and only some of the resultant links for life C are explicit (links 11–12). Here, too, the other resultant links are to be inferred for each life.

An example will help. An American man named John (life A) creates the projecting causes (links 1–3a) to be born as an Italian woman, Maria. In her life as Maria (life B), she experiences the projected effects of that karma (links 3b–7). As Maria is dying, the actualizing causes (links 8–10) to be reborn as a deva named Rooni ripen, and the deva Rooni (life C) is born and experiences their actualizing effects (links 11–12). One set of twelve links concerns the life as Maria, the other set has to do with rebirth as Rooni. Even though only links 1–7 are explicitly mentioned for Maria’s life, links 8–12 in that set of twelve links is implied. Similarly, although only the actualizing causes and effects are mentioned for the set of twelve links of Rooni’s life, the others are implied.

The Buddha explained the twelve links in this way to emphasize that the process of rebirth is continuous. While experiencing the effects of one life, the causes for another life are being created.

This presentation also emphasizes the unique functions of projecting causes and actualizing causes. *Projecting* means that those (projecting) causes are suitable to bring duḥkha after the actualizing causes come together and nourish them. *Actualizing* means that those (actualizing) causes make the potency of the karmic seed powerful enough to bring the result immediately.

In addition to the explicit presentation, Asaṅga set forth implicit presentations. In these, the order in which the four groups — projecting causes, projected effects, actualizing causes, and actualized effects — occur is not necessarily the order in which the twelve links are listed.

In the first implicit presentation, the cause of the new life (B) is begun in a

previous life (A) with its projecting causes: ignorance prompted the creation of formative karma that has the power to bring rebirth, and that karmic seed was laid upon the causal consciousness. At the time of death of life A, the actualizing causes of craving and clinging nourished that seed and it transformed into renewed existence. In the very next life, all of the results — resultant consciousness, name and form, six sources, contact, feeling (projected effects), birth, and aging or death (actualized effects) — are experienced. Here the resultant consciousness and birth occur simultaneously, and in the very next moment, while name and form, six sources, contact, and feeling unfold, the link of aging or death is in process. In this way, a set of twelve links is completed in two consecutive lives.

### IMPLICIT PRESENTATION 1

LINKS	RELATING TO WHICH LIFE	LIFE THEY OCCUR IN
Projecting causes 1– 3a	B	A
Projected effects 3b–7	B	B
Actualizing causes 8–10	B	A
Actualized effects 11–12	B	B

Lives A and B are consecutive.

In the second implicit presentation, the projecting causes created in life A ripen as life C, with life B occurring just prior to life C. Any amount of time may pass — one lifetime or eons of other lives — between lives A and C. At the end of one of these lives (B), craving, clinging, and renewed existence occur, and the karmic seed infused on the consciousness long ago is now about to bring a new birth. The projected effects and actualized effects occur together in the very next life (C).

### IMPLICIT PRESENTATION 2

LINKS	RELATING TO WHICH LIFE	LIFE THEY OCCUR IN
Projecting causes 1–3a	C	A
Projected effects 3b–7	C	C
Actualizing causes 8–10	C	B

Actualized effects 11–12	C	C
--------------------------	---	---

There is no fixed time between lives A and B. Lives B and C are consecutive.

## *An Example*

The teaching on the twelve links of dependent origination is complex and requires a great deal of contemplation. An example concerning the two implicit presentations will aid your understanding.

Pat arrives home from work and sees that her children left a mess in the kitchen. Tired from her job, she loses her temper and shouts at her children. This is the beginning of a set of twelve links. After Pat sees the mess, self-grasping ignorance/the view of a personal identity arises in her mind (link 1). This ignorance does not understand that the I is empty of inherent existence and instead grasps the I as inherently existent. In addition, self-grasping ignorance grasps her body and mind, her children, the mess in the kitchen, the chore of cleaning it up, and her unhappiness to exist inherently. Based on this, distorted attention that exaggerates the horribleness of the situation arises. This is immediately followed by anger and the intention to speak harsh words. Ignorance that does not understand the functioning of karma and its effects is also present, and because she is tired she does not consider either the long- or short-term effects of harsh words and does not apply the antidote to calm her mind. Harsh words fly out of her mouth, creating formative action (link 2), and a seed of destructive karma is laid on her mindstream. A having-ceased of the action of harsh words is also created (link 3a). This completes the projecting causes. The children scramble to clean the kitchen, and satisfied that shouting accomplished her purpose, Pat doesn't think to purify the paths of karma of malice and harsh words.

At the end of her life, as she is dying, Pat becomes angry and upset because the people around her are arguing and creating commotion. That mental state prompts craving and clinging (links 8 and 9) to nourish the seed of destructive karma created when she shouted at her children, priming it to bring a new rebirth (link 10). These are the actualizing causes. Her consciousness is drawn to the body of a screech owl and takes birth there (links 3b and 11). Aging or death (link 12) begins, as do the sequential links of name and form, six sources, contact, and feeling (links 4–7). These are the projected and actualized results of

that set of links. Although like all sentient beings, Pat seeks only happiness, not suffering, owing to ignorance she created the cause for suffering. Since links 8–10 occurred at the end of Pat’s life, that set of twelve links was completed in two lives as in implicit presentation 1.

Let’s change the scenario slightly. Motivated by compassion Pat regularly volunteers at a hospital where she gladdens the hearts of people needing support and hope. This begins another set of twelve links and leaves the seed of virtuous karma on her consciousness. At the time of her death, she rejoices in her own and others’ kind hearts and good deeds, and this virtuous mental state activates links 8–10 of the set of twelve links that began with her volunteer work. Her consciousness is attracted to take birth in the body of a human being and the projected and actualized results of that set of links occur.

Meanwhile, the karmic seed from harsh speech remains on her mindstream until in some future life its links 8–10 are activated and lead to an unfortunate birth. In that case, the set of twelve links associated with harsh speech occurs over three lifetimes, as in implicit presentation 2.

Many sets of twelve links can be in the works at one time, overlapping each other. While experiencing the resultant links of one set, the causal links of another set are being created. In Pat’s case she was experiencing the link of aging from a set of twelve links that began in a previous life. When she became angry and shouted at her children, the links of ignorance, formative action, and consciousness of a new set of links began. Her volunteer work at the hospital started yet another set of twelve links. During her life many sets of twelve links begin depending on actions done with virtuous or nonvirtuous motivations. Each set has the potential to lead to a new rebirth, unless the karmic seed and having-ceased are impeded from ripening or she eradicates the afflictive obscurations that cause rebirth in *samsāra*. Here we get an inkling of what “bound in *samsāra* by afflictions and karma” means.

Do we choose our next rebirth? For us ordinary beings, the choice exists as we do each action in our daily lives and create new karmic seeds. It is not the case that in the bardo we calmly look down on Earth or other habitats and pick our future parents in order to learn certain lessons or repay karmic debts. Rather, just prior to death karmic appearances manifest in our minds. Due to emotional reactivity to these appearances, craving and clinging arise and nourish a karmic seed, and the mind seeks new aggregates in which to take birth. The bardo is a confusing time; anger, attachment, jealousy, fear, and self-grasping ignorance arise just like during life.

No one creates lessons for us to learn in our lives. Whether we learn from our experiences is up to us. Do we insist on blaming others for our difficulties or do we examine our own distorted conceptions, afflictions, and behavior, and apply the Dharma counterforces to transform them?

Ārya bodhisattvas, as well as some śrāvaka āryas, can guide their own minds at the time of death and determine where they will be reborn. The rebirths of ordinary people, however, are projected by their afflictions and karma, just as during life they are under the influence of afflictions and karma. Under these circumstances, we are not free to experience the happiness and peace that we seek.

---

## REFLECTION

1. Review the process of how the twelve links produce a new rebirth according to the explicit and the two implicit presentations.
  2. Make an example, using a formative action created under the influence of ignorance in your present life, of how a set of twelve links could unfold in the future.
  3. How does this reflection affect your attitude toward life?
- 

## *Flexibility*

In all of the above situations, different elements of many sets of twelve links may occur during the present life. While we are experiencing the results of one set of twelve links, many new sets of twelve links are initiated with the creation of links 1–3a. While sometimes the projected and actualized effects occur soon after the projecting causes, in other situations a long interval may ensue. Cyclic existence is terrifying, for as we live out each saṃsāric existence, we ignorantly create the causes for many more.

Vasubandhu says that once the links of craving, clinging, and renewed existence occur, the bardo follows. There is no reversal of the process; it is not

possible to accumulate new projecting karma in the bardo, and the links of birth and aging or death from that set of the twelve links will definitely occur (ADK):

Once the intermediate state of a particular birth is actualized, it [the rebirth of that set of twelve links] will not waver.

Asaṅga has a different view (ADS):

There is the possibility of the set [of twelve links] to waver because in the intermediate state there is the possibility of accumulating karma.

### *Pāli Tradition: How We Cycle*

The Pāli commentaries, including the *Path of Purification*, explain the twelve links in terms of four groups, each with five links to illustrate the relationships of the twelve links with the different lifetimes in which they occur.

To explain the column “links”: From our present life, life B, we look back and ask ourselves what factors were responsible for our present rebirth. Ignorance and formative actions occurred in a preceding life, life A. Through the maturation of formative actions conditioned by ignorance come the five resultant factors in this life (life B): consciousness, name and form, six sources, contact, and feeling.

#### **THE PĀLI TRADITION’S PRESENTATION**

<b>LIFE</b>	<b>LINKS</b>	<b>20 MODES AND 4 GROUPS OF 5</b>
A	Ignorance (1) Formative actions (2)	Five past causes 1, 2, 8, 9, 10
B	Consciousness (3) Name and form (4) Six sources (5) Contact (6) Feeling (7)	Five present results 3, 4, 5, 6, 7
B	Craving (8) Clinging (9) Renewed existence (10)	Five present causes 8, 9, 10, 1, 2

C	Birth (11) Aging or death (12)	Five future results 3, 4, 5, 6, 7
---	-----------------------------------	--------------------------------------

In this life, when feeling occurs craving arises. That leads to clinging, which generates karmically active renewed existence. These three occurring in this life are the force that generates another rebirth — life C — in which birth, aging, and death are experienced. This corresponds to the explicit presentation in the *Rice Seedling Sūtra* explained above.

However, in any given life all these factors intermesh. So to understand how the twelve factors function in this life, we look to the last column with its twenty modes, which fall into four groups of five each.

(1) The group of the *five past causes*. In the previous life, life A, ignorance and formative actions were not the only causes for the present life; craving, clinging, and karmically active renewed existence were also present. These five are considered the five past causes that brought about the present life.

(2) The group of the *five present results*. The five past causes brought about the five present effects, links 3–7.

(3) The group of the *five present causes*. In this life, life B, there are five causes that will bring forth yet another rebirth — links 8, 9, 10, as well as 1 and 2. These same five factors that were five past causes of the present life become five present causes that will lead to a future rebirth, life C.

(4) The group of the *five future results*. Birth, aging, and death arise in the future life due to the five present causes. Links 3–7 are an expanded way of speaking of birth and aging or death.

In the above explanation, there are three connecting points: (1) Past causes connect with present results. This occurs between formative actions and consciousness. (2) Present results connect with present causes. This happens between feeling and craving. (3) Present causes connect with future results. This transition occurs between renewed existence and birth.

Of the twelve links, two are said to be roots of *saṃsāra*: Ignorance is the root extending from the previous life to the present one; craving is the root extending from the present life to the future life. As the basic unknowing that obscures the mind, ignorance is more fundamental than craving, but craving thrives on ignorance. Since identifying ignorance is more difficult than recognizing craving, we begin by subduing craving through restraining our senses and cultivating concentration. Then wisdom can arise and uproot ignorance.

As with many categories, the above distinctions serve explanatory purposes

and are not fixed. Ignorance exists in all three lives, as does craving.

## *An Example from a Pāli Sūtra*

In the *Greater Discourse on the Destruction of Craving* (MN 38), the Buddha gives an example of the twelve factors playing out in the life of an uninformed ordinary human being who is unaware that he is in saṃsāra and ignorant of the four truths. The Buddha then discusses the way to cut the cycle.

Conception in the womb requires three conditions, and if any one of them is missing, it does not occur. These are the sexual union of the mother and father, the woman being in the fertile time of her cycle, and the presence of a *gandharva* (P. *gandhabba*), a being who is ready to take rebirth and has a karmic affinity with these parents.<sup>61</sup> This karmic affinity is due to the first two links, (1) ignorance and (2) formative actions. The *gandharva* entering the newly fertilized ovum is called the “descent of consciousness.” This consciousness (3) brings with it ignorance, afflictions, and the entire store of karmic seeds from previous lives.

At the time of conception, name and form (4) arise. Only the tactile and mental sources are present at that time, but gradually as the zygote becomes an embryo and then a fetus, all six sources come into being (5). After the baby is born, the six sources become active, contacting (6) and engaging with sights, sounds, smells, tastes, and tactile objects. Babies have rudimentary conceptual thought, which develops as the child learns language and is socialized and educated. As the child plays with toys and participates in games, his six cognitive faculties lead to contact with more agreeable, disagreeable, and neutral objects. This produces pleasant, painful, or neutral feelings (7), and the child craves (8) and clings (9) to have what brings him happiness and to be free of what brings suffering.

As the child becomes an adult and his toys are exchanged for more sophisticated means of entertainment, the six sources continue to contact the six objects, leading to many occasions of pleasant, painful, and neutral feelings. As a senior citizen, the objects of entertainment change again, but the process of the six sources leading to contact that produces feelings continues.

In all these occasions, pleasant and painful feelings lead to craving and clinging to have or to be separated from objects of the six senses. Attachment,

anger, and other emotions arise one after the other in response to whatever he contacts. When he feels neither pleasure nor pain, he is bored and craves some excitement as an escape. Thus it is said “he delights in that feeling, welcomes it, and remains holding to it.” Lacking mindfulness and introspective awareness regarding his own experience, he does not see any alternative and remains ignorant of the potential of his mind.

What does it mean to delight in a painful feeling? This indicates a person clings to the feeling with the thought “I” and “mine.” His sense of I gets a boost through feeling uncomfortable. He may put himself in stressful or even dangerous situations to reinforce his sense that I exist. He may even create an identity out of his pain: “I am the person who was unfairly criticized.”

Triggered by craving and clinging (8 and 9), he speaks, acts, or ruminates about the situation. This karmically active side of renewed existence (10) ripens in a new birth (11). Aging or death (12) begins immediately and “sorrow, lamentation, pain, grief, and despair come to be. Such is the origin of this whole mass of *duḥkha*.” The process from contact onward to aging or death occurs repeatedly as a result of the six sources contacting objects of the six senses.

Seeing that this is our situation, a wise sense of danger arises, and we come to appreciate our precious human life and the opportunity it provides to counteract our situation in *saṃsāra*. We are grateful that the Buddha appeared in the world and taught the Dharma, which is “good in the beginning, good in the middle, and good in the end.” Seeing the disadvantages of *saṃsāra*, we take refuge in the Three Jewels and choose to go forth into a life of Dharma. Abandoning the ten nonvirtues and practicing the ten virtues, we cultivate mindfulness and introspective awareness with respect to sense objects. Now, whenever our cognitive faculties contact their objects, we pause. While the arising of feeling is a natural result of previous conditions, we now see that a weakness in the process exists between feeling and craving. We have a choice regarding our response to pleasurable, painful, and neutral feelings. Instead of immediately letting the mind jump into craving, we remain mindful and equanimous.

Some practitioners who have attained serenity may use their concentration to temporarily suppress craving for sense objects. However, *samādhi* is not the final solution to *saṃsāra*, and subtle attachment to the blissful or equanimous feelings experienced in deep concentration may still exist. Seeing this, they cultivate insight. As the power of their unified serenity and insight increases, they employ wisdom to penetrate *nirvāṇa* and gradually eradicate defilements.

Other practitioners have a stronger aptitude for wisdom and rely on the power of reflection and examination to understand the unsatisfactory nature of sensual pleasures. Through this, they draw their minds back from entanglement with sense objects and with understanding they temporarily stop their minds from reacting to feelings with craving. On their own, reflection and examination do not go deep enough to uproot saṃsāra, but they calm the mind, allowing for the cultivation of serenity. These practitioners, like the previous ones, then unify serenity with insight and use wisdom to realize nirvāṇa and overcome all defilements.

## *Who Revolves in Cyclic Existence?*

When outlining the twelve links in the *Rice Seedling Sūtra*, the Buddha said from ignorance arises formative action and from birth arises aging or death. He expressed the interconnection of the twelve links in this way to emphasize that there is no inherently existent person who experiences the twelve links. The links occur naturally as part of a causal process. The *Rice Seedling Sūtra* says:

Nothing whatsoever goes from this world to the beyond. Nevertheless, from causes and conditions the effect of karma is manifested. It is just as in a clean mirror one sees the image of a face, but the image does not transfer into the mirror. Because the causes and conditions are complete, a face appears. Accordingly, there is not anyone who transfers from this lifetime at death; no one is born in another lifetime as well. Because the causes and conditions are complete, the effect of karma is actualized.

To this Nāgārjuna adds in the *Versed Commentary on the Rice Seedling Sūtra (Śālistamba Sūtra Kārikā)*:

Just as the distant moon appears in a small vessel of water,  
but is not transferred there, karma and its function exist.  
Likewise, at death nothing transfers from this life, but a being is born.  
If the causes and conditions are not complete, a fire does not burn;  
once they are complete the fire burns.  
So, from complete causes and conditions the aggregates [of a new] life  
arise.

-----  
Just like the moon reflected in water, there is nothing that transfers  
from here at death,  
but a being is reborn.<sup>62</sup>

These moving passages point out that the person who transmigrates from one life to another is nothing more than a merely designated I. The rebirth process happens without a permanent, substantial self that is reborn. In fact, it would be impossible for rebirth to occur if there were an inherently existent self, because such a self would exist independent of all other factors and thus could not be influenced by causes and conditions and could not change. Since rebirth entails change, a permanent independent person could not be reborn. It is possible for rebirth to occur only if the I exists nominally, as a convention.

One moment of an oil lamp's flame doesn't transfer into the next moment, but a mere continuum goes on without interruption. Likewise, due to the coming together of causes and conditions, the mental continuum takes birth without a findable self that is reborn. When masters teach their disciples prayers by asking them to repeat the lines after them, the prayers are not transferred to the disciples, but they know the prayers just as the masters do. Just as a seal makes a clear impression on wax without anything transferring from the seal to the wax, so too does consciousness continue without a self that transfers from one life to the next.

Although we speak of a person revolving in cyclic existence — someone who creates karma, experiences its effects, and is the appropriator of the aggregates — this is a nominally existent self, not an inherently existent self. When the Buddha said that what arises through causes and conditions has no birth, he was referring to this uninterrupted process of causes and conditions that lacks any fixed beginning. No inherently existent aggregates or person goes from one life to the next. There are simply resultant factors that arise from causal factors. Both causes and results exist by mere designation; likewise the moment that a cause ceases and its result arises is merely designated by conception. As one impermanent, merely designated link ceases, another transient, merely designated link arises. In dependence upon this process, we say a person cycles in saṃsāra, but there is no soul or truly existent person who cycles in saṃsāra. There is simply the continuum of a merely designated person. Likewise the person who creates karma and attains nirvāṇa is like an illusion in that it cannot be pinpointed.

Not only can no inherently existent person who is reborn, practices the path,

and attains liberation be found, but the aggregates and the twelve links themselves also lack inherent existence. Nāgārjuna tells us in his *Commentary on the Awakening Mind* (59, 60, 63):

Starting with ignorance and ending with aging [or death],  
all processes that arise from  
the twelve links of dependent origination —  
we accept them to be like a dream and an illusion.

This wheel with twelve links  
rolls along the road of cyclic existence;  
outside this there cannot be sentient beings  
experiencing the fruits of their deed . . .

In brief from empty phenomena  
empty phenomena arise.  
Agent, karma, effects, and their enjoyer —  
the conqueror taught these to be [merely] conventional.

Although they are empty of inherent existence, the person, aggregates, and twelve links individually appear to be inherently existent to our minds that are polluted by ignorance. They resemble a dream and an illusion in that they appear falsely; they appear to have their own essence and exist from their own side, although they do not. These mistaken appearances come about due to the coming together of causes and conditions, just like a mirage appears on the road as a result of causes and conditions. The mirage exists and functions, although the water that appears to be there is a false appearance. Similarly, the person, aggregates, and links function although their appearance as inherently existent is false.

Just as inherently existent sentient beings bound in inherently cyclic existence do not exist, there are no inherently existent beings practicing the path and no inherently existent nirvāṇa to attain. Here, too, the agent, action, and object — the person practicing the path, the path itself, and nirvāṇa — lack any independent nature. The *Āryaratnakara Sūtra* says (OR 96):

The Tathāgata has said of those who go toward pacification [nirvāṇa]  
that no goer can be found.  
They are proclaimed to be free from going.

Through their liberation, many sentient beings are liberated.

If we search for inherently existent āryas progressing toward nirvāṇa, we cannot find any. Their going on the path — their activity of practicing — also cannot bear ultimate analysis. Inherently existent liberation too cannot be found. Nevertheless, āryas practice the path, realize emptiness, purify their minds, and become free from the six realms of rebirth. When they have generated bodhicitta and attained full awakening, they are replete with the perfect qualities to lead others to nirvāṇa as well. While all these agents and actions do not exist from their own side, they exist and function on the conventional level. Although ultimate analysis refutes their inherent existence, it cannot destroy their nominal, illusion-like, veiled existence or their ability to function on the conventional level.

The Pāli tradition expresses the same thought. In speaking of the four truths, Buddhaghōṣa said (Vism 16.90):

In the ultimate sense all the truths should be understood as void because of the absence of any experiencer, any doer, anyone who is extinguished, and any goer. Hence this is said:

For there is suffering, but no one who suffers;  
doing exists although there is no doer;  
extinction [of saṃsāra] exists but no extinguished person;  
although there is a path, there is no goer.

Once a monk asked the Buddha, “Venerable Sir, what now is aging and death, and for whom is there this aging and death?” The Buddha responded that this is not a valid question because the monk presupposed a substantial self (SN 12.35). The commentary likens such a question to “a dish of delicious food served on a golden platter, on top of which a small lump of excrement is placed.” While the question about aging and death is legitimate, asking it in terms of a substantial self contaminates the whole issue.

Someone who thinks the self and the body are the same falls to the extreme of nihilism by believing that both become nonexistent at death. If that were the case, there would be no need to practice the path because saṃsāra would end with death. Someone who thinks the self is one thing and the body is another falls to the extreme of absolutism by thinking that at death the self is released from the body and abides eternally. If the I were permanent and eternal, the path

could not put an end to saṃsāra because something that is changeless cannot cease.

Not only did the Buddha refute a substantial self that is born, ages, and dies, he also denied that the body — and by extension the other aggregates — belong to such a person (SN 12.37):

Monastics, this body is not yours, nor does it belong to others. It is old kamma, to be seen as generated and fashioned by intention, as something to be felt. Therein, monastics, the instructed ārya disciple attends carefully and closely to dependent arising itself thus: When this exists, that comes to be; with the arising of this, that arises. When this does not exist, that does not come to be; with the cessation of this, that ceases.

This body is not ours because there is not an independent person who possesses it. It does not belong to others either, because others also lack an independent self. Although the body is not literally karma, it is called *old karma* because previously created karma was its condition. This karma is intention; our volitional mental, verbal, and physical actions generated this body and life. When we contemplate dependent origination as ārya disciples do, we will understand the mere conditionality by which these things come into being and cease.

Buddhaghoṣa answers the question, “Who experiences the result of karma?” by first quoting an ancient Pāli verse and then explaining it (Vism 17.171–72):

“Experiencer” is a convention  
for mere arising of the fruit [result].  
They say “it fruits” as a convention,  
when on a tree appears its fruit.

It is simply owing to the arising of tree fruits, which are one part of the phenomenon called a tree, that it is said “the tree fruits” or “the tree has fruited.” Likewise, it is simply owing to the arising of the fruit consisting of the pleasure and pain called experience, which is one part of the aggregates called *devas* and *human beings*, that it is said, “A deva or a human being experiences or feels pleasure or pain.” There is therefore no need at all for a substantial experiencer.

A substantial experiencer cannot be found: *experiencer* and *agent* are mere

conventions. Thinking they are anything more than that is superfluous. We say “a human being experiences pleasure or pain” simply because that feeling has arisen in the feeling aggregate.

Āryas of the three vehicles who wisely understand dependent origination are free from doubt about the past, present, and future. They do not dwell on who they were in previous lives, or worry about whether they will exist in the future, and if so, as what. They do not fret about who they are, where they came from, and what will happen to them in the future. All these worries center on the idea of an independent self that persists in the past, present, and future. Those who understand dependent origination and how it functions in the past, present, and future know there is no need to posit a self that moves through these three time periods. They know that whatever occurs in the three times is simply due to conditionality — the fact that causes produce their effects and things come into being due to their respective causes and conditions. Factors in the past condition factors in the present. Causal factors are not the same as present factors, but they are not completely disconnected either. Through the transformation and ceasing of past factors, the present ones come into being. Through the present ones changing and ceasing, future factors will arise. All this occurs without a findable self who controls the process or who experiences it. There is no need for a persisting self to hold the stream of causes and effects together so that karmic seeds are carried to the next life.

If the description of the twelve links initially seems unfamiliar, that is because we have never seriously regarded our lives as conditioned events or thought of ourselves as conditioned phenomena that exist only because the causes for them exist. As we become familiar with the idea of dependent origination, this will become clearer. Although there is no substantial person to practice the path or attain nirvāṇa, a strong determination will arise in us to be free from cyclic existence, and this will propel us to cultivate the path of the āryas as the means to attain liberation.

---

## REFLECTION

1. Review the explanation and quotations that refute the existence of an inherently existent person, self, or soul that is reborn.

2. Do you get a sense that there is not a permanent, fixed person that is you who goes from life to life?
  3. Despite your not existing in that way, you still exist and function. The absence of an inherently existent person and the conventional existence of a dependent person are complementary.
- 

## *The Ultimate Nature of the Twelve Links*

The Buddha spoke not only about the conventional functioning of the twelve links but also about their ultimate nature. The conventional twelve links describe the way that we are born repeatedly in cyclic existence and the way to reverse this process. The ultimate nature of the links and of the cycle of saṃsāric rebirth is empty of inherent existence. If the twelve links existed inherently, they could not form a causal chain where one link produces the next. The *Āryaratnakara Sūtra* says:

How could something with inherent existence arise from another?

Thus the Tathāgata has presented causation.

The links' causal dependence is the reason establishing the emptiness of inherent existence of saṃsāra and of a person who cycles in it. Speaking of causal dependence in the *Sūtra of the Enumeration of Phenomena That Is Called "Discerning the Divisions of Existence, and So Forth,"* the Buddha said:

There are three defining characteristics of dependent arising: (1) no arising from a divine creator's thoughts, (2) arising from [multiple] impermanent cause(s), and (3) arising from a cause that has the capacity to give rise to that effect.<sup>63</sup>

Asaṅga echoed the Buddha's explanation of these three principles of causal dependence, saying: (1) The world did not come into being as a result of prior intelligence or an external creator. (2) It did not arise from a permanent cause. (3) It did not arise from a discordant cause. The *Rice Seedling Sūtra* adds two more characteristics: (4) it arises from existing causes, and (5) it arises from

selfless causes. Nāgārjuna said in *Versed Commentary on the Rice Seedling Sūtra*:

External dependent arisings arise  
neither from self, nor from other,  
nor from both, nor from time as a [permanent] agent.  
Similarly, they are not created by Īśvara or another deity.  
They are neither products of a principal nature, nor are they causeless.  
They come from a succession of causes and conditions  
that stem from beginningless time.<sup>64</sup>

The twelve links produce one rebirth after another without the intercession of an external force, such as a creator deity, a universal mind, or a cosmic substance from which everything is derived. Ju Mipham says in *Sword of Wisdom for Thoroughly Ascertaining Reality (Shes rab ral gri don rnam nges)*:

These appearances around us are generated  
through the process of dependent arising.  
Just as a lotus never appears in the sky,  
so we will never see anything independent.

The completion of a collection of causes  
carries out the function of inducing an effect.  
The entire identity of each diverse effect  
depends upon its particular causes.

Therefore, by knowing what is and is not the case  
for causes and effects  
we can avoid one thing and pursue another.

If the twelve links existed inherently — independent of all other factors — they would not be dependent on one another, because independent and dependent are mutually contradictory. Something must be one or the other, it cannot be both. Because things exist dependently, we can attain the peace we seek by avoiding the causes of suffering and creating the causes of happiness.

Nāgārjuna examined the relationship between causes and their results. How does an effect arise from a cause? Are the two independent of each other or related? His seminal work, *Treatise on the Middle Way*, begins with an analysis

of arising:

Neither from itself nor from another,  
nor from both,  
nor without cause  
does anything anywhere ever arise.

We will fully unpack this verse and its implications in a later volume, but for now we can begin to question how arising — the production of an effect by a cause — occurs. If it occurs independently, according to Nāgārjuna there are four alternatives:

(1) The effect already exists in the cause in a manifest or unmanifest way. One version of *arising from self* is that one cosmic substance contains all of creation in an unmanifest form such that the arising of various phenomena is simply the appearance or manifestation of what is already there. In that case, a fully formed sprout would already exist in a seed.

(2) The effect arises from causes that are inherently *other* than it. While the seed and the sprout are different, they are not inherently different; they are related as cause and effect. Asserting that the cause and effect both exist inherently is problematic because a dependent relationship between the two would be impossible. If cause and effect were unrelated, roses could grow from daisy seeds.

(3) Things arise from *both* self and other. This combines elements of both the above and contains the faults of both.

(4) Things arise *causelessly* means that all things and events arise randomly, there being no relationship between what existed previously and what exists later. Holding such a view is tantamount to saying that a sprout grows without a cause.

The texts unpacking the reasoning that refutes these four erroneous views and establishes the emptiness of true existence of all phenomena often use seeds and sprouts as examples. However, the important issue is, how does *duḥkha* arise and how is it ceased? When we wake up in a bad mood, where did our bad mood come from? Did it appear without any cause? Is it someone else's fault? Was it already present in our minds in an unmanifest form? Is it God's will? Or did it arise dependent on its own causes and conditions, in which case it does not exist independently, with its own self-enclosed essence.

When we initially begin studying these reasonings, we may wonder why the

great masters go into such great depth analyzing how sprouts grow when that is perfectly obvious to anyone who has a garden. But when we start to examine this process, what initially seems obvious begins to blur as we recognize our misconceptions and see that they are based on ignorance. Although we feel and believe that everything, ourselves included, has an independent essence that makes it what it is, it is impossible for things to exist this way. They are empty of an independent essence; they do not exist from their own side, nor are they self-powered.

Nevertheless, things arise and function dependent on other things. Sprouts grow from seeds; formative action arises due to ignorance. All these things and events exist conventionally when we don't analyze, but when we research for an independent essence in them, we cannot find it. So it is with the twelve links. Their being empty of inherent existence does not interfere with their dependent functioning on the conventional level. Each link arises from its preceding link and in turn gives rise to its subsequent link. The five causal links produce the seven resultant links. A person cycles in saṃsāra but cannot be found when we ask, "Who is the person who cycles in saṃsāra, really?" Tsongkhapa says (OR 70):

Therefore, conventionally the nonexistence of the four extremes with respect to arising and the existence of arising are not contradictory.

As a dependent phenomenon, our duḥkha exists only because its causes and conditions exist. Cyclic existence and its unsatisfactory circumstances are not predestined; they are not due to fate or to the will of a creator deity. They are malleable and can be overcome by ceasing their causes. In *Praise to the Supramundane (Lokātītastava 19)* Nāgārjuna praises the Buddha:

Sophists maintain that duḥkha is self-created,  
that it is created by another, and both,  
and that it arises causelessly.

You have taught that it is dependently arisen.

---

## REFLECTION

1. Review the three characteristics of dependent arising the Buddha described.
  2. Consider how those three characteristics apply to the existence of a material object, such as your residence.
  3. Consider how they apply to the existence of people — yourself, your friends, and your relatives.
  4. Review how nothing can arise from a cause that is itself, from something inherently different from it, from both, and without a cause.
-

## 9 | The Determination to Be Free

**A**NY PRISON INMATE can quickly and easily list the faults of being incarcerated: the physical dangers they face in prison, the confinement in their cells, the boredom, the ill treatment from guards and other inmates, and so on. Those with a strong determination to be free will be in contact with their attorney, make use of the law library, attend vocational courses and classes on anger management, and draw up a release plan so they can succeed after being released. Similarly, when those of us in saṃsāra clearly know the faults of rebirth by the twelve links, we will have a strong determination to be free. Seeking liberation, we will learn its characteristics and the causes to attain it. Then we will go about creating those causes and persevere until we attain genuine freedom and peace.

### *The Benefits of Meditating on the Twelve Links*

The Buddha taught the twelve links not only to show the evolution of saṃsāric rebirth but also to lead us to a deep understanding of causal dependence and emptiness, and their compatibility.

Meditating on dependent origination — that each link is produced dependent on the preceding one — is meditation on causal dependence, which helps us to avoid the two extremes of absolutism and nihilism. None of the links arises independent of other factors or due to a permanent cause; each link is dependent on the specific causes and conditions that brought it about. Understanding this counteracts the extreme of absolutism, thinking that the links exist inherently or that saṃsāra arises due to a permanent creator. Furthermore, when each link ceases, it does not become totally nonexistent; it gives rise to subsequent links. Understanding this eliminates the view of nihilism, thinking that there is no continuity of saṃsāra or that saṃsāra can occur without a cause.

Reflection on dependent origination clears away a host of wrong views. Identifying that ignorance and actions in this life create the causes for future lives eliminates the wrong view that there are no previous or future lives. Seeing

the variety of realms we may be born into ceases the incorrect idea that aside from the types of living beings we already know about, no others reside in the universe. The fact that formative actions bring fortunate or unfortunate rebirths dispels misguided notions that our actions have no effects or that virtue produces suffering and nonvirtue leads to happiness. Furthermore, because results arise from their concordant causes, not randomly, there is no purpose to justify, rationalize, or deny our harmful actions. They will always lead to suffering. Knowing this inspires us to be more mindful of our motivations and actions and to purify misdeeds.

In addition, we see that the causes of *duḥkha* exist within us, so relief from *duḥkha* must also be accomplished within our own mind. No miraculous drug can stop the cycle of rebirth, nor can cryonics conquer death. The only way to the deathless state — *nirvāṇa* — is by eliminating the causes of *saṃsāric* rebirth.

Contemplating each link individually accentuates its unsatisfactory nature. Cyclic existence is beginningless, and unless we make effort to cease it, its continuity will be endless. Now while we have the opportunity, we must develop a strong aspiration for liberation and live our lives according to this deep, heartfelt aspiration. What sense is there in seeking worldly pleasure when attachment to it simply leads to endless rebirth? As Togme Zangpo asks us in *Thirty-Seven Practices of Bodhisattvas*, “When your mothers who’ve loved you since time without beginning are suffering, what use is your own happiness?” There has to be more to life; there has to be a way to realize reality, arrive at a state of lasting peace, and benefit all beings as well. This accords with Togme Zangpo’s response: “Therefore to free limitless living beings develop the altruistic intention [*bodhicitta*].” Inspired to make our lives meaningful, we put energy into generating *bodhicitta* and realizing the ultimate nature of reality.

Thinking about the beginninglessness of *saṃsāra* pulls us out of fixation on our own, often petty, problems — the molehills we make into mountains that preoccupy so much of our mental energy. Considering the larger perspective of many lives, the vast variety of life forms in this universe, and the numerous sufferings we and other sentient beings endure instigates compassion for all sentient beings. Our obsession with our happiness of only this life fades, and the aspiration for full awakening gives our lives greater meaning.

It is said that each of us has been born in every life form and done every activity in cyclic existence infinite times. What, then, is truly important to do in this very moment? Since *saṃsāric* pleasures arise due to causes and vanish when the causal energy is consumed, clinging to them does not make sense. Seeing

that I and mine are dependent phenomena releases the tightness of having to prove or defend ourselves. We can relax and let go of trying to control everything and everyone around us. Instead, we will derive inner satisfaction from creating the causes for well-being, liberation, and full awakening. Such are the benefits of contemplating dependent origination.

## *Invigorating a Dry Dharma Practice*

Some practitioners lament that they do not progress in their practice as rapidly as they would like. Many factors may be at play: having unrealistic expectations of quick attainments, being very self-critical, lacking sufficient study so we do not know how to practice properly, or living far away from a teacher and supportive Dharma community. The remedy for these hindrances is to approach the Dharma with a relaxed, cheerful attitude, rely on spiritual teachers, and study the teachings.

Other factors may also be at play, such as the three types of laziness: (1) postponing study and practice in favor of sleeping and lounging around, (2) being distracted from Dharma activities by involvement with meaningless works aimed only at the happiness of this life, or (3) feeling discouraged due to a self-defeating attitude or lack of self-confidence.

The first two types of laziness stem from attachment to the happiness of only this life. To overcome these, meditation on impermanence and death is recommended so that we appreciate our precious human life and use it wisely. Meditation on the defects of saṃsāra is also helpful in this regard. Without seeing these defects clearly, we may want to use the Dharma to make our saṃsāra more comfortable — for example, by employing Dharma methods to lessen our anger. Although this is helpful and reduces the destructive karma we create owing to anger, it alone will not lead to liberation. Looking into our minds, we may find that at some level, we see cyclic existence as a rather pleasant and familiar situation. Although we may intellectually know the six disadvantages of cyclic existence, three types of duḥkha, and eight unsatisfactory conditions, in our hearts we still think happiness can be found in cyclic existence — especially in beautiful objects, attractive people, social status, good looks, praise, and money and possessions. We remain attached to that type of happiness and forget that superior states of fulfillment and bliss are available if we make the effort to attain them.

To overcome distorted views and attachment to the joys of cyclic existence, we must meditate deeply and consistently on the disadvantages of saṃsāra as explained in the first truth and on the origins of duḥkha as detailed in the second truth. Some people are not eager to do analytic meditation on these topics. They prefer to visualize deities, engage in breathing meditation to develop concentration, recite mantras, or meditate on love. Of course these meditations are worthwhile, but without a genuine aspiration to be free from cyclic existence and attain liberation, these meditations lack energy and long-term effects. There is the danger that we do them simply to feel good, relieve stress, improve our relationships — all goals that are worthwhile but are limited in scope because they don't look beyond this life.

We need to make our minds strong and courageous. While looking at the defects of cyclic existence may initially be startling or unpleasant, the sobering effect it has on our minds enables us to make wise choices and propels us toward sincere and continuous practice. By seeing that nothing of lasting purpose, pleasure, or worth exists in cyclic existence, our interest will naturally turn to the Dharma and we will be eager to transform our minds.

Sustained reflection on the opposite of four distorted conceptions helps us to generate the aspiration for liberation. Contemplating the impermanent nature of all saṃsāric pleasure, we understand that things such as financial security, relationships, and reputation are not fixed and stable as we had assumed. Seeing them as transient, we will accept them for what they are, use and enjoy them, but will not be sidetracked from Dharma practice by attachment to them.

Contemplation on the unattractive nature of our own and others' bodies will relieve anxiety about our physical appearance and the effects aging will have on it. It also helps to release the fear we have about separating from this body at the time of death and dampens unrealistic notions about sexual relations. We'll learn to relate to our bodies in a more practical way, keeping them clean and healthy — eating nourishing food, taking medicine when necessary, and avoiding substances that harm them — so that we can continue practicing the Dharma.

Meditation on the fact that whatever is produced by afflictions and karma cannot provide genuine happiness and peace helps us to relate to people and things in our environment in a more down-to-earth manner. Our unrealistic expectations will be waylaid, and we will be able to accept things for what they are rather than lament that they aren't completely satisfying. When we recognize that saṃsāric happiness is deceptive and inferior, our craving for it will relax and our minds will turn to liberation, true peace, and bliss.

Reflecting that all the people and phenomena that seem so real do not exist as independent, self-enclosed units with semipermanent personalities expands our view. We'll understand that the way things appear to exist from their own side is deceptive. They are dependent on other factors and empty of all the false modes of existence that our ignorance projects on them. Since there are no inherently evil people, we won't be so upset and angry and will maintain an optimistic attitude knowing that people can and will change. Aggravating situations in our daily lives will seem less dire, and our minds will be more peaceful. Dharma practice will become much easier, and with joyous effort we will be able to transform our minds without labored difficulty.

The third type of laziness is discouragement, which comes from thinking that we are incompetent, the path is too difficult, or the resultant awareness is too high to attain. I (Chodron) believe that this a big hindrance to people in contemporary Western society. Rooted in the view of a personal identity and the self-centered attitude, it makes us give up on ourselves before we even make any effort. Whether it comes from being taught original sin, being pressured to excel, or constantly comparing ourselves to others and never measuring up to our own satisfaction, this discouragement poisons our approach to the path. Examining and shedding our erroneous thoughts about the meaning of success, learning about buddha nature, and developing deep self-acceptance are antidotes to discouragement.

How can we accept ourselves when we are full of faults and have created so much destructive karma? First, we have to ease up on self-criticism and extend some kindness and compassion to ourselves. This enables us to accept ourselves for who we are at present, knowing that we can improve in the future. We recognize that in previous lives we created a tremendous amount of merit because we now have precious human lives with all the conducive conditions to progress on the path. In addition, we have the potential to become buddhas — a potential that can never be taken away or destroyed — and each of us has our own unique talents and gifts that we can contribute to the world.

### *Can a Leper Find Happiness?*

Māgandiya was a wanderer who believed that experiencing a rich variety of sensual pleasures was the source of growth and should be pursued with great enthusiasm (MN 75). To help him assess if his view was correct, the Buddha

described his own sensual, luxurious life in the palace during his youth and then explained that he came to understand the origin, disappearance, gratification, danger, and escape of sensual pleasures and relinquished craving for them.

The *origin* and *disappearance* of sensual pleasures refers to their transient nature — they are continuously arising and disintegrating, never remaining the same for even one moment and are thus unable to give long-term happiness. To explain gratification, danger, and escape, the Buddha gave the example of an attractive person (MN 13). *Gratification* is the pleasure we experience by looking at, hearing, smelling, touching, and thinking about the person. But this gratification cannot be sustained, and the *danger* is that the person will age and become frail, with broken teeth, white hair, age spots, and wrinkles. Eventually that person will fall gravely ill and die, the corpse being assigned to the charnel ground. Disappointment in sensual objects is assured. *Escape* is giving up desire and lust for them, wisely disentangling ourselves from those afflictions and objects that bind us to misery.

Having seen the origin, disappearance, gratification, danger, and escape with respect to sensual pleasures, the Buddha explained to Māgandiya that he chose to leave the palace, become a monastic, and adopt a simple lifestyle of sensual restraint. He did not envy those delighting in sensual pleasures, “because there is a delight apart from sensual pleasures, apart from nonvirtuous states, which surpasses divine bliss.” He thereby cultivated concentration based on the fourth dhyāna and attained arhatship with its inner peace and bliss. The joy he then experienced in no way compared with the insufficient pleasure derived from sensual objects.

The Buddha then spoke of a leper seeking happiness and relief from the unpleasant physical feelings of his disease. He gave some analogies that, ghastly as they are, accurately describe the leper’s situation as well as the situation of those of us addicted to wonderful sights, sounds, smells, tastes, tangibles, and thoughts (MN 75.13):

Suppose there is a leper with sores and blisters on his limbs, being devoured by worms, scratching the scabs off the openings of his wounds with his nails, cauterizing his body over a burning charcoal pit. Then his friends and companions, his kinsmen and relatives bring a physician to treat him. The physician prepares medicine for him, and by means of that medicine the man is cured of his leprosy and becomes well and happy, independent, master of himself, able

to go where he likes. Then he might see another leper with sores and blisters on his limbs, being devoured by worms, scratching the scabs off the openings of his wounds with his nails, cauterizing his body over a burning charcoal pit. What do you think, Māgandiya? Would that man envy that leper for his burning charcoal pit or his use of medicine?

The lesions on a leper's body are home for worms. Their crawling in his flesh irritates him, and the itching is so terrible that he scratches the scabs off his wounds, giving more area for the worm infestation. In another attempt at relief, he cauterizes the wounds on his body. Scratching and burning his flesh provide some satisfaction, but it lasts only a short while and then the painful itching arises again, more intensely than before.

Similarly, we beings in the desire realm — overcome by the dissatisfaction of unfulfilled craving, tormented by and seeking relief from the itching brought on by craving to get more and better of whatever we find attractive — try to satisfy our desires. But like the leper, this worsens our situation because everything we get serves to increase the craving. It's like drinking salt water: at first our thirst decreases, but then it returns more voracious and unbearable than before.

Just as someone cured from leprosy would not envy the happiness a leper gets from scratching his scabs and burning his wounds, arhats never envy the pleasure of beings in the desire realm.

The Buddha then related that after the leper was cured, two strong people dragged him to a charcoal pit as he wailed in fear and pain. "Is it only now that the fire is painful to touch, hot, and scorching, or previously too, when he was a leper, was the fire like that?" the Buddha asked Māgandiya. Māgandiya replied that it was hot, scorching, and painful before, only due to his illness the leper's senses were impaired and he experienced the fire that was painful to touch as pleasurable. The Buddha explained that so too, beings who are devoured by craving for sensual pleasures, who burn with the fever of craving for more and better sensual experiences, have impaired faculties that cause them to believe that sensual pleasures, which are in fact painful, bring the highest delight. In fact, they would be much happier and less tormented by disappointment and dissatisfaction if they could see the origin, disappearance, gratification, danger, and escape of sensual pleasures and release craving for them.

This corroborates recent studies that found that money does not equal

happiness. The Inuit of Greenland and the Maasai in Kenya report being just as happy as those on the Forbes 500 list of richest Americans. To conclude, the Buddha counseled Māgandiya:

The greatest of all gains is health,  
nibbāna is the greatest bliss,  
the eightfold path is the best of paths,  
for it leads safely to the deathless [nibbāna].

At first Māgandiya misunderstood the meaning of health to be physical health. But once the Buddha explained that nirvāṇa, the cessation of craving and clinging, is the highest health, Māgandiya was overjoyed and requested monastic ordination. Practicing sincerely, he soon became an arhat.

---

## REFLECTION

1. Contemplate the example of a leper seeking happiness. Then reflect that uninstructed worldly people live in a similar manner.
2. Apply this example to yourself.
3. Generate the determination to be free from cyclic existence and cultivate compassion for all other sentient beings.

---

## *Compassion for Ourselves and Others*

Courage and clear-mindedness are necessary to see cyclic existence for what it is — a deceptive cycle of misery. The aspiration for liberation from saṃsāra is a reflection of the compassion we have for ourselves. When we recognize that all other sentient beings are in the same predicament, compassion for them will also arise. Compassion gives us inner strength as we practice diligently to cease the causes of saṃsāra.

Puchungwa (1031–1106), a Kadampa geshe in Tibet, cultivated this compassion by contemplating duḥkha, its origin, its cessation, and the path to

that cessation according to the perspectives of the three levels of practitioners. *Initial practitioners*, who focus on avoiding an unfortunate rebirth and attaining a fortunate one, reflect that under the influence of the ignorance of karma and its effects, they create nonvirtuous formative karma. When nourished by craving and clinging, the karmic seed matures into renewed existence and the seven resultant links of an unfortunate rebirth ensue. Seeing this process, initial-level practitioners will work to abandon the ignorance of karma and its effects, create virtuous karma, and purify previously created nonvirtue.

*Middle-level practitioners* contemplate the twelve links in terms of all saṃsāric rebirths. They focus on the process that brings fortunate rebirths — ignorance giving rise to polluted virtuous formative karma, and so on. But they go a step further and understand that staying in cyclic existence — even if they have peaceful rebirths in the form and formless realms — is unsatisfactory. They want to eliminate the root of saṃsāra, first-link ignorance. Aware of another weak spot in the chain, that between feeling and craving, they practice experiencing pleasant, painful, or neutral feelings — even the feeling of bliss and equanimity in the form and formless realms — without reacting with craving for pleasure to continue or for pain to stop. Generating the aspiration for liberation from all of saṃsāra, they practice the three higher trainings of ethical conduct, concentration, and wisdom.

*Advanced-level practitioners* — and Geshe Puchungwa was one of these — contemplate the twelve links from the perspective of other sentient beings revolving uncontrollably in cyclic existence. With compassion for all the diverse sentient beings, they generate bodhicitta, engage in the bodhisattvas' deeds, and cultivate the wisdom realizing emptiness in order to become a buddha, one who has full wisdom, compassion, and power to lead others to awakening.

Cultivating compassion by considering that other sentient beings cycle in saṃsāra by means of the twelve links is a powerful way to subdue anger and resentment. When we reflect that others are trapped by their ignorance and subjected to the three types of duḥkha, hating them seems ludicrous. How can we possibly wish suffering on people who are already bound in the tortuous cycle of saṃsāra?

Sentient beings are conditioned phenomena; they are not fixed, inherently existent personalities. There is no “solid” person to feel malice toward and no benefit from wishing someone ill. Rather, with compassion and wisdom, let's do what we can to help them attain true freedom. As verses chanted daily in Tibetan monasteries after the midday meal say:

May all those who offered me food attain happiness of total peace.  
May all those who offered me drink, who served me,  
who received me, who honored me,  
or who made offerings to me attain happiness that is total peace.

May all those who scold me, make me unhappy, hit me,  
attack me with weapons, or do things up to the point of killing me  
attain the happiness of awakening.  
May they fully awaken to the unsurpassed,  
perfectly accomplished state of buddhahood.

---

## REFLECTION

1. Think of someone whom you care about deeply and reflect that they cycle in saṃsāra under the control of afflictions and karma. Let compassion arise.
  2. Think of someone whom you do not like or who has harmed you. Recognize that this person too cycles in saṃsāra under the control of afflictions and karma. Let compassion arise for them.
  3. Recall that if they were free from duḥkha, their ways of thinking and behaving would be entirely different than they are now.
- 

## *The Demarcation of Generating the Determination to Be Free*

How do we know our antipathy toward saṃsāra is a genuine determination to be free? Tsongkhapa says in *The Three Principal Aspects of the Path*:

By contemplating in this way, when you do not generate even for an instant the wish for the pleasures of cyclic existence, and when you have day and night unceasingly, the mind aspiring for liberation,

you have generated the determination to be free.

When generated, the aspiration for liberation brings an enduring shift in perspective that alters how we see and relate to our lives and to the world around us. This determination to be free from saṃsāra involves relinquishing our obsessive attachment for saṃsāric pleasures and the duḥkha it brings and focuses our attention on attaining nirvāṇa, the state beyond sorrow, and making that the aim of our lives.

Generating the determination to attain liberation from saṃsāra is essential to cultivate compassion. After seeing the defects of our own saṃsāra, we shift our focus to others, contemplating that they face the same undesirable situation. Compassion — the wish for someone to be free from duḥkha and its causes — arises as a result.

Bodhisattvas fear rebirth in saṃsāra under the control of afflictions and karma and seek to be free from it. But, having firm compassion for others and strong resolve to benefit them, they willingly take rebirth in saṃsāra. Sūtra statements such as “bodhisattvas should not become disenchanted with saṃsāra” do not mean that bodhisattvas should indulge in saṃsāric pleasures. Rather, they urge bodhisattvas to have such strong joyous effort that they will never give up benefiting sentient beings trapped in saṃsāra. Even if bodhisattvas experience overwhelming difficulties when benefiting others, they persevere without succumbing to fear of duḥkha or disenchantment with sentient beings. Taking on the misery of others, bodhisattvas do not dread physical or mental pain. Knowing that their actions to benefit others enable them to fulfill the collection of merit — an essential factor to attain full awakening — bodhisattvas joyfully take many rebirths in saṃsāra. This is the meaning of the passage in the *Sūtra of the Tathāgata’s Inconceivable Secret* (*Tathāgatācintya-guhya-nirdeśa Sūtra*, LC 1:328):

Bodhisattvas, thinking of the maturation of living beings, view cyclic existence as beneficial. Accordingly, they do not view great nirvāṇa as beneficial to the maturation of beings.

If bodhisattvas do not renounce their own saṃsāra and continue to take rebirth under the control of afflictions and karma, their ability to benefit others will be extremely limited. Unable to accomplish their own goal of full awakening, they cannot help other sentient beings accomplish their spiritual

goals. To fulfill both the purpose of themselves and others, bodhisattvas seek nonabiding nirvāṇa, in which they will be free from saṃsāra as well as their own personal peace of nirvāṇa. Bhāvaviveka says in *Heart of the Middle Way* (*Madhyamaka-hṛdaya-kārikā*, LC 1:330):

Since bodhisattvas see the faults of cyclic existence, they do not remain here.

Because they care for others, they do not remain in nirvāṇa.

In order to fulfill the needs of others, they resolve to remain in cyclic existence.

Inspired by bodhisattvas' compassion and courage, may we do the same.

## 10 | Seeking Genuine Peace

**E**ACH OF US wants happiness and not duḥkha. But among the various types of happiness, which is best? The Buddha answered (AN 2.65, 67, 68):

Monastics, there are these two kinds of happiness. What two? Sensual happiness and the happiness of renunciation . . . Of these two kinds of happiness, the happiness of renunciation is foremost.

Monastics, there are these two kinds of happiness. What two? The happiness with defilements and the happiness without defilements . . . Of these two kinds of happiness, the happiness without defilements is foremost.

Monastics, there are these two kinds of happiness. What two? Worldly happiness and spiritual happiness . . . Of these two kinds of happiness, spiritual happiness is foremost.

Here “renunciation,” “happiness without defilements,” and “spiritual happiness” refer to liberation. The Buddha steers us to a higher and more commendable type of happiness, the peace that goes beyond saṃsāra, the joy of nirvāṇa and full awakening. While we may experience many kinds of happiness in our present human rebirth, all of these pale in comparison to the joy and peace of nirvāṇa. Because the pleasures of this life are immediate and appeal strongly to our senses, some people have difficulty gaining confidence in the peace of nirvāṇa. To give up craving for sense pleasures requires an understanding of their defects and of the benefits of nirvāṇa. The more we understand these, the more our minds will naturally turn away from cyclic existence to liberation.

But we don’t have to wait until we attain liberation or awakening to experience Dharma happiness. Each time we release attachment, anger, and other afflictions in our daily lives, Dharma happiness, peace, and confidence take their place. Experiencing this Dharma happiness here and now gives us a small glimpse of the peace of nirvāṇa.

We began the section on the twelve links of dependent origination with the Buddha’s succinct statement on causality and conditionality:

When this exists, that comes to be;  
with the arising of this, that arises.  
When this does not exist, that does not come to be;  
with the cessation of this, that ceases.

The first two lines tell us that saṃsāra comes about due to a causal process, which we have explored in the previous two chapters. The last two lines inform us that nirvāṇa — the cessation of saṃsāra and its origins — can be attained through eliminating ignorance, the fundamental cause of saṃsāra. When the causes and conditions of saṃsāra do not exist, the resultant state of duḥkha will not arise. With the “remainderless fading away and cessation of ignorance,” the new creation of all the other links will cease, just as when the first domino in a row is hit, the others tumble down as well. What brings the cessation of ignorance? According to the common Buddhist view, it is the eightfold path, especially the wisdom or true knowledge that understands the four truths and nirvāṇa. According to the Prāsaṅgikas’ unique view, it also entails the direct, nonconceptual realization of the emptiness of inherent existence of all persons and phenomena. The process of gaining this wisdom is a gradual one, which itself depends on many causes and conditions.

### *The “Ye Dharmā” Dhāraṇī*

A *dhāraṇī* — an intelligible phrase that encapsulates the essence of a teaching — that is frequently recited by followers of both the Pāli and Sanskrit traditions is the “Essence of Dependent Arising Dhāraṇī.” In Sanskrit it reads:

*Ye dharmā hetu prabhavā hetun, teṣāṃ tathāgato hyavadat, teṣāṃ  
ca yo nirodha, evaṃ vādī mahāśramaṇa.*

All phenomena arise from causes. Those causes have been taught by the Tathāgata. And their cessation too has been proclaimed by the great renunciant.

Before becoming a follower of the Buddha, Śāriputra encountered the arhat Aśvajit and asked him to explain the essence of the Tathāgata’s teaching to him. Aśvajit recited these words, and fully understanding their meaning, Śāriputra

immediately became a stream-enterer. He later recited them to his friend Maudgalyāyana, who attained the same realization. They and five hundred of their followers then approached the Buddha and requested to become his disciples.

Fearlessly, and with complete self-confidence, the Buddha did not hesitate to proclaim four statements: He is fully awakened. He has destroyed all pollutants. He has correctly identified all obscurations. He knows that the Dharma, when practiced correctly, leads to the destruction of duḥkha. The Buddha taught the *ye dharmā dhāraṇī* by means of these four self-confidences or fearlessnesses.

*All phenomena arise from causes* indicates that each link of dependent origination comes into being dependent on the preceding ones. This emphasizes that true duḥkha — the seven resultant links — arises from true origins — the three links that are afflictions and the two that are karma. Here the Buddha instructs everyone who seeks liberation to abandon true origins; he says this by means of the third self-confidence, by which he has correctly identified the obscurations to liberation.

*Those causes have been taught by the Tathāgata* indicates that the Buddha has taught the counterforce to saṃsāra — the true path, a consciousness that directly perceives the selflessness of persons and phenomena. He states this in reliance on the fourth self-confidence, that he knows the way leading to the complete destruction of duḥkha.

*And their cessation too* indicates that by practicing true paths we will attain the final true cessation that is the eradication of true duḥkha and true origins. The Buddha states this by means of the second self-confidence, knowing that he has eradicated all pollutants.

*Has been proclaimed by the great renunciant* means that the Buddha has actualized true paths and true cessations and thus has completely perfected what to practice and what to abandon. He does this by means of the first self-confidence, being able to state with complete assurance that he is awakened with respect to all phenomena.

This short dhāraṇī contains great meaning because it incorporates the four truths, the eightfold path, a buddha's truth body that is the perfection of abandonment and realization, and a buddha's form body that acts to benefit all beings with the four self-confidences. A profound understanding of this dhāraṇī will enable us to attain the four bodies of a buddha.

PHRASE IN DHĀRAṆĪ	TRUTHS	SELF-CONFIDENCE
All phenomena arise from causes.	True duḥkha arises from true origins.	Third: The Buddha correctly identified the obscurations to liberation.
Those causes have been taught by the Tathāgata.	True path.	Fourth: The Buddha knows the way leading to the complete destruction of duḥkha.
And their cessation too . . .	True cessation.	Second: The Buddha knows that he has eradicated all pollutants.
has been proclaimed by the great renunciant.	True paths and true cessations have been actualized.	First: The Buddha knows that he is awakened with respect to all phenomena.

## *Forward and Reverse Orders of the Afflictive and Purified Sides of the Twelve Links*

The twelve links of dependent origination can be spoken of in terms of affliction — how cyclic existence continues — and purification — how cyclic existence ceases. Both the afflictive and purified presentations have a forward and a reverse order. The *forward order of the afflictive side* emphasizes the origins of duḥkha: with ignorance as condition, formative action arises; with formative action as condition, consciousness arises; and so forth, up to with birth as condition, aging and death arise. The *reverse order of the afflictive side* emphasizes the resultant true duḥkha: aging and death are produced in dependence on birth; birth is produced in dependence on renewed existence, and so on, up to formative action is produced in dependence on ignorance.

The purified forward and reverse sequence indicates the method for quelling saṃsāra and attaining liberation. The *forward order of the purified side* says: by ceasing ignorance, formative action ceases. By ceasing formative action, consciousness ceases, and so on until aging or death ceases. This sequence emphasizes the true paths that cease ignorance, thus stopping the other links from arising.

The *reverse order of the purified side* begins with the last link, aging or death, and investigates how to cease it. That is done by ceasing birth. Birth is

ceased by ceasing renewed existence and so on back to ceasing ignorance. Looking at the twelve links in this way emphasizes true cessation: that all the links can be ceased and nirvāṇa attained.

<b>ORDER OF TWELVE LINKS OF DEPENDENT ORIGIN</b>	<b>NOBLE TRUTH THAT IS SHOWN</b>	<b>UNDERSTANDING AND ASPIRATION ARISING FROM MEDITATION</b>
Reverse order of afflictive dependent origination: aging or death arise due to birth . . .	True duḥkha.	Understanding the nature of duḥkha, we desire to be free from it.
Forward order of afflictive dependent origination: with ignorance as condition, formative action arises . . .	True origin.	Understanding the origins of duḥkha, we aspire to abandon them.
Reverse order of purified dependent origination: aging or death are ceased by ceasing birth . . .	True cessation.	Understanding that duḥkha can be ceased, we want to actualize that cessation.
Forward order of purified dependent origination: by ceasing ignorance formative actions cease . . .	True path.	Understanding that true paths cease ignorance, we desire to cultivate them.

The question then arises: How do we cease the ignorance that is the origin of cyclic existence? We beginners must first develop a robust understanding of karma and its effects and bring that into our lives so that it influences our daily choices and actions. Then with a motivation aspiring for either liberation or full awakening, we seek the antidote that will demolish saṃsāra's root, first-link ignorance. Nāgārjuna says (MMK 26.10):

The root of cyclic existence is [formative] action;  
 therefore the wise one does not act.  
 Therefore the unwise is the agent.  
 The wise one is not, because he sees reality.

The first line points to formative actions, the second link, as the root of saṃsāra. Usually the fundamental root of saṃsāra is identified as ignorance, but here the root is said to be formative action because it is the source of consciousness entering into a new body. The distinction between the wise and the unwise lies in whether or not someone has realized the emptiness of true existence. Wise

ones — āryas of all three vehicles — do not create formative actions because they have realized emptiness directly. Not having yet gained the direct realization of emptiness, unwise ordinary beings accumulate karma that propels new rebirth in cyclic existence.

In saying “the wise one does not act,” Nāgārjuna does not mean they do nothing at all. If that were the case, they would never complete the path. Rather, the wise do not engage in activities motivated by their own self-centered, saṃsāric desires. But in terms of creating the causes and conditions for liberation or awakening, they do as much as possible.

This leads to further investigation of the last two of the four truths, true cessations and true paths. Nāgārjuna says (MMK 26.11–12):

With the cessation of ignorance  
[formative] action will not arise.  
The cessation of ignorance occurs through  
exercising wisdom in meditating on suchness [emptiness].

Through the cessation of this and that,  
this and that will not manifest.  
That which is only a mass of duḥkha  
will thus completely cease.

The wisdom realizing emptiness is the true path that ceases first-link ignorance. In the second verse, “this and that” refer to first-link ignorance and second-link formative action. By ceasing ignorance, there is no fuel for formative action to arise. In this way, the entire chain of twelve links that is a mass of constantly recurring misery ceases, and nirvāṇa, true freedom, is obtained.

The key that ceases first-link ignorance is the wisdom realizing the emptiness of inherent existence. The Buddha and great sages taught many reasonings to refute inherent existence and establish emptiness. A famous one is refuting the four extremes of arising. Nāgārjuna introduces it (RA 37):

Because this wheel [of saṃsāra] is not obtained from self, other,  
or from both, in the past, present, or future,  
[one who knows this] overcomes the grasping of I  
and thereby karma and rebirth.

Cyclic existence — our five polluted aggregates — does not arise from itself in the sense that it does not exist already inside its causes waiting to manifest. Saṃsāra also does not arise from causes that are inherently different from it. Nor does it arise from both self and other together, or without a cause. Because there is no inherently existent origin of saṃsāra, an absolute beginning to a set of twelve links cannot be found in the past, present, or future. Those who realize the dependent nature of saṃsāra and the person who cycles in it can overcome the ignorance grasping inherent existence. By overcoming the root cause of saṃsāra, the entire cycle of rebirth discontinues and nirvāṇa is attained. As Nāgārjuna says (RA 365):

Having properly realized that in this way  
beings are actually unreal, having no basis [for rebirth],  
or any appropriation [of new aggregates],  
one attains nirvāṇa like a fire whose causes have ceased.

---

## REFLECTION

1. Review the forward and reverse orders of afflictive dependent origination. Generate the aspiration to be free from saṃsāra.
  2. Review the forward and reverse orders of purified dependent origination. Have conviction that it is possible to free yourself from saṃsāra.
- 

### *Transcendental Dependent Origination (Pāli Tradition)*

Dependent arising, the lack of independent existence, and impermanence go hand in hand. The present is different from but related to the past. Impermanent things do not exist under their own power; they arise due to causes that preceded them. The present is the continuation of the past and is conditioned by the past. Present things and events have their own unique functions, and in the next moment they give way to a new moment that becomes the present.

We often think of impermanence as something negative: we are separated from what we like. However, because things are impermanent and conditioned, they can also change for the better. Transcendental dependent origination clarifies this and, in doing so, encourages us to practice the path leading to liberation and to knowledge of the destruction of all pollutants (*āsravakṣaya*, *āsavakkhaya*).

This theme is expressed in the forward and reverse orders of purified dependent origination. In addition, a few sūtras in the *Numerical Discourses* as well as the *Proximate Cause Sutta* (*Upanisā Sutta*, SN 12.23) present dependent origination in a dynamic way where one virtuous factor produces another, culminating in knowledge of the destruction of all pollutants. This emphasizes that spiritual evolution involves not just eradicating problematic factors but also enhancing constructive ones.

The presentation of transcendental dependent origination according to the Pāli tradition is expounded in the *Proximate Cause Sutta*. This presentation highlights the goal: knowledge of the destruction of all pollutants. The steps for arriving at that goal are then traced backward. Knowledge of the destruction of all pollutants has a proximate cause: liberation. Liberation has a proximate cause: dispassion. Dispassion's proximate cause is disenchantment. Disenchantment's is knowledge and vision of things as they really are. The proximate cause of knowledge and vision of things as they really are is concentration. Concentration's proximate cause is bliss, bliss's is pliancy, pliancy's is joy, joy's is delight, and delight's is faith.

At this juncture, the Buddha makes an interesting turn and cites duḥkha as the chief condition for faith: without duḥkha, we would not turn to the Buddhadharma for relief and would not generate faith in it. This is the point where we cross from mundane to transcendental dependent origination. The Buddha then says birth is the proximate cause for duḥkha and traces the sequential series of causes back to first-link ignorance. He goes forward again from ignorance to birth, then to suffering, and then crosses to the transcendental links beginning with faith and going through to the destruction of all pollutants. Meditating back and forth from ignorance to knowledge of the destruction of all pollutants has a powerful effect on our minds and shows us that we saṃsāric beings can attain liberation.

<b>TRANSCENDENTAL DEPENDENT ORIGINATION (FORWARD ORDER):</b>	
1.	Faith (P. <i>saddhā</i> )

2.	Delight (P. <i>pāmojja</i> )
3.	Joy (P. <i>pīti</i> )
4.	Pliancy (tranquility, P. <i>passaddhi</i> )
5.	Bliss (P. <i>sukha</i> )
6.	Concentration (P. <i>samādhi</i> )
7.	Knowledge and vision of things as they are (P. <i>yathābhūta-ñāṇadassana</i> )
8.	Disenchantment (P. <i>nibbidā</i> )
9.	Dispassion or fading away (P. <i>virāga</i> )
10.	Liberation (P. <i>vimutti</i> )
11.	Knowledge of the destruction of all pollutants (P. <i>āsavakkhayañāṇa</i> )

### *1. Duḥkha is the proximate cause for faith.*

Our lives are fraught with frustration and duḥkha. Not knowing a healthy way to deal with our stress, misery, and confusion, we usually seek to distract ourselves from it, spawning a culture of addiction to sense objects: drugs and alcohol, food, sex, entertainment, shopping, sports, news, and so on. Alternatively, we react to duḥkha with self-pity, digging ourselves deeper into despair. Although we sometimes deal with our pain in a healthy way by building up fortitude, resoluteness, and using our talents and intelligence, ignorance still obscures us from seeing that duḥkha permeates our lives. No matter how much we succeed in changing the external world to make it what we want it to be, we cannot bring our bodies, minds, or the external world completely under our control. Deep inside, a spiritual malaise remains and a small voice within us says, “There must be another way.”

Acknowledging this malaise spurs us to seek answers beyond what we already know. Here we have to thank the illness, injury, breakup of a treasured relationship, loss of a job, or internal dissatisfaction and anxiety for spurring us to look more deeply at the human situation.

Duḥkha alone will not cause faith to arise. We must encounter a reliable and true teaching that shows us the way out of our situation. We must investigate the teaching, teacher, and followers using our intelligence and reasoning. When we conclude they are reliable and trustworthy, we take refuge in the Three Jewels. Our faith is not blind or coerced. Based on inferential reliable cognizers and

reliable cognizers based on authoritative testimony, our faith and confidence will be stable.<sup>65</sup>

### *2. Faith is the proximate cause for delight.*

Through learning and contemplating the Dharma, we come to adopt the Buddhist worldview. This worldview does not demand submission to an external creator, nor does it justify suffering as something that is good for us. The worldview of the four truths looks squarely at our situation so that we know *duḥkha*, abandon its origin, realize its cessation, and cultivate the path. Relief arises because at last we have found a reliable path. Delight, which is a weak kind of joy, arises because we have met the *ārya*'s eightfold path, which now lies in front of us. Our hearts swell with virtuous aspirations and we dive into practice, commencing with the higher training in ethical conduct. Living ethically and purifying our past misdeeds, we experience freedom from guilt and self-recrimination. The low self-esteem that plagued us due to our mistaken actions evaporates, and our self-confidence increases because we now make wise decisions rooted in compassion and restraint from self-indulgence.

### *3. Delight is the proximate cause for joy.*

On the basis of following ethical conduct, we now engage in meditation. While some people prefer to begin with insight meditation, in general it is recommended to tame the coarse afflictions first by generating serenity. In the eleven factors of transcendental dependent origination, joy, pliancy, bliss, and concentration are part of the higher training in concentration. Knowledge and vision of things as they are, dispassion, and disenchantment pertain to insight meditation and the higher training in wisdom.

Cultivating serenity requires effort, fortitude, and perseverance. As the mind becomes more concentrated, joy arises, uplifting and refreshing the mind and bringing strong interest and delight in the object of meditation. The commentaries talk of five degrees of joy that develop as the mind approaches single-pointedness: (1) minor joy can make the hair on our bodies stand on end, (2) momentary joy flashes through the body with an intensity likened to lightning, (3) showering joy is like waves of ecstasy breaking over the body<sup>66</sup> or flowing through the mind, (4) uplifting joy gives the body a feeling of lightness, and in some cases can make the body levitate, and (5) pervading joy fills the entire body. The first four precede the attainment of the first *dhyāna*, and the fifth occurs in the first *dhyāna*.<sup>67</sup>

*4. Joy is the proximate cause for pliancy.*

Although joy brings great pleasure, it agitates the mind. It may also bring subtle fear of losing the ecstasy and cause the meditator to cling to the experience of ecstasy. The restlessness, anxiety, and clinging interfere with deep concentration, so as meditators progress they come to regard the ecstasy as a hindrance to be pacified. As joy calms down and becomes less exuberant, pliancy — the subsiding of distress and unserviceability — becomes more prominent. Pliancy is of two types: mental pliancy applies to the consciousness aggregate, and physical pliancy applies not to the body but to the mental factors in the aggregates of feeling, discrimination, and miscellaneous factors that accompany the consciousness. Pliancy subdues the excited disturbance caused by joy, eliminates rigidity and sluggishness, makes the mind more flexible so that it can be used to actualize higher stages of the path, and brings incredible stillness in the mind.

*5. Pliancy is the proximate cause for bliss.*

Due to the stillness brought by pliancy, bliss, which was present before, now becomes prominent. Joy is a mental factor belonging to the fourth aggregate, whereas bliss is a type of pleasant feeling. Joy is comparatively coarse; bliss is more subtle. Joy is compared to the gladness a weary, thirsty traveler feels upon hearing of an oasis nearby, and bliss to the happiness he experiences after he has bathed, satisfied his thirst, and lies down to rest in the shade of trees. In the present stage, joy is present, but due to pliancy it has been toned down and bliss is dominant.

Bliss here refers to the bliss experienced with access concentration, which is prior to the first dhyāna. Access concentration arises when the five hindrances have been suppressed and the counterpart sign — the radiant inner object of meditation — arises. Although subduing the hindrances began with faith and delight, now they have been suppressed more firmly so that the mind can remain concentrated and free from constant disruption. The meditator has much greater control of his or her mind. The bliss of being released from the hindrances, even temporarily during access concentration, is compared to the relief and joy someone feels upon being freed from slavery.

*6. Bliss is the proximate cause for concentration.*

As the bliss of access concentration expands, it permeates the mind and the hindrances to the unification of the mind vanish. At this point the mind enters

into absorption or full concentration, dhyāna. In general, concentration is a mental factor present in many mental states, including both access and absorption. It functions to unite the mind on a single object and to enable the consciousness and its accompanying mental factors to operate in harmony, making them steadier and more focused. While concentration has been increasing all along while cultivating serenity, in the dhyānas it becomes especially strong. The mind becomes very still, like a still lake on a cloudless night that clearly reflects the trees and moon. No discursive thought disturbs the mind's stillness.

During access concentration the dhyānic factors — investigation, analysis, joy, bliss, and one-pointedness — are strong enough to suppress the five hindrances, but not to place the mind in full meditative absorption. With the attainment of the first dhyāna, the dhyānic factors are strong enough to do this. Now the mind is so concentrated that any feeling of separation from the meditation object vanishes. From the first dhyāna, a meditator can proceed sequentially to attain the second, third, and fourth dhyānas, and then to the four formless absorptions, which are very refined states of mind in meditative absorption.

*7. Concentration is the proximate cause for knowledge and vision of things as they really are.*

Although it is an important precursor for wisdom, concentration alone is not sufficient to free us from cyclic existence. Despite its bliss and tranquility, concentration has only suppressed the coarse defilements. Other defilements still remain in the mind, dormant and ready to spring up whenever conditions allow. The ignorance of the four truths that is the root of saṃsāra as well as the other pollutants and fetters that depend on it must still be abandoned. To do this, insight and wisdom are essential, so now concentration is used to generate knowledge and vision of things as they really are, which is a form of insight that knows and sees the five aggregates as they actually are — their nature, arising, and passing away.

A mind in which the hindrances have been suppressed through concentration is needed to be able to see reality clearly. Just as a woodcutter needs not only a sharp ax but also clear eyesight so he can strike the same point repeatedly and fell the tree, similarly meditators require the steadiness and clarity that concentration provides to direct their wisdom to the analysis of conditioned phenomena.

The knowledge and vision of things as they really are liberates us. The Buddha said (SN 12.23), “The destruction of the pollutants is for one who knows and sees, I say, not for one who does not know and does not see.” Knowledge and vision are not intellectual but are a knowing and seeing that are so vivid that it is as if we were perceiving something with our eyes. Its initial cultivation may depend on conceptual knowledge, which helps to dispel mistaken notions. However, once the coarse misconceptions are dispelled and right view is established, we must go beyond conceptual knowledge to effect the very deep changes that lead to liberation.

Since all our experiences consist of a combination of the five aggregates, essential to the cultivation of wisdom are mindfulness and introspective awareness placed on the five aggregates. Although every experience and cognition can be broken down into the five aggregates, our ignorant, nonanalytical mind takes the aggregates as a uniform whole. This leads to the view that there is a permanent, substantial self. This view of a personal identity as being a self is the outer shell surrounding ignorance, and to eliminate it we must continually break our experience down into the five aggregates, see their nature, their arising, and their passing away.

A very peaceful and concentrated mind has difficulty engaging in the intense analysis that is now required. Thus the meditator emerges from the deep concentration of a dhyāna and studies each factor of that dhyānic state, identifying it as one of the five aggregates. She then examines the causes and conditions giving rise to each factor and each aggregate. This brings awareness that there is simply an ever-changing flow of physical and mental events that is devoid of a controlling self. She understands conditionality because each event arises when its causes and conditions exist and ceases when its causes and conditions cease. None of the factors or aggregates exist on their own, independently, and none of them require a supervisory self to function.

This awareness of conditionality leads to the examination of the arising and passing away of each physical and mental event. Noticing the coming into existence and the vanishing from existence of form, feelings, discriminations, miscellaneous factors, and consciousnesses reveals their impermanence. They not only arise and cease due to conditions, but conditions cause them to arise and cease in each nanosecond.

Changing in every brief moment, the five aggregates are unsatisfactory because they are incapable of bringing us stable happiness. The five aggregates cannot be the core of a real self because they are impermanent and unsatisfactory

both individually and as a collection. The clear seeing of the three characteristics of conditioned phenomena — impermanence, *duḥkha*, and no self — is the knowledge and vision of things as they really are.

*8. Knowledge and vision of things as they really are is the proximate cause for disenchantment.*

Knowledge and vision of things as they really are is weak insight; disenchantment is strong insight. To progress from the former to the latter, a meditator now focuses his attention on the momentary passing away of the aggregates — their disintegration and cessation. Repeated mindfulness on the vanishing of what he thinks is the source of happiness and security sparks disenchantment and disappointment. The things that he believed would protect him and bring him joy are now seen as they are — farces and deceptions — and the mind wisely turns away from them. This process of disenchantment is similar to that of a child who realizes without a doubt that Santa Claus does not exist and stops waiting for Santa to come on Christmas Eve. Disenchantment is not depressing; it is simply losing interest in the transient, unsatisfactory, and selfless external world with its kaleidoscope of illusory sensual delights that leave us exhausted. We now turn inward to wisdom.

He realizes that until now he has filtered and evaluated every experience through the distorted lens of mine, I, and my self. Whereas he previously believed this was truth, he now sees mine, I, and my self are conceptual fabrications imputed by ignorance and knows without a doubt that believing them to be true is the source of *duḥkha*. He knows the aggregates are not mine, these I am not, these are not my self, and he begins to mentally set down the burden that was never his to begin with. The Buddha says (SN 22.59):

Therefore, monastics, any kind of form whatsoever, any kind of feeling . . . discrimination . . . miscellaneous factor . . . consciousness whatsoever, whether past, future, or present, internal or external, coarse or subtle, inferior or superior, far or near should be seen as it really is with correct wisdom thus: This is not mine, this I am not, this is not my self.

Seeing thus, monastics, the instructed *ārya* disciple experiences disenchantment toward form, feeling, discrimination, miscellaneous factors, and consciousness. Experiencing disenchantment, he becomes dispassionate. Through dispassion [his mind] is liberated.

When it is liberated, there comes the knowledge: “It is liberated.” He understands, “Birth is destroyed, the holy life has been lived, what had to be done has been done, there is no more coming to any state of being.”

Here we see the progression that outlines the upcoming steps of dispassion, liberation, and knowledge of destruction.

*9. Disenchantment is the proximate cause for dispassion.*

Disenchantment with conditioned phenomena results from understanding their nature. It is based on accurate knowledge and insight and is not emotional rejection, fear, or escapism. Understanding the conditioned prepares us to realize the unconditioned. With disenchantment, a meditator detaches herself from conditioned phenomena. With knowledge that there is an actual state of lasting happiness that can be attained, she is determined to attain it. She continues relinquishing craving and clinging to conditioned things and does not take up any new attachments. This process of mental “spring cleaning” sees the gratification and danger of conditioned things and now seeks an escape — a path to freedom — from them.

Insight becomes deeper and more penetrative until a breakthrough is reached and she sees nirvāṇa. This is dispassion, path wisdom that is the first supramundane (*lokottara, lokuttara*) factor in transcendental dependent arising. While the eight previous factors are called members of transcendental dependent arising, they are in fact still mundane (*laukika, lokiya*) because their objects are conditioned phenomena, in particular the five aggregates. While these factors are indispensable steps to arrive at the supramundane path, they themselves are not supramundane.

*10. Dispassion is the proximate cause for liberation.*

The commentary on the Saṃyutta Nikāya explains:

Seeing with correct wisdom (P. *sammappaññāya*) is path wisdom together with insight. The mind becomes dispassionate at the moment of the path and is liberated at the moment of the fruit.

The mind becomes dispassionate when it sees nirvāṇa with correct wisdom and insight. This marks entrance into the supramundane path of stream-enterer. When the first three fetters — view of a personal identity, doubt, and view of

rules and practices — have been abandoned, the fruit of stream-enterer is attained. In this way, dispassion as the path is the condition for liberation as the fruit. The path and fruit sequence begins with stream-entry, continues with once-returned and nonreturner, and culminates in arhatship. Each path is a time of reducing or eliminating fetters, and each fruit is a time of knowing and enjoying the reduction or abandonment of those fetters. The mind is peaceful and delights in its newfound freedom.

There are two aspects to full liberation. One is freedom from the ignorance and defilements experienced during this lifetime. The mind is now immune to attachment, animosity, and confusion, and any last traces of these poisons have been eliminated so that they can never arise again. This nirvāṇa is visible here and now; it is nirvāṇa with remainder. The Buddha says (AN 3.55):

When a person is impassioned with sensual desire . . . depraved through animosity . . . bewildered by confusion, overwhelmed and infatuated by [sensual desire, animosity, and] confusion, then he plans for his own harm, for the harm of others, for the harm of both; and he experiences in this mind suffering and grief. But when sensual desire, animosity, and confusion have been abandoned, he neither plans for his own harm, nor for the harm of others, nor for the harm of both; and he does not experience in his mind suffering and grief. In this way, nibbāna is directly visible, immediate, inviting one to come and see, leading onward, to be personally experienced by the wise.

The other aspect of liberation is freedom from rebirth after the breakup of the present body. At arhatship, the peace in the mind is immense, for the mind is no longer controlled by defilements. Arhats rest with the security that comes from knowing that all future existence in saṃsāra has ceased.

Liberation — the fruit of arhatship — is the freedom from all pollutants that comes at the end of this chain of four paths and four fruitions. The path has been completed; there is nothing more to be abandoned or added.

*11. Liberation is the proximate cause for knowledge of the destruction of all pollutants.*

Each path, which reduces or abandons certain fetters, is immediately followed by its own fruit, which enjoys the reduction or abandonment of those fetters.

That is followed by a reviewing knowledge (P. *paccavekkhaṇa ñāṇa*) that ascertains what has just occurred. It reviews the fetters that have been abandoned by that path and those that still remain. The reviewing knowledge after attaining the fruit of arhatship certifies that all fetters, pollutants, and defilements as well as any underlying tendencies toward them have been eradicated and that none remains.

At the time of the path of arhatship, the four truths are known as they actually are. This knowing eradicates any remaining defilements. At the time of the fruit of arhatship, the remaining defilements have been eradicated and the mind is freed. Following this, the reviewing knowledge arises that understands that this has occurred and that the mind is liberated from defilements. The Buddha describes the sequence (MN 39.21):

He understands as it actually is: “This is duḥkha” . . . “This is the origin of duḥkha” . . . “This is the cessation of duḥkha” . . . “This is the way leading to the cessation of duḥkha” . . . “These are the pollutants” . . . “This is the origin of the pollutants” . . . “This is the cessation of the pollutants” . . . “This is the way leading to the cessation of the pollutants.”

When he knows and sees thus, his mind is liberated from the pollutant of sensual desire, the pollutant of existence, and the pollutant of ignorance. When it is liberated, there comes the knowledge: “It is liberated.” He understands: “Birth is destroyed, the holy life has been lived, what had to be done has been done, there is no more coming to any state of being.”

An arhat sees the final cessation of duḥkha and defilements very clearly and there is no doubt in his or her mind that this has occurred.

Two ascertainments are involved in this retrospective cognition. The *knowledge of destruction* knows that all the fetters have been uprooted and no longer remain. The *knowledge of nonarising* knows that they can never arise again. Together these are called the knowledge and vision of liberation (P. *vimutti ñāṇadassana*). Arhats experience freedom from defilements and enjoy the certitude that defilements can never arise again. This brings an incredible confidence and ease in the mind; arhats never experience anxiety or uncertainty. Having fully understood that there is no self or anything belonging to a self anywhere at all, they are the masters of their minds.

While the knowledge and vision of liberation is not always manifest in an arhat's mind, it remains there under the surface and can manifest as soon as she looks at the state of her mind. The Buddha analogized this to someone whose hands and feet have been amputated. Whatever he is doing, his limbs have been cut off, and the instant he turns his mind to it, he knows this is the case. Similarly, someone who has destroyed all pollutants is always free from them, and the instant he looks at his mind, he knows that this is the case.

## *Karma in Saṃsāra and Beyond*

Karma is of many varieties; discerning them is helpful to our practice. Of the *polluted karma* of saṃsāra, there is virtuous, nonvirtuous, and neutral karma.

*Virtuous polluted karma* is created by ordinary beings — everyone who is not an ārya. It ripens as happiness in saṃsāra and does not directly lead to liberation. It is of two kinds as mentioned above: (1) *Meritorious karma* is created by beings in the desire realm and brings a good rebirth or other happy circumstances in the desire realm. (2) *Invariable karma* is created by beings in the desire, form, or formless realms; it causes rebirth in the form or formless realms.

*Nonvirtuous or nonmeritorious karma*, when created by ordinary beings, propels unfortunate rebirths and other undesirable events in saṃsāra. When created by stream-enterers and once-returners, it does not propel a rebirth. Śrāvaka āryas who are not arhats may still experience suffering in their lives due to seeds of previously created nonvirtuous karma on their mindstreams. Ārya bodhisattvas, owing to the power of their wisdom and compassion, do not experience physical or mental suffering.

*Neutral karma* brings neither happy nor suffering results. Created by beings in all three realms, it is not powerful enough to propel rebirth in cyclic existence.

*Unpolluted karma* is created by āryas who are not buddhas. It does not propel rebirth in saṃsāra. Together with the latencies of ignorance, it produces the mental bodies of ārya bodhisattvas and arhats and leads to liberation and buddhahood. Buddhas do not create karma but engage in spontaneous awakened activities that benefit sentient beings.

When we closely examine our intentions, we may be surprised to find that many of them seek the happiness of only this life. The appearances of this life

are so vivid to our senses that naturally the minds of us ordinary beings gravitate toward them. Even if we believe in future lives, in our daily lives we often are not mindful that our actions create the causes for our future rebirths and our experiences in them. This limited perspective obscures the great opportunity our precious human lives provide to gain spiritual realizations. Although we may still create virtuous karma that will result in a fortunate rebirth with a motivation focused on this life, such a motivation impedes us from attaining liberation or full awakening. To expand the intentions behind our daily actions, it is important to enlarge our worldview to include future lives, liberation, and awakening.

All ordinary beings — including those from the supreme dharma stage of the path of preparation of all three vehicles downward — accumulate karma that propels rebirth in saṃsāra under the influence of ignorance and view of a personal identity.<sup>68</sup> Their motivations that see the disadvantages of saṃsāra and genuinely aspire for liberation, and virtuous karma similar to the wisdom analyzing selflessness, are contrary to first-link ignorance and are remedies for the craving for rebirth. They lead to the eradication of craving and the attainment of the ārya path, and in this sense they are not actual true origins. However, since they are similar to true origins in that they are not free from grasping true existence, this karma is included under true origins. The *Compendium of Determinations (Viniścaya-samgrahaṇī)* says (LC 1:305):

By nature they are not directed toward rebirth in saṃsāra. However, they approximate the physical, mental, and verbal good conduct that leads to rebirth. Consequently, you should understand that on this account they are included under the truth of the origin.

Antipathy toward all forms of duḥkha, sincere aspiration to attain liberation, bodhicitta, and the mind similar to the correct view are excellent steps along the path. But to create unpolluted karma that leads directly to liberation and awakening we must generate the ārya path by realizing emptiness directly. Only then do our actions become unpolluted and direct causes for liberation.

For us ordinary beings, the only karma we create that is not typical true origins of duḥkha are actions depending on the power of the field — that is, by interaction with holy objects, places, and people. Tsongkhapa says (LC 1:305–6):

You might not have acquired, through extensive meditative analysis

of the faults of cyclic existence, the remedy that eradicates the craving for the wonders of cyclic existence. You might also not have used discerning wisdom to properly analyze the meaning of selflessness, and might not have become habituated to the two bodhicittas [conventional and ultimate], in which case your virtuous activities — with some exceptions on account of the field's power — would constitute typical origins [of duḥkha], and hence would fuel the process of cyclic existence.

Nevertheless, contact with holy objects creates seeds of powerful virtuous karma. In *Letter to a Friend (Suhṛllekha)* Nāgārjuna says that even if someone sees the form of the Tathāgata in a mural and reacts to it with an afflictive attitude, he still creates karma to have visions of buddhas and buddha lands in the future. Buddhas and bodhisattvas are such powerful fields for accumulating merit because they have dedicated their lives to benefiting sentient beings for as long as saṃsāra endures. Due to the incredible virtue of their aspirations, any contact with them becomes virtuous in the long term. When we make offerings or prostrations to them, bodhisattvas rejoice in our virtue and dedicate their merit to be able to benefit us. Even when people harm them, bodhisattvas pray to be able to teach them the Dharma and lead them to awakening.

Although creating merit with holy objects is important, it is not sufficient for the attainment of spiritual realizations. We must cultivate all the steps on the path — the three higher trainings, the three principal aspects of the path, and the path of Tantrayāna — to gain full awakening.

## 11 | Freedom from Cyclic Existence

THE SIXTEEN ATTRIBUTES of the four truths spoken of in chapter 1 tell us that true cessation, as exemplified by nirvāṇa, has four aspects: (1) It is the *cessation* of the continuum of afflictions, their seeds, and the karma that causes rebirth. (2) It is true *peace*, the state of total tranquility that is completely free from all afflictive obscurations. (3) It is *magnificent* because we have reached ultimate satisfaction. (4) It is *freedom* because we have definitely emerged from cyclic existence.

Nirvāṇa is our goal, and the true path to attain it that is held in common by all Buddhist traditions constitutes the Dharma Jewel. The word *Dharma* has many meanings, depending on the context. In *Dharma Jewel*, it means to hold or prevent us from falling into duḥkha. From this perspective, even the path of the initial practitioner is the Dharma in that it prevents us from falling into the suffering of unfortunate rebirths. More broadly, Dharma holds or prevents us from experiencing all kinds of duḥkha; this is the role of true paths and true cessations, which together constitute the Dharma Jewel.

In general true paths consist of the three higher trainings in ethical conduct, concentration, and wisdom, which include the eightfold path. More specifically, the wisdom directly realizing emptiness is the counterforce that eliminates first-link ignorance and directly brings liberation. One moment of this wisdom is not sufficient to remove all deeply entrenched afflictions that have disturbed the mind from beginningless time. Because continual habituation with this wisdom is necessary, we need to cultivate single-pointed concentration (*samādhi*) and serenity (*śamatha*) that can focus on emptiness in a sustained manner free from distraction.

This concentration must be free of two principal faults: laxity and restlessness, which prevent us from focusing with stability and clarity on the object of meditation for long periods of time. The mental factors of mindfulness and introspective awareness are crucial to overcome laxity and restlessness, and these two mental factors are initially cultivated in the training of ethical conduct. To abide in pure conduct, we must hold our precepts with mindfulness and closely monitor the actions of our body, speech, and mind with introspective

awareness. Having developed some degree of mindfulness and introspective awareness by observing ethical conduct, we can then employ these two to identify and suppress laxity and restlessness and to deepen concentration. With strong concentration, wisdom becomes a stable and powerful counterforce to eradicate ignorance. In short, all three higher trainings assist one another and all three are necessary to attain liberation.

## *Stages Leading to Liberation and Full Awakening*

Attaining spiritual realizations occurs over time. Learning the stages leading to liberation and full awakening gives us an idea of the process of spiritual transformation we will undergo and the practices that will bring about the desired spiritual progress. There are many similarities in the paths and fruits of śrāvakas, solitary realizers, and bodhisattvas; there are many differences in them as well.

Before even entering one of the three vehicles — śrāvaka, solitary realizer, and bodhisattva — we must have a correct and stable understanding of the Buddhist worldview, purify our minds, and create much merit. Each vehicle has five paths: the paths of accumulation, preparation, seeing, meditation, and no more learning. Practitioners enter the śrāvaka path of accumulation when their aspiration to attain liberation remains stable day and night. Practitioners enter the bodhisattva path of accumulation when bodhicitta spontaneously arises in relation to any and all sentient beings.

In all three vehicles, practitioners go from the path of accumulation to the path of preparation when they have attained the union of serenity and insight on emptiness. This is still a conceptual realization, but through repeated practice they remove the veil of conceptuality and realize emptiness directly. At this point they attain the path of seeing and become āryas.

Stream-enterers, the first level of śrāvaka āryas, are on the path of seeing and have eliminated acquired afflictions. Afflictions may arise in their minds and they may create destructive karma. However, this karma is not strong enough to project rebirth in saṃsāra, so they no longer begin new sets of twelve links. They still have the seeds of projecting karma of many other sets of twelve links on their mindstreams, and when these are activated by craving and clinging, they take rebirth. Although they are not liberated from cyclic existence, they are not

fully under its sway in the way ordinary beings are. Stream-enterers can no longer be reborn in unfortunate realms, although they still experience suffering and sickness when born as humans.

Continuing to practice, stream-enterers gradually reduce layers of afflictions. When sensual attachment and malice have been subdued to a certain degree, they become once-returners, so-called because they will take only one more rebirth in the desire realm. Once-returners may still create destructive karma, although it is weak.

Ordinary beings are attached to the self, and while dying the fear that they will no longer exist arises, followed by craving for saṃsāric aggregates. This precipitates the bardo state. Attachment to self may arise in stream-enterers and once-returners, but investigating it with wisdom, they cast it out. It does not arise in nonreturners.

Once-returners continue their practice, and when the five lower fetters — view of a personal identity, doubt, view of rules and practices, sensual desire, and malice — are eliminated, they become nonreturners, so-called because they are never again born in the desire realm. Since destructive karma is created only in the desire realm, nonreturners no longer create it. Like stream-enterers and once-returners, nonreturners are still reborn under the power of afflictions and karma. When they abandon all afflictive obscurations completely, they attain the śrāvaka path of no more learning and become arhats — those who have attained liberation and are totally free from cyclic existence.

Although arhats no longer create new karma to be born in saṃsāra, the potency of previously created karmic seeds that could bring a saṃsāric rebirth remains intact. However, because they have eliminated all afflictions, those seeds are not nourished by craving and clinging and do not produce new rebirths.

Karmic seeds of completing karma remain on arhats' mindstreams and these may ripen. The most famous example of this occurred to Maudgalyāyana, one of the Buddha's chief disciples. Many lifetimes ago, he had killed his parents. Although he had been born in the hell realm as a ripening result of that deed, the fruit of that karma had not yet been exhausted. Some non-Buddhists knew that Maudgalyāyana was foremost among the Buddha's disciples in terms of his supernormal powers and would use those powers to bring people to the Buddhadharma. Jealous of the Buddha and his followers, they directed some thugs to kill Maudgalyāyana. Maudgalyāyana wished to spare them the nonvirtuous karma of killing an arhat and so tried to use his supernormal powers to escape. Due to the karmic seeds remaining from having killed his parents, his

supernormal powers failed; the thugs beat him severely and left him for dead. Maudgalyāyana crawled to the Buddha, paid final homage to him, and passed away. Although he experienced physical pain from the beating, he was not upset or angry.

While arhats are alive, intentions arise in their minds, but they do not leave any traces. The *Dhammapada* compares the action of arhats to the flight of birds across the sky (92–93):

Those who do not hoard [anything] and are wise regarding food,  
whose object is emptiness, the unconditioned, freedom —  
their track cannot be traced,  
like the path of birds in the sky.

Those whose pollutants are destroyed and who are unattached to food,  
whose object is emptiness, the unconditioned, freedom —  
their path cannot be traced,  
like the path of birds in the sky.

While alive, arhats are free from saṃsāra although they still have the saṃsāric aggregates — especially the bodies they took at birth, which are ripening results of polluted karma. Their bodies are true duḥkha, so their nirvāṇa is called “nirvāṇa with remainder (of the polluted aggregates).” When they die, all karmic seeds vanish on their own without a remedy being applied, although the latencies of afflictions still remain on their mindstreams. Leaving the five polluted aggregates and taking mental bodies (T. *yid lus*) that are not made of atoms, arhats now have a nirvāṇa without remainder. They remain meditating in peaceful nirvāṇa for eons, until the Buddha wakes them and encourages them to become fully awakened buddhas. They then generate bodhicitta, take birth by the power of prayers and aspirations, and enter the bodhisattva path.

Bodhisattvas on the paths of accumulation and preparation are born in saṃsāra owing to ignorance. From the path of seeing onward they are āryas and take birth according to their compassionate wishes and intentions and no longer experience birth, aging, sickness, or death under the power of afflictions and karma. By the force of their fervent compassionate intentions and stainless altruistic prayers, they may choose to take birth in a particular family or country to benefit the beings there. When doing so, they appear to experience everything ordinary beings do, yet their experience is very different from ours because of

the intensity of their realization of emptiness supported by bodhicitta. Because they have not yet eradicated all afflictive obscurations, these ārya bodhisattvas are said to be *in saṃsāra*, but not *of saṃsāra*.

When sharp faculty bodhisattvas attain the path of seeing, due to the force of their great resolve and bodhicitta, their bodhicitta transforms into the bodhicitta that is the purity of the extraordinary great resolve. From the path of seeing onward, bodhisattvas also gain a mental body that arises from unpolluted karma — the intention to assume such a body — and the subtle latencies of ignorance. This body is not one entity with the mind, but it is said to be in the nature of mind, because like the mind, it is not made of atoms and lacks physical impediment. It is unpolluted and free of physical pain, although until bodhisattvas attain the eighth ground it is not free from the pervasive duḥkha of conditioning.

To benefit us ordinary beings, these ārya bodhisattvas take or emanate a form similar to ours and show the aspect of sickness, aging, death, and so forth. These bodies are not true duḥkha.

If they manifest in the animal, hungry ghost, or hell realms to benefit sentient beings there, they are not beings of that realm; they are merely assuming that appearance. Bodhisattvas who practice Tantra actualize an impure illusory body and then a pure illusory body, even when they still have a polluted human body. The actual or ultimate unpolluted body is attained at buddhahood.

Ārya bodhisattvas progress through the ten bodhisattva grounds that occur on the paths of seeing and meditation. Until they reach the eighth ground, afflictions may still manifest in their minds, but they don't remain long and do not function as afflictions usually do in that they do not disturb the mind. Ārya bodhisattvas create only unpolluted karma.

Unless they had previously become śrāvaka arhats, ārya bodhisattvas are not liberated from saṃsāra until the beginning of the eighth bodhisattva ground. At this time, they have purified all afflictive obscurations and become pure ground bodhisattvas. Since cognitive obscurations still remain on their mindstreams, they must exert subtle effort to motivate their physical and verbal actions done to benefit of others. During the three pure grounds, they gradually abandon cognitive obscurations, and at the Mahāyāna path of no more learning when the cognitive obscurations have been fully pacified, they become buddhas who spontaneously and effortlessly act for others' welfare until saṃsāra ends.

Some ordinary beings are born in pure lands such as Sukhāvātī, Amitābha Buddha's pure land, as a result of special virtuous karma and sincere virtuous

aspirations and prayers to take rebirth there. Birth in Amitābha's and Akṣobhya's pure lands is not taken under the power of afflictions and karma and is not in the twelve links. The bodies of ordinary beings born there are not true duḥkha. Although many beings born in those pure lands still have self-grasping and other afflictions, these do not arise in manifest form, so they do not create karma for rebirth in unfortunate realms. Because they practice the path diligently, they no longer create karma for rebirth in saṃsāra and attain full awakening in the pure land.

---

## REFLECTION

1. Review the stages of the path to liberation for those following the Śrāvaka Vehicle.
  2. Review the stages of the path to full awakening followed by those in the Bodhisattva Vehicle.
  3. Get a sense of your potential. Realize that you can progress through these paths and stages and attain the peaceful results.
- 

## *The Two Obscurations*

The minds of ordinary sentient beings are veiled by two types of obscurations: afflictive obscurations and cognitive obscurations. The former principally prevent liberation from saṃsāra; the latter are mainly obstacles to full awakening. The state of having eliminated afflictive obscurations is nirvāṇa, or liberation. The state of having additionally removed cognitive obscurations is full awakening, nonabiding nirvāṇa, and buddhahood.

*Afflictive obscurations (kleśāvaraṇa)* are coarse and subtle self-grasping ignorance and its seeds and the three poisons of confusion, attachment, and animosity and their seeds. In short, afflictions and their seeds constitute afflictive obscurations.

*Cognitive obscurations (jñeyāvaraṇa)* are more subtle and difficult to

remove from the mindstream. Compared with afflictive obscurations, which are like onions in a pot, cognitive obscurations are like the smell that remains after the onions have been removed. Cognitive obscurations are the latencies of self-grasping ignorance, the latencies of the three poisons, the mistaken dualistic appearances that arise from them, and the defilement (*āvaraṇa*) of apprehending the two truths as different entities. All of these are abstract composites, not consciousnesses (although some contest this point).

The word *appearance* does not adequately indicate the meaning of the Tibetan word *snang ba*, which can refer to either appearance or perception. By saying “appearance of inherent existence,” we may mistakenly think that the obscuration is external to our minds — that phenomena from their side appear inherently existent — whereas the obscuration is associated with our minds — we “perceive” inherent existence, which does not exist at all. Please keep this in mind when we talk about the appearance of inherent existence.

The aspect of the mind that continues to have the mistaken appearance of inherent existence is called “manifest cognitive obscuration,” while the latencies left from the afflictions that cause these appearances are called “factors of a seed.” The latencies are subtle tendencies (T. *bag la nyal*). By their power, the mind continues to have the appearance of inherent existence.

*Mistaken dualistic appearances* are the aspect of the mind that continues to have the mistaken appearances of all internal and external phenomena as existing inherently. This aspect of the mind obscures all six consciousnesses — the five sense consciousnesses and the mental consciousness. Both ordinary beings and āryas who are not in meditative equipoise on emptiness have these mistaken dualistic appearances. The only consciousness in sentient beings’ continuums that lacks them is āryas’ exalted wisdom in meditative equipoise on emptiness.

Within the appearance/perception of inherently existent objects, one part exists and one part does not. A flower exists, but its being inherently existent does not. The flower is not a cognitive obscuration, but its appearing to be inherently existent is. When the mind is freed from this mistaken appearance, conventionally existent things do not cease to exist; rather, they no longer appear inherently existent.

The *defilement of apprehending the two truths as different entities* prevents seeing all phenomena — veiled truths and their emptiness — simultaneously. Since arhats and pure ground bodhisattvas have this defilement, they cannot simultaneously cognize the two truths. They must alternate consciousnesses:

their meditative equipoise on emptiness sees only emptiness; veiled truths, which are the substrata — that is, they are the objects that are empty — do not appear to that mind focused on emptiness. When they arise from their meditative equipoise on emptiness in the time of subsequent attainment, they know conventionalities but cannot perceive their emptiness directly. Because this defilement has been eradicated in buddhahood, buddhas can directly and simultaneously know the two truths.

Latencies of attachment and other afflictions also cause arhats to have dysfunctional behaviors of body and speech (*dauṣṭhulya*) that are breaches of discipline. Arhats may inadvertently jump around owing to the latency of attachment. They may spontaneously call someone a name owing to the latency of anger. Their clairvoyance may be unclear owing to the latency of ignorance. These infrequent occurrences are not due to any negative intention or ignorance on arhats' part, for they have eliminated all afflictions. Candrakīrti's *Autocommentary to the "Supplement"* says:

Although arhats have abandoned afflictions, they have the latencies, due to which they will jump as they did when formerly they were monkeys . . . Those latencies are overcome only in omniscience and buddhahood, not in others.<sup>69</sup>

The same idea is also found in later Pāli commentaries. They explain that although arhats have eliminated all obscurations due to afflictions, they still have latencies of afflictions, which can induce conduct that is a breach of decorum. This is because unlike the Buddha, arhats have not eliminated the obstruction to all-knowing and thus do not know all existents. The commentary to the *Udāna* says:

A *vāsanā* [latency] is a mere capacity to behave in certain ways similar to the behavior of those who still have defilements; it is engendered by the defilements that have been harbored in the mind from beginningless time, and remain in the mental continuum of the arhat even after the defilements have been abandoned, as a mere habitual tendency. The *vāsanās* are not found in the mental continuum of a buddha, who removes the defilements by abandoning the obstruction to all-knowing, but they are found in the minds of hearers and solitary realizers.<sup>70</sup>

An example is the bhikkhu Pilindavaccha. Although he was an arhat and had eradicated conceit and contempt, he continued to address fellow bhikṣus as outcastes. This occurred owing to the force of predispositions (latencies) established by his habitual behavior as a brahmin during five hundred previous lives.

Some schools speak of non-afflictive ignorance. To Vaibhāṣikas, this mainly impedes attaining all-knowing and consists of the four causes of non-knowingness: (1) non-afflictive ignorance of the profound and subtle qualities of a buddha, (2–3) ignorance due to the distant place or time of the object, and (4) ignorance of the nature of the object, such as the subtle details of karma and its effects. According to Prāsaṅgikas, non-afflictive ignorance refers to the latencies of ignorance and is not a consciousness.

## *Nirvāṇa*

All Buddhists seek nirvāṇa, but what is it? In general, nirvāṇa is a state or quality of mind. It is not an external place, nor is it something reserved for a select few. Nirvāṇa is attainable by each and every sentient being.

Nirvāṇa is the ultimate nature of our minds — the emptiness of the mind that has been totally cleansed of obscurations. Wisdom directly realizes the emptiness of all phenomena, including the emptiness of the mind itself. This wisdom gradually purifies the mind of defilements. As it does so, the emptiness of that mind, which is one nature with that mind, is also purified. The purified state of the emptiness of the mind that is free from afflictive obscurations is an arhat's nirvāṇa; the purified state of the emptiness of the mind that is free from both afflictive and cognitive obscurations is the nonabiding nirvāṇa of a buddha.

All produced things naturally cease because momentary disintegration is part of their nature; their cessation doesn't depend on some other cause or condition that is a counterforce. However, the true cessation that is the severance of afflictions does not occur in that way; it is not the natural disintegration of a thing when its causal energy ceases. True cessations come into existence due to wisdom, a counterforce that has been deliberately cultivated. Wisdom destroys ignorance such that it can never arise again; it severs the continuity of ignorance completely. By meditating on the reasonings that refute inherent existence and establish the lack of inherent existence, we generate the ārya path, the wisdom

that directly realizes emptiness. This wisdom apprehends the opposite of ignorance. Whereas ignorance apprehends phenomena as inherently existent, wisdom apprehends them as empty of inherent existence. In this way, wisdom uproots ignorance and its seeds. By the cessation and nonarising of ignorance, all other afflictions cease as well. Formative actions also cease, as do the remaining links.

There is debate whether nirvāṇa is a nonaffirming negative — a simple negation that doesn't imply anything — or an affirming negative — a statement that negates one thing while implying a positive phenomenon. An example of the former is “The I is empty,” where nothing positive is implied. An example of the latter is “The I that is empty,” which asserts a positive phenomenon — the I — while negating it being inherently existent.

Some people say nirvāṇa is an emptiness, the lack of inherent existence that never existed. This is a nonaffirming negative, a permanent phenomenon, and an ultimate truth. Others say nirvāṇa is the extinguishment of the afflictions, which did exist. It is an ultimate truth but not an emptiness. Here is how I see it. Nāgārjuna said (RA 42cd):

Nirvāṇa is said to be the cessation of the notions of things and non-things.

*Nirvāṇa is the extinction of afflictions* means not only that afflictions (things) have been extinguished but also that there are no inherently existent afflictions (non-things) in nirvāṇa. This beginningless absence of inherently existent afflictions is emptiness, an ultimate truth.

The absence of afflictions that is nirvāṇa, a true cessation, is a non-affirming negative. The afflictions can never again arise because their causes have been completely eradicated. If nirvāṇa were an affirming negative, a having-ceased of the afflictions rather than their total extinguishment, then the afflictions could arise once again. This is because the having-ceased of impermanent phenomena such as the afflictions can produce a result. However, in nirvāṇa, the afflictions and their causes can never again reappear. Nirvāṇa is the emptiness of the mind that is totally purified of afflictions. Nothing else is being affirmed.

Nirvāṇa is the state beyond sorrow, *sorrow* referring to saṃsāra, its duḥkha, and origins. Alternatively, *sorrow* alludes to inherent existence, and nirvāṇa being beyond sorrow indicates that it is the emptiness of inherent existence.

Four types of nirvāṇa are spoken of: natural nirvāṇa (*prakṛti-nirvṛta*),

nirvāṇa with remainder (*sopadhiśeṣanirvāṇa*), nirvāṇa without remainder (*nirupadhiśeṣanirvāṇa*), and nonabiding nirvāṇa (*apratiṣṭha-nirvāṇa*).

### *Natural Nirvāṇa*

Natural nirvāṇa is the ultimate nature of a mind that is primordially pure and devoid of inherent existence; it is the mind's emptiness of inherent existence. Candrakīrti says in *Clear Words*:

Since only emptiness has the character of stopping all elaborations,  
it is called *nirvāṇa*.

Emptiness itself is free from the elaborations of inherent existence. It appears in the way it exists to the main consciousness perceiving it; that is, to the wisdom directly realizing emptiness, emptiness appears without any elaboration of inherent existence at all. The mind has always been empty of inherent existence; this emptiness is called *natural nirvāṇa*, and by repeatedly realizing it we can attain the nirvāṇa that is the cessation of all duḥkha and its origins.

Natural nirvāṇa is not actual nirvāṇa — nirvāṇa that is the passing beyond the sorrow of saṃsāra. However, as emptiness, natural nirvāṇa acts as the basis that allows for the attainment of actual nirvāṇa. As the primordial nature of the mind, it is a quality of the mind, so attaining nirvāṇa does not entail procuring an external quality. Rather it involves recognizing a quality of the mind that is already present. When the mind is polluted, it is unawakened, and when it is purified it is awakened. Its empty nature is present in both instances. Because the mind lacks inherent existence, it can be freed from all pollutants that are based on grasping inherent existence.

In a more general way, natural nirvāṇa refers to emptiness. Everything around us — as well as the four truths and the basis, path, and result — are empty of inherent existence. In this way, all phenomena can be said to possess natural nirvāṇa or emptiness. However, only sentient beings can attain the nirvāṇa that is free from obscurations, because that nirvāṇa is the emptiness of the purified mind.

### *Nirvāṇa with and without Remainder*

According to the Svātantrikas and below, *remainder* in the terms *nirvāṇa with*

and *without remainder* refers to the ordinary aggregates, which are true duḥkha because they arise under the control of ignorance and polluted karma. Śrāvaka arhats first attain nirvāṇa with remainder, because at the time they eliminate all afflictive obscurations and attain liberation, they still have their ordinary bodies.<sup>71</sup> When they die and shed those bodies, there is nirvāṇa without remainder because the continuity of the polluted aggregates has ceased.

Vaibhāṣikas and Sautrāntikas, who do not accept one final vehicle — that is, they do not believe that all sentient beings can attain buddhahood — assert that at the time of nirvāṇa without remainder, when an arhat passes away, his or her continuum of consciousness ceases although the nirvāṇa without remainder exists.<sup>72</sup> Prāsaṅgikas, Svātantrikas, and Cittamātra Reasoning Proponents who assert one final vehicle — that all sentient beings will eventually attain buddhahood — say that the continuum of consciousness exists even after arhats leave their polluted bodies. At this time they are born in the Sukhāvātī pure land; there they have nirvāṇa without remainder because no suffering aggregates remain and they instead have a mental body. While these arhats still have the five aggregates, they are not polluted aggregates because they were not taken under the control of afflictions and polluted karma.

In Sukhāvātī, these arhats stay in meditative equipoise on emptiness for eons. In time, the buddhas will wake them from their meditative equipoise, teach them the Mahāyāna doctrine, and cause them to follow the bodhisattva path to full awakening. These arhats then generate bodhicitta and enter the bodhisattva path of accumulation. Unlike bodhisattvas who initially enter the bodhisattva path of accumulation and practice for three countless great eons to attain awakening, these arhats who later become bodhisattvas require a much longer time to attain awakening because the habituation of seeking only their own liberation is very strong. In the process of practicing the bodhisattva path, they often spend long periods of time in meditative equipoise on emptiness because they are captivated by the bliss of personal peace. It is difficult for them to generate great compassion and the great resolve that takes the responsibility for the welfare of all sentient beings.

Prāsaṅgikas have a unique meaning for nirvāṇa with and without remainder. *Remainder* refers to the appearance of inherent existence and the dualistic appearance of subject and object. Nirvāṇa without remainder is the final true cessation when arhats have completely overcome the afflictive obscurations and attain nirvāṇa, the passing beyond sorrow, where sorrow indicates the afflictive obscurations. This occurs during meditative equipoise on emptiness. This

nirvāṇa is free from the remainder of dualistic appearance and the appearance of inherent existence. Later, upon arising from meditative equipoise on emptiness, arhats again experience the false appearance of inherent existence due to cognitive obscurations. This is nirvāṇa with remainder of the appearances of inherent existence and of subject-object duality.

### *Nonabiding Nirvāṇa*

Nonabiding nirvāṇa is the purified aspect of the ultimate nature of a mind that is forever free of both afflictive and cognitive obscurations. It is called *nonabiding* because a buddha does not abide in either saṃsāra or in the personal nirvāṇa of a śrāvaka arhat. All Buddhist practitioners agree that saṃsāra is clearly undesirable and want to be free from it. For bodhisattvas, who wish to attain full awakening to best work for the welfare of sentient beings, the personal nirvāṇa of an arhat is limited because arhats spend eons in blissful meditative equipoise on emptiness while sentient beings continue to suffer in saṃsāra. Bodhisattvas seek the nirvāṇa of a buddha, a nirvāṇa that lacks the impediments of both saṃsāra and personal nirvāṇa. Nonabiding nirvāṇa, possessed only by buddhas, is free from the two extremes of saṃsāra and personal nirvāṇa.

Nonabiding nirvāṇa is also the nature dharmakāya of a buddha. It is the emptiness of a buddha's mind, the purified state of the natural buddha nature. Nonabiding nirvāṇa possesses two purities: natural purity and purity from adventitious defilements. Its natural purity is its primordial emptiness of inherent existence; its purity from adventitious defilements is the aspect of true cessation.

### *Pāli Tradition: Nirvāṇa*

In the Nālandā tradition, there is debate whether nirvāṇa is the cessation of something that once existed (the afflictions) or a state in which nothing existent was removed — an emptiness that is naturally free from inherent existence — and we now realize that emptiness. Most sages agree it is the latter. Pāli sūtras and commentators also speak of nirvāṇa in a variety of ways. In some cases, nirvāṇa refers to the elimination of the five aggregates subject to clinging; nirvāṇa is the state of cessation in which true duḥkha and the true origin of duḥkha have been eradicated. In other situations, nirvāṇa is spoken of as reality, the object of meditation of āryas' meditative equipoise.

## *Nirvāṇa as the Cessation of Duḥkha and Its Origin*

In the Buddha's description of his own awakening, he says (MN 26.18–19):

Then, monastics, being myself subject to birth, having understood the danger in what is subject to birth, seeking the unborn supreme security from bondage, nibbāna, I attained the unborn supreme security from bondage, nibbāna; being myself subject to aging, having understood the danger in what is subject to aging, seeking the unaging supreme security from bondage, nibbāna, I attained the unaging supreme security from bondage . . . [the passage continues with sickness, death, sorrow, defilement, in place of birth] . . . the knowledge and vision arose in me: “My deliverance is unshakeable; this is my last birth; now there is no renewal of being.”

I considered: “This Dhamma that I have attained is profound, hard to see and hard to understand, peaceful and sublime, unattainable by mere reasoning, subtle, to be experienced by the wise.” But this generation delights in worldliness, takes delight in worldliness, rejoices in worldliness. It is hard for such a generation to see this truth, namely, specific conditionality, dependent arising. And it is hard to see this truth, namely, the stilling of all formations [aggregates], the relinquishing of all attachments, the destruction of craving, dispassion, cessation, nibbāna . . .”

“This Dhamma” refers to the four truths. “Specific conditionality, dependent arising” refers to the true origins of duḥkha, and “the stilling of all formations, the relinquishing of all attachments, the destruction of craving, dispassion, cessation, nibbāna” is the standard expression of nirvāṇa in the sūtras. It is the extinguishment of the aggregates (formations), which are true duḥkha, and of all attachment and craving, which are true origins of duḥkha. The reference to true origins implies the truth of duḥkha and the reference to true cessation implies the true path. In nirvāṇa all four truths have been realized.

In some sūtras, nirvāṇa is said to be the eradication of attachment, anger, and ignorance (SN 38:1):

Friend Sāriputta, it is said, “Nibbāna, nibbāna.” What now is nibbāna?”

[Sāriputta]: “The destruction of sensual desire, the destruction of

animosity, the destruction of confusion: this, friend, is called nibbāna.”

This meaning fits in well with the etymological explanation of nirvāṇa. Literally, *nibbāna* indicates extinguishment. In Pāli, the word is formed from the negative particle *ni* and *vana*, which refers to craving. Thus nibbāna is the destruction or absence of the craving that propels repeated rebirths in cyclic existence. In Sanskrit, *nir* means “out” and *va* means “to blow.” Here *nirvāṇa* indicates that ignorance, the root of cyclic existence, and craving, the affliction that links one life to the next, have been blown out and extinguished. In this sense, nirvāṇa is the absence of something that once existed.

### *Nirvāṇa as the Object of Meditation*

Some sūtras in the Pāli tradition present nirvāṇa as the object of meditation of a supramundane path, where it refers more to a negation or lack of something that never existed. The Buddha says (AN 3.47):

There are, O monastics, these three characteristics that define the unconditioned [nibbāna]. What three? No arising is seen, no vanishing is seen, no changing while it persists is seen.

Unlike conditioned phenomena that arise and pass away, nirvāṇa — the unconditioned — is free from such fluctuation. Having no arising, nirvāṇa is not produced from causes and conditions. It never vanishes or ceases because of causes and conditions, and while it exists, it does not change or transform into something else. Here nirvāṇa is presented as a simple negation of attributes that never existed in it. The Buddha describes nirvāṇa (Udāna 8.4):<sup>73</sup>

One that is dependent [on craving and views] has wavering. One that is not dependent has no wavering. There being no wavering, there is calm. There being calm, there is no yearning. There being no yearning, there is no coming or going [birth and death]. There being no coming or going, there is no passing away or arising [succession of deaths and rebirths]. There being no passing away or arising, there is neither a here nor a there [this world or another world] nor an in-between-the-two. This, just this, is the end of duḥkha.

In another sūtra, the Buddha says (Ud 8.1):

There is, monastics, that base where there is neither earth, nor water, nor heat, nor air; neither the base of the infinity of space, nor the base of the infinity of consciousness, nor the base of nothingness, nor the base of neither-discrimination-nor-nondiscrimination; neither this world nor another world, neither sun nor moon. Here, monastics, I say there is no coming, no going, no standing still, no passing away, and no being reborn. It is not established, not moving, without support. Just this is the end of duḥkha.

And in another sūtra from the Udāna, he says (Ud 8.3):

There is, monastics, an unborn, unbecome, unmade, unfabricated. If, monastics, there were no unborn, unbecome, unmade, unconditioned, no escape would be discerned from what is born, become, made, fabricated. But because there is an unborn, unbecome, unmade, unfabricated, therefore an escape is discerned from what is born, become, made, fabricated.

Here nirvāṇa is a distinct phenomenon that has nothing to do with matter or with even the deepest samādhis in saṃsāra. Nirvāṇa is a negation — no coming, no going, not made, and so forth — without anything being posited in their stead. Because nirvāṇa exists, saṃsāra can be overcome; nirvāṇa is not total nonexistence. The language the Buddha uses in the above two passages reminds us of Nāgārjuna's homage in his *Treatise on the Middle Way*:

I prostrate to the perfect Buddha,  
the best of all teachers, who taught that  
that which is dependent arising is  
without cessation, without arising,  
without annihilation, without absolutism,  
without coming, without going,  
without distinction, without identity,  
and peaceful — free from fabrication.

The *Abhidhammattha Saṅgaha* explains nirvāṇa (CMA 258):

Nibbāna is termed supramundane and is to be realized by the knowledge of the four paths. It becomes an object of the paths and fruits, and is called nibbāna because it is a departure from craving, which is an entanglement.

Nirvāṇa is the object of only a supramundane path — the supreme, ultimate mind cognizing the supreme, ultimate object. Nirvāṇa is spoken of as having three aspects (CMA 260): (1) Because nirvāṇa is empty of ignorance, animosity, and attachment and because it is empty of the conditioned, it is *emptiness* (P. *suññata*). (2) Because it is free from the signs of ignorance, animosity, and attachment and is free from the signs of conditioned things, it is signless (P. *animitta*). (3) Because nirvāṇa is free from the hankering of ignorance, anger, and attachment and because it is not wished for by craving, it is wishless (P. *appaṇihita*).

Ānanda once asked Śāriputra if a monk could attain a samādhi in which he does not perceive any mundane phenomenon such as the four elements, the formless absorptions, this world and the world beyond, yet still be percipient. Śāriputra points to his experience of a state of samādhi in which this occurs (AN 10.7):

“Nibbāna is cessation of becoming, nibbāna is cessation of becoming” — one such perception arose in me and another such perception ceased. Just as when a fire of twigs is burning, one flame arises and another flame ceases, even so, “Nibbāna is cessation of becoming, nibbāna is cessation of becoming” — one such perception arose in me and another such perception ceased. On that occasion, friend, I perceived that nibbāna is the cessation of becoming.

Śāriputra indicates that nirvāṇa is the object of his perception. The commentary explains that he entered a samādhi of the fruition attainment of an arhat, which is an attainment in which the mind of the arhat is absorbed on nirvāṇa as an object. It is not cessation of discrimination and feeling or the attainment of cessation in which there is no discrimination or feeling, because Śāriputra is conscious. In this samādhi an arhat may focus on one aspect of nirvāṇa — for example, peaceful. It seems that Śāriputra is focusing on nirvāṇa and the cessation of becoming — that is, the absence of any active karma that

could bring rebirth.

Buddhaghosa refutes a number of misconceptions about nirvāṇa (Vism 16:67–74). The first is that nirvāṇa is nonexistent. Nirvāṇa exists because it is apprehended by the supramundane path. The fact that the limited minds of ordinary beings cannot perceive it does not render it nonexistent. If nirvāṇa were nonexistent, practicing the path would be futile and attempting to realize nirvāṇa would be useless.

Buddhaghosa also refutes the assertion that nirvāṇa is simply the disintegration of defilements and the ceasing of existence. If nirvāṇa were the destruction of craving, it would not be the unconditioned, because the destruction of craving is a conditioned event. Nirvāṇa is called the destruction of craving because realizing it brings the destruction of craving. However, it is not the destruction of craving because the destruction of craving is produced by causes; it has a beginning and an end, whereas nirvāṇa has no beginning or end and is definitely unconditioned. “It is uncreated because it has no first beginning,” Buddhaghosa says. There is no cause that brings about its arising; it is not made of matter.

The commentaries engage in many debates such as these, so there must have been a variety of viewpoints and a lot of discussion in India and Sri Lanka about what characterized nirvāṇa. We see the sūtras give two senses of nirvāṇa: It is the *goal* — a blissful state free from duḥkha and its origins — that can be experienced in this life. It is also the *object to be meditated on* — the unconditioned, the unborn, the unmoving that transcends all conditioned things.

Pāli commentators propose several ways to bring these two together and show that they are compatible. One is that nirvāṇa is metaphorically said to be the destruction of attachment, animosity, and confusion, but in actuality it is the unconditioned element that is seen by the attainment of the supramundane path and fruit. The realization of this unconditioned element has the effect of cutting away and finally eliminating attachment, animosity, and confusion. Because those defilements are destroyed in dependence upon seeing nirvāṇa, nirvāṇa is called the destruction of attachment, animosity, and confusion, although it is not the destruction of those three poisons.

While nirvāṇa is realized in time by a person, it does not come into existence through the act of being realized. As the unconditioned element, nirvāṇa always exists; it is the unborn, unoriginated, unchanging, deathless. Because nirvāṇa exists, the eradication of defilements is possible. The cultivation of the ārya path brings realization of the unconditioned, and this realization cuts off the

defilements. The meditator who has reached the extinction of defilements gains access to a special meditative attainment in which he or she can abide directly experiencing the bliss of nirvāṇa in this very life.<sup>74</sup> The object that is seen by that meditative attainment is the unborn, unceasing, unconditioned.

The experience of nirvāṇa is beyond our ordinary cognitive processes. To give us a rough idea of nirvāṇa, the Buddha sometimes presents analogies and synonyms. For example, the Buddha referred to nirvāṇa as the truth, the far shore, the subtle, the very difficult to see, the unaging, the stable, the undisintegrating, the unmanifest, the unproliferated, the peaceful, the deathless, the sublime, the auspicious, the secure, the destruction of craving, the wonderful, the amazing, the unailing, the unailing state, the unafflicted, dispassion, purity, freedom, nonattachment, the island, the shelter, the asylum, the refuge, the destination, and the path leading to the destination (SN 43:13–44).

The consciousness of an arhat realizing nirvāṇa is described (DN 11.85):

Where consciousness is signless, boundless, all-luminous,  
that's where earth, water, fire, and air find no footing.

There both long and short, small and great, fair and foul —  
there name and form are wholly destroyed.

With the cessation of consciousness this is all destroyed.

This consciousness is one where worldly phenomena such as the four elements and concepts such as “long” and “short” find no footing: they do not become totally nonexistent, but they do not appear to this mind of meditative equipoise focused on nirvāṇa. The ordinary mind of name and form that perceives sense phenomena is cut off.

Some people understand the last line to indicate that at arhatship, consciousness is totally ceased. However, it can also mean that with the temporary cessation of this dualistic mind, all appearances of veiled phenomena cease in the face of (in the experience of) profound meditative equipoise.

There are similarities as well as differences in the description of nirvāṇa in the Pāli and Sanskrit traditions. In the Pāli tradition, nirvāṇa is the unconditioned, in contrast to saṃsāra, which is conditioned. Nirvāṇa is completely separate and doesn't have anything to do with the saṃsāric world governed by dependent arising. Nirvāṇa, which is reality, is also distinct from selflessness, which is a characteristic of saṃsāric phenomena.

In the Sanskrit tradition, nirvāṇa is an emptiness, and emptiness is equivalent

to selflessness and ultimate reality. Emptiness is also compatible with dependent arising, which includes dependent designation. Being empty and existing by mere designation are characteristics of both saṃsāra and nirvāṇa. In addition, because phenomena arise dependently, they are empty of inherent existence.

### *Nirvāṇa and Liberation*

Although liberation and an arhat's nirvāṇa often seem to be the same, in some contexts they may be somewhat different. In the Sanskrit tradition, *liberation* (*vimukti*, T. *rnam par grol ba*) may refer to liberation itself or to the path leading to liberation. Liberation itself is true cessation — nirvāṇa — and is unconditioned. The path to liberation is a conditioned phenomenon. It is spoken of in the context of five heaps — ethical conduct, concentration, wisdom, liberation, and liberating wisdom. Here liberation is in the nature of the aspiration for liberation, and liberating wisdom is in the nature of the wisdom that liberates. Both are elements of the liberating path that leads to cessation. *Mokṣa* (T. *thar pa*) is a true cessation that is the abandonment of afflictive obscurations. It is also translated as “liberation” and refers to nirvāṇa.

In the Pāli tradition, liberation (P. *vimutti*) and nirvāṇa differ in that nirvāṇa is what is realized in the experience of liberation. Nirvāṇa is unconditioned, whereas liberation is a conditioned event. In transcendental dependent origination, liberation has the proximate cause of dispassion and is the proximate cause of knowledge of the destruction of all pollutants. In contrast, nirvāṇa is “unborn, unconstructed, unmade, unconditioned.” It is ever-existent and does not arise through causes and conditions. Liberation is the release of the mind from the defilements, especially the three pollutants. To give an analogy: nirvāṇa is like a building and liberation is the act of entering it; or nirvāṇa is like the area beyond the finish line and liberation is the act of crossing that line.<sup>75</sup>

### *Bodhi*

*Bodhi* is generally translated as “awakening” or “enlightenment,” the final goal of our spiritual practice. A buddha's awakening is a state in which all defilements of the mind have been abandoned and all excellent qualities and realizations have been completed. The basis for attaining awakening is the essentially pure nature of mind — the natural purity of the mind — which is

present in all of us. When the pure nature of the mind is obscured by afflictions, we are not awakened; when afflictions, their seeds, and their latencies have been completely purified, we are awakened. Thus awakening has to do with the nature of our minds.

In the Perfection of Wisdom sūtras, the essential pure nature of the mind is called *natural nirvāṇa*. These sūtras also say, “The mind is devoid of mind because the nature of the mind is clear light.” Both of these passages indicate that the nature of the mind does not exist inherently. The emptiness of ordinary beings’ minds has not been cleansed of obscurations; āryas have attained a certain degree of purity; the nature of buddhas’ minds is completely pure. In *Praise to the Sphere of Reality (Dharmadhātu-stava)*, Nāgārjuna says (DS 2):

When that which forms the cause for all saṃsāra  
is purified along the stages of the path,  
this purity itself is nirvāṇa;  
precisely this, the dharmakāya, too.

Here *the cause for all saṃsāra* could be understood as the unpurified aspect of the emptiness of inherent existence of the mind, according to Sūtrayāna, or as the unpurified subtlest clear light mind, according to Tantrayāna. Through cleansing that “cause,” nirvāṇa is attained. That nirvāṇa can be characterized as the truth body, specifically the nature truth body of a buddha, which is the final true cessation and the emptiness of the perfectly purified mind. The nature truth body is one nature with the wisdom truth body, the omniscient mind of a buddha. Here, the nature truth body is the meaning of *bodhi*.

## 12 | The Mind and Its Potential

ONCE WE HAVE recognized the unsatisfactory nature of saṃsāra and identified its causes, the questions arise: Is liberation possible? If so, how do we attain it? To answer these, we must understand our mind, which is the basis for saṃsāra and nirvāṇa.

### *The Mind's Potential*

As sentient beings — beings with minds that are still obscured — we have great potential, our greatest potential being to become fully awakened buddhas, omniscient beings who have the wisdom, compassion, power, and skillful means to be of the greatest benefit to all.

A natural quality of mind is its ability to cognize objects. This capacity to be aware of and to know objects is already present; it does not have to be newly cultivated. Nevertheless, various obstructions can inhibit the mind from cognizing objects. When these are eliminated, the mind will have no difficulty knowing all phenomena.

One type of obstruction is physical matter; a wall obstructs us from seeing what is beyond it. When the wall is removed, our visual consciousness can see what is there. A second obstruction is distance and size: the object is too far away or too small for our cognitive faculties to come in contact with it. To some extent telescopes and microscopes have helped alleviate this difficulty. In these cases, we can know the object not because the mind has become clearer and better able to apprehend the object but because the object is brought within the range of our operable cognitive faculties.

A third difficulty concerns the cognitive faculties that are the bases of consciousness. The visual consciousness is able to perceive only visible forms, not sounds or other sense phenomena, because it is dependent on the eye faculty. If a healthy eye faculty is absent, the visual consciousness cannot perceive visible forms.

The type of brain a being has also influences what that being can perceive. A mental faculty dependent on an animal brain and one dependent on a human brain have different ranges of objects they can know. Due to the complexity of the brains of these two beings, the mental faculties and consciousnesses depending on them differ in what they can perceive and understand.

Furthermore, a mind proliferating with wrong views and overwhelmed with disturbing emotions is too distracted and preoccupied to turn its attention to other objects. The range of what such afflictive mental states can know becomes very limited. A calm mind can be more astute.

A further difficulty in knowing objects is that some objects are so subtle, profound, or vast that the ordinary mind is unable to cognize them. To know these objects, single-pointed concentration and/or wisdom that is freed from wrong conceptions is needed.

Another type of obstruction is subtle defilements on the mind that produce false appearances. These prevent us from attaining buddhahood, the state of omniscient mind. When these subtle defilements are removed, the mind will naturally perceive all phenomena. The main obstructions to omniscience are the latencies of afflictions, the subtle appearance of inherent existence that they produce, and the defilement preventing seeing the two truths simultaneously. After the wisdom realizing ultimate reality eliminates the afflictive obscurations, it must cleanse the cognitive obscurations from the mind. When every last defilement is removed, the mind is totally purified and its excellent qualities are fully developed. This is the state of buddhahood in which the capabilities of the mind have no limits. The effectiveness of a buddha's activities depend not on the abilities of that buddha but on the receptivity of sentient beings.

*Bhagawan*, or “endowed victor,” is one epithet of the Buddha. The Buddha is endowed with all excellent qualities and is victorious in overcoming the four *māras* — the polluted aggregates, afflictions, death, and distraction to external objects. Since the mind has the natural capacity to be aware and to understand, when all obscurations have been removed, it will be able to directly perceive all phenomena. A buddha's omniscient mind is able to realize simultaneously both veiled and ultimate truths with a single consciousness.

---

## REFLECTION

1. Review the various factors that obstruct the mind's knowing phenomena.
  2. Contemplate that all of these can be eliminated.
  3. Rest in the awareness of the potential of your mind to become omniscient.
- 

## *Is Liberation Possible?*

To review, disturbing emotions and wrong views are called afflictions because when they arise in the mind they afflict us and disturb our mental peace. In addition, they motivate us to do actions that disturb and afflict the peace of others. Fortunately, these afflictions can be removed, enabling us to attain liberation, a true state of peace that does not fluctuate according to external circumstances. Several factors make liberation possible.

(1) *The basic or true nature of the mind is pure.* The basic nature of the mind is clear like water. Dirt in a glass of water isn't the nature of the water and can be removed. No matter how murky the water may be, its essential quality of clarity is never lost. This basic conventional nature (*svabhāva*) of the mind is clear and cognizant. It is the basis upon which awakening can be attained, and as such it is the ultimate source of our confidence that awakening is possible. Inanimate objects such as stones and trees cannot attain awakening because they lack the qualities of clarity and cognizance that only a mind possesses.

(2) *The afflictions are adventitious;* they are not part of the nature of the mind. Dharmakīrti says (PV 2.208ab):

The nature of the mind is clear light;  
the defilements are adventitious.

Afflictions have not penetrated into the basic nature of the mind. The fact that afflictions are not always present in the mind indicates that every instance of the mind's clarity and cognizance is not associated with afflictions. Sometimes our minds are peaceful and calm. Afflictions may arise and after a while pass away. If they were inherently part of the true nature of the mind, they would

always be present and it would be impossible to eliminate them. But this is not the case.

The purest form of mind is the fundamental innate clear light mind. In ordinary beings this subtle clear light mind is neutral; it has never been and can never become nonvirtuous. However, by engaging in special yogic practices, it can be transformed into a virtuous state. From this perspective, too, we see that defilements are not inherent in the nature of the mind.

(3) *It is possible to cultivate powerful antidotes* — realistic and beneficial mental states — that eradicate the afflictions. Saying that defilements are adventitious means that when suitable conditions are present, the defilements can be removed from the basic nature of the mind. It does not mean that at one time afflictions did not exist and later came into existence. Rather, afflictions are beginningless and have continuously obscured our minds until now. They can be ceased completely when the proper antidote is applied. In *Praise to the Sphere of Reality* (DS 20–21), Nāgārjuna compares the mind to asbestos cloth that is filled with dirt. When put into fire, the dirt will burn, but not the cloth. Similarly, the fire of the wisdom realizing emptiness will destroy defilements, but the clear light mind will remain unscathed.

Afflictions are rooted in the ignorance that misapprehends reality. Ignorance grasps phenomena as inherently existent, whereas reasoning proves that in reality phenomena are empty of inherent existence. Since ignorance does not rest on a valid foundation, it can be overcome by the wisdom realizing emptiness. When ignorance is severed from its root, the afflictions that depend on it are also eradicated and can never return. Excellent qualities such as compassion cannot be undermined by wisdom because they rest on a valid foundation. Dharmakīrti affirms (PV1.220–21):

All flaws, being susceptible to decrease and increase, have counterforces (*vipakṣa*); hence due to having inculcated the counterforces through habituating oneself to them, at some point the pollutants should be eliminated.

The nature of the mind is such that it is free of pollutants and by nature it [a mind that has realized emptiness] has a real [undistorted] object. As such, it cannot be counteracted by what is opposite to it because, even if one were to attempt to do so, the mind is naturally inclined toward its nature.

## REFLECTION

---

1. Reflect that the basic or true nature of the mind is pure and untainted.
  2. Consider that the afflictions that plague your mind and cause so many disturbances in your life are adventitious; they are not embedded in the nature of the mind.
  3. Reflect that it is possible to cultivate powerful antidotes to each and every affliction and obscuration.
  4. Conclude that the possibility to attain liberation exists within you and that, given your precious human life with all conducive factors for practicing the path, you have the ability to attain liberation and full awakening.
- 

### *Excellent Qualities Can Be Cultivated Limitlessly*

In *Commentary on Reliable Cognition*, Dharmakīrti explains why it is possible to cultivate the mind's excellent qualities limitlessly and to transform our ordinary mind into a buddha's fully awakened mind. Three factors make this possible.

(1) *The clear and cognizant nature of the mind is a stable basis for the cultivation of excellent qualities.* It is firm and continual; there is nothing that can cease it. For example, if we continuously boil water, it will dry up and nothing will remain. There is no basis for limitlessly boiling water. Excellent qualities cannot be cultivated limitlessly on an unstable basis such as the physical body because it falls ill, ages, and eventually dies. However, the clear light mind is a stable and continuous basis for cultivating excellent qualities. The more we train in excellent qualities, the more those qualities will be enhanced limitlessly until they are fully perfected in the state of buddhahood.

(2) *The mind can become habituated to excellent qualities that can be built up cumulatively.* Excellent mental qualities can be built up gradually without

having to begin anew each time we focus on developing them. A high jumper cannot develop his or her ability limitlessly. Each time the bar is raised, he or she must cover the same distance he jumped before, plus some more. The mind's nature is different. The energy from cultivating a quality one day remains, so that if that same quality is cultivated the next day, it builds on what was previously accomplished without having to reestablish it. We do not need to exert the same degree of energy to get to the same level on the second day, and that same effort will serve to increase that excellent quality. Of course this requires consistent training on our part, otherwise our spiritual "muscles" will atrophy. But if we practice regularly, our energy can be directed to enhancing the excellent qualities continuously until the point where they become so familiar that they are natural and spontaneous.

(3) *Excellent qualities can be enhanced, but never diminished, by reasoning and wisdom.* Constructive attitudes and emotions have a valid support in reasoning and wisdom. They can never be harmed by the wisdom realizing reality. Compassion, faith, integrity, generosity, concentration and all other excellent qualities can be cultivated together with wisdom and are enhanced by wisdom. For this reason, too, they can be cultivated limitlessly.

---

## REFLECTION

1. Reflect that the clear and cognizant nature of the mind is a stable basis for the cultivation of excellent qualities.
  2. Remember that the mind can become habituated to excellent qualities, which can be built up cumulatively.
  3. Contemplate that excellent qualities can be enhanced, but never diminished, by reasoning and wisdom.
  4. Understanding these points, feel confidence arise in yourself that, with effort and training, your mind can be transformed into the mind of a buddha.
-

## *Afflictive Mental States and the Nature of the Mind*

One moment of an affliction such as anger has two facets: the clarity and cognizance of the primary consciousness, and the mental factor of anger that pollutes it. When a mind of anger is manifest, these two cannot be separated. Does that mean that the clear and cognizant nature of the mind is defiled at that time?

According to Sūtrayāna, from the viewpoint that the primary consciousness and the mental factor of anger are concomitant in that single mental event, it is said both are defiled. However, this is not the whole picture, because anger can be extracted. When it is counteracted, the clear and cognizant consciousness remains. This consciousness is not defiled and its continuity can go on to awakening, since clarity and cognizance are also the nature of the awakened mind. The consciousness that is clear and cognizant is said to be pure, while the mental state of anger, which cannot continue on to awakening, is afflictive and adventitious.

Within Tantrayāna, both Dzogchen and the New Translation schools speak of the subtlest mind, which may be called *rigpa* or the primordial clear light mind. In the Dzogchen system, *rigpa* is said to pervade all states of mind, whether they are coarse — such as the consciousnesses manifest during our everyday lives — or subtle — such as the subtlest clear light mind that arises after the coarse consciousnesses have absorbed, for example, while dying or during special tantric meditations. *Rigpa* is undefiled, and because it pervades all mental states, the clear and cognizant aspect of those consciousnesses is undefiled.

Both sentient beings and buddhas possess the primordially pure awareness of *rigpa*, and from that perspective there is no difference between them. However, there is a great difference between having and not having the two obscurations, so sentient beings must still practice the path because defilements do not vanish by themselves.

From the Dzogchen perspective, when an afflictive mental state such as hatred or jealousy is manifest, the *rigpa* or clear light mind that pervades that coarse mind is not defiled. There is still the potential for *rigpa* to shine forth. This is the source of statements in the Dzogchen literature that resemble Nāgārjuna's assertion in *Praise to the Sphere of Reality*: "Within afflictions, wisdom abides." Here "wisdom" refers to the cognitive component of that mind

— its clarity and cognizance — not to actual wisdom. That cognitive component is called wisdom because it is the cause for wisdom to arise in the future.<sup>76</sup> The meaning is that amidst the afflictions, this undefiled, clear, cognitive component, or rigpa, exists.

In the New Translation schools of Tantrayāna, this primordially pure mind is called the clear light mind. Similar to rigpa, it continues from our present unawakened state to full awakening. But unlike rigpa, which is manifest while the coarse consciousnesses are functioning, the innate clear light mind is said to manifest only when the coarse consciousnesses — which include the afflictions — have absorbed at the time of death or due to special tantric meditative practices.

Dzogchen and the New Translation systems agree that when the coarser levels of mind are manifest, the subtlest mind is also present. As long as there is a being, a person, it is present. They differ on the issue of whether it is active or dormant while the coarse minds are functioning. Dzogchen says that rigpa is active and manifest at that time, and the New Translation schools say that the subtlest clear light mind is dormant.<sup>77</sup> Dzogchen teaches a method whereby one can experience rigpa even while the coarse consciousnesses are functioning. The New Translation schools rely on dissolving the coarse consciousnesses and the winds that are their mount by means of special tantric meditation exercises to make manifest the subtlest clear light mind. Both agree on the necessity of accessing this subtlest mind because, when used to realize emptiness, it swiftly eradicates obscurations.

## *The Equality of Saṃsāra and Nirvāṇa*

From the perspective of their ultimate nature, all the afflictive phenomena of saṃsāra and all the purified phenomena of nirvāṇa are equally empty. This is the context of the expressions the “equality of saṃsāra and nirvāṇa,” “unity of saṃsāra and nirvāṇa,” “one taste of all phenomena,” and similar phrases found in sūtras and tantras. Nāgārjuna mentioned this in *Treatise on the Middle Way*, Haribhadra spoke of it in his commentary to *Ornament of Clear Realizations*, and Tsongkhapa explained it in his *Elucidation of the Five Stages of Guhyasamāja*.

From the perspective that the emptiness of the mind is called natural nirvāṇa

and that this emptiness of the mind exists while we are in saṃsāra, it is said that saṃsāra and nirvāṇa are not different. The ultimate nature of saṃsāra and nirvāṇa is the same; it is the “one taste” of emptiness. In this context, it is said that if one realizes the nature of saṃsāra, one actualizes nirvāṇa.

Since saṃsāra and nirvāṇa are different entities conventionally, they may be called “the manifold.” In that their ultimate nature is the same taste — emptiness — it is said that the one taste is manifold and the manifold has one taste. This means that emptiness is the nature of all the manifold phenomena of saṃsāra and nirvāṇa, and all these manifold phenomena have the same ultimate nature, the emptiness of inherent existence. In other words, from the perspective of the substratum — the objects that have this empty nature — phenomena are many and varied. But from the perspective of their final nature, they share the one taste of emptiness.

Understanding that saṃsāra and nirvāṇa are equal in being empty of true existence is important for ordinary unawakened people who grasp both saṃsāra and nirvāṇa as truly existent. When such people view saṃsāra and nirvāṇa, they don't just see them as bad and good on the conventional level but also grasp them as inherently so. Such grasping diminishes our confidence in being able to free ourselves from saṃsāra and actualize nirvāṇa. This is because our minds not only highlight the faults of saṃsāra but also see them as fixed and unchangeable, as if they could never be abandoned. Similarly, we see nirvāṇa as independently good and thus too exalted for us to actualize.

Understanding that saṃsāra and nirvāṇa are of one taste counteracts the grasping that binds us to saṃsāra. Seeing both of them as empty of true existence, we become confident that however many faults saṃsāra has, they can all be eliminated, and that all the excellent qualities of nirvāṇa can be actualized. It is a matter of stopping the causes for saṃsāra and creating the causes to attain nirvāṇa.

Saying “saṃsāra and nirvāṇa are equal” does not mean that being in saṃsāra is the same as being in nirvāṇa or that we need not try to cease saṃsāra and attain nirvāṇa. Conventionally, saṃsāra and nirvāṇa are different; the bases of their emptiness are different. A mind in saṃsāra is one trapped in duḥkha by afflictions and karma; a mind in nirvāṇa is one that has generated the true path and actualized the final true cessation. Although saṃsāra and nirvāṇa are said to be equal from the viewpoint of their ultimate nature, emptiness, on the conventional level each has its own distinctive features. Saṃsāra is to be abandoned and nirvāṇa is to be actualized.

Some people may glibly say, “Saṃsāra and nirvāṇa are the same. Good and bad don’t exist; awakening is beyond such dualistic distinctions,” and on that basis, they ignore ethical conduct. This may sound well and good, but the moment their stomach hurts or they are criticized, these people scream, “This is bad! Stop it!” To avoid such dilemmas, it is important to study and correctly understand the meaning of some of the enticing phrases in the scriptures.

## *Levels of Mind*

Both Sūtrayāna and Tantrayāna speak of different levels of mind. In Sūtrayāna, the principal factor distinguishing various levels of mind is the depth of single-pointed concentration. Beings in the desire realm have coarse states of mind; those in the four form realms and four formless realms have progressively subtler and more refined states of mind corresponding to their progressively deeper states of concentration. The subtlest mind is that of the peak of saṃsāra (neither-discrimination-nor-nondiscrimination). This mind is considered coarse compared with the subtlest mind presented in Tantra.

In highest yoga tantra, the levels of mind are differentiated by the physical condition of the body. When the sense faculties are active, the sense consciousnesses function; they are the coarsest level of mind. The dream state is a little subtler because at that time the sense faculties do not function, although the brain is still active and the eyes move during REM sleep. Deep sleep and fainting are even subtler. The subtlest level of mind, which can function apart from the physical body, manifests at the time of death. This fundamental innate clear light mind (T. *gnyug ma lhan cig skyes pa'i 'od gsal gyi sems*) is accompanied by a very subtle wind, which is its mount. This subtlest mind and subtlest wind are one entity but nominally different; that is, one cannot exist without the other although they can be spoken of separately.

The term *clear light* (*prabhāsvara*) has various meanings, depending on the context. In the Sūtra Vehicle, it refers to (1) the clear and cognizant nature of the conventional mind, which is the *subject clear light* (here, saying the mind is clear light implies that the afflictive obscurations and cognitive obscurations are adventitious and do not exist in the nature of the mind), and (2) the emptiness of the mind, which is the *object clear light*, the ultimate nature of the mind.

In both Sūtra and Tantra, the subject clear light is the awareness that

cognizes the object clear light. However, the subject clear light mind spoken of in Tantra is far subtler. This innate clear light mind (*lhan cig skyes pa'i 'od gsal gyi sems*) is a special mind because it is the source or basis of all phenomena of saṃsāra and nirvāṇa. This subtlest mind continues from one life to the next. It is not a soul or self; it changes moment by moment and is empty of inherent existence. At death the coarser levels of mind absorb into the innate clear light mind, and after rebirth, the coarser consciousnesses reemerge from the basis of the innate clear light mind. When these coarser levels of consciousness exist, constructive and destructive thoughts and emotions arise and karma is created. The result of afflictive thoughts and actions is saṃsāra; the result of thoughts and actions purified by the realization of emptiness is nirvāṇa. The presence of ignorance or wisdom determines whether this mind is in saṃsāra or nirvāṇa.

It is said that the innate clear light mind is the creator in that it is the source or basis of saṃsāra and nirvāṇa. This indicates that phenomena do not arise causelessly nor are they created by an external creator. To make an analogy: Owing to the climate in a particular place, plants and animals come to exist there. From that perspective, we say the climate of a place creates the living things there because it acts as their basis. Similarly, because the innate clear light mind exists, all the phenomena of saṃsāra and nirvāṇa become possible.

Saying that the clear light mind is the source of all phenomena in saṃsāra and nirvāṇa is a general statement; it does not mean that the subtlest mind-wind is the substantial cause for phenomena in saṃsāra and nirvāṇa. Nor does it mean that all phenomena arise from my clear light mind or your clear light mind. Furthermore, it is not the same as the Cittamātrin assertion that all phenomena are the nature of the mind, which refers to their unique tenet that an object and the consciousness perceiving it arise from the same substantial cause, a latency on the foundation consciousness.

Saying that the clear light mind is the source of all phenomena in saṃsāra and nirvāṇa means that all phenomena exist in relation to the mind. All phenomena exist by being merely designated by mind. This conclusion is arrived at because all other possibilities — such as objective existence and existence from its own side — are untenable.

The *Kālacakra Tantra* explains that the ultimate goal, buddhahood, is based on the subtlest clear light mind. The coarse levels of mind cannot be transformed into the omniscient mind of a buddha. Only the subtlest mind-wind, which is beginningless and endless, can continue to buddhahood. By employing the special practices of highest yoga tantra to neutralize the coarser levels of mind,

the defilements present with the coarser levels of mind dissolve, and subtler states of mind arise. When accompanied by wisdom, these progressively subtler levels of mind have more power to effect change and purify the mind. When the subtlest mind-wind is activated, made blissful, and used to realize emptiness directly, it is extremely effective in rooting out the deepest and most entrenched obscurations. When all obscurations have been removed, this innate clear light mind becomes a buddha's omniscient mind, the wisdom truth body of a buddha. Its emptiness becomes the nature truth body, and the subtlest wind transforms into a buddha's form bodies — the enjoyment and emanation bodies by which a buddha benefits sentient beings. The key to the tantric path is learning how to make manifest the subtlest mind-wind and use it to accumulate merit and wisdom and attain full awakening.

This begins with gaining a comprehensive understanding of the entire Buddhist path from beginning to end, and then generating the three principal aspects of the path: the aspiration for liberation, bodhicitta, and the correct view of emptiness. When properly prepared in this way, we then receive empowerment into highest yoga tantra, abide with the tantric ethical restraints, and meditate on the generation and completion stages. This causes the winds to enter, remain, and dissolve in the central channel, at which time all coarser levels of mind cease and the subtlest mind-wind is activated. This is made blissful and used to realize emptiness. The stage of *example clear light* (T. *dpe'i 'od gsal*) is attained when this subtle blissful mind-wind realizes the object clear light — emptiness — via a conceptual appearance. When it cognizes emptiness directly, the stage of *actual clear light* (T. *don gyi 'od gsal*) is attained. Someone who has this attainment will become a buddha in that very life.

The discussion of clear light relates to the topic of buddha nature — the potential of each and every sentient being to become a fully awakened buddha — to which we now turn.

## 13 | Buddha Nature

**A**LL BUDDHIST TRADITIONS accept that excellent qualities can be cultivated and that defilements can be forever eliminated from the mind. What is the basis upon which this occurs? Each tradition describes it somewhat differently.

### *The Mind's Potential according to the Pāli Tradition*

Although the term *buddha nature* is not used in the Pāli scriptures to describe the mind's potential to attain liberation, the Buddha identified certain characteristics that reveal spiritual practitioners' inclinations toward liberation. Characteristics such as having modest desire and a sense of contentment signify that a person is a genuine spiritual practitioner aiming for liberation. Practitioners endeavor daily to cultivate these virtuous characteristics that indicate their potential to gain realizations.

In the sūtra *Luminous*, the Buddha spoke of the clear nature of the mind that is tainted by adventitious defilements that can be removed (AN 1.51–52):

This mind, O monastics, is luminous, but it is defiled by adventitious defilements. The uninstructed worldling does not understand this as it really is; therefore for him there is no mental development.

This mind, O monastics, is luminous, and it is freed from adventitious defilements. The instructed ārya disciple understands this as it really is; therefore for him there is mental development.

### *Ārya Disposition according to the Vaibhāṣikas and Sautrāntikas*

The tenet schools put forth assertions about the disposition (trait, lineage, T.

*rigs*) that accord with their general presentation of the basis, path, and result of practice. For Vaibhāṣikas, the ārya disposition (T. *'phags pa'i rigs*) is the mental factor of nonattachment that acts as a cause for its own resultant ārya path. Since Vaibhāṣikas emphasize craving as a formidable cause of cyclic existence, it makes sense that they assert nonattachment as both the antidote to craving and the disposition in sentient beings that has the potential to bring the realizations of the ārya path and liberation.

Contentment with what we have and lack of greed for what we do not have are the source of āryas' pristine wisdom. While nonattachment in the mindstream of an ordinary person is polluted in that it is associated with ignorance, when it is associated with an ārya's pristine wisdom, it is unpolluted. Guṇaprabha's *Sūtra on the Code of Ethical Conduct (Vinayasūtra)* explains that āryas with the disposition have four qualities: (1–3) They are satisfied with whatever food and drink, shelter, and robes they have. (4) They take joy in meditation and in overcoming what is to be abandoned.

The first three qualities are the means to actualize the ārya path, and the last is the actual cause to generate the realizations of the ārya path that bring true cessation. The first three are also the means to exhaust the sense of I and mine, while the last is the means to exhaust ignorance. Everyone seeking liberation or full awakening cultivates these four qualities in order to attain their goal.

According to Sautrāntikas, the disposition is the potential or seed for the arising of the unpolluted mind (T. *zag med sems kyi nus pa*), the pristine wisdom of the āryas. All sentient beings have this potential because all of them at one time or another have experienced happiness. Since happiness is the result of virtue, everyone has virtue and thus has the potential for the unpolluted mind. This potential is nourished through learning, reflecting, and meditating on the Dharma in the present life. However, if someone's roots of virtue are cut by his engagement in extremely destructive actions, this seed cannot grow and may even be destroyed.

In general, Vaibhāṣikas and Sautrāntikas assert that only sentient beings who will become wheel-turning buddhas — buddhas that initially teach the Dharma in a time and place where it is absent — will attain full awakening. All other sentient beings will attain arhatship. At the time they have completely abandoned all afflictive obscurations, arhats attain nirvāṇa with remainder — the remainder being their polluted bodies produced by afflictions and karma. When they pass away from that life and shed their polluted bodies, they attain nirvāṇa without remainder. At this time, the polluted aggregates no longer remain and

the continuity of the mental consciousness is severed, which precludes their entering the Bodhisattva Vehicle.

## *Buddha Nature according to the Cittamātra School*

In Mahāyāna literature, buddha nature, or buddha disposition (*buddhagotra*),<sup>78</sup> is discussed from three perspectives: the Cittamātra, Madhyamaka, and Vajrayāna. All three speak of the naturally abiding buddha disposition and the transforming buddha disposition.

According to Cittamātrins, as explained by Asaṅga in the *Compendium of the Mahāyāna (Mahāyānasamgraha)*, buddha disposition is the latency, seed, or potency that has existed since beginningless time and has the potential to give rise to the three bodies of a buddha. A conditioned phenomenon, the buddha disposition is the seed of unpolluted pristine wisdom (T. *zag med ye shes kyi sa bon*). Saying the buddha disposition is a latency fits in well with the Cittamātra school's assertion that everything arises as a result of latencies on either the foundation consciousness or the mental consciousness. When this latency of the unpolluted pristine wisdom has not yet been nourished by learning, reflecting, and meditating, it is called the naturally abiding buddha disposition, because it is beginningless. When the same latency has been nourished by learning, reflecting, and meditating on the Dharma, it is called the transforming buddha disposition. It is the same latency, the difference being whether or not it has been activated by means of Dharma practice.

Initially, as the *naturally abiding buddha disposition*, it is a simple latency that has three characteristics: (1) It has existed since beginningless time and continues from one life to the next uninterruptedly. (2) It is not newly created but is naturally present. (3) It is carried by the foundation consciousness according to the Cittamātra Scriptural Proponents and by the mental consciousness (the sixth consciousness) according to the Cittamātra Reasoning Proponents. This is so because sensory consciousnesses are unstable and only intermittently present.

When the naturally abiding buddha disposition is awakened and transformed by means of learning, reflecting, and meditating, it brings the realization of the ārya path and, at that time, it is called the *transforming buddha disposition*. In particular, when meditation on great compassion has progressed to the point

where the great resolve that takes responsibility to work for the welfare of all sentient beings arises, the Mahāyāna disposition has been awakened.

Citing the *Sūtra Unravelling the Thought* (*Samdhanirmocana Sūtra*), Cittamātra Scriptural Proponents assert three final vehicles — the Śrāvaka and Solitary Realizer Vehicles that culminate in arhatship and the Bodhisattva Vehicle that brings full awakening. The doctrine of three final vehicles states that once śrāvaka and solitary realizer practitioners attain arhatship, they will abide in meditative equipoise on emptiness forever and will not later enter the Mahāyāna and attain the full awakening of buddhahood. The Cittamātra Scriptural Proponents base this on their belief that there are five types of disposition (lineage) — śrāvaka, solitary realizer, bodhisattva, indefinite, and severed. Here “disposition” connotes a source of excellent qualities, and each sentient being has the latency for one of the five dispositions. This latency is an internal predisposition that exists naturally in each sentient being’s foundation consciousness that inclines him or her toward a particular spiritual path.

People display certain signs that are indicative of their buddha disposition. Those with the śrāvaka disposition have strong determination to be free from saṃsāra; they avoid nonvirtue and purify destructive karma, are moved by teachings on the four truths, and live ethically. They take prātimokṣa precepts with the aspiration for their own liberation and dedicate all the merit from their practice for this goal.

Those having the solitary realizer disposition have few afflictions and weak compassion, so they dislike busyness and prefer solitude. Teachings on the twelve links of dependent origination touch them deeply and they meditate primarily on this. Like śrāvakas, they purify destructive karma, create constructive karma, and have strong determination to be free from saṃsāra. Their motivation and dedication are directed toward the liberation of a solitary realizer arhat.

Those with the bodhisattva or Mahāyāna disposition are naturally empathetic and compassionate. They purify and abandon nonvirtue, create virtue, and take prātimokṣa and bodhisattva precepts with the aspiration to attain the full awakening of a buddha. Seeking to work for the welfare of sentient beings, they practice the six perfections and have fortitude to engage in the bodhisattvas’ deeds. Their motivation and dedication is for the attainment of buddhahood.

Persons of these three dispositions are definite in their path. They will not change vehicles but will proceed to the attainment of their own vehicle.

At present, it is uncertain which vehicle those of indefinite disposition will

enter. Depending on the spiritual mentor they meet and the Buddhist teachings they learn in the future, they will develop an inclination toward one vehicle or another.

Those whose lineage is severed (*icchāntika*) have engaged in extremely destructive actions or strongly adhere to pernicious wrong views. They have little merit, great negativity, and lack integrity and consideration for how their actions affect others. Not wishing to abandon nonvirtue and lacking insight into the unsatisfactory nature of saṃsāra, they have no interest in liberating themselves or others. Even if they dabble in the Dharma, their motivation is one seeking the pleasures of saṃsāra. Having cut their roots of virtue, they are in a state where, either temporarily or perpetually, they cannot attain liberation or awakening.<sup>79</sup>

This perspective on the buddha disposition and on three final vehicles is supported by Cittamātra tenets: Because a being's disposition is truly existent, it cannot change into the disposition of another vehicle. Since it can bring only the result of its respective vehicle, there must be three final vehicles.

Our buddha disposition may be impeded from manifesting when great attachment or strong afflictions overwhelm our minds and when we are too busy to be interested in spiritual practice or don't see the faults of the afflictions. Thinking our actions lack an ethical dimension and experiencing hindrances such as illness, poverty, or strong karmic obstructions also prevent our disposition from developing.

Certain activities can stimulate our buddha disposition: Learning and reflecting on teachings, living in an environment that is conducive to practice, and abiding near our spiritual mentor or sincere practitioners. Generating the aspiration for virtuous qualities, restraining our senses, abandoning nonvirtue, receiving monastic ordination, purifying obscurations, and so on also invigorate our buddha disposition.

Relying on the *Lotus Sūtra* (*Saddharma Puṇḍarīka Sūtra*) and the *Tathāgatagarbha Sūtra*, Cittamātra Reasoning Proponents and all Mādhyamikas assert one final vehicle: all sentient beings can enter the Bodhisattva Vehicle and attain buddhahood. The *Sublime Continuum* by Maitreya and Asaṅga's commentary on it speak of four types of people whose buddha nature is defiled in that they are not yet ready to enter the Bodhisattva Vehicle, engage in the two collections, and progress on the path to full awakening: worldly people who are infatuated with saṃsāric pleasures, non-Buddhists who hold wrong views, śrāvakas, and solitary realizers. They also discuss the specific obscurations that

block these sentient beings and explain their antidotes. Here Asaṅga writes from a Madhyamaka viewpoint that holds that all sentient beings have the buddha nature.

## *Buddha Nature according to the Madhyamaka School*

The topic of buddha nature (*gotra*) is found in the Perfection of Wisdom sūtras, *Ornament of Clear Realizations*, *Sublime Continuum* (*Ratnagotravibhāga, Uttaratantra*) by Maitreya and its commentary by his disciple Asaṅga, *Bodhisattva Grounds* (*Bodhisattva Bhūmi*), and other Mahāyāna texts. The *Tathāgatagarbha Sūtra* and *Nirvāṇa Sūtra* speak of buddha essence (*garbha*), using a more essentialist language. As a Mādhyamika, I prefer presentations that lack the essentialist meaning. Like Ngok Lotsawa, who translated the *Sublime Continuum* into Tibetan, in the Sūtrayāna context I believe buddha essence primarily refers to the emptiness of the mind.

The *Sublime Continuum* defines buddha nature as phenomena that have the possibility to transform into any of the buddha bodies. It is of two types — the naturally abiding buddha nature (*prakṛtisthagoṭra*, T. *rang bzhin gnas rigs*) and the transforming buddha nature (*samudānītagoṭra*, T. *rgyas 'gyur gi rigs*). Both exist in all sentient beings whether or not they are on a path.

The *naturally abiding buddha nature* is the emptiness of the mind that is yet to abandon defilements and that is able to transform into the nature dharmakāya of a buddha. Sakya Paṇḍita described it as the unchanging nature of the mind. In *Treatise on the Middle Way* Nāgārjuna notes that whatever is the nature of a tathāgata is the nature of sentient beings (22.16).

Whatever is the essence of the Tathāgata,  
that is the essence of the transmigrator.  
The Tathāgata has no essence.  
The transmigrator has no essence.

This empty nature of the mind is beyond the three times (past, present, and future), beyond the realms of cyclic existence, and beyond constructive and destructive karma. Neither virtuous nor nonvirtuous, it can act as the basis for both saṃsāra and nirvāṇa. The *Eight-Thousand-Line Perfection of Wisdom Sūtra* (*Aṣṭasāhasrikā Prajñāpāramitā Sūtra*) says:

Thus that which is the reality of all things  
is not past nor future nor present.  
Whatever is neither past, future, nor present  
is utterly free from threefold time,  
cannot be transferred nor objectified  
nor conceptualized nor cognized.

The existence of the naturally abiding buddha nature — the emptiness of inherent existence of ordinary beings' minds — means that mental defilements can be eliminated. Why? If phenomena existed inherently, they would be independent of everything else and thus would be unable to function, influence one another, or change. The fact that the ultimate nature of the mind is empty of inherent existence indicates that the mind can change.

In addition, all defilements are rooted in fundamental ignorance, the erroneous mental factor that grasps all phenomena as possessing an inherent reality. This erroneous grasping gives rise to attachment, anger, and all other afflictions and supports virtuous polluted mental states as well. From these spring our actions or karma, which cause us to take continual rebirth in cyclic existence. Cultivating insight into the true nature of reality, emptiness, initiates the process of undoing this causal chain. With the development of the wisdom that directly perceives reality — emptiness or suchness — this ignorance can be overpowered and completely eradicated from the mind. The defilements are not embedded in the ultimate nature of the mind. They too lack inherent existence, so when the antidote of the wisdom directly realizing emptiness is applied to them, they can be removed from the mind.

On the basis of recognizing the naturally abiding buddha nature — natural nirvāṇa, or the emptiness of the mind — we can attain the nirvāṇa that is the total pacification of mental defilements. A buddha's nirvāṇa is nonabiding nirvāṇa, the full purification of the naturally abiding buddha nature.

In some texts the emptiness of the mind is called a cause of buddhahood in the sense that meditation on emptiness purifies the mind of defilements and leads to buddhahood. However, emptiness is not an actual cause because it is a permanent phenomenon that does not change or bring results.

The *transforming buddha nature* is the seed for the unpolluted mind. It consists of conditioned phenomena that can transform into a buddha's wisdom truth body. The transforming buddha nature includes neutral mental consciousnesses<sup>80</sup> as well as virtuous mental factors, such as love, compassion,

wisdom, and faith, and other virtuous mental states, such as bodhicitta, that are progressively developed as a bodhisattva progresses through the ten bodhisattva grounds. The transforming buddha nature also includes consciousnesses that form the collection of wisdom — the principal cause of the wisdom truth body — and the mind visualizing ourselves as a deity, which is a cause for a buddha's form body. It is possible to increase these virtuous qualities and mental states limitlessly because their base, the clear light mind, is stable and because no antidote exists that can eliminate them. At the time we become buddhas, our naturally abiding buddha nature will become the nature truth body of a buddha, and our transforming buddha nature will become the wisdom truth body of a buddha.

Which of the seven types of awareness can be included in transforming buddha nature? Wrong awarenesses, such as resentment, self-grasping ignorance, and the mind that fantasizes being a star athlete without creating the causes, are not buddha nature. Inattentive awarenesses are not buddha nature because they don't correctly know their object. Correct assumptions, doubt inclined to the correct conclusion, inferential cognizers, correct mental direct perceivers, and subsequent reliable cognizers are transforming buddha nature. The five paths of the śrāvakas, solitary realizers, and bodhisattvas are transforming buddha nature, as are the ten bodhisattva grounds.<sup>81</sup> The emptiness of inherent existence of all these minds is the natural buddha nature.

In short, any neutral or virtuous mind that is not free from defilement and can transform into a buddha's wisdom dharmakāya is part of the transforming buddha nature. Mental consciousnesses accompanied by manifest afflictions cannot be transforming buddha nature because they are eliminated on the path.

As neutral or virtuous states of mind, the transforming buddha nature consists of impermanent phenomena. As the emptiness of the mind, the naturally abiding buddha nature is permanent. These two buddha natures are one nature. Although they are not exactly the same, one cannot exist without the other. Only the emptiness of neutral and virtuous consciousnesses can be the naturally abiding buddha nature because only the neutral or virtuous consciousnesses that are their bases are the transforming buddha nature.

Because the afflictions are empty of inherent existence, awakening is possible. However, the emptiness of the afflictions is not buddha nature. Since the afflictions are eliminated on the path and cannot be transformed into any of a buddha's bodies, their emptinesses will similarly cease and cannot become the nature truth body.

Some people speak of inanimate phenomena — rocks, trees, and so forth — as having buddha nature. I believe that they are referring to the fact that these phenomena are empty of inherent existence. Only sentient beings have buddha nature. That we can generate the determination to be free from saṃsāra, bodhicitta, and wisdom indicates that the buddha nature is within us. Because inanimate phenomena lack mind, they cannot generate these virtuous mental states and do not possess buddha nature.

Someone may wonder: Since the emptiness of the mind of a sentient being and the emptiness of the mind of a buddha are the same in being the emptiness of inherent existence, does that mean that sentient beings already have the qualities of buddhas or that they are already buddhas? No, it does not, because the minds that possess that emptiness differ. Tsongkhapa explains in *Illumination of the Thought*:

It is said, “The buddha nature is that which serves as the cause of āryas’ qualities when observed; thus, here the absurd consequence [that all sentient beings would have the qualities of āryas] is not entailed.” The mere presence of the nature of phenomena (*dharmadhātu*) does not mean that one abides in the buddha nature in terms of the path. When one observes and meditates on the nature of phenomena through the path, it comes to serve as the special cause of āryas’ qualities. At that time one’s buddha nature is regarded as special.<sup>82</sup>

Emptiness is the “cause” of the wonderful qualities of āryas when we perceive it directly and use that realization to cleanse our minds of defilements. The fact that we have the naturally abiding buddha nature — the empty nature of the mind — does not mean that we have already realized it with a true path — a reliable cognizer that realizes emptiness directly. Only a direct realization of the empty nature of the mind will bring about an ārya’s qualities. When this realization arises in our mind, the emptiness of our minds — our buddha nature — will be regarded as special.

The emptiness of inherent existence of our minds is a permanent phenomenon. It does not change moment by moment, as do conditioned phenomena. While emptiness in general is eternal, when we speak about the emptiness of a specific thing, that emptiness may not always exist. For example, the emptiness of a glass ceases when that glass shatters. An emptiness is posited

in relation to an object that is empty; it is one nature with that object — the emptiness of the mind exists in dependence on the mind. The emptiness of an ordinary being's mind exists as long as that ordinary being does. Because that mind has defilements, its emptiness is together with defilement. When portions of the mind's defilements have been removed by the true path, the mind becomes an ārya's mind and its emptiness is the emptiness of an ārya's mind. When ordinary beings realize emptiness directly and become āryas, the emptiness of the ordinary being's mind no longer exists; now there is the emptiness of an ārya's mind. These two emptinesses are both the absence of inherent existence, and to an ārya's mind in meditative equipoise on emptiness, they are undifferentiable.

While it is true that sentient beings' minds are empty of inherent existence and that defilements are adventitious, we cannot say that sentient beings' buddha nature is the same as a buddha's nature truth body that has the twofold purity — being naturally pure of inherent existence and being newly purified of all adventitious defilements. That is because sentient beings' minds are still together with defilements.<sup>83</sup>

No matter in which realm a sentient being abides, the naturally abiding buddha nature is always there. It does not decrease or increase. Gold may be buried in the ground for centuries, but it is still gold and it is always possible to access it. The gold may be covered with dirt, but it doesn't become the dirt. If dirt were its nature, it could never become clean. But because the dirt only obscures it, the gold can be cleansed so that its natural radiance can be seen. Similarly, the emptiness of our defiled mind is always there; when we realize emptiness, that wisdom cleanses the defilements from our minds, and in doing so, the emptiness of our minds will also be cleansed. Even though our minds have always been naturally pure of inherent existence, at that time we will have the additional purity of being free from all adventitious defilements.

Without the two kinds of buddha nature, there would be no way for the awakened activities of the Buddha to enter into us. Our minds would not be receptive to the Buddha's influence or to the teachings; nothing in our minds could germinate by coming into contact with these. Buddha nature is the basis of cultivation of the Mahāyāna; it is what enables our minds to be affected and transformed by the teachings. The fact that the Buddha taught the Dharma indicates that sentient beings have the potential to become Buddhas. If we didn't, it would have been useless for the Buddha to deliver 84,000 teachings.

## *Buddha Nature according to Tantra*

Highest yoga tantra points to buddha nature in a unique way: it is the subtlest mind-wind that is empty of inherent existence and whose continuity goes on to awakening. All sentient beings have this subtlest mind-wind. In ordinary beings, it becomes manifest only at the time of the clear light of death and goes unnoticed.

While the subtlest mind-wind is neutral in the case of ordinary beings, through special yogic practices it can be brought into the path and transformed into a virtuous state, a yogic state. Sentient beings' subtlest mind serves as the substantial cause for the wisdom dharmakāya — the omniscient mind of a buddha — and the true cessation and emptiness of a buddha's mind is the nature dharmakāya. The subtlest wind that is its mount is the substantial cause for the form bodies of a buddha — the enjoyment and emanation bodies. The *Hevajra Tantra* says:

Sentient beings are just buddhas,  
but they are defiled by adventitious stains.  
When these are removed, they are buddhas.

The first line indicates that sentient beings have the substantial cause for buddhahood, the subtlest mind-wind. It does not mean that sentient beings are buddhas, because someone cannot be both a sentient being and a buddha simultaneously. Through the practice of special techniques in highest yoga tantra, the continuum of this subtlest mind-wind can be purified and transformed into the three bodies of a buddha.

## *Nine Similes for Tathāgatagarbha*

By using nine similes, the *Tathāgatagarbha Sūtra* gives us an inkling of the buddha nature that has always been and will continue to be within us. Maitreya's *Sublime Continuum* and its commentary by Asaṅga explain these similes that point to a hidden richness inside of us — a potential that we are usually unaware of. Contemplating the meaning of these similes generates great inspiration and confidence to practice the path.

All afflictive and cognitive obscurations are condensed into nine

obscurations spoken of in the nine similes. By applying the appropriate antidotes, all of these can be removed and full awakening attained.

From beginningless time, the basic nature of the mind has been immaculate and has never been mixed with stains or afflictions. But it has been covered by these nine obscurations. As we progress on the path, the transforming buddha nature develops, the mind becomes purer, and the obscurations are gradually eliminated. When all obscurations have been removed such that they can never return, the purified mind becomes the wisdom dharmakāya and its emptiness becomes the nature dharmakāya. Maitreya says (RGV 1:80–81):

This [tathāgatagarbha] abides within the shroud of the afflictions,  
as should be understood through [the following nine] examples:

Just like a buddha in a decaying lotus, honey amidst bees,  
a grain in its husk, gold in filth, a treasure underground,  
a shoot and so on sprouting from a little fruit,  
a statue of the Victorious One in a tattered rag,  
a ruler of humankind in a destitute woman's womb,  
and a precious image under clay,  
this [buddha] element abides within all sentient beings,  
obscured by the defilement of the adventitious poisons.

*1. The buddha essence is like a beautiful buddha image in an old, ugly lotus.*

When the petals close around a buddha image, we see only the old lotus and not the beautiful buddha image. Not knowing the image is there, we never think to open the petals and take it out. Similarly, the seeds of attachment obscure our buddha essence. While all beings who are not arhats are obscured by the seeds of attachment, this simile applies particularly to ordinary sentient beings in the form and formless realms. Although they have temporarily suppressed the coarse manifest afflictions of the desire realm by entering into deep states of meditative absorption, the seeds of afflictions still remain in their mindstreams. Ordinary beings in the form and formless realms are specified because āryas may also take rebirth in these realms. However, they have already eliminated some portion of the seeds of afflictions.

We beings in the desire realm, too, have the seed of attachment. When it

explodes and becomes full blown, we have no awareness of our buddha essence, which is the source of all hope and confidence. Instead we become totally engrossed in the objects of our attachment. Just as the beautiful and fragrant lotus withers and becomes decrepit after a few days, the people and things we cling to age and decay. While they initially bring us happiness, later we become bored and cast them aside, as we would a withered flower.

A person with clairvoyance can see the buddha image inside the lotus and will open the flower and remove the buddha image. Similarly, the Buddha sees the buddha essence in each sentient being, even those in the hells, and thinks, “Who will liberate these beings from their obscurations, especially their attachment?” Because the Buddha has great compassion and is free from all defilements, he will guide us to discover the beautiful buddha image — the wisdom dharmakāya — hidden by our attachment.

## *2. The buddha essence is like honey with a swarm of bees surrounding it.*

The honey is like the ultimate truth — the emptiness of inherent existence. Just as all honey has the same taste, the ultimate nature of all phenomena is the same. Bees not only conceal the honey but also angrily sting someone who tries to take it, harming themselves as well as their enemy. Similarly, we cannot see our honey-like buddha essence because it is obscured by the seeds of hatred, anger, resentment, and vengeance. This obscuration pertains specifically to ordinary beings in the form and formless realms who do not experience manifest anger, but still have the seeds of anger in their mental continuums. We beings in the desire realm have the seeds of anger as well as coarse manifest anger. These seeds not only prevent us from seeing our buddha essence but also enable the destructive emotions related to anger and animosity to manifest in our minds, mercilessly stinging ourselves and those around us.

An insightful person knows that despite the bees around it, the honey itself is pure and delicious. She devises a skillful way to separate the bees from the honey, and then enjoys the honey as she wishes. Tasting honey, like realizing the emptiness of the mind, always brings joy. Similarly, the Buddha sees the buddha essence in each sentient being and with skillful methods, such as the teachings of the three turnings of the Dharma wheel, frees it from defilements.

### *3. The buddha essence resembles a kernel of grain in its husk.*

The husk obscures the grain. For the grain to become edible food, the husk must be removed. In the same way, the seed of ignorance obscures our minds so that we cannot realize the ultimate truth. As above, this obscuration applies particularly to ordinary beings in the form and formless realms, but those of us in the desire realm have it as well. The seed of ignorance makes self-grasping ignorance and the ignorance of karma and its effects manifest in our minds. By means of the above three seeds of the three poisons, sentient beings create karma that brings rebirth in saṃsāra.

Just as the grain cannot be eaten when inside the husk, the deeds of a buddha cannot be displayed while the buddha essence is in the husk of defilements. A wise person knows how to remove the husk and prepare the grain so that it becomes nourishing food. In the same way, the Buddha guides sentient beings to remove their defilements, and the buddhas they will become will provide spiritual sustenance for others.

### *4. The buddha essence resembles gold buried in filth.*

If someone accidentally drops some gold in a pile of filthy refuse at the side of the road, we don't know it is there let alone think to take it out, clean it, and use it. Similarly, while our gold-like buddha essence is not mixed with defilements, the filth of the manifest coarse three poisons prevents us from seeing it. Manifest coarse afflictions are the chief obscuration hindering beings in the desire realm. They provide the condition through which we are reborn especially in the desire realm. Led here and there by powerful emotions that arise suddenly and dominate our minds and by strong wrong views that we stubbornly cling to, we do not even consider the buddha essence that has always been there. Like the filth, manifest coarse attachment, animosity, and ignorance are repugnant. We dislike ourselves when they rule our minds, and others are likewise repulsed by our behavior.

The gold is pure — it can never become impure — but we cannot see it or use it as long as it is sunk in the filth. Similarly, the emptiness of the mind can never be infiltrated by the afflictions, but it cannot shine forth when obscured by the troublesome manifest afflictions.

A deva who possesses the clairvoyant power of the divine eye sees the gold, tells a person where to find it, and instructs him to make the gold into something

worthy of being gold. Similarly, the Buddha sees the empty nature of our minds, teaches us how to purify it, and instructs us how to transform our minds into the minds of buddhas. These first four similes pertain specifically to ordinary beings who have not yet realized emptiness.

*5. The buddha essence is like a treasure under the earth.*

Like a magnificent treasure buried under the earth in a poor person's yard, the buddha essence is obscured by the latencies of the afflictions. This obscuration pertains especially to śrāvaka and solitary realizer arhats, who have eliminated the coarse manifest afflictions and their seeds, but whose minds are still obscured by the latencies of afflictions, especially the latency of ignorance, that prevent them from becoming fully awakened buddhas. While these arhats have realized emptiness and overcome afflictions, the ground of the latencies of afflictions are the condition through which arhats obtain a mental body and abide in the pacification of saṃsāra that is an arhat's nirvāṇa. After these arhats generate bodhicitta, they follow the bodhisattva paths and grounds. In doing so, when the ground of these latencies is removed, they will attain the ultimate true cessation, nonabiding nirvāṇa.

A treasure buried under the house of a poor family can free them from poverty, but they do not know it is there, even though it is right under them. The treasure does not say, "I'm here. Come and get me." Our naturally abiding buddha essence is like a treasure that has existed in our minds beginninglessly. This emptiness of the mind does not decrease or increase, it does not call out to us saying, "I'm here." But when the Buddha tells us about it, we learn how to uncover it, freeing it from even the ground of the latencies of ignorance that prevent full awakening.

*6. The buddha essence resembles a tiny sprout hidden within the peel of a fruit.*

Beans have tiny sprouts inside but we cannot see them until the fruit and its peel have been shed. Similarly, for the path of seeing to be actualized, the objects of abandonment by the path of seeing must be destroyed. This simile applies particularly to ordinary beings on the paths of learning as well as Fundamental Vehicle āryas who are not yet arhats. Until they attain the path of seeing, the acquired afflictions, which are the objects to be abandoned by that path, obscure

their buddha essence. While on the path of seeing, these learners have overcome the acquired afflictions but still have the innate afflictions and their seeds.

The transforming buddha essence is like a sprout that has the potential to grow into a huge tree that will offer shade for many people on a hot day. Just as the sprout needs good conditions to grow, we rely on the conditions of the collections of merit and wisdom to nourish the transforming buddha essence. Great compassion, wisdom, reverence for the Mahāyāna teachings and their goal, a great collection of merit, and samādhi are nourishing conditions that assist the transforming buddha essence to become the wisdom dharmakāya.

*7. The buddha essence is like a buddha statue covered by a tattered rag.*

The innate afflictions and their seeds — the objects to be abandoned on the path of meditation — resemble a buddha image wrapped in a tattered rag. The dismantling of the afflictions began on the path of seeing, and now, on the path of meditation, they are in tatters and ready to be discarded completely. Similarly, ordinary beings and āryas on the learning paths (āryas who are not yet arhats) are still obscured by the innate afflictions and their seeds, but they are weak and will soon be overcome. Nevertheless, while present, they obscure the buddha essence.

A deva sees a buddha statue under a dirty cloth and explains to a person who wants to have a buddha statue that it is there and she should retrieve it. In the same way, the Buddha sees that the ultimate nature of his own mind — emptiness — is the same as the emptiness of the minds of all sentient beings, even animals, hungry ghosts, and hell beings. This beautiful nature is covered by the remnants of the eighty-four thousand afflictions. To free it from these, the Buddha teaches the Dharma. The nature dharmakāya is like a precious statue. Just as the whole statue comes out at once when the rag is removed, the nature dharmakāya appears in its entirety when the mind is freed from all defilements.

*8. The buddha essence resembles a baby who will become a great leader in the womb of a poor, miserable, forlorn woman.*

In her womb a woman bears a baby who will be a great leader and do much good in the world. Not knowing that her child will one day be able to protect her, she knows only her present suffering. Similarly, ārya bodhisattvas on the impure

grounds — grounds one through seven — have amazing potential that they are as yet unaware of owing to the womb-like confines of the afflictive obscurations. When they emerge from these on the eighth ground, their pristine wisdom becomes even more powerful, like the baby who has grown into a great leader.

Cyclic existence is like the homeless shelter in which this poor, miserable woman lives. There she is reviled by others and sinks into despair because she has no refuge or protector. Her child, as a great ruler, will soon be able to care for her, but she does not know this. Similarly, we do not realize that our ultimate protector is inside of us. But when the emptiness of our minds is revealed and becomes the nature dharmakāya, our problems are forever pacified. When we later actualize the enjoyment body, we will be like a wealthy monarch who can protect all beings in the land.<sup>84</sup>

*9. The buddha essence is like a golden buddha statue covered by a fine layer of dust.*

The buddha essence of the pure-ground bodhisattvas — grounds eight through ten — is still covered by a thin layer of cognitive obscurations that impedes their full awakening — the latencies of the defilements that bring about the appearance of inherent existence and prevent directly seeing the two truths simultaneously. Like a magnificent, golden buddha statue that was cast in a mold and now is covered by only a layer of fine clay dust remaining from the mold, their buddha essence will soon be fully revealed when the vajra-like concentration at the end of the continuum of a sentient being removes the last remaining obscurations from the mindstream, allowing the buddha essence to be fully revealed.

**NINE SIMILES FOR THE TATHĀGATAGARBHA**

	SIMILE FOR THE OBSCURING FACTOR	OBSCURING FACTOR	SIMILE FOR THE OBSCURED	OBSCURED PHENOMENON	PERSON SPECIFICALLY OBSCURED BY THIS OBSCURING FACTOR
1.	Lotus	Seeds of attachment that brings rebirth in the form and formless realms	Buddha image	The buddha nature that can become the truth body	Ordinary beings in the form and formless realms
2.	Bees	Seeds of anger	Honey	The ultimate truth, the emptiness of inherent existence of the mind	Ordinary beings in the form and formless realms
3.	Mud	Seeds of ignorance that brings rebirth in the form and formless realms	Kernel of grain	Naturally pure buddha essence	Ordinary beings in the form and formless realms
4.	Filth	Manifest afflictions of attachment, animosity, and confusion that bring rebirth in the desire realm	Gold	The emptiness of the mind	Ordinary beings in the desire realm
5.	Earth	Ground of the latencies of ignorance that create unpolluted karma <sup>26</sup>	Treasure	Naturally abiding buddha essence that can become nonabiding nirvana, the nature dharmakaya	Śrāvaka and solitary-realizer arhats
6.	Skin of fruit	Acquired afflictions, objects to be abandoned on the path of seeing	Sprout	Transforming buddha essence that can become the wisdom dharmakaya	Ordinary beings who have entered a path, śrāvaka and solitary realizers, āryas who are not arhats
7.	Tattered rag	Innate afflictions and their seeds, objects to be abandoned on the path of meditation	Buddha statue	Naturally pure buddha essence that will become the nature dharmakaya	Ordinary beings who have entered a path, learning āryas
8.	Womb of a destitute woman	Afflictive obscurations	Baby who will become a universal monarch	Buddha essence that will bring forth the enjoyment body of a buddha	Bodhisattvas on the 7 impure grounds (1-7)
9.	Fine layer of clay dust	Cognitive obscurations	Golden buddha statue	The buddha essence that will bring forth the emanation bodies of a buddha	Bodhisattvas on the pure grounds (8-10)

Note: Each simile is correlated with an obscuration and the particular sentient beings who possess it. While other sentient beings may also possess that obscuration, it is the outstanding obscuration — the immediate hindrance — that those particular sentient beings must overcome to progress on the path. The particular sentient beings pointed out in one simile may also possess the obscurations mentioned in another.

An expert statue maker recognizes the preciousness of the gold statue covered by clay dust and cleanses it to reveal its pure beauty for everyone to enjoy. Similarly, the Buddha sees our buddha essence and guides us on the path to reveal it, so that we will be able to manifest emanation bodies. These emanation bodies will appear in various forms according to the karma of the sentient beings who can benefit from them. By these means, the buddha we will become will compassionately instruct and guide sentient beings according to their disposition.

---

## REFLECTION

1. Contemplate each simile one by one.
2. Consider how it applies to you, the people you know, and all beings around you.

3. Seeing that each sentient being is impeded by obscurations that limit happiness and cause misery, let compassion arise for each and every sentient being.
  4. With strong compassion, cultivate bodhicitta and determine to become a buddha in order to lead all beings to actualize their buddha essence.
- 

### *Three Aspects of the Tathāgatagarbha*

Maitreya asserts that each sentient being has the buddha essence and can attain buddhahood (RGV 1.27).

Because a perfect buddha's body is pervasive,  
because suchness is without differentiation,  
and because a [buddha] lineage exists, all embodied [beings]  
are always in possession of a buddha essence.

He gives three reasons for stating that all sentient beings have the buddha essence and can attain full awakening: (1) *The buddhas' bodies are pervasive* so sentient beings can engage with the awakening activities of the buddhas. (2) *The suchness (natural purity) of the buddhas' minds and of sentient beings' minds cannot be differentiated* because both are the emptiness of inherent existence. (3) *Sentient beings possess the transforming buddha nature* that can develop all of a buddha's excellent qualities and transform into the three buddha bodies. These reasons, confirmed by the nine similes, indicate the following three aspects of the tathāgatagarbha.

#### *1. The tathāgatagarbha has the nature of the dharmakāya of self-arisen pristine wisdom.*

The tathāgatagarbha possessing the nature of the dharmakāya refers to the clear light nature of the tathāgatagarbha being called the dharmakāya. This is another case of giving the name of the result (dharmakāya) to the cause (tathāgatagarbha). Although the emptiness of the mind is permanent and is not an actual cause, it is called a cause because it is the foundation on which the

dharmakāya is attained. The first three similes describe this.

The tathāgatagarbha is pervaded by the awakening activities of the dharmakāya. This means that sentient beings have the potential to be engaged with and influenced by the buddhas' awakening activities that will guide them to awakening.

Within this first aspect of the buddha essence, the dharmakāya, there are two parts: (1) The *dharmakāya of realizations* is the undefiled empty nature of a buddha's mind that is realized by that buddha's wisdom dharmakāya. This emptiness is the actual dharmakāya and refers specifically to the dharmadhātu that is totally free from defilements and has the nature of clear light. It is what is perceived and experienced by the wisdom dharmakāya of a buddha. (2) The *dharmakāya of the teachings* leads to the realization of this empty nature. These teachings consist of the profound teachings of the definitive sūtras that explain the ultimate truth, and the interpretable teachings of the provisional sūtras that explain various veiled truths — such as the person, aggregates, grounds and paths — that are taught in accordance with the dispositions and interests of various disciples. The dharmakāya of the teachings is called the dharmakāya although it is not the actual dharmakāya. The actual dharmakāya is experienced by a buddha. The teachings are the conditions to attain this dharmakāya.

Just as the buddha image hidden in the closed lotus in the first simile cannot be seen, the wisdom dharmakāya — the ultimate, supreme meditative equipoise on emptiness — is not perceivable in the world. The honey (simile 2) resembles the profound teachings on the ultimate truth. Just as all honey shares the same taste of sweetness, all phenomena have the same “taste” of being empty of inherent existence. The grain (simile 3) corresponds to the vast teachings on the method side of the path. Just as the grain needs to be removed from its husk and cooked to become edible food, the vast teachings are provisional and require interpretation.

The definitive and interpretable teachings and the profound and vast teachings are given to disciples of all three dispositions — śrāvakas, solitary realizers, and bodhisattvas — as well as to sentient beings who are temporarily of uncertain disposition. This latter group consists of individuals who will later become disciples with one of the three dispositions, depending on the teachers they meet and the teachings they receive. By hearing, reflecting, and meditating on both the vast and profound teachings, sentient beings will attain the actual wisdom dharmakāya.

The chief way in which buddhas' awakening activities engage with and

influence sentient beings is by means of the buddhas' speech — the teachings they give. This ability of the buddhas' awakening activities to influence sentient beings is always present, and in this sense sentient beings are pervaded by the awakening activities of the dharmakāya.

## *2. The tathāgatagarbha has the nature of emptiness, suchness.*

The tathāgatagarbha — the emptiness of sentient beings' minds — cannot be differentiated from the aspect of the natural purity of the dharmakāya. The gold buried in filth (simile 4) illustrates the emptiness of the mind. Just as pure gold does not change into a base metal, the emptiness of the mind does not change into something else. Like pure gold, the tathāgatagarbha is pure and faultless. The ultimate nature of sentient beings' minds and the ultimate nature or natural purity of the tathāgatas' minds cannot be differentiated in that both are emptiness. They appear the same and cannot be distinguished to the face of the meditative equipoise directly perceiving emptiness. In this sense it is said that the suchness of the Tathāgata is the essence of sentient beings.

## *3. The tathāgatagarbha has the nature of the buddha lineage or disposition.*

This disposition culminates as the three bodies of a buddha, thus accomplishing buddhahood. Encompassing the remaining five similes, this disposition has two parts: (1) The *buddha disposition that has existed beginninglessly* resembles a treasure under the ground (simile 5). Just as no one put the treasure there and its beginning is unknown, the naturally abiding buddha nature has existed beginninglessly. (2) The *transforming buddha disposition that has the potential* resembles a sprout (simile 6). Just as a tiny sprout, upon meeting the conditions that nourish it, will gradually grow into a tree, the transforming buddha disposition has the potential to accomplish buddhahood and the three buddha bodies when it encounters the right conditions, such as learning, reflecting, and meditating on the Dharma.

The buddha statue covered by tattered rags (simile 7) represents the beginningless, naturally abiding buddha disposition. Just as a beautiful, precious statue shines forth when the impediment of the tattered rags is removed, the beginningless purity of the mind — its emptiness of true existence — is revealed when all adventitious defilements have been forever banished owing to the

collection of wisdom. At this point the naturally abiding buddha disposition is called the nature dharmakāya of a buddha.

The transforming buddha disposition blossoms owing to the accumulation of merit. When it is fully evolved, it becomes the enjoyment and emanation bodies of a buddha. Just as a future great leader who is now in his mother's womb (simile 8) will come to enjoy majesty, the enjoyment body enjoys the majesty and wealth of the Mahāyāna Dharma. Similar to a golden buddha statue emerging from the dust that surrounds it (simile 9), emanation bodies, which represent the actual dharmakāya, appear in whatever forms are most conducive to subduing the minds of sentient beings.

In our practice, our buddha disposition is initially awakened through listening to and reflecting on the Dharma, especially teachings on the value and purpose of bodhicitta and the two methods of generating it. Upon generating bodhicitta, we have the strong aspiration to attain the three buddha bodies. To accomplish this, we engage in the bodhisattva deeds — the six perfections and the four ways of maturing disciples — and fulfill the collections of merit and wisdom. Cultivating the collection of wisdom leads to gaining the pristine wisdom directly perceiving the ultimate nature of all phenomena. When this wisdom is developed further and used to fully cleanse all obscurations from our mindstreams, our naturally pure buddha nature becomes the nature dharmakāya — the suchness of the mind that has the two purities: the natural purity of inherent existence and the purity from adventitious defilements. The cultivation of the collection of merit, done through practicing the method aspect of the path, leads to our transforming buddha nature becoming the two form bodies — the enjoyment body and the emanation body. In this way, the three bodies of a buddha are actualized and our pristine wisdom perceives all existents throughout the universe.

### *Three Aspects of the Buddha Disposition*

1. The clear light nature of the tathāgatagarbha that will become a buddha's dharmakāya in the future.
  - The dharmakāya of realizations: the undefiled empty nature of a buddha's mind that is realized by that buddha's wisdom dharmakāya; buddha image (1).

- The dharmakāya of the teachings that are the conditions to attain it.
  - Profound teachings of the definitive sūtras on the ultimate truth; honey (2).
  - Interpretable teachings of the provisional sūtras on veiled truths; grain (3).
2. The tathāgatagarbha's empty nature (suchness) that cannot be differentiated from the emptiness of a buddha's mind; gold (4).
  3. The tathāgatagarbha that has the buddha lineage and accomplishes the state of a buddha.
    - Beginningless buddha nature; treasure (5).
    - Transforming buddha nature that has the potential to accomplish buddhahood; sprout (6).
    - When purified, the beginningless, naturally abiding buddha disposition becomes the nature dharmakāya of a buddha; statue (7).
    - When the transforming buddha disposition is fully evolved, it becomes the enjoyment body of a buddha; the future great leader in his mother's womb (8).
    - The emanation bodies of a buddha; golden statue (9).

In summary, in his commentary to the *Sublime Continuum*, Asaṅga says:

The similes taught in the *Tathāgatagarbha Sūtra* explain that the mind, which has existed without beginning in all realms of sentient beings, is empty by nature and therefore the afflictions are adventitious. Being empty by nature, this beginningless mind is inseparable from the innate development of the qualities of awakening.<sup>85</sup>

## *A Puzzle*

Maitreya admits that some aspects of buddha nature are difficult for ordinary beings to understand (RGV 1.25).

[The buddha nature] is pure and yet has affliction.  
 [Awakening] is not afflictive and yet is purified.  
 Qualities are totally indivisible [and yet not manifest].

[Awakening activity] is spontaneous and yet without any thought.

Here are several puzzling points.

- From beginningless time buddha nature has been pure and free from defilements, yet it still has afflictions and defilements.
- The awakened mind is pure, yet it needs to be purified.
- The emptiness of buddhas' minds and sentient beings' minds are indistinguishable in that both are pure and empty of inherent existence, yet one belongs to buddhas and the other to sentient beings.
- Buddhas' awakening activity is spontaneous, yet it occurs without conscious motivation.

Initially these four statements may seem contradictory, but seen from the proper perspective, they cease to be paradoxical. The explanations below clarify their meaning. We must think carefully to understand the explanations correctly; doing so will bring important and essential insights.

- Buddha nature is completely pure; the defilements are adventitious. They obscure the buddha nature but are not its essential nature.
- The awakened mind has no defilements, but prior to becoming a buddha, the mind's nature is covered by defilements. It is like gold hidden by stains. The gold is still gold, but its luster and beauty cannot be seen. Similarly, when the mind is immersed in defilements, the potential to develop a buddha's qualities remains; it is part of the mind's nature. However, this potential is covered and cannot yet function as the actual qualities of a buddha. Love and compassion are present in the unawakened mind; they cannot be forever extricated from the mind. But when anger overwhelms the mind, the seed of love is not apparent, although it is still there.
- In terms of their ultimate nature, both buddhas' minds and sentient beings' minds are empty of inherent existence, and any difference in these emptinesses cannot be discerned by the wisdom directly realizing emptiness. However, on the conventional level, the two minds are different: one is a mind with obscurations, the other is a mind that is completely free from obscurations.
- Buddhas' awakening activities are effortless; they occur spontaneously,

without purposefully cultivating a motivation. A buddha is free from conception and has become so habituated with compassion over many eons that no motivation or thought is needed for that buddha's awakened activities to radiate out in the most flawless and suitable way according to the disposition of each sentient being. This is inconceivable to us unawakened beings because our virtuous deeds require deliberate effort.

As we practice the path, sometimes discouragement fills our minds. If we observe closely, we will see that discouragement is simply a mass of distorted conceptions that we believe to be true. Instead of following these proliferating perverted thoughts, if we challenged their validity we would easily see they are false. One distorted conception is particularly pernicious; it believes that buddha nature does not exist and thus eliminating duḥkha and attaining awakening is not possible. Maitreya banishes this noxious thought (RGV 1.34):

If the buddha nature were not present,  
there would be no remorse over suffering.  
There would be no longing for nirvāṇa,  
or striving and devotion toward this aim.

If sentient beings truly lacked the possibility to be awakened and were doomed to irreversible saṃsāric suffering, no one would ever regret being in saṃsāra or long to be free from duḥkha and attain nirvāṇa. No one would aspire for full awakening or make effort toward that goal. This clearly is not true; the life stories of the Buddha and other realized beings disprove this. We see within ourselves the wish to be free from saṃsāra's duḥkha, the yearning for freedom from the grip of afflictions and karma. While we may not make as much effort as we would like toward this aim, we do take steps in this direction. This is based on trust that there is an alternative to saṃsāra and that an awakened state exists.

---

## REFLECTION

1. Contemplate the four puzzling points above and then reflect on the explanations that resolve them.
2. Feel your own yearning for spiritual awakening and your aspiration to

free yourself from the obscurations that bind you. Realize that these indicate the existence of the buddha nature. Respect that aspect of yourself and determine to nourish it.

---

## 14 | Going Deeper into Buddha Nature

VOLUME 1 of this series, *Approaching the Buddhist Path*, introduced the three turnings of the Dharma wheel and briefly described the presentation of true cessation and true path in each. I would now like to review and then expand on this topic and its relationship to buddha nature.

### *The Three Turnings of the Dharma Wheel and Buddha Nature*

The first turning of the Dharma wheel presents the overall structure of the Buddhist worldview based on the four truths. The second turning of the Dharma wheel contains a more detailed explanation of the third and fourth truths and presents the emptiness of inherent existence and the bodhisattva path. The essence of the third truth — true cessation — is understood in the context of the emptiness of the mind. The fourth truth — true path — is the wisdom realizing that emptiness.

We can see a progression. The first turning of the Dharma wheel discusses selflessness (*anātman*) in a general way. Having described the nature or identity of each truth and the way to engage with it, the Buddha explained the resultant understanding of each truth. Here he said that true cessation is to be actualized but there is nothing to actualize. This statement has deep implications. The Buddha wants us to understand emptiness, true cessation, and the unborn nature of phenomena.

In the second turning, the Buddha clarified that the precise meaning of selflessness is the emptiness of inherent existence (*śūnyatā*), the unborn nature. He also described the wisdom realizing this unborn nature. Here he called it “objectless” or “nonobjectifying” wisdom because it has ceased the apprehension of any objectifiable basis or inherent existence in persons and phenomena.

The Perfection of Wisdom sūtras — which were taught in the second turning

— and the *Ornament of Clear Realizations*, a commentary by Maitreya on those sūtras, explain *tathāgatagarbha* — buddha essence — from the perspective of it being the ultimate nature of the mind, the emptiness of the mind.

The third turning of the Dharma wheel delves deeper: The purified aspect of the emptiness of the mind is true cessation, but what mind is the basis of that emptiness? The ordinary mind we have at present, which is the basis of all our afflictions, is not that mind. Our sense consciousnesses also cannot be that basis, because they are not stable and continuous. Nor can afflictive minds such as ignorance be that basis because the continuity of ignorance is not present at buddhahood and thus the emptiness of ignorance is also absent then.

The mind that is the basis for true cessation must be a pure mind — pure in that afflictions have not entered into its nature. That mind must be beginningless and endless because its continuum must go without interruption to buddhahood and become a buddha's mind. This mind is the clear light mind that can become a liberating path — the subject clear light realizing the object clear light, the emptiness of the mind. This is the *tathāgatagarbha* presented in the third turning. While the second turning speaks of *tathāgatagarbha* primarily as the object, emptiness, the third turning presents it as the subject, the clear light mind that can realize emptiness, which is also the basis of that emptiness.

In this way, the second turning of the Dharma wheel gives a thorough account of emptiness — the third truth, true cessation — while the third turning presents a thorough explanation of the fourth truth, true path. Here the Buddha introduces the clear light mind, a mind that has always been and will continue to be pure. However, he does not explain how to access and realize that mind. Where can we find a deeper explanation of the clear light mind and the method to actualize it? This is the key that opens the door to Tantra. A disciple who wants to learn about this mind in more depth cannot find the explanation in Sūtra, so she is automatically drawn to Tantra.

Of the four classes of tantra, the first three are preparations for the fourth, the highest yoga tantra (*mahānuttarayoga tantra*), which contains the real meaning of Tantra. The highest yoga tantra provides a clear explanation about how to access the fundamental innate clear light mind, utilize it, and transform it into a virtuous mental state, a true path that realizes emptiness. The development of this wisdom mind culminates in the state of union, the state of full awakening described in Tantra.

From this perspective Nāgārjuna's *Commentary on Bodhicitta* can be seen as a commentary on the third turning because it unpacks the meaning of a verse

from the *Guhyasamāja Root Tantra*:

Devoid of all real entities;  
utterly discarding all objects and subjects  
such as aggregates, elements, and sense sources;  
due to sameness of selflessness of all phenomena,  
one's mind is primordially unborn;  
it is in the nature of emptiness.<sup>86</sup>

Similarly, Nāgārjuna's *Praise to the Sphere of Reality* comments primarily on the subject matter of the third turning, the subject clear light mind, but hints at the meaning of clear light mind as explained in Tantra. It says (DS 20–21):

Just as asbestos cloth<sup>87</sup>  
that is filthy with all kinds of dirt,  
when put into fire,  
the filth is burnt but not the cloth.

Similarly, it is the case with the clear light mind,  
which has defilements produced by attachment;  
the fire of pristine wisdom burns the defilements  
but not that clear light [mind].

When fireproof asbestos cloth is put in fire, the stains on it burn until they disappear completely, but the cloth remains untouched. Likewise, when the ordinary mind of sentient beings, the clear light mind, is exposed to the realization of emptiness, the stains on the mind — attachment and so forth — are removed but the clear light mind remains.

True cessation ultimately refers to the emptiness of the subtlest clear light mind that has become an awakened mind. Although this is not explicitly stated in the third turning, the clear light mind mentioned in the third turning ultimately refers to the clear light mind of highest yoga tantra. Here we see that the three turnings of the Dharma wheel are not disconnected teachings on different topics. Each turning is closely linked to the previous one; it builds on and unpacks the meaning of the previous turning in more depth and detail. In this way, the Buddha, a skillful and wise teacher, gradually leads us to deeper understandings. Similarly, each turning hints at deeper explanations found in the future turnings.

To summarize, in the context of the three turnings, from the Sūtra

perspective buddha nature is of two types: (1) The emptiness of the mind — the object that is perceived — as explained in the Perfection of Wisdom sūtras in the second turning. (2) The mind that is the basis of that emptiness. This undefiled mind has existed beginninglessly and will transform into the liberating paths that perceive this emptiness. Saying this mind is clear light means that the defilements are not an inherent property of this mind.

As the third turning leads us to understand, the emptiness of the mind is the natural buddha nature, and the basis of this emptiness is the transforming buddha nature. Both are buddha nature according to the Sūtra explanation. Furthermore, there is an extremely subtle mind that is the clear light mind and the seed of wisdom. It, too, is buddha nature. The full explanation of this mind and how to access it is presented in Tantra, specifically in highest yoga tantra.

## *A Link between Sūtra and Tantra*

This way of describing the buddha nature as both the object, emptiness, and the subject, mind, is confirmed by the Seventh Dalai Lama in his *Commentary on the “Pristine Wisdom on the Verge of Transcendence Sūtra”* (*Atyayajñāna Sūtra*). He explains that the pristine wisdom on the verge of transcendence refers to both the pristine wisdom realizing the ultimate nature as one approaches nirvāṇa and the pristine wisdom realizing suchness that is at the heart of the practice that one must engage in at all times, including at the point of death. In his commentary, the Seventh Dalai Lama quotes the sūtra:

If you realize the nature of your mind, it is wisdom. Therefore cultivate thorough discrimination not to seek buddhahood elsewhere.

What is the nature of that mind? He says it has three characteristics: (1) The nature of that mind is such that it is devoid of all conceptual elaborations (it is empty of inherent existence). (2) Since the ultimate nature of all phenomena is undifferentiable, the nature of that mind is all-pervading. (3) The nature is not polluted by any adventitious conceptualizations (afflictions).

He then turns to the tathāgatagarbha, saying that it exists in the mental continuum of each sentient being. Tathāgatagarbha refers to three factors:

(1) *The factor that allows for the buddhas’ awakening activity to interact*

with sentient beings (T. *nges legs kyi 'phrin las 'jug tu yod pa'i chha*). This factor is called the “essence or seed (*garbha*) of buddhahood” because it allows for sentient beings to enjoy and benefit from the buddhas’ awakening activities, which are fruits of their awakening. It is the aspect of the mind that is receptive and has the capacity to receive the buddhas’ various awakening activities and influence. This is the potency that exists in sentient beings that allows for the buddhas’ awakening activity to interact with sentient beings and stimulate their progress on the path.

(2) The *factor of the sphere of reality* — namely, the mind’s emptiness of inherent existence (T. *sems rang 'zhin gyis stong pa'i chhos nyid gyi chha*). This factor is the emptiness of the mind that is not free from defilements. It is called “the essence of buddhahood” because the nature of the Buddha’s dharmakāya and the nature of sentient beings’ mind are the same in terms of not being inherently polluted by afflictions. In terms of the mind being empty of existing from its own side, there is no difference between a buddha and a sentient being. In that way, sentient beings share the buddhas’ nature.

(3) The *factor that is the seed that serves as the basis for the actualization of the three buddha bodies* (T. *sku gsum 'grub byed kyi nyer len sa bon gyi chha*). This factor is called the “essence of buddhahood” because from this cause the resultant three buddha bodies emerge. This is the subject clear light mind described in the third turning, which transforms into the three buddha bodies. Usually a seed is an abstract composite, but in this case it refers to a mind. Here the tathāgatagarbha is a conditioned phenomenon, the clear light mind that will become a buddha’s mind. This clear light mind has existed beginninglessly, will continue endlessly, and is the basis of the emptiness of the mind. Why is it called clear light? Clear light implies that the actual nature of the mind is undefiled. The stains that presently cover the mind are adventitious; they have not entered into the nature of the mind and are not an inherent part of the clear light mind. As Maitreya said (RGV 1.62):

This clear and luminous nature of mind  
is as immutable as space. It is not afflicted  
by desire and so on, the adventitious defilements  
that spring from false conceptions.

The clear light mind is not permanent, but the fact that the afflictions are adventitious does not change. In the sense of the clear light mind being a

continuity, nothing new is created at awakening; the obscurations and defilements have simply been eradicated. At this point, this mind, which has existed since beginningless time and whose nature is undefiled, becomes the omniscient mind.

Because the Seventh Dalai Lama is ostensibly speaking in terms of Sūtra, the buddha nature he speaks of is the clear light mind described in Sūtrayāna. Looking deeper, I believe that he is actually referring to the fundamental innate clear light mind that has been present in sentient beings since beginningless time and goes on endlessly. The continuity of this mind will attain awakening. Because a clear exposition of the fundamental innate clear light mind that acts as the seed of the three buddha bodies is not found in Sūtra, a practitioner must seek it in Tantra, especially in highest yoga tantra, which contains an extensive explanation of the fundamental innate clear light mind that has existed beginninglessly and continues on until awakening. Without saying it directly, the Seventh Dalai Lama is directing us to the tantric explanation of the innate clear light mind. In this way, the sequence of the three turnings of the Dharma wheel leads us from the basic teaching of the four truths, to in-depth explanations of the third and the fourth truths, and then eventually to the highest yoga tantra.

Dzogchen and Mahāmudrā usually refer to a subtle mind, rigpa or the clear light mind, as the buddha nature. Among Gelukpas, in Sūtrayāna buddha nature is usually discussed from the perspective of the *Ornament of Clear Realizations*, where it refers to the emptiness of the mind, not to the subtlest clear light mind itself, as Tantra speaks of it. However, here, commenting on a sūtra, the Seventh Dalai Lama, who is a traditional Gelukpa, also describes the buddha nature in a way similar to that of Dzogchen and Mahāmudrā.

---

## REFLECTION

1. When the sūtra says, “If you realize the nature of your mind, it is wisdom. Therefore cultivate thorough discrimination not to seek buddhahood elsewhere,” what does it mean?
2. What are the three characteristics the Seventh Dalai Lama points to as the characteristics of that wisdom mind?
3. What is the sequence of teachings in the three turnings of the Dharma

wheel that lead us to the tantric explanation of the fundamental innate clear light mind?

---

## *Nothing Is to Be Removed*

A verse is found in the *Ornament of Clear Realizations* and the *Sublime Continuum*, both written by Maitreya. The *Ornament* is a commentary on the Perfection of Wisdom sūtras from the second turning; the *Sublime Continuum* is a commentary on the *Tathāgatagarbha Sūtra* from the third turning. Speaking of buddha nature, this verse says (RGV 1.155):

Nothing whatsoever is to be removed;  
not the slightest thing is to be added.  
Perfectly view the perfect [truth];  
seeing the perfect will liberate completely.

If the meaning of this verse were the same in both texts, there would be unnecessary repetition. To avoid that complication, the verse should be interpreted differently in each text. According to Abhayākaragupta (d. 1125), one of the great Indian commentators on the *Ornament*, from the viewpoint of the Perfection of Wisdom sūtras, the verse refers to the tathāgatagarbha from the perspective of the object, the empty nature of the mind. In this context, the element within sentient beings from which nothing needs to be removed and nothing needs to be added — something the discovery of which will lead us to nirvāṇa — is the emptiness of the mind. There is nothing to remove from the mind's emptiness because inherent existence has never existed. There is nothing to add to it because it is the ultimate nature of the mind. It is perfect, and seeing it perfectly — seeing it directly without any conceptual overlay — will cleanse the mind of obscurations and bring awakening. The object, emptiness, is flawless and perfect, and the way of perceiving it is also flawless and perfect. When one actually perceives emptiness in this way with an uninterrupted path, in the very next moment one will attain a liberated path. Nāgārjuna echoes this. Referring to the Buddha, he says (LS 23):

There is nothing that you have brought forth;  
there is nothing that you have negated

there is nothing that you have negated.  
You have comprehended that suchness,  
as it was before, so it is afterward.

The wisdom realizing emptiness does not remove something from the emptiness of the mind that was previously present. Nor does it bring a new reality to the mind. As the *Descent into Lanka Sūtra* (*Laṅkāvatāra Sūtra*) says, “Whether the Tathāgata appears in the world or not, reality forever abides.” Buddha nature — understood as the emptiness of the mind — is always present and does not change. The only difference is that wisdom now realizes this ultimate nature of the mind.

According to the *Sublime Continuum*, the verse refers to the clear light mind being the buddha nature. The clear light mind is the basis that has many attributes, such as its being pure from the beginning and not newly created. Its being pure from the beginning is described in the first line: because afflictions are not an inherent part of the clear light mind, there is nothing whatsoever to remove from it. Its not being newly created is explained in the second line: it is not the case that once the clear light mind was absent and then it was freshly created. Thus there is nothing to add to it because the clear light mind is eternal. But what does viewing this clear light mind perfectly mean? According to Sūtra, how can nonconceptual experience of the clear light mind liberate us?

The *Sublime Continuum* says that the ultimate nature is to be self-revealed: there is no need to use reasoning to understand it; one’s own experience will reveal it. Gyaltsab maintains that this ultimate nature refers to the emptiness of the mind, as it does in the *Ornament*. If that is the case, what does saying it is self-revealed mean? How can ultimate reality reveal itself? Interpreting the ultimate nature mentioned here to be the clear light mind connects to the Dzogchen and Mahāmudrā meditations on the mind. By stopping memories of the past and plans for the future, the clear and cognizant nature of the mind can be directly perceived. If one abides in this state and has a prior correct realization of emptiness, then the coarse levels of mind dissolve and the subtlest innate clear light mind — rigpa in Dzogchen — manifests; it reveals itself. Combining this mind with our previous familiarity with emptiness liberates us from afflictions and defilements.

*The Capacity Giving Rise to the Three Kāyas*

What is the relationship between the transforming buddha nature and the third factor of the tathāgatagarbha as set forth by the Seventh Dalai Lama — the factor that is the seed that serves as the basis for the actualization of the three buddha bodies? Take the example of a rosary and the beads that form it. When we think of a rosary, we think of one thing that is a continuum. That is similar to buddha nature as presented by the Seventh Dalai Lama. When we think of the individual beads, we focus on the particular components of the rosary. The beads are analogous to the various consciousnesses that can be the buddha nature. At one time it is bodhicitta, at another time it is the mind realizing emptiness, at yet another time it is the mind restraining from nonvirtue, and so on. The Seventh Dalai Lama is not referring to these specific mental states; he is emphasizing the continuum, the common feature shared by all of them. This common feature is the mental primary consciousness; this is the tathāgatagarbha. Some of the instances of this continuum may grasp true existence, and from that perspective they are not buddha nature. But from the perspective of that mind still being clear light — that which is clear and cognizant, whose obscurations are adventitious — it is the buddha nature.

Looking deeper, this third factor of tathāgatagarbha cannot refer to the transforming buddha nature. Why not? According to Sūtra, the transforming buddha nature is any mind that is not freed from defilements, whose continuity goes on to awakening and that serves as the basis for the emptiness that is the naturally abiding buddha nature. The naturally abiding buddha nature is the emptiness of the mind that is not yet freed from defilements. The seed having the capacity to give rise to the three kāyas must be a pure state of mind that is not defiled. This can only be a very subtle mind that has existed since beginningless time and will go on endlessly. The explanation of this primordial clear light mind is found in great depth only in highest yoga tantra, not in the Sūtra teachings that speak of the transforming buddha nature.

### *A Buddha's Nature Dharmakāya*

To review, in Tantra the fundamental innate clear light mind of sentient beings has never been mixed with defilements. This innate, ever-present mind has two qualities — it is the subtlest mind, and it has existed beginninglessly, exists endlessly, and will go on to awakening. When coarser levels of mind appear out of this subtlest mind, afflictions manifest. But when the coarser levels of mind

— including the white appearance, red increase, and black near attainment — absorb and cease, only the beginningless and endless clear light mind remains. At that time it is not possible for afflictions to arise. This indicates that the coarse minds are adventitious — they are not stable and enduring — while the innate clear light mind is eternal. This primordial clear light mind is the basis from which an individual’s saṃsāra evolves and it is also the basis from which the qualities of nirvāṇa come about.

The primordial clear light mind differs from the clear light mind described in Sūtra, which is together with afflictions in that afflictions manifest in it even though those afflictions are not an inherent part of that mind. However, afflictions are never able to manifest in the primordial clear light mind presented in Tantra because this mind manifests only after the coarser levels of mind and wind have ceased, at the time of death or by means of special yogic techniques.

In the Perfection of Wisdom sūtras, the nature body of a buddha (*svābhāvikakāya*) is said to be an unconditioned, permanent phenomenon — the emptiness of inherent existence of the awakened mind. The wisdom dharmakāya of a buddha is a conditioned, impermanent phenomenon that is the continuation of the clear light mind described in Sūtra. In Tantra, the primordial clear light mind is called the “composite nature body of a buddha.” Although the emptiness of the awakened mind — the nature body in common to Sūtra and Tantra — is a permanent phenomenon, the existence of a composite nature body is unique to Tantra because only Tantra speaks of the primordial clear light mind. Calling the primordial clear light mind at buddhahood the composite nature body emphasizes that nothing is newly created at buddhahood. This mind has been there all along, but now all the defilements, which were never an inherent part of it, are completely gone.

From the perspective of it cognizing all veiled and ultimate truths simultaneously, the purified primordial clear light mind of a buddha is called the omniscient mind, the wisdom dharmakāya. From the perspective of its existing from beginningless time and now becoming the purified basis of the emptiness that is the unconditioned nature body, it is called the composite nature body. The Seventh Dalai Lama refers to it as the “seed that has the capacity to give rise to the three kāyas of a buddha.” Although “seed” usually refers to an abstract composite, here it is a mind that serves as the basis for the three buddha bodies. This innate, primordial, ever-present mind also transforms into the wisdom dharmakāya. Thus in Tantra, the composite nature body and the wisdom dharmakāya of a buddha are the same mind seen from different perspectives.

In summary, Sūtra speaks of two buddha natures. One is the naturally abiding buddha nature; the other is the transforming buddha nature. The naturally abiding buddha nature is the emptiness of the mind that is not free from defilements. The transforming buddha nature is the mind that is the basis of that emptiness as well as any other neutral or virtuous qualities of mind that continue on to buddhahood.

If an intelligent person who is inclined toward Tantra hears of the third factor of tathāgatagarbha as explained by the Seventh Dalai Lama — the seed having the capacity to give rise to the three kāyas — she will understand that there is some aspect of her own mind that is a composite phenomenon and the buddha nature. What is that? It cannot be the defiled coarse mind because that mind does not continue to awakening. It must be a subtle mind that is hinted at but not explained extensively in Sūtra. She turns to Tantra, where there is a lengthy and explicit presentation of this mind. In this way, she enters Tantrayāna.

### *Pristine Wisdom Abiding in the Afflictions*

There is an area of potential confusion about tathāgatagarbha that we must take care to avoid. It stems from such statements as “Within afflictions, wisdom (*jñāna*) abides,” found in Nāgārjuna’s *Praise to the Sphere of Reality*. *Jñāna* usually refers to āryas’ pristine wisdom that directly realizes emptiness. Does this mean that afflictions are in fact wisdom? If so, are we already buddhas?

Statements such as this need to be understood correctly. Here *jñāna* refers not to āryas’ wisdom realizing emptiness but to the clear light nature that can transform into the wisdom of the resultant state. *Jñāna* is the aspect of the mind — found even in an afflictive mind — that can become the wisdom realizing emptiness. The cause — the clear light mind of sentient beings — will eventually become the result — a buddha’s pristine wisdom — and for this reason the clear light mind of sentient beings is called *wisdom* even though it has yet to become that wisdom. How is that aspect of the mind transformed into the nonconceptual wisdom directly realizing emptiness? By means of learning, reflecting, and meditating on the Dharma. This wisdom is generated in dependence on or in relation to the clear light mind.

Giving the cause the name of the result is reminiscent of Nāgārjuna’s discussion of the three kāyas (buddha bodies) in the ordinary state, on the path,

and at the resultant level. The expression “three kāyas in the ordinary state” does not mean that the three resultant kāyas are already present in us in our ordinary state. Rather, in the ordinary state we possess the basis upon which we can actualize the three kāyas. This basis is given the name of the result.

Similar ways of speaking are found in other scriptures. In *Treasury of Dharmadhātu* (T. *chos dbyings mdzod*), Longchenpa says that what is primordially awakened becomes reawakened. Some people take such passages literally, thinking that we are already buddhas. But if that is the case, then we are very strange and disgraceful buddhas! Longchenpa’s statement echoes the notion of natural nirvāṇa found in Madhyamaka texts. Natural nirvāṇa refers to the mind’s emptiness of inherent existence. This ultimate nature of the mind is pure and clear light; the defilements have not penetrated into it. Because this nature is naturally untainted, it is possible to remove the defilements that obscure it. While natural nirvāṇa is not the nirvāṇa of liberated beings, it serves as the basis upon which actual nirvāṇa can be attained. This is similar to the meaning of Longchenpa’s statement that what is the primordially awakened becomes reawakened.

Nāgārjuna’s statement that wisdom exists in the afflictions is made from the Sūtra point of view where wisdom refers to the continuity of the mental consciousness. According to Dzogchen and Mahāmudrā, the wisdom that is present in the afflictions is much subtler and refers to the innate clear light mind. They say this wisdom is a noncomposite phenomenon. Dodrubchen Jigme Tenpai Nyima (1865–1926), the Third Dordrup Rinpoche, explains that *noncomposite* in this context does not have its usual meaning of permanent and unconditioned. Rather, wisdom is said to be noncomposite because it has existed beginninglessly and is not newly created by causes and conditions. In the same way, the *Sublime Continuum* refers to the buddhas’ activities as permanent because they have existed beginninglessly and will exist eternally. Here “permanent” means eternal and unending; it doesn’t mean unchanging or unconditioned.

Gyaltsab Darma Rinchen has another view. He says that the term “wisdom” in this statement is not to be understood literally. Rather it refers to the emptiness of the mind, which is noncomposite, permanent, and always present.

I believe the Dzogchen and Mahāmudrā interpretations are more applicable when trying to understand the presentation in the *Sublime Continuum*. There is not much difference between the Seventh Dalai Lama’s view of buddha nature and that of Dzogchen and Mahāmudrā. However, Dzogchen and Mahāmudrā

speak from the viewpoint of highest yoga tantra and thus they identify the innate ever-present clear light mind as buddha nature, whereas the Seventh Dalai Lama speaks from the Sūtra viewpoint that points to Tantra.

## *Causal Clear Light Mind*

The causal clear light mind can be spoken of from the perspective of both Sūtra and Tantra. Sūtra speaks of the continuity of the mental consciousness, which is present at all times. The jñāna that abides in the afflictions refers to the continuum of this mental consciousness. While the continuum of the mental consciousness is not actual pristine wisdom, it will become this wisdom as we progress through the paths and grounds to buddhahood.

Highest yoga tantra differentiates two types of mind — the temporary, adventitious consciousnesses and the innate ever-present clear light mind. When all the coarser levels of mind — including the white appearance, red increase, and black near attainment — have dissolved, the subtlest innate clear light mind becomes manifest. Only this mind remains. The fact that all the other minds have dissolved indicates that they are adventitious, while the subtlest innate clear light mind, which has existed since beginningless time and continues on endlessly to awakening, persists.

From the viewpoint of highest yoga tantra, the clear and cognizant nature of the mind that is the fundamental innate clear light mind underlies all consciousnesses. But we should not equate clarity and cognizance in general with the fundamental innate clear light mind. All consciousnesses are clear and cognizant because that is the definition of consciousness. The fundamental innate clear light mind is the subtlest mind. The coarser minds of the waking state are derivatives of this everlasting mind. Although they have a clear and cognizant nature, they are not this subtlest innate mind.

Neither the continuum of the mental consciousness spoken of in Sūtra nor the fundamental innate clear light mind spoken of in Tantra is a soul or inherently existent self. Both are empty of inherent existence.

## *What Continues to Awakening?*

Who is the person that goes from being an ordinary being to an ārya to a buddha? To answer this, we speak of the *general I* — the continuity of the merely designated I from one life to another — and the *specific I* of each lifetime that constitutes that continuity. The specific I of each lifetime is designated in dependence on the aggregates of that life. Since our physical and mental aggregates change from one lifetime to the next, the I designated in dependence on them also changes. In one lifetime we may be Susan, in the next John. In one lifetime we may be a monkey, in another a human being, and in yet another a deva. These are the specific Is of those three lifetimes.

The general I or person that goes from one life to the next is designated in dependence on the series of specific Is. The Buddha spoke of the general I when he said, “In my previous life I was a king, in the present life I am Śākyamuni Buddha.” The person or I that exists continuously in the past, present, and future without interruption is the general I. That general I encompasses the monkey of one life, the human in the next, and the deva in the life after that. The monkey, human being, and deva are the specific persons of those individual lives. They are born and die; the general I goes from saṃsāra to full awakening.

When speaking of the self that exists in the three times, we are not referring to a subtle self or a coarse self — no distinction like that is made. It is simply the general I. Likewise, without making any distinction in terms of subtle or coarse, we say there is a general mental consciousness that exists in the three times.

Although the general mental consciousness goes from one life to the next and on to awakening, the specific mental consciousnesses of the sentient beings in that continuum do not. The consciousness aggregate of the monkey is not the substantial cause of the consciousness aggregate of the human being in the next rebirth. However, the last moment of the consciousness of one life is the substantial cause for the first moment of the consciousness of the next life. In this way, it is said that the continuity of the mental consciousness goes on to awakening. However, this mental consciousness is not a truly existent self or soul.

As discussed above, because afflictions such as ignorance are eradicated on the path and do not go on to awakening, they cannot be considered buddha nature. Although afflictions do not continue on to awakening, the clear and cognizant characteristic of the afflictions does. Here it is helpful to understand two kinds of continuities: (1) a *continuity of type* in which the cause and the result share similar characteristics, and (2) a *continuity of substance* in which one thing is the substance that transforms into another thing.

For example, a log burns and becomes ashes. The ashes are the substantial continuity of the log because the material of the log turned into the ashes. The ashes are not the continuity of type of the log because the log and the ashes do not have similar characteristics. Applying this to the question of afflictions continuing to awakening: the awakened mind is not the continuity of type of afflictions. Afflictions are polluted, they are the true origin of duḥkha. The awakened mind is unpolluted and is not the true origin. The two do not share the same characteristics. However, the clear and cognizant nature of the awakened mind is in the substantial continuity of the clear and cognizant nature of the afflictions.

From one perspective, it seems that if the mind grasping inherent existence changed objects and apprehended emptiness, it would be a virtuous mind. In that case, from the viewpoint of substance — clarity and cognizance — ignorance and wisdom would be in the same substantial continuity. But from the viewpoint of their characteristics, ignorance and the wisdom realizing emptiness are total opposites. The ignorance grasping true existence does not go to awakening; it is a totally distorted consciousness that cannot improve or become virtuous. In fact, when the antidote of wisdom realizing emptiness is applied, ignorance degenerates and becomes nonexistent. But when we look just at the clear and cognizant nature of ignorance, we can say that it can be purified and its purified continuum goes on to awakening.

## *Dzogchen and Mahāmudrā*

According to Sūtra, meditation on the clear and cognizant nature of the mind or on the transforming buddha nature alone will not eradicate afflictions. However, it does lead us to have more confidence that afflictions are not an inherent part of the mind and therefore that becoming a buddha is possible. This, in turn, leads us to question: What defiles the mind and what can eliminate these defilements completely? Seeking the method to purify the transforming buddha nature, we will cultivate the wisdom realizing the emptiness of inherent existence and eradicate ignorance.

According to Dzogchen and Mahāmudrā, meditation on the clear and cognizant nature of the mind could lead the coarse winds to dissolve and the subtlest clear light mind to become manifest. When this happens, practitioners who have previously cultivated a correct understanding of emptiness then

incorporate that understanding in their meditation and use the innate clear light mind to realize emptiness and abolish afflictions.

It is important to understand the *Sublime Continuum* correctly from a Dzogchen and Mahāmudrā point of view. Some people take it literally, leading them to incorrectly believe that primordial wisdom is permanent, inherently existent, independent of any other factors, and does not rely on causes and conditions. They then make statements such as, “If you unravel this secret, you will be liberated.” Dodrup Jigme Tenpai Nyima (1865–1926) and his disciple Tsultrim Zangpo (1884–c.1957), who were great Dzogchen scholars and practitioners, said that the mere presence of this primordial wisdom within us alone cannot liberate us. Why not? At the time of death, all other minds have dissolved, and only the primordial mind remains. Even though it has manifested in all the infinite number of deaths we have experienced in saṃsāra, that has not helped us attain buddhahood. These two sages say that in order to attain buddhahood, it is necessary to utilize the primordial wisdom to realize emptiness; only that will liberate us. This is consistent with Tsongkhapa’s view.

Some commentaries on Dzogchen and Mahāmudrā say: This wisdom that abides in the afflictions is the true wisdom, and on this basis every sentient being is already a buddha. Although we have been buddhas from beginningless time, we have to be awakened again. The wisdom that we have now is the omniscient mind of a buddha, and the three bodies of a buddha exist innately in each sentient being. Sentient beings have a basis of essential purity that is not merely emptiness but is endowed with three aspects. Its entity is the dharmakāya — the mode of abiding of pristine wisdom; its nature is the enjoyment body — the appearance aspect of that mind; and compassion is the emanation bodies — its radiance or expression. In short, they say that all three buddha bodies are present, fully formed in our ordinary state, but since they are obscured we are not aware of their presence.

Such statements taken literally are fraught with problems. While some people are partial and unfair in their criticism and refute misconceptions in only some traditions, Changkya Rolpai Dorje (1717–86) was unbiased and pointed out incorrect interpretations in all four Tibetan traditions, including his own Geluk tradition. In his *Song of the Experience of the View*, he says, “I say this not out of disrespect to these masters, but perhaps they have had less exposure to rigorous philosophical investigation of the great treatises and were unable to use certain terminology appropriately.” That is, the difficulty in their assertions lies in a broad use of terminology that is not grounded in the authority of the great

treatises. Of course, Changkya's comments do not apply to Dzogchen and Mahāmudrā masters such as Dodrup Jigme Tenpai Nyima and his teacher Awa Pangchu, who have done serious philosophical study and examination of the great treatises and who ground their understanding of Dzogchen in them. Their interpretations and writings are excellent.

All four Tibetan traditions teach practices that search for the mind — where it came from, where it goes, what its shape and color are, and so forth. Speaking of this shared practice, Changkya said that after searching in this manner, we find that the mind is not tangible, lacks color and shape, and does not come from one place or go to another. Discovering this, meditators experience a sensation of voidness. However, this voidness is not the emptiness of inherent existence that is the ultimate reality of the mind; it is the mere absence of the mind being a tangible object. Although someone may think this voidness is ultimate reality and meditate in that state for a long time, this is not meditation on the ultimate nature of the mind.

There are two ways to meditate on the mind. The first is as above, examining whether the mind has color, shape, location, tangibility, and so forth. This leads to the sense that the conventional nature of the mind lacks these qualities. The second is meditation on the ultimate nature of the mind, in which we examine the mind's ultimate mode of existence and discover its emptiness of inherent existence. People who confuse these two ways of meditating on the mind and think that the mind's absence of tangibility, color, and so forth is the mind's ultimate nature may criticize masters such as Dignāga and Dharmakīrti for their precise expositions on debate, logic, and reasoning, saying these only increase preconceptions. Gungtang Konchog Tenpai Dronme (1762–1823), another master who was impartial in his critical analysis of Tibetan Buddhist traditions, said he found this amazing.

Some people believe there is no need for reasoning or investigation on the path, that simply by having faith and receiving the blessing of a guru primordial wisdom will arise. In this light, I have been very happy to see the establishment of more shedras — academic institutes — that teach the classical philosophical texts from India and Tibet.

Some Westerners similarly do not value Dharma study and investigation, perhaps because Buddhadharma is relatively new in the West. Without a comprehensive understanding of the Buddhadharma, people tend to seek the easiest and shortest path to awakening, a path that does not require giving up their attachments. Such an attitude exists among Tibetans as well. Tsongkhapa

said that many people think that the Buddha's qualities are wonderful, but when a spiritual mentor explains through reasoning and scriptural citations how to attain them, they become discouraged and say, "Who can actually achieve such realizations?"

## *Are We Already Buddhas?*

In the *Tathāgatagarbha Sūtra*, the Buddha explained that each sentient being possesses a permanent, stable, and enduring tathāgatagarbha that is a fully developed buddha body (*kāya*) replete with the thirty-two signs of a buddha. Questions arise: If an already realized buddha existed within us, wouldn't we be ignorant buddhas? If we were actual buddhas now, what would be the purpose of practicing the path? If we were already buddhas and yet still needed to purify defilements, wouldn't a buddha have defilements? If we had a permanent, stable, and enduring essence, wouldn't that contradict the teachings on selflessness and instead resemble the self or soul asserted by non-Buddhists? Mahāmati expressed these same doubts to the Buddha in the *Descent into Lanka Sūtra*:

The tathāgatagarbha taught [by the Buddha in some sūtras] is said to be clear light in nature, completely pure from the beginning, and to exist possessing the thirty-two signs in the bodies of all sentient beings. If, like a precious gem wrapped in a dirty cloth, [the Buddha] expressed that [tathāgatagarbha] — wrapped in and dirtied by the cloth of the aggregates, constituents, and sources; overwhelmed by the force of attachment, animosity, and ignorance; dirtied with the defilements of conceptualizations; and permanent, stable, and enduring — how is this propounded as tathāgatagarbha different from the non-Buddhists propounding a self?<sup>88</sup>

Some Tibetan scholars accept the teaching on a permanent, stable, and enduring buddha nature literally, saying it is a definitive teaching. Sharing the doubts expressed above by Mahāmati, Prāsaṅgikas say this is an interpretable teaching. They say this, not on a whim, but by examining three points.

(1) *What was the Buddha's final intended meaning when he made this statement?* When speaking of a permanent, stable, and enduring essence in each sentient being, the Buddha's intended meaning was the emptiness of the mind,

the naturally abiding buddha nature, which is permanent, stable, and enduring. Because the mind is empty of inherent existence and the defilements are adventitious, buddhahood is possible.

(2) *What was the Buddha's purpose for teaching this?* The Buddha taught a permanent, stable, enduring essence complete with the thirty-two signs, in order to calm some people's fear of selflessness and to gradually lead non-Buddhists to the full realization of suchness. At present, these people, who are spiritually immature, feel comfortable with the idea of a permanent essence. The idea of the emptiness of inherent existence frightens them; they mistakenly think it means that nothing whatsoever exists. They fear that by realizing emptiness, they will disappear and cease to exist. To calm this fear, the Buddha spoke in a way that corresponds with their current ideas. Later, when they are more receptive, he will teach them the actual meaning. This is similar to the way skillful parents simplify complex ideas to make them comprehensible to young children.

(3) *What logical inconsistencies arise from taking this statement literally?* Accepting this teaching on a permanent, stable, and enduring buddha nature at face value contradicts the definitive meaning of emptiness and selflessness explained by the Buddha in the Perfection of Wisdom sūtras. In those sūtras, the Buddha set forth many reasonings that refute this view. Furthermore, if this statement were accepted literally, the Buddha's teachings would be no different from those of non-Buddhists who assert a permanent self.

The emptiness of inherent existence — which is the ultimate reality and the natural purity of the mind — exists in all sentient beings without distinction. Based on this, it is said that a buddha is present. But the ultimate reality of a buddha does not exist in sentient beings. While buddhas and sentient beings are the same in that the ultimate nature of their minds is emptiness, that ultimate reality is not the same because one is the ultimate reality of a buddha's mind — the nature dharmakāya — and the other is the ultimate reality of a defiled mind. If we said that the nature dharmakāya existed in sentient beings, we would have to also say that the wisdom dharmakāya, which is one nature with it, existed in sentient beings. That would mean that sentient beings were omniscient, which certainly is not the case! Similarly, if the abandonment of all defilements existed in ordinary sentient beings, there would be nothing to prevent them from directly perceiving the natural purity of their minds. They would directly realize emptiness. This, too, is not the case.

Some people say the dharmakāya with the two purities — the natural purity and the purity of the abandonment of all defilements — exists in the

mindstreams of sentient beings, but because sentient beings are obscured, they don't perceive it. If that were the case, then whose mind is purified and who attains the freedom that is the purity of all defilements? If sentient beings already possess the dharmakāya, there is no need for them to practice the path and purify their minds, because from beginningless time their minds have been free of adventitious defilements.

The assertion that a buddha complete with the thirty-two signs exists within the continuums of all sentient beings echoes the theistic theory of an eternally pure, unchanging self. If the thirty-two signs were already present in us, it would be contradictory to say that we still need to practice the path to create the causes for them. If someone says that they are already in us in an unmanifest form and they just need to be made manifest, that resembles the Sāṃkhya notion of arising from self, because even though existing, this buddha would need to be produced again in order to be made manifest. Nāgārjuna and his followers soundly refuted production from self.

The sūtra continues with the Buddha's response:

Mahāmati, my teaching of the tathāgatagarbha is not similar to the propounding of a self by non-Buddhists. Mahāmati, the tathāgatas, arhats, the perfectly completed buddhas indicated the tathāgatagarbha with the meaning of the words *emptiness, limit of complete purity, nirvāṇa, unborn, signless, wishless*, and so forth. [They do this] so that the immature might completely relinquish a state of fear regarding the selfless, [and to] teach the nonconceptual state, the sphere without appearance.<sup>89</sup>

Here we see that the Buddha skillfully taught different ideas to different people, according to what was necessary at the moment and beneficial in the long term to further them on the path. We also learn that we must think deeply about the teachings, exploring them from various viewpoints and bring knowledge gained from reasoning and from reading other scriptures to discern their definitive meaning.

The purpose of learning about buddha nature is to understand that the mind is not intrinsically flawed and that, on the contrary, it can be perfected. It is not just that the mind can be transformed; there is already part of the mind that allows it to be purified and perfected. Understanding this gives us great confidence and energy to practice the methods to purify and perfect this mind of

ours so that it will become the mind of a fully awakened buddha.

---

## REFLECTION

1. What does it mean to say that pristine wisdom abides in the afflictions?
  2. Are we already wise buddhas but just don't know it? Do buddhas have afflictions?
  3. The Buddha said there is a permanent, stable, and enduring buddha nature in each of us. What was his final intended meaning in saying this?
  4. What was his purpose for teaching this?
  5. What logical inconsistencies arise from taking this statement literally?
- 

### *Awareness of Our Buddha Nature Eliminates Hindrances*

Maitreya said (RGV 1.158):

[The sūtras of the second turning of the Dharma wheel] state in numerous places that all knowable [phenomena] are in all ways empty like a cloud, a dream, or an illusion. Why is it then, that in [the sūtras of the third turning of the Dharma wheel] the Buddha, having said this, declared that the buddha nature is present within beings?

Maitreya tells us that although the sūtras of the second turning characterize the buddha nature by giving the examples of an illusion and so forth to illustrate the emptiness of the mind, he will explain buddha nature slightly differently in the *Sublime Continuum*. This is a clue implying that he will emphasize the clear light mind being the buddha nature. This may cause some people to doubt: “The Buddha taught emptiness extensively in the second turning, saying that was the buddha nature. Why in the third turning would he speak about buddha nature

being the clear light mind that has beginninglessly been completely pure in sentient beings? Is there a contradiction between the second and third turnings?”

Maitreya explains that the Buddha spoke of buddha nature being the clear light mind in order to help us sentient beings overcome five factors that hinder us from developing bodhicitta, realizing emptiness, and attaining buddhahood.

(1) *Discouragement* makes us believe that awakening cannot be attained. Because we don't know that the buddha nature exists in us, cynicism and a lack of confidence prevent us from generating bodhicitta. Even before beginning, we give up and don't make an effort.

(2) Having *arrogant contempt for those we consider inferior* comes from not knowing that the buddha nature exists in others. With derision we judge and disparage others, abandon love and compassion, and abstain from engaging in the bodhisattva practices.

(3) *Distorted conceptions* incorrectly hold that adventitious defilements are truly existent, exist in the nature of the mind, and are impossible to eradicate. These wrong views superimpose true existence on things that are empty of true existence. They arise from not knowing the existence of the buddha nature in all sentient beings and interfere with our cultivation of the wisdom correctly realizing reality.

(4) *Denigrating the true nature* is to deny the existence of buddha nature or to think the buddha nature has not been present beginninglessly. This misconstrued deprecation repudiates the potential that exists within each sentient being and inhibits realizing the excellent qualities that are inseparable in nature from the buddha nature.

(5) *Self-centeredness* makes us biased toward the self, quenching the equanimity that sees self and others as equally valuable. Egocentrism obliterates the thought that buddha nature exists equally in ourselves and others. Pre-occupied with our own concerns, we are unable to generate the love and compassion that regard ourselves and others as equal. This, in turn, interferes with generating bodhicitta.

Understanding buddha nature counteracts these five faults. When we sentient beings hear about buddha nature, (1) joy, not discouragement, arises in our minds because we know duḥkha can be overcome; (2) in place of contempt arises respect for the Buddha and sentient beings who have this great potential; (3–4) analytical wisdom that correctly views reality abolishes superimpositions and denigration of the actual nature, replacing it with liberating wisdom; and (5)

great love for all sentient beings overcomes confining self-preoccupation by opening our hearts to others. In short, eliminating these faults clears the way to generating bodhicitta and engaging in the six perfections, especially meditative stability and wisdom, which are essential to overcome the two obscurations.

In this way, Maitreya clarifies that the description of buddha nature in the *Sublime Continuum* does not contradict that of the second turning but speaks of it from a different perspective. He also elucidates the purpose for teaching the tathāgatagarbha in the third turning: it is to help sentient beings overcome the five faults and have enthusiasm and determination to practice the path and attain full awakening.

## Notes

1. *Upādāna* means clinging, the aggregates being *subject to clinging*. This connotes that the aggregates are objects of our clinging and are brought about by clinging. *Upādāna* may also be translated as *appropriated*, connoting that the aggregates have been “taken” by the person.
2. In Buddhism *permanent* means unchanging. Permanent phenomena are not dependent on causes and conditions. *Impermanent* means changing from one moment to the next.
3. The way *nirvāṇa* is described here in the Pāli tradition — as a permanent, unconditioned, and unborn reality that allows for the eradication of defilements — sounds similar to the Madhyamaka description of emptiness in the Sanskrit tradition.
4. This refers to the fourfold classification of *nirvāṇa*. See chapter 11. According to the Prāsaṅgikas, *natural nirvāṇa* is emptiness. *Nirvāṇa without remainder* is true cessation in the continuums of arhats of the three vehicles that is qualified by the vanishing of the manifest appearance of true existence. *Nirvāṇa with remainder* is true cessation in the continuums of arhats of the three vehicles that is together with the manifest appearance of true existence. This occurs in the postmeditation time of arhats who are not buddhas. *Nonabiding nirvāṇa* is true cessation in which the two obscurations have been extinguished, and it is possessed only by buddhas. The lower tenet systems explain *nirvāṇa* with and without remainder differently.
5. See His Holiness the Dalai Lama and Thubten Chodron, *Buddhism: One Teacher, Many Traditions* for an explanation of the sixteen attributes according to the Pāli tradition.
6. *Self* has two distinct meanings, depending on the context: (1) the person, someone who is a sentient being or a buddha, and (2) inherent existence, as in self-grasping ignorance.
7. *Māra* is the personification of hindrances and obscurations.
8. See the first four chapters of Āryadeva’s *The Four Hundred* for a thorough description of the four distorted conceptions and their antidotes.
9. In both the Pāli and Sanskrit traditions, the three higher trainings of ethical conduct, concentration, and wisdom — which include the eightfold path — are generally specified as the path to liberation. Alex Wayman notes that the four distorted conceptions and four attributes of true cessations correspond to the four distorted conceptions and four attributes of true paths. These, in turn, relate to the three higher trainings. (1) True paths lead to true cessations, which together counteract the distorted conception that *nirvāṇa* does not exist because true paths do not exist. (2) The higher training of concentration is a *suitable* path that leads to *peace* because it calms and focuses the mind. (3) The higher training in ethical conduct is the *accomplishment* leading to *magnificence* because realizing the nature of the mind promotes nonharmfulness. (4) The higher training in wisdom is the *way to deliverance* because it leads to *irreversible freedom*. See Alex Wayman, “The Sixteen Aspects of the Four Noble Truths and Their Opposites,” *Journal of the International Association of Buddhist Studies* 3, no. 2 (1980), 73.
10. In general, when the meditative concentrations of both the form and formless realms are referred to together, they are called meditative absorptions. However, technically, *dhyāna* refers specifically to the levels of concentration in the form realm and *samāpatti* to those in the formless realm.
11. For a more detailed explanation, see Lati Rinpoche, Denma Locho Rinpoche, Leah Zahler, and Jeffrey Hopkins, *Meditative States in Tibetan Buddhism* (Somerville, MA: Wisdom Publications, 1983), 23–47.
12. Classes 29 to 25 are the Five Pure Abodes (*Śuddhāvāsa*).
13. Some say this is a separate division of the fourth *dhyāna*, making eighteen *dhyānas*; others say it is

within the Great Fruit Land.

14. The Pāli tradition does not include the Increasing Merit or Cloudless in the fourth dhyāna; it does include the Unconscious Beings. Some Sanskrit versions include the Unconscious Beings, making eighteen form realm gods; others do not.
15. *Śubha* can also be translated as “pure” or “auspicious.”
16. See AN 4.123 for a fuller description of the form realm.
17. The Pāli Abhidhamma says they also lack the sense of touch.
18. The *Treasury of Knowledge* explains why the Realm of Thirty-Three Devas is so-called: “There are eight wealth gods, eleven wrathful gods, twelve sun gods, and the two young sons of Ashvini. Due to there being these thirty-three principal [gods,] it is called so, or, alternatively, due to there being thirty-three residences of the gods, such as Excellent Dharma (*Sudharma*), the meeting place of the gods, and so forth, it is called so.”
19. Pāli sūtras do not speak of asuras as a separate realm, but consider them as having an unfortunate rebirth. They mention asuras who are neighbors of the devas in the Land of the Thirty-Three, but often fight with them. Some Pāli commentators say asuras are in the hungry ghost realm.
20. In some texts, the order of hungry ghosts and animals is reversed.
21. The Dalai Lama, *The Meaning of Life from a Buddhist Perspective*, trans. and ed. Jeffrey Hopkins (Boston: Wisdom Publications, 1993), 7.
22. See also Artemus Engle, *Inner Science of Buddhist Practice* (Boston: Snow Lion Publications, 2009), 125–34.
23. Candrakīrti’s *Commentary on Āryadeva’s “Four Hundred” (Catuḥśatakaṭīka)*.
24. The following list shows different contexts in which the term “ignorance” is used; it is not a standard textual enumeration.
25. *Gratification* is the pleasure experienced by contact with the aggregates. *Danger* is the decay of the aggregates that leaves us disappointed. *Escape* is giving up desire for the aggregates, wisely freeing ourselves from the afflictions that bind us to duḥkha.
26. A primary consciousness has several mental factors that *accompany* or are *concomitant* with it, meaning that they share five similarities: they have the same basis, observed object, aspect, time, and entity. In this case, ignorance is a mental factor accompanying the primary mental consciousness and thus shares these five similarities with it. See *The Foundation of Buddhist Practice*, chapter 3.
27. P. *silabbata-parāmāsa*. The term has several different translations. In Pāli *parāmāsa* means “misapprehension.” It seems the corresponding Sanskrit term may be spelled similarly to the term meaning “supreme,” and thus the Tibetan term is often translated as “holding bad rules and practices as supreme.”
28. “Eternalism” in Buddhist philosophy is not the same as the eternalism that is a philosophy of time.
29. Tibetan Buddhism calls these sixty-two “bad views,” but does not speak of them in the context of the mental factor of wrong views. Tsongkhapa discusses these in *Illumination of the Thought (Dgongs pa rab gsal)*.
30. This is sometimes translated as “shamelessness,” referring to the lack of the good kind of shame that feels badly about our poor behavior.
31. MN 148.28 speaks of three underlying tendencies: attachment to sensuality, anger, and ignorance. MN 64.3–6 speaks of five underlying tendencies: view of a personal identity, doubt, view holding bad rules and practices, sensual desire, and malice. These five are also the five lower fetters. The *Jñānaprasthāna* — the last text in the Sarvāstivādin Abhidharma — explains ten underlying tendencies that are the same as the ten root afflictions in the Sanskrit tradition.
32. See Padmanabh S. Jaini, “*Smṛti* in the Abhidharma Literature and Development of Buddhist Accounts of Memory of the Past,” in *In the Mirror of Memory: Reflections on Mindfulness and Remembrance in Indian and Tibetan Buddhism*, ed. Janet Gyatso (Albany: State University of New York Press, 1992), 47–60. Also see Collett Cox, “The Sarvāstivādin Path of Removing Defilements,” in *Paths to Liberation: The Marga and Its Transformations in Buddhist Thought*, ed. Robert E. Buswell Jr. and

Robert M. Gimello (Honolulu: Kuroda Institute / University of Hawaii Press, 1992), 70–72.

33. Origin and disappearance refer to their transient nature. Gratification is the attraction or enjoyment we have, danger is the unpleasant consequences that come from afflictive involvement, and escape is the freedom we wish to attain.
34. The *Treasury of Knowledge* contains two other categories of defilements that overlap with these twenty. The *ten full entanglements* (*pāryavasthāna*) are: (1–2) Lack of integrity and inconsideration for others interfere with ethical conduct. (3–4) Jealousy (being mentally upset by another’s success) and miserliness (possessiveness that opposes giving Dharma, possessions, and skills) are inconsistent with benefiting others. (5) Restlessness is agitation. (6–7) Regret and lethargy are inconsistent with concentration. (8) Sleep is the gathering in of the mind that leaves one incapable of controlling the body. Sleep and regret are full entanglements only when they are afflictive. In the *Compendium of Knowledge* regret and sleep are listed as variable mental factors because they may accompany virtuous mental states. (9) Wrath includes all types of anger directed at sentient beings and inanimate objects (except malice and harmfulness). (10) Concealment is hiding disgraceful behavior.  
The *six stains* (*mala*) are: (1–2) Pretension (misleading others) and deceit (crookedness of mind that leads to acting in a distorted manner) are forms of dishonesty. (3) Haughtiness is smug complacency. (4) Spite is holding firmly to disgraceful behavior and not accepting good advice. (5) Resentment is continued animosity. (6) Harmfulness is cruelty that injures others with weapons or harsh words.
35. According to Asaṅga, the definitions of pretention and deceit are reversed.
36. Bhikkhu Bodhi differentiates these two, saying that the auxiliary affliction of arrogance is a manifest affliction, whereas the underlying tendency of arrogance is an unmanifest potential or seed that will become a manifest affliction when provocative circumstances are encountered. Personal correspondence.
37. After speaking of the pollutants, Vasubandhu addresses the floods (*ogha*) and yokes (*yoga*), saying they are four in number: attachment, existence, ignorance, and views. They are called *floods* because they carry us away to rebirth in saṃsāra. They are called *yokes* because they tie us to rebirth in saṃsāra. He does not include views as a pollutant because the pollutants establish us in saṃsāra, whereas views alone, without being associated with other afflictions, are not sufficient to do this.
38. View of extremes holds the aggregates to be either eternal or nonexistent. According to the Vaibhāṣika and Sautrāntika schools, when one attains nirvāṇa without remainder, the aggregates cease to exist, so there is no person who actually possesses this type of nirvāṇa because without the aggregates, a person cannot exist. Since one part of view of extremes holds the aggregates to be nonexistent and accords with the above way of defining nirvāṇa without remainder, this view is neutral, not nonvirtuous.
39. See *The Foundation of Buddhist Practice*, chapter 3.
40. Here we note a difference between true origins, which include karma, and afflictive obscurations, which do not. True origins are the source of all types of duḥkha; afflictive obscurations are what must be overcome to attain liberation. Once afflictions are overcome, the karma causing rebirth can no longer ripen.
41. The Pāli tradition does not set out five paths, as does the Sanskrit tradition. It speaks of seeing and meditation, but not the path of seeing or the path of meditation.
42. Cittamātrins have a complex presentation of seeds and latencies and how they produce both the object and the consciousness cognizing it. This explanation will be saved for a later volume in the series.
43. The Tibetan word *nang wa* can be translated as either “appearance” or “perception.” “Appearance of inherent existence” makes it seem that the problem is on the object’s side — that phenomena appear inherently existent. However, the problem is actually on the subject’s side — the mind is obscured and perceives things as if they were inherently existent. But “perceive” is not exactly the right word either, because it implies direct perception, and inherent existence also appears to conceptual consciousnesses.
44. Vaibhāṣikas are an exception to this. Their position differs from that of the Prāsaṅgikas with whom we are now concerned.

45. These were described while commenting on the meaning of *dhammatā*, the nature of things, in DN 14.
46. This and other examples from DN 14 are commonly given in the ancient commentaries. More research needs to be done on the meaning of dharma causality. Bhikkhu Bodhi speculates that it may include the causality of progressing on the path, with one realization being the cause of the next.
47. See Leti Sayadaw, *The Niyama-dipani: The Manual of Cosmic Order*, [http://mahajana.net/texts/kopia\\_lokalna/MANUAL04.html](http://mahajana.net/texts/kopia_lokalna/MANUAL04.html).
48. *Pratītyasamutpāda* is translated as “dependent origination” when speaking about the twelve links and as “dependent arising” when speaking of the broader sense in which all phenomena are dependent and therefore empty of true existence.
49. The length of a moment varies according to the context from the tiniest nanosecond to the length of time to complete something to a lifetime. Here it refers to the length of time it takes for first-link ignorance to cause second-link formative action.
50. Geshe Lhundrup Sopa, with David Patt, *Steps on the Path to Enlightenment: A Commentary on Tsongkhapa’s Lamrim Chenmo*, vol. 2, *Karma* (Boston: Wisdom Publications, 2005), 326.
51. Chim Jampalyang, *Ornament of Abhidharma: A Commentary on Vasubandhu’s Abhidharmako’sa*, trans. Ian James Coghlan (Somerville, MA: Wisdom Publications, 2019), 411.
52. The bardo may last up to forty-nine days. If a new rebirth has not been found, at the end of each week there is a mini-death at which time it is possible for a new karma to ripen.
53. Pāli Abhidhamma commentaries say that in the moment just after the cessation of the rebirth-linking consciousness, the same type of consciousness apprehending the same object continues uninterruptedly when there is no cognitive process, until the arising of death consciousness. This consciousness is called the life-continuum. According to a more detailed explanation, the bhavaṅga follows immediately after the rebirth-linking consciousness and is a product of the same karma that produced the rebirth-linking consciousness. The bhavaṅga is a deep, underlying consciousness that accounts for the continuity of mind coming from the living being in the previous life. It is not a continuous consciousness, an independent consciousness, or a permanent self; it arises and passes away in each micro-moment. During the lifetime, the bhavaṅga arises whenever there isn’t a cognitive process, maintaining the continuity of mind. At the end of life, the life-continuum becomes the death consciousness. After death, the rebirth-linking consciousness and so forth of another set of twelve links occur. In this way, the mindstream (P. *cittasantāna*) flows on from conception until death and from death to the new birth, revolving like the wheel of a cart (CMA 228).
54. In other contexts “name” includes consciousness and refers to the mind as a whole.
55. This is from the Sūtra viewpoint. From the Tantric perspective, beings in the formless realm still have a very subtle body — the subtlest wind that is one nature with the subtlest mind.
56. This is according to Chim Jampalyang’s commentary on the *Treasury of Knowledge*.
57. See LC 1:311–12.
58. These seven are the mental contemplations of a mere beginner, individual knowledge of the character, belief, thorough isolation, withdrawal or joy, analysis, and final training. Sometimes an eighth contemplation, the mental contemplation of the result of final training, is listed. This is the actual dhyāna or meditative absorption.
59. Daniel Cozort, *Unique Tenets of the Middle Way Consequence School* (Ithaca, NY: Snow Lion Publications, 1998), 182.
60. The Pāli tradition prescribes the eightfold path as the remedy to cyclic existence.
61. Among the eighteen early schools the Sarvāstivāda, which later became influential in Tibet, asserted an intermediate state between one life and the next. The Theravāda commentarial tradition rejected this, saying that the consciousness separates from one body and in the very next moment the rebirth consciousness takes place in the new existence. Nevertheless, there is mention in the Pāli sūtras of the “being to be reborn,” or *gandhabba* (MN 38.26 and MN 93.18). The Pāli sūtras do not explain the meaning of *gandhabba*, but treat it as if the listeners already understood its meaning. Buddhaghosa explained a *gandhabba* as a being who is going to be reborn — that is, the consciousness of a being

who has passed away that is in a condition suitable for taking rebirth. In the case of a human birth, the gandhabba will be born as the child of two parents with whom it has a karmic connection.

In other contexts, gandhabba refers to semi-divine spirits inhabiting forests and plants or to a type of celestial musician.

62. Geshe Yeshe Tabkhye, “Dependent Arising, the King of Reasons Used to Distinguish the Ontological Status of All Things,” trans. Geshe Damdul Namgyal and Joshua W. C. Cutler, unpublished manuscript. This essay on dependent arising acts as an introduction to Kamalāśīla’s commentary on the *Rice Seedling Sūtra*, which Geshe Thabkhe translated into Hindi.
63. The sūtra’s Tibetan title is *Yod pa nyid la sogs pa’i bye brag rnam par ‘byad pa zhes bya ba’i chos kyi rnam grangs kyi mdo*. The sūtra passage is cited in *Vasubandhu’s Explanation of the Divisions of the First Factor of Dependent Arising* (DK, vol. *chi*, 5a, 4.xz; the citation is from Geshe Thabkhe’s unpublished manuscript, “Dependent Arising”).
64. Excerpt from Geshe Thabkhe’s unpublished manuscript, “Dependent Arising.”
65. See *The Foundation of Buddhist Practice*, chapter 2, for an explanation of reliable and unreliable awarenesses.
66. There is discussion regarding to what extent this joy is physical, because input from the five senses is subdued as concentration deepens.
67. Usually joy is said to accompany the first dhyāna, although here it arises before the attainment of access concentration, which is prior to the first dhyāna.
68. An exception is someone who followed the śrāvaka or solitary realizer path to arhatship, later entered the Mahāyāna, and is on the bodhisattva path of accumulation or preparation.
69. Jeffrey Hopkins, *Maps of the Profound* (Ithaca, NY: Snow Lion Publications, 2003), 692.
70. John Ireland, *The Udāna and the Itivuttaka* (Kandy: Buddhist Publication Society, 2007), 200.
71. A difficulty arises in speaking of nirvāṇa with remainder in this way. In the lifetime that they attain liberation, arhats may be beings in the desire, form, or formless realm. Clearly those in the desire and form realms have polluted bodies. Arhats in the formless realm have only four mental aggregates, so we cannot say their bodies are polluted. Saying their mental aggregates are polluted is awkward because their mindstreams are temporarily free from afflictions owing to their deep concentration. Thus it is a bit difficult to posit an illustration or an example of the polluted aggregates of formless-realm arhats. On the other hand, it is difficult to say that they have *no* polluted aggregates, because they have nirvāṇa with remainder in their continuums.
72. Espousing three final vehicles, Cittamātra Scriptural Proponents do not assert that arhats directed exclusively to their own personal peace enter the Mahāyāna. However, they say that an arhat whose liberation is transformed can enter the Mahāyāna and attain buddhahood. He makes this transition from nirvāṇa with remainder; it cannot occur from nirvāṇa without remainder because the continuity of mind has ceased at that time.
73. This and the two citations below from the Udāna were translated by Thanissaro Bhikkhu.
74. Pāli commentaries say that all āryas from stream-enterers on up can gain access to this state. However, some people say that there doesn’t seem to be evidence for this position in the sūtras: according to the sūtras, arhats alone can enter this samādhi.
75. Bhikkhu Bodhi, personal correspondence, August 6, 2017.
76. This is another case of the name of the result being given to the cause. His Holiness gave another example: A commentary to the *Ornament* refers to great compassion as the Bhagawati — the one who is completely subdued — indicating the Buddha. In fact, great compassion is neither full awakening nor the one who is completely subdued. Rather, the name of the result — Bhagawati — is being given to the cause — compassion — because great compassion is an essential cause of buddhahood.
77. Questions that spark much debate arise: What does it mean for a consciousness to exist or be present? If the clear light mind exists but is not active while the coarse consciousnesses are manifest, is it present? There are two main views. According to one view, if a consciousness is present, it needs to be manifest. In this case, the clear light mind is present only when the coarse consciousnesses have

subsided and it is manifest. But in that case, the clear light mind would not exist continuously, so how could it be the basis for saṃsāra and nirvāṇa?

According to the other view, a consciousness need not be manifest in order to be present. It may also be present in a dormant form. In this case, the clear light mind is present even when someone is going about their daily life and the coarse consciousnesses are active.

This brings up a further question: For a consciousness to exist, it must have an object, so if the innate clear light mind exists and is present while the coarse consciousnesses are manifest, what is its apprehended object? When the coarse levels of mind are active, they are dominant and are cognizing their apprehended objects. In that case, the subtler mind would be inactive and not apprehend anything. Lacking an apprehended object, how can we say that consciousness exists? On the other hand, that consciousness is the basis for saṃsāra and nirvāṇa, so how can it not exist continuously? This is a thorny topic!

Everyone agrees that when the coarse levels of mind have been absorbed, the innate clear light mind is manifest. In ordinary beings, this occurs primarily at the time of death. This subtlest clear light mind is free from afflictions because they were absorbed when the coarse minds and winds ceased functioning during the dying process. As such, unlike the coarse states of mind, this clear light mind can never be nonvirtuous or afflictive, and through tantric practice it may be transformed into virtue. This is one reason why Tantra is said to be profound.

78. Several other terms are also used in the discussion of buddha nature. In some circumstances they are used interchangeably, in others they have a slightly different meaning. In addition to the above terms, other terms include *buddha essence* (*tathāgatagarbha*, T. *bde bzhin gsegs pa'i snying po*) and *element of sentient beings* (*sattvadhātu*, T. *sems can gyi khams*), or simply *element*. *Gotra* (T. *rigs*), which is translated as *nature* or *disposition*, as in *buddha nature* or *buddha disposition*, may also be translated as *lineage*, *trait*, or *family*.
79. The Cittamātra Scriptural Proponents is the only Mahāyāna tenet school asserting that not all sentient beings can attain full awakening. Some people postulate that speaking of icchantikas is done to warn practitioners not to become lax or negligent.
80. There are different views about whether the five sense consciousnesses are included in the transforming buddha nature. Some sages say they are not, because alone the sense consciousnesses do not have the ability to accomplish the path — they are neither stable nor continuous. Only the mental consciousness can practice and realize the path. The mental consciousness leads the sense consciousnesses, which alone are blind with respect to emptiness. Others say that because the sense consciousnesses go with the mental consciousness to awakening they are part of buddha nature. The mental consciousness generates bodhicitta and realizes emptiness, so the sense consciousnesses also attain awakening.
81. These are the stages that spiritual practitioners actualize as they progress toward their spiritual goal.
82. Tsong-kha-pa Lo-sang-drak-pa, “Extensive Explanation of (Chandrakīrti’s) ‘Supplement to (Nāgārjuna’s) ‘Treatise on the Middle’’: Illumination of the Thought,” trans. Jeffrey Hopkins, unpublished manuscript.
83. Both Cittamātrins and Mādhyamikas agree that afflictions are adventitious, but they differ in explaining how they are adventitious. This affects their explanations of the clear light mind. Cittamātrins say the clarity and cognizance that are hallmarks of the conventional nature of the mind constitute the buddha nature. Because mental factors come and go while the nature of the mind remains clear and cognizant, they say the afflictions are not an inherent property of the mind. Nāgārjuna and the Prāsaṅgikas assert that because the mind is primordially pure of inherent existence, the afflictions derived from self-grasping ignorance are not an inherent property of mind. In short, whereas the Cittamātrins explain the undefiled nature of the clear light mind from the viewpoint of its conventional nature, Nāgārjuna does so from the viewpoint of its ultimate nature.
84. The ground of the latencies of ignorance is subtle motivational effort that instigates physical, verbal, and mental actions and is the cause of unpolluted karma. Created only by āryas, unpolluted karma

produces the mental bodies of śrāvaka and solitary realizer arhats and of ārya bodhisattvas.

# Glossary

*abstract composites* (*viprayukta-saṃskāra*). Impermanent phenomena that are neither forms nor consciousnesses.

*access concentration*. Serenity, which arises when the five hindrances have been suppressed.

*affirmative phenomenon*. A phenomenon realized by means of not eliminating an object of negation.

*affirming negative* (*paryudāsapratīṣedha*, T. *ma yin dgag*). A negative where, upon an awareness eliminating a negated object, another phenomenon is suggested or established.

*afflictions* (*kleśa*). Mental factors that disturb the tranquility of the mind; these include disturbing emotions and wrong views.

*afflictive obscurations* (*kleśāvaraṇa*). Obscurations that mainly prevent liberation; afflictions and their seeds.

*aggregates* (*skandha*). The four or five components that make up a living being: form (except for beings born in the formless realm), feelings, discriminations, miscellaneous factors, and consciousnesses.

*apprehended object* (*muṣṭibandhaviṣaya*, T. *'dzin stangs kyi yul*). The main object with which the mind is concerned — that is, the object that the mind is getting at or understands. Synonymous with *engaged object*.

*arhat*. Someone who has eliminated all afflictive obscurations and attained liberation.

*ārya*. Someone who has directly and nonconceptually realized the emptiness of inherent existence.

*ātman*. A permanent, unitary, independent self, as asserted by non-Buddhists.

*awakening* (*samyaksaṃbodhi*). Buddhahood; the state in which all obscurations have been abandoned and all excellent qualities developed limitlessly.

*bardo* (*antarābhava*). The intermediate state between one life and the next.

*basis of designation*. The collection of parts or factors in dependence on which an object is designated.

*bodhicitta*. A main mental consciousness induced by an aspiration to bring about the welfare of others and accompanied by an aspiration to attain full awakening oneself.

*bodhisattva*. Someone who has spontaneous bodhicitta.

*buddha nature* (buddha disposition, T. *sangs rgyas kyi rigs*). A phenomenon that is suitable to transform into a buddha's exalted body; sentient beings' potential to become fully awakened.

*causal or initial motivation* (*hetu-samutthāna*). The first motivation to do an action.

*causally concordant behavioral result.* Karmic result in which our action is similar to an action we did in a previous life.

*causally concordant experiential result.* Karmic result in which we experience circumstances similar to what we caused others to experience.

*causally concordant result.* The karmic result that corresponds to its cause. It is of two types: the result similar to the cause in terms of our experience and the result similar to the cause in terms of our habitual behavior.

*Cittamātra (Yogācāra).* A Buddhist tenet system that asserts the true existence of dependent natures but does not assert external objects.

*clear light (prabhāsvara).* The clear and cognizant nature of the conventional mind is the subject clear light. The emptiness of the mind is the object clear light.

*cognitive faculty (indriya).* The subtle material in the gross sense organ that enables perception of sense objects; for the mental consciousness, it is previous moments of any of the six consciousnesses.

*cognitive obscurations (jñeyāvaraṇa).* Obscurations that mainly prevent full awakening; the latencies of ignorance and the subtle dualistic view that they give rise to.

*collection of merit (puṇyasambhāra).* The practices of generosity and so forth — the method aspect of the path — motivated by bodhicitta and informed by the wisdom realizing emptiness that bears the result of buddhahood.

*conceived object (T. zhen yul).* The object conceived by a conceptual consciousness; synonymous with the *apprehended* or *engaged object* of a conceptual consciousness.

*conceptual appearance (artha-sāmānya).* A mental image of an object that appears to a conceptual consciousness.

*conceptual consciousness (kalpanā).* A consciousness knowing its object by means of a conceptual appearance.

*conceptual fabrications.* False modes of existence and false ideas imputed by the mind.

*conceptualizations (vikalpa viparyāsa).* Distorted concepts such as thinking impermanent things are permanent.

*consciousness (jñāna).* That which is clear and cognizant.

*continuity of substance.* A continuity in which one thing is the substance that transforms into another thing.

*continuity of type.* A continuity in which the cause and the result share similar characteristics.

*conventional existence (saṃvṛtisat).* Existence.

*conventional reliable cognizer (T. tha snyad pa'i tshad ma).* A reliable cognizer of conventionalities. It does not have the ability to perceive ultimate truths.

*conventional truths (saṃvṛtisatya).* That which is true only from the perspective of ignorance grasping true existence. They are not seen as true by an arya's meditative equipoise on emptiness. Synonymous with

*veiled truths.*

*cyclic existence (saṃsāra).* The cycle of rebirth that occurs under the control of afflictions and karma.

*death (maraṇabhava).* The last moment of a lifetime when the subtlest clear light mind manifests. The moment after the consciousness leaves the body is the bardo.

*definitive sūtra (nītārtha sūtra).* Sūtras that mainly and explicitly teach ultimate truths.

*demeritorious karma.* Second-link nonvirtuous formative actions that create the cause for unfortunate rebirths.

*dependent arising (pratīyasamutpāda).* This is of three types: (1) causal dependence — things arising due to causes and conditions, (2) mutual dependence — phenomena existing in relation to other phenomena, and (3) dependent designation — phenomena existing by being merely designated by terms and concepts.

*desire realm (kāmadhātu).* One of the three realms of cyclic existence; the realm where sentient beings are overwhelmed by attraction to and desire for sense objects.

*deva.* A being born as a heavenly being in the desire realm or in one of the meditative absorptions of the form or formless realms.

*dhāraṇī.* An intelligible phrase that encapsulates the essence of a teaching.

*dharmakāya.* See *truth body*.

*dhyāna.* Meditative stabilization in the form realm; full concentration where not only are the five hindrances suppressed but also the mind is in full meditative absorption.

*direct reliable cognizer (pratyakṣa-pramāṇa).* A nondeceptive awareness that knows its object — an evident phenomenon — directly, without depending on a reason.

*disenchantment (P. nibbidā).* Lack of interest in and detachment from phenomena conditioned by ignorance, which frees the mind from attachment.

*dispassion (fading away, P. virāga).* The path wisdom that first directly sees nirvāṇa.

*distorted attention (distorted conceptions, ayoniśo manaskāra, T. tshul min yid byed).* Attention that exaggerates or deprecates the characteristics of an object so that it is not known correctly. It induces conceptual proliferation (*prapañca, papañca*).

*duḥkha.* Unsatisfactory experiences of cyclic existence.

*Dzogchen.* A tantric practice emphasizing meditation on the nature of mind, practiced primarily in the Nyingma tradition.

*eight worldly concerns (aṣṭalokadharmā).* Material gain and loss, disrepute and fame, blame and praise, pleasure and pain.

*emanation body (nirmāṇakāya).* The buddha body that appears as an ordinary sentient being to benefit others.

*emptiness (śūnyatā)*. The lack of inherent existence and true existence.

*enjoyment body (saṃbhogakāya)*. The buddha body that appears in the pure lands to teach ārya bodhisattvas.

*environmental result (adhipatiphala)*. The result of karma that influences what environment we live in.

*existent (sat)*. That which is perceivable by mind.

*extreme of absolutism (eternalism, permanence, existence, śāśvatānta)*. Believing that a permanent, unitary, independent self exists or that phenomena exist inherently.

*extreme of nihilism (ucchedānta)*. Believing that our actions have no ethical dimension; believing that nothing exists.

*five actions of immediate retribution (ānantaryakarman)*. Killing one's mother, father, or an arhat; wounding a buddha; and causing a schism in the saṅgha.

*five lower fetters*. View of a personal identity, doubt, view of rules and practices, sensual desire, and malice.

*form body (rūpakāya)*. The buddha body in which a buddha appears to sentient beings; it includes the emanation and enjoyment bodies.

*form realm (rūpadhātu)*. The saṃsāric realm in which beings have bodies made of subtle material. Attainment of various states of concentration without the determination to be free from saṃsāra causes rebirth there.

*formless realm (ārūpyadhātu)*. The saṃsāric realm in which sentient beings do not have a material body. Deep meditative absorption without the aspiration for liberation from saṃsāra causes rebirth there.

*four distorted conceptions* (distorted attention, *ayoniśa manaskāra*, T. *tshul min yid byed*). Thinking (1) what is impermanent is permanent, (2) what is duḥkha by nature is happiness, (3) the unattractive and foul are attractive, and (4) what lacks a self has one.

*four māras*. Polluted aggregates, afflictions, death, and distraction to external objects.

*four seals (caturmudrā)*. Four views that make a philosophy Buddhist: all conditioned phenomena are transient, all polluted phenomena are duḥkha, all phenomena are empty and selfless, nirvāṇa alone is true peace.

*four truths of the āryas (catvāry āryasatyāni)*. The truth of duḥkha, its origin, its cessation, and the path to that cessation.

*fundamental innate clear light mind* (T. *gnyug ma lhan cig skyes pa'i 'od gsal gyi sems*). The subtlest consciousness that has existed beginninglessly, will exist endlessly, and will go on to awakening.

*Fundamental Vehicle*. The path leading to the liberation of śrāvakas and solitary realizers.

*gandharva* (P. *gandhabba*). (1) A being (in the bardo) to be born, (2) a celestial musician.

*grasping inherent existence (svabhāvagraha)*. Grasping persons and phenomena to exist truly or inherently. Synonymous with *grasping true existence*.

*grasping true existence* (true grasping, *satyagrāha*). Grasping persons and phenomena to exist truly or inherently.

*gratification, danger, and escape*. Gratification is the pleasure experienced by contact with the aggregates. Danger is the decay of the aggregates that leaves us disappointed. Escape is the freedom we wish to attain.

*having-ceased* (*naṣṭa*). An impermanent phenomenon that is an affirming negative and follows the ceasing or disintegration of a thing that is the past of that thing. The having-ceased of a karma has the potency to bring forth the results of that action.

*hell being* (*nāraka*). A being born in one of the unfortunate classes of beings who suffer intense physical pain as a result of their strong destructive karma.

*highest yoga tantra* (*anuttarayogatantra*). The most advanced of the four classes of tantra.

*hungry ghost* (*preta*). A being born in one of the unfortunate classes of beings who suffers from intense hunger and thirst.

*I-grasping* (*ahaṃkāra*). Conceiving and grasping the I (one's own self) as inherently existent.

*ignorance* (*avidyā*). A mental factor that is obscured and grasps the opposite of what exists. There are two types: ignorance regarding ultimate truth and ignorance regarding karma and its effects.

*immediate motivation* (*tatkṣaṇa-samutthāna*). The motivation that occurs at the time of the action.

*imperceptible form* (*avijñapti-rūpa*). A subtle form that is not perceivable by the sense faculties and arises only when a person has a strong intention.

*impermanence* (*anitya*). The transient quality of all compositional phenomena and functioning things. Coarse impermanence can be known by our senses; subtle impermanence is something not remaining the same in the very next moment.

*inattentive awareness* (T. *snang la ma nges*). A consciousness that doesn't ascertain its object, even though that object appears to it.

*inferential reliable cognizer* (*anumāna-pramāṇa*). An awareness that knows its object — slightly obscure phenomena — nondeceptively, purely in dependence on a reason.

*inherent existence* (*svabhāva*). Existence without depending on any other factors; independent existence. According to the Prāsaṅgika Mādhyamikas, inherent existence does not exist.

*interpretable sūtra* (*neyārtha sūtra*). A sūtra that speaks about the variety of phenomena and/or cannot be taken literally.

*invariable karma*. Second-link formative karma that is the cause for rebirth in a specific meditative absorption and no other.

*karma*. Intentional action; it includes intention karma (mental action) and intended karma (physical and verbal actions motivated by intention).

*karmic seeds*. The potency from previously created actions that will bring their results.

*latencies (vāsanā)*. Predispositions, imprints, or tendencies.

*liberation (mokṣa, T. thar pa)*. A true cessation that is the abandonment of afflictive obscurations; nirvāṇa.

*liberation (vimokṣa, vimokkha, T. rnam thar)*. In both the Pāli and Sanskrit traditions, this refers to the eight liberations, the mind's temporary release from defilements that is brought about by mastering certain meditative skills.

*liberation (vimukti, T. rnam grol)*. In the Pāli tradition, nirvāṇa is what is realized in the experience of liberation (*vimutti*); liberation is a conditioned event, whereas nirvāṇa is not.

*Mādhyamika*. A proponent of Buddhist tenets who asserts there are no truly existent phenomena.

*Mahāmudrā*. A type of meditation that focuses on the conventional and ultimate natures of the mind.

*meditative equipoise on emptiness*. An ārya's mind focused single-pointedly on the emptiness of inherent existence.

*mental direct reliable cognizer*. A nondeceptive mental awareness that knows its object by depending on another consciousness that induces it.

*mental factor (caitta)*. An aspect of mind that accompanies a primary consciousness and fills out the cognition, apprehending particular attributes of the object or performing a specific function.

*meritorious karma*. Second-link virtuous actions that create the cause for a fortunate rebirth in the desire realm.

*mind (citta)*. The part of living beings that cognizes, experiences, thinks, feels, and so on. In some contexts it is equivalent to primary consciousness.

*mindstream (cittasaṃtāna)*. The continuity of mind.

*mine-grasping (mamakāra)*. Conceiving and grasping mine — what makes something mine — as inherently existent.

*monastic*. Someone who has received monastic ordination; a monk or nun.

*Mount Meru*. A huge mountain at the center of our world system, according to ancient Indian cosmology.

*natural nirvāṇa (prakṛti-nirvṛta)*. The primordial emptiness of inherent existence of the mind.

*naturally abiding buddha nature (prakṛtisthagotra, T. rang bzhin gnas rigs)*. The emptiness of the mind that is not yet freed from defilements.

*nature truth body (svabhāvika dharmakāya)*. The buddha body that is the emptiness of a buddha's mind and the true cessations of that buddha.

*New Translation schools*. The Kagyu, Sakya, and Geluk traditions that formed in Tibet beginning in the eleventh century, after the decimation of the Dharma during the reign of King Langdarma (r. 838–41).

*nirvāṇa (P. nibbāna)*. The state of liberation of an arhat; the purified aspect of a mind that is free from afflictions.

*nirvāṇa with remainder (sopadhiśeṣanirvāṇa)*. (1) An arhat's nirvāṇa with the remainder of the polluted body while an arhat is still alive. (2) Prāsaṅgikas: an arhat's nirvāṇa in postmeditation time when the appearance of inherent existence still remains.

*nirvāṇa without remainder (nirupadhiśeṣanirvāṇa)*. (1) An arhat's nirvāṇa without the remainder of the polluted body, attained after an arhat passes away. (2) Prāsaṅgikas: an arhat's nirvāṇa while in meditative equipoise on emptiness where no appearance of inherent existence remains.

*nonabiding nirvāṇa (apratiṣṭha-nirvāṇa)*. A buddha's nirvāṇa that does not abide in either cyclic existence or personal liberation.

*nonaffirming negative (prasajyapratishedha, T. med dgag)*. A negative phenomenon in which, upon the explicit elimination of the negated object by an awareness, another phenomenon is not suggested or established.

*nonreturner (anāgāmi)*. The third level of a Fundamental Vehicle ārya who will no longer be born in the desire realm.

*object of negation (pratishedhya, T. dgag bya)*. What is to be refuted — for example, a self-sufficient substantially existent I or inherent existence.

*observed object (ālambana, T. dmig yul)*. The basic object that the mind refers to or focuses on while apprehending certain aspects of that object.

*once-returner (sakṛdāgāmin)*. The second level of a Fundamental Vehicle ārya who, in addition to eliminating three of the five lower fetters, has subdued sensual attachment and malice to a certain degree and will only be born in the desire realm one more time before attaining arhatship.

*ordinary beings (pṛthagjana, puthujjana)*. Sentient beings who have not realized emptiness directly and are not āryas.

*parinirvāṇa*. The nirvāṇa after death attained when an arhat or buddha dies.

*perceptible form (vijñapti-rūpa)*. Forms that can be perceived by the sense faculties.

*permanent (nitya)*. Unchanging, static. It does not mean eternal. Permanent phenomena do not depend on causes and conditions.

*permanent, unitary, independent self*. A soul or self (*ātman*) asserted by non-Buddhists.

*person (pudgala)*. A living being designated in dependence on the four or five aggregates.

*polluted (āśava)*. Under the influence of ignorance and its latencies.

*Prāsaṅgika*. The Buddhist philosophical tenet system whose views are most accurate.

*prātimokṣa*. The different sets of ethical precepts for monastics and lay followers that assist in attaining liberation.

*primary consciousness (vijñāna)*. A consciousness that apprehends the presence or basic entity of an object, which are of six types: visual, auditory, olfactory, gustatory, tactile, and mental.

*pure grounds*. The eighth, ninth, and tenth bodhisattva grounds. These bodhisattvas have eliminated all

afflictive obscurations.

*pure land*. Places created by the unshakable resolve and merit of buddhas where all external conditions are conducive for Dharma practice.

*reliable cognizer (pramāṇa)*. A nondeceptive awareness that is incontrovertible with respect to its apprehended object and that enables us to accomplish our purpose.

*reliable cognizer based on authoritative testimony*. An inferential cognizer knowing very obscure phenomena that cannot be established through direct perceivers or other inferential reliable cognizers but only by depending on the authoritative testimony of a trustworthy source, such as a credible person or scripture.

*rigpa*. According to Dzogchen, an undefiled, subtle consciousness that pervades all mental states. It is comparable to the fundamental innate mind of clear light in the New Translation schools.

*ripening result of karma*. The karmic result that is a rebirth; the five aggregates a being takes.

*Sautrāntika*. A Buddhist tenet school that espouses Fundamental Vehicle tenets and asserts both external objects and apperception to be truly existent. It is considered higher than the Vaibhāṣika school.

*self (ātman)*. Refers to a person or to inherent existence.

*self-grasping (ātmagrāha)*. Grasping inherent existence.

*self-sufficient substantially existent person (T. gang zag rang rkya thub pa'i rdzas yod)*. A self that is the controller of the body and mind. Such a self does not exist.

*sense faculty*. The subtle material in the gross sense organ (eye, ear, nose, tongue, and body) that enables perception of sense objects.

*sentient being (sattva)*. Any being with a mind, except for a buddha.

*serenity (śamatha)*. A concentration arising from meditation and accompanied by the bliss of mental and physical pliancy in which the mind abides effortlessly without fluctuation for as long as we wish on whichever virtuous object it has been placed.

*six perfections (ṣaḍpāramitā)*. The practices of generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom that are motivated by bodhicitta.

*solitary realizer (pratyekabuddha)*. A person following the Fundamental Vehicle who seeks liberation and who emphasizes understanding the twelve links of dependent arising.

*space particle*. Subtle particles that bear traces of the other four elements and are the source of all matter. They persist during the dormant stage between one world system and the next and act as the substantial cause for the coarser elements that arise during the evolution of the next world system.

*śrāvaka (hearer)*. Someone practicing the Fundamental Vehicle path leading to arhatship who emphasizes meditation on the four truths of the āryas.

*stream-enterer (srotāpanna)*. The first level of a Fundamental Vehicle ārya who has eliminated three of the five lower fetters.

*substantial cause*. Whatever is the main thing that turns into a result. For example, wood is the substantial cause of a table; the carpenter is a cooperative condition.

*subtlest mind-wind*. The indivisible subtlest mind and subtlest wind that is its mount.

*suchness*. Emptiness.

*superknowledge (abhijñā)*. Special powers gained through having deep states of concentration.

*supreme dharma stage of the path of preparation*. The fourth and last stage of the path of preparation. At this time, one is an ordinary being. After this, one becomes an ārya.

*syllogism (prayoga)*. A statement consisting of a subject, predicate, and reason, and in many cases an example.

*tathāgata*. A buddha.

*tathāgatagarbha* (buddha essence). Its general meaning is buddha nature; sentient beings' potential to become fully awakened.

*transforming buddha nature (samudānītagotra, T. rgyas 'gyur gi rigs)*. Any mind that is not freed from defilements, whose continuity goes on to awakening, and that serves as the basis for the emptiness that is the naturally abiding buddha nature.

*true cessation (nirodhasatya)*. The cessation of a portion of afflictions or a portion of cognitive obscurations.

*true existence (satyasat)*. Existence having its own mode of being; existence having its own reality. According to the Mādhyamikas, true existence does not exist.

*truth body (dharmakāya)*. The buddha body that includes the nature truth body (the emptiness of a buddha's mind) and the wisdom truth body (omniscient mind).

*twelve links of dependent arising*. A system of twelve factors that explains how we take rebirth in saṃsāra and how we can be liberated from it.

*ultimate analysis*. A probing awareness seeking an object's ultimate mode of existence.

*ultimate truth (paramārthasatya)*. The ultimate mode of existence of all persons and phenomena; emptiness; objects that are true and appear true to their main cognizer.

*unfortunate states (apāya)*. Unfortunate states of rebirth as a hell being, hungry ghost, or animal.

*union of serenity and insight on emptiness*. A meditative concentration on emptiness in which analytical meditation has induced special pliancy and serenity.

*unpolluted (anāsrava)*. Not under the influence of ignorance.

*unreliable awareness*. An awareness that does not correctly apprehend its object and cannot help us accomplish our purpose. These include correct assumers, inattentive perceivers, doubt, and wrong awarenesses.

*Vaibhāṣika*. A Buddhist tenet school that espouses Fundamental Vehicle tenets, does not accept

apperception, and asserts external objects to be truly established. It is considered the lowest tenet school.

*veiled truths (saṃvṛtisatya)*. Objects that appear true to ignorance; objects that appear to exist inherently to their main cognizer, although they do not. Synonymous with *conventional truths*.

*view of a personal identity* (view of the transitory collection, *satkāyadr̥ṣṭi*). Grasping an inherently existent I or mine (according to the Prāsaṅgika system).

*white appearance, red increase, and black near attainment*. Three subtle minds that manifest after coarser minds have absorbed and before the subtlest clear light mind arises.

*wisdom truth body (jñāna dharmakāya)*. The buddha body that is a buddha's omniscient mind.

*wrong or erroneous consciousness (viparyaya-jñāna)*. An awareness that is erroneous with respect to its apprehended object and, in the case of conceptual cognizers, with respect to its conceived object; a consciousness that cannot certify its object.

*yogic direct reliable cognizers*. Nondeceptive mental consciousnesses that know their objects by depending on a union of serenity and insight.

## About the Authors

THE DALAI LAMA is the spiritual leader of the Tibetan people, a Nobel Peace Prize recipient, and an advocate for compassion and peace throughout the world. He promotes harmony among the world's religions and engages in dialogue with leading scientists. Ordained as a Buddhist monk when he was a child, he completed the traditional monastic studies and earned his geshe degree (equivalent to a PhD). Renowned for his erudite and open-minded scholarship, his meditative attainments, and his humility, Bhikṣu Tenzin Gyatso says, "I am a simple Buddhist monk."

Peter Aronson

BHIKṢUṆĪ THUBTEN CHODRON has been a Buddhist nun since 1977. Growing up in Los Angeles, she graduated with honors in history from the University of California at Los Angeles and did graduate work in education at the University of Southern California. After years studying and teaching Buddhism in Asia, Europe, and the United States, she became the founder and abbess of Sravasti Abbey in Washington State. A popular speaker for her practical explanations of how to apply Buddhist teachings in daily life, she is the author of several books on Buddhism, including *Buddhism for Beginners*. She is the editor of Khensur

Jampa Tegchok's *Insight into Emptiness*. For more information, visit [sravastiabbey.org](http://sravastiabbey.org) and [thubtenchodronbooks.org](http://thubtenchodronbooks.org).

THE DAJAL LAMA WITH HIDDEN SIGNS

THE LIBRARY OF WISDOM AND COMPASSION : VOLUME 4

THE LIBRARY OF WISDOM AND COMPASSION

*The Library of Wisdom and Compassion* is a special multivolume series in which His Holiness the Dalai Lama shares the Buddha's teachings on the complete path to full awakening that he himself has practiced his entire life. The topics are arranged especially for people not born in Buddhist cultures and are peppered with the Dalai Lama's unique outlook. Assisted by his long-term disciple, the American nun Thubten Chodron, the Dalai Lama sets the context for practicing the Buddha's teachings in modern times and then unveils the path of wisdom and compassion that leads to a meaningful life, a sense of personal fulfillment, and full awakening. This series is an important bridge from introductory to profound topics for those seeking an in-depth explanation from a contemporary perspective.

*Volumes:*

1. *Approaching the Buddhist Path*
2. *The Foundation of Buddhist Practice*
3. *Samsāra, Nirvāṇa, and Buddha Nature*
4. *Following in the Buddha's Footsteps*

# FOLLOWING IN THE BUDDHA'S FOOTSTEPS

---

Bhikṣu Tenzin Gyatso,  
the Fourteenth Dalai Lama

*and*

Bhikṣuṇī Thubten Chodron

“This authoritative volume serves as a rich source of information on two major themes — the bases of Buddhist faith and the framework of Buddhist training — each viewed from the two complementary perspectives of the Pali tradition and the Indo-Tibetan tradition.”

— BHIKKHU BODHI, scholar-monk and translator of Pali texts

---

**D**elve into the substance of spiritual practice in this fourth volume of the Dalai Lama’s definitive series on the path to awakening, *Following in the Buddha’s Footsteps*. You’ll first hear His Holiness’s explanation of the Buddha, Dharma, and Sangha, why they are reliable guides on the path, and how to relate to them. His Holiness then describes the three essential trainings common to all Buddhist traditions: the higher trainings in ethical conduct, concentration, and wisdom. These chapters show us how to live a life free of harm to self or others and give us detailed instructions on how to develop single-pointed concentration as well as the higher states of concentration available to an earnest practitioner. In addition, the chapters on wisdom contain in-depth teachings on the noble eightfold path and the four establishments of mindfulness for developing greater awareness and understanding of our body, feelings, mind, and other phenomena. Together, these topics form the core of Buddhist practice.

This is a book to treasure and refer to repeatedly as you begin the path, progress on it, and near the final goal of nirvāṇa.

---

“*Following in the Buddha’s Footsteps* clearly lays out how to take the journey to exploring and developing our mind’s highest potential, following the Buddha as the unmistakable qualified guide who discovered the unmistakable qualified path all the way up to the final destination: enlightenment. The chapters in this book are logical, historically accurate, in-depth instructions and directions on how to skillfully and diligently create a meaningful Dharma practice.”

— JETSUNMA TENZIN PALMO,  
founding abbess of Dongyu Gatsal Ling Nunnery

## PUBLISHER'S ACKNOWLEDGMENT

The publisher gratefully acknowledges the generous help of the Hershey Family Foundation in sponsoring the production of this book.

About the Authors

## Preface

ALTHOUGH EACH VOLUME of the *Library of Wisdom and Compassion* can be read separately, the topics in them are arranged in a particular sequence so that each subsequent volume builds on the preceding one. The first volume, *Approaching the Buddhist Path*, and part of the second volume, *The Foundation of Buddhist Practice*, contain introductory topics that are helpful to know before engaging in further study. Calling them introductory doesn't mean they are elementary or easy; rather they are the basis of what will follow.

The second volume then continues, speaking about precious human life, its rarity and value, and urging us to take advantage of the opportunity it affords, since our lives are comparatively short and we will be reborn. Because effects arise from their causes, our future lives will depend on the causes we create now — our karma or actions. An extensive explanation of karma and its effects concludes this volume.

Volume 3, *Samsāra, Nirvāṇa, and Buddha Nature*, contains an in-depth discussion of the cycle of constantly recurring rebirth in which we are bound under the control of ignorance, afflictions, and polluted karma. It investigates buddha nature — the nature of our minds that provides the potential to become fully awakened buddhas.

That brings us to this fourth volume, *Following in the Buddha's Footsteps*, which begins with the topic of turning to the Three Jewels — the Buddha, Dharma, and Saṅgha — for spiritual guidance. Taking refuge in the Three Jewels is the mark of becoming a Buddhist, and the guidance the Buddha gives us is to practice the three higher trainings in ethical conduct, concentration, and wisdom.

In most presentations of the lamrim (stages of the path), which were written for Tibetans who were already Buddhists, the topic of refuge comes earlier — after considering our possible future rebirths. This occurs for two reasons. First, refuge is the initial protective measure enabling us to avoid unfortunate rebirths. Second, increasing our faith and trust in the Buddha facilitates our

understanding and practice of the law of karma and its effects. This is because we depend on the Buddha's word to understand the subtle and obscure aspects of karma and its effects.

My observation — and that of many fellow Western Dharma students — is that people who did not grow up Buddhist are eager to learn about karma and its results but need more time to understand the meaning of taking refuge in the Three Jewels. We want to understand clearly what are the Three Jewels and what are the advantages and meaning of taking refuge in them. For this reason, the explanation of refuge in this volume is fuller than in most lamrim texts. It includes Dharmakīrti's argument on why the Buddha is a reliable teacher and Maitreya's explanation of how the Buddha, Dharma, and Saṅgha individually and together guide us on the path to liberation and full awakening.

In volume 3, we discussed the āryas' four truths. The last two, true cessations and true paths, are the Dharma Jewel. The Dharma Jewel is the actual refuge, for when generated in our mindstream, awakening dawns. By actualizing a portion of true cessations and true paths, we become the Saṅgha Jewel, and by realizing them fully, we are transformed into the Buddha Jewel. This is possible because the buddha nature is an inalienable quality of our mind. Our actualizing the Three Jewels is the fulfillment of our buddha nature, which has been completely purified and brought to perfection.

With this background, the present volume elaborates on the true cessations and true paths spoken of in volume 3 by beginning with a more in-depth explanation of the Three Jewels of refuge. The Dharma Jewel of true paths includes the āryas' three higher trainings in ethical conduct, concentration, and wisdom, which are also revealed in this volume. Ethical conduct as practiced by monastics and lay followers comes first. Here we hear His Holiness's love and respect for the Vinaya — monastic discipline — and for the monastic community and its role in preserving the Dharma. This is followed by instructions on how to cultivate meditative concentration, explained from the perspective of both the Sanskrit and Pāli traditions. While the lamrim usually discusses this in the context of the perfection of meditative stability, it makes sense to include it in the higher training in concentration so practitioners can begin to improve their concentration now. The higher training in wisdom comes next. Here we delve into the thirty-seven harmonies with awakening, practices found in both the

Sanskrit and Pāli traditions. This volume is rich in teachings to practice that will definitely transform our minds.

## *How This Volume Came About*

*The Library of Wisdom and Compassion* came about when I requested His Holiness to write a brief root text for Tibetan geshe and khenpos to use when teaching in the West. His Holiness said we should write the elaborate explanation first and gave me transcripts of his teachings to work from. Several series of interviews happened over the years. In 2006 His Holiness said that this series must be unique — it should not be a rewording of previous lamrim texts — and insisted that material from the Pāli and Chinese Buddhist traditions be added.

Why would someone who has spent his life studying and practicing the Sanskrit tradition as presented in Tibet want to encourage his students and those interested in Buddhism to learn the Pāli tradition and Chinese Buddhism? His Holiness is open-minded and sees all these teachings as coming from the same Teacher, the Buddha. He knows a fair bit about other Buddhist traditions and is strongly opposed to sectarianism. His wish is for all Buddhist traditions to cooperate, have fruitful exchanges, and work together for the betterment of the world. Since all Buddhist traditions are present in the West, this is especially important. While not ignoring the differences in presentation and emphasis, His Holiness wants us to enhance our Dharma practices by learning from one another.

Charging me with adding teachings from the Pāli tradition and Chinese Buddhism, he also insisted, contrary to my wishes, that the book be coauthored and gave me permission to alter the usual order of the topics to suit this audience: people who were not brought up Buddhist, as well as Asians — especially young Tibetans — with a modern education.

Having received bhikṣuṇī ordination in Taiwan, lived with Chinese Buddhists in Singapore, and gone on pilgrimage in Tibet, Mainland China, and Taiwan, I was familiar with Chinese Buddhists and knew scholars and practitioners who could teach me more. Fortunately I also knew many Theravāda Buddhists from my time in Singapore and from the annual Western Buddhist Monastic Gatherings in the United States. I spent some time studying and

meditating at a wat in Thailand and diligently studied Bhikkhu Bodhi's talks on the Majjhima Nikāya, reading portions of the Vinaya and the other nikāyas in the Pāli canon as well as supplementary material.

The journey into other Buddhist traditions enriched my practice tremendously. I came to have a deep appreciation for the Buddha's skill as a teacher and the many ways he made the Dharma available so that living beings with different inclinations and interests could find what they needed in his teachings.

In 2018 I had another series of interviews with His Holiness, and I'd like to share a touching story that illustrates His Holiness's compassion in teaching us. We were completing a long discussion on how bodhisattvas generate the meditative absorptions of the form and formless realms, when His Holiness said, "I don't give a lot of thought to the meditative absorptions, though I would like to develop the capable preparation and use that to enter the path of preparation. I'm not expecting to attain buddhahood soon. Does that seem lazy? However, there are numerous buddhas in the ten directions, but do they come to help? As long as I have a polluted body, my wish is to serve sentient beings, and practically speaking, I can do that. I often contemplate Śāntideva's verses (BCA 3.21, 10:55):

Just like the earth and space itself,  
and all the other mighty elements,  
for boundless multitudes of beings,  
may I always be the ground of life, the source of varied sustenance.

For as long as space endures  
and as long as living beings remain,  
until then may I too abide  
to dispel the misery of the world."

### *How to Approach These Teachings*

His Holiness's teaching style is unique: he weaves easy-to-understand advice that relates to our daily life together with complex teachings that pertain to practitioners who have studied and practiced for many years (and lifetimes). In

addition, Buddhist teachers in general don't expect us to remember and understand everything the first or even second time we hear or read it. Rather, each time we study the same material new understandings are revealed because our mind has matured. So if some of the material seems difficult to understand or too advanced for your present level, keep going. Remember that you are “planting seeds” in your mindstream that will yield deeper and more precise understanding in the future.

### *Please Note*

Although this series is coauthored, the vast majority of the material is His Holiness's teachings. I researched and wrote the parts about the Pāli tradition, wrote some other passages, and composed the reflections. For ease of reading, most honorifics have been omitted, but that does not diminish the great respect we have for these most excellent sages and practitioners. Foreign terms are given in italics parenthetically at their first usage. Unless otherwise noted with “P” or “T,” indicating Pāli or Tibetan, respectively, italicized terms are Sanskrit. When two italicized terms are listed, the first is Sanskrit, the second Pāli. For consistency, Sanskrit spelling is used for Sanskrit and Pāli terms used in common language (nirvāṇa, Dharma, arhat, and so forth), except in citations from Pāli scriptures. The term *śrāvaka* encompasses solitary realizers, unless there is reason to specifically differentiate them. To maintain the flow of a passage, it is not always possible to gloss all new terms on their first use; a glossary is provided at the end of the book. “Sūtra” often refers to Sūtrayāna and “Tantra” to Tantrayāna — the Sūtra Vehicle and Tantra Vehicle, respectively. When these two words are not capitalized, they refer to two types of discourses: sūtras and tantras. Mahāyāna here refers principally to the bodhisattva path as explained in the Sanskrit tradition. Unless otherwise noted, all explanations and the meaning of all terms accord with the Prāsaṅgika Madhyamaka presentation. Unless otherwise noted, the personal pronoun “I” refers to His Holiness.

### *Appreciation*

My deepest respect goes to Śākyamuni Buddha and all the buddhas, bodhisattvas, and arhats who embody the Dharma and with compassion teach us unawakened beings. I also bow to all the realized lineage masters of all Buddhist traditions through whose kindness the Dharma still exists in our world.

This series appears in many volumes, so I will express appreciation to those involved in each individual volume. This volume, the fourth in the *Library of Wisdom and Compassion*, is due to the talents and efforts of His Holiness's translators — Geshe Lhakdor, Geshe Dorji Damdul, and Mr. Tenzin Tsepak. I am grateful to Geshe Dorji Damdul, Geshe Dadul Namgyal, and Ven. Sangye Khadro for checking the manuscript, and to Samdhong Rinpoche, Geshe Sonam Rinchen, Geshe Loyang, and Geshe Ngawang Sangye for clarifying important points. I also thank Bhikkhu Bodhi for his clear teachings on the Pāli tradition and for generously answering my many questions. He also kindly looked over the sections of the book on the Pāli tradition before publication. The staff at the Private Office of His Holiness facilitated the interviews, and Sravasti Abbey kindly supported me while I worked on this volume. Mary Petruszewicz skillfully edited this book. I thank everyone at Wisdom Publications who contributed to the successful production of this series. All errors are my own.

# 1 | Trustworthy Spiritual Guidance

WHAT MAKES our spiritual practice Buddhist? It is not merely doing practices taught in Buddhist scriptures, for some of those practices — such as refraining from harming others, cultivating love and compassion, and developing concentration — are also found in other religions. Doing these and other practices with a mind that has taken refuge in the Three Jewels is the key that makes these practices Buddhist. Taking refuge means we entrust ourselves for spiritual guidance to the Buddha, Dharma, and Saṅgha. Based on knowledge of their qualities, we choose to follow their guidance.

## *The Entrance to the Buddhist Path*

Our ultimate goal is to become the Three Jewels ourselves. To do this, we need to rely on the guidance of the Three Jewels that already exist. To actualize the Dharma Jewel — which as true cessation and true path is the ultimate refuge — in our own mindstream, we take refuge in the Buddha as the one who taught the Dharma and in the Saṅgha as the ones who have actualized some true cessations and true paths in their mindstream.

Taking refuge is not simply reciting “I take refuge in the Buddha, Dharma, and Saṅgha” with our mouths. It involves an internal commitment to our spiritual practice that motivates us to humbly seek spiritual guidance. Refuge is to be lived each moment, so that all the practices we do are directed toward actualizing the Dharma Jewel in our mindstream. When we have done this, we will have genuine, lasting joy and fulfillment, and our lives will have become highly meaningful. To attain nirvāṇa, we must start practicing now.

Based on his own experience, the Buddha taught a path in accord with reality. He did not teach anything illogical or contradictory to the laws of nature or the way things are. Through his teachings and his living example, he demonstrated the ability to eliminate unrealistic and harmful mental states — such as

ignorance, animosity, and attachment — from their root and to develop good qualities limitlessly. All of this accords with the way things function, and by practicing the Buddha's instructions we can verify the path to awakening and its resultant awakening through our own experience.

Some people read the biographies of the Buddha or other Buddhist sages and, inspired by their sublime lives, follow their teachings. That is wonderful. But the most important reason for following the Buddha's teachings is that we have studied and investigated them and have found them to be reliable and effective. In this way, we confirm for ourselves that the Buddha's philosophical teachings are the result of deep contemplation, sincere practice, and genuine meditation. They were not made up quickly to impress others. The faith that arises from understanding the teachings is stable and reliable, whereas the faith that derives from admiration of the Buddha's life or amazement at his supernatural abilities can easily change.

It is said that taking refuge in the Three Jewels is the excellent door for entering the Buddha's doctrine, renunciation of *duḥkha* is the door for entering a path, and *bodhicitta* is the door for entering the *Mahāyāna*. Taking refuge establishes the spiritual direction we will take in life and leads us to learn and contemplate the Buddha's teachings. Through this, we will realize that no enduring happiness is to be found in cyclic existence and we will renounce this suffering state and generate the aspiration to attain liberation. The stability of this understanding in our mind marks our entrance to a path. Stable *bodhicitta* is the door to enter the *bodhisattva* path that leads to full awakening because only this altruistic intention to attain awakening for the benefit of all sentient beings will give us the strength of mind to fulfill the collections of merit and wisdom necessary to attain full awakening.

To view this sequence in the reverse order: To attain full awakening, *bodhicitta* is indispensable. *Bodhicitta* is based on great compassion, but to feel great compassion for others, we must first have compassion for ourselves. Renunciation — wanting ourselves to be free from *samsāra* and to attain *nirvāṇa* — is the true meaning of self-compassion. To reach this understanding, we must be clear about our spiritual direction and the guides we rely on to lead us. Thus, taking refuge is the first step; it is the door to the Buddha's teachings.

To take refuge properly, correctly identifying and gaining a clear understanding of the Three Jewels is crucial. To do that, understanding the four

truths is important, and this is based on comprehending the two truths: veiled and ultimate truths. Without comprehending the two truths, our understanding of the four truths will be hazy, and without understanding the four truths, our refuge in the Three Jewels will not be stable.

We may wonder how we can take refuge without understanding profound and advanced topics such as the two truths, the four truths of āryas, emptiness, and dependent arising. Conversely, we may wonder how we can understand such topics without having deep refuge in the Three Jewels. By beginning with the topics of the two truths, the four truths, emptiness, and dependent arising, as we did in *Approaching the Buddhist Path*, we gain an initial understanding that forms a good foundation for taking refuge in the Three Jewels. Based on taking refuge, we then learn, contemplate, and meditate on the Buddha's teachings, and the understanding we gain from that deepens our refuge. That deeper refuge will inspire us to learn, contemplate, and meditate more, bringing even deeper understanding; and so it goes — with taking refuge and understanding the teachings aiding each other.

## REFLECTION

---

1. Contemplate the forward sequence: taking refuge is the door to enter the Buddha's doctrine by making us receptive and giving direction to our spiritual yearnings.
  2. Refuge opens our minds to contemplate duḥkha, the unsatisfactory conditions of saṃsāra. Seeing there is no final happiness to be had in saṃsāra, we renounce duḥkha and aspire for liberation. This is the door to enter the paths of the śrāvaka, solitary realizer, and bodhisattva.
  3. Seeing that all sentient beings, who have been kind to us in our beginningless lifetimes, are trapped in saṃsāra, we cultivate great compassion and aspire for full awakening in order to help them escape from saṃsāra. This bodhicitta motivation is the door to the Mahāyāna. Motivated and informed by bodhicitta, we generate the wisdom realizing the emptiness of inherent existence, which removes all obscurations and enables us to attain buddhahood.
  4. Contemplate the reverse sequence, seeing that realization of emptiness on the Mahāyāna path is fueled by bodhicitta, which is generated through having great compassion for all living beings. This, in turn, depends on having the aspiration for ourselves to be free from saṃsāra, which relies on having taken refuge in the Three Jewels.
-

## *Reasons for Taking Refuge in the Three Jewels*

As with any produced phenomenon, taking refuge occurs due to the coming together of its own causes and conditions. The first cause is being alarmed by the possibility of our misdeeds ripening in unfortunate rebirths in future lives. This is the basic, most immediate reason that leads us to seek spiritual protection and guidance. As we progress and our understanding of the Buddha's teachings increases, we become alarmed at being subject to the various kinds of *duḥkha* of cyclic existence in general and seek refuge from those.

The second cause is having faith and confidence in the ability of the Three Jewels to guide us from these dangers. Such confidence is based on understanding the qualities and abilities of the Three Jewels and how they are able to guide and protect us from these dangers.

Those inclined to the Bodhisattva Vehicle cultivate a third cause: great compassion for sentient beings and the wish to alleviate their *duḥkha*. Since the main audience in this series is disciples with sharp faculties who aspire for buddhahood, we must seek refuge with the aspiration to become a buddha in order to have all the necessary qualities to most effectively benefit all sentient beings. Even if this bodhicitta motivation is fabricated at present, by continued cultivation it will eventually become spontaneous. We seek refuge in the Three Jewels that embody the spiritual aims we aspire for and that we regard as reliable guides to show us the path.

In the first three volumes of this series, the first cause — alarm at the prospect of experiencing unfortunate rebirths and the *duḥkha* of *saṃsāra* — has been described in depth. We will now look at the way the Fundamental Vehicle, Perfection Vehicle, and Vajra Vehicle delineate the Three Jewels, and then we will examine the qualities of the Buddha in particular and the reason the Buddha is an excellent guide. The readers of this series are intelligent, and I am confident that by analyzing and contemplating the Three Jewels you will come to well-formed conclusions.

### **REFLECTION**

---

Contemplate the causes to take refuge in the Three Jewels:

1. Reflect on the faults of rebirth in unfortunate realms and in cyclic existence in general, as explained in volumes 1 and 2.
  2. Reflect on the excellent qualities of the Three Jewels that make them trustworthy objects of refuge (you can read ahead to learn these).
  3. With compassion for others who are bound to saṃsāra by afflictions and karma, generate the aspiration for full awakening.
  4. With relief and confidence, turn to the Three Jewels as reliable guides to actualize your spiritual aims.
- 

## *The Mind's Potential and the Existence of the Three Jewels*

Before discussing the qualities of the Three Jewels, it is helpful to know the mind's potential and how mental purification occurs. These points were covered in chapter 12 of *The Foundation of Buddhist Practice*, and we will briefly review them now.

The greatest potential each sentient being has is to become a fully awakened buddha who has the wisdom, compassion, and power to be of the greatest benefit to all sentient beings. A key quality of a buddha is omniscience. How is attaining omniscience possible given our current state of ignorance? The mind has the natural capacity to cognize objects, but various obstructions prevent it from knowing phenomena. (1) An intervening object, like a wall, prevents us from seeing what is on the other side. (2) The object is very far away or very small and is not within the purview of our sense faculties. (3) Our cognitive faculties are defective or limited in their scope — for example, our visual consciousness cannot hear sounds; if we have severe cataracts, we can barely see; an animal brain is not equipped to comprehend philosophy. (4) A mind obscured by wrong views or one that is unable to concentrate because of an abundance of disturbing emotions cannot understand certain points. (5) Some objects are so subtle, vast, or profound that unless we have meditative concentration or superknowledges, we cannot know them. (6) The latencies of ignorance and the mistaken appearances that they cause prevent the mind from knowing both veiled truths and ultimate truths simultaneously by one consciousness.

From their side, buddhas are not limited by the above obscurations, and having perfected their virtuous qualities, they have the ability to effortlessly and spontaneously manifest in limitless ways to benefit sentient beings. However, their power is not omnipotent in the sense of being able to unilaterally control events. Our ability to be benefited by the buddhas depends on our receptivity.

Just as the sun's light radiates everywhere equally, so do buddhas' awakening activities. Nevertheless, however brilliant the sun may be, its radiance cannot enter an upside-down vessel. Similarly, our karmic obscurations or lack of merit curtail the buddhas' ability to help us. But when the vessel is turned upright, the sun naturally flows in. Similarly, when we purify our minds and accumulate merit, our minds become receptive to the buddhas' awakening activities.

As our understanding of the mind increases, we will gain conviction in three points. First, the basic nature of the mind is pure and clear. Second, afflictions are based on ignorance that apprehends phenomena as existing in the opposite way than they actually exist. Thus ignorance and the afflictions born from it are adventitious and do not inhere in the nature of the mind. Third, it is possible to cultivate powerful antidotes — realistic and beneficial mental states — that root out ignorance, afflictions, and other obscurations.

In chapter 24 of his *Treatise on the Middle Way*, Nāgārjuna explains that together, the doctrines of dependent arising and emptiness of inherent existence establish the existence of the Three Jewels. Because all phenomena arise dependently, they lack inherent existence. Ignorance, however, grasps them to exist in the opposite way, as inherently existent. Because phenomena exist dependent on other factors — sprouts depend on seeds, children depend on their parents — they do not exist independently or inherently. When wisdom realizes their emptiness, it has the power to gradually eradicate ignorance and its latencies from our minds, and thus stop our duḥkha. This wisdom is true paths, and the cessations of the afflictions and duḥkha are true cessations. More specifically, a true cessation is the purified aspect of the emptiness of a mind that has removed a portion of afflictions by means of its antidote, the true path. True paths and true cessations constitute the Dharma Jewel, and in this way the existence of the Dharma Jewel, which is the actual refuge, is established.

True paths are first generated and true cessations are first actualized on the path of seeing of all three vehicles — the Śrāvaka, Solitary Realizer, and Bodhisattva Vehicles — and they exist in the mindstreams of āryas on the paths

of seeing, meditation, and no more learning. Those that have directly perceived emptiness and actualized true cessations are āryas and become the Saṅgha Jewel. When bodhisattvas overcome all obscurations, they become buddhas, the Buddha Jewel. In this way, the existence of the Three Jewels is established and the possibility of our becoming the Three Jewels is demonstrated.

When we deeply contemplate Nāgārjuna's explanation, our faith in the Three Jewels grows, not because someone told us about them or because we admire them, but because we understand the possibility of mental development that can lead to actualizing the Three Jewels ourselves. The ideal way to take refuge in the Three Jewels entails some degree of understanding of emptiness and dependent arising. Of course, we may initially take refuge for more elementary reasons, but our refuge will deepen as our understanding of the Three Jewels increases.

Another way of speaking of the Dharma is in terms of the transmitted or scriptural Dharma and the realized Dharma. The teachings given by the Buddha are the transmitted Dharma; the realizations that arise in the minds of practitioners who practice the transmitted Dharma are the realized Dharma. Currently both the transmitted and realized Dharma are present in our world. To preserve the transmitted Dharma, we must study the Dharma by listening to oral teachings and reading scriptures, treatises, and commentaries. To preserve the realized Dharma, we must meditate and actualize these teachings in our own minds. We should not take the existence of the Dharma for granted, but make a personal contribution to preserving it.

## REFLECTION

---

According to your present understanding, reflect that liberation is possible:

1. The basic nature of the mind is pure and clear.
2. Afflictions are based on ignorance that apprehends phenomena as existing in the opposite way than they actually exist. Thus ignorance and the afflictions born from it are adventitious and do not inhere in the nature of the mind.
3. It is possible to cultivate powerful antidotes — realistic and beneficial mental states such as the wisdom realizing emptiness — which root out ignorance, afflictions, and other obscurations.
4. Remember these three points, and as your understanding of the mind expands, come back and reflect on them again.

---

## *The Three Jewels according to the Fundamental Vehicle*

According to the Fundamental Vehicle, the Buddha Jewel is the historical Buddha, Śākyamuni Buddha, who lived approximately 2,500 years ago. The Dharma is the true paths — the eightfold path of right view, intention, speech, action, livelihood, effort, mindfulness, and concentration — and true cessations in the mental continuum of an ārya. The Saṅgha refers principally to the four pairs of realized beings — the approacher and abider for stream-enterer (*srotāpanna*, *sotāpanna*), the approacher and abider for once-returner (*sakṛtāgāmi*, *sakadagāmi*) the approacher and abider for nonreturner (*anāgāmi*), and the approacher and abider for arhatship. Bodhisattvas are also included in the Saṅgha Jewel. A commonly recited verse from the Pāli tradition expresses some of the magnificent qualities of the Three Jewels:

The Buddha, the Pure One, with ocean-deep compassion,  
who possesses the eye of wonderful stainless insight,  
the destroyer of worldly evil and defilement —  
with devoted heart, I honor that Awakened One.

The Dhamma taught by the Master,  
like a lamp that illuminates the path, fruit, and deathless nibbāna,  
untouched by the conditioned world and pointing the way beyond —  
with devoted heart, I honor that natural truth.

The Saṅgha, the most fertile ground for cultivation,  
seers of true peace, awakened through the Sugata,  
all wavering subdued, ariyas with subtle wisdom —  
with devoted heart, I honor that ariya community.

The qualities of the Three Jewels are also described in the *Jewel Sutta* (*Ratana Sutta*, Sn 2.1). The Buddha delivered this sūtra when the city of Vaiśālī was subject to the triple disaster of famine, evil spirits, and plague. The citizens invited the Buddha and Saṅgha to visit to remedy the difficulties. The protective

blessing arising from the Buddha teaching this sūtra and from the citizens reflecting on the qualities of the Three Jewels spread throughout the city. The triple disaster ceased and the citizens lived in peace. Verses 3–6 below encapsulate the qualities of the Three Jewels:

Whatever treasure exists here or beyond,  
or whatever precious jewel is in the heavenly world,  
there is none comparable to the Tathāgata.  
This precious jewel is in the Buddha.  
By this truth may there be safety.

The Buddha often uses the term “Tathāgata” to refer to himself. Tathāgata may be translated as the One Thus Gone, indicating that the Buddha has gone to nirvāṇa, the unconditioned state. Tathāgata can also be translated as the One Thus Come, in that the Buddha has come to nirvāṇa in the same way all the previous buddhas have: by perfecting the thirty-seven harmonies with awakening, completing the ten perfections, and acting for the welfare of the world.

The Tathāgata has fully awakened to the nature of this world, its origin, its cessation, and the path to its cessation — that is, he fully comprehends the four truths. The Tathāgata has fully understood and can directly perceive all things that can be seen, heard, sensed, known, cognized, and thought about; he knows them just as they are. Everything he speaks, from the time he attained awakening until his parinirvāṇa, is true and correct, and his actions are consistent with his words. He has conquered the foes of the afflictions and is not conquered by them. Thereby he possesses great power to benefit the world.

The Tathāgata has realized two great principles: dependent origination and nirvāṇa. Dependent origination applies to the conditioned world and pertains particularly to true origins and true duḥkha. Nirvāṇa applies particularly to the last two truths: it is the unconditioned, true cessation that is realized by true paths. Together dependent origination and nirvāṇa include all existents.

Although there may be great wealth, treasures, and jewels in the world, none of them even come near the qualities and benefit of the Tathāgata. The Buddha is even more precious, rare, and difficult to encounter than a wish-fulfilling gem. He has the capacity to fulfill all our wishes for enduring peace and happiness through leading us on the path to nirvāṇa.

The destruction, dispassion, deathless, and sublime  
discovered by the Sage of the Śākya in samādhi —  
there is nothing equal to that Dhamma.

This precious jewel is in the Dhamma.

By this truth may there be safety.

The Dharma Jewel that is an object of refuge consists of true cessations and true paths. This verse speaks of true cessations, nirvāṇa, which is the ultimate aim of spiritual practice. Unlike the conditioned, impermanent phenomena of saṃsāra, nirvāṇa is not created by causes and conditions and does not change in each moment. Nirvāṇa has four synonyms, each describing it from a different angle: (1) it is *destruction* of craving, or of ignorance, attachment, and animosity; (2) it is *dispassion* because it is the absence of attachment, desire, greed, and lust; (3) it is *deathless* because it is free from repeated birth, aging, sickness, and death in saṃsāra; (4) it is *sublime* — supreme, never-ending, and inexhaustible. Nirvāṇa is often said to be cooling because the heat of lust and mental afflictions has been extinguished, and experiencing nirvāṇa is like diving into a pool of cool water during India's hot season.

The supreme Buddha praised that purity  
that is called the “uninterrupted concentration” —  
there exists no equal to that concentration.

This precious jewel is in the Dhamma.

By this truth may there be safety.

The “uninterrupted concentration” refers to the supramundane eightfold path that leads to nirvāṇa. It is called “uninterrupted” because it brings immediate results. No other path or samādhi (a state of single-pointed concentration) can equal it. To develop the supramundane eightfold path, we must first cultivate the ordinary eightfold path by practicing the four establishments of mindfulness (of body, feelings, mind, and phenomena) and developing mundane right concentration. Through these, we will gain insight, which examines the nature of the body, feelings, mind, and phenomena in a deeper way. This leads to the wisdom of clear realization (P. *abhisamaya*), which breaks through and realizes the unconditioned. Wisdom of clear realization occurs in a samādhi that is a supramundane (*lokottara*) *dhyāna*. The supramundane dhyānas may be of four

levels, corresponding to the four mundane dhyānas. They are used as the basis for insight that brings the path and fruit of one of the four stages of stream-enterer and so forth. For example, if a practitioner has attained the second dhyāna and uses that to develop insight that brings the path and fruit of stream-enterer, it becomes a supramundane dhyāna, and the path and fruit are the second dhyāna supramundane path and fruit of stream-entry.

While the mind dwells in the uninterrupted concentration, wisdom actively penetrates the truth, bringing the immediate result of extinguishing certain defilements.<sup>1</sup> When one emerges from that concentration, one is a stream-enterer, an ārya. Unlike worldly samādhis that lead to rebirth in the form and formless realms, this samādhi leads to liberation.

The supramundane Dharma consists of the four ārya paths, their fruits, and nirvāṇa. These true cessations and true paths in the mind of the Tathāgata are his *dharmakāya*: his Dharma body or truth body. Buddhaghosa's commentary on the Middle Length Discourses explains:

Here the Blessed One shows [himself as] the Dhamma-body (*dharmakāya*), as stated in the passage, “The Tathāgata, great king, is the Dhamma-body.” For the ninefold supramundane Dhamma is called the Tathāgata's body.<sup>2</sup>

To return to the *Jewel Sutta*:

The eight persons — the four pairs — praised by the good,  
disciples of the Tathāgata, are worthy of offerings.

What is given to them bears great fruit.

This precious jewel is in the Saṅgha.

By this truth may there be safety.

The ārya Saṅgha and Saṅgha Jewel refers to the eight āryas, who may be monastics or lay practitioners.<sup>3</sup> The conventional Saṅgha is the monastic order of fully ordained ones. The eight classes of ārya Saṅgha are subsumed in four pairs — stream-enterers, once-returners, nonreturners, and arhats. *Stream-enterers* have a clear realization of nirvāṇa; they have understood the four truths directly, made the initial breakthrough to nirvāṇa, and abandoned three of the five lower fetters

(*samyojana, samyojana*) — view of a personal identity, doubt about the Three Jewels, and view of rules and practices.

This breakthrough or clear realization is called “the arising of the Eye of Dharma” — one now sees the Dharma and the truth of the Buddha’s teaching. Because of the power of this realization, it is impossible for a stream-enterer to do any of the five heinous actions: killing his mother, killing his father, killing an arhat, causing a schism in the Saṅgha, or drawing blood from a buddha. Stream-enterers are endowed with virtue and observe ethical conduct well. Lay stream-enterers keep the five precepts and monastic stream-enterers keep monastic precepts. While they may still commit transgressions — such as angrily speaking harshly — they never conceal their transgressions and confess and make amends as soon as possible.

Because stream-enterers’ faith in the Three Jewels is unshakable, they are firmly planted on the path to liberation. Some may attain arhatship in that very life, as did Sāriputta and Moggallāna, Ānanda, and many others. If not, they will be reborn in cyclic existence, but only as humans or devas, never in unfortunate realms. Stream-enterers with sharp faculties will take only one more rebirth, those of middle faculties will take two to six rebirths, and those of dull faculties will take at most seven more rebirths before attaining nirvāṇa. Stream-enterers with dull and modest faculties are not immune to the eight worldly concerns, and sometimes their behavior may resemble that of ordinary beings. Stream-enterers who are householders may marry and be attached to their families; they may enjoy praise, compete in business deals, and become angry when criticized. Nevertheless their afflictions are weaker than those of people who are not āryas.

*Once-returners* have significantly reduced, though not totally eliminated, their ignorance, attachment, and animosity and will be reborn in the desire realm only once more. *Nonreturners* have abandoned the fetters of desire and malice and will never again take rebirth in the desire realm. If they don’t attain nirvāṇa in that life, they will be reborn in a pure abode in the form realm and attain nirvāṇa there. *Arhats* have eliminated the remaining fetters of desire for existence in the form and formless realms, conceit, restlessness, and ignorance.

Each of these four pairs has two phases: the path and the fruit. The phase of the path is the time one practices to attain the fruit that is certain to be attained in that very life. The phase of the fruit is the time of breaking through and attaining that result. All four pairs are called *śrāvaka* (P. *sāvaka*), or disciples of

the Sugata. This term literally means “hearer” because, as Buddhaghosa explains (Vism 7.90), “they hear attentively the Blessed One’s instructions.” However, during the Buddha’s time *śrāvaka* was a more general term indicating a disciple, and the teacher of each sect had his own circle of *śrāvakas*, or disciples. These four pairs are the Buddha’s *ārya śrāvakas* who, because of their spiritual realizations, are worthy of offerings and respect. As visible representatives of the *ārya Saṅgha*, the monastic Saṅgha are also objects of respect and offerings. Those who make offerings to them accumulate great merit that leads to fortunate rebirths and conducive circumstances for Dharma practice.

### *The Three Jewels according to the Perfection Vehicle*

The Buddha, Dharma, and Saṅgha are called “jewels” because they are rare and precious — rare because they appear in the world infrequently, precious because they have the ability to lead us out of *saṃsāra* to liberation and full awakening. All sentient beings’ virtuous attitudes, words, and deeds can be traced to the Three Jewels that continually instruct and encourage sentient beings in virtue. The Three Jewels are more valuable than the mythical wish-fulfilling jewel because they fulfill our yearning for complete peace and freedom. They differ vastly from ordinary jewels that may temporarily improve the conditions of this life but cannot prevent or remedy all of our *duḥkha*. Each of the Three Jewels has an ultimate and a conventional aspect, which are presented below.

Perfection Vehicle practitioners take refuge in all buddhas throughout the universe — those living on our Earth, in other realms, and in the pure lands. In our world system Śākyamuni Buddha is the wheel-turning buddha who taught the Dharma (turned the Dharma wheel) when it was not previously present. Others have become buddhas by following his teachings. Each buddha has four buddha bodies. Here “body” means collection, as in a body of knowledge or a body of representatives. Buddha bodies may be enumerated as two, three, four, or five. These divisions involve different ways of classification but come to the same points.

There are several ways to posit the ultimate and conventional Three Jewels. The following is one way.<sup>4</sup>

## *Buddha Jewel*

The *ultimate Buddha Jewel* is the truth body (*dharmakāya*), which has the nature of the perfect abandonment of all defilements and the perfect realization of all excellent qualities. It is of two types:

- The *wisdom truth body* (*jñāna dharmakāya*) is the omniscient mind of a buddha, which has three principal qualities. With *knowledge* (*jñāna*), buddhas know all phenomena; with *compassion* (*anukampā*), they seek to benefit sentient beings without hesitation; and with *power* or *ability* (*T. nus pa*), from their own side they lack all impediments to exercising their skillful means.
- The *nature truth body* (*svabhāvika dharmakāya*) is of two types:
  - The *natural stainless purity* is the emptiness of inherent existence of a buddha's mind.
  - The *purity from adventitious defilements* is a buddha's true cessations of afflictive obscurations (*klesāvaraṇa*) that bind sentient beings to saṃsāra, and cognitive obscurations (*jñeyāvaraṇa*) that prevent them from knowing ultimate and veiled truths simultaneously with one consciousness.

The *conventional Buddha Jewel* consists of the *form bodies* (*rūpakāya*) in which a buddha appears in order to enact the welfare of sentient beings. These are of two types:

- An *enjoyment body* (*saṃbhogakāya*) is the form that a buddha manifests in his or her Akaniṣṭha pureland to teach ārya bodhisattvas.
- *Emanation bodies* (*nirmāṇakāya*) are the forms a buddha manifests that are perceivable by ordinary beings. These are of three types:
  - A *supreme emanation body* — for example, Śākyamuni Buddha — turns the Dharma wheel.
  - An *ordinary emanation body* manifests in diverse appearances of various people or things.
  - An *artisan emanation body* subdues sentient beings' minds through showing certain worldly skills.

The truth body is so-called because the wisdom truth body is the supreme *true* path and the nature truth body is the supreme *true* cessation. The dharmakāya is the fulfillment of our own purpose, in the sense that it is the total perfection of our mind. Form bodies are the fulfillment of others' purpose because through manifesting in these various forms, buddhas lead sentient beings to awakening. The truth bodies and form bodies are one inseparable entity. They are attained simultaneously at the first moment of buddhahood.

Contemplating the four buddha bodies gives us a profound understanding of Buddha Śākyamuni. His physical appearance as the human being Gautama Buddha is an emanation body, a form he assumed to suit the spiritual dispositions and interests of ordinary beings in our world. An emanation body derives from a subtler body, an enjoyment body, which emerges from the wisdom dharmakāya, a buddha's omniscient mind. A wisdom dharmakāya arises within the underlying nature of reality, a buddha's nature dharmakāya.

### *Dharma Jewel*

The *ultimate Dharma Jewel* is the true cessations and true paths in the mindstreams of āryas.

The *generally accepted Dharma Jewel* consists of the transmitted Dharma — the Buddha's word (the 84,000 teachings and twelve branches of scriptures) taught with compassion and skill from the Buddha's personal experience.

### *Saṅgha Jewel*

The *ultimate Saṅgha Jewel* is an individual ārya — someone who has some true cessations and true paths in their mindstream — or a group of āryas.

The *symbolic representation of the Saṅgha Jewel* is a group of four or more fully ordained monks or nuns. They have received the ethical restraints set forth by the Buddha.

The Buddha spoke of the importance of the fourfold assembly: fully ordained men and women and male and female lay practitioners who keep the five lay precepts. A group of four or more fully ordained monks (*bhikṣu*, *bhikkhu*) or four fully ordained nuns (*bhikṣuṇī*, *bhikkhuni*) is a Saṅgha, and this Saṅgha represents

the Saṅgha Jewel. “Saṅgha” does not refer to a group of people who attend a Dharma center.

The description of the Three Jewels emphasizes the inner, experiential aspect of religion and spirituality. The Three Jewels that we trust to lead us to liberation and awakening are distinct from religious institutions. Although realized beings may be members of religious institutions, these institutions are often operated by ordinary beings. Our refuge must always remain purely with the Three Jewels. If it does, we will not be confused by the actions of ordinary beings. It’s important to remember that not all Buddhists are buddhas.

### *Eight Excellent Qualities of the Buddha Jewel*

Maitreya’s *Sublime Continuum* (*Ratnagotravibhāga* or *Uttaratantra Śāstra*) discusses the excellent qualities of the Three Jewels according to the unique Mahāyāna perspective that is not shared by the Fundamental Vehicle. Learning and contemplating these qualities inspires our confidence and faith that they are superb, trustworthy guides on the path. Contemplating their qualities shows us the direction to take in our spiritual practice in order to actualize the Three Jewels ourselves. Giving us a vision of our potential, this overcomes the despair that lacks clear spiritual direction and dispels the thought that we have only limited purpose and potential in life.

The Buddha Jewel is a final object of refuge that possesses eight excellent qualities, such as being unconditioned and so forth. As described in the *Sublime Continuum* (RGV 1.5):

Unconditioned and spontaneous,  
not realized by other [extraneous] conditions,  
possessing knowledge, compassionate love, and ability,  
only the buddhas possess [the qualities of] the two benefits [of self and  
others].

The first three qualities indicate that buddhas have accomplished their own aim or purpose.

1. The excellent quality of being *unconditioned* indicates the truth body is free from arising and disintegrating. It possesses natural purity in that it has never and will never exist inherently. Buddhas have completely and directly realized this emptiness, which is naturally free from the elaborations of true existence; in the view of this pristine wisdom, there is no true existence. If true existence existed, this pristine wisdom would see it. Instead it has seen the ultimate truth, emptiness, in which all dualistic appearances have vanished, and the actual mode of existence of all phenomena is seen directly. Dualistic appearances are usually described as being of three kinds: (1) the appearance of subject and object being separate and distinct, as in, “I am realizing emptiness,” (2) the appearance of inherent existence, even though this appearance is false and nothing exists inherently, and (3) the appearance of veiled phenomena — tables, trees, people, and so forth — which are not ultimate truths.

A buddha’s pristine wisdom directly knowing emptiness differs from that of other āryas in that it can simultaneously perceive veiled truths and ultimate truths with one consciousness. A buddha’s *pristine wisdom knowing things as they are* — that is, knowing their emptiness — is free from duality, yet veiled truths appear to it. It is free from duality with respect to its direct realization of emptiness, but it is not a pristine wisdom free from all duality, in that it also knows conventionalities.

Every consciousness of a buddha is omniscient and knows both truths simultaneously. One aspect of omniscient mind knows ultimate truths within the vanishing of all dualistic appearances, and the other aspect knows conventional truths within dualistic appearance.

2. The excellent quality of being *spontaneous* indicates that in addition to natural purity, the truth body is pure of every coarse and subtle adventitious defilement. All elaborations and conceptualizations have been pacified. Cognitive obscurations<sup>5</sup> hinder other āryas from effortlessly working for the welfare of sentient beings. When these are pacified, they attain a buddha’s truth body and are able to spontaneously and effortlessly accomplish all that is needed to benefit sentient beings.

3. The excellent quality of *not being realized by extraneous conditions* means a buddha’s realizations cannot be completely understood by words and concepts and cannot be fathomed by sentient beings, even other āryas. Buddhas experience reality for themselves. The actual experience of knowing the ultimate truth nondually cannot be communicated to others in words, although the instructions

on how to actualize this experience for oneself can. This quality that is the buddhas' pristine wisdom that knows things as they are — as empty of inherent existence — knows phenomena from the perspective of seeing the nonaffirming negative that is phenomena's ultimate truth. The emptiness of inherent existence of all persons and phenomena is this nonaffirming negative — a negation that doesn't imply anything positive in the wake of having negated the object of negation.

The next three qualities indicate that the buddhas have accomplished the purpose of others — that is, they are fully capable of benefitting others most effectively.

4. The excellent quality of *knowledge* or *intuitive wisdom* knows the variety and diversity of phenomena as well as their ultimate nature. This wisdom is experiential and effortless; it knows the veiled appearances and functions of all conventionalities everywhere and simultaneously realizes all phenomena as they actually are — their emptiness of true existence.<sup>6</sup>

5. The excellent quality of *compassionate love* for each and every sentient being wants all sentient beings to attain liberating insight that bestows omniscience. With wisdom and compassion buddhas show the path to those who are currently blind to it.

6. The excellent quality of *power* is a buddha's power of intuitive wisdom and compassion that liberates others. This indicates that buddhas possess the complete range of abilities to clear away sentient beings' obscurations that force them to be repeatedly reborn in saṃsāra under the control of afflictions and karma. Like a sword, a buddha's wisdom and compassion have the power to cut the root of saṃsāra; like a thunderbolt, they destroy that root and have the power to show others how to do that as well.

7. The excellent quality of *one's own benefit* fulfills a buddha's own aims in the most meaningful way. This quality subsumes the first three qualities and ensures that buddhas have eliminated everything to be abandoned and actualized everything to be realized, making their minds entirely pure. By accomplishing their own aim — the truth body with the first three qualities — buddhas have the knowledge, compassionate love, and ability to manifest in form bodies in order to teach the Dharma to those who are suitable to be trained.

8. The excellent quality of *others' welfare* or purpose refers to a buddha's form bodies that benefit others in the most meaningful way. This quality subsumes the

three qualities of knowledge, compassionate love, and power. With their omniscient knowledge, buddhas perfectly understand the dispositions, aspirations, and capabilities of each sentient being to be trained. With compassionate love, they seek to benefit others. With their power of wisdom and compassion, and without any hesitation or self-doubt, they teach paths that are appropriate for sentient beings with different inclinations. To those inclined toward the Śrāvaka Vehicle, buddhas teach the four truths. For those inclined toward the Solitary Realizer Vehicle, buddhas teach the twelve links — the forward and reverse sequences of the afflictive and purified sides. To those inclined toward the Bodhisattva Vehicle, they also teach great love, great compassion, and bodhicitta, as well as the way to actualize the pristine wisdom knowing things as they are and the pristine wisdom knowing the variety of phenomena.

The two purities of a buddha's mind — the first two qualities — are aspects of the nature truth body and are unconditioned. Other aspects of a buddha's mind are awarenesses that are aspects of the wisdom truth body and include conditioned phenomena.

### *Eight Excellent Qualities of the Dharma Jewel*

The Dharma Jewel is a truth of the completely pure class (that is, the true cessations and true paths) in an ārya's continuum that possesses any of the eight excellent qualities, such as being inconceivable and so forth. True paths are consciousnesses informed by the wisdom directly realizing the subtle selflessness of persons and phenomena. They are first generated on the path of seeing, which marks a bodhisattva's transition from an ordinary being to an ārya.

Among an ārya's true paths are uninterrupted paths and liberated paths. An *uninterrupted path* is a wisdom directly realizing emptiness that is in the process of eliminating some portion of defilements. Those defilements do not exist in the mind at the time of the uninterrupted path, but they have not yet been completely abandoned. When they have been completely and forever abandoned and their true cessation actualized, this wisdom directly realizing emptiness is known as a *liberated path*. Through each successive true path and its corresponding true cessation, bodhisattvas gradually abandon all afflictive and

cognitive obscurations on the bodhisattva paths of seeing and meditation. Bodhisattvas become buddhas on the path of no-more-learning.

A true cessation is the purified aspect of the emptiness of a mind that has abandoned a certain portion of obscurations. True cessations have two factors: natural purity and the purity of adventitious defilements. *Natural purity* is the emptiness of inherent existence of all phenomena, here referring specifically to the emptiness of inherent existence of the mind. It is not an actual cessation because inherent existence has never existed and so cannot be ceased. The *purity of adventitious defilements* is the cessation of a portion of obscurations that is gained by cultivating the antidote, true paths. The Buddha Jewel fully possesses both purities. Other āryas possess natural purity and a portion of the purity of adventitious defilements. True cessations are genuine freedom; they are peaceful in that conceptual elaborations and dualistic appearances have been pacified.

The mere temporary absence of a defilement in the mind is not a true cessation. Even non-Buddhists can temporarily stop coarse manifest afflictions by attaining the first dhyāna, which suppresses but does not eliminate them. This is not a true cessation because these afflictions can again arise in their minds.

True paths free us from all duḥkha, its causes, and the latencies of its causes, and in that way they protect us. True cessations are the state of freedom. With the attainment of the liberated path of the path of seeing, ārya bodhisattvas have completely ceased all acquired afflictions. In addition, they no longer have any doubt regarding the Three Jewels as their objects of refuge and can never fall under the influence of misleading teachers. Having overcome wrong views, their conviction in the law of karma and its effects is unmoving. As their wisdom realizing emptiness becomes more powerful and they attain higher levels of the path, their innate obscurations are gradually eradicated, bringing great inner freedom. For this reason, true paths and true cessations are said to be the actual refuge that protect us from saṃsāra and personal nirvāṇa. The *Sublime Continuum* details the eight qualities (RGV 1.10):

That which is inconceivable, without the two, without conception,  
pure, clear, and of the antidotal class,  
that which is free from attachment and frees from attachment —  
that bearer of the character of the [last] two truths is the Dharma.

Let's look at each of the excellent qualities in turn.

1. The excellent quality of *being inconceivable* consists of three ways true cessations are inconceivable.

First, they cannot be conceived exactly as they are by logicians with respect to the four possibilities of existence, nonexistence, both, and neither. Logicians are those who use reasonings that create mistaken conceptual superimpositions regarding the way things exist. The ultimate truth — which is both true cessation and the Dharma Jewel — is not (a) truly existent, (b) truly nonexistent, (c) truly both existent and nonexistent, and (d) truly neither existent nor nonexistent.

Second, true cessations cannot be adequately known by relying on others' assertions and must be known experientially by oneself. Third, as ultimate truths, true cessations are not realized by a dualistic mind. They are known only by pristine wisdom that is free from duality.

2. The excellent quality of *being without the two* indicates that true cessations are free from a portion of the two: afflictions and polluted karma. This is the purity from adventitious defilements, which cannot be experientially understood through words and concepts. The Dharma Jewel is present on the paths of seeing, meditation, and no-more-learning and is free from some portion of afflictions and polluted karma.

3. The excellent quality of *being without conceptualization* means that the Dharma Jewel is free from all conceptualizations grasping true existence and free from distorted conceptions that give rise to afflictions. True cessations are known by our own wisdom in meditative equipoise on emptiness in which all dualistic appearances have vanished. This wisdom is called “individual self-knowledge” (T. *so so rang rig*).<sup>7</sup>

4. The excellent quality of *purity* means that the Dharma Jewel is not mixed with any obscurations. As wisdom paths of āryas, the Dharma Jewel is the pristine wisdom directly realizing emptiness. As such, it is free from all defilements that prevent the direct perception of ultimate reality.

5. The excellent quality of *clarity* indicates that the Dharma Jewel clearly knows the ultimate mode of existence — emptiness — of all phenomena. It is free from the bias embedded in attachment, anger, and confusion.

6. The excellent quality of the *antidotal class* refers to true paths being able to counteract some portion of the afflicted obscurations or cognitive obscurations. They dispel the darkness of ignorance and its latencies from the minds of sentient beings.

7. The excellent quality of *true cessations* subsumes the first three excellent qualities and refers to the true cessations of all three vehicles. Free from all craving, they are ultimate truths.

8. The excellent quality of *true paths* acts to eradicate defilements and subsumes the second three excellent qualities. As consciousnesses, true paths are conventional truths. Like the sun that eliminates the darkness of ignorance, the true paths of all three vehicles function to free the mind from craving and other defilements.

A Dharma Jewel must have at least some of the eight qualities. It is not necessary to have all eight of them. For example, the uninterrupted path of the path of seeing is a true path but not a true cessation.

## *Eight Excellent Qualities of the Saṅgha Jewel*

The Saṅgha Jewel consists of āryas from all three vehicles who possess any of the eight excellent qualities of knowledge and liberation. It is not necessary that this person possesses all eight qualities. For example, an ārya on the uninterrupted path of the path of seeing has the qualities of knowledge but not the qualities of liberation. Describing the qualities of the Mahāyāna Saṅgha Jewel, the *Sublime Continuum* says (RGV 1.14):

Because of pure inner pristine wisdoms  
seeing the mode and varieties,  
the assembly of intelligent irreversible ones  
is endowed with unsurpassable excellent qualities.

The eight excellent qualities of the Saṅgha Jewel are:

1. The excellent quality of *knowing the mode of existence* — the emptiness of inherent existence of all phenomena. The Saṅgha Jewel has inner wisdom knowing that truly existent identities do not exist. The analytical minds that arise from learning, reflection, and meditation gradually come to ascertain the correct view of emptiness. The wisdoms arising from learning and reflection are conceptual, and the wisdom arising from meditation may be either conceptual or nonconceptual. The perspective of probing awareness (T. *rigs shes*) that is

conceptual (on the path of preparation) is very different from that of nonconceptual probing awareness (on the path of seeing and above), which has ascertained emptiness just as it is and realizes it directly. The former investigates and conceptually analyzes how things exist; it is an essential step in realizing emptiness, although its understanding is not complete or direct. The latter is completely free from dualistic appearances and is possessed only by the Saṅgha Jewel.

2. The excellent quality of *knowing the varieties* indicates that the Saṅgha Jewel knows some portion of the diversity of phenomena.

3. The excellent quality of *inner pristine wisdom* is āryas' wisdom that specifically knows the buddha essence (*tathāgatagarbha*). Āryas, who comprise the Saṅgha Jewel, have direct knowledge of the buddha nature as it exists in all sentient beings. This is unlike ordinary beings, who possess the buddha nature but do not know it directly. Inner pristine wisdom also refers to the above two knowledges.

4. The excellent quality of being *pure from the obscurations of attachment* is freedom from some portion of afflictive obscurations, especially freedom from the ignorance grasping true existence.

5. The excellent quality of being *pure from impeding obstructions* is freedom from some portions of the cognitive obscurations.

6. The excellent quality of *being pure of the inferior obscurations* is freedom from some portion of the self-centered wish to attain liberation for oneself alone. This refers to irreversible bodhisattvas on the pure grounds — the eighth, ninth, and tenth grounds — whose qualities are close to those of buddhas. They are “irreversible” in that they will never again take rebirth in saṃsāra under the control of afflictions and polluted karma and they have eradicated all self-centered thought that strives for only their own liberation. This is a powerful attainment, and such a person is bound directly for buddhahood and cannot reverse from this course. If bodhisattvas have not attained the signs of irreversibility by the eighth ground, they will attain them then.

“Inferior obscurations” may also refer to obscurations to meditative absorption (*snyoms 'jug gi sgrub pa*), certain obstructions that prevent the easy movement between different meditative absorptions and thus impede the gaining of realizations.

7. The excellent quality of *knowledge* (true paths) includes the first three excellent qualities. The true paths in the continuums of ārya bodhisattvas are free from grasping true existence, but the true paths of the eighth-, ninth-, and tenth-ground bodhisattvas are so pure that they are close to the unsurpassable wisdom of a Buddha. They are objects of refuge that are free from any taint of seeking liberation for themselves alone.

8. The excellent quality of *liberation* refers to true cessations and subsumes the second three excellent qualities.

Describing the knowledge of the Saṅgha Jewel, the *Sublime Continuum* says (RGV 1.15):

By realizing the quiescent nature of beings,  
they perceive the very mode [of existence of phenomena].  
This is due to the natural, thorough purity  
and because afflictions are extinguished from the start.

“Realizing the quiescent nature of beings” refers to understanding the selflessness of persons and of phenomena. The wisdom directly realizing emptiness perceives the two selflessnesses — the ultimate nature of all persons and of all phenomena other than persons. This true path realizes these two emptinesses without differentiation; it simultaneously and directly perceives the emptiness of all existents. Such realization is possible because the nature of the mind is clear light — it is empty of true existence. This is its natural purity. In addition, the afflictions are not embedded in the nature of the mind, and in this respect they are primordially extinguished.

Enumerating the excellent qualities of the Three Jewels demonstrates why they are trustworthy and complete sources of refuge. Since we have the fortune to encounter such reliable objects of refuge, it is important that we take refuge in them fully, from the depth of our hearts, and to take refuge repeatedly in order to deepen and strengthen our connection with them. Doing this will enable us to call on their guidance no matter what situations we face in life or when we are dying.

The Perfection and Tantric Vehicles also include śrāvaka āryas and arhats as the Saṅgha Jewel. The *Sublime Continuum* explicitly mentions only ārya bodhisattvas and buddhas as the Saṅgha Jewel, because this text emphasizes

buddha nature and one final vehicle — that is, everyone will eventually enter the Bodhisattva Vehicle and become a buddha.

Bodhisattvas respect the śrāvaka Saṅgha, as they are fellow practitioners who follow the Buddha and attain liberation. However, there are some differences between the two. Bodhisattvas are motivated by bodhicitta and aim to become buddhas. By fulfilling the collections of merit and wisdom, they attain buddhahood where all obscurations have been abandoned and all realizations and excellent qualities brought to fulfillment. Śrāvakas are motivated to attain personal nirvāṇa and aim to become arhats who have eradicated afflictive obscurations, but not cognitive obscurations. Ārya bodhisattvas are endowed with both wisdom and the great compassion that wants all sentient beings to be free from the duḥkha of saṃsāra, and they are committed to bringing that about. They dispel the ignorance of countless sentient beings by their altruistic deeds that lead others on the path.

## *Final and Provisional Refuges*

The *Sublime Continuum* speaks of the objects of refuge or just refuges (T. *skyabs gnas*, *skyabs yul*), which are sometimes used in different contexts than the Three Jewels (T. *dkon mchog gsum*). Clarifying in our mind the differences and similarities between the Three Jewels and the three objects of refuge can be challenging because there are many permutations that can be made between them. And when we add in the symbolic jewels — the objects or people that represent the Three Jewels — there are even more! Exerting effort to understand these helps us to understand the Three Jewels and the three objects of refuge more deeply and to avoid confusing them with the symbolic jewels. Although charts are provided below to summarize the descriptions of each, thinking about the explanations of the classifications is what brings understanding.

The *Sublime Continuum* teaches the final and provisional objects of refuge to direct all sentient beings to the ultimate or final refuge. Those who are definite in the śrāvaka lineage regard arhatship as their final goal; they don't seek buddhahood or believe it is necessary to attain it. The division into final and provisional objects of refuge is made to guide and encourage them to seek the

final goal. This emphasizes that there is one final vehicle and that all beings will eventually enter the Mahāyāna and attain buddhahood.

The three objects of refuge are spoken of as final (ultimate) and provisional (conventional) refuges. A *final object of refuge* is a refuge that has completely traversed the path, and a *provisional object of refuge* is a refuge that has not completely traversed the path. The final refuge is the final destination we aim to attain by following the path, whereas the provisional refuge helps us to arrive there.

In this light, the final refuge is a buddha having the four buddha bodies. To review, these are: (1) the nature truth body — the emptiness and true cessation in the mindstream of a buddha, (2) the wisdom truth body — the Buddha’s omniscient mind, (3) the enjoyment body — the form a buddha appears in to guide ārya bodhisattvas in the pure lands, and (4) the emanation bodies — the forms a buddha appears in that we ordinary beings can perceive and relate to. The nature truth body and the wisdom truth body together are called “the truth body of a buddha.” The enjoyment body and emanation bodies together are called “the form body of a buddha.” A buddha with these four bodies is our final refuge, the final destination that we want to actualize on the path; there is nothing higher than this. So a buddha is both the actual Buddha Jewel as well as a final refuge, whereas an image of a buddha is not an actual Buddha Jewel, a final refuge, or even a conventional refuge; it is a symbolic Buddha Jewel (T. *brdar btags pa’i sangs rgyas dkon mchog*).

The realized Dharma has two aspects: true paths and true cessations. These exist only in the mindstreams of āryas who have realized emptiness directly. New bodhisattvas as well as śrāvakas and solitary realizers on the paths of accumulation and preparation of their respective vehicles have not realized emptiness directly and are not āryas. The true paths in the mindstreams of ārya learners (āryas who are not buddhas) are not final objects of refuge; they are a provisional refuge. This is because the pristine wisdom in the mindstreams of ārya learners still has a deceptive nature (T. *slu wa*) in the sense that it appears to them to be completely free of defilements, although it is not.<sup>8</sup> This pristine wisdom directly realizing emptiness is currently free from the influence of pollutants of ignorance and its seeds because only emptiness appears to this mind and the dualistic appearances of true existence, veiled truths, and subject and object have vanished. However, this pristine wisdom is not *completely* free from the pollutants

of the latencies of ignorance and still possesses defilement. There is a difference between the pristine wisdom being free of the influence of the pollutants of ignorance and its latencies, and the person being free of them. Here the pristine wisdom is free from the influence of the pollutants of ignorance and its latencies, but the person is not. After ārya learners' meditative equipoise on emptiness, in post-meditation time the appearance of true existence arises in their minds again. For this reason, ārya learners' pristine wisdom is not *completely* free from pollutants of ignorance and its latencies. It is in this sense that the true paths of ārya learners are said to be deceptive and are therefore a provisional refuge. However, the true cessations and true paths in the mindstreams of ārya buddhas are a final refuge.

Similarly, the true cessations in the mindstreams of bodhisattva āryas and śrāvaka and solitary realizer āryas (including arhats) are not the final refuge. This is because these āryas still have cognitive obscurations, even though their true cessations are the pacification of their true duḥkha and true origins. However, since buddhas are completely free from both afflictive obscurations and cognitive obscurations, the true paths and true cessations in their mindstreams are the final refuge.

The transmitted or scriptural Dharma that is made of letters, words, phrases, and sentences explains how to actualize the realized Dharma in our mindstreams. With the exception of the transmitted Dharma in the mindstream of a buddha, the rest of the transmitted Dharma is not a final or conventional refuge, nor is it an actual Dharma Jewel. It is a symbolic Dharma Jewel (T. *brdar btags pa'i chos dkon mchog*). The meaning of the subject matter of the scriptures in learners' mindstreams is like a raft that takes them across the ocean of saṃsāra. Once they are on the other side and have attained awakening, the raft is no longer necessary and can be left behind. However, just because the transmitted Dharma Jewel in the mindstreams of learners is not the final refuge, that doesn't mean that the Buddha's word is no longer necessary or important at buddhahood. To the contrary, this is how the Buddha teaches sentient beings and guides us to liberation and awakening. The transmitted Dharma in the continuum of a buddha isn't to be left behind.

Speaking of the final and provisional objects of refuge, the *Sublime Continuum* says (RGV 1.20):

Because it will be abandoned, because it bears the quality of being  
deceptive,  
because of absence and because it is together with fear,  
the two types of Dharma and the assembly of āryas  
are not supreme, everlasting refuges.

“Because it will be abandoned” refers to the twelve branches of scriptures within the continuums of learners. As mentioned above, the teachings are like a raft that takes us to the other shore where we will be free from cyclic existence. After crossing, we no longer need the raft, and for this reason the teachings are not final, ultimate, or everlasting refuge. “Because it bears the quality of being deceptive” explains that the true path directly realizing emptiness in the mindstreams of ārya learners is not a final refuge because those āryas are not yet free of all obscurations. These true paths must go beyond being together with a mindstream with defilements and be in the continuum of a buddha in order to be considered nondeceptive.

“Because of absence” describes why nirvāṇa without remainder (the nirvāṇa of an arhat who has passed away from his polluted body) is a refuge, but not a final refuge: it is the absence of duḥkha and its origins, but not an absence of both obscurations. “Together with fear” indicates that all ārya learners — even the tenth-ground bodhisattvas who are so amazing — are not final refuges because they still have a fear of the cognitive obscurations. Thus all the ārya learners are a provisional refuge, not a final refuge, but they are included in the Saṅgha Jewel. An ārya buddha is a final refuge as well as a Saṅgha Jewel. The assembly of ordinary Saṅgha members is not a final or a conventional refuge, nor is it the actual Saṅgha Jewel; they are a symbolic Saṅgha Jewel (T. *brdar btags pa'i dge 'dun dkon mchog*).

Speaking of the Three Jewels and of the final and provisional refuges in such detail emphasizes the unique qualities of the buddhas — the total purity and clarity of their minds, the full abandonments and realizations possessed only by the fully awakened ones. Seeing this, our faith in the Buddha increases as does our determination to become a buddha ourselves.

The chart below clarifies the final and provisional objects of refuge for the Buddha, Dharma, and Saṅgha. When we compare the ultimate and conventional refuges to the definitions of the Three Jewels, we see that the Dharma Jewel in the

continuum of a buddha is the final refuge, whereas the Dharma Jewel in the continuums of ārya learners of all vehicles is the provisional refuge. All these true paths and true cessations in the continuums of both ārya learners as well as buddhas are the actual Dharma Jewel that possess any of the eight excellent qualities, such as being inconceivable and so forth, but not all of them qualify as the final refuge.

The Saṅgha Jewel includes the buddhas, arhats, and ārya learners of all three vehicles. Among these, only the buddhas qualify as a final refuge, not any the others. The ārya learners, as beings who possess any of the eight excellent qualities of knowledge and liberation, are included in the Saṅgha Jewel, but they are conventional objects of refuge. Although ordinary monastics and a monastic community composed of ordinary beings are called “Saṅgha,” they are symbolic of Saṅgha Jewel and are not the final or provisional refuge.

### THE FINAL AND PROVISIONAL OBJECTS OF REFUGE AND SYMBOLIC JEWELS

	BUDDHA	DHARMA	SAṄGHA
Final object of refuge	The four buddha bodies: nature and wisdom truth bodies and enjoyment and emanation form bodies	True cessations and true paths (realized Dharma) in the mindstreams of ārya buddhas are a final refuge.	Ārya buddhas
Provisional object of refuge		True paths and true cessations (realized Dharma) in the mindstreams of ārya learners; nirvāna without remainder	Ārya learners
Symbolic jewel	Images of the Buddha	Transmitted Dharma except the transmitted Dharma in a buddha's mindstream	The assembly of ordinary Saṅgha members

The chart below reviews the ultimate and conventional refuges.

## THE FINAL AND PROVISIONAL REFUGES

THREE JEWELS	FINAL REFUGE OBJECTS	PROVISIONAL REFUGE OBJECTS
Buddha Jewel	Truth bodies, Form bodies	
Dharma Jewel	Realized Dharma (true paths and true cessations) in the continuum of a buddha	Realized Dharma (true paths and true cessations) in the continuums of the ārya learners of any vehicle
Saṅgha Jewel	Buddhas	An ārya learner of any vehicle

The next chart combines the discussions of the Three Jewels and the objects of refuge.<sup>9</sup>

## THREE JEWELS, ACTUAL AND SYMBOLIC JEWELS, AND FINAL AND PROVISIONAL REFUGES<sup>10</sup>

JEWELS OR BEARERS OF THE NAME OF JEWEL	ACTUAL JEWEL	SYMBOLIC JEWEL	FINAL OBJECT OF REFUGE	PROVISIONAL OBJECT OF REFUGE
Buddha Jewel (two truth bodies and two form bodies)	Yes		Yes	
Buddha images		Yes		
Dharma Jewel (realized Dharma of true cessations and true paths)	Yes		Yes: those in the continuums of ārya buddhas	Yes: those in the continuums of ārya learners
Transmitted or scriptural Dharma		Yes		
Saṅgha Jewel (ārya beings)	Yes		Yes: an ārya buddha	Yes: an ārya learner
Ordinary Saṅgha members		Yes		

As noted, it's important to take refuge in the Three Jewels every day. If you have a regular daily meditation practice, do this at the beginning of your meditation session. Visualize Śākyamuni Buddha, his body made of golden light, in the space in front of you. He is surrounded by your spiritual mentors, teachers of the lineage, buddhas, meditational deities, bodhisattvas, arhats, śrāvaka and solitary-realizer āryas, ḍākas and ḍākinīs, and transcendental Dharma protectors. Visualize all sentient beings surrounding you, with everyone facing the merit field. To overcome antipathy toward people you don't get along with or feel unsafe around, visualize them in front of you, between you and the Buddha. Feeling that you are in the presence of holy beings who are looking at you with complete acceptance and great compassion, take refuge. A verse that is commonly recited is:

I take refuge until I am awakened in the Buddhas, the Dharma, and the Saṅgha.

By the merit I create by generosity and the other perfections, may I  
attain buddhahood in order to benefit all sentient beings.

In Chinese Buddhism, a refuge verse that is often chanted to dedicate the  
merit at the conclusion of a meditation session is:

I take refuge in the Buddha; may each and every sentient being  
understand the Great Way [Mahāyāna] profoundly and bring forth  
the bodhi mind.

I take refuge in the Dharma; may each and every sentient being deeply  
enter the sūtra treasury and have wisdom vast as the sea.

I take refuge in the Saṅgha; may each and every sentient being form  
together a great assembly, one and all in harmony.

### *The Three Jewels according to the Vajra Vehicle*

The actual meaning of “refuge” is found in highest yoga tantra with its  
description of how to actualize the four bodies of a buddha. This class of tantra  
speaks of the fundamental innate mind of clear light, the subtlest consciousness  
of each and every sentient being. This innate clear light mind is beginningless and  
endless. It came from our past lives to the present life and will continue on to  
buddhahood. Our coarse consciousnesses — the five sensory consciousnesses and  
our coarse mental consciousness beset by its profusion of thoughts — do not  
continue to awakening.<sup>11</sup>

When the fundamental innate mind of clear light is purified of all  
obscurations, it becomes the wisdom dharmakāya, and its emptiness and true  
cessations are the nature dharmakāya. The medium through which the wisdom  
dharmakāya appears to sentient beings in order to benefit them is the enjoyment  
body that benefits āryas in the pure land. From the enjoyment body arise the  
emanation bodies that interact with ordinary sentient beings.

The substantial cause for these four bodies of a buddha exists in us now — it  
is the fundamental innate mind of clear light and the subtlest wind that  
accompanies it, which by nature are empty of inherent existence. Thus the  
potential for full awakening exists in us now. The Sūtrayāna explanation of the

substantial causes and conditions of the truth bodies and the form bodies is incomplete; it does not fully explain how the two collections of merit and wisdom become the causes for the body and mind of a buddha. Highest yoga tantra, on the other hand, contains the full explanation of this process. However, we cannot jump to the practice of highest yoga tantra immediately; we must create a firm foundation by practicing the Sūtrayāna.

In Vajrayāna, the Buddha Jewel includes all buddhas throughout the universe and all the awakened meditational deities, such as Avalokiteśvara, Mañjuśrī, Vajrapāṇi, Yamāntaka, Cakrasaṃvara, and Guhyasamāja. The Dharma Jewel includes the true cessations and true paths in the mindstreams of all āryas. Here the emphasis is on the true path being the fundamental innate clear light mind that has been transformed into the union of bliss and emptiness at that stage of actual clear light. The Saṅgha Jewel includes ārya bodhisattvas, supramundane heroes (*ḍākas*) and heroines (*ḍākinīs*), supramundane Dharma protectors such as Palden Lhamo, as well as ārya śrāvakas. Supramundane ḍākas and ḍākinīs are highly realized practitioners on the tantric path who assist practitioners by overcoming obstacles and gathering necessary conditions for their practice. Supramundane Dharma protectors are ārya bodhisattvas who appear in fierce forms in order to protect the Dharma. Worldly Dharma protectors are not included in the Three Jewels because they are saṃsāric beings.

Tantric practitioners also take refuge in the guru. It is important to understand this properly in order to avoid confusion. The guru is not a fourth object of refuge; rather, the ultimate guru is the four buddha bodies, with the emphasis being on the omniscient mind of bliss and emptiness. The ultimate guru encapsulates all three refuges. The ultimate guru's body is the Saṅgha, speech is the Dharma, and mind is the Buddhas. The ultimate guru is not a human being, but the omniscient minds of all buddhas; it is the union of bliss and emptiness that, motivated by great compassion, is able to effortlessly and spontaneously manifest in a variety of forms to benefit sentient beings who are receptive to their influence. The ultimate guru is our actual object of refuge.

Conventional gurus are the spiritual masters who bestow tantric initiations, teachings, and instructions. We view them as embodiments of the ultimate guru, which helps make our refuge objects appear more immediate and accessible. Our Dharma practice becomes more alive when we feel that we are near the buddhas. The tantras instruct us to see our conventional gurus as buddhas, just as we

practice seeing our environment as the deity's maṇḍala and the sentient beings around us as deities.

Some practitioners make the mistake of confusing refuge in the guru with refuge in the personalities of our beloved tantric spiritual masters who are human beings. In this case, when the conventional guru passes away, these disciples feel bereft of refuge, and over time many of them may drift away from the Dharma. This is sad because their ultimate object of refuge, the ultimate guru, is always present, but they don't recognize this. Their feelings of loss can be alleviated by continually bringing their attention back to the ultimate guru and imagining the ultimate guru manifesting as the central figure in their daily practice of guru yoga.

In tantric practice, we take refuge at the beginning of each meditation session. To do this, we visualize in the space in front of us the Buddhas, Dharma, and Saṅgha surrounding the principal deity whose practice we will do. Seeing all of them as the manifestations of the ultimate guru — the omniscient minds of all the buddhas — we take refuge.<sup>12</sup>

Below are the refuge verses from some tantric practices. The Heruka Cakrasaṃvara practice begins:

At all times I take refuge in the Buddhas, Dharma, and Saṅgha of all three vehicles, in the ḍākinīs of secret mantra yoga, in the heroes, heroines, and powerful goddesses,<sup>13</sup> in the great beings (mahāsattvas), in bodhisattvas, and above all, at all times, I take refuge in my spiritual master.

In the Guhyasamāja practice the refuge verse is:

I take refuge continually in the sugata buddhas in whose minds abides a mental play [realization of emptiness] actualized in stages like the waxing of the stainless moon and infinite methods of pure compassion. I go for refuge continually to the holy Dharma, which, as the truth of the path, is the basis for total freedom from all misconceptions and the foundation for the excellence of the holy beings [buddhas, meditational deities, and āryas], and which, as the truth of cessation, is the very nature of emptiness, the single taste of all phenomena. I go for refuge to the host of āryas who are masters of discipline, abide on the bodhisattva stages such as the Joyous

One, are endowed with the glory of bodhicitta, are incited by supreme compassion, and have become purely freed from the fetters abandoned on each stage as they progress.

## 2 | Qualities of the Buddha, Dharma, and Saṅgha

IN THE PREVIOUS chapter, we learned how the Fundamental Vehicle, Perfection Vehicle, and Vajra Vehicle describe the Three Jewels. In this chapter, we will discuss their excellent qualities — the attributes possessed only by trustworthy and fully qualified objects of refuge. The scriptures describe many groups of qualities of the Buddha, including four kinds of self-confidence, ten powers, eighteen unique qualities, and the qualities of the Buddha’s body, speech, and mind. The Indian sages Dignāga and Dharmakīrti composed a logical argument that verifies the Buddha as a reliable spiritual guide. Although it is short, its meaning is deep.

We will then move into the Recollections of the Buddha, Dharma, and Saṅgha, a practice found in the early sūtras and in both the Pāli and Sanskrit traditions. Although it may be seen as a practice to attain serenity, it also has the result of connecting to the Three Jewels in a profound way that we can rely on in times of duress and difficulty.

From there, we will examine the distinguishing features of each jewel and the causal and resultant refuges.

### *The Four Kinds of Self-Confidence*

In his autocommentary to the *Supplement* (*Madhyamakāvatārabhāṣya*, 6.210cd), Candrakīrti quotes a passage describing the four kinds of self-confidence (four fearlessnesses) of the Tathāgata. Gyaltzab explains these in his commentary to Maitreya’s *Sublime Continuum*. This passage is also present in *The Greater Discourse on the Lion’s Roar* (*Mahāsīhanāda Sutta*, MN 12.22–26) in the Pāli canon.

Sāriputta, the Tathāgata has these four kinds of self-confidence, possessing which he claims the herd-leader's place, roars his lion's roar in the assemblies, and sets rolling the Wheel of Brahmā.<sup>14</sup> What are the four?

(1) Here, I see no ground on which any renunciate, brahmin, god, Māra, Brahmā or anyone else at all in the world could, in accordance with the Dhamma, accuse me thus: "While you claim full awakening, you are not fully awakened in regard to certain things." Seeing no ground for that, I abide in safety, fearlessness, and self-confidence.

(2) I see no ground on which any renunciate . . . or anyone at all could accuse me thus: "While you claim to have destroyed the pollutants, these pollutants are not destroyed by you." Seeing no ground for that, I abide in safety, fearlessness, and self-confidence.

(3) I see no ground on which any renunciate . . . or anyone at all could accuse me thus: "Those things you called obstructions are not able to obstruct one who engages in them." Seeing no ground for that, I abide in safety, fearlessness, and self-confidence.

(4) I see no ground on which any renunciate . . . or anyone at all could accuse me thus: "When you teach the Dhamma to someone, it does not lead him when he practices it to the complete destruction of duḥkha." Seeing no ground for that, I abide in safety, fearlessness, and self-confidence.

Being fearless in these four ways, the Tathāgata teaches the Dharma with perfect intrepidity and self-confidence, free from all self-doubt. First, no one can justifiably say that the Buddha knows some things but not everything. With full confidence, the Buddha is able to state that he has complete and perfect knowledge of all phenomena. This quality is attained through being generous in teaching the Dharma.

Second, no one can rightly say that while the Buddha claims to have destroyed all pollutants, he in fact has not. By means of his perfect realization of reality, he has cleansed his mind of all gross and subtle pollutants, as well as their potencies, enabling his mind to accurately reflect all that exists. This quality ensures that the Buddha's motivation for speaking, acting, and teaching is free

from greed, competition, conceit, and jealousy. This quality is attained through having abandoned conceit and arrogance.

Third, no one can with good reason say that what the Buddha states is an obstruction to awakening is not one. As related in a Pāli sūtra (MN 22), Bhikkhu Ariṭṭha believed that activities the Buddha said are obstructions — such as hedonistically indulging in sensual pleasures — do not obstruct someone who engages in them. With this mistaken thought, he encouraged people to indulge in these activities to be happy. Other monks and then the Buddha himself admonished Ariṭṭha, saying that the Buddha has repeatedly explained why sensual desire is an obstruction and that this can be verified by observing one's own experience. The Sanskrit tradition explains this fearlessness as the Buddha's confidence in saying that the afflictive obscurations prevent liberation and the cognitive obscurations obstruct full awakening. This quality of fearlessness comes about through not having followed wrong doctrines in the past.

Fourth, no one can correctly state that the path the Tathāgata teaches does not lead to liberation and the total elimination of duḥkha. Many of the Buddha's disciples during his life and afterward have followed the path the Buddha taught and attained its results: liberation and awakening.

The *Ornament of Clear Realizations* explains that of these four proclamations, two are related to one's own welfare (in this case, the Buddha's welfare) and two to others' welfare. Stating with complete self-confidence that he is fully awakened regarding all phenomena and that he has destroyed all pollutants is related to fulfilling his own welfare because these are results that the Buddha himself experiences. His fearless proclamations that he correctly identifies obstructions on the path and that the Dharma he teaches definitely leads to nirvāṇa when practiced correctly are qualities by which the Buddha benefits others and thus are known as fulfilling others' welfare.

## *The Ten Powers of the Tathāgata*

The ten powers (*daśa bala, dasa bala*) are exceptional knowledges unique to the Buddha that enable him to perform the special functions of a buddha, such as to “roar his lion's roar” of full awakening and to establish the Buddha's teaching in the world, teach sentient beings skillfully, and lead them to awakening. These ten

are pristine wisdoms that have abandoned all obscurations and know the infinite knowable objects. The ten are found in the Sanskrit *Sūtra on the Ten Grounds* (*Daśabhūmika Sūtra*) and are explained in the *Sublime Continuum*. They are also found in the Pāli sūtra *The Greater Discourse on the Lion's Roar* (*Mahāsīhanāda Sutta*, MN 12) and are explained in the Pāli Abhidharma *Book of Analysis* (*Vibhaṅga*). The numbered extracts below are from the Pāli sūtra. In general, unless otherwise noted, the explanations accord with both the Sanskrit and Pāli traditions.

(1) The Tathāgata understands as it actually is the possible as possible and the impossible as impossible.

The Buddha knows with direct, unmistakable perception the appropriate and inappropriate relations between actions and their results. For example, he knows that happiness arises only from constructive actions, never from destructive ones, and that harmful actions lead to duḥkha, never happiness. This quality is a result of the Buddha's having generated bodhicitta and purely kept the bodhisattva ethical code in his previous lives.

The *Book of Analysis* in the Pāli canon gives more examples of what the Buddha knows through this power, such as: It is impossible for someone with right view to consider the conditioned phenomena of saṃsāra as permanent, pleasurable, and self, although it is possible for someone who lacks right view to consider them in this way. It is impossible for someone with definite right view — an ārya — to commit any of the five heinous actions of killing one's mother, father, an arhat, causing the Tathāgata to bleed, or causing a schism in the Saṅgha. However, it is possible for someone without right view to do these actions. It is impossible for an ārya to relinquish his or her refuge in the Buddha and follow a non-Buddhist teacher. Although disciples can understand these depending on guidance given by the Buddha, it is the Buddha who discovered these truths and knows them directly. Because he understands these natural laws, he is the perfectly Awakened One.

(2) The Tathāgata understands as it actually is the results of actions undertaken, past, future, and present, with possibilities and with causes.

Only the Buddha fully and accurately knows the intricacies of karma and its results. Having penetrated the law of karma and its effects with wisdom, he knows that each sentient being must experience the results of their actions. The Buddha understands the various types of karma — virtuous, nonvirtuous, neutral, propelling, completing, polluted, unpolluted, and so forth — and sees each and every coarse and subtle cause leading to a particular event in the beginningless lives of each sentient being.

(3) The Tathāgata understands as it actually is the ways leading to all destinations (*gati*).

“Destination” refers to the various types of rebirth sentient beings may take — as hell beings, hungry ghosts, animals, human beings, and devas<sup>15</sup> — and to the destination of nirvāṇa for the liberated ones. The Buddha also knows the paths leading to each type of rebirth — some are polluted virtuous paths that lead to fortunate rebirths; others are nonvirtuous and ripen in rebirth in unfortunate realms. Having cultivated the practices and paths of the three vehicles — śrāvaka, solitary realizer, and bodhisattva — the Buddha knows the correct paths leading to nirvāṇa and full awakening and can identify the incorrect paths that lead to continued rebirth in saṃsāra.

(4) The Tathāgata understands as it actually is the world with its many and different elements (*dhātu*).

In the *Sutta of the Many Kinds of Elements* (*Bahudhātuka Sutta*, MN 115), the Buddha demonstrates his knowledge of the eighteen constituents (*dhātu*), the six elements (*dhātu*) — earth, water, fire, air, space, and consciousness — the external and internal sense sources, the twenty-two faculties (*indriya*),<sup>16</sup> the twelve links of dependent origination, and so on. The Buddha does not accept the superficial appearance of things as monolithic wholes, but with wisdom discerns them as impermanent, conditioned, and dependent processes. With knowledge of all these elements, the Buddha is able to teach in accordance with the faculties and abilities of the sentient beings he is addressing.

(5) The Tathāgata understands as it actually is how beings have different inclinations (*adhimokṣa*, *adhimokkha*).

Sentient beings have various inferior and superior inclinations and interests. Inferior inclinations and interests involve aspirations for this life; superior inclinations and interests direct us toward liberation and awakening. Some are virtuous; others are nonvirtuous or neutral. Knowing others' minds with their diverse tendencies, the Buddha spoke to farmers, outcasts, merchants, and nobility, making the Dharma relevant to each person according to his or her way of thinking. The sūtras relate accounts of hostile brahmins or argumentative renunciates meeting the Buddha, who quickly allayed their antipathy and explained the Dharma to them in a way they could understand and accept. Many of these people then become the Buddha's followers.

The Sanskrit tradition adds that the Buddha also knows the inclinations of sentient beings that attract them to the three vehicles. By comprehending these, he is able to guide sentient beings accordingly, teaching whatever is suitable to each individual at a particular time so he or she will develop spiritually. This power is also called the "power that knows the paths that proceed everywhere," because it knows what is needed to attain upper rebirth and the goals of the three vehicles.

(6) The Tathāgata understands as it actually is the disposition of the faculties of other beings.

The Buddha can look deep within each person's mind and know the strength of their faculties of faith, effort, mindfulness, concentration, and wisdom. For people whose faculty of faith is more prominent, the Buddha leads them through devotional means to accomplish the path. Other people are more energetic and enterprising, some people are very mindful, and others are naturally calm because their faculty of concentration is strong. Those with a more developed faculty of wisdom enjoy questioning and investigating. The Buddha teaches each type of person accordingly. In the end, all of us need to balance the five faculties, and when we are ripe to do that, the Buddha will show us the way.

(7) The Tathāgata understands as it actually is the defilement, cleansing, and emergence in regard to the meditative stabilizations, liberations, concentrations, and meditative absorptions.

In this context, *defilement* (*saṃkleśa*, *saṃkileśa*) refers to those impediments that hinder a meditator from entering any of the meditative absorptions or, once having entered, make them deteriorate. *Cleansing* (*vyavadāna*, *vodāna*) is the method for removing that impediment. *Emergence* (P. *vuṭṭhāna*) is the way to come out of a state of meditative absorption after having entered it.

The eight liberations (*vimokṣa*, *vimokkha*) are states of meditative absorption. The nine serial absorptions (*samāpatti*) are the four dhyānas, the four formless absorptions, and the cessation of discrimination and feeling.<sup>17</sup> Because the Buddha has mastered all of these meditative attainments himself, he can guide others who seek them or who have attained them. He teaches the way to actualize these meditative attainments, and he urges practitioners who have the tendency to become attached to the bliss of concentration to continue practicing the path of compassion and wisdom.

In the Sanskrit tradition, this power is the Tathāgata's power that knows the thoroughly afflicted — attachment to the meditative absorptions and liberations — and the completely pure — the freedom from this attachment.

(8) The Tathāgata recollects his manifold past lives — that is, one birth, two births, three births, four births, five births, ten births, twenty births, thirty births, forty births, fifty births, a hundred births, a thousand births, a hundred thousand births, many eons of world-contraction, many eons of world-expansion, many eons of world-contraction and expansion: “There I was so named, of such a clan, with such an appearance, such was my nutriment, such my experience of pleasure and pain, such my lifespan; and passing away from there, I reappeared elsewhere; and there too I was so named, of such a clan, with such an appearance, such was my nutriment, such my experience of pleasure and pain, such my lifespan; and passing away from there, I reappeared here.” Thus with their aspects and particulars he recollects his manifold past lives.

This and the next power are the last two of the five superknowledges and the first two of the three higher knowledges that the Buddha gained while meditating during the night prior to his awakening. Recollecting his own previous rebirths, he understands what types of relationships he had with various sentient beings in the past and consequently how he could benefit them in this

life. The Sanskrit tradition adds that the Buddha knows the previous lives of all other beings as well.

(9) With the divine eye, which is purified and surpasses the human, the Tathāgata sees beings passing away and reappearing, inferior and superior, fair and ugly, fortunate and unfortunate. He understands how beings pass on according to their actions thus: “These worthy beings who were ill-conducted in body, speech, and mind, revilers of ariyas, wrong in their views, giving effect to wrong view in their actions — on the dissolution of the body, after death, have reappeared in a state of deprivation, in a bad destination, in perdition, even in hell. But these worthy beings who were well-conducted in body, speech, and mind, not revilers of ariyas, right in their views, giving effect to right view in their actions — on the dissolution of the body, after death, have reappeared in a good destination, even in the heavenly world.”

The Buddha knows how beings die and are reborn according to their karma. Knowing this, he can manifest in whatever way is most beneficial to guide each being on the path to awakening. While with the previous power he knows past lives, with this power he knows present and future ones.

(10) By realizing for himself with direct knowledge, the Tathāgata here and now enters upon and abides in the liberation of mind and liberation by wisdom (*cittavimukti-prajñāvimukti, cetovimutti-paññāvimutti*) that are unpolluted with the destruction of the pollutants.

This power knows that while śrāvaka and solitary-realizer arhats have eliminated only the afflictive obscurations, a tathāgata has eliminated all obscurations. Someone with the superknowledges can know the spiritual level only of those who are at the same or inferior level as himself. Only the fully awakened Buddha can know the levels of realization and attainment of each and every sentient being. He isn't fooled by our efforts to impress him and knows our strengths and weaknesses and who has attained the awakening of which one of the three vehicles. Thus he can guide us on the path accordingly.

Maitreya speaks of the ten powers in chapter 6 of the *Sublime Continuum*, where their order is slightly different (RGV 193):

- (1) Knowing what is worthwhile and worthless,
- (2) knowing the ripening product of all action,
- (6) knowing faculties, (4) temperaments, and (5) aspirations,
- (3) knowing the path reaching the entire range,
- (7) knowing meditative stability and so on —  
when it is afflicted or without pollution —
- (8) memory of past states, (9) divine sight, and (10) peace  
are the ten aspects of the power of knowledge.

## *The Eighteen Unique Qualities of a Buddha*

Both the Sanskrit and Pāli traditions describe eighteen distinctive qualities of a buddha (*aṣṭādaś-āveṇika-buddhadharma*, *aṭṭhāras-āveṇika-buddhadhammā*) that are not shared by arhats. The *Prajñāpāramitā Sūtra* says:<sup>18</sup>

Subhūti, between the time when the Tathāgata manifestly and completely awakens to the highest, perfect, and complete awakening and the time when he will pass beyond sorrow, not having appropriation (the five polluted aggregates), the Tathāgata has no (1) mistakes, (2) chatter, (3) forgetfulness [lack of mindfulness], or (4) unequipoised mind. Likewise, he has no (5) recognition of difference [discordance], (6) indifference of not investigating individually, (7) loss of aspiration, (8) loss of joyous effort, (9) loss of mindfulness, (10) loss of concentration, (11) loss of wisdom, or (12) loss of complete liberation. (13) His pristine wisdom precedes and follows through all actions of the body. (14) His pristine wisdom precedes and follows through all actions of the speech. (15) His pristine wisdom precedes and follows through all actions of the mind. His unimpeded, unobstructed pristine wisdom vision penetrates into the (16) past, (17) future, and (18) present.

These eighteen distinctive features are consciousnesses. The *Questions of King Dhāraṇīśvara Sūtra* (*Dhāraṇīśvara-raja-paripṛccha-sūtra*) explains each quality, and the *Ornament* divides them into four groups: six unshared behaviors, six unshared realizations, three unshared awakening activities, and three unshared pristine wisdoms. These eighteen features are also found in the Pāli tradition's commentarial texts and are mentioned in Dhammapāla's *Treatise on the Pāramīs*.

### *Six Unshared Behaviors*

1. Due to his mindfulness and conscientiousness, the Buddha has *no mistaken physical actions*, whether he is walking, standing, sitting, or lying down. His feet do not touch the ground when he walks, and any insect that touches them will be reborn in a pure land. He acts in accordance with what he says, and his speech fulfills the needs of each sentient being in that moment.

2. Always speaking appropriately, truthfully, and kindly, he is *free from mistaken speech* and chatter. The Buddha does not dispute with the world, nor does he complain or criticize what others have done.

3. He is *free from any lack of mindfulness* regarding the dhyānas and wisdom. *Without forgetting* sentient beings, he teaches them appropriately.

4. His mind *continuously abides in meditative equipoise* on emptiness and simultaneously teaches the Dharma to sentient beings.

5. He *does not perceive any discordant appearances* of inherent existence and recognizes all phenomena as sharing the one taste of emptiness. The Buddha is not biased toward sentient beings and does not benefit those who praise him and behave well or harm those who do not.

6. He abides in *perfect equanimity free from indifference*, knowing the individual characteristics of each phenomenon as well as when sentient beings' minds are ready to be ripened.

### *Six Unshared Realizations*

7. With all-encompassing love and compassion, a buddha never experiences any decline of his *aspiration* and intention to benefit all sentient beings or to increase their virtuous qualities.

8. His *joyous effort* to lead others to awakening never diminishes. A buddha experiences no physical, verbal, or mental fatigue, and continuously cares for the welfare of sentient beings without laziness or despondency.

9. A Buddha's *mindfulness* is effortless and uninterrupted. He is mindful of the situations each sentient being encounters in the past, present, and future and the methods to subdue their minds.

10. Free from all obscurations, he continuously remains in *samādhi* with pure and stainless wisdom focused on the ultimate reality of emptiness.

11. His *wisdom* knows that his state of awakening, which is free from both afflictive and cognitive obscurations, cannot degenerate. He lacks any dualistic appearance or grasping at duality and knows the clear light nature of the mind.

12. With *total freedom*, his inexhaustible wisdom perfectly knows all existents, the 84,000 Dharma teachings, the doctrines of the three vehicles, as well as how and when to express them to sentient beings.

### *Three Unshared Awakening Activities*

13. Imbued with wisdom, the Buddha's bodily actions are always done to benefit others. He emanates diverse bodies that appear wherever sentient beings have the karma to be led on the path to awakening. Whatever *physical actions* the Buddha does — standing, lying, sitting, walking — automatically have a positive effect on sentient beings and subdue their minds.

14. Knowing the dispositions and interests of each sentient being, he teaches the Dharma in a manner appropriate for that person. His *speech* flows smoothly, is accurate, and lovely to hear. It does not deceive or lead others astray, but is clear, wise, and kind.

15. Filled with undeclining love and compassion, his *mind* encompasses all beings with the intention to do only what is of the highest benefit. He effortlessly and continuously cognizes all phenomena.

### *Three Unshared Pristine Wisdoms*

Without obscuration or error, the Buddha's wisdom simultaneously knows everything in the (16–18) *past, future, and present*. His knowledge of the future does not mean that things are predetermined. Rather, the Buddha knows that if a

sentient being does a particular action, a particular result will follow, and if another course of action is taken, a different result will come. He knows all buddha fields and realms of sentient beings as well as all beings and their activities in them.

Two further excerpts from the *Questions of King Dhāraṇīśvara Sūtra* illustrate how the Buddha's qualities surpass those of bodhisattvas, śrāvaka learners, and arhats.<sup>19</sup>

There, the Tathāgata's knowledge of the exhaustion of pollutions (*āsrava*, *āsava*) is completely purified, stainless, totally pure, clear light; all elaborations due to latencies are well destroyed. Śrāvakas' exhaustion of pollutants is measurable and the latencies are not well destroyed. Solitary realizers' exhaustion of pollutants is measurable; devoid of great compassion, they are devoid of courage. The Tathāgata's exhaustion of pollutants is endowed with the best of all aspects: all elaborations due to latencies are well destroyed. [The Tathāgata is] always upheld by great compassion, fearless, not devoid of courage, not outshone by all the worlds, endowed with one instant of mind. Why? The Tathāgata has no latencies of karma, no latencies of afflictions, no latencies of faulty behavior.

And

It is like this: For example, the sky is totally pure by nature, not abiding together with dust and smoke. Likewise, the Tathāgata's knowledge of the exhaustion of pollutants does not abide together with the latencies of karma and afflictions. Immediately upon thoroughly abiding in such exhaustion of pollutants, he teaches the Dharma in order for sentient beings with pollutants and with appropriation to exhaust the pollutants and abandon appropriation.

Saying, "O sentient beings, arisen from constantly conceptualizing the imperfect, you should realize individually just exactly as they are the pollutants and appropriations," the Tathāgata teaches the Dharma to them with examples that set out this and that [so that] they will, by all means, thoroughly know just exactly as they are the pollutants as imperfect, and having thoroughly

known, by not appropriating any phenomena whatsoever, will also totally pass beyond sorrow.

While ārya śrāvakas may have some of the above qualities, they are not motivated to attain all of them and do not use them to benefit others in the same way ārya bodhisattvas do. For example, bodhisattvas employ the first three of the eight liberations not to unify the mind in samādhi but to develop skill in making emanations, an ability that is crucial to benefit sentient beings. Some śrāvakas develop this ability, others do not. Similarly, although all ārya bodhisattvas cultivate the ability to remember previous lives and know the passing away and rebirth of all sentient beings — a skill necessary to benefit sentient beings most effectively — only some śrāvakas do.

These sūtra passages give us an idea of the Buddha’s magnificent qualities. Contemplating them brings joy in our hearts and expands our mental horizons. It enhances our respect and admiration for the awakened ones as well as for the bodhisattva path they practiced that enabled them to gain those abilities. Furthermore, recollection of the Awakened One’s excellent qualities inspires us to follow the same path he did so that we can provide sentient beings with the same support and relief from duḥkha that he did.

## *Qualities of the Buddha’s Body, Speech, and Mind*

Tsongkhapa praises the Buddha (LC 1:32):

I bow my head to the chief of the Śākyas,  
whose body was formed by ten million perfect virtues,  
whose speech fulfills the hopes of limitless beings,  
whose mind sees precisely all knowable objects.

Śākyamuni Buddha did not come into being independent of causes and conditions; his body was formed by a vast array of perfect virtues. He was once an ordinary being like us, but through enthusiastically and diligently creating the myriad causes for awakening, he attained full awakening. Because the path to buddhahood involves a causal process and because we have the basic “raw material” of the buddha nature, we too can create the causes to become buddhas.

Buddhas are able to manifest an infinite number of emanations simultaneously. Appearing in whatever form is most suitable to communicate with specific sentient beings, they appear throughout the universe wherever sentient beings have created the karma to be receptive to their awakening influence. Although these emanations appear to be ordinary people, their bodies are not made of atoms. A buddha's emanation body is pleasing to look at but does not generate attachment in the viewer. In the case of a supreme emanation body such as Śākyamuni Buddha, it has the thirty-two signs and eighty marks of a great person, which include the crown protrusion and the impression of a thousand-spoke Dharma wheel on the palms of the hands and soles of the feet. Each of these signs is the result of having practiced specific virtuous deeds. In the Sanskrit tradition, the signs and marks and their causes are detailed in the Perfection of Wisdom sūtras, Nāgārjuna's *Precious Garland* (176–97), and Maitreya's *Ornament of Clear Realizations* (*Abhisamayālamkāra*). The thirty-two signs are spoken of in the Pāli *Sutta of the Marks* (*Lakkhana Sutta*, SN 30) and the *Brahmāyu Sutta* (MN 91); the eighty marks are mentioned in Pāli commentarial literature.

The principal way in which buddhas benefit sentient beings is by teaching the Dharma — giving us the tools to create the causes for our own well-being and awakening. In that way, their speech fulfills the hopes of limitless beings — both our temporal and ultimate aspirations and welfare. Being aware of this, we should take every opportunity possible to listen to, reflect, and meditate on the Awakened One's teachings.

The *Sūtra Revealing the Inconceivable Secret of the Tathāgata* (*Tathāgata-cintya-guhyanirdeśa Sūtra*) and commentaries to the *Ornament of Mahāyāna Sūtras* (*Mahāyāna-sūtrālamkāra*) speak of sixty or more magnificent qualities of buddhas' speech through which they guide sentient beings to fortunate rebirths, liberation, and full awakening. When a buddha speaks, each person understands exactly what is most helpful for him or her to hear at that time. For one person, the teaching is about impermanence, for another it concerns emptiness, and for a third it teaches compassion. A buddha's voice is melodious and brings harmony and peace to the minds of the listeners. Never harsh or cruel, a buddha's words are always inspiring; they reinforce and enhance our ability to integrate the Dharma and eliminate our doubts. Like a lion's roar, a buddha's speech conquers extremist views; like the bellow of an elephant, it makes the Dharma known without

hesitation; like Brahmā's melodious voice, sentient beings can listen to it without becoming weary. When someone's mind is ready, no matter where she is or what circumstances she is in, a buddha's speech will ripen her mind, stimulating her to gain understanding and realizations.

The Buddha's mind directly and simultaneously knows all existents — ultimate truths and conventional truths — without discord. No sentient being has this ability. The Buddha's omniscient mind has two aspects: from the perspective of it seeing emptiness, it is called the “pristine wisdom knowing things as they are”; from the perspective of it perceiving the entire diversity and variety of phenomena, it is called the “wisdom knowing the varieties.”

## REFLECTION

---

Sometimes the descriptions of the Buddha's qualities are so magnificent that they seem incomprehensible to us. Try this practical way to get an idea of what it would be like to be a buddha:

1. Imagine that all your anger, resentment, and spite are gone forever, not because they are repressed but because their seeds are no longer in your mindstream. No matter how other people treat you or speak to you, your mind remains calm and your only thought is for that person's well-being.
  2. Imagine that all attachment, emotional neediness, craving, and clinging no longer exist in your mindstream because the potential for them to be there has been eliminated. You live without frustration, moodiness, and disappointment.
  3. Imagine having every good quality that you admire: impartial love and compassion, generosity free from even the trace of stinginess or fear, and stable fortitude that enables you to remain calm no matter what you encounter.
  4. Feel admiration and reverence for those holy beings who have such qualities and be confident that you can create the causes to have them too.
- 

### *The Buddha as a Reliable Guide*

To commence the *Compendium of Reliable Cognition* (*Pramāṇasamuccaya*), Dignāga (480–540) pays homage to the Buddha:

I bow to the one who has become a reliable [guide], [starting out] intent on benefiting migrating beings, [followed by generating the wisdom that] serves as the way, [then reaching the state of] the One Gone to Bliss, [and finally emerging as] the Protector.

Commenting on this, Dharmakīrti (600–60) says in chapter 2 of *Commentary on the “Compendium of Reliable Cognition”* (*Pramāṇavārttika*):

Out of compassion he states what is best [for the listener], and through his pristine wisdom he says what is true. Since he is intent upon stating that which is best and true along with the means to realize it, he is reliable. He is praised as reliable in that his teaching is of that kind, and the purpose of praising him in that fashion is to establish the nature of what is reliable through that teaching.

The Buddha is one who has transformed himself into a reliable being. Saying that he “has *become* a reliable guide” indicates that the Buddha is not an absolute or independently existing being who has possessed magnificent qualities from the beginning. Rather, he cultivated a compassionate intention and the wisdom realizing selflessness and stabilized them in his mind over a long period of time. In this way, he abandoned all defilements, developed all excellent qualities, and is capable of teaching others what to practice and abandon on the path through his own experience. By following the same path, we can do the same.

Why do we want to establish the Buddha as a reliable guide? If we are Buddhist practitioners who seek liberation and awakening, we need to know what to practice and what to abandon to reach our spiritual goals. We don’t know this on our own and need a teacher, and it is imperative that this teacher be unmistakable. If we follow an unreliable teacher who imparts fallacious teachings, we risk confusing virtue and nonvirtue, and as a result falling to an unfortunate rebirth. For this reason, we want to establish that the Buddha is an authoritative guide who teaches the unmistakable path.

Each of the reasons in Dignāga’s praise illustrates why the Buddha is reliable: (1) Because he started out intent on benefiting migrating beings, (2) he strove to gain the true path, the wisdom realizing selflessness. (3) This wisdom led him to attain the state of the One Gone to Bliss (*Sugata*) who has perfect abandonments and realizations, and (4) in that way he became a reliable and trustworthy

Protector-Guide who teaches the four truths from his own experience. Each of these attributes builds on the previous one, culminating in the Buddha being a reliable spiritual guide for those seeking temporal happiness in saṃsāra and the highest goodness of liberation and full awakening.

These attributes are expressed in a series of syllogisms, as was the tradition in ancient India.<sup>20</sup> They show how the person of the previous mental continuum of the Buddha successively gained realizations, attained awakening, and became a reliable guide. That is, before Śākyamuni became the Buddha, he had beginningless previous lifetimes during which he was many different beings — a deer, a monarch, and so forth. The first syllogism of the forward order speaks about the bodhisattva he was in a previous life who had just generated uncontrived bodhicitta; it shows why he was capable of generating the wisdom directly realizing selflessness. The second syllogism speaks of the person that the Buddha was in a previous life when he was on the bodhisattva path of seeing and shows why that person was suitable to become the Sugata.

The syllogisms are presented in a forward and a reverse order.

### *Forward Order*

The forward order follows the sequence in the verse of homage. The Buddha being a reliable or authoritative guide is what is to be proven, and one intent on benefiting migrators, the Teacher, the Sugata, and the Protector are the reasons that establish this. Of these four, the one intent on benefiting migrators and the Teacher are excellent causes that lead to the excellent results of the Sugata and Protector.

1. Consider the person of the same mental continuum as the Buddha, who has just attained the bodhisattva path of accumulation: he is suitable to give rise to the Teacher — that is, the wisdom realizing selflessness — because he is an ordinary bodhisattva endowed with great compassion.

We can understand that this person had great compassion by reading stories in the scriptures that relate his practice as a bodhisattva in previous lifetimes. By familiarizing himself with contrived compassion, this person is able to gain uncontrived compassion because compassion is a mental quality that can continue to increase and become stable with repeated practice. Motivated by great compassion he is unwaveringly *intent on benefiting migrating beings* who

wander from one saṃsāric realm to another under the control of afflictions and karma; he is totally dedicated to working for their welfare.

Seeing sentient beings repeatedly tormented by duḥkha and totally ignorant of the correct means to escape from this desperate situation, he seeks and finds the liberating path and cultivates the *wisdom directly realizing selflessness* — the pristine wisdom that enables him to gradually eradicate all defilements from his mental continuum. In this way, he surpasses practitioners who habituate themselves with erroneous philosophies and whose meditation only reinforces self-grasping.

As a sharp-faculty disciple, he had inferentially realized selflessness before generating the compassionate intention. Now his wisdom, which is conjoined with bodhicitta, directly realizes selflessness. This wisdom is now called “the Teacher” in the sense that it paves the way for him to become a teacher. This is so because based on his own experience of directly knowing selflessness, he is capable of leading or “teaching” himself the method to generate the path to awakening in his mindstream, thus fulfilling the goal of his compassion. For this reason, the phrase “the wisdom that serves as the way” in Dignāga’s verse is translated as “the Teacher” in Tibetan. This is a case of giving the name of the result (Teacher) to the cause (the wisdom realizing emptiness) because this wisdom enables him to proceed on the path to becoming a Teacher.

2. Consider the person in the same continuum as the Buddha, who is on the liberated path of the bodhisattva’s path of seeing: he is suitable to give rise to the Sugata whose abandonments have three distinctive features, because he is a bodhisattva who has directly realized selflessness and is familiarizing his mind with this realization.

Having familiarized himself with bodhicitta and wisdom for a long time and by directly realizing the complementary nature of subtle dependent arising and emptiness, he is well poised to abandon all obscurations and realize all good qualities and knowledge. He will reach the culmination of the spiritual path and become the Sugata, the One Gone to Bliss — the one who understands well (*su*) and goes to the ultimate peace of nonabiding nirvāṇa (*gata*), at which time his qualities of abandonment (true cessations) will have three special features.

The three distinctive features of the Sugata’s abandonments are excellent, irreversible, and complete. (a) *Excellent abandonment* indicates that unlike non-Buddhists, he has abandoned all afflictions. (b) *Irreversible abandonment* means

that these afflictions have been abandoned in such a way that they will never return. This distinguishes him from śrāvaka āryas, such as stream-enterers and so forth, who are still reborn in saṃsāra due to afflictions and karma. (c) *Complete abandonment* shows that all cognitive obscurations have been abandoned, distinguishing the Sugata from śrāvaka arhats who still have those obscurations.

3. Consider the Ārya Buddha in the same continuum as the bodhisattva at the end of his continuum as a sentient being, who has just attained the first moment of omniscience: he is suitable to be the Protector, who perfectly works for the welfare of others and protects sentient beings by teaching them the four truths, because he is a being who has discovered the Sugata whose abandonments have three distinctive features.

As one who has accomplished the entire path, he is fully capable of protecting sentient beings from cyclic existence. He does this by teaching us the path of the four truths and the method to actualize nirvāṇa based on his own experience and insight. Being fully perfected himself, the Buddha does not need to depend on other teachers. He is not lackadaisical, but spontaneously reaches out and connects with sentient beings in all possible ways.

4. Consider the Sage, the Buddha: he is proven to be an authoritative, reliable being for those who seek liberation because he is a being with the Protector, the perfect welfare of others, in his continuum.

Having eradicated all afflictions, the Buddha could have remained in personal nirvāṇa, but due to his compassion, he chose to teach and guide us. Because the Buddha is one who progressed by means of perfecting the above four attributes, he is a reliable, trustworthy, and nondeceptive spiritual guide. Not seeking wealth, fame, or service, his motivation is pure. His wisdom is unobstructed and he has no reason to lie. For these reasons, we can trust his teachings. Knowing this increases our confidence in the Buddha, Dharma, and Saṅgha and eliminates doubts about the viability of the path the Buddha set forth.

All four attributes are necessary to be a perfectly trustworthy guide who teaches a complete path. Imagine someone who has great compassion but lacks the wisdom to free himself from cyclic existence. Consider someone who has realized the ultimate nature but lacks great compassion and enthusiasm to guide others. Imagine if someone's realizations were not complete, yet he tried to guide us. Because the Buddha has great compassion and the wisdom realizing selflessness and his abandonments are complete, those of us who wish to free

ourselves from saṃsāra can rely on him. We will not be disappointed and will not be led astray.

### *Reverse Order*

The reasoning of one nature is used in the forward order by showing that he (the subject of each syllogism) has the nature of being suitable to advance to the next level. Causal reasoning is used in the reverse order in that he (the subject of each syllogism) is preceded by his cause.

1. Consider the Buddha (who is a reliable guide): he was preceded by the Protector, the perfect welfare of others that was his cause, because he is a being who is a consummate guide who unerringly teaches what to adopt and what to abandon in the four truths to those seeking liberation and awakening.

As we learn and practice the four truths, we gain more conviction in the Buddha as an unmistakable and reliable guide. Although we ordinary beings are not yet able to know the sixteen aspects of the four truths by direct experience — one must be an ārya to do that — we can validate the Buddha's explanation of them by employing reasoning. Because he is an authoritative, trustworthy guide on the path who unerringly teaches the four truths with their sixteen aspects, we know the Buddha must have become that by being a Protector.

2. Consider the Buddha: he was preceded by the perfect realization, which has three distinctive features (of a Sugata) that was his cause, because he is a consummate being in possession of the Protector, the perfect welfare of others.

Because he is the Protector who teaches what to practice and what to abandon on the path, the Buddha is also the Sugata who has impeccable realizations with three distinctive qualities: (a) *Excellent realization* — unlike non-Buddhists, he has realized the ultimate nature of reality. (b) *Irreversible or stable realizations* that never decline, unlike those of śrāvaka āryas on the paths of seeing or meditation. (c) *Complete realizations* — unlike śrāvaka arhats, he is omniscient and has realized all knowable objects and knows the methods to do so.

3. Consider the Ārya Buddha in the first moment of omniscience, who belongs to the same continuum as the Buddha: he was preceded by the wisdom that directly realizes selflessness (Teacher) that was his cause, because he is a being

who has discovered the Sugata that has the three distinctive features of realization.

The Buddha became the Sugata by accomplishing the two principal causes: the wisdom realizing selflessness and great compassion that is intent on benefiting migrating beings. Wisdom, which is called “the Teacher,” is identified because the sharpening of this wisdom is what enabled him to go from being an ordinary being to become a Sugata.

4. Consider the person in the same continuum as the Buddha, who is on the uninterrupted path of the bodhisattva’s path of seeing: he was preceded by the great love and great compassion that are his causes, because he is a bodhisattva who has directly realized selflessness.

The person in the same continuum as the Buddha who had attained the wisdom that directly realized selflessness did so propelled by the motivation of great compassion that was intent on alleviating the duḥkha of each and every sentient being and working for their benefit.

I find it inspiring to contemplate the Buddha’s qualities and reflect on the joyous effort motivated by compassion that he put forth to become a reliable guide for us. It also gives me a vision of what we can do in our lives to become reliable guides for others in the future.

Mātṛceṭa, a first-century Indian sage and poet, converted to Buddhism from Hinduism after being defeated in a debate by Āryadeva. At that time, he wrote the *Hymn to the Buddha* (*Śatapañcāśatka*), a stunning book praising the Buddha’s qualities. Mātṛceṭa pays homage to the Buddha by way of the causes he created to attain awakening and his incomparability to other sages and teachers — his body, speech, compassion, teachings, benefits, and so on — all of which point to the Buddha’s being a reliable guide. Praising the causes of the Buddha’s awakening, Mātṛceṭa says:

Having brushed aside doubts  
about whether or not it could be done,  
of your own free will  
you took this helpless world under your protection.

You were kind without being asked,  
you were loving without reason,

you were a friend to the stranger  
and a kinsman to those without kin.

Praising his incomparability, Mātṛceṭa says:

By not envying the superior,  
despising the inferior,  
or competing with equals,  
you attained preeminence in the world.

You were devoted to virtues for their own sake,  
not for the rewards that come from them.  
Thus due to your right progress,  
they have all come to completion within you.

These verses and others like them are helpful to read when contemplating the recollection of the Buddha.

The Buddha encouraged us not to rely on him or his teachings simply because others honor him and follow his doctrine. To the contrary, he encouraged people to practice the teachings and attain the same realizations and awakening he has. When they do, the Buddha said (MN 27):

It is at this point that an ariya disciple comes to the conclusion:  
“The Blessed One is fully awakened, the Dhamma is well-  
proclaimed by the Blessed One, the Saṅgha is practicing the good  
way.”

## *Recollection of the Buddha, Dharma, and Saṅgha*

A practice common to the Pāli and Sanskrit traditions is the six recollections — the recollection of Buddha, Dharma, Saṅgha, generosity, virtue, and deities.<sup>21</sup> The term “recollection” (*anusmṛti*, *anussati*) is a prefixed form of the word mindfulness (*smṛti*, *sati*). The Buddha instructed us to approach the recollections of the Buddha, Dharma, and Saṅgha with faith, effort, mindfulness, concentration, and wisdom, qualities that comprise the five faculties and five

powers found among the thirty-seven harmonies with awakening. In the Sanskrit tradition, this recollection is found in the *Sūtra Recollecting the Ārya Three Jewels* (*Ārya-ratnatraya-anusmṛti Sūtra*).<sup>22</sup> Here we will explain the shorter, commonly recited “Homage to the Three Jewels” from the *Mahānāma Sutta* (AN 6.10) in the Pāli canon.

The meaning of these verses is common to all Buddhist traditions. The explanation below generally follows Buddhaghosa’s *Path of Purification* (Vism 6:2–100), with elements added from the Sanskrit tradition.

### *Recollection of the Buddha*

The Pāli homage that recollects the Buddha reads (AN 6.10.1):

The Bhagavān is an arahant, completely and perfectly awakened, accomplished in higher knowledge and conduct, one gone to bliss, knower of the world, supreme guide of beings to be tamed, teacher of devas and humans, the Buddha, the Bhagavān.

It is almost identical to the homage in the Sanskrit tradition that, translated from Tibetan, reads:

To the Teacher, Bhagavān, Tathāgata, arhat, completely and perfectly awakened one, perfect in knowledge and good conduct, one gone to bliss, knower of the world, supreme guide of beings to be tamed, teacher of devas and humans, to you the Buddha, Bhagavān, glorious victor Śākyamuni, I prostrate, make offerings, and go for refuge.

Understanding each epithet of the Buddha reveals rich meanings.

*Teacher.* The Buddha taught the Dharma of the three vehicles according to the interests and dispositions of various disciples in order to gradually lead all sentient beings to full awakening.

*Bhagavān.* All ancient Indian traditions referred to their most exalted person as Bhagavān (Blessed One or World-Honored One). It signifies the respect and veneration given to one who is distinguished by special qualities as the highest of all beings. *Bhaga* indicates fortune, share, or possession. He is the one honored as

the highest of all beings in the world due to possessing marvelous qualities. *Bhaga* also means “destroyed” — he has destroyed all defilements and the three poisons of attachment, animosity, and ignorance.

In the Tibetan translation of Bhagavān (*bcom ldan 'das*), *bcom* means to destroy — he has destroyed the four Māras of the polluted aggregates, afflictions, death, and the son of the gods;<sup>23</sup> *ldan* means endowed — he is endowed with the four bodies of a buddha and the five pristine wisdoms; *'das* means beyond — he has transcended both saṃsāra and an arhat’s personal nirvāṇa.

*Tathāgata* (One Thus Gone, One Thus Come). “Tathāgata” also predates the Buddha and indicates a perfectly accomplished and realized person. The Buddha refers to himself as a fully awakened one, a tathāgata.

Buddhaghosa explained “Tathāgata” in eight ways, and Dhammapāla added even more explication. As mentioned above, the Buddha has gone thus to nirvāṇa in the same way that all liberated ones of the past have gone, by practicing the thirty-seven harmonies with awakening. He has come thus to buddhahood just as all the buddhas of the past have come, by fulfilling the ten perfections. By working for the benefit of the world, all tathāgatas thus have come to buddhahood. They convey the teaching of the deathless, to which they have gone by their own practice.

The Mahāyāna also explains the Tathāgata as one who has gone to the direct perception of all phenomena as well as their thusness (*tathatā*) or emptiness. He knows everything thus — as it is — and everything is just as he has said it to be. Chinese scriptures add that the Buddha came from thusness or emptiness.

*Arhat* was another term used in various ancient Indian traditions. As with Bhagavān and Tathāgata, the Buddha adopted this word and gave it a specific meaning according to his doctrine. “Arhat” has several meanings: (1) foe destroyer, because of having destroyed all afflictions and pollutants; (2) accomplished one, because of being liberated from saṃsāra; and (3) worthy one, because of being worthy of offerings and respect because he has destroyed all defilements and is free from saṃsāra. “Arhat” is not a term restricted to the Buddha but applies to all those who have destroyed the afflictions and are liberated from saṃsāra.

*Completely and Perfectly Awakened One* (*Samyaksambuddha*, *Sammāsambuddha*). The Buddha has awakened from the sleep of ignorance and awakens others as well. He comprehends completely and perfectly all

phenomena, especially the inner workings of the mind and the paths to liberation and awakening and their resultant states. As one who has completed the path, he possesses the ten powers of a buddha, the four fearlessnesses, and many other magnificent powers. His ability to explain the Dharma in a way that is easily understood by whatever audience he speaks to is indicative of his great knowledge and skill.

Whereas the early Pāli commentaries were more modest when speaking of the Buddha's knowledge, the second-century BCE commentary *Paṭisambhidāmagga* elaborated on seventy-two types of knowledge related to the Buddha's awakening, including omniscient and unobstructed knowledge of all phenomena — past, present, and future.

In general, the Pāli tradition considers the Buddha to be all-knowing, whereas the Sanskrit tradition considers him omniscient. In a Pāli sūtra (MN 71), the wanderer Vacchagotta directly asked the Buddha if he is omniscient such that whether he is walking, standing, sleeping, or awake “knowledge and vision are continuously and uninterruptedly present to him.” The Buddha denied this and replied that he has the three higher knowledges: recollection of previous lives, knowledge of the death and rebirth of all sentient beings, and knowledge of the destruction of all pollutants together with full understanding of the four truths.

In another sūtra, the Buddha says (AN 4.23):

In the world . . . whatever is seen, heard, sensed, and cognized, attained, searched into, pondered over by the mind — all that is fully understood by the Tathāgata . . . By comprehending all the world, all in the world just as it is, from all the world he is released: in all the world he clings to nothing.

Many Pāli commentators understand these passages to mean that although the Buddha knows all that is, everything does not appear to his mind simultaneously and continuously at all times.<sup>24</sup> Rather, all knowledge is available to him, but he must turn his mind to that topic. When he does, it will effortlessly appear because his mind is free from obstructions.

According to the Mahāyāna, the Buddha is fully omniscient; every existent — both veiled and ultimate truths — appears to his mind at all times. He comprehends all phenomena without mistake, as they actually are. The Buddha is

completely and perfectly awakened because he has completed all qualities of body, speech, and mind perfectly, precisely as they should be. He has attained nonabiding nirvāṇa, abiding neither in saṃsāra nor in the personal peace of an arhat.

*Perfect in Knowledge and Good Conduct (Vidyā-caraṇa-saṃpanna, Vijjā-caraṇa-saṃpanna).* The Buddha is perfect in knowledge because he possesses the three higher knowledges, and he is perfect in good conduct because he lives with pure ethical conduct and has restrained his senses and is moderate in eating, drinking, sleeping, and so forth. He has also perfected all the various meditative absorptions. He is able to enter and arise from each of them easily and quickly and can train others to do the same. The Buddha is endowed with knowledge — the higher training in wisdom — and its foundation — the higher trainings in ethical conduct and concentration. Alternatively, “knowledge” refers to the Buddha’s wisdom and “good conduct” to his great compassion. With wisdom he knows all that is beneficial and harmful for sentient beings, and with compassion he acts to lead them away from harm and toward all that is beneficial and liberating.

*One Gone to Bliss (Sugata).* The Buddha is one gone to bliss because he has (1) gone along the sublime eightfold path, and (2) gone to the sublime state, the deathless state, nirvāṇa. As with several of the other epithets, this one was used by other spiritual groups as well.

According to the Sanskrit tradition, the one gone to bliss has two qualities: the realization of unpolled wisdom and the complete abandonment of all objects to be abandoned. He has gone to bliss because he has reached the sublime state of nonabiding nirvāṇa and will never regress.

*Knower of the World (Loka-vid, Loka-vidu).* The Buddha knows the world in multiple ways. (1) He knows the conditioned world (*saṃskāraloka, saṅkhāraloka*) composed of the five aggregates, six sources, and eighteen constituents. He fully understands that the world is simply a collection of constantly changing conditioned phenomena, arising and ceasing in each moment without the involvement of a self, external deity, or permanent substance. He fully understands the twelve links — the process by which sentient beings enter cyclic existence — as well as the way to reverse this and attain liberation. (2) The Buddha knows the world of beings — each individual’s disposition and interests, those who act well and those who don’t, those of sharp faculties and those with

modest faculties. (3) The Buddha knows the universe and the world systems existing in infinite space and time and can describe their dimensions and characteristics.

The epithets above describe the Buddha's personal realizations and attainments that establish him as fully awakened. The epithets below establish him as an excellent spiritual teacher and guide. Combining these, we see the Buddha has fulfilled his own purpose by attaining all realizations and abandoning all that is to be abandoned, and he has fulfilled others' purposes by being a spiritual teacher and leading sentient beings on the path to temporal and ultimate happiness.

*Supreme Guide of Beings to Be Tamed* (*Anuttara-puruṣa-damyā-sārathī*, *Anuttaro puriṣa-damma-sārathī*). Able to lead everyone to liberation, including those who have committed great destructive karma, the Buddha is the unsurpassed guide of all those whose minds are to be subdued. He guided to liberation Aṅgulimāla, who murdered 999 people, and by meditating on love he subdued the mad elephant that his cousin Devadatta unleashed to kill him.

Just as the driver of a cart guides the oxen, the Buddha guides those sentient beings capable of realizing the ārya path to that path. He restrains those who have acted contrary to the Dharma, steers those who have strayed to a wrong path back to the right one, and prods the lazy. As for those unruly ones whose karma is not right for them to encounter the path at this moment, he leaves them undisturbed.

*Teacher of Devas and Humans* (*śāstā deva-manuṣyāṇaṃ*, *Satthā devamanussānaṃ*). While the Buddha teaches all sentient beings, devas and humans are his main disciples because their inner and outer conditions are more suitable for practicing the path. The sūtras tell of the Buddha teaching devas who visited his vihāra (monastic residence) in the middle of the night and of the Buddha visiting the Brahmā realm to teach the devas there.

*Buddha*. The Tibetan word for buddha is *sangye*. *Sangs* indicates the Buddha has awakened from the sleep of afflictions, and *rgyas* indicates he is omniscient, having expanded his awareness to all knowable objects.

*Glorious* (*śrī*). The Buddha is glorious because he is endowed with the perfection of high rebirth and highest goodness. In general, "high rebirth" refers to a fortunate rebirth, but since the Buddha is no longer subject to rebirth, this indicates he is capable of showing others how to create the causes for fortunate

rebirths. “Highest goodness” indicates that he has attained full awakening and leads others to liberation and awakening as well.

*Victor (Jina)*. The Buddha is victorious over the afflictive obscurations, the cognitive obscurations, and the four Māras.

*Śākyamuni*. The Buddha was born in the Śākya clan and is the Capable One or Sage (Muni) because he is capable of subduing the two obscurations.

These epithets give us much to contemplate by illustrating the Buddha’s qualities and the reasons he is a reliable object of refuge. They provide insight into the Dharma he practiced that enabled him to attain those qualities, and the realizations the Saṅgha actualize as they follow the same path. Inspired to practice the path, we feel grateful that the Buddha has shared the precious Dharma methods with us.

Recollection of the Buddha can soothe our hearts in times of physical, mental, or spiritual duress. Tsongkhapa reflects (PDA 44–45):

Here too, as I reflect on your [the Buddha’s] words, I think,  
“Blazing with the glory of noble signs  
and hallowed in a net of light rays,  
this teacher, in a voice of pristine melody,  
spoke thus in such a way.”  
The instant such a reflection of the Sage’s form  
appears in my mind it soothes me,  
just as the moon-rays heal fever’s pains.

## REFLECTION

---

1. Imagine the Buddha in the space in front of you and recollect the qualities mentioned in the epithets.
  2. Reflect on other qualities of the Buddha, such as the four types of self-confidence, the ten powers, and the eighteen unique qualities.
  3. Let the feeling of trust in the Buddha arise and, with faith in his ability to guide you to awakening, take refuge in him. You may recite a verse or put it in your own words.
-

## *Recollection of the Dharma*

The Dhamma well-expounded by the Bhagavān,  
to be seen here and now, immediate,  
inviting one to come and see, applicable,  
to be personally experienced by the wise.

The verse of recollection of the Dharma (AN 6.10.2) points out several of its magnificent qualities.

*Well-expounded.* Unlike the other qualities of the Dharma that pertain only to the transcendental Dharma (true path and true cessation), “well-expounded” applies to the scriptures as well. The transmitted Dharma is well-expounded because it is good in the beginning, middle, and end. A scripture’s introduction describes the circumstances in which it was taught, its body has a clear meaning that is explained using reason and examples, and its conclusion culminates by generating faith in those who hear or study it. All aspects of the teachings show us how to live a life of purity and purpose. In addition, the Dharma wisely instructs us to begin by practicing ethical conduct, to practice serenity (*śamatha*, *samatha*) and insight (*vipaśyanā*, *vipassanā*) in the middle, and at the end to attain nirvāṇa.

The Dharma is pure in its meaning and detail. It is pure in meaning because its intention is profound — to help us cross the ocean of saṃsāra — and it is pure in detail because its words are clear. There is nothing that needs to be added or removed to improve the Dharma. Whereas other spiritual traditions do not correctly identify the obscurations to be abandoned, the Buddhadharma explains this correctly and without distortion. Because the Dharma is accurate in all respects, practicing it will lead us to realize nirvāṇa.

The supramundane Dharma consists of the four śrāvaka paths and the four fruits of those paths, the bodhisattvas’ paths and grounds, and nirvāṇa. This Dharma is the middle way between asceticism and self-indulgence and between absolutism and nihilism. It is the ultimate refuge, true peace. Can anything better than this ever be expounded?

*To be seen here and now.* The ārya paths and nirvāṇa can be experienced here and now by abandoning obscurations. Those who have actualized the ārya paths do not obsess over their own or others’ afflictions or the objects of affliction, and

thus they do not experience mental misery. Those who have realized the Dharma are sure of their knowledge and do not need to blindly believe another person in order to know what they have already realized directly. Based on the correct view, the Dharma is worthwhile to learn because it frees us from the fears and dangers of saṃsāra.

*Immediate.* The supramundane Dharma bears immediate results. The uninterrupted paths that overcome a portion of afflictions last one moment and are immediately followed by the liberated paths that are free from those afflictions.

*Inviting one to come and see.* This is the famous Pāli phrase *ehipassa-vidhi* (P. *ehipassika*) with which the Buddha invites us to “come and see this Dharma.” He asks us to investigate and test the Dharma and to experience it for ourselves. This Dharma invites verification, and we are encouraged to verify it for ourselves through intelligent analysis and by applying it to our lives and experiencing the Dharma ourselves. Unlike a deceptive person whose purse is empty but says, “I have money,” and unlike a person who thinks a fool will buy his container of rubbish, the Buddha encourages us to inspect and engage with his teachings and discover their purity for ourselves.

*Applicable.* The uninterrupted and liberated paths lead to nirvāṇa, which then becomes our shelter and true refuge.

*To be personally experienced by the wise.* We should not take the Dharma on blind faith, but must learn and practice it ourselves. We cannot hire someone else to do this for us or hope that when our friend attains nirvāṇa, it will magically rub off on us too. The ārya paths cannot be known with our five senses; they are known only by our mind. The Dharma is the province of the wise; the foolish who are distracted with the seeming pleasures of cyclic existence cannot fathom, let alone come close to it. However, if we understand and practice the Dharma correctly, it will lead us to its stated results.

### *Recollection of the Saṅgha*

The Saṅgha of the Bhagavān’s disciples is practicing the good way,  
the Saṅgha of the Bhagavān’s disciples is practicing the straight way,  
the Saṅgha of the Bhagavān’s disciples is practicing the true way,  
the Saṅgha of the Bhagavān’s disciples is practicing the proper way;

that is, the four pairs of persons, the eight types of individuals,  
the Saṅgha of the Bhagavān's disciples,  
is worthy of gifts, is worthy of hospitality,  
is worthy of offerings, is worthy of respect,  
is the unsurpassed field of merit for the world.

Recollection of the Saṅgha (AN 6.10.3) involves reflecting on the qualities of the community of disciples. They are a community because they practice a common ethical code and share the same view. This community practices the good, straight, true, and proper way. Those following the Śrāvaka Vehicle form four pairs: those who have attained the path and fruit of stream-enterer, once-returner, nonreturner, and arhat. The Saṅgha also includes ārya bodhisattvas and buddhas.

*Practicing the good way.* The āryas have gained their realizations by practicing the correct way that accords with how things are and that leads irreversibly to nirvāṇa. The Saṅgha practices the Dharma and the Vinaya, and thus not only actualizes these themselves but also preserves them for future generations.

*Practicing the straight way.* By following the middle way, free from the two extremes, the Saṅgha practices in a straightforward way without being crooked or off track.

*Practicing the true way.* The Saṅgha's aim is nirvāṇa, which is true and nondeceptive.

*Practicing the proper way.* The Saṅgha's practice follows the footsteps of those who are worthy of veneration.

*Is worthy of hospitality.* Since the ārya Saṅgha practices properly, Saṅgha members are worthy to receive gifts of the four requisites — food, clothing, shelter, and medicine — so they can continue their practice. These gifts bear auspicious fruit for the donors due to the virtue and pure practice of the recipients.

*Is worthy of offerings.* Offerings given to the Saṅgha bear good results for the donor. This is not “spiritual business” — we should not give offerings to the Saṅgha only to receive merit in return. Rather, our offerings are expressions of our heartfelt rejoicing in the practice and spiritual qualities of those who live with pure ethical conduct, generate compassion and bodhicitta, and gain wisdom of the ultimate nature.

*Is worthy of respect.* By respecting the qualities of realized beings, we make ourselves receptive to develop those same wonderful qualities.

*Is the unsurpassed field of merit for the world.* When rice seeds are sown in a fertile field, a munificent crop will result. Similarly, the Saṅgha, with the Buddha as its head, is the supreme field where we can grow a bountiful crop of virtue. This comes through making offerings and venerating them with a joyful, appreciative, and humble attitude.

To meditate on the qualities of the Three Jewels, we recollect those qualities one by one and reflect deeply on the reasons the Three Jewels have them. We contemplate, “For this reason the Buddha is a tathāgata, for this reason, he is an arhat,” and so forth. Many benefits arise from this reflection.

Conclude your meditation session on the qualities of the Three Jewels by reflecting, How fortunate I am to have encountered these precious objects of refuge. I can truly trust their guidance because through having practiced the same instructions they now teach, they realized those noble spiritual qualities and aims. Feel deep trust and confidence in the Three Jewels and let that calm uplift your mind. A discouraged or depressed attitude cannot exist at the same time as the mind inspired by recollecting the qualities of the Three Jewels.

You may also conclude your meditation session by thinking, “How fortunate we are that there are holy beings in this universe with the wise and compassionate qualities of the Three Jewels! By following their guidance and subduing our mind, we will create goodness in ourselves and in the world. Feel hopeful, optimistic, and joyful to do your spiritual practice.”

Another way to conclude your recollection is to reflect, “Just as the Buddha practiced the Dharma, abandoned all defilements, and realized all excellent qualities, I can also do this. He taught the path so that I and others will put the teachings into practice and emulate them by actualizing the same realizations for the benefit of sentient beings. To fulfill the purpose of the Three Jewels and the hopes of suffering sentient beings, I will practice earnestly.”

The Buddha advised his disciples that when fear or terror arose in them — for example, when they lived alone in the forest — they should recollect the Awakened One’s qualities, “For when you recollect me, monastics, whatever fear or trepidation or terror you may have will be abandoned.” If they could not recollect the Buddha, he instructed them to recollect the Dharma, and if that was

not possible, then to recollect the Saṅgha and the same benefits will accrue (SN 11.3).

Many benefits accrue to one who recollects the Three Jewels. The Buddha said (AN 6.10.1):

At that time, the ariya disciple's mind is not obsessed by attachment, animosity, or ignorance; on that occasion his mind is simply straight, based on the Tathāgata (Dhamma, Saṅgha). An ariya disciple whose mind is straight gains inspiration in the meaning, gains inspiration in the Dhamma, gains happiness connected to the Dhamma. When he is happy, joy arises. For one with a joyful mind, the body becomes tranquil. One tranquil in body feels pleasure, for one feeling pleasure, the mind becomes concentrated. This is called an ariya disciple who dwells in balance amid an unbalanced population, who dwells unafflicted amid an afflicted population.

Recollection of the Buddha enables practitioners to suppress the five hindrances that impede serenity. Their mental factors of investigation and analysis are firmly placed on the Buddha's magnificent qualities. As these develop, joy arises. With joy, physical and mental disturbances are pacified, and their bodies and minds become pliant and tranquil. This leads to physical and mental bliss, which in turn produces concentration. Through the arising of these dhyānic factors, practitioners attain access concentration (*P. upacāra samādhi*). This concentration is called "recollection of the Buddha" because that recollection was the means by which it was attained.

Recollection of the Buddha produces marked effects on all aspects of practitioners. They become humble and respect the Buddha. Their faith, mindfulness, wisdom, and merit increase, as do their joy and bliss. Fear and dread no longer plague them, and they can endure pain without difficulty. They feel as if they are in the presence of the Buddha, and their minds seek to develop the Buddha's qualities. They are naturally conscientious, and should the opportunity to act unethically arise, their integrity and consideration for others arise clearly, as if they were in the Buddha's presence. They will definitely have a fortunate rebirth and may continue to practice and develop actual dhyāna and insight. In short, the recollections of the Three Jewels not only deepen our refuge but also strengthen

our commitment and ability to maintain pure ethical conduct and increase our concentration.

Recollection of the Buddha plays an important role in the Sanskrit tradition. The Pure Land practice, popular in East Asia, takes the recollection of the Buddha Amitābha as its principal practice, and through it one cultivates serenity and insight. Tibetan Buddhists often use a visualized image of the Buddha as the object upon which to cultivate serenity, and in Vajrayāna, practitioners not only recollect the Buddha's qualities but also meditate on the Buddha they will become by imagining having those qualities now.

## REFLECTION

---

1. Reflect on the excellent qualities of the Buddha one by one, thinking, the Buddha is the Teacher because . . . (remember the meaning of a Teacher). Do this for each of the Buddha's excellent qualities.
  2. Reflect on the excellent qualities of the Dharma one by one, thinking, the Dharma is well-expounded because . . . (remember the meaning of being well-expounded). Do this for each of the Dharma's excellent qualities.
  3. Reflect on the excellent qualities of the Saṅgha one by one, thinking, the Saṅgha practices in the good way because . . . (remember the meaning of practicing in the good way). Do this for each of the Saṅgha's excellent qualities.
  4. Conclude your reflection by considering your fortune of having encountered the Three Jewels.
- 

## *Distinguishing Features of the Three Jewels*

The Three Jewels harmoniously direct us toward the same spiritual aims. Yet each jewel has its own distinguishing features and a distinct role that it plays in guiding us. Understanding these expands the meaning of taking refuge in them. Asaṅga explains six distinguishing features in his *Compendium of Determinations* (*Viniścaya-samgrahaṇī*).

Someone may ask, "Each of the Three Jewels has so many magnificent qualities. Is it sufficient to take refuge in only one of them?" Taking refuge in all three is important because we relate to each jewel differently, owing to their

differences in defining characteristics, awakening influence, distinct qualities, the way of appreciating them, our practice in relation to them, and our creation of merit in relation to them.

In their *defining characteristics*, the buddhas are those who have abandoned all defects and developed all good qualities limitlessly. They are omniscient and are able to know both ultimate and conventional truths simultaneously. The Dharma Jewel consists of true paths and true cessations, which, when actualized in our mind, are the real protection from duḥkha. The Buddha appeared in our world to teach us how to actualize the Dharma Jewel, and in doing so he fulfilled our wishes. The Saṅgha Jewel consists of āryas who have realized the Dharma and are qualified to guide us so we can do the same. They demonstrate the correct practice and prove the validity and usefulness of the Buddha's teachings.

When it comes to their *awakening influence*, the Buddha teaches us the transmitted Dharma in the most effective manner and instructs us what to practice and abandon on the path. The Dharma Jewel eliminates duḥkha and its causes, the afflictions. The Saṅgha Jewel gives us encouragement, inspiration, and assistance in practicing. Their joy in study and practice invigorates us, and their presence reassures us that we are not alone on the path.

We *recollect the distinct qualities* of each of the Three Jewels: The buddhas are free from ignorance, anger, and attachment; they have supreme wisdom and compassion and know all phenomena as clearly as we see a button in our palm. When practiced correctly, the Dharma brings good results in the beginning, middle, and end. The Saṅgha is on the right path. Being impartial, Saṅgha members are true friends and objects of respect. We can count on their companionship and support on the path.

We show our *appreciation*, respect, and gratitude for each of the Three Jewels in a particular way by making offerings, being of service, respecting the buddhas, putting the Dharma into practice so that it transforms our mind, and practicing together with the Saṅgha and joining in their efforts to make Dharma a healing force in the world.

In terms of our *practice*, the buddhas are the role models we emulate. We prostrate, make offerings, and serve and respect them to create the merit enabling us to attain their excellent qualities. We familiarize ourselves with the Dharma, practicing and meditating on it and integrating it with our body, speech, and

mind. We practice harmoniously together with the Saṅgha, sharing teachings and material goods with them and following their good example.

*We create and increase our merit* in relation to each of the Three Jewels in a distinct manner. We offer, prostrate, and serve the Buddha, and we cultivate the Dharma in our mindstream. We engage in virtuous actions together with a Saṅgha of four or more fully ordained monastics who represent the Saṅgha Jewel, and we also make offerings, pay respect, and offer service to them.

## REFLECTION

---

1. Why is each of the six distinguishing features important in your refuge practice?
  2. For each of the six, make examples of how you have related to or could relate to each of the Three Jewels.
- 

## *Causal and Resultant Refuge*

As the Buddha's followers, we take refuge in the causal Three Jewels that guide us to awakening and the resultant Three Jewels we will become upon fulfilling our spiritual aspiration. The *Sublime Continuum* presents the resultant Three Jewels by linking them to the spiritual interests and dispositions of the three types of practitioners. That is, according to their disposition, disciples will have different resultant refuges that are their chief focus.

Even before entering a path, some followers are attracted to bodhicitta and have great admiration for the Buddha's qualities. They enter the Mahāyāna path and yearn to attain the qualities of a fully awakened buddha. As a result, they attain buddhahood. Thus the Buddha Jewel is said to be their main object of refuge.

Other disciples are attracted to the explanation of dependent origination and enter the Solitary Realizer Vehicle. Focusing their effort on realizing the forward and reverse orders of the afflictive and purified sides of the twelve links of dependent origination, they take the Dharma Jewel as their principal resultant refuge. By meditating on dependent origination, they extinguish the causes of cyclic existence and become solitary-realizer arhats.

Another group of disciples are attracted to the four truths of the āryas. Entering the Śrāvaka Vehicle, they learn and meditate on the four truths and take the Saṅgha as their resultant refuge. Relying on the instructions of a Saṅgha member, they become a śrāvaka arhat. In short, the resultant refuge is specific to each individual according to his or her disposition, the path that appeals to them, and their principal spiritual goal.

Although their resultant objects of refuge may differ, all three groups turn to the external Buddha, Dharma, and Saṅgha as their causal refuge. In this context, the Buddha refuge is our Teacher, Śākyamuni Buddha; the Dharma refuge is the true paths and true cessations in the mental continuums of āryas; and the Saṅgha refuge is the āryas of all three vehicles. All Buddhists, no matter which vehicle or Buddhist tradition they follow, take refuge in the causal Three Jewels. We create merit and purify negativities in relation to them by bowing, making offerings, revealing our misdeeds, rejoicing in our own and others' virtues, and so forth. By relying on the causal three objects of refuge, we receive teachings and guidance, practice the three higher trainings, generate love and compassion, realize the correct view of reality, and attain the awakening of the vehicle we enter.

We can also speak of the resultant Three Jewels in terms of the Three Jewels we will become in the future. From this perspective,<sup>25</sup> those of us who aspire for full awakening have as our resultant refuge the Buddha Jewel we will become in the future, the true paths and true cessations that will exist in our mindstream at that time, and the ārya buddhas we will become. At this time the natural buddha nature — the emptiness of our mind — will become the nature truth body of a buddha, and the transforming buddha nature will become the wisdom truth body of a buddha. Simultaneously with attaining the truth body, we will attain a buddha's enjoyment and emanation bodies, becoming the Buddha Jewel ourselves.

These resultant Three Jewels are our genuine protection from the duḥkha of saṃsāra. The true cessations and true paths in our mindstream when we become āryas are the actual refuge that will protect us. Meditating on impermanence, the defects of saṃsāra, love, compassion, bodhicitta, the correct view, and so on inches us forward on the path to become the Three Jewels. Even though our resultant Three Jewels do not exist now, they will exist in the future. Because we have the potential to actualize them, we can take refuge in the resultant Three Jewels now.

## REFLECTION

---

1. What is your causal refuge? What is your resultant refuge?
  2. How do they differ? In what ways are they the same?
  3. How does the causal refuge help you to actualize the resultant refuge?
-

### 3 | Heartfelt Connection to the Three Jewels

**I**N THE PRECEDING CHAPTERS we identified the Three Jewels and learned their qualities. Reflecting on these moves the heart. First, we are assured that we are not alone on our spiritual journey, that millions of people have followed the path before us and attained the results of a tried-and-true path. We can trust their guidance.

Second, we have a vision of the spiritual journey we will take and the destination we will arrive at as a result of correct practice. We are not inherently limited beings, but like the Buddha who was once a sentient being and later became an awakened one, we too can follow that path and attain that result. This knowledge transforms our attitude about life into one with great purpose and a long-term perspective that brings reliance in the face of life's vacillations.

#### *Formally Taking Refuge*

Before taking refuge, it is important to know the qualities of the Three Jewels so that we are clear on whom and what we are entrusting our spiritual guidance to and whose instructions we plan to follow on the path. At a certain point in our spiritual journey, we may deeply feel that the Buddhist path resonates within us and we want to follow it. We can then formally take refuge in the Three Jewels during a ceremony.

Traditionally, the demarcation of becoming a Buddhist has been taking refuge. Some people hesitate to participate in a formal ceremony in which they repeat the refuge formula after a spiritual master. Other people want to take refuge formally, but the external conditions are not present. Participating in a ceremony is not necessary. What is important is that we have reflected on the qualities of the Three Jewels, the reasons for taking refuge in them, and the meaning of doing so. Having done that, entrusting ourselves from our hearts to

the Three Jewels for spiritual guidance because we recognize them as reliable objects of refuge is the real meaning of taking refuge.

Some people ask me if believing in rebirth is necessary to take refuge and become a Buddhist. They have learned some of the Buddha's teachings on developing fortitude, love, and compassion, for example, and find them meaningful. They have faith in the Buddha and want to take refuge. However, they are unclear regarding the existence of rebirth, karma, and other realms and do not find those teachings useful for their spiritual practice at present. In such a case, because these people have some faith and a good attitude toward the Dharma and a wish to strengthen these, I allow them to attend a refuge ceremony and consider themselves Buddhist if they wish.

However, some people do not agree with this. They say that the scriptures clearly delineate the causes for taking refuge in the Three Jewels: the person must have a sense of the danger of taking an unfortunate rebirth or of remaining in saṃsāra, faith and confidence in the ability of the Three Jewels to guide us from this danger, and in the case of a Mahāyāna practitioner, compassion and a wish that others be free from this danger. To have these three, a person must accept rebirth, karma, other realms of existence, and emptiness, otherwise taking refuge in the Three Jewels would not be of interest to them.

From my point of view, different levels of refuge in the Three Jewels exist, and people may enter at a level that is comfortable and appropriate for them at the present. This helps them on their spiritual path and encourages them to continue to learn and practice the Buddha's teachings.

To be a Buddhist, a person should trust in the Three Jewels. Some people do this without giving a lot of thought to past and future lives. Other people think about rebirth yet continue to question it even though they respect the Buddha, Dharma, and Saṅgha. We can say that these people are about to become Buddhist. Similarly, some people may trust the Three Jewels but do not immediately accept the teachings on selflessness and emptiness. All these people can still benefit from Buddhist teachings on ethical conduct, love, compassion, generosity, patience, and so on. For these reasons, I don't think that belief in rebirth must necessarily be a criterion for taking refuge in the Three Jewels.

You can practice the teachings that help you in your life and for the moment leave to the side the ones that you do not agree with or do not understand. You do not need to accept everything; forcing yourself to believe passages in the

scriptures that do not make sense to you does not help you to progress. Continue to reflect on the teachings so that what you practice is based on reason. If something can be logically disproved or is not logically consistent, do not accept it even if it is written in a Buddhist scripture.

Initially, a spiritual seeker could trust Jesus, Buddha, God, and other gods, and synthesize them in their personal spiritual practice. But at a certain point this person will need to specialize. To develop further in Buddhist practice, understanding emptiness is very important. Once one fully accepts and is convinced regarding emptiness and dependent arising, accepting the concept of a creator God becomes difficult. Similarly, if someone decides to specialize in Christianity as it is generally taught, accepting the doctrine of emptiness may be difficult. Along the same line, if someone doesn't accept rebirth, then bodhicitta — which wants to liberate sentient beings from rebirth in saṃsāra — doesn't make sense. Thus for one who is a true Buddhist and who wishes to develop the altruistic intention of bodhicitta and become a buddha, belief in rebirth and emptiness are necessary to develop the realizations of the entire path.

In many Pāli sūtras, whenever non-Buddhists meet the Buddha, listen to his teachings, see their truth, and take refuge in the Three Jewels, they express their joy (MN 4.35).

Magnificent, Master Gotama! Master Gotama has made the Dhamma clear in many ways, as though he were turning upright what had been overturned, revealing what was hidden, showing the way to one who was lost, or holding up a lamp in the dark for those with eyesight to see forms. I go to Master Gotama for refuge and to the Dhamma and to the Saṅgha of monastics. From today let Master Gotama remember me as a lay follower who has gone to him for refuge for life.

When preparing for the refuge ceremony, contemplate this and try to generate the same feeling in your heart.

When we take refuge during a ceremony, we take refuge in the Buddha, Dharma, and Saṅgha, not in a particular Buddhist lineage, teacher, or tradition. To take refuge formally in a ceremony, request a spiritual teacher whom you trust and respect to perform the ceremony. At that time, you may also request to receive any or all of the five lay precepts (*pañcaśīla*). These five are to abandon

killing, stealing, unwise and unkind sexual behavior, lying, and taking intoxicants. Since the person from whom you receive refuge and precepts becomes one of your spiritual mentors, it is wise to consider well whom you request.<sup>26</sup> In the ceremony, the spiritual mentor will lead you in generating the aspiration to be free from cyclic existence and to attain liberation. With that strong motivation, you will kneel down and repeat the verse of taking refuge three times after the teacher.

Venerable, please pay attention, from now until the end of my life, I, named \_\_\_\_\_, take refuge in the Buddha, the supreme among human beings; I take refuge in the Dharma, the supreme abandonment of craving; I take refuge in the Saṅgha, the supreme assembly. Venerable, please care for me as a Buddhist who takes refuge (and precepts).

Think deeply about what you say as you repeat this and generate a deep sense of faith and confidence in the Three Jewels, as well as a strong intention to follow the path to liberation. After reciting this verse, your teacher will explain the refuge guidelines, which enable you to continue to deepen your refuge. If you wish, you may also request a refuge name.

## *Deepening Our Refuge*

Taking refuge through a ceremony, while optional, can strengthen our feeling of connection to the Three Jewels. This feeling of connection must be consciously and continually cultivated afterward to reap the benefits of taking refuge. Taking refuge is not something we do once and then forget about. Rather, we begin every meditation session by taking refuge and cultivating a bodhicitta motivation. In this way, over time our refuge in the Three Jewels will deepen and become a tremendous source of inner strength, enabling us to greet whatever life brings with confidence, optimism, and purpose.

Studying and practicing the following guidelines will help you increase your mindfulness and deepen your refuge.

## *General Guidelines*

In his *Compendium of Determinations* (*Viniścaya-samgrahaṇī*), Asaṅga recommends:

- In analogy to taking refuge in the Buddha, commit yourself wholeheartedly to a qualified spiritual mentor. It may take time to find such a spiritual mentor. Don't rush; remember the Buddha is our fundamental teacher.
- In analogy to taking refuge in the Dharma, listen to and study the teachings as well as put them into practice in your daily life.
- In analogy to taking refuge in the Saṅgha, respect the Saṅgha members as your spiritual companions and follow the good examples they set.
- Avoid being rough and arrogant, running after any desirable object you see.
- Avoid criticizing whatever meets with your disapproval.
- Be friendly and kind to others and be concerned more with correcting your own faults than with pointing out those of others.
- As much as possible avoid the ten nonvirtues,<sup>27</sup> and take and keep the eight one-day precepts.<sup>28</sup>
- Have a compassionate and sympathetic heart toward all other sentient beings.
- Make offerings to the Three Jewels on Buddhist festival days, such as new- and full-moon days, Vesak (the day of the Buddha's awakening), and other special holidays.

## *Guidelines for Each of the Three Jewels*

1. Having taken refuge in the Buddha, who has purified all defilements and developed all qualities, do not turn for refuge to worldly deities, who lack the capacity to guide you from all problems.

Respect all images of the Buddha: do not put them in low or dirty places, step over them, point your feet toward them, or sell them to earn a living. Respecting statues and other images is not idol worship; it is mindful practice. When looking at various images, do not discriminate "this Buddha is beautiful,

but this one is not,” because the Buddha’s body is never ugly. However, we can comment on the craftsmanship — some artistry is poor and some is magnificent. Do not treat with respect expensive and impressive statues while neglecting those that are damaged or less costly.

2. Having taken refuge in the Dharma, avoid harming any living being.

Respect the written words that describe the path to awakening by keeping the texts clean and in a high place. Avoid stepping over them, putting them on the floor, putting other things on top of them, such as your glasses, coffee cup, or other books, or throwing them in the rubbish when they are old. It is best to burn Dharma materials; they can also be recycled.<sup>29</sup>

3. Having taken refuge in the Saṅgha, do not cultivate the friendship of people who criticize the Buddha, Dharma, and Saṅgha or who have unruly behavior or do many harmful actions. Be polite and compassionate toward them, but do not become close friends because their views and attitude may have a detrimental influence on your refuge.

Respect monks and nuns, as they are people who are making earnest efforts to actualize the teachings. Respecting them helps your mind, because appreciating their qualities makes you open to learn from their example. By respecting even the robes of ordained beings, you will be happy and inspired when seeing them.

### *Common Guidelines*

1. Mindful of the qualities, skills, and differences between the Three Jewels and non-Buddhist refuges, and mindful of the differences among the Three Jewels themselves, repeatedly take refuge in the Buddha, Dharma, and Saṅgha.

2. Remembering their kindness, make offerings to them, especially offering your food before eating.<sup>30</sup>

3. Mindful of their compassion, encourage others to take refuge in the Three Jewels.

4. Remembering the benefits of taking refuge, do so three times in the morning and three times in the evening by reciting and reflecting upon any of the refuge prayers.

5. Do all actions by entrusting yourself to the Three Jewels. Whatever happens — whether you are sick or well — rely on the Three Jewels. When you are nervous, anxious, or afraid — for example, before a job interview or when

receiving the results of a medical test — take refuge in the Three Jewels. This will help you to recall the Dharma teaching that will be most helpful for you to contemplate in that situation.

6. Do not forsake your refuge at the cost of your life, or even as a joke. Treasure your refuge, respect your spiritual yearnings, and follow the path sincerely.

The refuge guidelines are explained well in the *Great Treatise on the Stages of the Path*. Please study that section.

## *Maintaining Proper Refuge*

Since refuge in the Three Jewels is the demarcation of being a Buddhist, and deep trust in the Three Jewels is essential for a Buddhist's spiritual progress, we want to ensure that we keep our refuge purely. One of the guidelines for doing this is not to turn to other objects of refuge that lack the ability and the qualities to guide us to awakening.

Buddha Śākyamuni is our teacher. For this reason, an image of the Buddha is found at the center front of the altar in a Tibetan monastery. The Buddha is our guide, the one who reveals the path to awakening to us. We wholeheartedly entrust our spiritual well-being to him. If we feel remorse for having acted harmfully or having transgressed our precepts, we should confess and purify this in the Buddha's presence because we revere and admire him. When we have earnest spiritual aspirations, we should likewise address them to the Buddha.

However, this is often not the case. When Tibetans enter the temple, they pay homage to the Buddha, but many direct their attention to the corner of the hall, where there is a small, dark room that is the protector's shrine room. It is here that Tibetans experience a sense of awe and cultivate restraint from negative actions. In front of the protectors, they are terrified of their destructive karma. They make offerings to fierce-looking protectors rather than to the peaceful Buddha in the main temple. The monks in charge of the offering rituals to the protectors generate the most revenue. This indicates that people have not properly understood important elements of Buddhist practice.

Most Buddhist traditions speak of Dharma protectors, beings who help practitioners on the path. These Dharma protectors are of two types:

supramundane and mundane. Supramundane protectors have directly realized emptiness and thus are included in the Saṅgha refuge — for example, Palden Lhamo and Mahākāla. Others, such as Nechung and the four great kings, are worldly beings who have made promises to great masters to protect the Dharma and practitioners. These protectors are not included in the Saṅgha refuge. We can rely on them for temporal help for virtuous purposes in the same way we would rely on a powerful person to help us in time of need. However, we do not seek spiritual refuge in them.

Then there are spirits, who are of many levels and types. Just like human beings, some spirits are helpful and others harmful; some have clairvoyant powers, whereas others do not. Some have virtuous qualities; others are angry and spiteful. Spirits are still within cyclic existence, and while some people may seek their aid, caution is necessary.

I have noticed a trend for people who call themselves Buddhists to turn to spirits to attain worldly success. This is not beneficial for several reasons. First, because these beings help only in temporal ways, a practitioner's motivation will degenerate from one of bodhicitta to one of seeking wealth, reputation, or power. This clearly corrupts his Dharma practice.

Second, Buddhism does not accept the existence of an omnipotent being who can control what happens to us. When people worship spirits, they usually petition, "Please give me this. Please do that." It seems that in their minds they regard the spirits as quasi-omnipotent and think that pleasing them is the means to attain happiness. This runs counter to the Buddha's teachings on karma and its effects, in which he clearly stated that we are responsible for creating the causes for happiness through abandoning harmful actions and creating virtuous ones. We have to discipline our own minds and put effort into improving ourselves.

For example, as a simple monk who has faith in the path the Buddha set out, I must restrain my mind from negativities and be mindful to act constructively. Look at Milarepa. There was nothing in his cave, yet he became a great practitioner. He did not propitiate spirits to increase his wealth or fame or to make his religious institution successful.

If many people begin to pray to an external being for worldly success, the existence of Buddha's teachings will degenerate in our world. People will think, "If I worship this deity, I'll be rich; if I worship that one, I'll live long." They will neglect to observe karma and its effects and will cease refraining from destructive

actions and creating beneficial ones. Instead they will expect an external being to save them from suffering and bring them happiness, and they will teach that to others. When Buddhist practitioners think and act this way, the beneficial influence of Buddha's precious teachings in our world will decline.

Ordinary people everywhere prefer to look outside of themselves to obtain happiness and alleviate suffering. It is easy for them to mistake the pujas and ceremonies done in Tibetan Buddhism as the worship of inherently existent external beings. Because these ceremonies are colorful and entertaining, people are attracted to them, thinking that the performance of a puja in and of itself is virtuous. This is not correct; the virtue or merit created depends on the motivations of the practitioners and their ability to meditate on wisdom and compassion while performing the puja.

In saying this, we should not go to the other extreme and say that all pujas and all deities are irrelevant. The practices of meditation deities such as Avalokiteśvara, Mañjuśrī, Tārā, and so forth contain profound methods for purifying ignorance, attachment, and animosity, and for perfecting the six perfections. These deities are emanations of awakened qualities that appear in a physical representation so that we can relate to them. Their pujas are done with the aspiration for liberation, bodhicitta, and the wisdom realizing emptiness. Those who do these practices properly do not worship these deities as external, omnipotent gods.

Also, we must differentiate between the practice of an ordinary person and the practice of a highly realized master. If a highly realized master propitiates a spirit, he has the ability to control that spirit. The spirit respects and obeys this master, so there is no danger. However, an ordinary person who propitiates the same spirit is not able to do this, and thus the result of his asking for help becomes more uncertain. It is like two people dealing with a ferocious dog. If the master asks the dog to protect the house, the dog will obey. But if another person does, the dog may turn around and bite him.

Unfortunately, the propitiation of the Dolgyal spirit (Shugden) became popular within certain segments of Tibetan society and has also spread abroad. For many years now, I have steadfastly discouraged people from doing this practice for three principal reasons.

First, as Buddhists, our ultimate refuge is in the Buddha, Dharma, and Saṅgha. Our aim is to penetrate the meaning of the four truths and the two

truths and to generate compassion and bodhicitta, all of which are included in the extensive and profound teachings given by our Teacher, the Buddha. Because Shugden is a worldly spirit, propitiating him degenerates the Buddhadharma and makes it a form of spirit worship.

Second, religious tolerance is important within the Tibetan community and among all faiths, and for years I have advocated mutual respect among the various Tibetan Buddhist traditions. I myself do practices from all four traditions — Gelug, Nyingma, Kagyü, and Sakya — and encourage others to do so as well. The practice of Shugden is very sectarian and includes threatening those who practice in a nonsectarian manner. As such, it creates divisiveness among the various Tibetan traditions.

Lastly, from the time of the Fifth Dalai Lama in the seventeenth century until the present, the Dolgyal spirit has been antagonistic to the Dalai Lamas and the Tibetan government they head. The propitiation of Shugden has been controversial in both the Sakya and Gelug traditions. Many great Tibetan lamas, including the Fifth Dalai Lama and the Thirteenth Dalai Lama, have stated the harmful effects of this practice and advised against it. At this crucial juncture in Tibetan history, we Tibetans must remain unified in support of a representative government.<sup>31</sup>

Leaving spirits aside, what, then, is the proper way for a sincere practitioner to relate to worldly Dharma protectors? I believe this depends on the culture and the disposition of the individual. Let's say we are initiating an important project that will benefit people. We work with total dedication and sincerity and exert effort to gather the necessary material facilities. But at some point we find we need others' help. In that case, we can request assistance or inspiration from the Dharma protectors. Some people may have a stronger karmic connection with one protector than another, just as we form friendships more easily with one person than with another. Still, we are aware that we are responsible for creating the causes for success, both temporal and spiritual.

We must always remember that Dharma practice occurs in our mind. We may go to a temple to meditate, but Dharma practice is not limited to that place. When common people think about Tibetan Buddhism, the picture of a Tibetan monastery with monks wearing hats, playing drums, and chanting in deep voices comes to mind. These external scenes and implements are not Buddhism. Real practice means confronting our own selfishness and cultivating a heart seeking to

benefit others. Taking initiations and doing the practices of various deities is a technique to help us develop our inner qualities. If we see these deities as external beings and worship them as omnipotent gods, we have gone beyond the path the Buddha taught.

Building temples and making statues is wonderful; they remind us of the Buddha. But statues cannot speak, and engaging with the Buddha's teachings is most important. We need to listen to and meditate on the teachings; we need to study and compare Pāli, Tibetan, and Chinese canons and translate texts that haven't been translated from the other canons. If we requested Nāgārjuna now for teachings, he would say, "I already wrote a lot, but you aren't studying, reflecting, and meditating on it. So there's no need for me to write more right now."

## *Bodhisattvas' Refuge*

In the *Inquiry of Ugra Sūtra* the Buddha gives guidelines for how bodhisattvas and those aspiring to be bodhisattvas safeguard and cultivate their refuge. This is by engaging in four specific activities in relation to each of the Three Jewels:

A bodhisattva who takes refuge in the Buddha (1) does not abandon bodhicitta, (2) does not break her promise to attain full awakening, (3) does not relinquish great compassion, and (4) does not concern herself with other vehicles.

A bodhisattva who takes refuge in the Dharma (1) relies on and associates with Dharma teachers and, having respect for them and having paid homage to them, listens to the Dharma, (2) having heard the Dharma, reflects on it deeply, (3) teaches and explains what he has heard and reflected on to others, and (4) dedicates the roots of virtue arising from giving the Dharma to other sentient beings so that they may attain full awakening.

A bodhisattva who takes refuge in the Saṅgha (1) leads those who have not yet definitively entered the Śrāvaka Vehicle to generate bodhicitta, (2) guides those who are drawn to materialism and consumerism to take interest in the Dharma, (3) relies on the Saṅgha of ārya bodhisattvas, and (4) strives to cultivate the śrāvakas' excellent qualities, but not for the purpose of attaining personal peace.

These guidelines remind those of us who aspire to be bodhisattvas to be mindful and incorporate refuge and bodhicitta into all actions. Although these

twelve points take little space when written down, living them requires an open mind and great joyous effort.

## 4 | The Higher Training in Ethical Conduct

THE THREE HIGHER trainings in ethical conduct, concentration, and wisdom are essential elements of the path to liberation and full awakening. The true path described in the context of the four truths centers on the eightfold path of the āryas, and these eight are subsumed in the three higher trainings. The Fundamental Vehicle, Perfection Vehicle, and Vajra Vehicle are based on a common meaning of the three higher trainings, with the latter two vehicles adding unique elements to each training.

### *The Three Higher Trainings*

There are two thoughts about when Śākyamuni attained buddhahood. According to the Pāli tradition and the Vaibhāṣika and Sautrāntika tenet systems, he was born as a prince in the Śākya clan and, having renounced worldly life, lived as a renunciant and attained awakening under the bodhi tree at Bodh Gaya. According to the Cittamātra and Madhyamaka tenet systems, he had attained awakening many eons prior and in the life as Śākyamuni displayed the behavior of practicing the path and attaining awakening.

The Sanskrit tradition follows the latter view, explaining that the Buddha's display of newly attaining awakening was skillful means so that practitioners would understand how to follow the steps of the path and become awakened themselves. No matter which version we believe, the Buddha's life is definitely an example for us to follow.

The Buddha attained awakening by practicing step-by-step. While meditating under the bodhi tree, he gained the wisdom that broke through saṃsāra and led to nirvāṇa. He cultivated this wisdom based on having attained deep states of concentration while meditating for six years with five ascetic companions. He developed concentration based on abiding in ethical conduct by leaving the

householder's life and becoming a renunciate. Here in the Buddha's life, the three higher trainings shine as a beacon on the path.

Most spiritual paths contain some practice in ethical conduct, concentration, and wisdom, but as followers of the Buddha, we refer to ours as the three *higher* trainings. These practices are higher in three ways. They are done with refuge in the Three Jewels, indicating they are higher than those of non-Buddhists. They are infused with the understanding of selflessness, showing that they lead to the higher aim of eradicating ignorance. They are done with the aspiration for liberation or full awakening, making them higher than doing them to attain a fortunate rebirth.

People who seek a fortunate rebirth in the desire realm also practice ethical conduct, and meditators who seek rebirth in the form and formless realms attain concentration without cultivating wisdom. The motivation to attain liberation or full awakening is necessary to practice all three higher trainings so that they will bring those supramundane results.

Ānanda affirmed that the Buddha continuously emphasized the importance of the three higher trainings (DN 10.1.6):

Subha, there are three divisions of things which the Lord praised, and with which he aroused, exhorted, and established people. Which three? The division of ariyan ethical conduct, the division of ariyan concentration, and the division of ariyan wisdom.

## *The Importance of Ethical Conduct*

People who are serious about religious practice differ from those who are not. Buddhists accept that human life has a deeper purpose than sensual enjoyments, wealth, power, social status, and praise gained in this life, and that a fortunate rebirth, liberation, and awakening are valuable in the long term. Since afflictions prevent us from actualizing our spiritual purpose, we want to reduce and eventually eliminate them. The various levels of ethical codes guide us to subdue our physical, verbal, and mental actions. Here “ethical code” refers to a set of precepts taken in the presence of a spiritual mentor, and “precepts” refers to the particular trainings set out in that ethical code.

The meaning of mental advancement is that untamed states of mind decrease and beneficial states increase. For obscurations to be removed from the root by the wisdom realizing emptiness, our mind must first be capable of meditating with single-pointed concentration. To subdue the subtle internal distractions that interfere with concentration, firm mindfulness and introspective awareness are necessary. To strengthen our mindfulness (*smṛti*, *sati*) and introspective awareness (*samprajanya*, *sampajañña*) and to gain concentration, we must first overcome the grosser external distractions by developing mindfulness and introspective awareness of our physical and verbal actions. This is done through the practice of ethical conduct.

Ethical conduct means to refrain from doing harm. It applies to both monastics and lay followers because all of us need to refrain from harming ourselves and others in order to progress on the path and to create peace in the lives of those around us. To this effect, the Buddha advised us to abandon the ten destructive paths of action. Taking and keeping the various levels of ethical codes aids us in doing this and points out even subtler nonvirtuous actions to avoid. Tibetan Buddhism contains three levels of ethical codes: prātimokṣa or individual liberation, bodhisattva, and tantric. The prātimokṣa ethical codes focus on abandoning doing harm through body and speech. The bodhisattva ethical code emphasizes abandoning self-centeredness and regulates our mental activities as well as physical and verbal activities. The tantric ethical code helps overcome subtle obscurations, another form of harmful mental activity. Because their focus is more and more subtle, the three sets of ethical precepts are taken in that order: first prātimokṣa, then bodhisattva, and finally tantric.

Whether we principally practice the Fundamental Vehicle, Pāramitāyāna, or Vajrayāna, ethical conduct is the foundation of the practice. Precepts give form and focus to ethical conduct. Although all Buddhists try to live ethically and abandon the ten nonvirtues, the taking of precepts involves special commitment and thus brings special benefit. Living in precepts makes us more aware of our physical, verbal, and mental activities. It enables us to purify destructive karma quickly because by stopping habitual negative actions, we stop their most harmful result, the tendency to do them again. It also brings a rapid and strong accumulation of merit, for every moment that we are not breaking a precept, we are actively abandoning that destructive action and thus enriching our mind with merit from acting constructively. Keeping precepts is also a wonderful

contribution to world peace. Imagine if every sentient being followed the first precept, not to kill, for just one day. How different life in our world would be!

Keeping the precepts we have taken is the best sign of being a holy being. If we want to do a meditation retreat but ignore ethical conduct in our daily lives, our priorities are confused. The foundation of any practice, especially Vajrayāna, is ethical conduct. Without keeping the commitments and precepts we have taken, attaining realization is impossible. Thinking otherwise is a result of not understanding the essence of Dharma practice. We shouldn't cheat ourselves by ignoring ethical living.

Although precepts have such benefits, a person has to feel comfortable taking them and be prepared to assume the responsibility of following them as best as possible. Some people are brave when it comes to taking precepts and commitments — thinking it is their right — but cowardly when it comes to keeping them. We should be the opposite and think well before taking precepts. Then we humbly request to receive them from our teachers and with joy keep them properly.

## *The Prātimokṣa Ethical Code*

Within the first level of ethical codes, the prātimokṣa, there are eight types: three are for householders and five for monastics. The three for lay followers are (1–2) the five precepts for male and female lay followers (*upāsaka* and *upāsikā*), and (3) the one-day precepts for lay followers (*upavāsa*). All of these are taken on the basis of having taken refuge in the Three Jewels.

The five lay precepts are to abandon killing, stealing, unwise and unkind sexual behavior, lying, and taking intoxicants (alcohol, illegal drugs, and misuse of prescription medicines). At the time of formally taking refuge in a ceremony, you can also take one or more of the five precepts.

The eight one-day precepts are the above five — the third precept being celibacy — plus to abandon (6) sitting on high or luxurious seats or beds; (7) singing, dancing, or playing music (entertainment); wearing perfumes, ornaments, or cosmetics; and (8) eating at improper times — that is, between midday and dawn of the following morning. In ancient times, people went to their local monastery on new- and full-moon days to take these precepts and

practice with the monastics. Nowadays many people receive the transmission for the one-day precepts from their teacher and subsequently take them at home before a Buddha image. Some monasteries ask monastic aspirants to reside in the monastery and take the eight precepts for a period of time (many months or a year) before receiving monastic ordination. Some lay followers take the eight precepts and live at home.

The five ethical codes for monastics are for (1) fully ordained monks (*bhikṣu*, *bhikkhu*), (2) fully ordained nuns (*bhikṣuṇī*, *bhikkhuni*), (3) training nuns (*śikṣamāṇā*, *sikkhamāṇā*), (4) novice monks (*śrāmaṇera*, *sāmaṇera*), and (5) novice nuns (*śrāmaṇerī*, *sāmaṇerī*). Monastic aspirants begin with taking the five lay precepts. When both they and their spiritual mentor think they are ready to assume more precepts, aspirants request and then take the novice ordination. This ethical code has ten precepts: the eight as above, including celibacy, plus not handling money or precious substances. The seventh precept is divided in two: one to abandon entertainment such as music, dancing, and singing, the other to abandon wearing perfumes, ornaments, or cosmetics. In Mūlasarvāstivāda, novices receive ten precepts and must abandon three degenerations: (1) failure to formally request the abbot to be your abbot, (2) failure to abandon the signs of a lay person, (3) failure to uphold the signs of a monastic (such as wearing robes and shaving the head). In Tibetan Buddhism, the ten novice precepts have been further divided to make thirty-six.

Nuns also have a two-year training ordination that involves six, twelve, or eighteen precepts, depending on the Vinaya tradition. Bhikṣus and bhikṣuṇīs have the full ordination, with many more precepts. While the number of precepts may vary, in substance and meaning, these Vinaya traditions are very similar.<sup>32</sup>

The bhikṣu and bhikṣuṇī ethical codes were not present during the first twelve years of the Buddha's teaching. When monks began to misbehave, doing naturally negative actions or engaging in rude or unbecoming behavior, the Buddha established precepts. The Vinaya contains stories describing the origin of each precept and the adaptations and exceptions that the Buddha made as new circumstances arose. We see that the precepts are not rigid vows or laws but are trainings and guidelines that help us. Bhikṣuṇīs assumed almost all the precepts that were established in response to the naughty behavior of bhikṣus, in addition to ones established as a consequence of the naughty behavior of bhikṣuṇīs. The

bhikṣus did not assume the precepts established for the bhikṣuṇīs. For that reason, bhikṣuṇīs have more precepts.

### NUMBER OF BHIKṢU AND BHIKṢUṆĪ PRECEPTS ACCORDING TO THE THREE VINAYA TRADITIONS

VINAYA	BHIKṢU PRECEPTS	BHIKṢUṆĪ PRECEPTS
Theravāda	227	311
Dharmaguptakā	250	348
Mūlasarvāstivāda	253	364

Many levels of the prātimokṣa ethical code exist because people have different levels of ability. For those capable of remaining celibate for the duration of their lives, monastic precepts are suitable. For those who are not interested in or not able to be celibate, taking some or all of the five lay precepts is appropriate. For those who are uncertain if they can keep the five precepts for their entire life and those who want to expand their ethical conduct, taking the eight precepts for one or more days is worthwhile.

As the Buddha's life story shows, when Śākyamuni saw a sick person, an old person, and a corpse, he reflected that worldly life has no essence. He then saw a religious mendicant and was inspired to engage in spiritual practice to be free from cyclic existence. For that reason, he left the householder's life and became a monastic. Similarly, as his followers, we generate the actual aspiration to attain liberation, and to that end follow the prātimokṣa ethical code of either a householder or a monastic. We choose to take precepts because we know that following them will help us purify negativities, accumulate merit, and reduce the afflictions that impede liberation.

A base motivation to become a monastic — such as wishing to escape debts, avoid caring for sick or elderly relatives, or not be responsible for children after a divorce — will not do. Neither is wanting a place to live or free food a suitable motivation. Our motivation must be to free ourselves from saṃsāra or to become a buddha in order to best benefit others.

The prātimokṣa precepts concern abandoning harmful actions of body and speech. To do so, we need to restrain the source of these actions, the mind. Some people mistakenly think that purity in ethical conduct involves changing their external behavior to conform to the rules and win others' approval. However, genuine ethical discipline involves subduing the mind, which motivates the physical and verbal behavior.

In countries following the Pāli tradition, laypeople are encouraged to become familiar with the monastic precepts so that they know how to behave in relation to monastics. In Thailand many lay followers know the monastic precepts because there is the custom of young men becoming bhikṣus for three months. In other Theravāda countries, those who have not taken the precepts are often able to read and study them. The belief is that when laypeople know the monastic precepts, they will better understand how to help monastics keep their precepts. In addition, if some monastics are naughty, laypeople will comment, which inspires the Saṅgha to behave properly.

In Central and East Asian countries, people are generally not allowed to study the prātimokṣa precepts before receiving them in a valid ordination. Perhaps this is to avoid prospective monastic candidates from being discouraged when learning the number of precepts or to avoid laypeople disrespecting the Saṅgha if they see a few monastics who do not keep all the precepts well. However, individual teachers will sometimes allow aspirants to learn the precepts under their guidance. In Taiwan, novices learn what bhikṣus and bhikṣuṇīs are to practice and to abandon by living with them and observing them. Almost all monastics attend a Buddhist Institute for five years after ordination, where they learn the Vinaya and Dharma.

Tibetan monks usually receive a detailed explanation of the precepts when studying the Vinaya, which is one of the five main topics studied in the large monasteries. Just after ordination, monks and nuns often receive teachings on the four main precepts and the other categories of precepts. They are also referred to books where the precepts are concisely explained. Because the full ordination for women is not extant in Tibetan Buddhism, nuns can learn the novice precepts but cannot study the full Vinaya.

Furthermore, in all Vinaya traditions, only fully ordained monastics can recite the prātimokṣa precepts together at the fortnightly confession and

restoration of precepts (*poṣadha*); those who are not fully ordained may not attend.

## *Vinaya Schools*

At present, three Vinaya lineages are extant as living traditions that give monastic ordination and have monasteries where the Saṅgha lives. All three stem from the original eighteen schools that predated the historical rise of the Mahāyāna. As such, all Vinaya schools are included in the Fundamental Vehicle; there is no separate Mahāyāna Vinaya ordination, although many people who practice the Mahāyāna become monastics. The three living Vinaya traditions are:

1. The Theravāda (Sthaviravāda, T. *gnas brtan pa*, C. *shangzuo-bu*), found predominantly in South and Southeast Asia. Descended from the Vinaya lineage brought to Sri Lanka by Aśoka's daughter and son in the third century BCE, its Vinaya literature is in Pāli.
2. The Dharmaguptaka (T. *chos sbas pa*, C. *fazang-bu*) Vinaya was translated into Chinese in 410–12 by Buddhayaśas, and in 709 the emperor decreed that it was to be the only Vinaya followed in China. It is also called the “Four-Part Vinaya” and is followed principally in China, Korea, and Vietnam.
3. The Mūlasarvāstivāda Vinaya (T. *gzhi thams cad yod par smra ba*, C. *genben shuoyiqieyou-bu*), followed in Tibet, Mongolia, and the Himalayan regions. It was brought to Tibet by the Nālandā master Śāntarakṣita.

Considering that the literature of these Vinaya schools was passed down orally for many centuries before being written down, and considering the geographical distance between them — from Sri Lanka and Indonesia in the south to Gandhara and Kashmir in the west, to Tibet and Mongolia in the north, and to China, Korea, and Japan in the East — these schools are remarkably similar in their presentation of the monastic lifestyle. They follow essentially the same precepts and perform the same Saṅgha procedures and rites (*saṅghakarman*). The layouts and contents of the three Vinayas are also similar.

The three Vinaya traditions each rely on their own Vinaya commentaries. Buddhaghosa wrote an authoritative commentary, the *Samantapāsādikā*, on the Theravāda pāṭimokkha in the fifth century. To do this, he relied heavily on very old commentaries written at the Mahāvihāra Monastery in Sri Lanka. Several other Vinaya commentaries were written after this as well.

Five important Vinaya commentaries were translated into Chinese, and many commentaries were written in Chinese. Daoxuan (596–667) was the most famous and prolific commentator, authoring the *Three Books of Nanshan* (*Nanshan San Da Bu*) and other Vinaya materials that have been studied up to the present. Using the Dharmaguptaka Vinaya as the basis, he compared it with the other Vinayas extant in the Chinese canon — the Sarvāstivāda, Mahāsāṃghika, Mahīśāsaka, and Mūlasarvāstivāda — and drew all the good points together in his works. Chinese monastics take advantage of there being four other Vinayas in their canon and consult them when the Dharmaguptaka Vinaya does not give sufficient detail on a point of interest.

Tibetans follow the Vinaya commentaries of the Indian masters Guṇaprabha and Śākyaprabha. Guṇaprabha studied sūtras, Vinaya, and commentaries under the guidance of Vasubandhu, and he specialized in the Sarvāstivāda Vinaya. His commentaries, the *Vinaya Sūtra* and *Ekottarakarmaśataka*, are used to study the monastic code. We also follow the Tibetan subcommentaries by Sherab Sangpo, *Ocean of [Vinaya] Scriptural References* (*dul ba mdo rtsa'i rnam bshad nyi ma'i' od zer legs bshad lung gi rgya mtsho*), and Gyalwa Gendun Drub's *Precious Garland [of Vinaya]* (*bslab bya rin chen phreng ba*).

## *The Benefits of Practicing the Prātimokṣa Ethical Conduct*

The practice of Vinaya — the monastic code — helps to increase contentment. Monastics are limited in the food they can consume — no solid food is taken from midday until early dawn the next morning. Monastics do not have the right to demand this or that food; whatever they receive, they must accept. Monastics in East Asia who also follow the bodhisattva ethical code are vegetarian; Tibetan monastics who also follow the bodhisattva ethical code may or may not be vegetarian.

How does this practice of having limits create contentment? Contentment is an internal feeling that arises when craving is absent. As we practice releasing our craving and being satisfied with the present situation, contentment naturally arises. From our own experience we learn that contentment comes not from having all our desires fulfilled but from freeing ourselves from being under the control of those desires.

Monastics also have limits regarding their clothing. We cannot keep more than one set of robes with the thought, “this is mine.” Extra robes must be regarded as belongings shared with another monastic. We also cannot wear expensive robes. Previously in Tibet some monks wore luxurious robes. This was self-deception. The Chinese Communists were kind to us, liberating us from this corruption. Both the Vinaya and the Communists helped us to be content with the clothes we had!

Monastics limit the time spent with family to avoid being emotionally dependent on them and getting involved in family dramas. Family activities consume much time and take us away from Dharma study and practice. Adopting the name our preceptor gave us at the time of ordination signifies leaving our old identity as relatives or friends of others and beginning a new life as a monastic.

Practicing Vinaya helps us to develop mindfulness and introspective awareness. By being mindful of our precepts and checking if our behavior is proper when we are awake — whether we are walking, sitting, standing, or lying down — our mindfulness becomes stronger. Well-trained monastics can catch themselves and abstain from negative actions even in a dream.

The practice of Vinaya also helps to develop fortitude (patience) and tolerance. The *Prātimokṣa Sūtra* says (DV 43):

Fortitude is the first and foremost path.

The Buddha regards this as supreme in his teachings;  
one who has left the household life yet annoys others  
is not called a renunciate.

The Buddha taught that fortitude leads not only to the ultimate happiness of nirvāṇa but also to happiness in this very life. In this regard, he taught four means of refining virtue. Although he taught that practicing these four is the way to become a genuine monastic, they refine the virtue of everyone who practices them. They also bring harmony to our relationships and to society in general.

If others are angry with you, do not react with anger but with fortitude.

If others hit you, do not attack them back.

If others criticize you, do not criticize them in return.

If others embarrass or insult you, do not respond by embarrassing or insulting them.

These are real ascetic practices that will increase our fortitude. I tell people that the essence of the Buddha's teachings can be put in two sentences: When possible, help others. When that is not possible, at least don't harm them. These four means of practicing fortitude embody that principle.

People who grew up in a theistic religion and later became Buddhist may think of precepts as nonnegotiable rules propounded by an authority. Naturally, this makes them uncomfortable. Two types of rules exist. One is the troublesome kind — those that are only rhetoric and lack a constructive purpose. The other consists of helpful guidelines that lead to happy results. For example, if we want to be healthy, we voluntarily adopt new eating habits and avoid activities and foods that cause illness. Similarly, when we want to abandon the mental disease of ignorance, anger, and attachment, we voluntarily curtail the actions motivated by them and the objects that trigger them. We undertake the precepts voluntarily because they help us live according to our values and attain our spiritual aims; they are not forced on us by an external authority.

The form an ethical code takes and the behavior it encompasses may vary according to the culture in which it exists. To give an analogy, if we are overweight, we need to reduce our food intake. But if we become too thin and weak, we need to eat more. Although the two guidelines are opposite to each other, the purpose of good health is the same.

Similarly, the monastic precepts were established in ancient Indian culture, an agrarian society where it was difficult to find cloth, women were cloistered in their homes, and going on alms rounds was societally acceptable and even seen as virtuous. Contemporary society is very different. There are cars, digital devices, and the Internet — items that are not regulated in the Vinaya. Women are educated, many families have only one parent, and people work long hours and have limited free time. Some monastics choose to keep the precepts exactly as written in the Vinaya, and that is commendable. However, because of the changes

in society, I believe the way we keep some of the precepts needs to be adjusted. We must look at the Buddha's intention in establishing each precept: What mental state is that precept designed to subdue? If societal conditions are not suitable to keep a particular precept literally, how can we implement the meaning of that precept in our lives?

At the first council after the Buddha's parinirvāṇa, the question arose of changing the precepts, since the Buddha had said that minor precepts could be changed when circumstances necessitated it. But no one asked what the minor precepts were, so the council of five hundred arhats decided not to change any precepts. Yet the Buddha's injunction to abandon actions that are in line with those he said to abandon and to do actions concordant with those he prescribed remains. Monasteries have thus developed their own internal rules and guidelines to match present conditions. For example, had digital devices, television, and the Internet existed in his time, the Buddha surely would have established many precepts regarding them. If climate change had been an issue twenty-five centuries ago, he would have established precepts to limit monastics' carbon imprint and to require recycling.

Important elements of the Vinaya should not be changed, and when internal guidelines and rules are established in a monastery, care must be taken not to go against the original intention of the Buddha. The Vinaya precepts should be maintained well. Although people may interpret them differently, only an assembly of monastic elders from all Buddhist traditions has the authority to change any of them.

If Buddha came today, he certainly would modify some areas of the Vinaya and establish new precepts according to contemporary social reality. However, this is not a matter that one individual can decide. Since the Vinaya is common to most Buddhist countries, the issue of reform and modification needs to be discussed by individual monastics of all traditions. By everyone conducting thorough research in their own traditions and examining the general rules as well as the exceptions to them, we could determine what modifications are necessary and permissible given the cultural context of modern times. These are matters that require serious thought.

The prātimokṣa ethical codes are a common element in the śrāvaka and bodhisattva paths. Bodhisattvas, whether they practice the Pāramitāyāna or Vajrayāna, must respect the prātimokṣa ethical codes. Thinking they are inferior

or irrelevant is a transgression of the bodhisattva and tantric ethical code. The thirteenth root bodhisattva precept is “abandon causing others to discard completely their prātimokṣa ethical code and embrace the Mahāyāna.” Being negligent of one’s prātimokṣa precepts is explicitly forbidden in the bodhisattva and tantric precepts.

Bodhisattvas must set a good example for others and inspire their faith; otherwise they will not be able to benefit sentient beings. The ninth auxiliary bodhisattva precept is to abandon “not acting according to one’s vowed trainings when it would generate or sustain faith in others,” the fifteenth is to avoid “not abandoning negative actions that cause one to have a bad reputation,” and the sixteenth is to abandon “not correcting one’s own deluded actions or not helping others to correct theirs.” The second root tantric precept is to abandon “contemptuously disregarding the (prātimokṣa) trainings and precepts,” and the tantric pledges, recited daily in the Six Session Guru Yoga, include “I shall abandon the four roots, intoxicants, and unsuitable activities” and “maintain the ten virtues.” An auxiliary tantric commitment is to abandon “needlessly going beyond the prātimokṣa or bodhisattva precepts.” Assuming higher ethical codes necessitates that we become even more diligent in keeping our prātimokṣa precepts.

## REFLECTION

---

1. Ask yourself: How many years have passed since I was born? How many years do I have left? How many months? How many days? See that your precious human life is slipping away and that while you still have this life, it’s important not to take it for granted but to use it wisely.
  2. Recall that all the suffering people experience in saṃsāra comes from destructive actions and recollect the disadvantages of these unwholesome deeds.
  3. Since happiness arises from virtuous karma, make a sincere determination to abandon negativity and create virtue.
  4. Since this begins with practicing ethical conduct, see the importance of taking and living in precepts.
- 

*Intoxicants*

The precept concerning intoxicants calls for special attention, since intoxicants are prevalent in most societies and cause much damage. Despite the material prosperity and wealth of developed countries, many people there are lonely, unhappy, and suffer from stress and low self-esteem. Knowing that external things do not bring happiness, but not knowing how to find inner happiness, they turn to illegal drugs and alcohol, and abuse prescription drugs as well. Misusing these substances is a clear sign of unhappiness and the failure of consumer society to solve humanity's problems. Of course, intoxicants do not solve these problems either and in fact exacerbate them, ruining people's lives, families, careers, and friendships.

It is in this light that the Buddha warned us to avoid intoxicants. His motivation was to protect us from the suffering that comes from the lack of restraint of an intoxicated mind. One story tells of a monk who was held captive and told that he must either kill a sheep, have sex with a woman, steal another's possessions, lie, or take an intoxicant. Thinking that consuming intoxicants was not a naturally negative action, whereas the others were, he chose that. However, once he was intoxicated, he did the other four actions! In a similar vein, I (Chodron) work with prison inmates, and 99 percent of them were intoxicated at the time they committed their crime. Of course, that doesn't excuse harmful behavior, but it demonstrates that although they didn't plan on harming others when initially taking the intoxicant, the intoxicant destroyed their awareness of the consequences of their actions until it was too late.

The Buddha took a clear stand in relation to intoxicants: "Anyone who calls me their teacher and claims to be my follower will not drink alcohol, not even the amount on the tip of a blade of grass." You may wonder why, then, when giving the five precepts to crowds of thousands of people, I sometimes tell the story of my teacher, Kyabje Ling Rinpoche. When lay Buddhists protested that they found abandoning *chang* — a Tibetan beverage made of fermented barley — too difficult, he told them, "at least drink less and don't get drunk." However, when giving the lay precepts in the context of the Kālacakra empowerment or when the audience consists of more dedicated practitioners, I stick to the Buddha's clear stance of abandoning all intoxicants whatsoever.

*Why Celibacy?*

The precept to be responsible in our sexual behavior and to abandon unwise and unkind forms of sexual behavior is common to all Buddhist traditions. The Buddha was not against sexuality but recognized that it was a powerful energy that practitioners with different spiritual aspirations and different levels of practice had to deal with differently.

On the first level of Buddhist practice, one works within human nature, which comes from having this body in cyclic existence. Here the emphasis is on subduing gross levels of afflictions that motivate harmful actions and avoiding the ten nonvirtues that actively harm others. At this level, one is encouraged to subdue extreme sexual lust and to abandon unwise or unkind sexual behavior that causes pain and confusion for oneself and others. Proper use of one's sexuality is appropriate for lay practitioners; celibacy is not necessary. Enjoying sensual pleasures is part of your life, and Buddhism simply recommends being practical and not getting so carried away with sensual pleasures that you harm others or create heavy destructive karma.

In that light, Thich Nhat Hanh, a renowned Vietnamese monk who teaches in the West, considers sexual activity without love and commitment to be unwise sexual behavior. Although this is not explicitly mentioned in the scriptures, I think it is true. Having love for one's partner and a sense of responsibility and involvement with him or her is important. Then the relationship will last for a long time, which in general is helpful for children to prosper.

People have so many problems in their romantic relationships and are tormented by the emotional, financial, and social problems that broken relationships bring. For this reason, I advise people to build strong relationships over time and not to rush into marriage. You must examine false expectations you may hold: for example, thinking that the other person will meet all your needs or believing that since love conquers all, you do not need to work at building a good relationship or communicating well with your partner.

On the second level of practice, we no longer seek the pleasures of *samsāra*. We see *samsāra* as a type of bondage that we seek to be free of. Attachment is one of the principal causes of *samsāra*, and gaining freedom from attachment — especially to objects of the five senses — is a desirable result on the path to liberation. Of all forms of attachment, sexual relations is the most intense and complex because it involves attachment to objects of all five senses — sights, sounds, smells, tastes, and touch. Thus those who seek freedom from attachment

are advised to subdue sexual desire and refrain from sexual activity. This advice comes from the Buddha and is found in the scriptures.

At this point on the path, we have to confront things that are normally considered a part of human nature, such as sexual desire. Our aim now is not having a career and raising a family, but to attain liberation, and attachment to sexual intercourse prevents fulfilling our spiritual aim. Although sexual desire arises naturally from our body, we can control it and change it. On this second level of practice we go against human nature — which includes our biologically conditioned attitudes and impulses that come from having a body and mind under the influence of afflictions and karma. As our aim is now liberation, monastic ordination, with its requirement of strict celibacy, becomes important.

An example is helpful. Skilled athletes who hold high aspirations eagerly abandon activities that impede their training and the realization of their goals. To be successful, they willingly refrain from eating certain foods, taking intoxicants, and irregular sleeping habits. They give up a grand social life and spend their time in consistent training. Their restraint is not seen as unhealthy suppression but as necessary and conducive circumstances that will lead them to fully develop their potential and achieve their goals. Similarly, monastics willingly give up sexual relations and immersion in sensual pleasures because these hinder the attainment of their spiritual goals. Those activities are time consuming, and monastics prefer to use their time in Dharma activities.

Buddhism speaks of two types of desire. One is based on reason and is beneficial, such as the desire to help those in need or the desire to attain liberation. Another is based on wrong conceptions and is more emotional. This negative type of desire craves for sense pleasures but is never satisfied by obtaining the object of desire. Whatever pleasure we experience leads to craving more or better. Such craving can only be satisfied by gaining freedom from desire.

Western psychology has various views on sexuality and what constitutes a healthy relationship to sexuality at various stages of life. Although Western psychology is very sophisticated, it operates within fixed parameters and with certain assumptions about human nature and happiness that differ from those of Buddhism. If we described suffering, its origins, liberation, and the path from the perspective of psychology, it would differ considerably from the four truths in Buddhism.

In youth, people may have different sexual experiences, including masturbation, but those who choose to become monastics stop all of these. As a result, their health and mental stability often improve. Although following sexual desire can bring temporary satisfaction, those seeking liberation and awakening need to control and redirect this energy. This is emphasized in the *Kālacakra Tantra* and other tantras. Those monastics who can control their experiences even in dreams are truly remarkable.

If liberation from the acute fears and pain of saṃsāra did not exist, then we could go along with human nature and do whatever we like. However, since it is possible to achieve awakening, the purest form of mind, then taking action that seems to be contrary to human nature is worthwhile and leads to supramundane results.

Many factors need to be considered and understood when an individual considers how or whether to use his or her sexuality. The Buddha did not say that everyone must give up sexual activity. It is our own choice.

## REFLECTION

---

1. What ethical values do you live by?
  2. Did you accept them because you learned them from others when you were young? Because you examined them and saw the reasons behind them? Both?
  3. Why did the Buddha caution against taking intoxicants? Does your experience and what you have observed about others' experience with intoxicants support this?
- 

## *Bodhisattva and Tantric Ethical Codes*

The bodhisattva ethical code is part of Mahāyāna practice and is taken with the wish to attain awakening in order to benefit all sentient beings. In Tibetan Buddhism, the bodhisattva ethical code contains eighteen root precepts and forty-six auxiliary ones. In Chinese Buddhism, the bodhisattva ethical code for monastics has ten root precepts and forty-eight auxiliary ones, whereas the bodhisattva ethical code for laypeople has six root and twenty-eight auxiliary precepts. No matter how they are enumerated, all these precepts focus on

subduing self-centeredness, which is the main obstacle to generating bodhicitta and engaging in the bodhisattvas' deeds.

The tantric ethical code found in Vajrayāna Buddhism is undertaken with a more intense bodhicitta motivation — wishing to attain awakening very quickly in order to be capable of benefiting sentient beings sooner. Bodhisattva precepts and tantric precepts emphasize ethical conduct predominantly on the mental level, although certain behaviors are also regulated. Here, motivation and attitude are foremost. Based on this, some scriptures mention that all actions can become Dharma actions; that is, if our motivation is pure and sincere, we can turn all actions into Dharma actions. However, this does not imply an exceptional ethical perspective whereby everything a person does can indiscriminately be seen as virtuous.

According to the Vinaya, where the main emphasis of the practice is on decreasing attachment, monastics are not allowed to touch money, gold, or other precious objects. However, according to the bodhisattva precepts, which presupposes some degree of control over attachment and emphasizes the welfare of others, if the donor would be hurt or feel deprived of the opportunity to create merit if we refused her monetary gift, then we should accept it. Although these actions may superficially seem contradictory, they both involve ethical precepts that apply to one person at different times in her training, according to what she is capable of at the time.

Tantric texts discuss certain behaviors that reflect a person's having overcome polarities and preconceptions regarding such things as cleanliness or beauty. The conduct of very advanced tantric practitioners may reflect this. It is often said that their behavior cannot be spoken of in terms of precepts because their level of spiritual realizations is beyond the preconceptions of inherent good and evil. We must properly understand what this means. Such people are no longer under the influence of ignorance and other afflictions; it is in that sense that they are beyond good and evil. It does not mean that they may transgress precepts at will, with no harmful results. Rather, because they have profound wisdom of ultimate reality, their minds are so thoroughly disciplined that the very purpose of precepts — to tame the unruly mind — has already been fulfilled. Having understood emptiness and dependent arising, they have great respect for ethical conduct. Although such practitioners may act unconventionally on occasion and

outwardly appear to be acting contrary to precepts, no mental defilement is involved, and their actions do not harm others.

For practitioners who are not at that level — and that includes the great majority of us — we need to keep our precepts with mindfulness and introspective awareness to prevent the arising and the acting out of our afflictions. As long as we remain vulnerable to the afflictions and their latencies, ethical conduct is relevant and necessary because there is danger of causing harm to ourselves and others.

### *Making Mistakes and Rectifying Them*

We take precepts because we are imperfect beings who are trying to tame our minds. We do our best to keep the precepts purely so that we can benefit from having them. But we also know that we're not perfect and will make mistakes. If we could keep the precepts perfectly, we would not need to take them. The Buddha set up many ways whereby we can make amends when we transgress precepts, and by following these, we restore the purity of our precepts. In this way, we learn from our mistakes. However, if monastics transgress a root precept — such as killing a human being, stealing something of value, having sexual intercourse, or lying about spiritual attainments — with all factors complete, he or she is no longer a monastic and must return to lay life. Lay followers may retake the five precepts if they have broken them.

When we transgress a precept, it is important not to conceal it, but to reveal it and use the methods taught in the Vinaya to purify both the destructive karma and the infraction of the precept. There are many stories in the sūtras of people who obstinately held wrong views or refused to follow the training,<sup>33</sup> but later regretted their misdeeds. They went to the Buddha to reveal and confess their errors: “Venerable, a transgression overcame me, in that like a fool, confused, and blundering, I did [that behavior]. Venerable, may the Bhagavān forgive my transgression seen as such, for the sake of restraint in the future.” The Buddha then agreed that the person indeed committed a transgression and spoke of the consequences of having done so because he wanted to make sure the person understood the faults of the action. When the Buddha was sure that the person comprehended this and that his confession was genuine, he said: “Since you see

your transgression as such and make amends in accordance with the Dhamma, we forgive you. For it is growth in the ariya's discipline when one sees one's transgression as such and makes amends in accordance with the Dhamma by undertaking restraint in the future.”

It is essential that monastics help one another by giving and receiving advice and admonishment. When a monastic misbehaves but does not acknowledge his error, individual monastics or the Saṅgha community should advise him with a compassionate motivation so that he can correct his ways. When we receive admonishment, we must listen respectfully and contemplate what those who are senior in ordination or wiser in the precepts say. After the root precepts, the second category of precepts — the remainders (*saṃghāvaśeṣa*, *saṃghādiseṣa*) — are the most serious to keep well. Many transgressions of the remainders are tied to defiantly refusing to heed advice and admonition.

Such behavior creates many hindrances to our practice. In some cases, the behavior a person is being warned against may not be naturally negative and thus itself would not create a big hindrance. However, when someone is defiant, stubbornly defends himself, and refuses to listen to wise advice, he creates obstacles to spiritual progress. For example, when the Buddha recommended that monastics eat only before noon, the monk Bhaddāli told the Buddha he was not willing to do that and announced to the Saṅgha as well that he refused to undertake that training (MN 65). While eating after noon is not naturally negative, Bhaddāli's attitude of clinging to his own ideas created the obstacle. Although it can sometimes be hard to listen to others when our self-centered attitude is strong, for our own benefit we should try to take in the compassionate counsel that those wiser than us offer.

Fortunately for Bhaddāli, some wise monks recommended that he apologize to the Buddha, which he did. The Buddha was stern with him in response. It made me (Chodron) wonder what would have happened had Bhaddāli tried to follow the training and then, if he experienced difficulties, had humbly gone to the Buddha to explain. Surely the Buddha would have compassionately helped, and so many problems would not have arisen.

If we keep our precepts well and take the essence of our precious human lives, our minds will transform and we will be able to accomplish much that is of benefit to ourselves and others. How is this to be done? Sāriputta recommended (MN 3.7):

Here disciples of the Teacher who live secluded train in seclusion; they abandon what the Teacher tells them to abandon; they are not luxurious and careless; they are keen to avoid backsliding and are leaders in seclusion.

Sāriputta goes on to say the real evil is greed and hatred, anger and revenge, contempt and domination, envy and avarice, deceit and fraud, obstinacy and presumption, conceit and arrogance, vanity and negligence. In other words, “seclusion” means isolation from afflictions, destructive actions, and the eight worldly concerns. Seclusion from self-centeredness and self-grasping ignorance are best. Someone could live in seclusion in a remote place far from other living beings and still have a mind filled with negativities and distractions. Genuine seclusion entails conscientiousness, mindfulness, introspective awareness, integrity, and consideration for others. In short, seclusion is to train our minds so they become one with the Dharma.

Precepts give structure to our physical and verbal actions and stimulate us to examine our minds, for only by working with our views and emotions can we keep the prātimokṣa precepts well. However, monastic life is more than abiding in precepts. In *Precious Garland*, Nāgārjuna points out fifty-seven faults that monastics (and lay followers too!) should abandon. By noticing when they arise in our minds and knowing the antidotes to each one, we will be able to counteract them and pacify our minds. Nāgārjuna’s verses and their explanation can be found in *Practical Ethics and Profound Emptiness*.<sup>34</sup>

## REFLECTION

---

1. What is the reason for not concealing our ethical misdeeds and broken precepts?
  2. What benefits arise from confessing and regretting our harmful actions?
  3. What effect would admitting and regretting your misdeeds have on your mind? Is this something you want to do?
-

## 5 | Saṅgha: The Monastic Community

### *The Value of the Monastic Community*

THE SAṄGHA,<sup>35</sup> the monastic community, has been important, respected, and valued throughout history. One reason is that its members practice the higher training in ethical conduct by taking and observing the bhikṣu or bhikṣuṇī precepts. Having a simple lifestyle, they are free from family concerns and the necessity to work to provide for a family. Having more time and energy for Dharma practice, the Saṅgha has been charged with preserving the Buddha's teaching throughout the ages. The Saṅgha upholds the transmitted Dharma by memorizing, learning, contemplating, and teaching the Buddhadharma; it upholds the realized Dharma through meditation and practice that lead to profound spiritual realizations. This is not to say that lay practitioners are incapable of these activities, and there have been great lay practitioners throughout history.

Monasteries act as the physical locations for the full-time practice and preservation of the teachings. When people think of monastics living together for the purpose of studying and practicing the Dharma, they feel inspired. Rejoicing in the monastics' serious practice of purifying their minds and cultivating good qualities, people are uplifted and feel hope for the world. Monasteries also act as physical locations where the public can go when they need spiritual comfort or teachings. They also house large libraries and Buddhist art and artifacts.

In our day and age, Saṅgha living together at monasteries provides an example of a community intent on living ethically. Not conforming to the consumer culture, they show that it's possible to be happy and content with a simple lifestyle and few possessions. Many monasteries take care to reduce, reuse, and recycle; they compost organic material, showing the public that it does not take great effort to do one's part to care for the environment.

Some monasteries have temples of great grandeur that inspire the residents and visitors alike. How is this concordant with a simple lifestyle? It is said that

ideally the monastery should be rich, but the individual monastics living there should be poor. This means that common areas — the temple, library, meeting areas, and so forth — should be attractive and inspiring, but monastic quarters, robes, and personal articles should be modest.

The Buddha indicated the importance of the Saṅgha when he was about to enter parinirvāṇa (DV 45):

Do not say after my parinirvāṇa that pure practitioners have no protector. Now that I have taught the *Prātimokṣa Sūtra* and the excellent Vinaya well, regard these as the World-honored One after my parinirvāṇa.

If this sūtra remains long in the world, the Buddhadharma will be widespread, and because it is widespread, nirvāṇa can be attained.

Failure to keep the *Prātimokṣa Sūtra* and to conduct the poṣadha as it should be is like the setting of the sun, when darkness shrouds the entire world.

Always protect and keep the precepts, just as a yak protects its tail. Always stay together in harmony according to the Buddha's words.

And from the dedication verses of the poṣadha (DV 46):

The Buddha's appearance in the world is to be widely celebrated.  
Listening to the Dharma and practicing it accordingly is the surest  
cause for peace.

The harmony of the assembly is the surest factor for nirvāṇa.  
Liberating sentient beings from suffering is the utmost happiness.

## *The Flourishing of the Dharma and the Existence of the Dharma*

Traditionally the flourishing of Buddhism in a land is dependent on the existence of the Saṅgha. Because lay practitioners are more numerous in the West, some of my Western friends ask me if this is still the case. To answer, we must distinguish

between the flourishing of the Buddha's doctrine in a place and the presence or existence of the Dharma there. According to scripture, whether a place is a "central land" where the Buddha's doctrine flourishes depends on the presence of the fourfold assembly — bhikṣus and bhikṣuṇīs (male and female fully ordained monastics) and male and female lay practitioners with five precepts. Since lay followers are numerous, the flourishing of Buddhism in a country is determined by whether the practice of the Vinaya is present there, specifically if there is a fully functioning monastic community — that is, one that conducts the three principal Vinaya rites: fortnightly confession and restoration of precepts (*poṣadha*, *uposatha*), the annual rains retreat (*varṣā*, *vassa*), and the annual invitation for correction (*pravāraṇā*, *pavāraṇā*).

The existence or presence of Buddhism in a locale depends on the existence of practitioners. If lay followers who have taken refuge in the Three Jewels and abide with the five precepts live in a place, Buddhism is present there. Thus there are very few times when Buddhism has not been present. For example, after Buddhism in Mongolia was destroyed by Communists, laypeople who had taken refuge and kept the lay precepts still lived there. Although Buddhism existed in Mongolia at that time, we can't say it flourished there or that Mongolia was a central land then.

## *The Intent and Purpose of Monastic Life*

Stable interest in becoming a monastic develops naturally from deep reflection on the foundational Buddhist teachings. Contemplating the four truths, especially impermanence and death and the disadvantages of saṃsāra, we develop the aspiration to be free from saṃsāra. As a result of reflecting on compassion and dependent arising, we become interested in the nature of the mind, which leads to an appreciation of emptiness. This leads to an understanding of rebirth, and then to the possibility of achieving liberation. When one is convinced of this possibility, one will naturally be drawn to living a life according to ethical precepts, which could lead to requesting ordination as a monastic. The Buddha explained the development of the motivation to ordain (MN 29.3):

Monastics, here a clansman goes forth out of faith from the home life into homelessness considering, “I am a victim of birth, aging, and death, of sorrow, lamentation, pain, grief, and despair. I am a victim of suffering, a prey to suffering. Surely an ending of this whole mass of duḥkha can be known.”

The Buddha established the monastic community for a purpose. To fight afflictions, we need the correct view of emptiness, and to maintain this view, we must develop single-pointedness of mind. To concentrate, mindfulness is needed, and this can be gained from training in ethical conduct. While many lay practitioners maintain the ethical conduct of the five precepts, the ethical conduct of monastics is stricter and thus has a greater effect to subdue the mind. Whereas the life of a householder may be more colorful, monastic life is more stable. Although it is difficult and requires giving up sexual relations and so on, there are some consolations and benefits even in this lifetime. The monastic way of life is praised not because it is inherently worthy of respect, but because it has direct relevance in aiding the development of the three higher trainings.

This latter point is important in the West, where some people may think that monasticism is outdated and irrelevant. We must remember that our teacher Śākyamuni Buddha himself was a monk. The Buddha did not live as a monk for fifty years to avoid working and to get free lunches in villages! Rather, because of the simplicity and lack of worldly activities a monastic life entails, he had more freedom to learn and meditate on the Dharma. The examples of the past great masters — the majority of whom were monastics — should be followed by the disciples of the present and future.

Even after attaining awakening, the Buddha remained a monastic. His ethical restraint and monastic lifestyle were natural expressions of the purity of his mind. His example illustrates how a person whose mind is completely liberated from defilements lives his or her life.

Monastic life is not suitable for everyone. Someone who practices diligently can attain high realizations as a lay Buddhist. Marpa, the great master of the yogi Milarepa, was a lay practitioner and inconceivable tantric adept, as was Milarepa. Everyone must choose the lifestyle most suitable for themselves and have confidence in their ability to practice.

In Tibet, two communities of practitioner evolved: the community of those with braided hair in white dress and the community of ordained monastics in saffron (maroon) robes. The white dress refers to lay practitioners, especially those practicing Vajrayāna. They do not observe the external forms of ordained life, such as wearing monastic robes and shaving the head, but they keep precepts: the five lay precepts, the bodhisattva ethical code, and the tantric ethical code. The saffron-robed are those who are celibate and follow the monastic ethical code. They may also follow the bodhisattva and tantric ethical codes. In Tibet, each community practiced with clarity and direction.

Today we find people who are neither in one camp nor the other. The Tibetan yogi Drukpa Kunleg (1455–1529) said many people who practiced like this are now in the hell realms. If you are a monastic, you should dress and act like one. On occasion I meet people who are wearing monastic robes at one time and lay clothes at another, so even I get confused when I see them!

Sometimes we encounter laypeople who are eager to put on clothes that resemble monastic robes. This, too, is confusing for the general public, and for me too! My debate teacher, Tsenzhap Serkong Rinpoche, said we should not be like bats: in one situation, to fulfill its self-centered interests, a bat will claim to be a bird; in another situation when it is more advantageous, it will announce, “I’m a mouse!” People should make a clear decision regarding which lifestyle they want to live, and then receive the appropriate level of precepts and wear the clothes that correspond to it.

Whichever lifestyle you follow, do it with clarity. If you decide to become a monastic, the change in your appearance should reflect a change in your mind, in your lifestyle, and in the direction of your life. If someone puts on monastic robes without having the proper motivation, he usually does not follow the precepts well. In that case, he damages himself and is in danger of polluting the Dharma. I went to Mongolia when it was a Soviet republic. In a gallery there was a painting of a huge monk with a gaping mouth and laypeople walking into it. The curator was embarrassed to tell me that the painting indicated that people were being exploited by the Saṅgha. I replied that there’s no need for him to be embarrassed because in some cases this happens. Each monastic should analyze his or her motivation and actions and see if they are cultivating the Dharma or disgracing it.

Keeping monastic precepts for a long time is of great benefit. It enables people to gain strong conviction in the efficacy of the three higher trainings and

habituate themselves to them over time. In their future lives, they will encounter conducive circumstances and will be able to continue practicing as a monastic. In this way, awakening will be attained more swiftly because they are habituated to releasing attachment to saṃsāra and to practicing the path.

That said, if a person no longer wishes to be a monastic, he is free to return the precepts and continue his Dharma practice as a layperson. No one is pressured to continue being a monastic if he no longer desires to be.

For those who have the strong desire to keep the precepts but have obstacles to doing so for their entire lifetime, the Thai system of permitting ordination for a limited period — usually three months — is good. However, short-term monastic ordination is not possible in the Tibetan system because all the prātimokṣa precepts, except the eight one-day precepts, must be taken with the motivation to keep them for the duration of our lives. However, someone can take the eight one-day precepts for an extended period of time and reap the benefits of doing so.

## *Maintaining the Purity of the Saṅgha*

In the *Sutta on the Fruits of the Homeless Life*, the Buddha describes how one becomes a monastic and then lives as one (DN 2.42):

And having gone forth [from the householder life to the homeless life of a monastic], he dwells restrained by the restraint of the precepts, persisting in right behavior, seeing danger in the slightest faults, observing the commitments he has taken regarding body, deed, and word, devoted to the skilled and purified life, perfected in ethical conduct, with the sense-doors guarded, skilled in mindful awareness, and content.

To receive ordination precepts, a person must be motivated by renunciation — the aspiration to be free from cyclic existence and attain liberation. However, in ancient India and later in Tibet, a few people took ordination to escape punishment or danger, or as a way of receiving requisites. Of the Tibetan refugees in India today, approximately 10 percent are monastics. Of these, some are genuine practitioners and others are not. Those who are proper monastics should

remain; those who misbehave or are lax should go. More emphasis on the quality rather than the quantity of monastics is necessary. One step in this direction would be to take seriously, and not just as a formality, the part of the ordination ceremony that questions whether a person has any obstacles to receiving ordination. This is my view; other Tibetan teachers may see the situation differently.

The Vinaya states that people should be properly screened and prepared before ordination and then trained in the monastic life afterward. Nevertheless, this is not the case for some monastics. As a result, the individual monastics and the general Buddhist community suffer. This situation saddens me because the existence, well-being, and good example of a well-trained monastic community is important for lay practitioners, other monastics, and society in general.

Although it is up to each person to decide whether to become a monastic, once you are ordained, you should practice sincerely. Putting on robes and shaving one's head are not sufficient to be a monastic. If you wear the robes of a monastic but your way of life is not good, disadvantages accrue to you as well as to the Saṅgha. The Buddha declared that accepting offerings from lay followers who donate with faith but not keeping your precepts well creates powerful karma that will ripen in a hellish rebirth. He explained that there are four ways of enjoying or using requisites: enjoyment with theft, with debt, as an inheritance, and as an owner.

1. When monastics who transgress precepts and have poor conduct enjoy requisites, it is as if they were stealing the requisites because they have been offered to those who practice well. This is *enjoyment with theft*.
2. When monastics with good conduct enjoy offerings but do not reflect on the kindness, generosity, and merit of the donor and do not dedicate for the donor's welfare, it is *enjoyment with debt*. This is because they consume the requisites but have not fulfilled their commitments to the donor.
3. Ārya learners who are on their way to become arhats are those truly worthy of receiving offerings. When these āryas enjoy offerings, it is *enjoyment of an inheritance*, since it is as if they were using the inheritance that will later become theirs.

4. Arhats' use of requisites and offerings is *enjoyment as an owner*. Since they have eradicated all pollutants and fulfilled the aim of the path, the offerings are theirs to use.

If a monastic does not behave properly, the Saṅgha as a whole will face difficulties. Lay followers become disillusioned, which harms their faith in the Dharma. In addition, the lay community will lose respect and look down on monastics. To avoid this, monastics must study and practice well and make themselves into objects worthy of respect, and laypeople should respect and support them. Some people may be surprised at my frankness, but I say these things out of love and respect for the Dharma and the Vinaya and for sentient beings.

Along this line, Atiśa gave excellent advice to monastics:<sup>36</sup>

For those holding monastic ordination,  
the big trap lies in receiving  
material gifts and social respect.  
Avoid attachment to such things.  
Those free from materialistic grasping  
are a source of delight to the wise,  
like a lotus blossoming in fire.

Ordained practitioners have a special responsibility  
in preserving the holy Dharma.  
They should live in the four higher ways,  
such as moderation, and so forth,  
should have few needs and  
learn to be content with a simple life.

One should live with few possessions  
and dwell with one's back turned  
to the things that cause grasping.

Sometimes monastics will begin their monastic life with a sincere motivation but later be sabotaged by various types of attachment and conceit. The Buddha warned (MN 29.2):

When he has gone forth thus, he acquires gain, honor, and renown. He is pleased with that gain, honor, and renown, and his intention is fulfilled. On account of it he lauds himself and disparages others thus: “I have gain, honor, and renown, but these other monastics are unknown, of no account.” He becomes intoxicated with that gain, honor, and renown, grows negligent, falls into negligence, and being negligent, he lives in suffering.

The Buddha compares this to someone who needs heartwood to make an article but passes up the heartwood and takes twigs and leaves instead, thinking he will be able to build what he wants with those. Such a person is sadly mistaken and will not be able to fulfill his aim.

Attachment to offerings and honor are not the only trap for monastics. The sūtra continues, talking about a monk who practices ethical conduct well. He receives gain, honor, and renown but is not pleased with them. He rejoices over his practice of the precepts — and it is fitting to do so — however, he then becomes arrogant because of this, praising himself for upholding the precepts well and disparaging others for being sloppy or immoral. Such attachment and arrogance — this time in relation to the keeping of pure precepts — makes him become self-satisfied, complacent, and negligent in developing further virtues. As a result, he too abides in suffering.

Similar results occur when attachment and arrogance arise in a monastic who has attained serenity, gained supernormal powers, or gotten a taste of temporary liberation in deep concentration. In each case, conceit can cloud the mind, causing the person to become complacent and smug. They lose energy and do not fulfill the noble aspirations they had when joining the Saṅgha. We must remain humble and focused on the ultimate attainments of liberation and awakening.

Meditation on the kindness of others and the disadvantages of the self-centered attitude are good antidotes to such conceit and complacency. Seeing the kindness we have received from others makes us vividly aware that everything we know and all that we have accomplished is not due to an inherently spectacular ability in ourselves. To the contrary, it is due to the kindness of those who have taught us, cared for us, and encouraged us. Therefore conceit is totally inappropriate. When we consider how self-importance and smugness have sabotaged us during our beginningless lives in cyclic existence, we develop

antipathy toward these mental poisons. Strong mindfulness and introspective awareness arise; we are determined to not fall prey to such self-defeating habits and to remain true to our spiritual aims. To help us do that, the Buddha recommended that all monastics reflect thus (AN 10.48):

Monastics, there are these ten points that one who has gone forth should often reflect on. What ten?

One gone forth should repeatedly reflect: “I have entered a different and special way of life.”

One gone forth should repeatedly reflect: “My livelihood [requisites] depend upon others.”

One gone forth should repeatedly reflect: “My deportment should be different [calmer]. There remain further practices that I must do.”

One gone forth should repeatedly reflect: “Do I reproach myself concerning faults in my conduct?”

One gone forth should repeatedly reflect: “Do my wise companions in the spiritual life find fault with my conduct?”

One gone forth should repeatedly reflect: “I must part and be separated from everyone and everything dear and agreeable to me.”

One gone forth should repeatedly reflect: “I am the owner of my kamma, heir of my kamma, I have kamma as my origin, kamma as my relative, kamma as my resort; I will be the heir of whatever kamma, good or bad, that I do.”

One gone forth should repeatedly reflect: “How am I spending my days and nights?”

One gone forth should repeatedly reflect: “Do I delight in solitary dwellings or not?”

One gone forth should repeatedly reflect: “Have I experienced any profound truths or wise insights of the ariyas, so that when facing death, I do not feel embarrassed when questioned by my spiritual companions?”

Monastics, these are the ten points that one who has gone forth should reflect on.

Since attachment to family and attraction to people don't disappear upon receiving precepts, the Buddha gave advice to monastics on the proper way to relate to lay followers. The Pāli commentary *Sāratthappakāsinī* by Buddhaghosa explains (SN 798n272):

As the moon gliding across the sky does not form intimacy, affection, or attachment with anyone, nor give rise to fondness, longing, or obsession, yet remains dear and agreeable to the multitude, so you too should not form intimacy and so forth with anyone. Then, by doing so, you will approach families like the moon, dear and agreeable to the multitude. Further, as the moon dispels darkness and emits light, so you will dispel the darkness of defilements and emit the light of knowledge.

This advice is so moving that all of us, lay and monastic, would do well to heed it. Open-hearted care and concern free from longing and guilt is a healthy way to relate to others.

How do lay followers handle a situation in which a monastic is not behaving according to the precepts? First, we should try to prevent such situations from occurring. For example, lay practitioners should not invite monastics to join them in watching movies with sex and violence. They should not drink alcohol or take recreational drugs in the presence of monastics, take monastics to a casino, hug monastics of the opposite sex, or of the same sex if they are gay. I have heard of all the above happening; such activities are not suitable for monastics, and lay followers must be aware of this. Also, refrain from offering monastics luxury items; some monks become spoiled by lay followers who dote on them.

In the *Inquiry of Ugra Sūtra*, the Buddha gave advice on how to regard a monastic who has transgressed precepts. Without disrespecting the person, we think that the robes are the robes of the fully awakened Buddha, who is free from all pollutants and has complete ethical conduct, concentration, wisdom, and liberation. As such, we have respect for āryas and generate compassion for the monastic. Without whitewashing the situation, we recognize this person's conduct is not appropriate although he wears the Buddha's robes. But since the Buddha advised us not to despise the unlearned, we recall that it is the person's afflictions that have committed the offense. Since this person has access to the Buddha's teachings, if he studies and practices them in the future, he will come to

know, confess, and rectify his lapses. In this case, he will still be able to become an ārya and a buddha one day.<sup>37</sup>

In this way, we protect ourselves from becoming judgmental or from losing faith. In addition, we think, “I, too, have the seeds within me to act in inappropriate and nonvirtuous ways. Thus I will learn from observing this person and invigorate my mindfulness and introspective awareness to prevent myself from acting in a similar manner.”

The Vinaya contains many ways for monastics to confess and make amends for the various types of transgressions. Monasteries with knowledgeable monastics know and practice these ways, thus benefitting the individual, the Saṅgha, and the public.

An important purpose of monastic life is to reduce attachment, and for that, it is essential that monastics live simply. When Atiśa came to Tibet, a big reception was held to welcome him, and monks wearing elaborate costumes and headgear assembled on horseback. Appalled by this extravagant display, Atiśa covered his head with his upper robe and said, “The Tibetan ghosts are coming!” Seeing this, the monks asked what happened and learned that Atiśa was unhappy because they did not have a simple appearance. They descended from their horses and changed into ordinary robes. Seeing this, Atiśa was pleased.

In Tibet before 1959, some abbots and monks wore very elaborate and impressive robes and costumes that reflected their status and connection to rich benefactors and powerful personages. It seems they had more respect for the paraphernalia given by rich benefactors than the robes given by the Buddha. As Kedrup, Tsongkhapa’s disciple, noted, “If monastics do not maintain integrity and instead indulge in excesses, it is a sign of the degeneration of the Dharma.” Therefore monastics must constantly strengthen their motivation to renounce the duḥkha of cyclic existence and attain awakening. As monastics, their task is to learn, think, and meditate on the vast and profound teachings as much as possible. In conjunction with this, they should teach, translate, write, and lead others in practice so that the Dharma will be upheld in our world.

Monastics must be celibate. There are no exceptions: abstention from sexual intercourse is one of the four root precepts, transgression of which means that person is no longer a monastic. While we sometimes hear stories of great practitioners who have consorts, these people are not monastics. If a monastic reaches the level where he or she is capable of doing the consort practice —

isolated mind on the completion stage — he should give back his monastic precepts and return to lay life. Tsongkhapa had attained the stage where he was capable of practicing with a consort in order to dissolve the winds into the indestructible drop at his heart. However, with great compassion for sentient beings and great respect for the Vinaya, he chose not to do this and remained a monk for the rest of his life. He knew that living as a pure monastic would be a clearer and more inspiring example for future generations of monastics. At the time of his death, when the winds naturally dissolve, he meditated on the clear light and attained the next level of tantric realization.

Discipline in monasteries must be strict regarding this point. The Indian yogi Virūpa (8th–9th century), from whom the Sakya lineage stems, was a monk at Nālandā Monastery in India. While he studied Pāramitāyāna, he also practiced highest yoga tantra. One night the disciplinarian at Nālandā was making the evening rounds, and from Virūpa's room he heard women's voices. Opening the door, he saw women who, although they looked like prostitutes, were ḍākinīs. We don't know if the disciplinarian recognized them as such, but in any case he said that because this was a monastery for monks, they must leave. He also expelled Virūpa from the monastery. Even though Virūpa was highly realized, no exception was made for him — in the monastery everyone had to keep the root prātimokṣa precepts no matter their level of realization. I think that is wonderful. Someone who has developed internal Tantrayāna realizations should return his or her monastic precepts and practice tantra outside the monastery.

I doubt that everyone who thinks they are at the level of doing consort practice is capable of doing it. A person does not make this decision for himself; he follows the instructions of his lama. A previous incarnation of Serkong Dorje Chang was a monk when he attained the level in which practice with a consort would be beneficial. Following the advice of the Thirteenth Dalai Lama, he returned to lay life and married even though he was capable of intercourse without emission. This demonstrated his compassion for others — he did not want them to lose faith in the Saṅgha — and his respect for monasticism.

Monastics who are spiritually accomplished must also maintain the prātimokṣa discipline. Vinaya and the prātimokṣa precepts were established in accord with ordinary, worldly conventions, and they should be kept in that perspective. Unconventional behavior or public displays of supernormal powers

could lead other monastics without such accomplishments astray and cause confusion in the minds of lay followers.

Some people put on the mask of being a religious practitioner but are corrupt. Many Christian monastics live simple, contented lives; some live as hermits their whole lives. A cloistered French monastery allowed me to visit. The abbot who received me was barefoot. Some years ago, Pope Francis dismissed a German bishop because he was living a luxurious life. Abbots of our monasteries should do likewise if the monks are living luxuriously. Monastics must learn the Dharma and Vinaya and apply it to their lives. If we sincerely believe in contentment coming from a simple lifestyle, we won't be hypocritical and destroy the faith of others.

Some monastic precepts must be kept strictly, but in certain circumstances the Vinaya allows exceptions. Monasteries may vary in terms of how certain precepts are kept. Personally, I prefer that the precepts are followed more strictly. Once we make an exception for one thing, it's like a crack that eventually becomes bigger and bigger. From the beginning, it's important to follow the discipline closely. We should not relax the discipline just to have more monastics. Quality is more important than quantity.

## REFLECTION

---

1. Why is it important for the individual and for society that monastics keep their precepts well?
  2. If you are a monastic, reflect on the ten points the Buddha asked monastics to contemplate. If you are a lay follower, reflect on ways you can help monastics to keep their precepts.
- 

## *Tibetan Monastics and Monastic Institutions*

The prātimokṣa precepts are to help us regulate actions of body and speech, and in doing so, they make us look at the mind that motivates our physical and verbal actions. Keeping all the precepts meticulously is extremely difficult; not all Tibetan monks are perfect and follow the precepts to the smallest detail. But I think Tibetan monks in general keep the major precepts of the 253 bhikṣu

precepts. The great majority of Tibetan monastics are sincere practitioners, and they form the core of our monastic institutions. They engage in the three major Vinaya rites — the fortnightly confession and restoration of precepts, the rains retreat, and the invitation for correction at the conclusion of the rains retreat. Monastics who do not follow the important precepts are a sign of degeneration. We cannot deny their existence, but they do not represent all Tibetan monastics. In any religious group there are usually a few mischievous people, but to blame the entire community for the bad behavior of a few individuals is wrong.

We should look to the people who practice well for inspiration and not dwell on those who fail to do so. If we can help them improve their conduct, that is good, but if they transgress a root precept, they are no longer monastics and must be expelled from the Saṅgha.

Some lay lamas have families, yet they wear robes that look similar to monastic robes. This is confusing to the public. I have advised them to wear white robes to distinguish themselves from the Saṅgha, but some do not. Some laypeople put on monastic robes in order to collect offerings during large pujas where thousands of people are in attendance. These people are not actual monks, and their pretending to be so creates heavy nonvirtuous karma.

Some monastics in both the Dharmagupta and Mūlasarvāstivāda traditions do not eat in the afternoon. This is wonderful. Most Theravāda monastics also do this; in addition, some go on alms round (*piṇḍapāta*) and some do not touch money. This is also admirable. Due to the large percentage of the Tibetan population that is monastic, practical constraints prevent us from following some of these practices.

Prior to 1959, approximately one-quarter of the male population in Tibet were monks. In the Lhasa area, the monasteries were the size of small towns. Ganden Monastery had approximately 4,000 monks, Sera 8,000, and Drepung 10,000. These large monasteries, and many of the smaller ones, also function as schools where the monks study the main philosophical treatises for up to twenty years. The study program includes classes with a teacher, memorization, many hours of debate, pujas, Vinaya rites, and other group activities. Many young boys join the monasteries. They usually live with an older monk in one of the group houses in the monastery. These large monasteries are schools where children are raised within a lifestyle consisting of religious study and practice. Needless to say, with so many children, adolescents, and young adults who are not only

memorizing and studying but also bursting with energy, Tibetan monasteries generally are not the quiet, remote hermitages found in some other Buddhist countries.

The Buddhist tradition of debate originated in ancient India. In the Pāli sūtras we see that the Buddha himself discussed and debated philosophical principles with the renunciates and brahmins of his time. In later centuries, large monastic universities such as Taxila, Nālandā, Odantapurī, and Vikramaśīla came into being. At these sites monastics used debate as a pedagogical tool for their own learning, as well as to establish the validity of the Buddha's teachings when confronted by the challenges of non-Buddhist scholars. As an extension of the Nālandā tradition, Tibetan Buddhism does the same.

An important element for a successful debating program is a large number of students. By having many people to discuss the Dharma with, monastics are exposed to a variety of viewpoints and perspectives that help to enhance the breadth of their understanding. They learn to evaluate doctrines based on sound logical arguments. Of the three wisdoms, the education program in Tibetan monasteries emphasizes the development of the wisdoms of learning and contemplating. The wisdom of meditation is usually cultivated privately.

Given the large number of monks at these major Tibetan monasteries, it would have been impossible for local villagers to give alms on a daily basis. Even if the monks had gone to Lhasa, several hours' walk by foot, all the streets would have been jammed! Although laypeople brought donations of food to the monasteries, it was difficult to obtain the amount needed to feed so many monastics, and pots big enough to cook for thousands could not be found. Therefore the monks prepared meals in their smaller group houses within the monastery. This necessitated buying and cooking their own food, and for that reason they handled money.

This same system has continued in exile. It would be too difficult for Tibetan refuge settlements or local Indian villages to offer food to thousands of monastics each day. Furthermore, the monastics are immersed in study programs that are time-intensive, so it is easier for a few monastics to buy food and cook for a larger group. The food is served and eaten quickly so they can return to their studies.

The monastics in some Tibetan monasteries observe the practice of not taking food after midday. They gather for the midday meal and have only tea the rest of the day. I once instructed a monastery in Dharamsala to do that, but it

proved to be fruitless. Although the monastery did not serve an evening meal, the monks prepared food in their rooms on one-burner stoves.

Unlike Christian monasteries and Buddhist monasteries in other Asian countries where the monastery supplies robes, shoes, and bags and covers medical and travel expenses, Tibetan monks must supply these themselves. For this reason, too, they use money. They usually receive donations from relatives or friends, or use the offerings distributed during large ceremonies and teachings. In some monasteries, breakfast is provided to all monks who attend the morning puja, and when benefactors sponsor pujas, they often offer a meal to the assembly. In India, the Tibetan Nuns' Project has been able to provide food for the nuns enrolled in some nunneries. However, some of these nunneries are overcrowded, and some nuns must live outside and provide for themselves. Such practical concerns require that Tibetan monastics use money to buy necessities.

In Tibet and in the early years of our lives as refugees in India, some monks studied and practiced with their belly only half full. I know some excellent monks who are now Dharma teachers for whom this was the case.

Some people think that Tibetan monks do not keep Vinaya strictly because they practice tantra. This is not the case. In fact, tantric precepts are stricter because they pertain to mental actions as well as physical and verbal behavior. Practitioners who observe the tantric ethical code and commitments should also observe Vinaya because Vinaya precepts are easier to keep and are good preparation for taking the bodhisattva and tantric precepts. Practicing Tantrayāna should not be used as an excuse to neglect Vinaya. Quite the opposite, we should be stricter in practicing Vinaya because if we aren't, how can we expect to observe the tantric ethical code, which is more difficult to follow?

## *Challenges for Western Monastics*

The situation for Western monastics is especially difficult because few monasteries are established in the West, and while living in India they face visa, health, and language difficulties. Because they are comparatively new to Buddhism, Western monastic aspirants are not always aware of the behavior expected of people holding prātimokṣa precepts. In addition, prospective candidates are not always properly screened or prepared before ordination.

Although they would like training in Vinaya, it is not always available to them in their own language. Western monastics often end up living on their own or at Dharma centers, where they work and receive room and board.

In 1993, during a conference with Western Buddhist teachers, some Western monastics told me of the difficulties they face, and I began to weep. We must think and then act to remedy this situation.

The best solution is for Western monastics to begin monasteries and to develop their own training programs, and we Tibetans can help from our side. Monastics who wish to train in India can establish Western khamtsens (houses) in the Tibetan monasteries and nunneries. In addition to the two-week preordination course currently taught by Western monastics in Dharamsala, India, intensive training courses could be held after ordination, as is done in Taiwan.

Geshes and khenpos at Dharma centers should educate Western monastics in the Vinaya and do the fortnightly poşadha (T. *gso sbyong*) with them. This is important not only for the students but also for the teachers' practice. They should also have special courses where they teach Western monastics the prohibitive and prescriptive precepts and monastic etiquette. I think it is wise for senior Western monastics as well as the geshe or khenpo to assess the aspirants because Westerners can more easily detect potential problematic areas with candidates from their own culture.

The gradual approach of the Christian monasteries — where a candidate for ordination must pass through many stages before receiving full precepts — works well. This gives the person time to think about monastic life and evaluate if it is suitable for them. The monastic community also has the opportunity to assess the suitability of the candidate. I encourage Westerners who are considering monastic ordination to live in a monastery as a layperson for some time so that they have an experience of living and practicing in a monastic community. Then they can slowly take the progressive levels of ethical precepts and adjust to each level before assuming the next.

To receive the four requisites — food, clothing, shelter, and medicine — monastics need the support of lay practitioners. My hope is that lay followers will support Western monastics and reap the benefit of having Dharma practitioners who share their culture and language. At present, many monastics in the West must hold a job in order to sustain themselves; this makes keeping their precepts

and living a monastic lifestyle of simplicity difficult. Many lay followers prefer to donate to monasteries where they see a group of monastics practicing together. Although some Saṅgha members prefer the independence of living alone, they must also accept the difficulties that entails.

After they have received some years of initial training in a monastic setting, some monastics may wish to do as the Tibetan sage Drom Tonpa advised: remain in an isolated area with a small group of peers who have similar attitudes and do similar spiritual practices. Although they may live separately, they remain together as a spiritual community. Then when difficulties arise — sickness or spiritual problems — spiritual companions can help. In addition, by staying with “friends in ethical conduct,” they will support one another in being conscientious and refraining from negativities.

Monastics who are also teachers must carry their sense of renunciation wherever they live. To maintain that, living with other monastics — be they our teachers, peers, or students — is valuable. Although monasteries are rare in the West at present, the hope is that more will be built in the future. This will really help the rooting and flourishing of the Dharma in the West. In the meantime, monastics who do not live in community should cultivate friendships with spiritual comrades with similar views, aspirations, and precepts. They can then discuss the Dharma and various challenges they face together.

## *Full Ordination for Women*

As noted above, Vinaya texts delineate different levels of monastic ordination. For men, there is full ordination (*bhikṣu*) and novice (*śrāmaṇera*). For women, there is full ordination (*bhikṣuṇī*), training (*śikṣamāṇā*), and novice (*śrāmaṇerī*). According to the Mūlasarvāstivāda Vinaya, a Saṅgha of at least ten bhikṣus (five in outlying areas) must be present for a novice monk to receive bhikṣu ordination. For a training nun to receive bhikṣuṇī ordination, she first goes before a Saṅgha of at least ten bhikṣuṇīs (five in an outlying area), where she receives the abiding-in-pure-conduct<sup>38</sup> (*brahmacāryapasthana*, T. *tshangs spyod nyer gnas*). Then, in the same day, she goes before a Saṅgha of at least ten (or five in an outlying area) bhikṣus and a Saṅgha of bhikṣuṇīs, where she receives the full

bhikṣuṇī ordination. Fewer monastics are needed to preside over novice ordination.

The lineage of full ordination for men came to Tibet from India with Śāntarakṣita (725–88) and his disciples, who established the first monastery in Tibet at Samye in 775. Unfortunately, when Śāntarakṣita brought Indian monks to Tibet, he did not bring nuns. It would have looked suspect had celibate monks traveled with celibate nuns. Because of the lack of requisite bhikṣuṇīs to have the bhikṣuṇī ordination, this ordination never took root in Tibet, although Tibetan women did receive the novice (*śrāmaṇerī*) ordination.

The lineage of full ordination for both men and women was established in Sri Lanka in the third century BCE by King Aśoka's son and daughter, who were both fully ordained monastics. Both lineages were decimated due to the Chola invasions of Sri Lanka in the eleventh century. The bhikṣu lineage was reestablished immediately, but it was not until 1998, when some Sri Lanka nuns received full ordination from Taiwanese monastics, that the bhikṣuṇī lineage was reinstated. Now there are well over one thousand Theravāda bhikṣuṇīs. Many Western women have received Theravāda bhikṣuṇī ordination.

The first bhikṣu ordination in China occurred around 249–53, and the first dual bhikṣuṇī ordination in 434. The lineage of bhikṣuṇī ordination exists in Taiwan, China, Korea, and Vietnam to this day. These nuns are well-educated and leaders in the Buddhist community. Some Western women and a handful of Tibetan women have taken bhikṣuṇī ordination from Chinese, Vietnamese, and Korean Saṅghas.

Scholars have found a few examples of Tibetan lamas giving bhikṣuṇī ordination in Tibet in previous centuries. These ordinations were given in an irregular manner. A question therefore arises regarding the authenticity of that ordination. It is a bhikṣuṇī ordination, but it was not given in the perfect manner. Understanding the nature, purity, and authenticity of an ordination is complex. For example, when someone receives ordination from a preceptor whose ordination has degenerated, if the new monastic is not aware of the preceptor's degeneration, he or she receives the precepts, but the ordination was given imperfectly because the number of monks needed to give it may not have been sufficient.

For many decades I have expressed the hope that the bhikṣuṇī ordination will be given in the Tibetan tradition. When our kind teacher, Buddha Śākyamuni,

established the bhikṣuṇī order, he affirmed women's ability to attain liberation. He explained that the fourfold Saṅgha — fully ordained monks and nuns, and male and female lay followers — harmoniously practicing the Buddhadharma would ensure that his teachings would remain a long time in this world for the benefit of all. If the fourfold assembly is complete, the place becomes a central land, one of the conditions for our precious human life. I often tell Tibetan masters that the introduction of the bhikṣuṇī order is a service to the Buddhadharma, for at present the fourfold assembly is not complete in our culture. Bhikṣuṇī ordination is especially important now, when nuns' education has vastly improved and many nuns are qualified to teach.

I feel that equal opportunity regarding ordination is important. Citing passages in the Vinaya, some Tibetan Vinaya masters suggest that under special circumstances, a valid bhikṣuṇī ordination can be performed by the bhikṣu Saṅgha alone. These special circumstances include a place where bhikṣuṇīs are not available to give the ordination because no bhikṣuṇīs reside in that area or because it is too dangerous for bhikṣuṇīs to travel to that place. Previous and contemporary masters in the Chinese community agree with this.

The bhikṣuṇī ordination is a matter for the Saṅgha<sup>39</sup> as a whole to discuss. No one person has the authority to make the decision. Some people imply that as the Dalai Lama, I can issue a decree introducing the bhikṣuṇī lineage in my tradition, but this is not possible. We must follow the procedure for making major decisions set out in the Vinaya, and this necessitates a group decision by the Saṅgha.

Regarding this issue, the process is complex because the bhikṣuṇī Saṅgha participating in a dual ordination would have to be from the Dharmaguptaka lineage, but the Tibetan bhikṣus follow the Mūlasarvāstivāda Vinaya. Various conferences have been held on this topic both in India and the West, but no definitive conclusion has been reached, although a conference of Tibetan monks said that Tibetan nuns could go to Taiwan to receive the ordination from Chinese monks. However, then the Tibetan nuns would be Dharmaguptaka bhikṣuṇīs and could not do joint Vinaya activities with Tibetan monks who are from the Mūlasarvāstivāda tradition. Furthermore, the nuns' teachers, who are predominantly monks, tell them it is unnecessary to become bhikṣuṇīs because they already have novice ordination and hold the bodhisattva and tantric ethical codes.<sup>40</sup>

Since Vinaya is a practice common to Theravāda, Chinese, and Tibetan Buddhism, discussing this at the international level would be excellent. Representatives of all traditions would be present to discuss the research and to discuss varying interpretations of Vinaya. These representatives need not be highly ranked bhikṣus. It is more important that good Vinaya scholars and practitioners come together — in a Buddhist holy site if possible — to discuss this. After informal, open discussions, a decision could be made by this international group. Decisions made in this way will be easy for everyone across Vinaya traditions to follow. In preparation for that, it would be good if Tibetan bhikṣus were to agree on a way in which the Mūlasarvāstivāda bhikṣuṇī ordination could be given. Many heads of Tibet's Buddhist lineages have expressed similar support for this, and the present Karmapa has taken active steps to introduce bhikṣuṇī ordination. However, many monks are still very conservative.

We Tibetans were very fortunate that after the bhikṣu Saṅgha was decimated during the reign of King Langdarma in the ninth century, we were able to restore the bhikṣu lineage, which was on the verge of extinction in Tibet. As a result, many people have been able to listen, reflect, and meditate on the Dharma as fully ordained monks. This has been of great benefit to Tibetan society and to sentient beings in general. It is my hope that we can find a way to establish the bhikṣuṇī Saṅgha in the Tibetan community as well.

In the meantime, several individual nuns who practice Tibetan Buddhism have received bhikṣuṇī ordination in the Dharmaguptaka Vinaya from Chinese, Vietnamese, or Korean Saṅghas. We recognize them as bhikṣuṇīs. I encourage them to do the three primary Saṅgha rites together: the fortnightly purification and restoration of precepts, the rains retreat, and the ceremony concluding the rains retreat. Some of these nuns are now establishing monasteries in the West.<sup>41</sup>

According to Vinaya, full ordination is available to both male and female practitioners equally. However, the bias against women in Indian culture at the Buddha's time is reflected in certain aspects of Vinaya. For example, a fully ordained monk is considered higher than a fully ordained nun, although there is no difference in hierarchy of the actual precepts.

In addition to introducing the bhikṣuṇī ordination, bhikṣuṇīs must also become objects of reverence. We must examine sexist passages in Buddhist texts. For example, in the rite to ordain male novices, there is a passage saying that

while the bhikṣuṇī ordination is higher than the male novice ordination, bhikṣuṇīs are not objects of reverence for male novices. This discrimination needs to change.

I am heartened that now, for the first time in Tibetan history, there are nun geshes. They completed the same course of study as the monks, with the exception of studying the full Vinaya, and took the same geshe exams. In December 2016 I was delighted to present the first twenty female geshes their geshe degrees at the convocation held at Drepung Monastery in South India. In future years, more nuns will complete their studies, take the exams, and receive their geshe degrees. Ever since the 1960s, I have advocated for better education for the nuns, and with the aid of the Tibetan Women's Project, the Department of Religious and Cultural Affairs, the monk geshes who instructed the nuns, and most of all, the effort of the nuns themselves, this has been accomplished. As women's education continues to improve, more and more women can take up leadership positions, and with their natural tendency toward compassion, they will make a positive contribution to the Buddhadharma and to society.

We must look also from the larger perspective of the bodhisattva and tantric ethical codes. Especially in tantra, not showing respect to women is a downfall. Women are objects of reverence, so it would be inconsistent to practice tantra yet discriminate against women.

### *Advice for Monastics*

I would like to speak now to those of you who are monastics. The heart of Buddhadharma is nonviolence, and the foundation for training ourselves in nonviolence is ethical conduct, specifically restraint from the seven destructive actions of body and speech that directly harm others and the three nonvirtues of mind that indirectly harm others by motivating harmful physical and verbal behavior. Taking and keeping monastic precepts is a huge aid in cultivating nonviolence, and living in a monastery supports you in keeping the precepts. Just by following the daily schedule and the discipline and guidelines, you will abandon coarse destructive actions and cultivate good qualities. Lone trees are twisted and felled by the wind, but trees in a forest protect each other from the wind and grow upward together. Similarly, monastics grow in the same direction

— the three higher trainings, bodhicitta, and so forth — together. Living together in a monastery — in an environment designed for Dharma practice — they can easily keep their precepts and progress on the path. Monastics support one another in avoiding negativities and help one another to purify negativities.

Since we have obtained a precious human life, now is the time to stop the suffering of cyclic existence. When we are laypeople, we face many interruptions to Dharma practice. Ordained life, in contrast, gives us great opportunity to engage in Dharma practice. Therefore we should appreciate the lives and qualities of a monastic lifestyle and recognize the faults of a householder's lifestyle.

Of course, nonmonastics can practice the Dharma, but laypeople need to take care of their families, which necessitates working to gather financial resources. There is then the need to decide how to spend the money and how to protect the things acquired with it. Householders with children worry about their education and behavior when they're young, and about their livelihood and relationships when they are older. Living within a family, they are attached to people and will make enemies when others hurt their dear ones. In these circumstances, even though they wish to practice the Dharma, they are compelled by the situation to spend most of their life, energy, and time looking after relatives as well as the practical matters that concern their well-being: family income, investments, and long-term financial planning; conflicts among family members and crises in their lives; the education and upbringing of children; various social obligations, and so forth. Of course these activities can be done with a positive motivation, but for many people their motivation is one of attachment. Concerning themselves with so many things that distract their minds, it is often difficult to find time to study and practice the Dharma. On the other hand, monastics are free from such activities and obligations.

By contemplating the difference in lifestyles, be aware of the importance of not engaging in unnecessary activities and of cultivating contentment. If a monastic is not content with what he or she has, his life will be similar to that of a layperson. There is not much sense in simply shaving your hair if you do not practice as a monastic and cultivate Dharma qualities in your heart and mind. A foremost practice is to abandon afflictions. The *Sūtra of Mindfulness* (*Mdo dran pa nyer gzbag*) says:

Pleasant and sweet are the afflictions at first;

however, they ripen into piercing pain.  
Seeing that they bring you despair,  
abandon them as you would poison.

Many serious practitioners choose to live in nature, remaining in the forest or near the sea, where they watch the rising and falling of the waves and experience the changes in seasons. Here they reflect on impermanence, seeing their body as transient. On this basis, they develop a sense of disillusionment and disgust with saṃsāra and the afflictions that cause it. They focus their minds on realizing emptiness and on seeing the world and sentient beings in it as like illusions. Monastics are more likely than householders to have the time and circumstances for such serious practice.

It is helpful for monastics, no matter how long they have been ordained, to contemplate repeatedly some of the verses in the ordination ceremony.<sup>42</sup>

Transmigrating in the three realms,  
one is not able to sever attachment.  
Give up attachment and enter nirvāṇa.  
That is the true way to repay kindness.

Guard integrity and aspiration.  
Cut the bonds of family and kin.  
Leave your worldly home to practice the Dharma.  
Aspire to lead all beings to full awakening.

Go forth to enter the path.  
Cut off bonds and bid family farewell.  
Now you are imbued with the precepts.  
Resolve to cut nonvirtue and cultivate compassion.  
Renounce illusion, return to the truth.  
How happy is the door to liberation.

Whether or not you are ordained, it would be beneficial to develop appreciation for the simplicity of a monastic life. Even if you are unable or do not want to be ordained in this life, appreciating the monastic way of life will leave an imprint so you can be ordained in future lives.

## *The Joy of Monastic Discipline*

To express in a brief way the respect I have for monastic discipline, I would like to share with you a poem I wrote in 1973.

How appropriate it is for those fortunate to follow you,  
the Buddha who taught great purity,  
to engage with minds of faith  
in pure conduct beyond reproach.

Externally pure and also internally pure,  
this is the Buddhist tradition;  
it produces every temporary and ultimate benefit.  
How auspicious to meet with  
this medicine benefitting both self and others.

This opportunity is found this once,  
is difficult to find again,  
and those who strive are so few.  
Make firm effort in your heart  
and apply yourself to pure conduct in a hundred ways.

Since without a doubt such a path  
can easily subdue the very coarse afflictions,  
why even mention freedom from the duḥkha  
experienced in the householder's life?

With discipline as the root,  
what cannot be produced  
from the mighty tree of the Mahāyāna path:  
bodhicitta and the union of serenity and insight?

The extremely swift, ultimate secret path,  
the magnificent and praiseworthy method  
to transform strong poison into medicine —  
the foundation of this, too,

is ethical restraint.

Eh ma! Cherish this discipline,  
which is the cause of attaining swiftly, swiftly  
the inseparable union of emptiness and compassion,  
the state of Vajradhara.

Therefore, O friends with intelligence,  
do not disparage or hold as trivial  
the prātimokṣa ethical code,  
which originates in the śrāvakas' scriptures.

Discipline is praised as the basis and root of the doctrine.  
One should strive to maintain it carefully  
by study and analysis,  
with mindfulness and introspective awareness.

Guard it respectfully with conscientiousness and integrity.  
Do not be lazy or indifferent,  
lest you snap the root of lasting happiness.

I have spoken these words with the thought to benefit,  
lest the purpose be diminished.  
By the kindness of the great father Mañjuḥoṣa  
and my kind and qualified spiritual mentors,  
this monk from Amdo, Tenzin Gyatso,  
has written this with heartfelt respect for these practices.  
Forsaking eloquence in composition,  
it was composed in a plain and simple style.

By any merits it may have,  
may all mother sentient beings in general,  
and especially many intelligent young people from the Land of Snows,  
engage in the practice of this path  
and touch the ground of supreme awakening.

May all good fortune increase!<sup>43</sup>

## 6 | The Higher Training in Concentration and the Perfection of Meditative Stability

THE HIGHER TRAINING in concentration is typically discussed in the context of the fourth truth, the true path, and the perfection of meditative stability is usually explained in the context of the six bodhisattva perfections, emphasizing that it must be done with the bodhicitta motivation. However, they deal with the same topics — conducive conditions for cultivating serenity, observed objects, techniques to deal with hindrances and faults, and the attainment of serenity and higher meditative absorptions. For that reason, the higher training in concentration and the perfection of meditative stability will be discussed together here. In keeping with my wish that the Library of Wisdom and Compassion be unique and bring in perspectives of other Buddhist traditions, after the presentation following the Sanskrit tradition as practiced in Tibet, we'll look briefly at how concentration is cultivated in the Pāli and Chinese traditions. This will enlarge your knowledge and benefit your meditation practice.

### *Concentration and Serenity*

Concentration (*samādhi*) is useful in all aspects of life, although its meaning in common parlance and in spiritual practice differs. Artists, musicians, car mechanics, computer programmers, scholars, and truck drivers have a certain type of concentration, as do children absorbed in a computer game. While useful, this is not the type of concentration cultivated in meditative practice when the mind is focused and absorbed on only one object. When we fix an appliance, play music, or throw a football, we must attend to many objects to perform that one task, whereas in stabilizing meditation the mind is trained to stay put unwaveringly on one object.

“Concentration” has various meanings depending on the context. In the study of mind and awareness, concentration is one of the five object-ascertaining

mental factors that all of us have, even though it may not be adequately developed at present. In the eightfold path, it refers to the single-pointed concentration that leads to gaining states of *dhyāna* (P. *jhāna*) — meditative absorptions of the form realm. As one of the three higher trainings, concentration includes three factors of the eightfold path: right mindfulness, right effort, and right concentration. In this case, the emphasis of *samādhi* is more on developing skill in meditation in general as well as the ability to keep the mind focused on virtue during daily life. In other contexts, “concentration” refers to special meditations that enable a practitioner to engage in a specific activity.

*Samādhi* unifies the primary mind and its associated mental factors in a balanced way so that mindfulness and attention on the object are sustained and the mind is tranquil. This differs from our usual distracted mind that is subject to a flood of external sensory stimuli, jumps from one thought to another, or is overwhelmed with emotions such as anxiety, craving, or resentment. The scattered mind cannot understand things deeply; it sees only superficially and is often afflictive. *Samādhi* brings calm and gentleness. It is like a mirror that clearly reflects objects. Such a mind, when combined with wisdom, can bring deep understanding.

Serenity is concentration (*samādhi*) arisen from meditation and accompanied by the bliss of mental and physical pliancy in which the mind abides effortlessly without fluctuation for as long as we wish on whatever object it has been placed. Cultivating this state of single-pointed concentration requires diligent effort over time, and once attained, it must be maintained through continuous practice. The new calm and concentration beginners experience is wonderful, but it is not serenity, so do not be dismayed when later you are distracted. Similarly, do not try to re-create a marvelous meditative experience in your next session and become disappointed or frustrated when you can't. Developing concentration takes time and diligence.

The enthusiasm that newcomers to Buddhism have to gain concentration is commendable, and it will bear fruit if first they develop a broad understanding of the Buddhist path and cultivate a proper motivation. Cultivating single-pointedness of mind in order to gain psychic powers, be famous, or remain in a blissful meditative state is doing ourselves a great disservice.<sup>44</sup> Without a good motivation such powers could be misused, harming others and planting many seeds of destructive karma on our own mindstreams. At best, it creates the cause

for rebirth in the form and formless realms while in saṃsāra. For this reason, most spiritual mentors begin by instructing students on meditation topics that will help them to generate the aspiration to be free from saṃsāra, the altruistic intention of bodhicitta, and the correct view of emptiness.

In general, meditation is of two types: stabilizing and analytical. Stabilizing meditation is predominantly used to develop serenity, and analytical meditation to develop insight. The difference between serenity and insight is not their object of meditation, but the way the mind engages with the object. Serenity focuses on it single-pointedly; insight analyzes it deeply to understand its characteristics. Although insight is often thought of in relation to emptiness, its object could be other phenomena. While serenity is often associated with meditation on the breath or the image of the Buddha, it can also focus on emptiness.

The teachings on the higher training in concentration and the perfection of meditative stability center on cultivating serenity, dhyānas of the form realm, and meditative absorptions of the formless realm. The Tibetan word translated as serenity has two syllables: *zhi* means “calm” and *gnas* is “to abide.” This mental state is calm in that all distractions to external objects have ceased and all impediments to concentration — especially restlessness and laxity — have been calmed. It abides on an internal observed object. Serenity involves not only mental stability but also vibrant mental clarity. Those on the bodhisattva path can develop serenity either before or after generating uncontrived bodhicitta.

## *The Importance of Developing Serenity*

Many benefits come from attaining serenity and the dhyānas. All our virtuous activities become more focused and thus have a stronger effect on our mind. Whether we meditate on the breath or lamrim topics, recite scriptures or prayers, do tantric visualizations or recite a mantra, being able to focus our mind single-pointedly facilitates understanding the meditation object and integrating Dharma meanings into our mind.

Serenity is the foundation for generating insight and the union of serenity and insight. When the union of the two is focused on emptiness, it has the power to uproot all afflictive and cognitive obscurations that cause saṃsāra and prevent us from attaining buddhahood.

Serenity makes the body and mind peaceful, bringing happiness in this life. It is the basis for cultivating mastery over external elements, as exemplified in the supernormal powers, and for actualizing the superknowledges, which expand our range of knowledge. Serenity is necessary to actualize the generation stage and completion stage of highest yoga tantra and thus become fully awakened.

Together with speaking of the benefits of serenity, meditation masters caution their disciples not to become attached to the bliss of concentration or to become complacent without developing further realizations. Having attained a meditative absorption of the form or formless realm, it is tempting to remain in that peaceful state, in which case we will not progress on the path to liberation and awakening, but will simply create the cause to be born in those realms in the future. Another danger is confusing the bliss of serenity and the absence of manifest afflictions during meditative absorption with liberation. Many non-Buddhist and Buddhist practitioners who have attained meditative absorptions have been sidetracked in these ways. Maintaining a strong and clear motivation, checking our meditative experiences with a qualified spiritual mentor, and following the advice of our spiritual mentors are extremely important so that we will realize our deepest spiritual goals.

Having said this, sometimes I think we Tibetans are overly cautious and neglect this crucial quality of single-pointed concentration. In my own case, even before we left Tibet I had genuine interest in emptiness, and after we went into exile in India I continued to make consistent effort to study and analyze the ultimate nature of phenomena. I got some feeling for it; however, due to the lack of single-pointed concentration, my practice has not progressed further. Saying *gate gate paragate parasamgate bodhi svaha*, the mantra in the *Heart Sūtra*, has little impact without serenity. If we are serious about actualizing the paths and grounds, we must engage in the practice of samādhi.

The two collections of merit and pristine wisdom are the requisites for attaining buddhahood, and to benefit others effectively, gaining the five superknowledges (*abhijñā*)<sup>45</sup> is essential. All these are attained on the basis of serenity and the dhyānas. Atiśa says in *Lamp for the Path to Awakening* (*Bodhipathapradīpa* 34–35, 38–39):

All buddhas say the cause of the completion  
of the collections,

whose nature is merit and pristine wisdom,  
is the development of the superknowledges.

Just as a bird with undeveloped wings  
cannot fly in the sky,  
those without the power of the superknowledges  
cannot work for the good of living beings.

In order to develop the superknowledges  
and the beyond-saṃsāra paths,  
you should first cultivate serenity.  
If your serenity practice is weak,  
you will gain no power  
even through sustained effort.  
Therefore accomplish the trainings  
in the various levels of samādhi.

Śāntideva likewise extols the benefit of serenity and emphasizes that it be accomplished prior to insight (BCA 8.4):

Recognizing that the afflictions are eradicated  
by insight imbued with serenity,  
first seek serenity that is attained  
by those who joyfully renounce worldly [pleasures].

The wisdom realizing emptiness is the actual counterforce that destroys afflictions, their seeds, and latencies. To discern emptiness correctly and then keep our mind focused on it for great lengths of time, concentration and serenity are necessary. Concentration is a powerful state of mind that is able to control mental activity and the arising of afflictions. Serenity is a concentration that is supported by the bliss of pliancy, is able to keep the mind in equipoise on its object as we wish, and is based on the nine stages of sustained attention. Each of the nine stages of sustained attention is concentration in itself because each is the mental factor of concentration, but this alone is not sufficient to be what is usually called “concentration” or “samādhi.”

In short, cultivating single-pointedness in general and attaining serenity in specific has many benefits. The *Sūtra Unraveling the Thought* (*Samādhinirmocana Sūtra*) says (LC 3:14):

Maitreya, you should know that all mundane and supramundane virtuous qualities, whether of śrāvakas, bodhisattvas, or tathāgatas, are the result of serenity and insight.

## REFLECTION

---

1. Contemplate the benefits of serenity: it is the foundation for gaining insight, it facilitates the collections of merit and wisdom, it is the basis for gaining the superknowledges, it brings great peace to the mind, and so forth.
  2. Seeing these benefits, aspire to improve your concentration.
- 

## *Conditions Conducive to the Development of Serenity*

In Sūtrayāna, single-pointed concentration is cultivated with the coarse mental consciousness, which is related to our body. Thus, external factors — altitude, temperature, time of day, and physical health — influence our ability to meditate. In *Śrāvaka Grounds* (*Śrāvakabhūmi*), Asaṅga listed thirteen prerequisite conditions for the development of serenity; Kamalaśīla in his *Middle Stages of Meditation* (*Bhāvanākrama*) summarized these into six. It is important for someone who is entering retreat with the aspiration to attain serenity<sup>46</sup> to seek an appropriate environment with these six conditions. For us practitioners who are not in retreat, having as many of these conditions as possible facilitates our development of concentration.

The Chinese master Zhiyi (538–97) wrote extensively about how to generate serenity, dhyāna, and insight.<sup>47</sup> His list of important factors to have in place in order to generate serenity overlap with those of Kamalaśīla's listed below and are explained together with them.

1. *A favorable place* is one that is calm, quiet, and healthy; it is secluded and free from commotion and hubbub. It has clean water and air and is located where

we can easily obtain food, clothing, shelter, and medicine. This minimizes disrupting our meditation schedule to seek requisites or engaging in wrong livelihoods to procure them. Meditating in a place inhabited by previous great meditators is recommended because such places have been blessed and positively influenced by their practice. The area should be safe, where illness, animals, human beings, or machines do not endanger our well-being. We should be near other meditators, teachers, or Dharma friends who can help us if hindrances or questions arise regarding practice.

Zhiyi explains that meditating in a dwelling in the mountains is best to avoid others disturbing us. If not, a hermitage located at least a mile from a village, where ascetic practices are done, is good. Minimum is a monastic dwelling (*saṃghārāma*) that is not near a town or city. Whatever our residence, it should not require a lot of time and effort to maintain it.

2. Prior to entering strict retreat, we must develop a *clear and correct understanding of the instructions* to gain serenity and to overcome any errors and difficulties that arise. Studying not only the essential instructions on meditation but also the major scriptures on serenity will benefit our practice greatly. These include the description of the five faults and eight antidotes and the nine stages of sustained attention in texts written by Maitreya, Asaṅga, and Kamalaśīla. The *Sūtra Unraveling the Thought* (*Samdhinirmocana Sūtra*) also contains instructions on the practice to attain serenity.

Zhiyi instructs us to stay near our teacher and good Dharma friends. Teachers instruct and guide us through giving teachings, and Dharma friends encourage and support our cultivation. We support and encourage them in their Dharma practice, so we mutually benefit each other.

3. *Being free from coarse desires and having few desires* is important. Even if we live in a secluded place, if we crave a soft bed, music, delicious food, sex, or a good novel, our mind will be constantly distracted.

Zhiyi emphasizes that renouncing the five objects of sensual desire is essential for our meditation practice to progress. Attachment to visual forms, especially good-looking people, is a huge obstacle to cultivating concentration. Clinging to sounds — especially the sweet, ego-pleasing sounds of praise and reputation, not to mention singing and music — captivate and distract us. Remember that even the most delightful and endearing sounds do not last even a split-second; they vanish as soon as they arise, so there is nothing to cling to. Similarly, craving

frangrances, tastes, and wonderful tactile sensations is fruitless, for these pleasures do not last, and procuring and protecting them easily lead to destructive karma and fritter away our precious human life.

4. A mind that is *satisfied and content* — one that doesn't desire "more and better" — is able to meditate. Such contentment is rare in modern society, where most people constantly try to better their position and increase their possessions. We may have to combat much of our previous conditioning and the expectations of society and family to develop contentment.

Having sufficient clothing and food is important; otherwise the mind will be unduly disturbed, making meditation difficult. Yet being content with what we have can be challenging. Zhiyi explains three approaches to clothing, depending on our level of renunciation. The first is to wear a single cloak as the Buddha did in his previous lives as a bodhisattva. He did not see many people, and his body was strong enough to endure the elements. The second is to have only a single set of monastic robes, as Mahākāśyapa — a close disciple of the Buddha — did. The third, for people residing in cold climates whose ability to endure the weather is not developed, is to have an extra set of robes and other garments, as the Buddha permitted. However, they are to mentally offer these to the Buddha so as not to be self-indulgent or accumulate many possessions.

Similarly, there are three approaches to food. The superior person lives in nature, sustaining himself on the plants, fruits, and herbs found there. The middling consumes only the food offered on alms round, and in this way does not engage in wrong livelihood and maintains the ascetic practice. Someone with lower capacity dwells in a hermitage (*aranya, araṇṇa*) where a benefactor offers food, or lives with the Saṅgha community and eats the food offered to it.

5. Our *involvement in worldly activities must be minimal*. If we have a job and engage in many projects, they will occupy our mind, making concentration difficult. Writing emails, texting, reading social media, keeping a blog, reading books not related to the Dharma, or caring for family members will take us away from our meditation seat and occupy our attention when we're seated on it.

Zhiyi emphasizes that we must put our responsibilities to rest by ceasing the busyness of ordinary life. This involves ceasing to direct our energy toward making a living as well as avoiding the company of friends, relatives, and people who have no interest in or respect for Dharma practice. Furthermore, since other interests such as worldly careers, occult practices, and non-Dharma books are

distracting, they are to be avoided. Needless to say, nowadays we must forgo watching the news, checking the stock market, writing a blog, and keeping up with friends and events on social media.

6. *Pure ethical conduct*, keeping whatever precepts and commitments we have accepted, eliminates regret and remorse. At least we must abandon the ten destructive paths of actions. Without being able to control our coarse physical and verbal actions, which are motivated by coarse afflictions, we will not succeed in pacifying the mental factors that prevent concentration.

The remainder of this section comes from Zhiyi, who explained that pure ethical conduct is essential to prevent distractions and karmic obstacles that interfere with the cultivation of serenity. As in building a house, a firm foundation is necessary before constructing the walls or roof. The essence of ethical conduct is the three disciplines of the Mahāyāna: to abandon negativities, to accumulate virtue, and to benefit sentient beings. In this context he emphasized the importance of keeping a vegetarian diet, which stops the slaughter of many living beings.

Of the three levels of observing precepts, those who are supreme have not committed any of the five heinous crimes — matricide, patricide, killing an arhat, causing blood to flow from a Buddha, and causing a schism in a harmonious monastic Saṅgha. They meet a qualified spiritual mentor, take refuge and the five lay precepts, and may also have taken the novice or full monastic precepts. Guarding all the precepts well and avoiding the ten destructive actions, they are free from transgressions. Such disciples are analogous to a cloth that is completely clean and will easily absorb dye; they will attain serenity and insight.

Those who are middling keep the major precepts well but have many transgressions of the minor precepts. If they engage in sincere purification, their Dharma practice will be successful. They are similar to a dirty cloth that has been cleaned so that the dye will take.

The third group, disciples whose ethical conduct is weak, have committed many transgressions of both the major and minor precepts. If the root monastic precepts have been broken with all factors intact, they are no longer monastics and may not reordain in that lifetime. Their destructive karmic seeds require purification, which can be done by sincere application of the appropriate means. To do this, they cultivate a clear understanding of and confidence in the law of karma and its effects, and fear experiencing the results of their destructive actions.

They develop a sense of personal integrity and consideration for others and seek out methods to purify their offenses and negativities. Revealing and confessing their offenses and negativities, they have a strong determination not to do them again. With determination to protect the Dharma, they generate the great vow of bodhisattvas to liberate all sentient beings, which leads them to cultivate continuous mindfulness of the buddhas in all directions and to contemplate the offenses and negativities as empty of inherent existence.

With these elements and sincere regret especially for committing the serious offenses, they engage in purification practices until signs of purification arise. These signs include feeling their body and mind become light and pleasant, having auspicious dreams or seeing auspicious signs, witnessing their virtuous thoughts increase, understanding Dharma teachings, and experiencing Dharma joy and a mind free from worry and regret. In addition, they keep the precepts well in the future. Once they have restored good ethical conduct, they will be able to attain dhyāna. Such disciples resemble a very dirty and torn cloth that has sufficiently been patched and cleaned so that the dye will take.

Another way to purify the seeds of heavy destructive karma is, with strong regret, integrity, and consideration for others, to confess to the Three Jewels and pledge not to do such actions again. With firm concentration, they meditate that these karmas are empty by nature. They also maintain mindfulness of the buddhas in the ten directions, and in the break times offer incense and prostrate to them as well as recite the precepts and Mahāyāna sūtras.

Our activities during the break times between meditation sessions influence the success of our efforts very much. Please see chapter 6 of *The Foundation of Buddhist Practice*, which discusses this.

## REFLECTION

---

1. Review the meaning of each conducive condition for cultivating serenity: favorable place, correct understanding of the instructions for cultivating serenity, freedom from coarse desires, contentment, minimal involvement in worldly activities, and pure ethical conduct.
  2. Contemplate why each condition is important.
  3. Consider how you can begin to develop these conditions now.
-

## *Observed Objects*

Because sentient beings have different tendencies and dispositions, the Buddha described several objects that could be the observed object (*ālamāna*) for cultivating serenity. In general, any object, internal or external, can be used, even a pebble or a candle. However, this physical thing itself is not the object used to develop serenity; the conceptual appearance of it in our mind is, because serenity is developed with the mental consciousness, not the sense consciousnesses.

Staring at a candle will not lead to serenity because this is done with the visual consciousness, which, unlike the mental consciousness, is not a stable consciousness and does not always function. Staring at an external object may drive away discursive thoughts, but this quality alone does not constitute serenity. However, we may gain familiarity with the object by looking at it with our visual consciousness, and then lower our eyes and meditate on it with the mental consciousness. The internal image — the conceptual appearance of the candle in our mind — is the observed object upon which we develop serenity.

The Buddha spoke of four main categories of observed objects for meditation: (1) extensive objects, (2) objects for purifying behavior, (3) objects of expertise, and (4) objects for purifying afflictions. Understanding the purpose and benefits of these various meditation objects, we will choose one of them, not a candle or a flower, as our object of meditation.

### *Extensive Objects*

Extensive objects are so called because they are used for the development of both serenity and insight. They are of four types:

1. *Analytical images* are observed by insight that analyzes its object.
2. *Nonanalytical images* are observed by serenity that focuses on the object without analyzing it. Analytical and nonanalytical images are posited in terms of how the mind observes the object. They are conceptual appearances of the object, which may be the five objects for purifying behavior, the objects of expertise, and objects for purifying afflictions.
3. *The limits of existence* refers to the extent of phenomena and are posited in terms of the observed object. The *limits for the diversity of phenomena*

means phenomena must be either permanent or impermanent — that is the limit of what they can be. The five aggregates are the limit of what impermanent phenomena can be; if it is impermanent, it must belong to one of the five aggregates. The four truths are the limit of what is to be known. The *limits for the nature of phenomena* means reason establishes the truth of those meditation objects. Upon reaching an understanding of the limit of a phenomenon, we fix our mindfulness on it with stabilizing meditation.

4. *The purpose we seek to accomplish* is posited in terms of the result and refers to gaining the fruit of serenity and insight.

### *Objects for Purifying Behavior*

Meditation on an object for purifying behavior helps those whose behavior is dominated by a specific affliction to pacify that affliction. The affliction is one that we have become familiar with over many lifetimes and is now prominent in our mind. Five objects for purifying behavior are taught according to the affliction that disturbs our mind the most.

1. To counteract strong desire, we concentrate on the ugly aspect of the person or thing to which we are attached. The meditation on the body to counteract sexual desire is an example of this. To investigate whether the body is attractive, we examine the different parts of the body — liver, muscles, blood, and so on — or the body as a corpse. When the aspect of its foulness appears, we concentrate on that.
2. To subdue strong anger, resentment, and animosity, we cultivate serenity on the experience of love, wishing friends, strangers, and enemies to have happiness and its causes.
3. When suffering from confusion, we meditate on the twelve links, the dependent process through which cyclic existence arises. Seeing that there is no person who creates causes and experiences results or who cycles in saṃsāra, we cultivate serenity on that.
4. To purify conceit, we concentrate on the five mental and physical aggregates, the twelve sources, and the eighteen constituents. Focusing on these components dissolves the conceit of being a self separate from

its parts. Because the detail and diversity of these things are difficult to understand, our conceit will decrease.

5. To pacify distracting and discursive thoughts, we meditate on the breath by observing inhalation and exhalation, with or without counting the breaths.

### *Objects of Expertise*

Objects of expertise are so called because becoming skilled or knowledgeable about them refutes a personal self and facilitates realizing emptiness. Meditation on any of the sets of objects below increases concentration as well as wisdom.

1. Knowledgeable about the *five aggregates*, we know that the I and mine do not exist separate from the aggregates.
2. With knowledge about the *eighteen constituents*, we understand that they arise dependent on their respective causes and conditions.
3. Skill in the *twelve sources* is knowing that the six external sources are the object conditions of consciousness; the six internal sources are dominant conditions of consciousness; and the immediately preceding consciousness, which is included in the mental source, is the immediately preceding condition of the six consciousnesses.<sup>48</sup>
4. Knowledge of the *twelve links of dependent origination* entails realizing impermanence, duḥkha, and selflessness in relation to the twelve links.
5. Knowing *appropriate and inappropriate results* is understanding that it is appropriate for fortunate ripening results to arise from virtue but not from nonvirtue.

### *Objects for Purifying Afflictions*

Objects for purifying afflictions are general antidotes to afflictions and help us to purify coarse and subtle afflictions of the desire, form, and formless realms by temporarily suppressing them with concentration and then cutting their root with wisdom. To temporarily suppress afflictions, the meditation object is the coarseness of the lower levels of meditative absorptions and the peacefulness of the higher levels. This is done to gain progressively higher levels of meditative

absorption in the form and formless realms. For example, someone who has attained the first dhyāna and seeks to attain the second dhyāna contemplates the first dhyāna as coarse and the second as peaceful. Through this, she will suppress the afflictions associated with the first dhyāna and attain the concentration of the second dhyāna.

Cutting the root of afflictions is done by meditating on the sixteen attributes of the four truths: impermanence and so forth. Combining serenity with insight into these sixteen leads to attaining the ārya paths and liberation.

In addition to the four main categories of observed objects taught by the Buddha to cultivate serenity, other objects may be used with success.

### *The Conventional Nature of the Mind*

The conventional nature of the mind may be the observed object. Here we focus on the mere clarity (luminosity) and cognizance (awareness) that is the mind. The expression “mind focuses on mind” does not mean that a single instance of mind looks at itself. Rather, one moment of mind focuses on the immediately preceding moment of mind. To do this requires understanding the mind’s nature and being able to identify the mind.

The mind resembles a crystal. When a crystal is placed on a colored cloth, the color of the cloth is evident and prominent, but the clarity of the crystal is obscured. When the crystal is removed from the colored cloth, its own quality of clarity can be perceived. Similarly, when the mind is distracted toward external objects and internal conceptualizations, its own clear and cognizant nature is obscured, but when it can be seen alone, its qualities of clarity (that reflects objects by arising in their aspect) and of cognizance (that knows objects) become evident. Words alone cannot give us the full flavor of clarity and cognizance; to know them we must identify and experience them ourselves.

Identifying the mind is not easy, as it is usually directed outward to sense objects or inward toward feelings of happiness and pain. The mind is covered by layers of conceptions: thoughts and emotions, hopes and fears about the past and the future, all of which obscure its clear and cognizant nature. To perceive the mind, we need to peel away these layers, “capture” the clear and cognizant nature of the mind, and stabilize our attention on it. The mind needs to become familiar with staying in the present; then we will be able to see the true face of our mind.

To identify the mind, look at an object with a muted, uniform color. Gaze at it, but focus on the mind that is perceiving it. Maintain a strong determination to maintain your focus on the mind without being distracted. When your mindfulness is strong, you will be able to immediately identify when the mind is distracted by an external object such as a sound or an internal object such as a thought or feeling. By immediately identifying distractions as they arise and withdrawing your attention from them, return your focus to the perceiving mind. Gradually these obscurations will cease and you will perceive a stable, lucid state of mind.

When the mind is able to remain in the present, undisturbed by thoughts of the past and the future, you may experience a vacuum. This is not the emptiness that is the ultimate truth, but an absence of the solidity you are accustomed to. This experience of a vacuum arises because you are so habituated to external objects that when you remove your mind from them and stay in the present, you feel there is a vacuum, an absence. As you continually increase the duration of this experience, you will have a glimpse of the clear and cognizant nature of the mind. That is, within the experience of the absence of sense stimuli, gradually the clarity and cognizance of the mind become more obvious. This is the conventional mind that is an object of meditation for developing serenity.

At first you will be able to identify and remain focused on the clear and aware nature of mind for only a short while. However, as you continue to practice, this time will be extended. You will begin to see that the mind is like a mirror or like totally clear and still water. Objects can appear and disappear without disturbing the medium in which they arise. Noticing this, you will be able to observe your thoughts and perceptions without getting hooked by them. They will arise and pass away without ruffling the stillness of the mind.

If your attention flags, remember a happy or a suffering experience, and without indulging in these feelings, use them to clearly identify the mind and then return your concentration to the conventional nature of the mind.

The challenge with using the mind as the observed object is that because it lacks form, we can easily slip into meditating on a mere conception of the lack of materiality. We may also fall into blank-minded meditation on nothingness. In both cases we have lost the object of meditation. We may think we are meditating on the mind, but we are not. Longchen Rabjampa speaks of this in his Dzogchen writings and advises that to remedy it practitioners purify the seeds of destructive

karma, accumulate merit, study the teachings, and practice under the guidance of a qualified spiritual mentor.

### *Emptiness*

Some people prefer to use emptiness — the lack of inherent existence — as their observed object for cultivating serenity. This is called “seeking meditation on the basis of the view” and is possible only for practitioners with exceptionally sharp aptitude who have realized emptiness through reliable inference. Temporarily forsaking analysis on the ultimate mode of existence, they concentrate on a conceptual understanding of it.

The danger here is that if you lack clear ascertainment of emptiness, your focus on it may weaken, and you may meditate on nothingness instead. For this reason, most spiritual mentors recommend “seeking the view on the basis of meditation” and encourage first using the image of the Buddha or another object to gain serenity and then look to attain a stable inferential realization of emptiness.

### *The Buddha*

In his *Stages of Meditation*, Kamalaśīla spoke of the image of the Buddha as the meditation object for cultivating serenity. He based this on the *Sūtra on the Concentration That Perceives the Buddha of the Present Face to Face* (*Pratyutpanna-buddha-saṃmukhāvasthita-samādhi Sūtra*) and the *King of Concentration Sūtra* (*Samādhirāja Sūtra*).

Developing deep familiarity with the image of the Buddha has many advantages: We can easily recollect the Buddha’s qualities, which is especially helpful at the time of death. Our refuge will deepen, inspiring our mind. We will create merit, which contributes to the attainment of a buddha’s form body. Other practices such as making offerings and prostrations to the field of merit will become more alive. This also prepares us for tantric practice in which we imagine ourselves as deities and our environment as the deity’s maṇḍala and concentrate single-pointedly on that.

To do this meditation, look at a photo or statue of Śākyamuni Buddha or reflect on an eloquent description of him. Then lower your eyes and visualize the

Buddha as a three-dimensional living being in the space in front of you. Seated on a throne, lotus, and flat cushions of the sun and moon, his body is made of brilliant golden light. Imagining a small figure makes the mind more alert, visualizing it being very bright opposes laxity, and imagining it to be dense or heavy prevents restlessness and scattering.

To begin, mentally recollect the basic features of the Buddha's form — his head, torso, arms, legs, and so on. Then focus single-pointedly on his body as a whole. If it is not completely clear, which it certainly won't be in the early stages, that is fine. Simply focus your attention on it, even if it is just a general golden shape. When the image fades, review the features of his body once again and then sustain your concentration on the entire form. If some parts of the Buddha's body appear clearly, focus on them, and if they fade, return your attention to the entire body.

Do not insist on trying to visualize every detail clearly before concentrating on the image of the Buddha. Doing so interferes with stable concentration. However, if you develop concentration on the image that appears, the mind will settle down and clarity will develop. People are different: for some the image appears easily, for others it does not. Some people have a clear image, others do not. Some people have a stable image, others do not. Regardless, we must continue meditating.

Sometimes instead of a golden body his body may appear to be another color, or instead of a seated Buddha the image of a standing Buddha will appear. Do not follow these distortions but bring your attention back to your original meditation object. Apply the techniques described below to eliminate the various hindrances and faults that may arise.

## REFLECTION

---

1. Recall the benefits of developing concentration on the image of the Buddha: it deepens your refuge in the Three Jewels, brings mindfulness of the Buddha's excellent qualities, and plants imprints on your mindstream to be able to think of the Buddha when you die.
2. After looking at a statue or painting of the Buddha, lower your eyes and visualize the Buddha with his body of golden light in the space in front of you.
3. Go over the details and then focus on the Buddha's body as a whole, being satisfied with however clear the image may be.

4. When the image becomes fuzzy, review the details again and then focus again on the whole image.
  5. If distractions arise, renew your mindfulness of the Buddha. If lethargy arises, apply the antidotes to energize the mind.
- 

### *The Breath*

The breath is a good meditation object, especially for beginners, and can be effective for attaining serenity. It is not as subtle as the mind and not as gross as an external object. Some meditators have told me that when they focus on the breath for a while, the mind becomes very still and settled. Breathing meditation is helpful to calm the mind when it gets excited or upset in daily life. The stillness it brings enables the mind to take a rest and have some respite from the afflictions. Nevertheless, a more lasting and powerful approach to subduing the afflictions is to reflect on dependent arising, emptiness, and the benefits of bodhicitta.

### *Observed Objects in Tantra*

Some people prefer to generate serenity during tantric practice, using the image of themselves as a deity or a syllable visualized at a specific point in the deity's body as the observed object. This is fine, although some masters advise developing serenity on one of the objects mentioned in Sūtrayāna first because they consider serenity as preliminary to tantra. Meditating on the deity's body has the additional benefits of counteracting ordinary appearance and ordinary grasping. For those practicing the three lower tantras, serenity is attained during the yoga with signs; for those practicing highest yoga tantra, it is attained during the generation stage. The method for developing serenity by pacifying the five hindrances, eliminating the five faults, cultivating the eight antidotes, and so forth is the same as in Sūtrayāna.

To use the image of yourself as a deity as the meditation object involves receiving tantric empowerment. During the sādhana practice, meditate on emptiness and dissolve your polluted body into emptiness. Then think that the mind understanding emptiness appears as the deity with a divine body made of

light. Establish divine identity of yourself as the deity. Then review the features of the deity's body and focus single-pointedly on the general image.

### *Other Objects*

Bodhibhadra, a master at Nālandā and one of Atiśa's spiritual mentors, set out a variety of meditation objects to develop serenity in his *Chapter on the Collections of Concentration* (*Samādhi-sambhāra-parivarta*). To outline them (LC 3:38):

1. Serenity attained by looking inward
  - a. Focusing on the body
    - Focusing on the body itself in the aspect of a deity
    - Focusing on the body as foul, for example as a skeleton
    - Focusing on a special syllable or implement of a deity
  - b. Focusing on what is based on the body
    - Focusing on the breath
    - Focusing on a subtle divine syllable
    - Focusing on the subtle drops in the body
    - Focusing on the aspects of light rays
    - Focusing on joy and bliss
2. Serenity based on an object of meditation
  - a. Special
    - Focusing on a deity's body
    - Focusing on a deity's speech
  - b. Common

### *Choosing Our Meditation Object*

The choice of object for serenity meditation depends on our disposition, faculties, and proclivity toward one object or another. For example, people who have asthma or allergies find focusing on the breath difficult. They prefer a visualized image or another object. People who can visualize easily may prefer to use a visualized image of the Buddha as their observed object. It is wise to consult

with your spiritual mentor when choosing the meditation object, but once you have chosen an object, do not keep changing it.

Many benefits are derived from choosing a meditation object that helps familiarize your mind with virtue. Noting this, Tsongkhapa cautions (LC 3:38):

Since you must achieve concentration using an object of serenity that has a particular purpose, those who achieve concentration using things like pebbles and twigs for objects of meditation are clearly ignorant of the teachings on objects of concentration.

Serenity is a practice of Buddhists and non-Buddhists alike; concentration is necessary to gain deeper understanding no matter which spiritual tradition we practice. Our Christian, Jewish, Hindu, and Muslim brothers and sisters may choose a meditation object from their own tradition as the observed object — the image of Christ, the star of David or a Hebrew letter, a Hindu deity, or an Islamic symbol — and apply the instructions described below to develop serenity.

Those from other faiths may also do analytical meditation. For instance, they could practice both stabilizing and analytical meditation to develop faith in God or to generate love for their fellow human beings. At an interfaith conference at Gethsemani, the late Thomas Merton's monastery in Kentucky, United States, I described how to gain serenity. The participants were sincere practitioners of their own faiths, and these teachings undoubtedly benefited them.

## *Structuring the Meditation Session*

A realistic attitude free from grandiose expectations of quick results is important when cultivating serenity. Unbroken continuity in our practice is also necessary. If we meditate for many hours one day and then not at all for three days, the benefit of cumulative practice will elude us.

For the first session each day, do all six preparatory practices described in chapter 6 of *The Foundation of Buddhist Practice*. Place an image of the Buddha on a table in front of you, make many offerings, and generate bodhicitta, thinking that you will develop serenity in order to attain full awakening for the benefit of all sentient beings. Sit in the seven-point position of Buddha Vairocana. This

position straightens the internal, subtle energy channels, allowing the winds or qi to flow smoothly.<sup>49</sup> This, in turn, makes the mind calmer. Sitting in this position facilitates concentration and establishes auspicious predispositions to attain a buddha's form body. Be sure to cultivate a bodhicitta motivation and observe your breath for a few minutes to calm the mind before focusing on your chosen meditation object.

For the remaining sessions begin with taking refuge in the Three Jewels and generating bodhicitta. Then contemplate the seven limbs to purify negativities and create merit, and request your spiritual mentors for inspiration so your meditation session will bear the desired fruits. Always dedicate the merit at the conclusion of each session.

In retreat or in daily practice, short meditation sessions are recommended to develop serenity. Pushing yourself to do long sessions is counterproductive. It makes the mind tight, so that instead of looking forward to meditating you will put it off, whereas if you are content at the conclusion of a session you will be happy to meditate later. As the mind becomes more stable, gradually increase the length of the sessions. Although cultivating serenity may be difficult at first, as you progress you will experience its benefits and meditation will become easier.

When cultivating serenity, meditation masters recommend having many meditation sessions each day. In each have several mini-sessions; initially meditate for five minutes, then take a short break during which you open your eyes and relax for a minute. Then do another five-minute session followed by another short break. Remain seated during the short breaks, but stretch your legs if necessary. Continue like this for the duration of the session. As your stability on the object increases, have fewer, but longer, mini-sessions. If suitable, you can eventually do four sessions each day in retreat setting. When cultivating serenity as part of your daily practice, your session may be fifteen to thirty minutes total.

## *Working with the Body*

When we begin meditating, our body may be very restless. We fidget, trying to find that elusive comfortable position. We try using different cushions or putting them in different places. We may sit on a bench with our legs underneath it, or sit

on a chair. Although sometimes we are successful in finding a comfortable position, at other times no matter what we do the body isn't comfortable.

This in part is due to our body being unfamiliar with the meditation posture. Doing yoga, tai chi, qigong, or other exercises are effective for stretching the body and calming its energy. Keeping our body fit and healthy is important for meditation. Sometimes the physical restlessness is related to mental restlessness: our habituation with seeking distraction, craving for new and exciting experiences, or addiction to pleasurable feelings and the activities that bring them. We begin to notice that the stress in our mind and tightness in our body affect and amplify each other. Those of us who never thought of ourselves as being particularly anxious may discover that, in fact, we have a lot of anxiety and this makes sitting calmly in meditation a challenge.

Śāntideva said that there is nothing that does not become easier with practice, so we must persevere without pushing ourselves or holding unrealistic expectations. If we do so, gradually our body will get used to the meditation posture and tension will disperse.

## 7 | Obstacles and Antidotes

**L**EARNING THE METHOD to attain serenity is a precious opportunity, even if we are unable to implement every facet of it at this moment. We employ whatever we can in our daily practice, gradually increasing our ability to concentrate. When possible, we do long or short retreats. Studying and applying these teachings enables us to practice properly and to deal with the various hindrances that everyone experiences at one time or another while meditating. These instructions are detailed, and it is worthwhile to study them well.

### *The Five Hindrances*

When we meditate, distracting thoughts and afflictions easily arise in the minds of us ordinary beings. As our introspective awareness improves, we notice these more; memories of the past, plans for the future, objects of attachment, and images of people and situations we dislike pass through our mind. Some may think meditation is making them more distracted, but in fact this jumble of thoughts has been going on for a long time and only now are we noticing it. These thoughts and images impact us — affecting our outlook, moods, self-confidence, and behavior — even though we may not register them at the moment.

Because distracting thoughts are so pervasive, Asaṅga strongly advises that before we seriously endeavor to cultivate serenity, we direct our meditation toward subduing whichever affliction is strongest so that it does not repeatedly interrupt our meditation. Meditating on the objects for purifying behavior helps this. Becoming acquainted with the five hindrances and developing skill in their antidotes is also essential. This will make our mind more malleable and improve our ethical conduct and psychological well-being. With a more virtuous and focused mind, concentration, bodhicitta, and wisdom can grow.

The Pāli, Tibetan, and Chinese Buddhist traditions all speak of five hindrances (*nīvaraṇa*) that interfere with the cultivation of concentration: (1)

sensual desire (*kāmacchanda*), (2) malice (*vyāpāda, byāpāda*), (3) lethargy and sleepiness (*styāna-middha, thīna-middha*), (4) restlessness and regret (*auddhatya-kaukr̥tya, uddhacca-kukkucca*), and (5) deluded doubt (*vicikitsā, vicikicchā*). The explanation below is an amalgamation of instructions from these three traditions that come to the same point. It includes citations from Pāli scriptures, citations from Nāgārjuna's *Commentary to the Great Perfection of Wisdom* found in the Chinese canon,<sup>50</sup> and meditations from Vasubandhu's *Treasury of Knowledge* (*Abhidharmakośa*) and its *Autocommentary* (*Abhidharmakośa-bhāṣyam*) in the Tibetan canon.

Although the five hindrances are separate mental factors, separating one from the other in practice is not always easy because they arise in close proximity to one another. For example, we perceive or think about a pleasing person and sensual desire arises. But soon after, the same person becomes annoying and malice arises. This occurs because the craving and delight affiliated with sensual desire are also the cause for aversion and malice. These emotions are not unrelated.

The five hindrances obstruct the mind from abiding calmly and stably on the meditation object. It is the work of samādhi to clear these hindrances and calm the proliferations of thoughts and moods. To overcome them, we must see them clearly and then apply the antidotes.

### *Sensual Desire*

Sensual desire is attachment for objects of the desire realm, be they material — such as money, possessions, or food — or social — such as approval, praise, and reputation. Sensual desire is the hallmark of most societies; we are consumed with wanting more or better, and our minds are filled with plans and images of everything we believe will bring us happiness.

Sexual desire is human beings' strongest desire, and modern culture extols it. From childhood, we have been exposed to sexual images and have received the message that a large part of our worth as human beings is being sexually attractive. In addition to the natural desire that our bodies have as biological organisms, our self-esteem becomes wrapped up in our appearance and sexuality. This overemphasis on sex is psychologically unhealthy.

While pleasure itself is not “bad,” attachment to it diverts our mind from spiritual practice. We can spend an entire meditation session lost in fantasies of sensual desire. When this desire manifests, we often feel compelled to fulfill it, no matter what. This leads us to make impulsive decisions that often create destructive karma and bring problems down on us. Remembering the impermanent and unsatisfactory nature of the desirable object or person is helpful to subdue the urge to grasp it in order to fill the void, boredom, or loneliness inside of us. Nāgārjuna said in *Commentary to the Great Perfection of Wisdom* (NSP 635–36):

Desire is the net of the demons and an entangling web from which it is difficult to escape. Desire constitutes a burning heat which dries up all bliss. . . . Desire, like drawing close to a fiery pit, is extremely fearsome. It is like cornering a venomous snake, like an enemy invader brandishing a knife, like swallowing molten copper . . . like a lion blocking one’s path. All desires are just like this and are worthy of being feared. Desires cause people to undergo torment and suffering.

Those people who are attached to desire are like convicts in a prison, like a deer caught in a corral-trap, like birds snared in a net, like fish who have swallowed a hook . . . like a crow in the midst of a band of owls. . . . Desires are like blind men approaching an abyss, like a fly caught in hot oil, like a peaceful man caught up in military combat, like one who had entered a river of boiling brine, like one who licks a honey-smear blade.

When our mind becomes overwhelmed with sensual desire, an excellent antidote is contemplating the foul nature of the body — our own and others’ — to calm lust and craving. In chapter 8 of *Engaging in the Bodhisattvas’ Deeds*, Śāntideva presents the body to us as it actually is, exposing the senselessness of lust. Meditating on these verses, as well as analyzing the parts of the body in meditation, are effective methods for counteracting sexual attachment.

*Malice*

Malice, the wish to give harm, may arise toward many objects — a particular person, physical pain or mental anguish, loneliness, conflicting ideas, political figures, sounds, or whatever else meets with our disapproval. Malice is an unpleasant state that makes us vengeful, cynical, and fearful, but it is one that we may be familiar with, one that distracts us from using our human potential to do good.

Malice causes our actions to contradict Dharma advice and, as a result, we fall to unfortunate rebirths. It is likened to a thief that steals our virtue and a storehouse filled with all types of harsh speech. If malice arises while we sit in meditation, we may spend the entire session ruminating on the harms done to us, such that any concentration — except on the object of our anger — becomes impossible. Nāgārjuna quotes Śakra, the king of the devas, asking the Buddha (NSP 391):

What thing is it which, killed, brings peace and security?  
What thing is it which, slain, one has no regrets?  
What thing is it which is the root of venomousness?  
And which devours and destroys all forms of goodness?  
What thing is it which one slays and then one is praised?  
What thing is it which, slain, brings one no more distress?

The Buddha replies:

If one kills anger, the mind will be peaceful and secure.  
If one slays anger, the mind will have no regrets.  
It is anger which is the root of venomousness.  
It is anger which destroys all forms of goodness.  
If one slays anger, all buddhas offer praise.  
If one slays anger, one has no more distress.

Recognizing the disadvantages of anger and malice, turn your mind to the kindness of others. Releasing the judgmental, vengeful attitude, cultivate forgiveness and love. Our meditation on love should be personal. It is not difficult to wish well to an amorphous group of sentient beings suffering on the other side of the world. But wishing specific individuals to have happiness and its causes — especially those we know who have different political opinions or who

have harmed us or our dear ones — can be more challenging. Begin the meditation with individuals and gradually radiate love to all beings everywhere.

### *Lethargy and Sleepiness*

Lethargy manifests physically as lacking physical energy and stamina and mentally as mental heaviness; the mind is dull, unclear, and lacks energy. We feel bored and don't want to exert the energy to be interested in anything. This may occur because the mind is mired in negativity or exhausted by too much emotion.

Sleepiness is drowsiness; the five sense faculties have withdrawn and we may even nod off in meditation.

Lethargy and sleepiness are distinct mental factors but are explained together because they have the same cause, function, and antidote. They are caused by five factors: bad dreams, mental unhappiness, physical exhaustion, unbalanced food consumption, and depression. Both function to make the body and mind dull and are counteracted by a bright, alert mind.

From one perspective, lethargy and sleepiness are more problematic than other hindrances in that other hindrances can often be dispelled simply by recognizing them, whereas the mind is totally clouded over and unaware when lethargy and sleepiness reign. Nāgārjuna says that the buddhas and bodhisattvas admonish their indolent disciples by reminding us of the faults of saṃsāra and urging us to wake up immediately and follow the path to liberation (NSP 629):

You! Get up! Don't lie there hugging that stinking corpse  
that is all sorts of impurities falsely designated as a "person."  
It's as if you've gotten a serious disease or been shot by an arrow.  
With such an accumulation of suffering and pain, how can you sleep?

The entire world is burning up by the fire of death.  
You should be seeking means of escape. How then can you sleep?  
You're like a person in shackles being led to his execution.  
With disastrous harm so imminent, how can you sleep?

With insurgent fetters not yet destroyed and their harm not yet  
averted,  
it's as if you were sleeping in a room with a venomous snake

and as if you have met up with the soldiers' gleaming blades.  
At such a time, how can you sleep?

Sleep is a vast darkness in which nothing is visible.  
Every day it deceives and steals away your clarity.  
When sleep blankets the mind, you are not aware of anything.  
With such great faults as these, how can you sleep?

While sitting in meditation, you may notice that the mind can be restless one moment and drowsy the next. This indicates that lethargy and sleepiness are not necessarily signs of physical fatigue or lack of sleep. They are often a way that ignorance and resistance sabotage your attempts to meditate. Sometimes they occur as a result of destructive karma created in the past: we may have avoided the Dharma or treated holy beings and holy objects disrespectfully. Making prostrations together with the four opponent powers before we sit in meditation is an excellent way to invigorate the body while purifying karmic obstacles. This may be done in conjunction with reciting "A Bodhisattva's Confession of Ethical Downfalls." While prostrating, imagine brilliant light from the Buddha filling your body-mind, dispelling physical and mental heaviness and uplifting your mental energy. While doing breathing meditation, imagine inhaling bright light with each breath and exhaling dullness in the form of smoke that vanishes in space. Remembering impermanence is also effective, as is contemplating uplifting topics, such as the qualities of the Three Jewels, the preciousness of your human life, and the rare opportunity you possess to cultivate wonderful spiritual qualities.

Chinese monasteries have wake-up devices that some monastics use. One is a piece of wood attached to the meditator's ear with a string. If he nods off, it falls and pulls the ear. Another is a stick that when hit on an acupuncture point on a meditator's back makes a cracking sound that rouses the person.

During break times, look long distances, and look at the stars and the moon at night to enlarge your mental scope. Make the meditation room cooler or remove your sweater, and avoid overeating. Splash cold water on your face before the session.

*Restlessness and Regret*

Restlessness and regret are separate mental factors that are combined as one hindrance because they have the same cause, function, and antidote. Both arise due to preconceptions that remember our relatives, friends, home, previous good times, and loving companions. Both function to make the mind unsettled, and both lack calm. Serenity is their antidote.

Restlessness is mental agitation that includes anxiety, fear, apprehension, excitement, and worry. An incessant flow of thoughts bounce from one topic to another. Restlessness is of three types: physically restless, we jump from one activity to another aimlessly; verbally restless, we get caught up in singing, chatting, arguing over trivial topics, and discussing worldly affairs; mentally restless, we are filled with distractions and discursive thoughts. Restlessness is likened to an unrestrained drunken elephant and a camel without a nose ring; both are nearly impossible to control. For these reasons, rather than allow restlessness to continue unabated, we must recognize it and then deliberately calm body, speech, and mind so that they will be undisturbed and more manageable.

Regret is an uncomfortable feeling that we did something we should not have done or did not do something we should have done. Regret is of two types. (1) We spend time and energy in useless activities. When we realize how much time we have wasted, we feel remorse and worry that we'll never be able to meditate properly. (2) After engaging in serious destructive karma, we feel overwhelmed with guilt and self-reproach. Although regretting our misdeeds is virtuous, here the mind is unclear and falls into unproductive and exaggerated guilt.

Both restlessness and regret take us into the past, longing for pleasures long gone or worrying and guilty about actions done or not done. Both also take us into the future, restlessness planning pleasurable experiences, regret anxious about what could go wrong. Our thoughts are immersed in events that are not happening now.

Observing our breath is one antidote to the flurry of agitated and remorseful thoughts. Mindfulness of the movements of the body helps to return attention to the present. Paying attention to our present physical, verbal, and mental activities alleviates fears about the future and remorse about the past. We discover that the present is agreeable and full of opportunities to create virtue.

Guilt is especially useless; it draws us into self-preoccupation in a most unhealthy way. Nāgārjuna counsels (NSP 631):

If you feel regret for an offense,  
having regretted it, put it down and let it go.  
In this way, the mind abides peaceful and happy.  
Do not constantly remain attached to it in your thoughts.

If you possess the two kinds of regret,  
of having not done what you should have done, or having done what  
you should not have done,  
because this regret attaches to the mind,  
it is the mark of a foolish person.

It is not the case that, on account of feeling guilty,  
you will somehow be able to do what you failed to do.  
All of the ill deeds that you have already committed  
cannot be caused to become undone.

Generating the type of regret involved in purification is useful. Having sincerely performed the four opponent powers, we can release self-reproach and guilt.

### *Deluded Doubt*

Doubt is indecisiveness. One type of doubt involves seeking answers to genuine questions we have about the path or the meditation technique. That doubt invites curiosity and can usually be cleared up by consulting our spiritual mentor or a knowledgeable Dharma friend.

Another type of doubt — a useless spinning of thoughts — is deluded. We have so many options to choose from that we get caught in doubt: Should I go to this Dharma center or that one? Should I rely on this teacher or that one? Should I ordain? Am I doing this meditation correctly? How long should my meditation sessions be? We may doubt our abilities or doubt that it is possible to actualize our spiritual goals. We are mired in the quicksand of indecision and confusion.

Deluded doubt specifically concerns Dharma teachings: It seems that rebirth doesn't exist. I'm not sure but it sounds like emptiness means nothing exists. Is it really possible to become a buddha? Isn't that just fantasy and wishful thinking?

Appearing so real and important, doubt immobilizes us. It's like trying to sew with a two-pointed needle: we can't go this way; we can't go that way. Deluded doubt inhibits generating the faith and confidence in the Three Jewels that makes our minds receptive to learning and practicing the Dharma. As a result, even if we meet the Buddhadharma and encounter an excellent spiritual mentor, the benefit we receive from them is lost to us. We resemble someone who goes to a land of great wealth, but lacking a bag, is unable to take anything away with him.

While not all forms of doubt inhibit gaining serenity, three foremost ones do:

1. Doubt in ourselves prevents us from trying: I'm not capable of this; my intelligence is limited and the defilements and seeds of destructive karma obscuring my mind are too great. Such unrealistic self-denigrating thoughts paralyze. The opportunity to act to improve our situation — especially by employing the mind-training methods — is always present.

2. Doubt in our spiritual mentor arises from looking only at his or her superficial characteristics with a judgmental attitude: My spiritual mentor's behavior is nothing special. He or she doesn't have any realizations of the path, so what will I gain from following him? Considering ourselves wise enough to evaluate our spiritual mentor's practice, we are blind to our own arrogance. To free ourselves from this doubt, Nāgārjuna recommends that we think of gold in a smelly pouch. If we want the gold, we have to take the pouch too. Then, instead of dwelling on the mentor's shortcomings, we reflect that our mentor is instructing us in the Buddha's teachings, just as the Buddha himself would do. Rather than focus on the pouch, we direct our interest to the gold inside.

3. Doubt in the Dharma makes us wonder if buddhahood and the path to attain it exist. Not knowing how to think clearly about the topic, our mind swirls in confusion. We need some patience; it's unrealistic to think that all our questions must be answered before we can do any Dharma practice at all. By practicing what we understand, we increase our respect in the teachings and open our minds to understanding other topics. Nāgārjuna advises (NSP 631):

Just as when a person stands at a fork in the road  
and is so confused by doubt that he goes nowhere at all,  
[when you seek realization of] the true character of phenomena,  
doubt acts in just the same way.

Because you remain doubtful, you don't diligently seek  
[to realize] the true character of phenomena [*dharmatā*].  
This doubt comes forth from confusion.  
Among all the detrimental [mental factors], it is the worst . . .

Although you may possess doubts while abiding in the world,  
you should still accord with the sublime and virtuous Dharma.  
Just as when you contemplate a fork in the road,  
you should follow that path which is most beneficial.

The five hindrances are subsumed in the three poisons and are related to the 84,000 afflictions. The hindrance of sensual desire is the poison of attachment, the hindrance of malice is the poison of anger, the hindrances of lethargy and sleepiness and doubt are the poison of confusion, and the hindrance of restlessness and regret is based on all three poisons. These four categories — attachment, anger, confusion, and all three — each subsume 21,000 afflictions, for a total of 84,000. By applying antidotes to three poisons and five hindrances, all afflictions are overcome.

Zhiyi says that a practitioner who has successfully suppressed these five through serenity is like a person who has recovered from a threatening disease, a famished person arriving in a land of plenty, and a hostage being released from terrorists. Her mind is peaceful, responsive, clear, and blissful. Suppressing afflictions through serenity gives us temporary respite; only insight into emptiness will eradicate the hindrances forever.

## REFLECTION

---

Review the five hindrances and for each one contemplate:

1. What is the meaning of this hindrance?
  2. How does it interrupt concentration?
  3. Pinpoint examples of it in your own experience. Which of the five is most troublesome for you?
-

## *Taming the Five Hindrances*

Although we may think that we are the only ones in the meditation hall who are distracted while everyone else abides in blissful samādhi, we are not alone in having difficulty concentrating. Everyone must deal with the same hindrances in meditation. The hindrances may manifest as images in the mind, ruminating thoughts, or powerful emotions. When a hindrance is not so strong, simply returning the mind to the object of meditation and renewing our mindfulness is sufficient. But when it is strong, we must temporarily leave the object of meditation and reflect on another topic to counteract the hindrance and bring the mind back to a balanced state. In the *Discourse on the Removal of Distracting Thoughts* (MN 20), the Buddha taught five methods for doing this. In sequence they are:

1. Pay attention to a virtuous object. Precisely contemplate the opposite of the distracting thought or emotion.
  - For attachment to material possessions, contemplate impermanence.
  - For sexual desire, contemplate the parts of the body.
  - For anger, hatred, and resentment toward sentient beings, contemplate love.
  - For anger at inanimate things, analyze their components — the four elements (earth, water, fire, and wind).
  - For aversion to situations, contemplate that they are the result of your previous karma and of circumstances that you do not have control over in this life (such as other people's actions, the weather, and so on).
  - For intellectual doubt, study the teachings.
  - For emotional doubt, contemplate the qualities of the Buddha, Dharma, and Saṅgha.
2. Examine the danger and disadvantages of those distracting thoughts:
  - They cause your own and others' suffering now and in the future.
  - They obstruct wisdom, cause difficulties on the path, and lead you away from nirvāṇa.

- Like the carcass of a snake, dog, or human being hanging around your neck, they weigh you down.
3. Do not give attention to those thoughts; ignore them. This resembles turning our head away from something that we do not want to see. In the break time between sessions, engage in an activity that does not allow your attention to go to these thoughts: take a walk, clean the room, paint the figure of the Buddha.
  4. Examine the formation of those thoughts. For example:
    - Ask yourself, Why am I thinking this? What are the factors that led to this thought or emotion coming into my mind?
    - From a detached perspective, watch the thoughts flow by until gradually the flow of thoughts quiets down.
  5. “Crush mind with mind” — that is, crush the nonvirtuous mental state with a virtuous one.

When we repeatedly apply these counterforces to the hindrances and train the mind in serenity meditation over time, nonvirtuous thoughts will decrease and the mind will become quiet, single-pointed, and concentrated. We will become the master of our own thoughts and will not be subjected to disturbing thoughts. This occurs not through unhealthy psychological repression of thoughts but by learning to work with the mind in a constructive way. By employing these five techniques in the proper circumstances and proper manner, with practice we will be able to redirect the mind in order to attain the “higher minds” (*P. adhicitta*) — the four dhyānas and four formless absorptions.

Although we ultimately seek nonconceptual realizations, both the Pāli and Sanskrit traditions employ conception in varying ways in the process of developing serenity. For example, in the Pāli tradition the *asubha* meditation on the unattractive nature of the body involves focusing on the conceptual appearances of the various parts of the body. To meditate on love, we reflect on others’ kindness and visualize sentient beings around us. The antidote to lethargy is to visualize sunlight filling our body-mind. All these involve conceptual consciousnesses.

Using thought in this way is beneficial in counteracting incorrect ways of thinking, such as proliferating conceptualizations (*prapañca*, *papañca*, T. *spros pa*), a profusion of discursive, ruminating thoughts. These unrealistic thoughts

distract the mind and lead it to negativity. Learning to think clearly and in accord with the truth the Buddha taught helps to remedy them.

### *Meditating on the Body to Counteract Desire*

The meditations on the body found in the *Treasury of Knowledge* are presented as antidotes to the sensual desire that interferes with concentration. They can also be done as practices of mindfulness of the body that aid in the cultivation of wisdom. These meditations on the body may initially appear off-putting, but this is precisely why they work to counteract sexual desire. Perhaps the resistance we have to these meditations is that we aren't yet ready to give up enjoyable sensual pleasures!

To do these meditations on the body, examine what the body is, both now when it is alive and later after it has become a corpse and is in various stages of decay. When dissecting sexual attachment, see that it arises in relationship to the body's color, shape, tactile contact, and usefulness. To counteract attachment to the beautiful color of someone's body — the color of their skin, eyes, teeth, and so forth — contemplate that no matter how beautiful his or her body is now, after death it will not be good looking in the least. Imagine it as a corpse: first it will turn a dark-bluish color; as it decays further it will become reddish, and finally it will become a rotten, black corpse. Even when the person is alive, the color of their body may turn ugly — for example, when bruised or scarred. Open sores, boils, and infected areas are likewise unpleasant to look at.

As an antidote to attachment to the attractive shape of another's body, contemplate its appearance when it is a bloated and swollen corpse. Larger animals and birds eat the flesh and then tear the body apart to gnaw on the bones, destroying its beautiful shape. Even when a person is alive, the shape of their body may be disfigured due to illness or injury.

To counteract attachment to the touch of their body, imagine it as a corpse being devoured by maggots and other insects; just the idea of touching it quickly fades away. Eventually the flesh is consumed, revealing the skeleton; this is hardly a body we want to embrace. Even when alive, the body may be covered with open sores infested with worms. Here in India we see lepers whose flesh has rotted and fallen off, revealing the bone underneath.

The usefulness of another's body refers to the pleasure derived from it. This may be sexual pleasure, pleasure because they serve us, or pleasure from their personality. Here we consider that person almost like an instrument for our own use, enjoyment, and pleasure. As an antidote, meditate on an unmoving corpse or cadaver. It lacks a personality and cannot do anything for us.

As an antidote to all four — color, shape, touch, and usefulness — beginning at the person's forehead or toe, visualize the person's flesh rotting and falling off piece by piece, until only a skeleton remains. Then imagine the same happening to others' bodies, until the entire universe is entirely filled with bones. Alternatively, meditate on the components of the body — the intestines, stomach, muscles, kidneys, spleen, brain, blood, and so on. Whether the body is alive or dead, the color, shape, and touch of its organs are unpleasant. Some people faint when seeing the inside of a body.

Contemplate your own body in a similar way, for one day it will be a rotting corpse or just a pile of ashes if cremated. Meditating on the body as described above causes the mind to become disillusioned with the splendors of saṃsāra. It is less distracted by sensual desire and can more easily be applied to concentration.

### *Meditating on a Skeleton to Counteract Restlessness*

Meditating on your own body as a skeleton makes the mind sober and is a general antidote for restlessness. The following meditations on a skeleton may also work to eliminate laxity because the mind focuses on an object that becomes more and more subtle.

Begin the meditation by focusing at your midbrow and visualize the flesh gradually falling off until only your skeleton remains. The skeleton grows in size and more bones appear until all of space is filled with bones. Concentrate on that for a while, then imagine the bones absorbing one into another until only the room is filled with bones. They absorb further until your skeleton is all that remains. Meditate single-pointedly on this. This is the yoga for beginners.

Once you are able to do the above meditation well, you can move on to the second level, the yoga of thorough training. The process of visualization is similar: begin by focusing on a small piece of exposed bone at your mid-brow and imagine the flesh gradually falling away from the rest of your body until only your skeleton remains. It expands, filling the entire room with bones. More bones

appear until the whole environment is brimming with bones. Then narrow the scope of the visualization as before, with the bones gradually absorbing one into another until only your skeleton remains. The skeleton dissolves from the bottom upward until only the upper half of your skull remains. Concentrate on this, fine-tuning the focus of your meditation in this way.

In the third level, the yoga of complete attention, visualize in the same way as before, expanding the range of bones and then withdrawing and absorbing them until only the upper half of the skull remains. Then that dissolves until only a tiny fragment of bone is present at your midbrow. Concentrate on that single-pointedly.<sup>51</sup>

This meditation brings many advantages. First, meditating on the foul aspects of the body subdues attachment and restlessness, which fantasizes about the pleasures we crave. The mind settles, and our attention no longer scatters to objects of attachment. Second, by making our observed object subtler and subtler — first the skeleton, then the upper half of the skull, and finally the bone fragment at the midbrow — we also counteract laxity by increasing the intensity of the clarity of our visualization. These two bring the third advantage, the ability to concentrate single-pointedly on the chosen object of meditation.

The above meditations on foulness act as antidotes to attachment and restlessness. Although they do not eliminate the seeds of these afflictions from our mindstreams, they reduce their coarse level by preventing their manifesting in our minds. Whether an object is actually attractive or not, our minds are fully capable of fabricating beauty. By reflecting that our own and others' bodies ultimately become bones, we see that there's nothing left to desire but the bones, which are not very attractive. If you wonder if these meditations really work to calm attachment, the way to find out is to do them.

### *Meditating on the Breath to Counteract Discursive Thought*

The Buddha recommended meditation on the breath to overcome discursive thought (*vikalpa*, *vikappa*, T. *rnam rtog*) — mental busyness that hinders our meditation. This meditation, taught by Vasubandhu in *Abhidharmakośa-bhāṣyam*, progresses in six phases. The Chinese master Zhiyi's *Six Dharma Gates to the Sublime*, written in the sixth century, also teaches this meditation. The coming and going of the breath as you exhale and inhale is the observed object.

1. *Counting the breath.* Relax the mind and body. Then breathe comfortably, letting your out and in breaths be equal in speed and strength. Mentally count each cycle of the breath going out and coming in until you reach ten. Don't count more than ten because restlessness may arise from the mind focusing too tightly. If you count less than ten, you may not be able to overcome laxity. Count clearly; don't mix up the numbers or forget them. Avoid confusion over whether you're exhaling or inhaling.

As you exhale, be aware, Now I'm about to breathe out, I'm breathing out, the exhalation is almost finished, the exhalation has finished. When inhaling, think, Now I'm about to breathe in, now I'm breathing in, the inhalation is about to finish, the inhalation has finished.

Even though the instructions are simple, doing this meditation properly with concentration is difficult. If you concentrate well, thoughts will disappear and you will be left with the radiant nature of the mind.

2. *Following the breath.* Breathe slowly and while inhaling follow the breath in. Imagine it going to the throat, heart, navel, thighs, and soles of the feet. Get a sense that the breath pervades the body, which has many channels through which the breath passes. When exhaling, follow the breath as it leaves your body. Imagine it goes a short distance outside your nostrils before you inhale again. This is called "following," because the mind follows the breath.

3. *Placing.* Breathe normally, but rather than concentrate on exhaling and inhaling, concentrate on the internal flow of the breath within the body. It is like a fine, still thread running from the tip of your nose to the soles of your feet. Examine the sensations the breath causes within the body along the points of this thread. Do you feel hot, cold, comfortable, uncomfortable, and so forth? Examine the pleasant, unpleasant, and neutral feelings that arise from the breath's movement in the body.

4. *Investigating.* Observe the breathing process. As you inhale and exhale, be aware that the breath isn't just wind; it's in the nature of all four elements — earth, water, fire, and wind — and the four element derivatives — visible form, odor, taste, and tangible objects. The breath is part of the body. Observe how the mind and mental factors depend on the breath, and how the mind and mental factors depend on the body and breath. The breath and the mind and mental factors are interrelated. Observe the way in which they mutually affect each other. When the relationship of mind and body is broken, the person dies.

5. *Changing*. Instead of focusing on the breath, use your mind, which has become serviceable and concentrated, to examine the four truths, which now become your object of meditation. As a result of this, the mind is able to proceed through the four stages of the path of preparation (heat, peak, fortitude, and supreme dharma).

6. *Purifying*. The mind goes on to cultivate the paths of seeing, meditation, and no-more-learning.

These six meditations are progressive and profound, the latter being harder than the preceding ones. When developing ability in them, start with the first and, when it is stable, proceed to the second, and so on. Alternatively, you can do several in one sitting, going all the way through the sequence of six.

The above three meditations on the foul aspects of the body, the skeleton, and the breath can be the observed objects for cultivating serenity or they can be used to counteract the hindrances of attachment, restlessness, and discursive thought when they interrupt your meditation on another observed object. In the latter case, return to your original observed object after the affliction has subsided.

People tell me that when doing analytic meditation on lamrim or deity yoga practice, their minds are either distracted, wandering from this object to that, or they are drowsy. In this case, I recommend doing the meditations described above over a period of time. Witness for yourself the effect they have. The Buddha recommended these meditations because he knew they work!

## REFLECTION

---

1. Do the three meditations described above by first making an outline of the meditation points: (1) meditating on the body to counteract desire, (2) meditating on a skeleton to counteract restlessness, and (3) meditating on the breath to counteract discursive thought (mental chatter).
  2. Be aware of how each meditation affects your mind when you do it repeatedly.
- 

## *Overcoming Hindrances*

It is important not to become discouraged when the five hindrances arise in your meditation, but to make effort to eliminate them. This effort is different from pushing ourselves — it is steady and consistent; the mind is neither too tight nor too loose. As we familiarize ourselves with the antidotes over time, hindrances will gradually subside and the mind will become clearer. The concentrated mind of samādhi is blissful and focused. Free from the five hindrances, it can see the body, feelings, mind, and phenomena for what they are. With samādhi, we will come to know the power and potential of the mind, and will be able to integrate wisdom and compassion in our way of being. The Buddha gave several similes for the relief and freedom one feels when the five hindrances have subsided:

Suppose a person is afflicted, suffering and gravely ill, and his food does not agree with him and his body has no strength, but later he recovers from the affliction and his food agrees with him and his body regains strength. Then on considering this, he will be glad and full of joy. Or suppose a person is a slave, not autonomous but dependent on others, unable to go where he wants, but later he is released from slavery, independent of others, a free person able to go where he wants. On considering this, he is glad and full of joy. Or suppose a person with wealth and property enters a road across a desert, but later he crosses over the desert, safe and secure, with no loss of property. On considering this, he is glad and full of joy. So too, monastics, when these five hindrances are not abandoned in himself, a monastic sees them respectively as a disease, slavery, and a road across a desert. But when these five hindrances have been abandoned in himself, he sees that as good health, freedom from slavery, and a land of safety (MN 39.14).

The development of samādhi and serenity is a gradual process; it does not happen quickly or with little effort on our part — no matter how much we wish realizations could occur in that way! The Buddha used the simile of a goldsmith gradually purifying gold to illustrate this. He washes the gold well several times to separate the gold dust from earth, grit, sand, and dust. He then puts it into a melting pot and repeatedly melts it to remove all flaws. Only when the gold is pliant, workable, and bright can the goldsmith make what he wishes with it. The Buddha explains (AN 3.101):

It is similar, monastics, with a monastic devoted to the higher mind: there are in him gross impurities, namely bad conduct of body, speech, and mind. Such conduct an earnest, capable monastic abandons, dispels, eliminates, and abolishes.

When he has abandoned these, there are still impurities of a moderate degree that cling to him, namely sensual thoughts, thoughts of malice, and violent thoughts. Such thoughts an earnest, capable monastic abandons, dispels, eliminates, and abolishes.

When he has abandoned these, there are still some subtle impurities that cling to him, namely thoughts about his relatives, his home country, and his reputation. Such thoughts an earnest, capable monastic abandons, dispels, eliminates, and abolishes.

When he has abandoned these, there still remain thoughts about higher mental states experienced in meditation.<sup>52</sup> That concentration is not yet peaceful and sublime; it has not attained full serenity, nor has it achieved mental unification; it is maintained by strenuous suppression of the defilements.

But there comes a time when his mind becomes inwardly steadied, composed, unified, and concentrated. That concentration is then calm and refined; it has attained to full serenity and achieved mental unification; it is not maintained by strenuous suppression of the defilements.

Then to whatever mental state realizable by direct knowledge he directs his mind, he achieves the capacity of realizing that state by direct knowledge, whenever the necessary conditions occur.

Fortitude, continuous effort, and a relaxed mind free from unrealistic expectations are great aids to gain serenity and other realizations.

Some great Buddhist meditators dwell alone in the forest or mountains, not speaking to anyone and braving hardships. Hearing about them, some people have a romantic notion of living in solitude, withdrawn from the world. One day the Buddha heard about a bhikṣu who was dwelling alone and who encouraged others to do so. He entered a village on alms round alone, returned to his isolated place alone, sat alone, and did walking meditation alone. Calling this monk to

him, the Buddha said that what he was doing was a way of dwelling alone, but fulfilling the real purpose of dwelling alone differed (SN 21:10):

How is dwelling alone fulfilled in detail? Here, what lies in the past has been abandoned, what lies in the future has been relinquished, and attachment and sensual desire for present forms of individual existence have been thoroughly removed . . .

The wise one, all-conqueror, all-knower,  
among all things unsullied, with all cast off,  
liberated in the destruction of craving:  
I call that person “one who dwells alone.”

*Abandoning what lies in the past* means releasing attachment and sensual desire for the aggregates of the past, which include the material possessions, reputation, praise, appreciation, and so forth we have received in the past. *Relinquishing what lies in the future* is to give up attachment to the aggregates of the future with all of its inner and outer trappings. *Removing attachment to present forms of existence* is to leave aside attachment to present sensual pleasures. In short, abandoning the view of a personal identity and craving for existence in the past, present, and future is the highest meaning of dwelling alone.

Keeping this in mind is important, lest conceit arise: I am a great meditator doing what others cannot do. I hope others speak well of me and bring me offerings because they respect my renunciation. Actually, such a person may have given up good food, but they are nourishing their conceit instead.

“All conqueror” is one who has overcome compulsive rebirth in saṃsāra. “Unsullied” is one who has given up craving and views, “all cast off” is freeing oneself from all defilements, and “liberated in the destruction of craving” is the attainment of arhatship. If we keep this in mind, we will train our mind to dwell alone in peace, separated from defilements.

## REFLECTION

---

1. What does it mean to abandon what lies in the past, in the future, and in the present?

2. To function in society, we need to remember what we have learned in the past, to plan for the future, and to act in the present. Surely the Buddha is not instructing us to do nothing. How do we integrate his advice to abandon what lies in the past, present, and future with being an effective person, like he himself was?
- 

## *The Five Faults and Eight Antidotes*

The Sanskrit tradition as practiced in Tibet and China relies on the texts of Maitreya and Asaṅga for instructions on the method to cultivate serenity. In *Differentiation of the Middle and the Extremes (Madhyāntavibhāga)*, Maitreya spoke of five faults that impede serenity and eight antidotes that eliminate them.

### **FIVE FAULTS AND THEIR ANTIDOTES**

FAULT	ITS ANTIDOTES
laziness	confidence (faith) aspiration effort pliancy
forgetting the instruction (forgetting the object)	mindfulness
restlessness and laxity	introspective awareness
nonapplication of the antidote	application of antidotes
overapplication of the antidote	equanimity

#### *1. Laziness and Its Antidotes: Confidence, Aspiration, Effort, and Pliancy*

Laziness comes in three forms: (1) Sleeping a lot and laying around, doing nothing much at all, we procrastinate. (2) Keeping ourselves busy with worldly activities — work, socializing, shopping, looking at the latest happenings on our devices — we lack time to meditate. (3) Overwhelmed by discouragement, we

feel inadequate and don't try to train our minds. It is easy to identify instances of all three types of laziness in our lives; overcoming them is more difficult. All three interfere with our ability to gain serenity. In the context of cultivating serenity, laziness refers to not wanting to do the practice to develop serenity.

The actual antidote to laziness in the context of cultivating serenity is mental pliancy. Since it takes a while to strengthen this mental factor, we begin by cultivating *confidence* (faith) in the benefits of serenity and concentration. These benefits include mental calm and peace, freedom from coarse destructive emotions, the ability to remain focused on a virtuous object without distraction, and a clear, powerful mind that facilitates the realization of emptiness.

Confidence is a joyous state of mind that gives rise to *aspiration*, which is interested in and aspires to cultivate serenity. This leads to *effort* that takes delight in concentration and is enthusiastic to attain it. This is like having confidence in the qualities of a product advertised on television. We aspire to buy it and happily make effort to do so.

On the path to attain serenity, we pass through the nine stages of sustained attention, during which we abandon the faults and hindrances to concentration — especially restlessness and laxity. *Pliancy*, the fourth antidote, actually accomplishes this. Pliancy is a mental factor that is free from all mental and physical unserviceability — factors that impede the body and mind from cultivating virtue whenever we like. With physical and mental pliancy, our body feels light and flexible, and our mind easily remains focused on whatever virtuous object we choose.

## *2. Forgetting the Instruction and Its Antidote, Mindfulness*

Forgetting the instruction means forgetting the meditation object. Having overcome coarse laziness, we sit on the meditation cushion and try to concentrate, but our untrained mind quickly strays from the observed object to objects of attachment, anger, jealousy, and worry. Instead of focusing on the meditation object, we think about future vacation sites or the argument we had with a colleague. The antidote is mindfulness, a mental factor that is familiar with the meditation object and holds the mind on it in such a way that distraction and forgetfulness cannot arise. Mindfulness is closely related to memory and applies only to an object with which we are well acquainted.

Losing the meditation object mainly occurs on the first four stages of sustained attention. Losing the object is like a child running out of the room; mindfulness is analogous to bringing him back inside. By continually bringing our mind back to the observed object whenever it strays, mindfulness makes the distracting thoughts gradually subside. Bhāvaviveka said:<sup>53</sup>

The elephant of the mind wandering wildly  
is to be securely bound with the rope of mindfulness  
to the pillar of a meditation object,  
and is gradually tamed with the hook of wisdom.

Ethical conduct is a precursor to serenity, because it develops mindfulness in daily life activities. Whether we are walking, standing, sitting, or lying, we must maintain mindfulness of our precepts and of suitable behavior for that situation. Doing this facilitates mindfulness of our meditation object because physical and verbal actions are easier to control than mental activity. Conscientiousness — a mental factor that values thinking, speaking, and acting constructively — is a key element.

Talking and having a busy social life cause many thought preconceptions to flood our minds. By speaking and socializing less, unrealistic and unbeneficial conceptualizations gradually decrease. One meditator I know in Dharamsala spends six days of the week in total silence but talks a little on the day his attendant brings his weekly supplies. Sometimes, even for several months, he will not talk at all. While this is not practical for most of us, we should try to speak only what is necessary, wise, kind, and appropriate to the circumstances. Chatting here and there with this person and that disturbs our meditation, as well as the people around us!

### *3. Restlessness and Laxity and Their Antidote, Introspective Awareness*

Single-pointedness of mind has two characteristics: (1) *Stability* is the ability to stay on the meditation object without wandering to another object. The chief obstacle to stability is restlessness, which scatters the mind toward other objects. (2) *Clarity* is vibrancy of the subject, the meditating mind apprehending the object. Its chief obstacle is *laxity*, which decreases the intensity of the clarity, so that the mind's way of apprehending the object becomes loose. Because

restlessness<sup>54</sup> and laxity have the same antidote, introspective awareness, they are grouped together as the third fault.

## Restlessness

Scattering (T. *'phro wa*) occurs when the mind moves to another object. It may be virtuous — for example, straying from the meditation object of the image of the Buddha to think about precious human life instead. It may be nonvirtuous, such as plotting our revenge for a harm inflicted on us. It may be neutral — for example, thinking about doing the laundry after the meditation session. Distraction (mental wandering, T. *rnam gyeng*) is the same as scattering. Discursiveness or conceptualization (*vikalpa*, *vikappa*, T. *rnam rtog*) is similar to scattering and distraction and implies that the mind is filled with mental chatter, useless thoughts, and worries.

Restlessness is a type of scattering and distraction; it is associated with attachment because the mind goes to objects of attachment. Restlessness, not scattering, is considered one of the five faults because when we try to cultivate concentration, our attention tends to stray toward objects of attachment more than toward other objects. *Coarse restlessness* causes us to lose the meditation object completely and shifts our attention to a desirable object — food, an attractive person, a car, or a promotion.

With *subtle restlessness*, the meditation object is not entirely lost, but one part of the mind comes under the influence of discursive thought and a pleasing object of desire is about to appear in our mind. This is compared to water under ice; the ice (our concentration) looks firm, but something else (subtle restlessness) is going on under the surface and the ice risks cracking. Subtle restlessness is like a bird with a chained foot: the mind hasn't forgotten the meditation object but is unable to fully engage in it. It is more difficult to recognize than coarse restlessness because there is still stability and clarity, but the undercurrent of mind is moving toward another object due to attachment. This often arises when our focus on the meditation object is too tight. If subtle restlessness increases and we lose the meditation object completely, coarse restlessness has arisen.

The antidote to restlessness is introspective awareness, a mental factor that monitors the mind and is a form of intelligence. When mindfulness is powerful, introspective awareness comes naturally, and when introspective awareness is strong, mindfulness can easily be maintained. Mindfulness holds the object of

meditation, and introspective awareness assesses whether restlessness or laxity have arisen and are interrupting concentration. While our main focus remains on the meditation object, introspective awareness, like a spy, discreetly surveys the situation from time to time to see if any faults to concentration are present. If so, we must apply the specific antidote to that fault.

Introspective awareness is especially important during the early stages of developing concentration. When concentration is more stable and faults are less likely to arise, introspective awareness does not need to monitor the mind as much. Employing introspective awareness too often may provoke restlessness, so skill is needed in using it.

Although introspective awareness is posited as the antidote to both restlessness and laxity, it is not the actual antidote. By observing the mind, it identifies the presence of restlessness or laxity and sets in motion the process to remedy it. Lacking introspective awareness is analogous to a burglar entering our house and our having no awareness of theft occurring right under our nose.

The remedy to coarse restlessness is to bring attention back to the meditation object and renew mindfulness on it. If this does not work, temporarily leave the meditation object and reflect on a topic that makes the mind sober, such as impermanence and death or the *duḥkha* of cyclic existence. When the mind's energy is lower, return to your original meditation object. Focusing on the breath may also calm restlessness.

If these methods do not work and restlessness continues, visualize your spiritual mentor in the form of the Buddha above your head. Imagine white light and nectar flowing from his heart, flowing down into your body, purifying all negativities and eliminating all hindrances to serenity, especially restlessness. Request inspiration from the Buddha to gain serenity for the benefit of all sentient beings.

If your mind is still very agitated, pause the meditation session and resume it at another time.

The remedy for subtle restlessness is to relax the intensity of concentration slightly, but not so much that we lose the object.

Although restlessness is the chief form of scattering to look out for, whenever your attention wanders to another meditation object, even a virtuous one, bring it back. If you are visualizing the Buddha and your attention scatters to *Tārā*, bring the mind back to the Buddha. When contemplating impermanence, if you

switch to meditating on the disadvantages of saṃsāra, immediately return to your original object. If a camper wants to start a campfire but becomes distracted by the beautiful scenery and lets the fire diminish, she must begin all over again. So, too, if we want to cultivate concentration but let our attention wander, we will have to start anew.

While knowing the definitions and functions of the mental factors that interrupt concentration and those that support it is necessary, identifying these in our own experience is essential. It takes time and effort to observe how our mind operates, but doing this is the key to making the Dharma come alive for us. Otherwise there is danger that our intellectual knowledge of the teachings will simply increase our arrogance rather than decrease our afflictions.

### **Laxity**

Laxity differs from lethargy, which is a heaviness of body and mind that is close to sleep. Lethargy causes the decline of both stability and clarity. The mind is dull and passive; it may even begin to dream. Lethargy isn't mentioned as one of the five faults because on higher levels of concentration it is less frequent than laxity, but when laxity is mentioned, lethargy is implied. At initial levels of practice, lethargy is a noticeable obstacle for many people.

When *coarse laxity* is present, there is some stability on the object, but the clarity has decreased. The object doesn't appear so clearly, and we may start to lose it. Although the mind isn't distracted to another object and isn't drowsy, it lacks force. It remains in a vague state with an agreeable sensation. Perhaps it resembles what my Western friends call "spaced out."

Because the mind has become too withdrawn inside, the antidote to coarse laxity is to enlarge the scope of the meditation object. Make it brighter, elaborate on the details. If the meditation object is the image of the Buddha, employ analysis to review the details of the Buddha's form. Visualizing bright light filling the room or looking at a light also helps. If coarse laxity persists, temporarily leave the meditation object and contemplate a topic that will elevate your spirits and invigorate the mind — for example, precious human life, the benefits of concentration, the benefits of bodhicitta, or the excellent qualities of the Three Jewels. Such reflection energizes the mind and makes it joyful. If coarse laxity continues, visualize your spiritual mentor and make a request as described above,

and then return to your meditation object. Otherwise stop the session, splash water on your face, take a walk outdoors, and look out at a vista.

*Subtle laxity* is the worst fault when trying to generate serenity. With it, the mind has become too relaxed. Although clarity remains and the mind may abide single-pointedly on the object, the freshness or vigor of the clarity has declined because the mind's grip on the object has become too loose; a subtle sluggishness, weakness, and lack of comprehension are present.

Subtle laxity is difficult to recognize because it's similar to samādhi in that both have stability and clarity and both are characterized by the mind being peaceful and experiencing a pleasurable sensation. Because of these similarities, subtle laxity is especially dangerous. A meditator's breath may stop, and she may sit in meditation for days. Afterward, she may think she has attained serenity and makes no effort to improve her meditation, when in fact subtle laxity was present.

Subtle laxity has many disadvantages. Our meditation doesn't become a cause to attain serenity and we may become forgetful in this life and be born as an animal in the next. Mindfulness becomes weak and wisdom decreases. Eventually coarse laxity returns and we may lose clarity completely.

Someone once said to me, "I have good concentration on the object, but I lack energy for the welfare of other beings." I believe this was because the person's meditation suffered from subtle laxity. Subtle laxity is like a tied donkey; it looks calm but is ignorant. Correct concentration, on the other hand, should make the mind alert and vibrant.

Another person mentioned to me that while he was meditating to gain serenity, his mind became duller and he couldn't think as clearly. I responded that this indicated that something was amiss in his meditation — he had not detected the presence of subtle laxity.

The remedy for subtle laxity is to hold the meditation object more firmly and tighten the mode of apprehension of the object. But if we hold the object too tightly, restlessness may arise. Finding the right balance is like holding a tiny bird: our grip must be neither too tight nor too loose. The proper balance is developed only through experience. If we err, it's better to be on side of tightness because restlessness is easier to recognize and overcome than laxity.

Skill is required to use introspective awareness properly to identify lethargy, laxity, distraction, and restlessness. If our introspective awareness is weak, we won't recognize interruptions to concentration. If it is overactive, it interrupts the

flow of concentration and prevents the mind from becoming stable. Mindfulness and introspective awareness go hand in hand. Mindfulness is like holding a full cup of water; introspective awareness is like an occasional glance to see if the water is spilling. Initially we aim for stability on the object through mindfulness. Later, when we are more familiar with the object and our attention span is longer, introspective awareness is needed to check for faults such as restlessness and laxity. Until introspective awareness is strong, our meditation remains prey to these two faults.

Initially periods of laxity and restlessness are strong and frequent. Through practice they become weaker and periods of concentration on the object become longer. In time, subtle laxity and restlessness lose their force and disappear.

### *Nonapplication and Its Antidote, Application of the Antidotes*

*Nonapplication* is not applying the antidote even when we know restlessness or laxity is present. It is similar to a general not sending out troops once a spy has discovered the enemy lurking about. Nonapplication occurs principally in the seventh stage of sustained attention, but something similar to it may occur earlier. The antidote is to *apply the appropriate antidote* to whichever fault has arisen and exert effort to eliminate it: holding the object and paying closer attention to it when laxity arises, relaxing our mental grip on the object when restlessness is present.

### *Overapplication and Its Antidote, Equanimity*

*Overapplication* is excessive exertion; it occurs when we apply antidotes to restlessness and laxity although they haven't occurred or have already been eliminated. It resembles a parent correcting a child when the child is behaving well — it simply disturbs the child. This fault occurs mainly in the eighth stage of sustained attention, although a similitude may occur earlier. The antidote to overapplication is *equanimity*, in which we relax our effort a little, but not too much.

In short, the Indian sage Atiśa advises us:

Avoid all factors that hinder samādhi,  
and cultivate conducive factors

[by] applying the eight antidotes for eliminating negativities.  
This is the rubbing stick  
free from the moisture of attachment  
for igniting the fire of the spiritual path.  
Meditate in this way with intensity.

## REFLECTION

---

1. Identify each of the five faults in your own meditation. Which one is the most troublesome for your present level of development?
  2. Practice noticing each fault when it arises and applying its antidote. Do this over a period of time.
  3. What change do you see in your meditation?
- 

### *The Nine Stages of Sustained Attention*

The nine stages of sustained attention and six powers are explained in Asaṅga's *Śrāvaka Grounds* and *Compendium of Knowledge* (*Abhidharmasamuccaya*).

The nine stages of sustained attention (*navākārā cittasthiti*) are stages of concentration on the way to serenity. The six powers and four types of attention (mental engagement) help to overcome faults, stabilize the mind on the object, and increase clarity. In doing so, they enable meditators to progress sequentially through the nine stages. The six powers (*bala*) are:

1. Through *hearing* (*śruta*), we learn the teachings on the method to cultivate serenity and place our mind on the observed object as instructed by our teacher. The first stage of sustained attention is accomplished by hearing.
2. Through repeated *reflection* (*cintā*) on the meditation object, we become able to stabilize the mind on it for a short while. Reflection accomplishes the second stage of sustained attention.
3. *Mindfulness* (*smṛti*) repeatedly brings the mind back to the object and accomplishes the third stage. Generated at the beginning of the session,

mindfulness stabilizes the mind on the object and prevents distraction so the fourth stage is attained.

4. *Introspective awareness (samprajanya)* sees the faults of discursive thoughts, auxiliary afflictions, and distraction to sense objects, and does not allow the mind to go toward other objects, thoughts, or emotions. It helps to tame and calm the mind and becomes prominent during the fifth and sixth stages.
5. *Effort (vīrya)* exerts energy to eliminate even subtle discursive thoughts and auxiliary afflictions and prevents the mind from getting involved with them. Preventing restlessness, laxity, and so forth from interfering with the flow of concentration, effort enables the meditator to focus the mind by releasing distractions. It is prominent on the seventh and eighth stages.
6. Through *complete familiarity (paricaya)* with the above powers, the mind spontaneously remains in samādhi. This power is found on the ninth stage.

The four types of attention determine how the mind engages with the meditation object.

1. *Tight focus (balavāhana)* is used on the first and second stages of sustained attention to reinforce mindfulness.
2. When there is more stability, *interrupted focus (sacchidravāhana)* is used to attain the third through seventh stages.
3. *Uninterrupted focus (nīschidravāhana)* corresponds with the eighth stage.
4. *Spontaneous focus (anābhogavāhana)* is present with the ninth stage.

Maitreya outlined the nine stages of sustained attention in his *Ornament of Mahāyāna Sūtras*. Each line describes the activity of one stage.

1. Having directed the mind to the object of observation,
2. do not allow its continuum to be distracted.
3. Having noticed distraction, quickly return [the mind] to that [object].
4. The aware also withdraw the mind inwardly more and more.

5. Then, seeing the good benefits of concentration, tame the mind in concentration.
6. By seeing the faults of distraction, pacify dislike for [concentration].
7. Desire and so forth as well as discomfort and so forth likewise should be pacified [immediately] upon arising.
8. Then, those who make effort at restraint [of faults need only] make [a little] effort to [concentrate] the mind.
9. Natural arising is attained. Aside from familiarizing with that, one desists from activity.

Let's look at the nine stages of sustained attention and the role the six powers and four types of attention play in them.

### *1. Placing the Mind (Cittasthāpana)*

To begin, we must identify the observed object and place the mind on it, even though our attention may not remain on it for long. To do this, withdraw your attention from external objects and with mindfulness place it on the meditation object. Do not follow distracting thoughts, sounds, and so forth.

The appearance of the object isn't clear, and the mind is filled with discursive thoughts, one coming after the other. Our mind may seem noisier than usual, although in actuality it isn't. It's simply that for the first time we are aware of how busy the mind is. For example, someone living near a highway is so familiar with the sound of traffic that he does not usually notice it. Only when he goes to a quiet place does the noise he is accustomed to become apparent. Discursive thoughts are automatically pacified in the process of progressing through the nine stages, so do not be discouraged. As your mindfulness strengthens, the flood of thoughts will gradually subside.

The first stage of sustained attention is accomplished by the power of hearing, for we apply the mind to the instructions we have previously heard from a teacher and set our mind on the object. Tight focus helps us to gain a strong hold on the object.

### *2. Continual Placement (Samsthāpana)*

Initially our goal is to keep our attention on the object and not let it stray. Through practice and employing the power of reflection, the mind is able to continually stay on the object for a short while. This marks the second stage of sustained attention. Tight focus is still necessary to keep the mind on the meditation object, but now the mind can remain on the object a little longer. Still, the time spent in distraction exceeds the time the mind abides on the object, and our concentration is constantly interrupted by scattering to other objects. However, distractions and discursive thoughts begin to take a rest and their force weakens. We begin to experience a little peace of mind.

### *3. Repeated Placement (Avasthāpana)*

Now our aim is to recognize when the object is lost due to distraction and reset it on the object more quickly. Gradually, distractions decrease, and when they do arise, we are able to recognize them. Previously we couldn't immediately regain concentration on the object once it was lost, but now, due to developing mindfulness on the previous two stages, mindfulness easily returns to the meditation object and attention returns inward. Our focus is interrupted because concentration is not continuous. Still, scattering is recognized at once, so its duration is shorter and our ability to remain on the object increases. At this time, the third stage of sustained attention arises.

### *4. Close Placement (Upasthāpana)*

As we develop more familiarity with the object, forgetting the object greatly decreases. Mindfulness is generated at the beginning of a session and attention remains on the object with fewer distractions. The mind becomes subtler and is more easily drawn inward, away from the expansive diversity of thoughts and objects. Coarse restlessness and laxity are present, so our focus on the object is still interrupted.<sup>55</sup> Nevertheless, the power of mindfulness is strong. Now the fourth stage of sustained attention arises.

### *5. Taming (Damana)*

The mind is disciplined and tamed so that it can stay on the object almost continuously. The power of introspective awareness stops the mind from wandering to destructive emotions and discursive thoughts about sense objects. Coarse laxity and coarse restlessness are no longer problems. Previously subtle laxity wasn't a problem because single-pointedness was difficult to attain. However, now the mind may become too absorbed in the object so that subtle laxity occurs. Subtle laxity and subtle restlessness interrupt the focus, but concentration is easily restored by the power of introspective awareness. Being aware of the benefits of concentration, we take delight in it and attain the fifth stage of sustained attention.

### *6. Pacifying (Śamana)*

Through the power of introspective awareness, conviction that distraction is to be abandoned becomes firm, and all resistance to or dislike for single-pointed meditation is gone. During the previous stage, concentration was tightened in order to eliminate laxity. Now it may be too tight, making the mind restless and causing subtle restlessness. Subtle laxity may still arise occasionally, so both subtle laxity and subtle restlessness cause interrupted focus on the object. Having matured through practice, the power of introspective awareness can sometimes identify and deal with restlessness and laxity before they arise. The sixth stage of sustained attention, pacifying, now arises.

### *7. Thoroughly Pacifying (Vyupaśamana)*

Even if subtle thoughts or subtle destructive emotions such as attachment, resentment, lethargy, and so on manifest, they are easily pacified. Subtle laxity and subtle restlessness arise occasionally, so focus is still interrupted, but the power of effort easily and quickly stops them. Mindfulness, introspective awareness, and effort are well developed, but nonapplication of the antidotes may still occur. At this point the seventh stage of sustained attention arises.

### *8. Making Single-Pointed (Ekotikarāṇa)*

As a result of mindfulness and effort, laxity and restlessness are not able to interrupt concentration, so focus is uninterrupted. After sitting down to

meditate, we can immediately apprehend the meditation object and concentration remains on it continuously. Only a little effort is needed at the beginning of a session to discern the details of the object and to guard against laxity and restlessness. After that, the mind stays on the object without faltering through the power of effort. The eighth stage of sustained attention now arises and single-pointed concentration can remain for a long time.

### *9. Placement in Equipoise (Samādhāna)*

Gradually the power of complete familiarity becomes stronger and effort to maintain mindfulness and introspective awareness is no longer required. The mind engages with the object willingly and the ninth stage is attained. Just the wish to meditate is required at the beginning of the session. Once mindfulness is placed on the object and the mind enters meditative equipoise, it effortlessly and naturally remains in single-pointed concentration without having to evoke mindfulness. The focus on the object of meditation is spontaneous and single-pointed meditation automatically continues for a long time. The sense consciousnesses are totally absorbed and no longer respond to external stimuli during meditation. This is the highest concentration attainment with a desire-realm mind. It is a similitude of serenity; fully qualified serenity has not yet been attained.

According to the Tibetan scholar Chim Jampelyang, the first three stages are means to enable the mind, which is generally fluctuating and moving from object to object, to abide on its meditation object. The second three stages are the means to stabilize the mind that is already abiding on its object, although stability can still be disturbed by coarse restlessness and laxity. The last three stages are means to gain full control of the mind that has achieved stability.

As we progress through these stages of sustained attention, the strength of our mind and the power of our meditation increase in dependence on each other. Clarity and stability correspondingly increase, resulting in mental and physical peace and happiness. Our complexion becomes youthful and radiant, we feel light and vigorous, and dependence on coarse food decreases.

## *Mental and Physical Pliancy and the Bliss of Physical and Mental Pliancy*

After the ninth stage, mental pliancy, physical pliancy, the bliss of physical pliancy, and the bliss of mental pliancy need to be cultivated in that sequence to attain serenity. Some people are able to do this quickly; others must meditate for weeks before attaining serenity. Asaṅga says in *Compendium of Knowledge* (LC 3:82):

What is pliancy? It is a serviceability of the body and mind due to the cessation of the continuum of physical and mental dysfunctions. It functions to dispel all obstructions.

Physical dysfunctions are factors related to winds (*prāṇa*) in the body that make the body heavy and uncomfortable when we try to engage in virtue. Mental dysfunctions prevent taking delight in eradicating afflictions. Through increased familiarity with concentration, physical dysfunctions are overcome. At this time, the brain feels heavy — though not in an uncomfortable way — and there is a pleasant tingling sensation at the top of the head, as if a warm hand were placed on the crown after our head was freshly shaved. This sensation occurs as dysfunctional winds leave from the crown. Immediately afterward, dysfunctional mental states are overcome and *mental pliancy* is attained. In general, mental pliancy is a mental factor that accompanies all virtuous minds and enables the mind to be directed toward a virtuous object. However, this is a special mental pliancy that is a serviceability of mind — a lightness and clarity of mind coupled with the ability to set the mind on whatever virtuous object we wish. The mind no longer resists being directed toward virtuous objects and is happy to meditate and stay on the meditation object.

### **THE NINE STAGES OF SUSTAINED ATTENTION**

STAGE	POWER	ATTENTION	MAIN FAULT	MAIN ANTIDOTE	WHAT TO ACCOMPLISH ON THIS STAGE
1. placing the mind	hearing	tight focus	laziness, forgetting the object, distraction, scattering	conviction, aspiration, effort	identify meditation object and place the mind on it
2. continued placement	reflection		forgetting the object, distraction, scattering	mindfulness	remain on the object a little longer
3. repeated placement	mindfulness	interrupted focus	forgetting the object, distraction, scattering	mindfulness	recognize when object has been lost and reset attention on it
4. close placement			coarse restlessness and coarse laxity	introspective awareness	strengthen mindfulness so can remain on object longer without distraction
5. taming	introspective awareness		subtle laxity	introspective awareness	stop wandering so can remain on object almost continuously
6. pacifying			subtle laxity and subtle restlessness		abandon all resistance to concentration, identify laxity and restlessness before they arise
7. thoroughly pacifying			nonapplication of the antidote/ restlessness and laxity may arise, but are quickly stopped	application of the antidote	easily pacify subtle afflictions
8. making single-pointed	effort	uninterrupted focus	overapplication of the antidote	equanimity	only a little effort is needed at beginning of session, guard against restlessness and laxity
9. placement in equipoise	complete familiarity	spontaneous focus		pliancy	no effort needed to maintain mindfulness and introspective awareness, mind habitually remains single-pointed

Mental pliancy in turn induces serviceability of the winds flowing through the body because the winds that power afflictions have subsided. A wind of physical pliancy pervades the entire body and the body's lack of serviceability for meditation is overcome. This is *physical pliancy* — a lightness, buoyancy, and serviceability of body that enables the body to be used for whatever virtuous purpose we wish without pain, fatigue, or hardship. The body feels as light as a cotton ball, almost as if we could ride on our own shoulders. Physical pliancy immediately leads to experiencing the *bliss of physical pliancy*, which is a very blissful tactile sensation. The body feels incredibly comfortable and fresh, and we can use it in virtuous activities as we wish.

As concentration continues, there is the sense that the body has melted into the meditation object. At this point, the *bliss of mental pliancy* is experienced. The mind is very joyous — almost too buoyant — and we feel as if we could focus on each atom of a wall. Following this, there is a sensation on the top of the head — similar to placing a cool hand on top of a freshly shaven head — and the mental

bliss decreases a little. When it becomes stable, *unfluctuating bliss of concentration* and *unfluctuating mental pliancy* arise. At this point serenity is attained. I know a monk who studied well and later meditated to develop serenity. He described to me the bliss arising from physical and mental pliancy.

Serenity is concentration arisen from meditation that is accompanied by the bliss of mental and physical pliancy in which the mind abides effortlessly without fluctuation for as long as we wish on whatever object it has been placed. Stabilizing meditation has been brought to fulfillment. Kamalaśīla's second *Stages of Meditation* says (LR 3:80):

For you who have cultivated serenity in this way, when your body and mind become pliant and you have mastery over your mind in directing it as you wish, at that time know that you have accomplished serenity.

Many signs occur with the attainment of serenity: The body and the mind are flexible and serviceable; physical and mental pliancy arise quickly when we meditate. The mind is very spacious and can abide firmly and steadily on its meditation object; even a loud sound will not interfere with concentration. There is a sense of great clarity, as if we could count atoms. In postmeditation time, afflictions don't arise as often or as strongly, and craving for sense pleasures has decreased. We can meditate as long as we wish without any discomfort; the body feels light and at ease and the mind is free from the five hindrances. Sleep can easily be transformed into meditation and wonderful experiences may occur during sleep. Even after arising from meditation, some degree of physical and mental pliancy remain. Afflictions may arise in break times, but in general they are weaker and can be easily subdued.

Serenity has three qualities:

1. *Nonconceptuality* is nondiscursive stability, the stability that comes with the absence of distracting thoughts. In this context "nonconceptuality" does not mean that the mind perceives its object directly without the medium of a conceptual appearance. Rather, it indicates the mind can stay on the observed object of meditation for as long as we wish because it is free from restlessness and does not conceptualize any other object.

2. *Clarity* in this context means that the mind is free from laxity and the object clearly appears.
3. *Benefit* in this context means that the bliss of mental and physical pliancy has been attained.

Once serenity has been attained, four afflictions can interfere with maintaining and improving the quality of concentration. It is important to monitor the mind diligently and avoid falling prey to them.

1. *Attachment* to the pleasure of serenity or whatever level of absorption we have attained prevents us from cultivating wisdom. Content to remain in blissful concentration, we relinquish the opportunity to realize emptiness.
2. *Arrogance* thinking that we are superior to others because we have attained meditative absorption distracts us from deepening our concentration and wisdom.
3. *Ignorance* mistaking deep states of absorption for liberation keeps us bound in saṃsāra. The result of this is especially painful at the time of death, when a meditator expects to attain nirvāṇa without remainder but instead realizes he will be reborn in saṃsāra.
4. *Wrong views* obstruct gaining the correct, liberating view of emptiness.

In *Śrāvaka Grounds*, Asaṅga recommends (LC 3:89):

When you attain the mind of serenity, in this way, signs, thoughts, or auxiliary afflictions may appear, manifest, or become the object, because of forgetfulness or the fault of lack of habituation. Do not fall immediately under the influence of the faults that you have previously observed. Neither recall them nor pay attention to them. In this way, because you are neither being mindful of this object nor attending to it, it dissolves; and when it is dispelled, you will settle in the absence of the appearance of these obstructions.

While cultivating the nine stages of sustained attention and during the first period of time after attaining serenity, the meditation object is a conceptual appearance perceived by a conceptual mental consciousness. As meditation

continues and serenity becomes more refined, a point is reached where the object is so vivid that it is known nonconceptually. At this point, the object is no longer a conceptual appearance of, for example, the Buddha, but a form that is a phenomena source (*dharmāyatana rūpa*) — a form appearing only to mental consciousness.

Human beings who have attained serenity or higher absorptions do not lose their single-pointed concentration during the break times between meditation sessions. However, it is not manifest, and their five senses function when they go about their daily activities. Although their afflictions are weaker due to the power of samādhi, they may still manifest, so practitioners must maintain mindfulness and introspective awareness in all activities.

During such a retreat to generate serenity, do mainly stabilizing meditation with little analytical meditation. Asaṅga instructs (LC 3:89):

At that time [of cultivating serenity], this [concentration] attends to an image without discursive thought, and it exclusively focuses mindfulness one-pointedly on the object. It does not examine it, classify it, investigate it, ponder it, or analyze it.

Asaṅga indicates that the practice of serenity does not involve analytical activity. Kamalaśīla agrees and says in *Stages of Meditation* (LC 3:89):

The nature of serenity is nothing more than a one-pointed mind.  
This is the general characteristic of all meditative serenity.

Serenity is not a stage of concentration. It is a quality that pervades all meditative absorptions.

Some people erroneously believe that any meditation that lacks analysis and discursive thought must be meditation on emptiness, but this is not the case.

When, after attaining serenity, concentration is conjoined with the aspiration for liberation, it becomes a path to liberation. When it is conjoined with bodhicitta, it becomes a Mahāyāna path leading to awakening.

## *A Diagram Illustrating the Process of Attaining Serenity*

The diagram on page 166 illustrates the process of cultivating serenity. It depicts a monk (the meditator) chasing after and finally subduing an elephant (his mind). The numbers on the diagram correspond to the following explanations.

1. The six bends in the road represent the six powers. The first bend signifies the power of hearing our spiritual mentors' instructions on how to cultivate serenity.
2. The first stage, placing the mind, is attained by the power of hearing instructions.
3. The rope represents the power of mindfulness.
4. The taming hook represents the power of introspective awareness.
5. The flame is found from this point until the seventh stage, after which it is no longer present. It decreases in size, indicating the decreasing amount of effort needed to apply mindfulness and introspective awareness.
6. The elephant represents the mind; its black color indicates laxity.
7. The monkey symbolizes distraction in general; its black color indicates restlessness in particular. The monk is chasing the elephant and monkey, indicating that he has little control over the laxity and distraction that plague his mind.
8. This bend represents the power of reflection on the meditation object, which will lead to the second stage.
9. The second stage, continual placement is attained when the length of focus on the meditation object has increased.
10. Exposure to the five sense objects incites restlessness and hinders concentration.
11. The elephant now walks instead of runs — the mind is beginning to calm down. The elephant gradually turns white, representing increased clarity on the object and increased focus on it.
12. This bend represents the power of mindfulness, which leads to attaining both the third and fourth stages.
13. The third stage, repeated placement, is attained. The meditator has lassoed the elephant and can bring his attention back to the meditation object when it has been interrupted by coarse laxity or restlessness.

14. The hare represents subtle laxity. Now the meditator can distinguish between gross and subtle laxity.
15. The animals looking backward indicates that the mind is gaining strength over the faults and represents the mind's ability to return to the meditation object after recognizing mental wandering.
16. The fourth stage, close placement, is attained. The meditator is able to bring his attention back to the meditation object more quickly.
17. This bend represents the power of introspective awareness, which leads to the attainment of the fifth and sixth stages.
18. Restlessness's ability to affect the mind is curbed.
19. The monkey gathering fruit from the tree to the side of the meditation path represents the distinction between virtuous thoughts that arise when doing stabilizing meditation and at other times. The ones that arise during stabilizing meditation must be suppressed because they distract the meditator from the meditation object, whereas virtuous thoughts that arise at other times are to be encouraged.
20. The meditator is no longer chasing the wild elephant of the mind but is now leading it. Laxity and restlessness have decreased.
21. The fifth stage, taming, is attained and coarse laxity and coarse restlessness are no longer problems. The meditator begins to lead the elephant and the monkey follows. The mind is more controlled, although the meditator must goad the elephant.
22. The sixth stage, pacifying, is attained, and all resistance to or dislike for single-pointed meditation is gone. The hare (subtle laxity) is gone.
23. This bend represents the power of effort, which leads to attaining the seventh and eighth stages.
24. The seventh stage, thoroughly pacifying, is attained. It is now difficult for subtle laxity and subtle restlessness to arise, and if they do, they can be easily eliminated with a small amount of effort. The monkey stands behind the meditator and pays homage to him.
25. The elephant is completely white and the monkey is no longer present, symbolizing that by applying a little mindfulness and introspective awareness at the beginning of the meditation session, the meditator can enter an interrupted state of single-pointed concentration in which

- laxity, restlessness, and distractions do not have the power to interrupt concentration. The eighth stage is near.
26. The eighth stage, making single-pointed, is attained. Laxity and restlessness are not able to interrupt concentration, so the focus is uninterrupted. At the beginning of the session, the meditator can immediately apprehend the meditation object and can continuously maintain concentration on it.
  27. This bend represents the power of complete familiarity, through which the ninth stage is attained.
  28. The ninth stage, placing in equipoise, is attained. The elephant rests besides the meditator, who sits at ease. The mind effortlessly stays on the meditation object without any interruption during the entire session. A rainbow streams from the meditator's heart.
  29. The meditator rides the elephant along the rainbow path en route to serenity. The meditator experiences the bliss of physical and mental pliancy.
  30. Serenity is attained.
  31. Mental joy is present.
  32. The monk rides the completely pacified elephant. By attaining the union of serenity and insight with emptiness as the object, the monk holds the sword of wisdom. Ignorance, the root of saṃsāra, is now in the process of being cut.
  33. With extremely powerful mindfulness and wisdom, represented by the flames, the meditator continues to meditate on emptiness. With his meditation informed by bodhicitta, he eradicates all defilements from the mind.

## 8 | The Meditative Absorptions

SERENITY IS A TOOL to aid our practice; it is not an end in itself. The purpose of gaining serenity is to be able to cultivate insight and then to unite serenity and insight, which empowers the mind to be able to either temporarily suppress or completely eliminate afflictions. Having attained serenity, a practitioner may follow one of two paths. One is a *mundane path*, leading to the attainment of higher meditative absorptions in this life, birth in the form or formless realm in the next life, and perhaps the first five superknowledges. The mundane path involves mundane insight, which contemplates the drawbacks (grossness) of the lower states of meditative absorption and the benefits (peacefulness) of the higher states within cyclic existence and results in temporarily suppressing afflictions.<sup>56</sup> This path is common to both Buddhists and non-Buddhists.

The other is a *supramundane path*, in which serenity is used as the basis for the cultivation of insight into the sixteen attributes of the four truths, especially selflessness and emptiness. This is unique to Buddhist practitioners and leads to nirvāṇa and full awakening. Serenity is required to proceed on either of these two paths.

Understanding the meditative absorptions will benefit your practice. You will know that the practice of cultivating serenity and higher meditative states requires patience, fortitude, and effort, and that it's best to approach this without expectation of quick results gained with little effort. These teachings provide a road map to follow that enables us to practice in a steady, sequential manner and to more accurately evaluate our practice and experiences in meditation. This prevents us from becoming arrogant or giddy with excitement after having an especially "good" session or an unusual experience. In this way, we will continue to practice with a balanced mind and a good motivation.

The teachings in this chapter and the next are complex and require study on our part to learn. There are several new terms, which, with study, you will become familiar with. You may find it helpful to make an outline of the topics.

## *Cultivating Mundane Insight*

Samsāra consists of three realms — the desire, form, and formless realms.<sup>57</sup> The desire realm is so called because the beings in it are distracted to external objects of desire. The form realm, where beings have a subtler body than ours, consists of four levels of dhyāna (meditative stabilizations), while the formless realm, where beings do not have a coarse body, has four levels of meditative absorption.

We live in the desire realm and know it exists. How can we establish the existence of the form and formless realms? One way is to examine our states of mind. Our mental state in the desire realm is much grosser due to our distraction and obsession with external objects and their perception by the five sense faculties — eye, ear, nose, tongue, and touch. When we develop even a little concentration, our mind becomes more peaceful and stable. When this is enhanced, serenity is attained and the mind becomes even calmer and subtler. From this we can intuit that there are progressively deeper states of meditative absorption that are even more peaceful and subtle, and we can infer that there are sentient beings who take birth in these deep meditative absorptions and dwell in them for a long time.

Corresponding to the three realms (*dhātu* or *laukya, loka*) are the three spheres (*avacara*) of consciousness: (1) the desire sphere of consciousness (P. *kāmāvacaracitta*), (2) the form sphere of consciousness (P. *rūpāvacaracitta*), and (3) the formless sphere of consciousness (P. *arūpāvacaracitta*). These spheres of consciousness are a classification of mental states while the realms are planes of existence or worlds into which sentient beings are born. Usually beings in a particular realm have the sphere of consciousness corresponding to that realm. However, a being of another realm may have that sphere of consciousness on occasion. For example, human beings are born in the desire realm and have a desire-sphere consciousness. Upon attaining serenity, a human being's meditating mind becomes a form-sphere consciousness, although their body remains a desire-realm body.

Each dhyāna has two parts: (1) the preparatory stages — also called “access” (*sāmantaka*) — of that dhyāna, and (2) the actual dhyāna that is attained upon the completion of its preparatory stages. To attain the actual first dhyāna, meditators must first accomplish its seven preparatory stages or preparations, which are first dhyāna spheres of consciousness. The seven preparations consist of

the initial level of serenity, where one is called a “mere beginner,” and the first six of the seven mental contemplations (*manaskāra*). Here, “serenity” refers to a form-sphere consciousness and a level of meditative equipoise. Serenity must be strengthened by repeated meditation before meditators proceed to the seven mental contemplations. *Śrāvaka Grounds* lays out the seven mental contemplations (LC 3:98):

For the sake of freedom from the desire realm, diligent yogis use the seven types of mental contemplation and subsequently achieve their freedom. The seven types of mental contemplation are: the mental contemplations of (1) discernment of characteristics, (2) arisen from belief, (3) isolation, (4) delight or withdrawal, (5) analysis, (6) final training, and (7) the result of final training [which is the actual first dhyāna].

These seven can be practiced in terms of cultivating understanding of grossness and peacefulness or of the four truths. (1) *Grossness and peacefulness* refers to the disadvantages of the lower sphere of consciousness and the relative peacefulness of the present one. When mental contemplations are practiced for this aim, they are mundane paths practiced by Buddhists and non-Buddhists alike who want to deepen their meditative state. Both serenity and insight are employed: insight analyzes the grossness and peacefulness of the realms, and at the conclusion of analysis, serenity focuses one-pointedly on their relative grossness and peacefulness. (2) Buddhists practice the seven mental contemplations to cultivate understanding of the *four truths* in order to attain a supramundane path leading to nirvāṇa.

First we’ll discuss the mental contemplations in terms of grossness and peacefulness as outlined by Asaṅga in *Śrāvaka Grounds*.

1. The *mental contemplation of discernment of characteristics* involves study and reflection on the individual characteristics of the desire realm and the first dhyāna, the former being gross and the latter peaceful. One becomes a beginner at purifying afflictions. Here meditators analyze the grossness of the desire realm: Sentient beings fight; they create all ten paths of nonvirtue. Their bodies are made of foul substances and their minds are filled with afflictions such as anger, resentment, jealousy, miserliness, and lack of integrity — qualities that are absent in the first dhyāna. They experience suffering when they are born, age, fall ill, and

die, and in between birth and death they are dissatisfied, fearful, anxious, and despondent.

Having analyzed the defects of the desire realm, meditators analyze the peacefulness of the first dhyāna: Beings do not suffer from birth and aging. They have whatever they need, fulfill their desires without much effort, and experience contentment. No one engages in the ten paths of nonvirtue, so there are no wars over resources or honor. They have long lifespans and don't experience the horrible diseases that beings in the desire-realm face. Their environment is beautiful, embellished with spectacular buildings and jeweled grounds.

Meditators focus single-pointedly first on the grossness of the desire realm followed by the peacefulness of the first dhyāna; these two are their observed objects. Because it is difficult to analyze within the state of serenity, meditators alternate stabilizing and analytical meditation and again cultivate the nine sustained attentions, overcoming the five faults with the eight antidotes and employing the four powers and six engagements. Should restlessness start to arise, they emphasize stabilizing meditation; should laxity manifest, they emphasize analytical meditation.

Continuing to meditate, they gain mental and physical pliancy, the bliss of physical pliancy, and the bliss of mental pliancy, which is a special mental pliancy induced by analysis. This is a concentration that is a union of serenity and insight and is also the attainment of insight. The union of serenity and insight is so called because previously analysis interfered with the stability of serenity, and the stability of serenity interfered with analysis. Now there is no interference, and the stability at the end of analysis is a special kind of serenity. This marks passing on to the second mental contemplation.

2. The *mental contemplation arisen from belief* is so called because it arises from the belief derived from learning and thinking about grossness and peacefulness during the first mental contemplation. Both serenity and insight are used during these mental contemplations. Insight is cultivated by analyzing the grossness and peacefulness; at the end of analysis, serenity focuses on the grossness and peacefulness discerned through analysis. Meditators now gain the ability to abandon some of the desire-realm afflictions through suppressing them by the power of concentration. This abandonment is temporary, for the afflictions are only completely abandoned by meditation uniting serenity and insight on emptiness.

Desire-realm afflictions are of nine grades. The three general grades are great, middling, and small. Each of these is divided in turn into great, middling, and small. The great-great afflictions are the coarsest ones and thus the easiest to abandon; the small-small are the most intractable and require more time and effort to abandon (see the chart “Grades of Afflictions of the Desire Realm” on page 226).

3. The *mental contemplation of isolation* arises from repeatedly cultivating the second mental contemplation viewing the desire realm as gross and the first dhyāna as peaceful with insight. When meditators can overpower the manifest form of the great-great root and auxiliary afflictions of the desire realm by the uninterrupted path that is their antidote, that marks the beginning of the third mental contemplation. This uninterrupted path views the desire realm as gross; it is immediately followed by a liberated path that views the first dhyāna as peaceful. The uninterrupted path is so called because it suppresses the manifest great-great afflictions of the desire realm so that these afflictions no longer cause any interruption. The liberated path is so called because it is liberated from those afflictions.

The mental contemplation of isolation has three uninterrupted paths and three liberated paths, one each for the great-great, middle-great, and the small-great levels of afflictions. An uninterrupted path, without break in meditation, becomes a liberated path when the suppression of each level of manifest afflictions is complete. This mental contemplation is so called because it's the first time meditators' minds are separated or isolated from the great afflictions of the desire realm. In addition to the uninterrupted paths and liberated paths, there is the mental contemplation of isolation that is neither. This is the meditation that occurs after one liberated path and before the next uninterrupted path that overcomes the next level of afflictions. For example, the uninterrupted path overcoming the great-great afflictions is seamlessly followed by the liberated path that has overcome them. Then the path that is neither occurs; here concentration is strengthened until it is strong enough to bring the uninterrupted path that overcomes the middle-great afflictions and so on.

4. The *mental contemplation of delight or withdrawal* also consists of three uninterrupted paths and three liberated paths. These abandon the three levels of middling afflictions. This mental contemplation is called “withdrawal” because the uninterrupted paths view the desire realm, shed attachment to it, and

withdraw from its grossness. It is called “delight” because the liberated paths viewing the first dhyāna are free from the middling afflictions. As above, a mental contemplation of withdrawal or joy that is neither also exists.

5. The *mental contemplation of analysis* is so called because after having abandoned the first six levels of afflictions, meditators may think they have overcome all nine. To discern if that is the case, they analyze by imagining an object that could easily give rise to a desire-realm affliction and see if even a small affliction arises in response. Having detected that some desire-realm afflictions can still manifest, they continue their meditation.

6. The *mental contemplation of final training* has three uninterrupted paths and three liberated paths that overcome the three small afflictions. Between one liberated path and the next uninterrupted path, there is a mental contemplation of final training that is neither. The last liberated path suppresses the small-small desire-realm afflictions. The third, fourth, and sixth mental contemplations are the antidotes that suppress afflictions.

7. The *mental contemplation of the result of final training* is free of manifest desire-realm afflictions and occurs at the time of entering the first dhyāna. Since the afflictions have been suppressed but not destroyed and their seeds remain in the mindstream, one is not an ārya.

Jinaputra summarizes the seven mental contemplations in his commentary to Asaṅga’s *Compendium of Knowledge* (ISBP 171):

[The mental contemplation] of discernment of characteristics brings about a comprehensive understanding of what is to be abandoned and what is to be attained, and then directs the mind toward their respective abandonment and attainment. Following that, [the mental contemplation] arisen from belief takes up the correct practice. [The mental contemplation] of isolation abandons the great grades of afflictions. [The mental contemplation] of delight abandons the middle grades of afflictions. [The mental contemplation] of analysis places the mind in a state that is free of the exaggerated pride that believes [the goal] has been attained. [The mental contemplation] of final training abandons the small grades of afflictions. [The mental contemplation] of the result of

final training experiences the fruit of having meditated effectively on those [preceding six] mental contemplations.

In a manner that conforms to each specific instance, it should be understood that a description similar to the one that explains the seven mental contemplations that bring about the attainment of the first dhyāna applies to all the other meditative levels up to the [formless absorption of] neither-discrimination-nor-nondiscrimination.

The seven preparations should not be confused with the seven mental contemplations. The seven preparations consist of the initial level of serenity and the first six of the seven mental contemplations. The seven mental contemplations do not include the initial level of serenity and add the actual first dhyāna as the last mental contemplation. Serenity is found in all dhyānas and formless meditative absorptions.

#### **RELATIONSHIP BETWEEN THE SEVEN PREPARATIONS AND SEVEN MENTAL CONTEMPLATIONS OF THE FIRST DHYĀNA**

<b>SEVEN PREPARATIONS (ACCESS)</b>	<b>SEVEN MENTAL CONTEMPLATIONS (ŚRĀVAKA GROUNDS)</b>
1. mere beginner, which is the initial level of serenity	beginner at mental contemplation, which is the initial level of serenity
2. discernment of characteristics	1. discernment of characteristics (beginner at purifying afflictions)
3. arisen from belief	2. arisen from belief
4. isolation	3. isolation
5. delight or withdrawal	4. delight or withdrawal
6. analysis	5. analysis
7. final application	6. final training
The last liberated path is the actual first dhyāna.	7. result of final application (the actual first dhyāna)

## *Meditative Absorptions of the Form Realm*

*The first dhyāna* is a meditative absorption because the mind and its associated mental factors operate equally on the object. While several mental factors are present, five are chief: two are antidotes, two are benefits, and one is the basis. Investigation (coarse engagement, *vitarka*, *vitakka*) and analysis (subtle engagement, *vicāra*, *vicāra*) are *antidotes* because they are the continuation of the investigation and analysis in the preparations that led to the abandonment of the faults of the desire realm. Investigation examines the nature of the observed object in a general way; analysis examines its attributes in detail.

The mental bliss that accompanies the mind of the first dhyāna performs two functions. From the perspective that it causes the mental consciousness and the other mental factors to be joyful, it is called joy (*prīti*, *pīti*). From the perspective that it makes the body blissful, it is called bliss (*sukha*). Joy and bliss are *benefits* because the meditator experiences the joy and bliss that come with having left behind the faults of the desire realm. One-pointedness (*ekāgratā*, *ekaggatā*) is the *basis* because it serves as the foundation of the other four mental factors. Together, these five are known as the “five absorption factors.”

The meditative absorption of the first dhyāna is of two kinds. The *causal absorption of the first dhyāna* is attained in this life. If it has not degenerated when the meditator dies, it brings the *resultant-birth absorption of the first dhyāna*, and the meditator is born in the first dhyāna with the physical and mental aggregates of the first dhyāna. In this case, the seven mental contemplations of the first dhyāna are the second link of formative action — the invariable karma that projects rebirth in the first dhyāna. The ripened effect of that action is the aggregates of a being born in the first dhyāna. Once born in the first dhyāna, beings experience the environmental result — a pleasing environment — and causally concordant results, such as a mind without the desire-realm afflictions. The process is the same when yogis are reborn in higher meditative absorptions.

The *causal meditative absorption* of the first dhyāna has two types. The first is a mere first dhyāna that has all five absorption factors; the second is the special first dhyāna that has separated from the coarser factor of investigation and has neutral feeling instead of joy and bliss.

The uninterrupted paths and liberated paths described above are mundane paths in that they only suppress manifest afflictions. They are not ārya paths that

eradicate afflictions completely.

We may also speak about three types of causal meditative absorptions of the first dhyāna:

1. With the pure (*śuddha*) meditative absorption, meditators are free of all afflictions associated with the first dhyāna. When one initially attains the first dhyāna, it is pure; but later it may become afflictive if one of the afflictions of the first dhyāna — attachment, for example — arises in one's mind. Nevertheless, a pure meditative absorption is still polluted because afflictions have only been temporarily suppressed, not eradicated.
2. The unpolluted (*anāsrava*) meditative absorption is used by āryas as the basis for their path consciousness that eradicates afflictions.
3. The afflictive (*kliṣṭa*) is polluted by one or more of the afflictions of the first dhyāna. This dhyāna has five afflictions: attachment, view, arrogance, ignorance, and doubt. Experiencing the bliss of the first dhyāna, some meditators become *attached* to it. Generating one of the superknowledges, meditators see their previous lives and have the *view* of a permanent self. Thinking they are exceptional for having attained the first dhyāna, they may become *arrogant*. Being *ignorant*, they may *doubt* whether the first dhyāna is a path to liberation. Any of these makes the first dhyāna afflictive.

Meditators may now seek deeper states of absorption: the second, third, and fourth dhyānas of the form realm and then the four meditative absorptions (*samāpatti*) of the formless realm. To gain the other three dhyānas, meditators cultivate the seven mental contemplations for that dhyāna by contemplating the grossness of the lower dhyāna and the peacefulness of the higher one. Meditators suppress the three great, three middling, and three small levels of afflictions associated with the lower dhyāna by means of nine uninterrupted paths and nine liberated paths that abandon them as they advance through the seven mental contemplations for the next dhyāna. Similar to the first dhyāna, the second, third, and fourth dhyānas also have causal and resultant birth types of dhyānas and pure, unpolluted, and afflictive types.

*The second dhyāna* has four dhyānic factors: one antidotal, two benefits, and one basis. The antidotal factor is internal clarity (*adhyātmāsamprasāda*). It includes the mental factors of mindfulness (*smṛti*), which remembers the observed object of the second dhyāna and its aspects; introspective awareness (*samprajanya*), which monitors whether the mind is focused on the object; and equanimity (*upekṣā*), which here has subdued the fluctuation caused by investigation and analysis in the first dhyāna.<sup>58</sup> The second dhyāna is now free from investigation and analysis. Its benefits are joy and bliss, although joy, being very exuberant, can sometimes agitate the mind. As with all four dhyānas, the basis is one-pointedness.

*The third dhyāna* has five dhyānic factors: three antidotal, one benefit, and one basis. The antidotal factors are mindfulness, introspective awareness, and equanimity, which together cause the mind to overcome attachment to the second dhyāna. Equanimity especially subdues the restlessness of joy, which is no longer present in the third dhyāna. Equanimity equalizes and balances the mind and its accompanying mental factors. The benefit factor is the bliss of the third dhyāna, which is not as disturbing as the bliss of the second dhyāna. The basis is single-pointed concentration.

*The fourth dhyāna* has four dhyānic factors: two antidotal (mindfulness and equanimity), one benefit (the equanimity that is a neutral feeling), and one basis (single-pointedness). Mindfulness, equanimity, and neutral feeling are now said to be thoroughly pure because meditators have relinquished eight faults that cause fluctuation in concentration: investigation, analysis, inhalation (*śvāsa*), exhalation (*praśvāsa*), physical pain (*duḥkha*) of the desire realm, mental unhappiness (*daurmanasya*) of the desire realm, mental happiness (*saumanasya*) up to and including the second dhyāna, and the feeling of bliss (*sukha*) of the third dhyāna. Equanimity has pacified these and balanced the mind, making the fourth dhyāna the best basis for attaining the path of seeing. Although the fourth dhyāna has introspective awareness, it is not listed because it is no longer necessary since the eight faults have been overcome. Having abandoned inhalation and exhalation, these meditators stop breathing while in deep meditative equipoise.

The first and second dhyānas differ in that although both are clear and stable, the power of the first dhyāna is incomplete due to investigation and analysis. When these are subdued in the second dhyāna, the power of concentration is

complete. The second and third dhyānas differ in that the benefit is not complete in the former because both joy and bliss are present. When the joy and bliss of the second dhyāna are overcome and only the bliss of the third dhyāna remains, the factor of benefit is complete. The third and fourth dhyānas differ in that the faults of inhalation, exhalation, and the feeling of bliss remain in the former but are absent in the latter, bringing about the completion of thorough purity in the fourth dhyāna. Of all eight meditative absorptions, it is the one most suitable for attaining the excellent qualities of the three vehicles. Bodhisattvas in general rely on the concentrations of the dhyānas to generate excellent qualities; only bodhisattvas on the eighth ground and above have the power to use the formless absorptions for that purpose.

### PRINCIPAL MENTAL FACTORS IN THE FOUR DHYĀNAS

DHYĀNA	FACTORS PRESENT	NEWLY ABSENT FACTORS
1	2 antidotal: investigation, analysis 2 benefits: joy, bliss 1 basis: one-pointedness	
2	1 antidotal: internal clarity (includes mindfulness, introspective awareness, equanimity) 2 benefits: joy, bliss 1 basis: one-pointedness	investigation, analysis
3	3 antidotal: mindfulness, introspective awareness, equanimity 1 benefit: bliss 1 basis: one-pointedness	joy
4	2 antidotal: mindfulness, equanimity 1 benefit: equanimity that is a neutral feeling 1 basis: one-pointedness	inhalation, exhalation, pain, mental unhappiness, mental happiness, feeling of bliss

## *Meditative Absorptions of the Formless Realm*

Meditators practicing the mundane path who have gained the fourth dhyāna may proceed to attain the four meditative absorptions of the formless realm: limitless space (*ākāśānantya*), limitless consciousness (*viññānānantya*), nothingness (*ākimkāntya*), and the peak of saṃsāra (*bhavāgra*). While the four dhyānas differ in terms of the presence or absence of different dhyānic factors, the four meditative absorptions of the formless realm are distinguished by their observed object. Also, whereas analysis is the prominent meditative activity in the four dhyānas, stabilization is the main meditation done in the four formless absorptions. The sense that the body is sinking under the earth is the sign of attaining any of the four dhyānas, whereas the sense that the body is flying in space is the sign of attaining any of the four formless absorptions.<sup>59</sup>

Each of the formless absorptions has seven mental contemplations where meditators analyze within a mind of serenity and focus on the lower dhyāna or absorption as gross and the discrimination of the upper one as peaceful. However, they principally engage in stabilizing meditation. They actualize nine uninterrupted paths and nine liberated paths, the last liberated path being the actual absorption they seek to attain. Each of the four formless absorptions has causal and resultant rebirth absorptions as well as pure, unpolluted, and afflictive types of absorption, although some say the peak of saṃsāra does not have an unpolluted absorption.

Practitioners who have attained the fourth dhyāna still have a sense of craving even though all attachment to objects of the desire realm have been abandoned. This occurs because obstructive contact is still present in the dhyānas. Seeing this attachment as a fault, they strive for a state that is like space in which there is no obstructive contact. Taking this state as their meditation object, they view the fourth dhyāna as gross and focus one-pointedly on the thought, “Space is limitless.” By meditating in this way, they attain the nine uninterrupted paths and nine liberated paths and then the actual *absorption of limitless space*. At this time the appearance of forms ceases and there is no perception of obstructions, such as walls or mountains, and no perception of variety, such as various colors and shapes. Meditators don’t think that these no longer exist, rather they cultivate their nonappearance to the mind. Space exists everywhere.

Having attained the state of separation from obstruction and contact, they still have feeling, and again craving arises. In short, until self-grasping has been eliminated, as soon as there is an appearance, craving will arise in relation to it. So practitioners aspire to go beyond limitless space and seek the state of limitless consciousness. To attain the *absorption of limitless consciousness*, meditators focus on the absorption of limitless space as gross and the discrimination that consciousness is limitless as peaceful.

After a while, they begin to see the state of limitless consciousness as unsatisfactory and look for whatever is different from consciousness, be it material or immaterial. Not finding anything, they transcend the actual absorption of limitless consciousness and stay in the contemplation beyond this — a state in which there is absolutely nothing whatsoever. Drawn to the perception that there is nothing, they pursue it repeatedly, causing them to go beyond the preparations to nothingness to attain the actual absorption of nothingness. In short, to attain the *absorption of nothingness*, they focus on the discrimination that consciousness is limitless as gross and see the discrimination that there is nothing to apprehend that is material or immaterial as peaceful.

To attain the *absorption of the peak of saṃsāra*, meditators view the discrimination that there is nothing to apprehend as material or immaterial as gross and they cultivate the thought that coarse discrimination (of nothingness) doesn't exist, and subtle discrimination is not nonexistent. They release all coarse discrimination so only subtle discrimination remains. Cultivating the seven preparations, they suppress the nine grades of afflictions of nothingness and attain the meditative absorption of the peak of saṃsāra.

Beings in the formless realm have very long, peaceful lives, but after the karma for these rebirths has been exhausted, without choice they fall to lower levels of rebirth. It's like ascending to the top of the Eiffel Tower: the only way to go is down. Some people mistake the peace of rebirth in the formless realm for liberation, only to be horrified when they die and take rebirth in the desire realm again because they still have self-grasping ignorance. Dharmakīrti counsels (PV 221cd–222ab):

Where there is grasping at self, there is the view of other.  
From this duality of self and other  
arise attachment and animosity.

Due to this, all faults of cyclic existence ensue.

For this reason, it is essential to lay the foundation of a strong aspiration to be free from saṃsāra, knowledge of the paths and grounds leading to liberation and awakening, and reliance on a fully qualified spiritual mentor who can guide us.

### *Meditative Absorptions on the Four Truths*

The methods to attain serenity, the dhyānas, and the formless absorptions are found in both Buddhism and Hinduism. Christians and followers of other faiths may also benefit from learning the techniques leading to serenity, and we can share these with them. Non-Buddhists who seek to attain the dhyānas and formless absorptions practice the mundane path of meditating on grossness and peacefulness as described above.

Buddhist teachers often caution their disciples from seeking the eight meditative absorptions without first having a clear aspiration to attain liberation or buddhahood. Their concern is that the disciples may easily become attached to the bliss and equanimity of those meditative states and cease to pursue their spiritual aim of nirvāṇa. Followers of the Mahāyāna, in particular, are strongly encouraged to emphasize the cultivation of bodhicitta so that they are not distracted by either the joys of saṃsāra or the bliss of the personal peace of arhatship. Nāgārjuna tells us (MMK 18.5a):

Through the elimination of karma and affliction there is nirvana.

Buddhists who take this to heart do not follow the mundane path of grossness and peacefulness in order to attain higher rebirths in saṃsāra.<sup>60</sup> They instead seek the ultimate reality (*dharmatā*), nirvāṇa. Their aim is liberation or full awakening, and to attain these they must cultivate the union of serenity and insight on the four truths or on emptiness in order to generate the supramundane paths — the only paths that can eradicate the afflictive obscurations and cognitive obscurations.<sup>61</sup> The mental contemplations that focus on grossness and peacefulness used to attain the dhyānas are not suitable to do this. Tsongkhapa said (LC 3:101):

Nowadays there is no one who uses these methods [of the mundane path of grossness and peacefulness] to accomplish the actual dhyānas and so on, so there is no one to lead you astray.

In Tibet meditators did not practice the meditation on grossness and peacefulness to attain rebirth in the form and formless realms. In this way, they did not get sidetracked by attachment to the bliss and equanimity of the meditative absorptions.

Asaṅga's *Śrāvaka Grounds* speaks of four types of people who do not practice the supramundane paths in that lifetime but proceed only by practicing the mundane path of meditation on grossness and peacefulness: (1) non-Buddhists because they do not understand the four truths, (2) Buddhists with dull faculties who have excessively emphasized meditation on serenity for a long time, (3) sharp-faculty Buddhists whose roots of virtue haven't completely ripened, and (4) bodhisattvas who defer their attainment of buddhahood to a future life and do not attain it in this life.

To attain liberation, it is not necessary to gain all the meditative absorptions of the form and formless realms. In fact, some of the lower absorptions may be more conducive for this. Tsongkhapa says (LC 3:95):

Furthermore, even if you do not achieve the higher dhyānas of the form realm or meditative absorptions of the formless realm, but do achieve the serenity explained previously, which is included in the level of access to the first dhyāna, then you can achieve liberation — freedom from all the fetters of cyclic existence — by cultivating insight based on that serenity.

However, since buddhas' minds have perfected all excellent qualities limitlessly, they have mastered all the meditative absorptions.

The three vehicles are distinguished in terms of the method aspect of the path; according to the Prāsaṅgikas, followers of all three vehicles realize the same selflessness — the emptiness of inherent existence of all persons and phenomena. To achieve the union of serenity and insight on selflessness, cultivating concentration is essential. In this light, pursuing the dhyānas helps to enhance their concentration.

Practitioners unite serenity and insight and eradicate afflictions in different ways. Śrāvakas become arhats by passing through the five śrāvaka paths of accumulation, preparation, seeing, meditation and no-more-learning. However, they need not attain all four fruits of that path — the fruits of stream-enterer, once-returner, nonreturner, and arhat — because there are different ways to overcome the innate afflictions. To discuss this in-depth would take us into the complex topic of the Twenty Saṅghas.<sup>62</sup> This topic involves the many and varied ways that śrāvakas can attain arhatship, including the realms they abide in while practicing, the afflictions abandoned at different stages, their meditative attainments, and so forth. Texts present this topic in various ways, and scholars differ in their presentations as well. In addition, the topic can be presented in a detailed or abbreviated manner, which may sometimes sound different from each other even when the same scholar wrote both presentations. Below is one presentation explained briefly.

The afflictions to be abandoned are divided into eighty-one grades. Each of the nine levels — the desire realm, the four dhyānas, and the four formless absorptions — has three grades of afflictions — great, middle, and small. These three are further subdivided into three — the great-great, middle-great, and small-great afflictions — so there are nine afflictions for each level. The nine grades of afflictions for each of the four dhyānas and four formless absorptions are laid out similarly, for a total of eighty-one grades all together.

### *Grades of Afflictions of the Desire Realm*

- Great
  1. Great-great
  2. Middle-great
  3. Small-great
- Middle
  1. Great-middle
  2. Middle-middle
  3. Small-middle
- Small
  1. Great-small

2. Middle-small
3. Small-small

These afflictions may be abandoned in two ways: The first is by temporarily suppressing them by means of the preparations for each successive dhyāna. The second is by eradicating them forever by means of the supramundane paths directly realizing selflessness. Someone may have temporarily suppressed a certain grade of afflictions by the power of their samādhi but not yet eradicated them by the power of their wisdom.

In *Śrāvaka Grounds*, Asaṅga describes how śrāvakas progressively develop the seven mental contemplations in relation to the four truths. The descriptions of the mental contemplations here differs from that for cultivating mundane insight.

1. The *mental contemplation of discernment of characteristics* involves learning, reflecting on, and analyzing the meaning of the sixteen aspects of the four truths as they apply to all rebirths in saṃsāra. This stage employs both the wisdom arising from hearing and the wisdom arising from reflection.
2. The *mental contemplation arisen from belief* is attained when analysis brings certainty regarding the four truths. This is gained through the cultivation of the wisdom arising from meditation and brings awareness of the full extent and nature of the four truths and evokes aversion toward true duḥkha and true origins. Nevertheless, a practitioner’s mind still resists the peacefulness of nirvāṇa because of strong familiarization with sensory pleasure that has been present since beginningless time. Identifying the conceit “I am” as the source of this and applying the antidote to the conceit, a practitioner meditates on the subtle impermanence of the mindstream and cultivates a deeper understanding of the sixteen aspects of the four truths. She then develops awareness that the apprehending mind has the same nature as the apprehended meditation object, an understanding that arises on the heat level of the path of preparation. It is called “heat” because the fire of wisdom will consume the kindling of the afflictions in the future. Continued meditation brings the peak level, which is so called because it is the highest point of unstable virtue — that is, one could still fall back or take an unfortunate rebirth. More practice leads to attaining the third level of

- the path of preparation, fortitude, which is so called because the mind now strongly accepts four truths and there is no longer the possibility of backsliding. By continuing to examine the nature of the mind, the practitioner attains a mental state that seems to be without discrimination, as if the mind lacks an object and has ceased functioning, although it hasn't. This is the level of supreme Dharma, where one is on the verge of perceiving emptiness directly.
3. The *mental contemplation of isolation* is attained after the practitioner exerts herself with respect to four truths and generates a direct perceiver of the true nature of the four truths. This realization marks the advent of the path of seeing and heralds the destruction of afflictions that are to be abandoned on that path.
  4. The next three mental contemplations are attained during the path of meditation. The *mental contemplation of analysis* examines what obstacles have been abandoned and what are yet to be abandoned.
  5. With the *mental contemplation of delight* one continues to meditate, occasionally investigating what obstacles have and have not yet been abandoned, periodically generating aversion toward things for which the practitioner should feel aversion (the first two truths), and from time to time generating great delight toward things for which she should feel delight (the last two truths).<sup>63</sup>
  6. Through practicing the mental contemplation of delight, the vajra-like concentration arises. It abandons all remaining afflictions to be abandoned by the path of seeing. This is the *mental contemplation of final training*.
  7. The *mental contemplation of the result of final training* occurs after the vajra-like concentration has eradicated all remaining afflictive obscurations and arhatship has been attained.

With respect to the way śrāvakas proceed on the path to liberation, there are four types of śrāvaka āryas: simultaneous eliminators, leapers, gradual attainers, and gradual eliminators.<sup>64</sup>

*Simultaneous eliminators* attain only the fruits of stream-enterer and arhat, not the fruits of once-returner and nonreturner. They eradicate afflictions by using serenity as the basis for cultivating insight into emptiness. To do this they

employ a preparation of the first dhyāna called the “capable preparation” (*anāgamyā*), which is a mind of the form realm.<sup>65</sup> It is attained by first developing serenity and then alternating analytical and stabilizing meditation on emptiness to attain a similitude of insight. Continuing to meditate in this way, they attain a fully qualified insight — the capable preparation. It is so called because it is able to serve as the mental basis for supramundane paths — the unpolluted paths of seeing, meditation, and no-more-learning — that are the antidotes to afflictive obscurations of the three realms. The simultaneous eliminators easily abandon the eighty-one afflictions of the three realms using the capable preparation, because it abandons the great-great afflictions of all nine levels simultaneously, the middle-great afflictions of all nine levels simultaneously, and the small-great afflictions of all nine levels simultaneously, and so on through to the small-small afflictions of all nine levels. These śrāvakas go through nine uninterrupted paths and nine liberated paths.

Simultaneous eliminators have sharp faculties and attain nirvāṇa faster than the other types of śrāvaka āryas. However, the capable preparation alone cannot abandon the cognitive obscurations.

*Leapers* bypass one or more fruits. One type of leaper has suppressed between six and nine of the nine grades of desire-realm afflictions prior to entering the path of seeing. This enables them to leap over the fruit of stream-enterer and become a once-returner when they attain the path of seeing. The second type of leaper has suppressed all nine grades of desire-realm afflictions and leaps over both stream-entry and once-returner, becoming a nonreturner upon attaining the path of seeing.

*Gradual attainers* proceed gradually through all four fruits one after the other.

*Gradual eliminators*, like gradual attainers, sequentially suppress and eradicate the various grades of afflictions. However, some gradual eliminators attain all four fruits, some do not attain the fruit of stream-enterer, and some do not attain the fruits of stream-enterer and once-returner.

Some śrāvakas seek birth in one of the five pure abodes (T. *gnas gtsang ma*) in the form realm. To be born there, they engage in the alternating dhyāna meditation (T. *bsam gtan spel sgom*), which involves alternating between polluted (mundane) and unpolluted (supramundane) fourth dhyānas. In this way, they transmute previously created propelling karma that would lead to a rebirth in one

of the first three levels of the fourth dhyāna so that it ripens instead as birth in one of the five pure abodes in the fourth dhyāna. These abodes are pure in the sense that birth there is not taken by polluted propelling karma, so only āryas are born there.<sup>66</sup> Vasubandhu explains the alternating dhyāna meditation (ADK 6:42–43ab):

Initially, the fourth [dhyāna] is alternated.  
It is achieved by mixing instants.  
It is for the sake of being reborn and abiding  
as well as out of fear due to the afflictions.  
Because there are five types [of alternating dhyāna meditation],  
there are only five rebirths in pure places

*Who practices or uses alternating dhyāna meditation?* It is not practiced by ordinary beings, including those on the paths of accumulation and preparation, because it has an unpolluted component. In terms of āryas, it is not practiced by stream-enters or once-returners because they have not attained an actual dhyāna and are still liable to be born in the desire realm under the force of afflictions and karma.<sup>67</sup> Thus it must be nonreturners or arhats who practice alternating dhyāna meditation. Nonreturners do this practice to be reborn in a pure abode and attain nirvāṇa there. Sharp-faculty arhats are liberated, but do this practice to gain a happy abiding in that life. Dull-faculty arhats do it to distance themselves from obscurations that relish the pleasant taste of concentration.

*In which realms is this meditation done?* It is practiced by beings in either the desire or form realms.

*How many versions of the alternating dhyāna meditation are there?* There are five, one corresponding to each of the five pure abodes: (1) small-three, (2) middling-six, (3) big-nine, (4) very-big-twelve, and (5) extremely-big-fifteen alternating dhyāna meditations.

*How are they practiced?* There are two phases: the preparation when meditators are training, and the actual practice after they have gained proficiency in the alternating dhyāna meditation. The following is the description for the small-three alternating dhyāna meditation.

Preparation: Āryas who aspire to do this practice initially abide continuously in the unpolluted actual fourth dhyāna, which is the most serviceable mind

because it is free from the eight faults: investigation, analysis, inhalation, exhalation, physical pain of the desire realm, mental unhappiness of the desire realm, mental happiness up to and including the second dhyāna, and the bliss of the third dhyāna. That is followed by continually abiding in the polluted actual fourth dhyāna. After that, they continually abide in the unpolluted actual fourth dhyāna again. Initially they may take breaks between these periods of abiding. Eventually these periods of abiding become shorter, so that each of the three periods of abiding in the unpolluted, polluted, and unpolluted fourth dhyāna lasts only two moments.

Actual: once the meditators are trained as above, they do the same three-period alternation with one effort — that is, all in one go without a break.

*What is the measure of having attained the alternating dhyāna meditation?* Vaibhāṣikas say that it is the ability to abide in the unpolluted actual fourth dhyāna for one shortest moment, then abide in the polluted actual fourth dhyāna for a shortest moment, and finally abide in the unpolluted actual fourth dhyāna for one shortest moment. This entire sequence is done with one effort and lasts for only three shortest moments — a shortest moment is 1/64 of a fingersnap. Vasubandhu disagrees, saying only the Buddha can do this; he asserts that each phase lasts for a moment — that is, the length of time of a fingersnap. The Mahāyāna agrees with this.

*What form does each of the five alternating dhyāna meditations take?* The small-three is described above. The middling-six alternates the unpolluted actual fourth dhyāna with the polluted one to make six moments. The big-nine is nine moments, the very-big-twelve is twelve moments, and the extremely-big-fifteen alternating dhyāna meditation is fifteen moments of alternately abiding in the unpolluted and the polluted actual fourth dhyāna. To be able to go from unpolluted to polluted absorptions is extremely difficult, and to be able to do this in the shortest moment is almost unimaginable. Yet these are the skills these diligent śrāvakas develop.

The small-three alternating dhyāna meditations bring birth in the lowest or first of the five pure abodes, Not Great; the middling-six in the second, Untroubled, and so on to the third, Beautiful; the fourth, Clear-Sighted; and the fifth, Highest Pure Abodes.

Asaṅga's *Bodhisattva Grounds* says that the dhyānas of bodhisattvas can be categorized as two: mundane and supramundane. Alternatively, they may also be

classified in three: (1) dhyānas cultivated for happiness in this life, (2) dhyānas cultivated to attain the excellent qualities of concentration,<sup>68</sup> and (3) dhyānas cultivated to accomplish the welfare of sentient beings.<sup>69</sup>

Bodhisattvas seek to develop a mind that is serviceable, wise, and able to benefit others. For this purpose, they need knowledge of the various meditative absorptions, especially the fourth dhyāna, the best support to enter the Mahāyāna path of seeing. Since bodhisattvas are of different faculties and at different stages, they go about this accordingly. Those bodhisattvas who first became arhats through following the śrāvaka path have attained the dhyānas and formless absorptions during that path. Some scholars maintain that at the time of having eliminated all afflictive obscurations, śrāvaka arhats attain all eight meditative absorptions, in which case these bodhisattvas would have them.

New bodhisattvas who did not previously follow the śrāvaka path to arhatship could generate the fourth dhyāna in several ways. Sharp-faculty disciples who already have an inferential realization of emptiness now make effort to attain the concentrated mind of serenity. However, those who used a meditation object other than emptiness to attain serenity must gain the correct view of emptiness and then traverse the nine stages of sustained attention to gain serenity with emptiness as the object.

Bodhisattvas seek to suppress the afflictions in order to increase the clarity of insight and attain the supramundane paths. As the power of their minds increases as a result of meditating on emptiness for prolonged periods of time, they approach the level of the first dhyāna. Through persistent one-pointed meditation on emptiness, their minds become more stable and subtle, and they reach a level of experience whereby the afflictions of the desire realm have been suppressed. At that point it could be said that they have reached the first dhyana.

To determine that this is the case, they think of an object that would normally trigger manifest attachment to the sensual pleasures of the desire realm and check if such attachment arises in their minds. If not, they confirm to themselves that they have reached the first dhyāna or a state equivalent to it. They progress in a similar way, meditating on emptiness, and then testing to see if the particular afflictions corresponding to each subsequent meditative absorption arise in their mind. In that way, they confirm their level of meditative absorption.

After bodhisattvas have attained serenity on emptiness, they must unify serenity and insight on emptiness. This is necessary because otherwise the

stability of serenity interferes with the analysis of insight, and analysis interferes with stability. To harmonize the two, based on having traversed the nine stages of sustained attention and attained serenity, they alternate stabilizing and analytical meditation on emptiness and again apply the four attentions until special pliancy is induced through the force of analysis. At that time, they attain fully qualified insight, a wisdom of thorough discrimination of phenomena conjoined with special pliancy induced by the power of analysis. The clarity of this mind is much greater than that of serenity alone, and its wisdom can penetrate emptiness more deeply. Since the one-pointedness of serenity continues to operate with insight, the mind that is the union of serenity and insight becomes very powerful. At this point there is the wisdom arisen from meditation, and the path of preparation is attained.

When, with the fourth dhyāna, bodhisattvas realize emptiness directly, they attain the path of seeing and begin to gradually eradicate the afflictive obscurations and then the cognitive obscurations. Eradicating defilements so they can never arise again goes far beyond merely temporarily suppressing them on the mundane path.

Some masters and scriptures point to yet another path whereby Buddhist meditators deepen their concentration and progress to the fourth dhyāna. This is by contemplating the first two truths — for example, true duḥkha and true origins of the desire realm as gross and the remaining two truths of the desire realm as peaceful. Here their meditation object is the four truths and their sixteen attributes.

Bodhisattvas can attain a concentration called the “stream of Dharma” (T. *chos rgyun gyi ting nge ’dzin*) on the great stage of the path of accumulation. This samādhi is concomitant with mindfulness and wisdom, and by entering it bodhisattvas can listen to the teachings of innumerable buddhas in various buddha fields without ever forgetting them. They can even hear teachings given by a supreme emanation body without needing to be physically near that buddha.

The fifth chapter of the *Ornament of Clear Realizations* explains that to attain this concentration, bodhisattvas sequentially develop each meditative absorption up to the peak of saṃsāra. After meditating in each absorption in the ascending order, they descend in reverse order, and then meditate upward sequentially to the fourth dhyāna, where they then attain the ultimate fourth dhyāna (T. *rab mthā'i bsam gtan bzhi pa*). Some people say bodhisattvas attain this meditative

ability by meditating on grossness and peacefulness; others say it may be attained with emptiness as one's meditation object.<sup>70</sup> In either case, by the great stage of the path of accumulation, bodhisattvas have attained all eight meditative absorptions.

Causes to attain the concentration of the stream of Dharma are hard to accumulate. We must have a union of serenity and insight that has a special ability to hear teachings from a supreme emanation body. In addition, we must have heard many teachings, collected merit and wisdom for a long time, purified obscurations to directly seeing buddhas and hearing the Dharma from them, and gained correct views and pure ethics.

*Bodhisattvas following the Perfection Vehicle or the three lower tantras* (action, performance, and yoga tantra) attain serenity first, followed by insight. Insight itself is the union of serenity and insight.

*Bodhisattvas who enter highest yoga tantra without having previously become an arhat* may do so with the mental basis of the capable preparation. They do not seek to suppress the afflictions of the desire realm or attain the first dhyāna because they employ desire on the path.

If bodhisattvas have not already attained the union of serenity and insight, they may do so using special techniques in highest yoga tantra on the basis of having either the Cittamātrin or Madhyamaka view of emptiness.<sup>71</sup> After meditating on emptiness during the *coarse generation stage*, practitioners imagine that their wisdom understanding emptiness manifests in the form of the deity and the mandala. With analytical meditation, they meditate on the clear appearance of themselves as the deity, and with stabilizing meditation, they focus on the divine dignity of being a deity who is empty of inherent existence. To remedy laxity and restlessness, they focus on a subtle drop at the upper or lower tip of the central channel, respectively. The coarse generation stage is completed when the meditator can maintain concentration on the entire mandala and its deities as well as the subtle deities on the sense bases for four hours.

During the *subtle generation stage*, yogis visualize the mandala and its deities — all of them being empty of inherent existence — in a subtle drop at the upper or lower tips of the central channel. They attain the union of serenity and insight by visualizing the mandala deities emanating from and then reabsorbing into the mandala deities in this subtle drop. Emanating the deities subsumes analytical meditation; their reabsorption subsumes stabilizing meditation. In this way,

analytical and stabilizing meditation are done at the same time with one consciousness, not alternately as in the Perfection Vehicle. This unique quality of highest yoga tantra enables serenity and insight to be attained simultaneously, at which time the subtle generation stage is complete.

## REFLECTION

---

1. What are the three realms and how do they relate to the three spheres of consciousness?
  2. What are the principal mental factors present in each of the four dhyānas? What are their functions and why are some of them abandoned as concentration deepens?
  3. What is the difference in outcome between developing insight by contemplating grossness and peacefulness, and by contemplating the aspects of the four truths?
- 

## *The Eight Liberations*

The Buddha spoke of eight liberations (*vimokṣa*, *vimokkha*, T. *rnam thar*), which are deep states of concentration. Here “liberation” does not mean freedom from saṃsāra — which is the meaning of *vimukti* (*vimutti*, T. *rnam grol*) — but the mind’s temporary release from defilements, which is brought about by developing particular meditative skills.

### *Sanskrit Tradition*

In the Sanskrit tradition, the eight liberations are explained in the *Mahāvibhāṣā*, the *Mahāprajñāpāramitā Śāstra*, and the *Ornament of Clear Realizations* and its commentaries.<sup>72</sup> There is some difference in the presentation of the eight liberations and nine serial absorptions in various texts. The *Ornament of Clear Realizations* defines these liberations as exalted knowers that are not polluted by the afflictions of their own level. They are practiced in order to abandon the obscurations to absorption. When practiced by bodhisattvas, the first three liberations are called the “three paths of emanation” because by abandoning attachment to forms, they eliminate obstacles to emanating many forms that fulfill the needs of sentient beings. Ārya bodhisattvas can generate the eight

liberations into supramundane paths, although the first seven can also be found in the continuums of non-āryas.

1. *Liberation of that having form viewing forms*: Depending on an actual dhyāna, a yogi emanates many forms while her own body remains visible to others.

2. *Liberation of that not having form viewing forms*: Depending on an actual dhyāna and considering herself as formless and having only the four mental aggregates, a yogi emanates many forms while her body is not visible to others.

3. *Liberation of the attractive that eliminates obstacles*: Depending on an actual dhyāna, a yogi counteracts his preference to emanate beautiful forms and his dislike of emanating unattractive ones. All forms appear to him as attractive.

The first two liberations eliminate obscurations to emanating forms and the third eliminates the fault of liking beautiful forms and disliking unattractive ones. These are practiced by bodhisattvas on the great stage of the Mahāyāna path of accumulation and above. When practiced by śrāvakas, these three liberations depend on a dhyāna or a formless meditative absorption as a support and are attained by nonreturners who manifest a body and by arhats who are free from afflictive obscurations and obscurations to absorption.

The next five liberations are called the “five paths of abiding happily in the present life.”<sup>73</sup>

4–7. The *liberations of infinite space, infinite consciousness, nothingness, and neither-discrimination-nor-nondiscrimination* are the four meditative absorptions of the formless realm. In this context, these four absorptions are ones that act as a cause for a path of liberation and abide in accordance with unpolluted liberation. They are called “liberations” because they are free from the manifest afflictions of their corresponding levels. Although ārya bodhisattvas may meditate with the four formless absorptions, they do not take rebirth in these realms because they have exhausted the polluted karma that would cause this and because they cannot benefit the sentient beings born there.

8. The *liberation of cessation* is a meditative equipoise existing in the continuum of āryas meditating on emptiness by depending on both a supramundane path and a mind of the peak of saṃsāra. It is a consciousness in which coarse feelings and discriminations associated with the mental consciousness have ceased. By stopping these, as well as other coarse consciousnesses and mental factors, yogis stop the afflictions that arise in

association with them, rendering the mind very peaceful. Through practicing in this way meditators increase their meditative pliancy and agility and abandon the obscurations to ceasing discriminations and feelings.

The liberation of cessation differs from the *absorption of cessation* (*nirodha-samāpatti*), which is an abstract composite in an ārya's continuum. It is not a consciousness, but is the state in which coarse feelings and discriminations associated with the subtle primary mental consciousness have ceased by the power of a supramundane path. It is the same as the cessation of discrimination and feeling (*saṃjñā-vedayita-nirodha*, *saññā-vedayita-nirodha*). It is not an actual absorption, but is called one because it arises dependent on meditating in a meditative absorption.

Śrāvaka meditators absorb in the last five liberations in order to abide happily in the present life; bodhisattvas practice them for the benefit of others. The first seven liberations show a progressive refinement of samādhi, while the eighth liberation requires both concentration and insight. All eight liberations can be attained only by those who have entered a path and who possess an actual dhyāna,<sup>74</sup> but only nonreturners and arhats who have mastered the four dhyānas and four formless absorptions and ārya bodhisattvas can attain the eighth liberation.

### *Pāli Tradition*

The eight liberations are enumerated in MN 77:22 and DN 16:3.33 and are described in the *Paṭisambhidāmagga* in the Khuddaka Nikāya and the *Aṭṭhasālinī* by Buddhaghosa.<sup>75</sup>

1. The embodied looking at form: the attainment of the four dhyānas using a kasiṇa derived from a color in one's own body. Meditators perceive themselves as embodied, and using a color found on their body as the initial object of meditation — the color of their hair, blood, eyes, and so forth — they generate the learning and counterpart signs<sup>76</sup> and attain dhyāna.

2. The formless looking at a form: the attainment of the dhyānas using a kasiṇa derived from an external object, such as the four elements. Meditators perceive themselves as disembodied and enter a dhyāna by using an external color as a kasiṇa. To progress from the first to the second liberation, they release some degree of conceit and attachment regarding their own physical appearance, and

before progressing to the third liberation, they do the same regarding others' bodies.

3. Resolved only upon the beautiful that eliminates obstacles: the attainment of the dhyānas through using either a very pure and beautiful colored *kaṣiṇa* or the four brahmavihāras as the object of meditation. The first two liberations lead to perceiving the body as foul, and the third releases any excessive disgust by focusing on a beautiful object. When cultivating the four immeasurables as a liberation of mind, meditators see sentient beings as attractive.

4–7. The four formless absorptions that lead meditators to experience a pleasant abiding in this life. Meditators enter the first absorption by transcending all perceptions of form. They enter the last three by surmounting the object of the preceding absorption.

8. The attainment of cessation of discrimination and feeling, also called the absorption of cessation, is an absence of all manifest activity of the six consciousnesses. Attained by the combination of serenity and insight, it is accessible only by nonreturners and arhats who have mastered the preceding meditative absorptions.

To attain it, Pāli commentators say the meditator enters the first dhyāna. After emerging from it, she applies insight to contemplate the dhyāna factors as impermanent, *duḥkha*, and no-self. She then enters the second dhyāna, and upon emerging from it, she similarly analyzes its factors in terms of the three characteristics. She continues like this up through the absorption of nothingness. In this way, she both accomplishes these meditative absorptions and develops insight wisdom regarding them. Having emerged from the absorption of nothingness and contemplated its factors as impermanent, *duḥkha*, and no-self, she makes the resolution to enter the cessation of discrimination and feeling. Before entering that cessation, she determines how long she wants to remain in it; this can be from a short time up to seven days. If she is a monastic, she resolves that if the Saṅgha needs her, she will automatically emerge from this absorption.

She then enters the absorption on the base of neither-discrimination-nor-nondiscrimination (the peak of *saṃsāra*), and from there goes into the cessation of discrimination and feeling in which all mental functions stop for the predetermined length of time. When this time is over, she emerges from that state and mental functions resume. Bhikkhunī Dhammadinnā explained (MN 44.16–21) that the meditator does not think, I will attain the cessation of discrimination

and feeling, I am attaining this, or I have attained it. Later, she does not think, I will emerge from the cessation of discrimination and feeling, I am emerging from it, or I have emerged from it. All this is accomplished by force of the determination made prior to that meditation session.

As with anyone in the fourth dhyāna and above, this meditator's breath stops when entering the cessation of discrimination and feeling. There are stories in the scriptures of arhats in this meditative state who were mistaken as dead by people who saw them. When they tried to cremate the body, it would not burn. When emerging from this state, the first consciousness to arise is the fruition consciousness of either a nonreturner or arhat that has nirvāṇa as its object.

The cessation of discrimination and feeling is considered an exalted state and the highest of all samādhis. It is not a support for higher attainments because arhats also enter it, so it's not clear why this state would be sought. Nonetheless, offerings made to those who have just emerged from the cessation of discrimination and feeling are said to create special great merit. For this reason, Mahākāśyapa would often enter this absorption for a short while before going on alms round to benefit those who offered food to him.

## *The Nine Serial Absorptions*

The nine serial absorptions are spoken of in the *Ornament of Clear Realizations* and its commentaries. Also called the nine abidings in equipoise, these nine are the serial absorptions of the four dhyānas, the four meditative absorptions of the formless realm, and the absorption of cessation. The Sanskrit tradition considers the first eight supramundane paths.

The nine serial absorptions are so called because meditators must initially attain them successively in their forward order. After having mastered all nine in both ascending and descending order, they train to enter them in a leap-over manner. This is done in order to develop mental dexterity, and on that basis to cultivate many other abilities leading up to the capabilities of a buddha.

The leap-over meditative absorption (*vyukrāntaka-samāpatti*) is presented differently in the *Ornament of Clear Realization* and the *Treasury of Knowledge* (ADK 8:18cd–8:19ab):

Join the two types to the eight levels.  
Leap over one through going and coming.  
Proceed to the third dissimilar type.  
This is the leaping meditative absorption.

This meditation is done by arhats who are human beings; they have clear minds, lack afflictions, and have control over their concentration so they can unwaveringly engage in this practice. The eight levels are the four dhyānas and four formless absorptions. The two types are the polluted and unpolluted, which are to be joined with the eight levels.

First meditators develop the ability to absorb in the polluted eight absorptions in the ascending order from the polluted first dhyāna to the polluted peak of saṃsāra, and in the descending order from the polluted peak of saṃsāra to the polluted first dhyāna. They then do the same using the eight unpolluted absorptions. This is known as the “long preparation.”

Next, they do the short preparation. They absorb in a polluted first dhyāna, after which they leap over the second dhyāna and absorb in a polluted third dhyāna. They then leap over the fourth dhyāna and absorb in polluted infinite space, followed by leaping over infinite consciousness and absorbing in polluted nothingness. They then descend to the polluted first concentration in the same leap-over fashion. Here all the absorptions are polluted or mundane ones. This is followed by doing the same using unpolluted, supramundane absorptions.

Finally, they do the actual leap-over absorption. First they absorb in a polluted first dhyāna, leap over the second dhyāna, and absorb in an unpolluted third dhyāna. They leap over the fourth dhyāna and enter a polluted infinite space absorption, leap over infinite consciousness and enter an unpolluted nothingness absorption, and then descend in the same manner.<sup>77</sup>

There are other ways to do the leap-over absorption — for example, starting with the unpolluted first dhyāna, leaping over the second dhyāna and absorbing in a polluted third dhyāna, leaping the fourth dhyāna, entering an unpolluted infinite space, and so on in the ascending and descending fashion. In addition, meditators can begin with the polluted second dhyāna, leap over the third dhyāna, and enter the unpolluted fourth dhyāna, ascending in this manner to the peak of saṃsāra and then descending again. There are many more ways to do this meditation as well. The meditative dexterity of these yogis is amazing!

Another version of the leap-over meditative absorption is described in Maitreya's *Ornament of Clear Realizations* (5:24–25). This is done by bodhisattvas on the path of meditation to develop a very flexible mind and to perfect the meditative absorptions.

Having gone and come in the nine meditative absorptions,  
including cessation in the two aspects,  
a consciousness included in the desire [realm] not in meditative  
equipoise  
is taken as the boundary,

whereupon one enters in absorption in the manner of leap-over,  
leaping over one, two, three, four,  
five, six, seven, and eight,  
going variously until entering into absorption of cessation.

In the context of the leap-over meditation, the eight meditative absorptions are minds realizing emptiness, and the absorption of cessation is an abstract composite. The desire-realm mind focuses on the attributes of the desire realm — forms, sounds, and so forth — and is a coarse mind.

To prepare, bodhisattvas first master all eight meditative absorptions (the four dhyānas and four formless absorptions) in their ascending order, as well as the absorption of cessation. This is followed by entering all nine in the descending order, beginning with the absorption of cessation and ending with the first dhyāna.

Next, they meditate successively on the eight meditative absorptions in the ascending order, beginning with the actual first dhyāna. In between each of the eight, they enter the absorption of cessation, so the sequence is first dhyāna, absorption of cessation, second dhyāna, absorption of cessation, and so on up to the peak of saṃsāra, followed by absorption of cessation.

Between the ascending and descending sequences, sharp-faculty bodhisattvas enter a desire-realm mind that is a bridge between the two sequences. Being sharp faculty, they can go from the very subtle, refined absorption of cessation to this very coarse bridge-desire-realm mind, and then to the absorption of cessation that initiates the descending sequence. For dull-faculty bodhisattvas, this is too difficult, so after completing the ascending order, they enter a mind called the

“peak of saṃsāra of small capacity,” which is a little coarser than the peak of saṃsāra, and from there enter the bridge-desire-realm mind. They then begin the descending sequence.

In the descending order, the nine serial absorptions are alternated with a desire-realm mind. Bodhisattvas enter the absorption of cessation, desire-realm mind, peak of saṃsāra, desire-realm mind, nothingness, desire-realm mind, and so on down to first dhyāna, desire-realm mind.

When they become fully proficient in this, meditators can use either the absorption of cessation or the desire-realm mind as the interwoven state as they sequentially ascend and descend the eight meditative absorptions.<sup>78</sup> Before entering the leap-over meditation, bodhisattvas set their intention, “After entering absorption, I will go from the first dhyāna to the absorption of cessation, and so forth.” In that way, they can pass from one absorption to the next in the ascending sequence while remaining in meditative equipoise.

There are thirty-four leap-over bases. In the ascending order, there are sixteen bases — the eight meditative absorptions and eight absorptions of cessation that are in between them. In the descending order, there are eighteen bases because all nine serial absorptions alternate with a desire-realm mind. This makes a total of thirty-four.

In the verse above, it is said that the bodhisattvas *leap over one, two, three, and so forth* because during the meditative absorptions the mind is focused in deep single-pointed meditation. Meditators emerge from that and have a desire-realm mind that is a coarse, nonequipoise mind. When they enter the next absorption, they must leap over the previous one (two, three, and so on) absorption. For example, in the descending order, they go from absorption of cessation to desire-realm mind. To enter the next absorption, they must leap over the absorption of cessation to directly enter the peak of saṃsāra. Alternating a subtle, equipoise mind and a coarse, nonequipoise mind is extremely difficult, and the ability to do this makes the meditative abilities of these bodhisattvas truly remarkable. How they train their minds and the abilities they gain from doing so are an indication of how powerful our minds can be as a result of correct practice done with a Dharma motivation.

The difference between the serial absorptions and the eight liberations is a matter of emphasis. The liberations are spoken of from the viewpoint of being

free from certain obscurations; the serial absorptions emphasize that the body, mind, and mental factors are in equilibrium.

In the chapters on the higher training in concentration we have learned of the astounding abilities that sincere meditators can develop. We may wonder why they are explained to those of us who are beginners — won't some people be discouraged by their own comparatively feeble concentration when they see how far they have to go? This depends on our perspective. Learning about the capacities of the human mind inspires us; we know that if we put in the same time and effort as past meditators have, that we too can actualize abilities like theirs. In addition, knowing that there are Buddhist meditators who have already attained these abilities gives us a better idea of the Saṅgha that is our object of refuge; faith and respect in them automatically arises in our mind. As a side benefit, if we have the tendency toward spiritual arrogance, learning of these advanced practices checks our pride, suppressing that hindrance to spiritual progress.

## *The Superknowledges*

The principal aim of the Buddha's teachings is to stop duḥkha by stopping rebirth under the influence of ignorance, afflictions, and karma and to attain nirvāṇa, or full awakening. Nevertheless, the sūtras present other spiritual accomplishments that are valued as well. The first of these is mastery over the various dimensions of the mind — the dhyānas and formless absorptions — that are accomplished by means of samādhi. Scriptures frequently praise the peace and ease these mental states bring. They were sought after and attained by many non-Buddhist spiritual seekers from the Buddha's time to the present.

Another spiritual accomplishment praised in the scriptures is the superknowledges (*abhijñā*, *abhiññā*), supernatural physical and mental powers through which meditators can perform feats that ordinary people consider miraculous or preternatural because they cannot be explained by either the science of old or modern-day science. These special abilities are a by-product of samādhi and give meditators access to hidden laws of the material world that can only be known through refined states of meditative absorption.

Like mastery of dimensions of the mind, the superknowledges can be attained by non-Buddhists as well as Buddhists. While some spiritual seekers

hold them as the purpose of the path, the Buddha sees them as a by-product of deep concentration. He emphasized to his disciples that they should not be content with attaining the various meditative absorptions or supernormal abilities, because without the attainment of nirvāṇa they are still susceptible to all forms of saṃsāric duḥkha. For this reason, when Buddhists cultivate these abilities, it is of utmost importance to have a motivation to benefit others. Otherwise they risk falling prey to conceit and clinging and will find themselves in unfortunate rebirths in future lives.

For example, a meditator in Tibet had deep concentration and could maintain the visualization of himself as the wrathful deity Yamāntaka. But since he lacked the aspiration for liberation, he did not cultivate wisdom and in his next rebirth was born as a spirit that looked like Yamāntaka. There is also a story of a novice who could fly. Since his determination to attain liberation was not strong, one day when he heard the enchanting singing of a maiden working in the fields below, he fell in love and disrobed to marry her. On the other hand, practitioners who use supernormal powers with compassion to benefit others and to spread the Buddha's teachings enact great benefit.

Although the Buddha taught all three aims — nirvāṇa, mastery over dimensions of the mind, and the superknowledges — he knew his followers had different aptitudes and interests and did not expect all of his disciples to accomplish the latter two. These arhats who attain nirvāṇa but not the other two are called “those liberated by only wisdom” (P. *paññāvimutta*). They attain liberation either by using the capable preparation or by developing wisdom and eradicating defilements simply on the basis of access concentration.<sup>79</sup> Those who attain nirvāṇa as well as the four dhyānas, four formless absorptions, and perhaps even the cessation of discrimination and feeling have mastery of a wide range of mental states and are called “those liberated in both ways” (P. *ubhatobhāgavimutta*). Disciples who attain nirvāṇa as well as mastery over mental states and the superknowledges are called “arhats with the six superknowledges.” In countries following the Pāli tradition, they say that we find all three types of persons to this day.

In short, although the superknowledges are not a sign of insight or wisdom, Buddhist texts do consider them a sign of spiritual accomplishment. In the Buddha's time, many yogis had these abilities and would even challenge the Buddha to contests in miraculous powers. One of the four special Buddhist days

in the Tibetan calendar — the full moon of the first lunar month — celebrates the Buddha’s victory in one such contest. After a group of non-Buddhist yogis kept prodding the Buddha to participate in such a contest, he reluctantly consented. His purpose was to subdue their arrogance, and by showing extraordinary miraculous powers he successfully did this, and they later became his disciples.

To meet the expectations of society at that time, some of the Buddha’s disciples accomplished supernormal powers, but the Buddha prohibited his followers from displaying these powers to show off. In fact, monastics who speak even truthfully about their supernormal powers transgress a *prātimokṣa* precept. Those who lie about having powers they do not have commit a root offense. Throughout the ages, the Buddha’s disciples with these abilities have used them to work in unobtrusive ways to benefit others and to spread the Dharma.

A *sūtra* tells the story of the layman Kevaddha who asked the Buddha to increase the faith of the laypeople by demonstrating his supernormal abilities, but the Buddha refused. Kevaddha then asked him to display his ability to read others’ minds, which the Buddha also declined. Instead he showed Kevaddha another type of miracle (DN 11.8).

And what is the miracle of instruction? Here, Kevaddha, a monastic gives instructions as follows: “Consider in this way, don’t consider in that way. Direct your mind this way, not that way. Give up that, gain this, and persevere in it.”

The true miracle is being able to instruct others and inspire their faith in the Dharma so that they may be led away from *duḥkha* and attain *nirvāṇa*.

When used with a good motivation — such as to attain liberation or awakening, or to benefit sentient beings with great compassion — these powers allow us to accumulate merit and generate wisdom quickly. They enable bodhisattvas to benefit sentient beings easily and exactly according to their needs. The first five superknowledges are mundane abilities: supernormal powers, divine ear, understanding the minds of others, recollection of past lives, and divine eye. The sixth superknowledge is a supramundane realization — the destruction of pollutants.

While non-Buddhists may actualize the first five, only Buddhists who seek liberation from *samsāra* seek the sixth — the attainment of liberation. The last

three superknowledges — recollection of past lives, divine eye (knowledge of the passing away and rebirth of beings according to their karma), and destruction of the pollutants — are also the three higher knowledges that the Buddha actualized under the bodhi tree prior to his awakening. In the Pāli tradition, sometimes two other powers — knowledge and vision and mind-made body — are included at the beginning of the list of superknowledges, bringing the total to eight.<sup>80</sup>

The Sanskrit tradition asserts that the first five superknowledges can be attained on the basis of the actual first dhyāna. The Pāli tradition says the actual fourth dhyāna is required because the mind is very pliant and concentration is strong and imperturbable.

### 1. *Supernormal Powers*

Training for the five superknowledges is rigorous, but when the mind is developed in this way, it is able to have mastery over nature and defy ordinary scientific laws. The Buddha describes meditators with such powers (MN 77.31):

Having been one, they become many; having been many, they become one; they appear and vanish; they go unhindered through walls, through enclosures, through mountains, as though through space. They dive in and out of the earth as though it were water; they walk on water without sinking, as though it were earth. Seated cross-legged, they travel in space like birds. With their hands they touch and stroke the moon and sun, so powerful and mighty. They wield bodily mastery even as far as the Brahmā world.

People with supernormal powers (*ṛddhi, iddhi*) can make their body into many bodies and then absorb these diverse bodies back into a single body. They can make themselves invisible, vanishing and reappearing at will. They pass through solid materials with ease, walk on water, fly in space, and even touch the sun and moon.

The *Path of Purification* describes the process to develop these powers, which is done by means of samādhi developed in a series of preliminary exercises with the kasiṇas (S. *krtsna*) — colored disks or different elements — as meditation objects. With the earth kasiṇa as an object, meditators first attain the first dhyāna. They then attain the first dhyāna successively using seven other kasiṇas

— water, fire, air, blue, red, yellow, and white. Then they do this in reverse, entering the first dhyāna beginning with a white kasiṇa, then yellow, red, blue, air, fire, water, and earth kasiṇa. After that, they enter the first dhyāna using each kasiṇa in sequential and reverse orders many times.

Then beginning with the earth kasiṇa, they attain each of the four dhyānas and the four formless absorptions in succession. From the absorption of neither-discrimination-nor-nondiscrimination (peak of saṃsāra) they descend, absorption by absorption, to the first dhyāna, still using the earth kasiṇa. They then practice going in and out of each dhyāna very quickly in forward and reverse orders, using the earth kasiṇa. When this has been mastered, they proceed to do the same with each of the other seven kasiṇas in turn, so that they have mastered all eight meditative absorptions with these eight kasiṇas in forward and reverse orders.

Following this, they alternate dhyānas. Using the earth kasiṇa they attain the first dhyāna, third dhyāna, infinite space, and nothingness. They then do this with each of the other seven kasiṇas. They also train so that they can enter the first dhyāna with one kasiṇa, the second dhyāna with another kasiṇa, the third with yet another, up to the absorption of neither-discrimination-nor-nondiscrimination.

Having mastered this, they now go from absorption on neither-discrimination-nor-nondiscrimination down to the first dhyāna, using a different kasiṇa to attain each absorption. They develop the ability to go into the first dhyāna quickly, stay for a moment, emerge from it, and, using another kasiṇa, go into the second dhyāna, stay in it a moment, emerge from it, and so on up to the absorption of neither-discrimination-nor-nondiscrimination, and then back down to the first dhyāna. In this way, they build up amazing mastery of the mind, entering and emerging from deep states of absorption in a few seconds. This preparatory process develops extraordinary mental power, which is then used to direct the mind to the exercise of the supernatural powers. Through the force of their intention, and based on this profound acuity and agility in samādhi, they gain the supernatural powers described above.

One of these is the ability to create a mind-made body (*manomaya-kāya*) in which the dhyānic mind creates another physical body that is an exact replica of the meditator's own body with all its limbs and sense faculties. The Buddha describes it as like a reed extracted from a sheath, a sword pulled out of its

scabbard, or a snake removed from its slough (MN 77.30). Once the mind-made body has been extracted from the physical body, the meditator mentally controls it because it has no mind of its own, even though to others it looks as if it is a normal body moved by its own consciousness. This mind-made body can travel to distant places while the meditator remains at the monastery. It can appear to teach Dharma elsewhere, and when it has served its purpose, the meditator absorbs it back into his own body.

## *2. Divine Ear (Clairaudience)*

With the divine ear, meditators can hear sounds in the heavenly realm, human world, and other realms and directions where sentient beings dwell. They can hear sounds, listen to conversations, and hear cries of pleasure or pain that are far away as easily as ones nearby (MN 77.32).

With the divine ear element, which is purified and surpasses the human, they hear both kinds of sounds, the divine and the human, those that are far as well as near.

## *3. Understanding the Minds of Others*

With this superknowledge, meditators know (MN 77.33):

the way to understand the minds of other beings, of other persons, having encompassed them with their own minds. They understand a mind affected by lust as affected by lust and a mind unaffected by lust as unaffected by lust; they understand a mind affected by hate as affected by hate and a mind unaffected by hate as unaffected by hate; they understand a mind affected by confusion as affected by confusion and a mind unaffected by confusion as unaffected by confusion; they understand a contracted mind as contracted and a distracted mind as distracted; they understand an exalted mind as exalted and an unexalted mind as unexalted; they understand a surpassed mind as surpassed and an unsurpassed mind as unsurpassed; they understand a concentrated mind as concentrated

and an unconcentrated mind as unconcentrated; they understand a liberated mind as liberated and an unliberated mind as unliberated.

With this superknowledge meditators know the mental states of others as clearly as they see a spot on their own face reflected in a clean, bright mirror. For example, if another person's mind is affected by attachment or anger, they know it as such. If it is free from those, they also know that.

#### *4. Recollection of Past Lives*

Meditators with this superknowledge know (MN 77.34):

the way to recollect their manifold past lives, that is, one birth, two births . . . a hundred thousand births, many eons of world-contraction and expansion: “There I was so named, of such a clan, with such an appearance, such was my nutriment, such my experience of pleasure and pain, such my lifespan, and passing away from there, I reappeared elsewhere; and there too I was so named . . . and passing away from there I reappeared here.” Thus with their aspects and particulars they recollect their manifold past lives.

This superknowledge gives meditators the ability to know particular details of their previous lives from long ago. The *Path of Purification* says to develop this ability, a meditator must first master the dhyānas up to the fourth dhyāna, bringing the mind to imperturbability. Because the dhyānas are states of single-pointed concentration on one object, remembering previous lives, which involves turning the mind to many objects, cannot be done while in the fourth dhyāna itself. Meditators emerge from the fourth dhyāna into a state of ordinary consciousness, where the mind is still suffused with the power and clarity of the dhyāna. They begin by recalling what took place just before their meditation session, then remember what happened before that, gradually extending their memory as far back as possible to events from childhood and infancy. It isn't necessary to remember every detail of every day; sometimes they remember larger segments of their lives, such as being a young adult or an adolescent. Whenever their memory becomes cloudy, they pause and enter the fourth dhyāna to refresh, strengthen, and purify their mind. Reemerging from this dhyāna, they take up

recollecting events in their life from where they left off, going back to the time of birth, life in the womb, and up to the time of conception, when the consciousness first entered the union of egg and sperm of this life.

At this time, it seems as if they come up against a wall and cannot remember further back. But without giving up, they again enter the fourth dhyāna to refresh the mind and make it focused, sharp, and clear. Emerging from that dhyāna, they again try to recall what happened in the moment before rebirth. They apply their mind with determination to break through the wall that obstructs memory until eventually the concentrated mind is able to penetrate the fog of forgetfulness and recollect the last moment of the previous life (or the bardo). They continue progressing back in time, gradually remembering events from the previous life. Again encountering the wall of obscuration when they reach the beginning of that life, they persevere, sharpening and purifying the mind by entering the fourth dhyāna for a period of time. They then resume the recollection process until they can recall the second preceding life. And so on, they practice, developing the ability to remember vividly thousands, if not millions or billions, of previous lives.

### 5. *Divine Eye (Clairvoyance)*

The divine eye gives meditators access to the death and rebirth of sentient beings (MN 77.35).

With the divine eye, which is purified and surpasses the human, they see beings passing away and reappearing, inferior and superior, fair and ugly, fortunate and unfortunate. They understand how beings pass on according to their actions thus: “These worthy beings who were ill-conducted in body, speech, and mind, revilers of ariyas, wrong in their views, giving effect to wrong view in their actions, on the dissolution of the body, after death, have reappeared in a state of deprivation, in a bad destination . . . but these worthy beings who were well-conducted in body, speech, and mind, not revilers of ariyas, right in their views, giving effect to right view in their actions, on the dissolution of the body, after death, have reappeared in a good destination, even in the heavenly world . . . they understand how beings pass on according to their actions.

The attainment of the divine eye, which sees beings dying and reappearing in their next life according to their karma, brings several special abilities. They understand clearly how sentient beings are governed and controlled by their karma. They know the actions sentient beings did to cause rebirth in particular realms during specific lives. They have the ability to see events in other realms in the universe, in places far away, and in other dimensions that our normal eyes are not privy to.

For a Dharma teacher, this ability is especially useful, for she can see various beings and their karma and thus knows their unique dispositions and how to skillfully benefit them. There are many stories in the sūtras of the Buddha knowing by means of his divine eye which beings were receptive to the Dharma at that time and whose faculties were ripe to gain realizations if they were taught. By knowing which beings in other realms or universes are ripe to be led on the Dharma path, bodhisattvas with supernormal powers can go to those places to teach them.

The divine eye is attained by using the light *kasiṇa* to enter the fourth *dhyāna*.<sup>81</sup> Having developed a luminous mind, they emerge from this *dhyāna* and turn this inner perception of light outward, using their clear and powerful minds to radiate this bright light that illuminates ever greater distances and extends to other realms of existence.

Sometimes while extending light further, the mind becomes dull and the light cannot penetrate to reveal those realms and events. At that time meditators again cultivate concentration with the light *kasiṇa* and use it to enter the fourth *dhyāna*. When their mind is refreshed and clear, they emerge from that *dhyāna* and resume radiating the light.

Eventually this powerful *samādhi* can illuminate other realms that are ordinarily concealed, and meditators can see devas, hungry ghosts, hell beings, as well as human beings and animals in other parts of the universe. Fixing their attention on particular beings, they inquire: What is the karma that brought this being to be born in this realm of existence? By the power of the divine eye, they gain direct understanding of this karma. They see that those beings in unfortunate realms were born there owing to the power of specific destructive actions and that those in fortunate realms attained such rebirths due to constructive actions. Some future events may become apparent as well.

## 6. *Destruction of Pollutants*

The sūtra says (MN 77.36):

By realizing for themselves with direct knowledge, they here and now enter upon and abide in the liberation of mind and liberation by wisdom that are unpolluted with the destruction of the pollutants.

According to the Prāsaṅgika Madhyamaka view, this superknowledge is concomitant with the concentration and wisdom that abandon afflictive obscurations; it directly knows these abandonments. It is possessed by āryas who have exhaustively abandoned all afflictive obscurations. This includes śrāvaka arhats and bodhisattvas of the pure grounds — the eighth, ninth, and tenth grounds — and buddhas. In the mindstreams of buddhas this superknowledge knows their abandonments of both the afflictive and the cognitive obscurations.<sup>82</sup>

According to Pāli commentaries, unlike the other superknowledges, the destruction of pollutants is possessed only by arhats. It may be attained on the basis of access concentration, the momentary concentration of “dry-insight” meditators, or any of the four dhyānas. Dry-insight arhats are so called because their wisdom lacks the softening and moistening effects of the dhyānas that make the mind more receptive. Although such wisdom is “hard,” it can still eradicate defilements.

This superknowledge realizes a liberation called the “liberation of mind and liberation by wisdom” (P. *cetovimutti-paññāvimutti*), which is free from defilements. When the pollutants — the fundamental defilements obscuring the mind — have been uprooted by wisdom, a meditator enters upon and dwells in the liberation of mind liberation by wisdom. The liberation of mind is the concentration factor associated with the fruition attainment of arhatship because it is free from attachment. Liberation by wisdom is the wisdom factor associated with the fruition attainment of arhatship because it is free from ignorance. The former is primarily the result of serenity and the latter is primarily the result of insight, but coupled together like this, they refer to the fruition attainment of arhatship made accessible by the destruction of the pollutants. The fruition attainment of arhatship (P. *arahattaphala-samāpatti*) is a special meditative

attainment accessible to an arhat, by which he directly experiences nirvāṇa through the duration of the attainment.

## *The Value of the Superknowledges for Bodhisattvas*

Although some śrāvakas choose to develop the first five superknowledges, others do not. However, these are crucial for bodhisattvas because they enable bodhisattvas to accumulate great merit that is dedicated to full awakening and they enable both bodhisattvas and buddhas to be of great benefit to sentient beings. With *supernormal powers*, bodhisattvas go to pure lands where they listen to Dharma teachings directly from various buddhas. In pure lands, they create enormous merit by emanating abundant and magnificent offerings that they offer to the buddhas and bodhisattvas there. In the human realm, buddhas and bodhisattvas benefit others by revealing these powers to specific disciples to enhance their faith and joyous effort. They do so discreetly, with no wish to gain reputation or fame. Buddhas and bodhisattvas can also manifest many bodies, appearing as ordinary individuals in diverse places to teach and guide the beings there. In addition, these miraculous abilities enable bodhisattvas to know where the spiritual mentors, Dharma friends, and disciples with whom they have karmic connections are living and to go there quickly to either receive or give teachings and guidance.

By means of *clairaudience*, bodhisattvas can hear teachings in other places and understand all languages. This enables them to understand a wide range of teachings and to know their students' Dharma discussions. With this knowledge, bodhisattvas have the ability to resolve their students' doubts and dispel their misconceptions.

Through *knowledge of others' minds*, bodhisattvas directly know others' interests and dispositions as well as their emotional patterns and habitual thoughts, and thus can teach them accordingly. They know whose mind is under the influence of afflictions and whose is free from afflictions. Cherishing others more than themselves, bodhisattvas are never judgmental when they see that someone's mind is overcome with afflictions. Instead, their compassion and determination to help that person increase.

By means of *knowing past lives*, bodhisattvas know their spiritual mentors, Dharma practices, and spiritual friends from previous lives and thus seek them out again in this life. Studying and practicing under the guidance of teachers with whom they have associated and in whom they have deep trust and faith from previous lives, and continuing practices in which they have already trained in previous lives enables them to progress rapidly. In addition, they know the disciples with whom they have had Dharma connections in previous lives and continue to guide and teach them. By clearly seeing the karma that their disciples have created in the past, these bodhisattvas understand their disciples' present experiences and tendencies and know how to guide them effectively.

The *divine eye* enables bodhisattvas to know others' karmic tendencies as well as where they have been reborn. They also know the karmic results of actions that people are doing now, which helps them to guide their disciples more effectively. Clairvoyance gives bodhisattvas the ability to discern sentient beings' karmic receptivity to the Dharma and to interact with them accordingly. It also enables them to locate their previous disciples and benefit them in their present life forms. Understanding others' minds, bodhisattvas know who has entered the path and their level of realization as well as who has not entered the path, and thus can guide all these beings accordingly.

With *knowledge of the destruction of pollutants*, bodhisattvas of the pure grounds know their own level of spiritual attainments, fortifying their confidence in their ability to benefit others.

In short, some of the superknowledges involve extrasensory perception — perception by means other than our five senses; others involve supernormal powers — special physical powers that affect how one's body interacts with the surrounding environment.

\* \* \* \* \*

Since we are discussing these special abilities that most people do not have, I would like to make a few comments. When I posed questions to my senior tutor, Kyabje Ling Rinpoche, he would sometimes give strange answers. I began to suspect that he had other sources of knowledge, so once I asked him, "Do you have clairvoyant experiences?" He responded, "I don't know, but sometimes certain unusual types of knowledge seem to arise in me." Ling Rinpoche was a

knowledgeable spiritual master with great integrity, and I had known him since I was a child. Therefore I trust him and believe that clairvoyance and other superknowledges exist.

Theoretically, the ability to know is a natural property of consciousness. Even in our ordinary experiences, we sometimes have premonitions of what might happen. I think these indicate that the seed for such cognitive powers lies within us. Through meditative practices and single-pointed concentration in particular, we begin to sharpen the focus of our memory and mindfulness, increasing our ability to recollect experiences. As the power of recollection becomes sharper, the potential for precognition is enhanced as well. This is the theoretical basis for believing in precognition.

These abilities seem to arise in different forms in different people. In the eighteenth century, during the time of the Seventh Dalai Lama, a highly realized master named Dagpu Lobsang Tenpe Gyaltzen was universally recognized as having clairvoyant powers. Changya Rolpay Dorje, another great master, asked him, “How does this knowledge arise in you?” Dagpu Lobsang Tenpe Gyaltzen replied, “Whenever I have to seriously think about something, I focus on the first image that appears in my mind. This is usually a bell. On top of that appears certain images and patterns that give me particular premonitions.”

Teachings of the highest yoga tantra contain specific practices that enable people to develop that kind of power. The sūtras also speak of extrasensory perception, but that is usually only visual and auditory, never olfactory. Even in our ordinary experiences we can cognize objects at a distance through our visual and audio perceptions, though we can't do this for odors. The power of clairvoyance is limited to visual forms.

While extrasensory perception and supernormal powers are possible, the Buddha forbade his disciples to talk about their accomplishments in this area. One of the precepts of a fully ordained monastic is to abandon publicly proclaiming that one is an arhat or has special abilities. This is to ensure that practitioners remain humble.

Some people claim to have superknowledges, but personally I am very skeptical. Because of misconceptions originating centuries ago, some people believe that many Tibetan monastics have special powers. When I visited Taiwan, I warned some of the Tibetan teachers and monks there not to pretend to have

realizations or special powers that they did not possess, because one day their pretense might be revealed.

Some ordinary people may have some ability to know future events or someone's thoughts. When these abilities are a result of previous karma — not of samādhi developed in this life — they are generally limited in scope and are lost at death. They do not protect the people who possess them from falling into unfortunate rebirths and do not indicate that they possess spiritual realizations. Furthermore, these special abilities do not necessarily propel them along the path to awakening and sometimes become a distraction to spiritual practice. In some cases, a person may believe they have extrasensory perception when in fact they do not. In this case, telling others what they intuit could be inaccurate and harmful. This is especially true if they give unasked-for advice.

Some people may gain extrasensory perception or supernatural powers through single-pointed concentration. When used with compassion to benefit others, some special abilities are constructive. But if those people have not cultivated compassion, there is danger that they use those powers to gain respect, material gain, or power over others, in which case such powers are useless at best and harmful at worst. The goal of the Buddhist path is not to gain supernatural powers but to attain liberation and awakening. Therefore these special abilities must be cultivated with the proper motivation, and practitioners must know that until they become fully awakened buddhas their extrasensory perception and supernatural powers are not complete and may be erroneous.

## REFLECTION

---

1. What are the six superknowledges? What are their functions?
  2. Reflect on the ways bodhisattvas use each superknowledge with compassion to benefit sentient beings.
- 

## *Serenity in Buddhist Practice*

What makes the cultivation of serenity a Buddhist practice? The most important criterion is that it is held by refuge in the Three Jewels. What allows serenity to

lead to nirvāṇa and awakening? When the union of serenity and insight is coupled with the aspiration for liberation and the wisdom realizing emptiness, it leads to nirvāṇa; when it is conjoined with bodhicitta and the wisdom realizing emptiness, the union of serenity and insight leads to full awakening. To ensure that our practice of serenity contributes to our ultimate spiritual aims, we should not seek meditative concentration to the exclusion of other practices, especially when we are relatively new to Dharma practice. Analytical meditation on the stages of the path is necessary to cultivate a proper motivation and a firm foundation for practicing both serenity and insight.

There is a story of a meditator who spent so many years absorbed in the bliss of samādhi that his hair grew into long dreadlocks. When he eventually arose from meditation, he noticed that some mice had nested in his hair. Furious, he swatted the mice and chased them away. Although this meditator had firm concentration, he lacked fortitude, such that a small provocation triggered a huge outburst of anger.

Most of our daily meditation practices involve both analytical and stabilizing meditation. To develop compassion we employ analytical meditation to understand the kindness of others and their suffering in saṃsāra. When compassion arises, we focus on that experience with stabilizing meditation. Should compassion weaken, engaging in more analysis will reinvigorate it, at which point we resume stabilizing meditation on compassion. Most meditation on the stages of the path is done by alternating analytical meditation and stabilizing meditation in this way.

During meditative absorption, a meditator may temporarily pass beyond manifest afflictions, but the enemy of afflictions will still surface in post-meditation time. For this reason, we must not be satisfied with the bliss of concentration but must develop insight into emptiness as well, for only that will free us from saṃsāra. However, without the powerful concentration of serenity or the dhyānas, our understanding of emptiness will lack sufficient strength to serve as a counterforce to self-grasping ignorance. Repeatedly entering into the realization of emptiness with single-pointed concentration is required to make the mind strong enough to uproot ignorance. This involves the union of serenity and insight on emptiness.

That union is a state imbued with physical and mental pliancy induced by analytical meditation on emptiness. Concentration alone can focus single-

pointedly on emptiness, but analysis interrupts the stability of concentration. Analysis can plunge the depth of emptiness, but alone it cannot focus on emptiness single-pointedly. Uniting the two involves analysis being able to induce the physical and mental pliancy that brings deep concentration. Tsongkhapa says (LC 3:24):

Discerning wisdom becomes insight when, without focusing on a single object, it can generate pliancy through the power of analysis. So generating pliancy by setting your attention on a single object of meditation — even if the object is emptiness — is nothing more than a way to achieve serenity; that alone does not count as attaining insight.

Meditating with pliancy and concentration on emptiness is serenity meditation. To become insight focused on emptiness — which itself is considered the union of serenity and insight — analysis must induce the pliancy of serenity.

The sequence of first meditating on serenity and then insight pertains to when these two are being newly attained. After meditators have gained both of them, they can begin a meditation session with serenity followed by insight, or they may directly enter into insight.

Although attainment of serenity precedes attainment of insight, that does not mean that we should wait until we have full serenity before studying and contemplating the correct view. It is good to seek teachings on emptiness and gain familiarity with it as soon as we have a general understanding of the path.

In the Perfection Vehicle and the practice of the three lower tantras (Action, Performance, and Yoga Tantra), serenity must be attained first. Although a meditator may have serenity, the stabilizing meditation of serenity and the analytical meditation of insight interfere with each other. They must be practiced alternately until analysis itself can induce the pliancy of serenity. At that time, the union of serenity and insight is attained. When this powerful mind has emptiness as its object, the meditator enters the path of preparation. As mentioned, the process of attaining serenity and insight in highest yoga tantra differs.

*Words of Advice*

I would like to speak now to those who have completed many years of study in the monastic universities. It seems that some Tibetan Buddhists belittle serenity perhaps because it is a practice shared with non-Buddhists or perhaps because they are concerned with becoming attached to the bliss of concentration. Holding this attitude, they neglect trying to improve their concentration. They may be well-educated lamas who are able to teach topics from the beginning to the end of the path, yet because they lack single-pointed concentration they cannot experience what they teach. The experiences described in Tsongkhapa's *Bright Lamp of the Five Stages* (*Rim nga gsal sdron*) and *Completing the Five Stages in a Single Seating* (*Rim nga gdan rdzogs*) are readily available for us to relish, yet we haven't devoted the time and energy to attain serenity and these higher attainments evade us.

The lengthy texts on the lamrim are designed to facilitate systematic practice of the topics explained in the classical treatises and commentaries, and as such they should be our primary guide for Dharma practice. But some people forget this and use the classical treatises to increase their intellectual understanding rather than incorporating them into the lamrim practice. Other lamas may not read the lamrim extensively and teach it simply because it is customary to do so. On the other hand, I have heard of some monks that meditate on the lamrim while they study the treatises at the monastic universities. That is excellent!

Some people do retreats and recite many mantras. Although this is good, practitioners in retreat should meditate on the teachings they have received. The autobiography of Jamyang Shepa, one of the great lineage lamas, relates that he did retreat on the 173 aspects of the three knowers as taught in the *Ornament*. It would be good if more people did serious meditation on these and other topics taught in the Indian treatises and commentaries.

The disciplinarian of one monastic university suggested that periods of silent meditation be incorporated into the daily prayer sessions and pujas, and I enthusiastically agreed. Pabongkha Rinpoche used to remain in silent meditation on emptiness at the point of taking death as the path to the dharmakāya when he did deity yoga practices. I have advised Namgyal Monastery to do this as well, instead of chanting "Everything becomes empty" and "Within emptiness arises . . ." in the same breath.

Our monasteries must produce people who are accomplished meditators as well as skilled scholars. To this end, I suggest that monastic institutions establish

some colleges for meditation practice. I also appeal to the new generation of monastics to put more effort into gaining personal experience of serenity and insight in order to preserve the realized Dharma and benefit sentient beings.

## 9 | Concentration in the Pāli Tradition

WITHIN THE PĀLI TRADITION, there are various approaches to the development of serenity<sup>83</sup> and insight. According to the Majjhima Nikāya Commentary (II 346), serenity includes the eight meditative absorptions that are the basis for insight. Some teachers advocate cultivating serenity and insight separately and combining them afterward. Of those, some emphasize developing serenity first, followed by insight, while others teach insight first, followed by samādhi. Still other meditation masters instruct their disciples to develop serenity and insight together. Teachers also have different preferences for meditation objects.

It is important to train in samādhi under the guidance of a qualified teacher and not to do these practices on our own. Working with the mind is a delicate venture and without proper guidance it is easy to go astray. A good meditation master who understands the various experiences that may arise in meditation will be able to steer you in the correct direction and confirm your progress. This enables you to practice free from worry and prevents taking unnecessary detours on the path.

### *Objects of Meditation*

Depending on the disciple's temperament, a meditation teacher usually prescribes one of forty objects for the cultivation of serenity. There are six kinds of temperament: those who are attached, angry, confused, faithful, intelligent, and speculative and scattered. These temperaments depend on a person's habits and the balance of humors in their body. A teacher discerns disciples' temperament by observing their posture, the way they walk, eat, wear their clothes, and engage in daily actions.

These are the forty possible meditation objects (Vism 3.104):<sup>84</sup>

- The ten kaṣiṇas are earth, water, fire, air, blue, yellow, red, white, light, and limited-space kaṣiṇas.<sup>85</sup>
- The ten unattractive objects are corpses in various states of decay. Unlike the meditation on corpses in mindfulness of the body where the purpose is to understand our own impermanence, here the purpose is to focus single-pointedly on the object with no reflective thought.
- The ten recollections are the recollection or mindfulness of the Buddha, Dharma, Saṅgha, ethical conduct, generosity, deities (the divine qualities of devas), death, the body, breathing, and nirvāṇa.
- The four divine abidings (four immeasurables) are love, compassion, empathic joy, and equanimity.
- The four formless states are the bases of infinite space, infinite consciousness, nothingness, and neither-discrimination-nor-nondiscrimination. These are the meditation objects of those born in the formless realm.
- One discrimination is discerning the repulsiveness of food.
- One analysis is defining the four elements.

Of these forty, twenty-two have the counterpart sign as the object: the ten kaṣiṇas, ten unattractive objects, mindfulness of breathing, and mindfulness of the body. This means the actual object when serenity is attained is the counterpart sign — a clear, luminous mental image or conceptual appearance, which is an object only of mental consciousness. Although we may begin by focusing on the breath, for example, the breath is not the actual object perceived in states of deep concentration; the sign (*nimitta*) is.

Of these forty, eight recollections (omitting mindfulness of the body and of breathing), the discrimination of the repulsiveness of food, and the defining of the four elements bring access concentration (P. *upacāra samādhi*) only. All the others will bring full absorption (P. *appanā samādhi*). Any of the kaṣiṇas is a condition for cultivating the first five superknowledges.

A beginner initially apprehends the various objects in different ways. All the kaṣiṇas, except the air kaṣiṇa, are initially apprehended by sight. For example, the earth kaṣiṇa is a round disk made of clean clay about four fingers wide. It is braced up and placed on a board in front of the meditator.

The ten unattractive objects are also first seen with the eyes. In previous times meditators went to charnel grounds to view these. The body's innards are known by hearing descriptions of them. The breath is apprehended by the tactile consciousness, the air kasiṇa by sight and touch, and the remaining objects by hearing a description of them. Beginners cannot apprehend the divine abiding of equanimity or the four formless states; only experienced meditators are able to engage with those objects.

The forty objects can be correlated with the various temperaments. If we are aware of our overall temperament, we can get a sense of the type of object that it would be most beneficial for us to focus on. If we have a lot of attachment, using the ten ugly objects and the body is helpful to reduce attachment and focus the mind. If we suffer from anger, the four divine abidings and the four color kasiṇas are useful. Those who are confused or scattered find the breath a helpful meditation object. Someone inclined toward faith will find the first six recollections riveting. Death, nirvāṇa, defining the four elements, and repulsiveness of food are useful for the intelligent. The other kasiṇas and the four formless states can be used by all.

Before going to a quiet place to practice, we should fully dedicate ourselves to the Buddha, thinking, I give my life to the Buddha. Doing this strengthens the mind, so if we encounter something frightening we will not run into town, socialize with a lot of people, or give up our practice. Instead, even if a fearful image appears, we won't be alarmed because we have dedicated ourselves to the Buddha.

A good motivation — one that seeks to gain realizations on the path to arhatship — is also important, as is a strong determination to confront and work with the afflictions. We should then request our spiritual mentor to select a meditation object for us and receive instructions on how to develop serenity with it as a base. Rushing off to an isolated place with a lot of enthusiasm but no knowledge on how to meditate will not lead to fulfillment of our spiritual aims.

At the beginning of a meditation session, review the disadvantages of sensual desire and cultivate the wish to be free from it. Recollect the qualities of the Three Jewels and feel joyful. Reflect that you are entering the path of renunciation that all āryas have followed. Feel eager to meditate, knowing that by doing this you will gain the bliss of Dharma realizations.

In the process of developing serenity, three signs (P. *nimitta*) are to be cultivated: the preliminary sign (P. *parikkamma-nimitta*), learning sign (P. *uggaha-nimitta*), and counterpart sign (P. *paṭibhāga-nimitta*). Using the example of an earth kasiṇa, first make the kasiṇa disk by filling a wooden rim — approximately twelve to eighteen inches in diameter — with clay, smoothing the clay to get the sense of earth. Place the disk on a stand or raised platform in front of your meditation seat, about two feet away or at any distance that feels comfortable. The disk may be lower than your head or directly in front of you.

With eyes open, look at it, thinking, earth, earth. When the image of earth is firm in your mind, lower your eyes and continue to focus and think, earth, earth. Don't ignore the color of the earth, but don't give it prominence either, because the actual object of meditation is the conceptual appearance of earth, which is an object of mental consciousness, not visual consciousness. This mental image is called the *preliminary sign*; the mental consciousness conceptually apprehends the earth kasiṇa seen by the visual consciousness. If the mental image fades, look at the earth kasiṇa to refresh your visualization of it and then lower your eyes and visualize it.

Gradually you will be able to form the image in your mind, sometimes with your eyes open and sometimes with them closed. This is called *developing the sign*. Concentration at this initial stage is called “preliminary concentration” (P. *parikkamma-samādhi*), and most of your effort goes toward being mindful of the object, noticing when a distraction or other hindrance has arisen, applying the antidote to it, and bringing the mind back to the meditation object.

Continue to develop the preliminary sign until the *learning sign* arises. This is a subtler object that replaces the preliminary work sign. It arises when you see the mental image just as clearly with closed eyes as with open eyes looking at the kasiṇa. At this point stop looking at the external earth kasiṇa and focus exclusively on the mental object, the learning sign. If your apprehension of the learning sign isn't stable and fades away, open your eyes and look at the physical earth kasiṇa. Investigation is important at this point to establish familiarity with the learning sign.

As you continue to meditate, the five hindrances are gradually suppressed by the five absorption factors (discussed below). Suppression in the context of developing concentration differs from psychological suppression. Here the mind and body are at ease and free from stress; the mind is virtuous and the feeling is

either happy or equanimous. Unlike psychological suppression in which the person does not see his mental functioning clearly, here suppression of the five hindrances leads to greater clarity and ability to discern the functioning of the mind.

Untroubled by manifest afflictions, especially by the five hindrances, the mind becomes more concentrated. The *counterpart sign* arises and access concentration is attained. The difference between the learning sign and the counterpart sign is that the former has imperfections and flaws, whereas the latter is brighter and more purified. Very luminous, beautiful, and vivid, the counterpart sign is immaterial and lacks physical color or shape because it is not an object of visual consciousness. It is likened to a looking-glass disk taken out of its case, a very clean mother-of-pearl dish, or the moon coming out from behind a cloud. Stabilizing the counterpart sign is difficult, so you must guard it carefully and practice it over time in order to attain full absorption.

Access concentration begins when the counterpart sign arises and the five hindrances have been suppressed.<sup>86</sup> This is called the “stage of suppression abandonment” (P. *vikkhambhana-pahāna*). The first dhyāna begins with the stable and full development of the five absorption factors. Although the absorption factors are present in access concentration, they are not firm and access concentration may easily be lost, which may be likened to a toddler falling down while learning to walk. But just as an adult can stand firmly for a long time, the absorption factors remain strong for a long time during actual meditative absorption. The mind in full absorption does not perceive sensory objects.

Nowadays in Asia, few masters are familiar with kasiṇa meditation and most meditators use the breath as the object for cultivating serenity. Focusing on the breath slows down the thought processes and clears the mind of the barrage of scattered thoughts. To use the breath as your meditation object, begin by placing your attention at the nostrils and upper lip and observing the physical sensation of the breath as it enters and exits.<sup>87</sup> Some people recite “buddho” to help them maintain focus on the breath, thinking “bud” when inhaling and “dho” while exhaling. The learning sign is a mental image arisen from this physical sensation. When it arises, turn your attention to that nimitta that has arisen based on the breath — a colored luminous sphere or a radiant light — and make that your object of meditation.

## *The Four Brahmavihāras*

The practice of the four immeasurables (P. *appamaññā*), or four brahmavihāras — love, compassion, joy, and equanimity — is common to the Pāli and the Sanskrit traditions. This practice may be done in diverse contexts and for different purposes: to soothe rough emotions, develop serenity, aid in the cultivation of bodhicitta, and so on. In several sūtras, the Buddha presented the four brahmavihāras as a means to cultivate samādhi (DN 13.76).

The ariya disciple — who is thus devoid of covetousness, devoid of malice, unconfused, introspectively aware, ever mindful — dwells pervading one quarter (direction) with a mind imbued with love, likewise the second quarter, the third quarter, and the fourth quarter. Thus above, below, across, and everywhere, and to all as to himself, he dwells pervading the entire world with a mind imbued with love, vast, exalted, measureless, without hostility, without malice.

The ariya disciple . . . dwells pervading the entire world with a mind imbued with compassion, vast, exalted, measureless, without hostility, without malice.

The ariya disciple . . . dwells pervading the entire world with a mind imbued with altruistic joy, vast, exalted, measureless, without hostility, without malice.

The ariya disciple — who is thus devoid of covetousness, devoid of malice, unconfused, introspectively aware, ever mindful — dwells pervading one quarter with a mind imbued with equanimity, likewise the second quarter, the third quarter, and the fourth quarter. Thus above, below, across, and everywhere, and to all as to himself, he dwells pervading the entire world with a mind imbued with equanimity, vast, exalted, measureless, without hostility, without malice.

The four brahmavihāras are practiced in conjunction with mindfulness and are used to cultivate samādhi. Before meditating on them, it is necessary to shed animosity for others by seeing the danger of holding onto anger, hatred, and resentment.<sup>88</sup> Recall that if these people were happy, they would act differently.

People harm others because they are unhappy; therefore it makes sense to wish them to have a peaceful mind and good circumstances in their lives.

Love is the wish for beings to have happiness and its causes. Before beginning, consider what happiness is and what the actual causes for happiness are. Happiness does not refer exclusively to the feeling of security brought about by external objects — possessions, reputation, family, and so forth — but rather to a sense of peaceful well-being and contentment in any circumstance. Then generate a sense of love (*mettā*) for yourself, wishing yourself happiness and its causes. For some people this comes easily, but others must first let go of feelings of unworthiness by contemplating that each and every sentient being is worthy of happiness. Wish yourself to have the requisites for life and especially wish yourself to have the happiness that comes through mental transformation and Dharma practice.

On this basis, now extend love to someone you respect. When that is stable, extend it to friends and radiate love to them. Continue by extending love to people toward whom you feel neutral. Even though they may be strangers, they want happiness with the same intensity that you do. When that feeling is stable, think of beings with whom you have a contentious relationship, where there is conflict or distrust. As your love becomes more powerful, radiate it outward to include more and more beings. Finally, spread love to all sentient beings in all directions and realms.

When barriers to extending love to the five groups — yourself, the respected person, friend, neutral person, and hostile person — have been broken down and you are able to radiate love equally to all five, simultaneously the counterpart sign<sup>89</sup> appears and access concentration is attained. Continuing to meditate, attain the full concentration of the first dhyāna by developing and repeatedly practicing that same sign. In the first dhyāna the five hindrances have been suppressed and the five factors — investigation (applied thought), analysis (sustained thought), joy, bliss, and one-pointedness — are present. With the attainment of the first dhyāna, a practitioner also attains the liberation of mind with love (P. *mettā-cetovimutti*).<sup>90</sup> As meditation continues, the second and third dhyānas (in the fourfold schema) will be gained.

Compassion (*karuṇā*) is wishing beings to be free from suffering and its causes. Reflecting on the three kinds of duḥkha — the duḥkha of pain, change, and the pervasive duḥkha of conditioning<sup>91</sup> — wish yourself to be free of them.

Then gradually increase the scope of your compassion to include dear ones, strangers, and people you don't like, and wish them to be free from all *duḥkha* whatsoever.

To develop empathic joy (*muditā*), begin with a dear person, followed by a neutral person, and then a hostile one. Contemplate the goodness they have in their lives and have a sense of abundance. Rejoice in their good fortune and rejoice in the merit that caused it. Wish them not to be parted from this well-being — not by their possessively clinging to it but by joyously appreciating it. Then recollect other beings who are currently experiencing good fortune and feel happy for them; rejoice that they have goodness in their lives and rejoice in their virtuous activities. Let go of any sense of jealousy or competition that wants to deprive them of the causes of well-being. Instead, have the sincere wish that everyone not be separated from abundance, well-being, and excellent opportunities. Here, too, include yourself, rejoicing at your good fortune and virtue.

Equanimity (*upekkhā*) is explained differently in various contexts. In the Pāli tradition, it refers to a sense of acceptance about what is and is not possible. To cultivate it, reflect on the difficult and painful things in your life that haven't yet been resolved. Consider that these circumstances came into being as a result of karma, your own actions. Karma is real and powerful; once karmic seeds have ripened we cannot unripen them. We must accept the situation, stop fighting the reality of what is happening, and cultivate fortitude and equanimity. This will make the mind strong and prevent becoming bitter about life. After cultivating equanimity for yourself, gradually extend it to others. When spreading equanimity to dear ones, strangers, people you don't like, and all beings, recall that beings fare according to their karma. Although you may want to help them, sometimes their situation is such that you are unable to help because of the strength of their karma or because they are not receptive at this moment. Abide in equanimity and don't suffer unnecessarily, thinking that you should be able to fix their problem. Keep your heart open to them, but realize that just as you can't always resolve all of your own dilemmas caused by your karma, neither can you resolve others' difficulties.

Breaking down the barriers between oneself and the neutral person, the dear one, and the hostile one are as above in the meditations on love, compassion, and joy. So too is cultivating and repeatedly practicing the sign. Through this one

enters the fourth dhyāna. A meditator can gain the fourth dhyāna only on the basis of having attained the third by means of meditation on one of the other immeasurables. In other words, only after attaining the first, second, and third dhyānas on love, compassion, and empathic joy can a meditator attain the fourth dhyāna on equanimity.

Serenity can be cultivated with any of the four brahmavihāras, beginning with love. You can abide in them with access concentration or absorption into one of the dhyānas. The “liberation of mind by love” refers to dhyāna absorption on love. The four brahmavihāras, when perfected to the state of dhyāna, are liberations of mind in that they are free from the five hindrances and gross negativities of body, speech, and mind. They are also free from confines because love, compassion, joy, and equanimity are radiated in all directions. The expansive karmic result of these liberations of mind overpowers the negative karmic influence of the limited karma of the desire realm. All four brahmavihāras are liberated from hostility and malice. Specifically, love has the remarkable ability to liberate the mind from malice, compassion liberates from vexation, joy liberates from discontent, and equanimity from attachment. These four liberations of mind weaken the fetters and lead meditators to becoming nonreturners. Once combined with the awakening factors, those concentrations lead to final liberation from saṃsāra.

## REFLECTION

---

1. Reflect on the various types of happiness — physical, mental, spiritual — and their external and internal causes, and generate love, the wish that all beings have these.
  2. Releasing all thoughts of unworthiness, respectfully wish yourself to have happiness and its causes. Imagine your healthy needs being fulfilled.
  3. Spread this love to those you respect.
  4. When this is stable, gradually spread love to friends, strangers, and people you don't get along with.
  5. Then extend love to all beings in all realms of existence. Focusing on that experience of love, develop concentration.
-

By cultivating the five absorption factors (*dhyānāṅga*), a meditator successfully suppresses the five hindrances and attains the first dhyāna. These five absorption factors were discussed in the Sanskrit tradition as well.

1. Investigation directs and applies the mind to the meditation object. Uplifting the mind and placing it on the object, it brings the mind onto the object.

2. Analysis sustains awareness on the meditation object until the mind gradually becomes peaceful. For example, if the meditation object is the breath, analysis sustains attention on the breath, examining and knowing each breath very clearly.

Investigation is compared to ringing a bell, and analysis is like the resonance of the sound. Other analogies are: investigation is like a bird flapping its wings, and analysis resembles it floating; investigation is like holding a dish, and analysis is like drying it.

3. Joy is delight and a sense of satisfaction that arises by being interested in the object. It arises when the mind settles down and becomes peaceful as a result of investigation and analysis. For example, by recollecting the Buddha with deep concentration, we feel deep inspiration and elation. Joy brings lightness of body and mind. Sometimes it may even feel like the body is floating in air. Joy is the result of having developed some degree of concentration.

4. Bliss is the pleasant and happy feeling that accompanies concentration as a result of the peacefulness and stillness of the mind. This bliss is unlike what we usually call bliss in a worldly sense because now the mind is tranquil and satisfied. Joy is likened to the delight a thirsty traveler has upon seeing an oasis, and bliss is likened to the happiness and pleasure he experiences by drinking the water and resting under a tree.

5. One-pointedness unifies the mind and its accompanying mental factors on the object. It is a stillness of the mind that allows the mind to stay in a relaxed manner on the meditation object.

As we approach dhyāna, the five factors sequentially increase in strength. When all five are present and work together to plunge the mind into the meditation object so that the mind becomes completely absorbed in the object, the first dhyāna is attained. Investigation and analysis are the basic application of mind that leads to samādhi. While they investigate and examine the object, respectively, they do not judge or form opinions about it. Instead investigation

and analysis come to know the object well and maintain interest in it. Investigation is initially more prominent because it applies the mind to the object repeatedly. Once the object is fixed in the mind, analysis continues the awareness and examination of the object. For example, investigation applies the mind to the meditation object, which at this stage is the counterpart sign, and analysis sustains that awareness and examines and knows the counterpart sign. These are the two basic and most important functions that develop samādhi.

Joy and bliss arise when investigation and analysis harmonize and work together and become more refined. As concentration increases, joy arises. Having elements of exuberance and elation, joy is relatively coarse compared with bliss, which is the feeling of pleasure that accompanies concentration. Although joy is exhilarating, bliss is more relaxed and satisfying.

These five factors have to be cultivated with patience. We cannot will access concentration or any other meditative state to arise. Making meditation into a struggle is not the way to attain blissful samādhi. Pushing makes the mind tight and agitated, producing the opposite of what we wish. It is more effective to soften the mind and allow concentration to deepen. If we cultivate the factors with consistent but relaxed effort, when they are mature and strong the mind will go into full absorption by itself.

While the five factors may sometimes be present in ordinary consciousnesses, they do not work together. When cultivating samādhi, they work together to reduce and finally suppress the hindrances, although each factor has more sway in counteracting one or another of the hindrances. Investigation opposes lethargy and sleepiness by putting the mind on the meditation object. Analysis counteracts doubt by keeping the mind steady on the object without the jumpiness of doubt. Joy counteracts malice, and bliss is the remedy to restlessness and regret because the mind naturally prefers what is delightful over what is agitating. One-pointedness works against sensual desire by unifying the mind on the object in a worthwhile way.

The five dhyāna factors consolidate the mind on the meditation object. Investigation directs the mind to the object, analysis secures it there, joy generates interest in it, bliss experiences its affective quality, and one-pointedness focuses the mind on it.

A mind with full concentration is like a room with only one chair. When the chair is occupied, if another guest comes in, he leaves immediately because there

is no place for him to sit. Similarly, when samādhi is focused one-pointedly on the meditation object, other thoughts cannot stay in the mind. As wonderful as concentration is, it only suppresses the hindrances; it does not eradicate them. Only the wisdom developed by unifying serenity and insight can do that. The mind endowed with mindfulness, introspective awareness, and samādhi gives rise to true wisdom that knows all conditioned phenomena as impermanent, duḥkha, and selfless and that leads to the path wisdom that knows nirvāṇa.

## *The Four Dhyānas*

Once the five hindrances are suppressed by the five absorption factors, full meditative absorption is attained. There are eight levels of absorption — four of the form realm and four of the formless realm — that a meditator in the human realm can attain. In each successive state of absorption, concentration deepens. However, the formless absorptions are not useful for gaining realizations because the mind is too absorbed.

In the Pāli sūtras, the Buddha describes right concentration in terms of the four dhyānas that are form-realm spheres of consciousness (SN 45.8).

What is right concentration? Herein, secluded from sense pleasures, secluded from nonvirtuous states, a monastic enters and dwells in the first dhyāna, which is accompanied by investigation and analysis with joy and bliss born of seclusion.

With the subsiding of investigation, he enters and dwells in the second dhyāna which has inner confidence and mental unification, is without investigation and analysis, and has joy and bliss born of concentration.

With the fading out of joy, he dwells in equanimity, and with mindfulness and introspective awareness he experiences bliss with the body; he enters and dwells in the third jhāna of which the ariyas declare: “He is equanimous, mindful, one who dwells happily.”

With the abandoning of pleasure and pain and with the previous disappearance of joy and displeasure, he enters and dwells in the fourth dhyāna, which is neither painful nor pleasant and

includes the purification of mindfulness by equanimity. This is called right concentration.

The dhyānas are distinguished by their component factors, as shown in the chart below. While the presentation in the sūtras and the Abhidharma analysis may differ superficially, they come to the same point.

### THE FOUR DHYĀNAS AND THEIR CORRESPONDING DHYĀNIC FACTORS

DHYĀNA	ABHIDHARMA ANALYSIS	SŪTRA EXPOSITION
First	Present: investigation, analysis, joy, bliss, one-pointedness of mind	Absent: sensual pleasures, nonvirtuous states of mind Present: investigation, analysis, joy, bliss born of seclusion (from the five hindrances)
Second	Present: joy, bliss, one-pointedness	Absent: investigation, analysis Present: internal stillness, one-pointedness of mind, joy, bliss born of concentration
Third	Present: bliss, one-pointedness	Absent: joy Present: equanimity, mindfulness, introspective awareness, bliss experienced by body
Fourth	Present: neither-pleasure-nor-pain, one-pointedness	Absent: bliss (of body) and pain, joy and displeasure Present: neither-pain-nor-pleasure, purity of mindfulness, equanimity; mind is purified, bright, unblemished, rid of imperfection, malleable, wieldy, steady, and attained to imperturbability.

#### *First Dhyāna*

The Buddha describes the experience of the first dhyāna (MN 39.15):

Having abandoned these five hindrances, imperfections of the mind that weaken wisdom, quite secluded from sensual pleasures, secluded from nonvirtuous states, he enters upon and abides in the first dhyāna, which is accompanied by investigation and analysis, with joy and bliss born of seclusion. He makes the joy and bliss born of seclusion drench, steep, fill, and pervade his body, so that there is no part of his whole body not pervaded by the joy and bliss born of seclusion.

When the five factors are fully developed and have suppressed the five hindrances, the mind naturally flows into the concentrated state of the first dhyāna. The mind is now totally withdrawn from sense objects, although there is some difference of opinion whether there is recognition of sound while in dhyāna. Some people say there could be slight recognition of sound but it does not disturb the mind. Others say there is no perception of sound at all. The mind being secluded from nonvirtuous states means that it is separated from the five hindrances, and the joy and bliss the meditator experiences is a result of having abandoned the five hindrances.

Concentration in the dhyānas is sharp and focused, but also free from tension and stress. It is arrived at through balanced effort that is firm but not tight. Buddhaghosa gives an analogy of balanced effort (Vism 4.68). In ancient India a surgeon's students would practice using a scalpel on a lotus leaf. Someone who is hurried and tense applies too much force and either cuts the lotus leaf in two or pushes it under the water. Someone who is too lax and timid doesn't dare touch the scalpel to the lotus leaf for fear of dunking it or slicing it. However, someone with balanced effort is relaxed yet knows the right degree of pressure to cut the leaf properly.

Prior to attaining the first dhyāna, a meditator puts effort into increasing joy and bliss. When she enters the first dhyāna, joy and bliss are firm and she no longer makes a conscious effort to increase them. Without thought, the mind remains clearly focused on the meditation object, experiencing this great delight. The Buddha compares the experience of the first dhyāna to bath powder kneaded with water to form a ball, where the water permeates the entire ball but does not ooze out. Likewise, the meditator "makes the joy and pleasure born of seclusion drench, steep, fill, and pervade her entire body, so that there is no part of her body unpervaded by the joy and pleasure born of seclusion."

Some people mistakenly believe that pleasure is antithetical to Dharma practice and must be relinquished. Here we see meditators actively cultivate joy and bliss, so that in the first dhyāna joy and bliss pervade their entire body, which stops the mind's obsession with sensual pleasure. They stop creating destructive karma involving sense objects, enabling them to have a flexible state of mind that can be directed toward realizing reality.

Just as meditators must have stable access concentration before going on to develop the first dhyāna, so too should they master the first dhyāna before going on to the second. There is a delicate balance here: On the one hand, there may be a tendency to become complacent enjoying the first dhyāna and not continue to practice. On the other hand, there may be an overeager tendency to push ahead and attain the second dhyāna quickly. Both of these tendencies are detours to avoid; taking the time to master the first dhyāna prevents them. Mastery of a dhyāna involves perfecting the skill in this dhyāna so that the meditator is able to enter, abide, and emerge from it without difficulty. She can stay in the dhyāna for as long as she wishes, and upon emerging, the mind is clear and she is not confused about where she is or what is happening around her. She is able to review the experience, noting the process by which she entered, abided, and emerged from that dhyāna. She is also able to analyze the dhyāna into its different factors, clearly knowing each absorption factor that is present.

The *Connected Discourses on Dhyāna* (SN 34) discuss the meditative skills to master in one dhyāna before going on to the next:

1. Concentration: knowing what factors — such as investigation, joy, and so forth — that each dhyāna has.
2. Attainment: entering dhyāna easily.
3. Maintenance: steadying the mind in dhyāna.
4. Emergence: being able to emerge from the dhyāna at the time one has determined before entering meditation.
5. Pliancy: relaxing the mind and making it pliant.
6. Object: knowing and being comfortable with the kasiṇa object.
7. Range: knowing the range of concentration to be produced in the mind — as in knowing, “This concentration has a nimitta as the object, this one has the three characteristics as the object.” In serenity concentration the nimitta is the object; in insight concentration mental and material

phenomena characterized by one or another of the three characteristics are the object.

8. Resolution: resolving to elevate the mind to the next, higher dhyāna.
9. Thoroughness: acting with care in order to enter dhyāna.
10. Persistence: maintaining continuity in the practice.
11. Suitability: fulfilling the qualities that are pertinent and beneficial for concentration.

### *Second Dhyāna*

While the meditator develops the eleven skills and becomes familiar with the first dhyāna, he continues to practice samādhi, receiving the four requisites with right livelihood, alternating walking and sitting meditations, and sleeping in moderation in the middle part of the night. At some point he begins to reflect on that experience. While absorbed in the first dhyāna, there is no thought or deliberation, so he leaves the first dhyāna and resumes normal consciousness, although that consciousness still bears the flavor of the first dhyāna's concentration. In that state, he evaluates the first dhyāna. Although the first dhyāna has been the most wonderful experience he has had and is definitely better than the pleasures of the desire realm, it also has some faults. It isn't far removed from the desire-realm mind with its five hindrances and manifest defilements. Furthermore, investigation and analysis are comparatively coarse factors. He recalls that the Buddha spoke of another meditative absorption that is even more excellent, in which investigation and analysis are not present. Having repeatedly reflected on the defects of the first dhyāna and the benefits of the second, he makes a determination to attain the second dhyāna.

After continuing to meditate and strengthen his faculty of concentration, when his faculties are strong enough, he enters access concentration and then goes directly into the second dhyāna without passing through the first dhyāna.<sup>92</sup>

To attain the first dhyāna, investigation and analysis were necessary to direct the mind to the meditation object and hold it there. Now other factors perform those functions, so those two factors are released, and there is an inner stillness and clarity of mind that become more prominent. Joy and bliss are still present, and the one-pointed unification of mind is stronger, so the depth of concentration increases. Whereas previously joy and bliss arose due to being

separated from the five hindrances, now they are present due to the power of samādhi itself.

The Buddha compared the joy and bliss experienced in the second dhyāna to a cool fount of water that wells up from below and permeates the entire lake. Similarly, the meditator “makes the joy and bliss born of concentration drench, steep, fill, and pervade this body, so that there is no part of his whole body not pervaded by the joy and bliss born of concentration.” As before, he familiarizes and trains in the second dhyāna, developing the skills mentioned above.

### *Third Dhyāna*

Although the meditator initially experiences the second dhyāna as much superior to the first, after some time he sees that even the peace of the second dhyāna is not free from faults. As concentration deepens, joy is seen as undesirable because it makes the mind too exhilarated. Aware that there is a deeper level of meditation, the meditator determines to attain it. He renews his practice with the meditation object, this time with the intention to abandon joy, and strengthens his faculty of concentration until it makes joy subside. When it does, the third dhyāna dawns. Bliss and one-pointedness are still present. The mindfulness, introspective awareness, and equanimity that were present before (but submerged due to the strength of the other factors) now become stronger and are prominent. There are various types of equanimity (Vism 4.157–66); in the third dhyāna, the equanimity of dhyāna, which leads to impartiality even toward bliss, is present. The Buddha compares the experience of the third dhyāna to lotuses that grow and thrive while immersed in water without rising out of it, such that the “cool water drenches, steeps, fills, and pervades them . . . so that there is no part of all those lotuses not pervaded by water . . . So too does the pleasure divested of joy drench, steep, fill and pervade this body, so that there is no part of his whole body unpervaded by the pleasure divested of joy.”

In addition, the meditator “feels bliss with his body.” This indicates that in dhyāna he experiences the bliss of his mental body and makes the bliss free from joy drench and pervade his entire mental body. After emerging from dhyāna, he experiences bliss in his physical body. Cultivating skill in the various aspects of the third dhyāna, he trains in it and develops some degree of mastery in it.

### *Fourth Dhyāna*

After mastering the third dhyāna, the meditator sees that it too is faulty in that the feeling of bliss in it is comparatively coarse and can provoke subtle attachment. That is, the bliss of samādhi had counteracted attachment to sensual pleasures, but now it disturbs the tranquility of the mind by making subtle attachment arise. Even though the blissful feeling coexists with equanimity in the third dhyāna, bliss is not the strongest support possible for equanimity; it pulls the mind away from equanimity because there is some attachment to it. A neutral feeling — one that is neither painful nor pleasurable — is the best support for equanimity. Having considered the defects of the third dhyāna and knowing that there is a superior state of concentration, he makes a determination to attain the fourth dhyāna. He practices in order to release the bliss, and when his faculties are strong enough, the bliss fades away and he enters the fourth dhyāna. Pleasure and pain, joy and displeasure all vanish, and the meditator abides in the fourth dhyāna, which is free from painful and pleasurable feelings. Equanimity, which is far more peaceful than bliss, comes to the forefront. The firmness of equanimity fully purifies mindfulness, and his one-pointed unification of mind is strong.

Equanimity is present in all four dhyānas, although in the first two it is in the background, overshadowed by the other absorption factors. In the first dhyāna investigation and analysis bring fluctuation, and in the second dhyāna joy causes ripples in the stillness of the mind. In the third dhyāna, because joy has faded away, mindfulness, introspective awareness, and equanimity are prominent. However, equanimity is not fully evident because bliss provokes a subtle attachment to the blissful feeling. In the fourth dhyāna, this subtle attachment and the blissful feeling are released and equanimity flourishes. Now the meditator “sits pervading this body with a pure bright mind, so that there is no part of his whole body not pervaded by the pure bright mind.” This radiant mind abides in equanimity, undisturbed even by bliss. This is the feeling of equanimity that has neither-pain-nor-pleasure. It is completely free from physical feelings of pain and pleasure and mental feelings of joy and grief.

The dhyānas are higher levels of the mundane mind; they are more focused, flexible, and have greater ability to perceive more clearly than the confused and obscured mental states of the desire realm. The dhyānas are called “blissful abidings here and now” because the pleasant feeling of bliss accompanies the first three. The fourth dhyāna is a pleasant abiding because the peace of equanimity

pervades it. People who have attained any of the dhyānas see sensual pleasure as pointless and boring. They would much rather partake in dhyāna meditation, where they can remain peaceful for days at a time and emerge refreshed and invigorated, unlike people in the human realm who go on vacation and return exhausted.

Some meditation masters encourage their disciples to use insight to analyze the mental state of that meditative absorption after they emerge from it. They examine every factor of that meditative absorption to determine if there is a self lurking in it. Analyzing states of samādhi in this way, practitioners understand that even these wonderful, blissful experiences are composed of various factors and arise due to causes and conditions. These sublime states are impermanent, impersonal, and not to be grasped at as a self. Such analysis prevents meditators from craving and longing for these meditative experiences for their own sake and encourages them to use these meditative attainments as tools to attain liberation. Analyzing these states also prevents practitioners from generating the erroneous view that these states are a self or the experience of God or another absolute deity. Furthermore, such analysis prevents conceit, thinking oneself is a great practitioner for having such meditative experiences. Instead, practitioners see once again that everything lacks self.

### *The Four Formless Absorptions*

Beyond the four dhyānas are deeper states of concentration, the four formless states. Advancing from one dhyāna to the next involves refining the mind by successively abandoning coarse mental factors, whereas progressing through the four formless states entails refining the object of meditation. Taking their names from their meditation objects, the four formless states are the base of (1) infinite space, (2) infinite consciousness, (3) nothingness, and (4) neither-discrimination-nor-nondiscrimination.

Although the dhyānas are called “blissful abidings here and now,” the four formless absorptions are referred to as “peaceful abidings” because the mental peace experienced in them deepens and remains undisturbed. As with the dhyānas, these peaceful abidings of the formless realm are cultivated serially, the lower ones being mastered before the higher ones are cultivated.

To review, many meditators training to gain the four dhyānas begin with a meditation object that is a form — the breath, a kasiṇa, and so forth. Through this, a conceptual appearance or learning sign appears, and that becomes the meditation object. With continued meditation, that mental image becomes more purified and beautiful, transforming into a bright light or a luminous sphere — the counterpart sign — and the mind becomes absorbed in that. This nimitta is the object for all four dhyānas.

If a meditator wants to go beyond the dhyānas into the formless absorptions, he focuses on the luminous sphere or radiant light of the kasiṇa object — blue, for example — which is the counterpart sign of his dhyānic meditation and expands it until it is as vast as space. He now becomes completely absorbed in this vast blueness with the mind of the fourth dhyāna. Blue is the only thing in his field of awareness; it is undivided and seamless, pervading the entire universe as far as the mind can reach. Then, to enter the absorption of infinite space, he considers that although the fourth dhyāna is peaceful, it is nevertheless faulty because its object is a form, and that a meditative absorption without form would be superior and more peaceful. He makes the determination to attain the absorption of infinite space, and resolving, “let this form vanish,” he mentally removes the blue pervading all of space. When the mind is properly prepared, the blue light disappears and all that remains as an object of awareness is the infinite space that was where the bright light had been. His mind now becomes immersed in this infinite expanse of space, with no perception of a nimitta at all. All perception of form or any other sense object has disappeared, and the meditator is only aware of the infinitude of space. Thus he enters and dwells in the absorption of infinite space, the first formless absorption.

The process of advancing from one meditative absorption to the next is similar to advancing from one dhyāna to the next. After mastering the present absorption, a meditator considers its defects and the benefits of the higher absorption. However elevated the present absorption is, it is still coarse and unpeaceful compared with the description of the next one. Seeking to be free from the defects of the previous state and to experience the deeper peace and mental refinement of the next, he generates the determination to attain the next absorption.

When the meditator has mastered the absorption of infinite space, he reflects that it is consciousness that is aware of infinite space. It is as if consciousness

pervades that infinite space. He shifts his attention from infinite space to the infinity of the consciousness that is conscious of and pervades that space, and he makes a determination to attain the absorption of infinite consciousness. By means of making this determination and repeated practice, the perception of space falls away and only consciousness remains, extending infinitely. This is the second formless state.

After mastering the absorption of infinite consciousness, he reflects that there is no obstruction and impediment in it. He now focuses on the unimpeded nature of infinite consciousness until the awareness of consciousness falls away and there remains just the awareness of nothingness — its unimpeded and unobstructed nature. The object his mind focuses on is the nonoccurrence or nonexistence of the consciousness of the base of infinite space. That is, he is now aware that the consciousness of infinite space is no longer occurring. By focusing the mind on this, he enters the absorption of nothingness.

After becoming familiar with this deep concentration, he turns his attention to the consciousness that is aware of nothingness. Perceiving this very subtle consciousness to be even more peaceful, he enters and abides in the base of neither-discrimination-nor-nondiscrimination. This absorption is so refined that when in it, one cannot say discrimination is present, nor can one say there is no discrimination at all. Discrimination is still present but it is so subtle that it does not perform the normal function of discrimination. It is so subtle that if one tries to detect it, one cannot; but if one does not try to perceive it, one will be vaguely aware that there is subtle discrimination functioning. Thus the fourth formless absorption is called “neither-discrimination-nor-nondiscrimination,” and neither-discrimination-nor-nondiscrimination is the object of that absorption. That state is also called the “peak of saṃsāra” because it is the most refined state of mind possible for beings caught in the cycle of rebirth.

Beings born in the formless realms due to having attained these meditative absorptions while they were human beings stay in these states of samādhi for eons. When the karma for that rebirth is exhausted, other karma ripens and they again fall to other realms in saṃsāra. The formless absorptions are so refined that it is difficult, though not impossible, for a human meditator to use them to cultivate the wisdom and insight leading to liberation. When the Buddha was still a bodhisattva, he trained with two meditation teachers after he left the palace. Under the first, he mastered the absorption of nothingness and under the

second the absorption of neither-discrimination-nor-nondiscrimination. Realizing that despite having attained such refined samādhi his mind was not completely free from defilements, he left those teachers. Years later under the bodhi tree he perfected the wisdom and insight that culminated in full awakening.

## *Four Kinds of Development of Samādhi*

The Buddha speaks of four types of concentration, according to the results they produce. Of course the results depend on the method used as well as on a practitioner's motivation — the result they seek. The Buddha says (AN 4.41):

There are, monastics, these four kinds of development of concentration. What four? (1) There is a development of concentration that leads to a pleasant abiding in this very life; (2) there is a development of concentration that leads to obtaining knowledge and vision; (3) there is a development of concentration that leads to mindfulness and introspective awareness; (4) there is a development of concentration that leads to the destruction of the pollutants.

The first development of concentration leads to happiness in this very life, what the Buddha calls “a pleasant dwelling in this very life.” Here meditators train in the prescribed method, attain serenity, and then meditate progressively to attain the first, second, third, and fourth dhyānas. They abide blissfully in these states of concentration and create invariable karma that leads to rebirth in the corresponding form realm.

The second is the development of concentration that leads to attaining knowledge and vision, which refers to the superknowledge of the divine eye. Gaining this depends on mastery of the fourth dhyāna. The divine eye is useful for practitioners with compassion who seek to benefit others.

The third is the development of concentration that leads to mindfulness and introspective awareness. In this meditation, three of the five aggregates — feelings, discriminations, and miscellaneous factors (views and emotions) — are

known as they arise, abide, and pass away. Through this concentration one develops a very focused mind that observes and understands the arising, abiding, and ceasing of these three mental events in one's own mind.

With the development of concentration that leads to the destruction of pollutants, a practitioner is aware of the momentary rising and passing away of each of the five aggregates as it occurs. Much more refined than the previous concentrations, this concentration is combined with insight. Some wisdom is present in the concentration leading to mindfulness and introspective awareness, but it cannot see the momentary arising and passing away. It sees things as abiding for a while before ceasing. This fourth development of concentration knows subtle impermanence deeply. By seeing the momentary nature of all things — in particular the five psychophysical aggregates we cling to as self — a meditator gains profound realizations. She knows that everything that is impermanent is unsatisfactory in nature. Things that cease as soon as they arise are unstable and cannot provide lasting happiness. She also knows that whatever is impermanent is not a self; transient aggregates cannot endure long enough to be a real self.

Realization of the three characteristics — impermanence, *duḥkha*, and no-self — is considered mundane insight. It precedes the breakthrough to the wisdom knowing *nirvāṇa* that marks the attainment of the path of stream-entry. Through meditation with the wisdom knowing *nirvāṇa*, one will destroy the pollutants in stages and attain *nirvāṇa* as an arhat.

## *Samādhi and Insight*

The ultimate purpose of *samādhi* is, in combination with insight wisdom, to eradicate defilements completely by propelling meditators gradually through the four stages of awakening — stream-enterer, once-returner, nonreturner, and arhat.

While on the path, meditation on the *dhyānas* refreshes the mind and can protect the meditator in dangerous situations. There are accounts of many forest meditators entering *samādhi* when a tiger is nearby. Later, upon arising from meditation unharmed, they saw tiger paw prints around the area.

We may be skeptical, thinking that since the *dhyānas* are so blissful, it is somehow wrong for practitioners to indulge in them. The Buddha had a similar doubt at the beginning. As one practicing extreme asceticism, he thought

pleasant experiences were dangerous because they would entice the practitioner into desire. After doing ascetic practices for six years, he remembered going into states of samādhi as a child and wondered if it was the path to awakening. As he reflected on this, he understood that there was no reason to be afraid of the pleasure of meditative absorption, because it did not involve nonvirtuous states of mind as sensual pleasures did. He began to meditate with dhyānas and recommended this type of meditation to his disciples as a way to overcome hindrances by drawing the mind away from sensual pleasure to a higher pleasure and then to awakening.

In recommending the dhyānas, the Buddha urged his disciples to use higher types of happiness to abandon attachment to lower types of happiness. The peace of the dhyānas so outshines the happiness derived from sensual pleasures that it automatically helps practitioners to see the futility and unsatisfactoriness of sensual happiness.

Of course if we were to indulge in the peace of the dhyānas, there is the danger of becoming attached to them. This attachment could dissuade us from making effort to eradicate defilements completely. For this reason, the Buddha taught how to abandon attachment to the dhyānas. Having meditated in a dhyāna, the practitioner arises and reflects on that mental state itself: the dhyāna is impermanent, is duḥkha in nature, and lacks a self; it is a saṃsāric state, and as such, not worth being attached to. He then meditates with insight to free himself from saṃsāra.

As shown by the Buddha's awakening, attaining the fourth dhyāna is necessary to become a buddha. It is the door to the three higher knowledges — knowledge of past lives, of the passing away and reappearance of beings, and of the destruction of pollutants — that preceded the Buddha's awakening. The Buddha described how he employed that concentrated mind to attain awakening (MN 36.38):

When my concentrated mind was thus purified, bright, unblemished, rid of imperfection, malleable, wieldy, steady, and attained to imperturbability, I directed it to knowledge of the recollection of past lives . . . to knowledge of the passing away and reappearance of beings . . . to knowledge of the destruction of the pollutants. I directly knew as it actually is [the four truths] . . .

When I knew and saw thus, my mind was liberated from the pollutant of sensual desire, from the pollutant of existence, and from the pollutant of ignorance. When it was liberated there came the knowledge, “It is liberated.” I directly knew, “Birth is destroyed, the holy life has been lived, what had to be done has been done, there is no more coming to any state of being.”

Although it may be possible to go from access concentration to insight meditation, it is wiser to develop at least the first dhyāna. This is because in access concentration, the five hindrances are not well suppressed and may rebound, disturbing insight meditation. Doing insight meditation on the basis of the first dhyāna prevents this.

For other people cultivating insight first is more suitable. Practicing insight meditation weakens the five hindrances. After the hindrances have been worn down by insight, these practitioners cultivate serenity and attain the dhyānas.

For people who seek liberation from saṃsāra, the higher training in wisdom is essential, and this requires insight. Insight requires some degree of samādhi. While some stream-enterers and once-returners may not have attained a dhyāna, or if they have, have not mastered it, they do have the wisdom of insight into the three characteristics, which has some degree of concentration.

In general, the four establishments of mindfulness are used to develop insight. However, certain practices within the four establishments can be used as absorption practices — for example, the mindfulness of breathing and the mindfulness of the foul aspects of the body. Buddhaghosa said that the contemplation of feelings, mind, and phenomena do not lead to attainment of even the first dhyāna.<sup>93</sup>

The sūtras are not completely clear about the degree of samādhi needed to become an arhat, and it seems that there are a variety of ways to go about attaining liberation. Wisdom and insight are essential elements in all of them, but the degree of samādhi is variable.

While the dhyānas focus the mind on one object only, the Pāli commentarial literature speaks of another kind of concentration — momentary concentration (*khaṇika-samādhi*), which does not restrict the range of awareness to one object. To develop it, meditators do not exclude the multiplicity and diversity of phenomena from their field of attention. Instead, they direct mindfulness toward

the changing states of mind and body, noting any phenomenon that appears. In other words, in meditation they maintain continuous awareness of whatever enters into their field of perception and release any clinging to it, simply noting the variety of sensory objects, feelings, mental states, and so forth that arise and cease in their field of awareness.

By doing this, concentration becomes continuously stronger until it becomes established one-pointedly on the constantly changing stream of events. Despite the change in the object — one moment it is a memory, the next a physical sensation, then a mental feeling, and so forth — the single-pointed unification of the mind remains. Whereas previously when cultivating concentration any change of object would disturb the concentration, now it does not. In fact, after a while the mind that is aware of the constantly changing phenomena in the field of awareness becomes strong enough to suppress the five hindrances, in the same way as access concentration does. These meditators progress on the path of insight, which in time will lead to the breakthrough to the wisdom knowing *nirvāṇa*. Practicing the four establishments of mindfulness is one way to develop this flexible yet steady concentration. According to some commentaries, these meditators can gain an arhatship by cultivating insight knowledge with access concentration, without attaining any of the *dhyānas*.<sup>94</sup>

Dry-insight meditators develop insight focused on the ever-changing stream of experience — the arising and ceasing of the five aggregates. Because their meditation is not focused on a single object, their minds do not enter *dhyāna*. However, when their mind shifts from the rising and ceasing of the aggregates and takes *nirvāṇa* as its object — as it does during the path and fruit of stream-enterer and so on — their concentration rises to the level of the first *dhyāna* for that experience. Thus their paths and fruits are the supramundane first *dhyāna*,<sup>95</sup> because all paths and fruits must occur at the level of *dhyāna*.

In *dhyāna* the mind is focused single-pointedly and unwaveringly on an unchanging object — such as the mental image of the foulness of the body<sup>96</sup> — whereas the mind used to cultivate insight requires certain mental functions that are not operative within *dhyāna*, such as the ability to observe, analyze, and be mindful of a changing object of perception. Thus to do insight meditation, meditators emerge from a *dhyāna*. While their minds are still infused with the power of *dhyāna*, they do analysis. Although this concentrated state is not as deep

as a dhyāna, it is sufficiently focused to analyze the object and generate insight without being distracted to other objects.

The dhyāna that accompanies the supramundane paths and fruits is a supramundane dhyāna, which is not the same as a mundane dhyāna. According to the *Path of Purification* and the Abhidhamma system, meditators in general practice insight in a state of concentration that is not a dhyāna. This is called insight concentration (P. *vipassanā-samādhi*). When meditators make the breakthrough to the supramundane path, the mind naturally jumps into a dhyānic state. If they have practiced dhyāna first, the path and fruit will occur at the level of the dhyāna that they used as the “basis dhyāna” for practicing insight (another opinion is that it occurs at the level of the dhyāna that was investigated with insight-knowledge; a third opinion is that it can occur at either level, depending on the wish of the meditator).<sup>97</sup>

Samādhi does not achieve its ultimate purpose without insight, and insight is gained through practicing the four establishments of mindfulness. So it is to the practice of the four establishments of mindfulness that we turn in chapters 12 and 13.

## 10 | The Practice of Serenity in Chinese Buddhism

THE QUIESCENCE of serenity and the analytical wisdom of insight are like the two wings of a bird or two wheels of a cart: they must be balanced for the aspired result to come about. This is true also for Chan meditation, which leads to both serenity and insight.<sup>98</sup> Serenity suppresses the afflictions, nurtures the mind, and can be used to create merit. Insight brings wisdom and cultivates Dharma understanding. As the Buddha says in the *Dharmapada* in the Chinese canon (Taishō 04.210.572a):

In the absence of concentration, one does not exercise wisdom. In the absence of wisdom, one does not course in concentration. The path comes forth from concentration and wisdom.

Learning how to practice serenity and insight is essential before engaging in the actual practice, but merely knowing the words — even being able to teach this method to others — is not sufficient. Not practicing it ourselves is like a beggar who calculates others' wealth.

### *Meditation*

Nāgārjuna's *Treatise on the Middle Way* does not give instructions on how to cultivate serenity, but assumes that practitioners have already attained it and are prepared to meditate on the correct view once they have discerned it. Much of this preparation depends on being well grounded in the method aspect of the path, including serenity, described in the Yogācāra scriptures by Asaṅga and others. On the other hand, just cultivating serenity without the wisdom realizing emptiness is common to non-Buddhists and does not bring liberation. Only when we gain the union of serenity and insight can we generate the unpolluted

wisdom that realizes the eight negations in Nāgārjuna's homage in the *Treatise on the Middle Way* and knows emptiness directly.

Before entering samādhi, it is essential to think of the duḥkha of all sentient beings to avoid becoming attached to the bliss of samādhi. In this way, we conjoin the mind of great compassion and bodhicitta with all our meditation practices and reflect on the emptiness of all the practices we do. This is practiced repeatedly over time in order to gain familiarity with it.

For many centuries we Tibetan practitioners have had the misconception that meditators following Chinese Buddhism engage in blank-minded meditation. During the time of Śāntarakṣita, Chinese monks resided at Samye Monastery in Central Tibet, where they translated texts from Chinese into Tibetan. If they had had this wrong view, Śāntarakṣita would have refuted it himself and would not have asked Kamalaśīla to come in later years to do so. This shows that Hwashang Mahāyāna's (C. Hoshang Mohoyen) corrupted view of Chan was not shared by all Chinese practitioners.

The great debate at Samye (c. 792–94) between Hwashang Mahāyāna (meaning “Mahāyāna abbot”) and Kamalaśīla was a decisive point in Tibetan Buddhist history. As recounted by Tibetan historians, Hwashang Mahāyāna asserted that all thoughts are useless and to be abandoned on the path. Just as clouds, be they black or white, obscure the sky, so too thoughts, be they constructive or destructive, obscure the true nature. Thus the method side of the path was unnecessary because it involved thought. One simply has to empty the mind of all thought whatsoever and nirvāṇa will be attained. The Indian sage Kamalaśīla refuted blank-minded meditation by asserting that practices on the method side of the path are imperative for the collection of merit and that emptiness must first be approached by means of constructive thought before it can be nondualistically perceived. As a result of the debate Tibetans turned toward India, rather than China, as the principal source for Buddhist scriptures and ideas.

Interestingly, a similar debate was going on at approximately the same time in China as well, where the Huayan and Chan patriarch Guifeng Zongmi (780–841) criticized the views and practices of certain Chan practitioners.

While meditation instructions in Chinese Buddhism are vast, most of the important points have been covered in the forgoing chapters about concentration and will not be repeated here. These include guidelines about choosing a

meditation place, preparing for the session, meditation objects, methods to counteract the five hindrances and other faults, progressing through the nine stages of sustained attention, maintaining mindfulness and introspective awareness during break times, and so forth. Meditation masters also warn against “dead-tree” samādhi, where meditators become attached to the peace of samādhi and fail to generate wisdom.

## *Creating Balance at the Beginning and End of a Meditation Session*

The writings of the Chinese master Zhiyi (538–97), who emphasized practicing serenity and insight together in a balanced fashion, are particularly important because they appeared early in the history of Chinese Buddhism when proper meditation instruction was not readily available to the general Buddhist practitioner who was not a scholar. His comprehensive and clear instructions were a great boon to practitioners of his time and for those up to the present day. A good deal of this chapter is based on his book, *The Essentials of Buddhist Meditation*.

Someone wishing to engage in meditation to attain serenity must first generate the great vows to liberate all sentient beings from saṃsāra and to follow the Buddha’s way to do this. Such a motivation makes the mind strong, courageous, and resilient. Serenity is also cultivated within the recollection that all phenomena exist in dependence on the mind. As the *Sūtra on the Ten Grounds* says (EBM 77):

Throughout the three realms, there is nothing else at all. It is all created solely from the mind.

By understanding that the mind is empty of inherently existing nature, we will understand that all phenomena are not objectively real. By ceasing ignorance, afflictions cease, karmic formations cease, and saṃsāric duḥkha ends.

The body, breath, and mind are interrelated and therefore are discussed together. The body is the coarsest, the breath a little less coarse, and the mind the least coarse. Adjusting and balancing the body makes the breath subtler, which in

turn makes the mind subtle. Such a subtle, fine mind is conducive for cultivating serenity. The influence goes the other way as well: when the mind is subtle, the breathing pattern changes and becomes more refined, and in turn the body is more relaxed.

Having mindfulness and introspective awareness of our body, breath, and mind during the break times is crucial. If our physical actions are rough, impulsive, and reckless, our breath will be coarse, and because of this our thoughts will be scattered and unclear. When we later sit down to meditate, our body will be agitated and uncomfortable, making the mind correspondingly restless and unsettled. During the break time, we should therefore reflect on what is important to do and how to do it, and then go about it in a relaxed yet focused manner.

Begin a meditation session by settling the body into a comfortable and stable posture. If possible, sit in the vajra position with the left foot on the right thigh and the right foot on the left thigh. Loosen your belt and put your left hand on top of the right,<sup>99</sup> in your lap, against your body.

Now balance the breath by expelling the stale breath: gently exhale it through the mouth while imagining that any blockages in the flow of the body's internal energy are released. Then close the mouth and gently inhale fresh air through the nose. Do this a few times. Then sit with the mouth closed and breathe through the nose. Sitting very still while meditating is important.

Begin meditation by adjusting the breath and helping it to become subtle if it is windy, uneven, or ordinary. Windy breathing is when inhaling and exhaling produce a sound; this makes the mind scattered and unfocused. Uneven breathing may occur even when breathing is noiseless; here the breath catches and does not flow smoothly. As a result, the mind becomes stuck and blocked. Ordinary breathing occurs when the breath is still coarse, even though there is no sound and it does not catch. Breathing this way makes the mind tired.

To subdue these three imbalanced ways of breathing, adjust the breath by focusing the mind at the navel; this has a stabilizing effect. Check that the body is relaxed and tension free. Also imagine the breath penetrating all the pores freely and without obstruction. In this way, the breath becomes subtler and more refined. The breathing process is slower, smoother, and more relaxed. Breathing in this way automatically makes the mind more stable, peaceful, and content. When the breath and mind are more subtle and refined, it is easier to enter meditative

absorption. In addition, disorders such as stress and imbalances of the winds and qi do not occur.

Having balanced the breath when entering meditation, now balance the mind by first reining in distracted thoughts. Then look out for and make adjustments should lethargy, restlessness, agitation, or laxity occur. Lethargy occurs when the mind is muddled and unclear. At this time, firmly place the attention at the tip of the nose. Focusing on this one object without letting the mind sink into dullness is a remedy for lethargy. Restlessness occurs when the body and mind are fidgety, ill at ease, and unsettled. Anchoring the attention at the navel helps to stabilize restive energy and stop distractions. Agitation may arise when mindfulness is strong and the mind is more concentrated, yet the mind's focus has moved upward so that the chest area becomes painful. Should this happen, relax the mind and let the focus go downward toward the navel. This helps the qi to flow down and become more balanced, which eliminates the chest pain. Laxity manifests when we don't maintain suitable posture in meditation and a lack of mental lucidity and determination has set in. To remedy this, reestablish the recommended meditation posture and anchor the mind with strong mindfulness on the meditation object.

Having entered meditation as described above, maintain strong mindfulness and ensure the body, breath, and mind remain balanced by being aware of what is happening with each of them. Regarding the body, occasionally check to make sure that it remains in the proper position and is not slumped over or leaning to one side, and that our hands, mouth, and so forth are in the proper position. If anything is askew, correct your posture by straightening it. Similarly, check that the breath is gentle and smooth. If it has become windy, uneven, or ordinary, or if it is forced and not relaxed, apply the appropriate antidotes so that it becomes refined and gentle. If the mind has been infected by lethargy, restlessness, agitation, or laxity, apply the antidotes so that it becomes balanced. Keeping the body, breath, and mind in balance prevents disorders and obstacles from previous lives from arising and aids in concentration.

How you emerge from meditation is important. Since the body, breath, and mind have become subtler in meditation, they need to become coarser and more active before you engage in other activities. Immediately arising from the meditation seat and rushing around without allowing the body, breath, and mind to gradually adjust to the change in activity may bring on headaches or stiffness

later. In addition, in future meditation sessions you may feel uncomfortable and fidgety. When coming out of meditation, first allow the mind to focus on an object different from the meditation object. Then open your mouth and gently exhale, imagining the wind dispersing from the energy channels in the body. Then uncross and move the feet a little. Follow this by rubbing your hands together to warm them and then rubbing the body briefly. Now put your hands over your eyes and open your eyes. Once any excessive physical heat has gone, get up and move about.

Cultivating skill in how we enter, abide, and arise from meditation plants the seeds to be like the great bodhisattvas described in the *Lotus Sūtra* (EBM 97):

For the sake of the Buddha Path, the bodhisattvas in this great assembly have already diligently practiced effort for an incalculable number of tens of millions of crore<sup>100</sup> of eons. They have become skillful in entering, abiding in, and emerging from an incalculable number of trillions of crores of samādhis. They have gained great superknowledges, have long cultivated the pure, holy conduct, and have become well able to practice all of the good dharmas in appropriate sequence.

## REFLECTION

---

1. Settle the body into a comfortable and stable posture.
  2. Balance the breath by expelling the stale breath.
  3. Adjust the breath if it is windy, uneven, or ordinary by focusing at the navel.
  4. Place mindfulness on your meditation object if it is other than the breath.
  5. Balance the mind by reining in distracted thoughts and then looking out for lethargy, restlessness, agitation, and laxity, and apply the appropriate antidotes should they occur.
  6. At the conclusion of the session, dedicate the merit and arise from meditation gently.
- 

*Cultivating Serenity and Insight in Sitting Meditation*

In the actual practice, serenity and insight are used as antidotes to the roughness and disorder of a beginner's mind, as a way to counter the faults of lethargy and agitation, as a means to deal with subtle states of mind in meditative absorption, and as the method to perfectly balance meditative absorption and wisdom.

Even if meditators avoid the trap of dead-tree samādhi — becoming attached to the bliss of samādhi and failing to generate wisdom — they may still not have the correct balance of concentration and wisdom. If they lack the wisdom based on insight, their meditative absorption will be characterized by ignorance. Even if their concentration is strong, they will be unable to cut the fetters that bind them to saṃsāra. The remedy is to emphasize the cultivation of wisdom and then combine it with serenity.

Other people have sharp wisdom of the ultimate nature, but their concentration is weak and their meditation is hampered by distraction or laxity. Like a candle flame in the wind, their concentration cannot illuminate objects clearly and they are unable to cease the cycle of birth and death. These people must emphasize serenity and then unify it with insight so that their concentration becomes like a candle burning in a closed area that clearly illuminates all that is there.

Many people combine the Amitābha practice with Chan meditation. They concentrate their minds on the recitation of the Amitābha Buddha's name. When their concentration is firm, they “turn back the light” and observe the mind that is meditating, asking, “Who is reciting the Buddha's name?” This *hua-tou* — a short phrase or question used as a subject of meditation to focus the mind — becomes all-consuming in the sense that the mind is completely drawn into this investigation. As the intellect is confounded by this question, great doubt arises until suddenly there is a breakthrough and emptiness is realized. When done on the basis of firm serenity, the meditation on this *hua-tou* is insight meditation. It must then be conjoined with serenity. It is like picking up a pearl at the bottom of a pond: finding it when there are waves or ripples is difficult. The water must be still and clear, and then the mind-pearl appears by itself.

## *Cultivating Serenity and Insight while Interacting with the Environment*

Zhiyi eloquently explains how to practice serenity and insight while engaged in various activities. Regarding walking, he says (EBM 117–19):

At times when you are involved in walking, bring forth this thought, “For what purpose do I now wish to walk?” If it is on account of being directed by afflictions or by nonvirtuous or neutral matters, you should not proceed with walking. If it is not an instance of being directed by afflictions and if it is for the sake of a matter that produces virtuous benefits and that is in accord with the Dharma, you should go ahead and proceed with walking.

How do you go about cultivating serenity while walking? If you are walking, maintain awareness that, due to walking, there may come to exist all of the phenomena of the afflictions, of good, of bad, and so forth. If you are completely aware that the mind engaged in walking as well as all phenomena present in walking cannot be found, the false-thinking mind will cease. It is this that constitutes the cultivation of serenity [while walking].

How do you go about cultivating [insight] contemplation while walking? Bring forth this thought, “It is due to the mind that I move the body. As a result I bring about that forward movement referred to as walking. It is due to walking that there may then come to exist all of the phenomena of the afflictions, of good, of bad, and so forth.”

Then immediately turn back the attention and contemplate the mind that is engaged in walking. You will fail to perceive any characteristic appearance associated with it. Realize that the one who walks as well as all the phenomena involved in walking are both ultimately empty and still. It is this which constitutes the cultivation of [insight] contemplation [while walking].

The instructions for practice are clear: first examine your motivation for walking, and if it is conjoined with afflictions or even a neutral intention, do not proceed but stop and assess once again what is best to do at that moment.

To cultivate serenity while walking, maintain your introspective awareness so that afflictions do not arise. Furthermore, reflect on the mind engaged in walking as well as everything else involved in walking — our legs, feet, and shoes; the

road, its bumps and turns; our destination, others on the road, and so forth — and see that none of them can be found in their parts. Seeing this, the mind that mistakenly grasps them as real will cease.

To practice insight while walking, analyze what the word “walking” refers to. See that there is no independent action of walking; there is no independent I or mind that instructs the body to move. Walking exists by being merely designated in dependence on the legs moving the body forward. What is the mind that has the intention to walk? Does it have color, shape, or location? Does it exist in the past, present, or future? Is it unitary or does it have different aspects? Is it caused or uncaused? By employing ultimate analysis, understand that all phenomena involved in walking are empty of existing from their own side. Because their ultimate nature is beyond the afflictive conditioning of the world, they are said to be still.

Zhiyi continues by describing serenity and insight in relation to standing, sitting, lying down, doing various physical activities, and speaking in a similar way. He discusses how to practice serenity and insight when the six sense faculties are cognizing the six sense objects. As for the ear and sounds, he says (EBM 129–31):

[Regarding] the cultivation of serenity when the ear hears sounds: Whichever sounds are heard by the ear, immediately realize that they are characterized by being like echoes. If you hear sounds with which you are temperamentally agreeable, do not give rise to attachment. As for sounds to which you are temperamentally opposed, do not give rise to hate. As for sounds to which you are neither opposed nor agreeable, do not give rise to a discriminating mind. It is this which constitutes the cultivation of serenity [while hearing].

What is meant by the cultivation of [insight] contemplation in the hearing of sounds? Bring forth this thought, “No matter what sound is heard, it is empty and utterly devoid of any [inherent] existence. It is only from the coming together of the sense faculty and the sense object that there is the generation of the auditory consciousness. Next, the mental consciousness arises and, in a forced manner, gives rise to discriminations. It is because of this that there

may then come to exist all of the phenomena of the afflictions, of good, of bad, and so forth.”

[Then] turn back the attention and contemplate the mind that hears sounds. You will not perceive any characteristic appearance. Realize that the one who hears as well as all of the other associated phenomena are ultimately empty and still. It is this which constitutes [insight] contemplation [in relation to the ear and sounds].

To practice serenity while hearing various sounds throughout the day, understand that all the sounds are false, like echoes. Just as an echo falsely appears to be the voice of a person, but is not, so too do all sounds falsely appear to have an independent essence, although they do not. Because these sounds do not exist in the way they appear, do not let attachment arise for ones that appear pleasant or anger arise for ones that appear unpleasant. There is no use in forming opinions and ideas about neutral sounds, as they, too, are false.

To cultivate insight regarding hearing, regard all sounds as empty of inherent existence. Why? Because all sounds, as well as the act of hearing and the one who hears, arise dependently, not by their own power. The auditory consciousness depends on the ear faculty encountering the sound, and sound itself is nothing more than vibratory waves in the air. The mental consciousness that reacts to the sounds arises dependent on the auditory consciousness, and then the afflictions of attachment, anger, and confusion arise in reaction to the pleasant, unpleasant, or neutral feelings experienced while hearing.

Then examine the mind that hears. What is it? Does it exist independent of the ear faculty and sound waves in the air? It, too, does not exist from its own side, nor does the person who is hearing, nor all the other phenomena associated with hearing a sound.

The analogies and descriptions Zhiyi uses for each sense object differ but come to the same point. Visual forms are like the moon reflected in water. Odors are false, deceptive, and unreal. Flavors are like tastes in a dream, and tactile sensations resemble reflections, illusions, and conjurations. He also encourages us to analyze the mind cognizing mental phenomena in sitting meditation.

A person who is able to cultivate serenity and insight of all these objects and in all situations is a true bodhisattva. Nāgārjuna says (NSP 301–3):

When sitting undisturbed within the forest,  
in a state of stillness, one extinguishes the manifold ills.  
Calmly and contentedly, one gains unity of mind.  
This bliss is unequaled even by the bliss of the celestial realm.

People seek after worldly profit,  
fame, clothing, and fine furnishings.  
This sort of pleasure affords no peace or security.  
One thus pursues his own benefit, but finds no satisfaction.

The one with patched robes practices reliance on alms,  
and, whether moving or still, his mind is always unified.  
Spontaneously employing the eye of wisdom,  
he contemplates and knows the reality of all phenomena.

Among all the different entryways into the Dharma,  
all are entered through equanimous contemplation.  
When the understanding and wise mind abides in stillness,  
nothing anywhere in the three realms is able to equal this.

## REFLECTION

---

1. List the sequence of points to practice serenity when walking. Then walk slowly while practicing these.
  2. After ten minutes, pause and notice the effect this has had on your mind.
  3. List the sequence of points to practice insight when hearing. Sitting in meditation, observe the sounds you hear and practice these points.
  4. Remember these points and practice them when you hear pleasant or unpleasant sounds in your daily life.
- 

*Deviant Meditation and Correct Meditation*

Sometimes when practicing meditative absorption strange sensations or perceptions may occur. For example, the body moves about restlessly; it feels heavy as if there were a weight on it or it feels very light as if it were going to fly. The body may feel extremely hot or cold, tied up, or twisted, as if it were hanging or suspended from something. The body may experience tactile sensations that spark nonvirtue in the mind. Sometimes meditators experience strange mental states. The mind becomes heavy, clouded, and filled with unethical ideas; it may be distracted, confused, distraught, or filled with inappropriate happiness or sorrow. The mind may be moody: overwhelmed with sad thoughts or so happy that one appears drunk. These are all signs of deviant meditative absorptions.<sup>101</sup>

If someone becomes attached to these sensations and appearances, grasping them to be true and real, he may become mentally ill and may open himself up to harm from spirits. Sometimes spirit interferences make the meditator seem especially intelligent, powerful, or charismatic, and as a result he becomes arrogant and clings to wrong views. Worldly people may think he is highly realized and blindly follow his guidance, so that he misleads other people on the path or draws them into harmful activities. Due to the heavy karma this person creates, when he dies, he will fall to an unfortunate rebirth.

If a practitioner of concentration has such symptoms or appearances, he should immediately recognize that they are false and deceptive and not believe them. Turning his mind to virtuous objects, he should not become enchanted by or attached to such inverted signs and focus instead on the Buddha's teachings. He should consult his spiritual mentor, follow proper meditation instructions, and renew his refuge in the Three Jewels.

In contrast, meditators who attain the various dhyānas and are free from these abnormal signs are progressing well. They have a sensation of emptiness or lack of obstructions, brightness, and purity. Their minds are calm and tranquil and their thoughts accord with the Dharma. Their confidence in the Three Jewels deepens and their bodies and minds are responsive so that they can engage in virtue with ease. They are not interested in worldly concerns and do not feel obliged to get involved in them. Satisfied, content, and tranquil, they can enter into and emerge from dhyāna according to their wish.

Those who are progressing well should continue in their practice, applying serenity and insight at the appropriate times in their meditation. If they have deep meditative experiences, they should consult a realized master and explain

their insight or experience. The master will either agree it was an authentic realization or give wise guidance to steer the meditators in the right direction. In this way, they will continue to advance in accord with the Buddha's teachings, which will bring good results to themselves and others.

## *Counteracting the Work of Māra*

Buddhist scriptures speak of the four *māras*, or corrupting forces: (1) the afflictions, (2) five aggregates, twelve sense sources, eighteen constituents, (3) death, and (4) ghost and spirit demons. The first three are remedied by practicing the path and attaining liberation. The last *māra* generally refers to other beings who create interferences. In the *sūtras* Māra is depicted as a being who tries to create problems for sincere cultivators so that they deviate from the Dharma path. While some people regard Māra and his forces as a metaphor, others see them as actual external beings.

Mental states of desire, worry, craving, sleepiness, laziness, fear, doubt, remorse, arrogance, resentment, and so on are the work of Māra's armies. Some demons may enter the person's mind, causing violent mood swings and erratic behavior that could expose him to calamity. Demons may also inspire the kind of deviant concentration discussed above, where practitioners have all sorts of strange physical and mental experiences and may even appear to have spiritual powers and great charisma, such that they lead some people astray.

One method to dispel these demons involves the practice of serenity. Here a practitioner is to recognize these objects and people as false and not let them disturb the mind. She should neither fearfully push them away or desirously grasp at them, but rather return to her meditation and strengthen her concentration. When her concentration is strong, these interferences automatically disappear.

This method is reminiscent of the great Tibetan meditator Milarepa (1052–1135), who, when disturbed by spirits, asked them where they came from and why they wanted to bother him. The spirits replied, "Why did your mind, filled with preconceptions and superstitions, call us here?" In other words, the source of our suffering and fear is our own unsubdued, afflictive mind.

A second method employs insight. Here the meditator turns the light back on his own mind, asking, "What is the mind that is observing these things?"

Since a self-enclosed, independent mind cannot be found, what can be disturbed by these interferences? The wisdom realizing emptiness is the ultimate protection. To paraphrase Nāgārjuna's statement in the *Commentary on Wisdom*, "Aside from the true character of phenomena (*dharmatā*), everything else is demonic phenomena." That is, since whatever is associated with ignorance and saṃsāra is not to be trusted, we should not get caught up in it, but put energy into attaining awakening. While sitting under the bodhi tree, the Buddha said to Māra (EBM 417):

Numerous armies such as these  
may vanquish the monastic.  
I use the power of dhyāna and wisdom  
to smash all these armies of yours,  
and after perfecting the path to buddhahood,  
I will bring all beings across to liberation.

If a practitioner is not yet strong enough to dispel these interferences through serenity or insight, she holds her mind steady, not letting false thoughts and disturbing emotions proliferate. She contemplates that the emptiness of the demon realm and the emptiness of the buddha realm are a single emptiness. There is nothing in the demon realm to fear and nothing in the buddha realm to cling to. In this way, her mind transforms into wisdom and the demons vanish.

Even if the frightful or attractive appearances do not vanish, Zhiyi counsels practitioners not to worry. There has never been a case in which a tiger that was a transformation of a demon has actually eaten anyone. Nor has an attractive man or woman who was a transformation of a demon ever become someone's spouse.

Furthermore, the disturbance comes principally from the side of the practitioner's mind because he allows fear, anger, and desire to arise and grow. The antidote is to increase wisdom and, by doing so, become more immune to such interferences. Practitioners can also recite mantras while maintaining mindfulness on the Three Jewels or the Buddha. Purification practices, recitation of precepts, and cultivation of a sense of integrity and consideration for others will also protect them from involvement in harmful actions. Negativity is unable to stand up to or conquer strong virtue, so if we keep our minds aligned with the Buddha's teachings, demons will vanish by themselves.

The Buddhist sage Tsung-pen (1020–99) advises that while meditating sometimes beautiful scenes or figures may appear to the mind, and at other times terrifying ones may appear. We should avoid being joyful at the former and despondent or antagonistic toward the latter.<sup>102</sup>

You must realize that such scenes do not come from outside: all are born from being sunk in oblivion or are brought about by karmic consciousness. All that the eyes see and the ears hear is false — don't get attached to it! Keep on making energetic progress.

Wise advice, indeed!

## 11 | Higher Training in Wisdom: The Role of Mindfulness and Introspective Awareness

### *Introduction to the Thirty-Seven Harmonies with Awakening*

HAVING DISCUSSED the higher training in concentration and the cultivation of serenity, we will now turn to the higher training in wisdom and the cultivation of insight. This involves the thirty-seven harmonies with awakening, practices shared in the Pāli and the Sanskrit traditions. The thirty-seven harmonies contain elements of all three higher trainings, and they all directly or indirectly cultivate the wisdom that realizes the four truths and the ultimate nature of reality. This is the wisdom that eliminates ignorance and leads to nirvāṇa.

From the perspective of the Sanskrit tradition, the Fundamental Vehicle teachings as explained in the Pāli, Chinese, and Tibetan canons are the foundation of the entire path. Here is where the four truths, three higher trainings, and thirty-seven harmonies with awakening are first taught. On this basis, the Mahāyāna explains the third truth — true cessation and emptiness — in more detail in the Perfection of Wisdom sūtras. The Mahāyāna also delves deeper into the meaning of the cognizing subject and the true path in the tathāgatagarbha teachings. On this basis, the Tantrayāna teachings follow. Here we see that the Fundamental Vehicle emphasized in the Pāli tradition and the Theravāda, the Mahāyāna teachings of the Perfection Vehicle, and the Tantrayāna teachings are not separate and unrelated paths, but the latter build on the former.

Unfortunately, some practitioners of Tibetan Buddhism do not pay adequate attention to these valuable practices of the thirty-seven harmonies with awakening. While the thirty-seven harmonies are explained in Mahāyāna sūtras and commentaries, they are not widely practiced among followers of the Tibetan tradition. Perhaps this is because in the Indo-Tibetan tradition, these thirty-seven

practices are correlated with the levels of the five paths, as explained below, so practitioners think that they are to be done later, after they have attained a path. However, I read a sūtra that explains how to include them in our daily practice, even at the beginner's level. I would like to encourage Tibetan Buddhists to do these thirty-seven practices, especially the four establishments of mindfulness. We meditate on them with a bodhicitta motivation and the Prāsaṅgika view of emptiness.

Studying the thirty-seven harmonies gives me the wonderful opportunity to relate to the Buddha as a bhikṣu who lived in India. This is different from seeing him as Vajradhara in a maṇḍala, as we do in Vajrayāna. For me it is very moving to read the sūtra accounts of the Buddha interacting with his disciples. I get a real sense of his life as a human being who lived on our Earth and taught people like me. I feel very close to the Buddha, our marvelous teacher.

Most of the sūtras were given in response to questions his disciples asked him, or they are follow-ups to questions he asked them or other renunciates. Someone would ask the Buddha, “How do we develop this realization or quality?” Other times, a problem would arise concerning a disciple's behavior, and one of the monks would ask the Buddha how to deal with it. It was in this very human way of interacting with the people around him that the Buddha gave instructions on the thirty-seven harmonies with awakening.

Before speaking in depth about the thirty-seven harmonies, there are two mental factors — mindfulness and introspective awareness — that are worthy of more attention because they play an important role in all three higher trainings.

## *The Importance of Mindfulness and Introspective Awareness*

Discussed in both Pāli and Sanskrit traditions, the mental factors of mindfulness and introspective awareness primarily function to focus on what is important in the moment — be it our meditation object, the movement of our body, the reason for engaging in a certain action, and so forth. They work together to keep our mind in virtue and to redirect our attention back to what is important should it stray toward nonvirtue. They protect our minds from nonvirtue, thus preventing suffering and obstacles on the path. Śāntideva pleads (BCA 5:23):

To those who wish to guard their minds,  
I make this appeal with palms joined:  
You must use every effort to employ  
both mindfulness and introspective awareness.

Mindfulness and introspective awareness also enable us to work for the benefit of others, as Togme Zangpo encourages in the “Thirty-Seven Practices of Bodhisattvas” (36):

In brief, whatever you are doing,  
ask yourself, “What’s the state of my mind?”  
With constant mindfulness and introspective awareness  
accomplish others’ good — this is the practice of bodhisattvas.

Mindfulness and introspective awareness will be explained separately and then we’ll see how they operate together.

## *Mindfulness*

The original meaning of “mindfulness” in Indian languages is memory or recollection. The Buddha used this ordinary word but gave it a new meaning specific to his doctrine. According to the two *Knowledges*,<sup>103</sup> mindfulness is a distinct mental factor that repeatedly brings to mind a phenomenon of previous acquaintance without forgetting it. In *Compendium of Knowledge* Asaṅga says (LC 3:49):

What is mindfulness? In regard to a familiar object, the mind is not forgetful and operates without distraction.

Mindfulness has three features: (1) Its *focal object* is a familiar object. It cannot be generated toward an unfamiliar object. (2) The *subject*, the mind, is not forgetful of the object, meaning that it is focused on that object and not distracted from it. (3) Its *function* is to prevent distraction to other objects. After attention has been placed on the meditation object, mindfulness keeps it there.

When discussing mindfulness as one of the five faculties, the Buddha said (SN 48.10):

And what, monastics, is the faculty of mindfulness? Here, monastics, the ariya disciple is mindful, possessing supreme mindfulness and discretion, one who remembers and recollects what was done and said long ago. He dwells contemplating the body in the body . . . feelings in feelings . . . mind in mind . . . phenomena in phenomena, ardent, introspectively aware, mindful, having removed longing and displeasure for the world. This is called the faculty of mindfulness.

*Contemplating the body in the body* means *contemplating the body as a body*. This indicates the specific object of contemplation: it is the mere body, not the painful, pleasureable, and neutral feelings it generates in us, not our ideas about our body, our like or dislike of the body, but simply what is there, a momentary body that is in the nature of duḥkha and that neither has a self nor is a self. The same pertains to feelings, mind, and phenomena. In short, mindfulness focuses on its object in a way that both remembers it and observes its characteristics just as they are. Conjoined with introspective awareness and wisdom, it brings insight into the nature of the object.

Mindfulness also means memory, calling to mind, and recollection. It recollects the precepts so that we can live within their boundaries. It prevents the mind from becoming engrossed in sense objects, daydreams, and anxious thoughts. It counteracts absentmindedness and protects us from nonconscientiousness, being so focused on the plethora of inner preconceptions that we do not pay attention to what is at hand.

Mindfulness increases our store of knowledge by focusing our mind when we are listening to teachings and enabling us to remember them later. This twofold function of mindfulness — taking in what is happening in the present and recalling it afterward — facilitates learning, contemplation, and meditation on the Buddha's teachings as well as applying the teachings in all facets of our life.

Mindfulness reminds us of the goals of spiritual practice: attaining fortunate rebirths, liberation, and full awakening. In the practice of ethical conduct, it remembers our precepts, preventing nonvirtuous actions. In the cultivation of concentration, it remembers the meditation object, preventing distraction and

restlessness. In the context of developing wisdom, it enables the mind to stay on the object and, together with wisdom, examines the person and the aggregates. In daily life, mindfulness remembers what has been done and what needs to be done. It distinguishes what is worthy of our attention and what is not. The Buddha compared mindfulness to a gatekeeper that safeguards what is important (AN 7.67):

Just as the royal frontier fortress has a gatekeeper — wise, experienced, intelligent — to keep out those he doesn't know and to let in those he does, for the protection of those within and to ward off those without; in the same way an ariya disciple is mindful, highly meticulous, remembering and able to call to mind even things that were done and said long ago. With mindfulness as his gatekeeper, the ariya disciple abandons what is unskillful, develops what is skillful, abandons what is blameworthy, develops what is blameless, and looks after himself with purity.

In the Pāli tradition, a beginner will be given a basic object of meditation — usually the breath. Mindfulness of breathing settles and clears the mind during meditation sessions. In daily life, practitioners keep mindfulness on their breath as much as possible, and if afflictions or distractions enter the mind, they renew mindfulness on the breath. If they need to turn their attention to another activity, they temporarily relax mindfulness of the breath and devote attention to the new task. Once that is finished, rather than glance around the room to see what interesting sights there are, they renew mindfulness on the breath.

In the Sanskrit tradition, mindfulness is maintained when contemplating a particular Dharma topic — for example, death, the kindness of others, emptiness — during meditation sessions. In the break times, we keep that topic in mind, reflecting on it as we go through the day. This is very effective for increasing wisdom and keeping the mind in virtue. The object of mindfulness for tantric practitioners, both in and out of formal sessions, is oneself as the meditation deity.

The purpose of restraining the senses is to restrain the mind. When our senses are unguarded, our minds become involved with sensory objects, which leads to experiencing pleasurable, painful, and neutral feelings. These feelings easily bring a flood of afflictive emotions in our minds. By being careful of the quality and

quantity of objects we allow our senses to perceive, we can free the mind from emotional reactions to the various pleasant, painful, and neutral feelings that arise. This doesn't mean ignoring everyone and everything around us or moving through the environment like a robot. Rather, maintaining mindfulness on a specific virtuous or neutral object protects the mind from getting lost in the proliferation of thoughts, opinions, preferences, and emotions that center on external objects.

Mindfulness differs from bare attention. Bare attention is aware of and notes all the various objects, sensations, feelings, ideas, and emotions that arise in the mind. Mindfulness is related to wisdom; it chooses a virtuous or neutral object and focuses on it, becoming familiar with it and preventing mental wandering. In daily life, mindfulness focuses on our ethical values and precepts, thus ensuring that we act in accordance with them. Mindfulness must be wise and judicious; wisdom cannot arise in a mind that lacks mindfulness. The monk Māluṅkyaputta shares what the Buddha taught him about mindfulness (SN 35.95):

Having seen a form with mindfulness muddled,  
attending to the pleasing sign,  
one experiences it with infatuated mind  
and remains tightly holding to it.

Many feelings flourish within,  
originating from the visible form,  
covetousness and annoyance as well,  
by which one's mind becomes disturbed.  
For one who accumulates dukkha thus  
nibbāna is said to be far away . . .

When, firmly mindful, one sees a form,  
one is not inflamed with lust for forms;  
one experiences it with dispassionate mind  
and does not remain holding it tightly.

One fares mindfully in such a way  
that even as one sees the form  
and while one undergoes a feeling,

[dukkha] is exhausted, not built up.  
For one dismantling dukkha thus,  
nibbāna is said to be close by.

What is said applies equally to sounds, odors, tastes, and tangible objects. With all of them, mindfulness imbued with wisdom exhausts duḥkha by ceasing its causes so that the practitioner approaches nirvāṇa.

The Buddha stressed the importance of mindfulness on the path. Of the thirty-seven harmonies with awakening, mindfulness constitutes eight: the four establishments of mindfulness, the faculty of mindfulness, the power of mindfulness, the awakening factor of mindfulness, and correct mindfulness as one of the eightfold path. Although the characteristics of mindfulness in these contexts is the same, its strength and ability to eliminate afflictions differs, as can be seen when the harmonies with awakening are correlated with stages of the path.

## REFLECTION

---

1. What is the role of mindfulness in cultivating ethical conduct?
  2. What is the role of mindfulness when cultivating serenity?
  3. How does mindfulness differ from bare attention?
- 

## *Introspective Awareness*

In the Sanskrit tradition, introspective awareness (*saṃprajanya*, *sampajañña*) is considered a type of intelligence (*prajñā*), but it is not wisdom.<sup>104</sup> Wisdom develops from introspective awareness but understands phenomena in a deeper way. Introspective awareness's knowing can range from clearly knowing simple occurrences, such as “now I am moving my arm,” to more complex and discriminative knowing, such as knowing the impermanent, transient nature of feelings or the arising of craving dependent on a sense faculty's contact with an object.

Although introspective awareness is not specifically defined in the two *Knowledges*, its opposite, nonintrospective awareness, is. From this we can infer what introspective awareness is. Nonintrospective awareness is not just the lack of introspective awareness; it is a mental factor that is an afflictive intelligence that does not understand an object correctly. Vasubandhu in the *Five Aggregates* says (ISBP 310):

What is nonintrospective awareness? [It is] intelligence that is concomitant with an affliction and [it is the mental factor] that causes one to engage in activities of body, speech, or mind inattentively.

Sthiramati adds to this that nonintrospective awareness doesn't know what is to be done and what is to be avoided. It functions to allow the increase of destructive actions of body, speech, and mind, supports the accumulation of transgressions from broken precepts, and hinders the application of the four opponent powers. It also causes whatever wisdom we have developed to degenerate and hinders the further development of analytical wisdom. Nonintrospective awareness is of three types: the nonintrospective awareness (1) that accompanies wrong views, (2) that hinders development of reliable analytical wisdom because it misunderstands the object, and (3) that interrupts serenity because the mind is unable to attend alertly to the meditation object.

Using this as a guideline, we can infer three types of introspective awareness: the introspective awareness that (1) accompanies correct views, (2) understands the object and supports the development of reliable analytical wisdom, and (3) enables the mind to attend to the meditation object and supports the practice of serenity. The first two show that introspective awareness is associated with the cultivation of wisdom, and the third is the introspective awareness associated with serenity. Here introspective awareness is a meta awareness that monitors and is aware of what is happening in the mind. Assessing whether the mind is directed to a virtuous or nonvirtuous object, introspective awareness must be sharp and have a strong element of intelligence. Otherwise, like a foolish spy, it will ruin everything. When I was young, I asked one of my personal attendants to alert me when my senior tutor was coming. But sometimes this attendant slept when he shouldn't have and didn't inform me. Naturally that caused some problems!

Pāli commentaries explain four types or aspects of introspective awareness:

1. With *introspective awareness of purpose* we pause before acting to clarify the purpose of our action. Why am I doing this? Will this action be of benefit or is it best not to do it? This introspective awareness enables us to avoid acting impulsively, foolishly, or by force of habit.

2. *Introspective awareness of suitability* examines the suitability of the circumstances and knows how to achieve the determined purpose or goal most effectively in accordance with the Dharma. In all our activities a beneficial purpose and suitable means are important. If the purpose is good but how we go about attaining it is unethical or harmful to others, it is not suitable to do.

These two types of introspective awareness apply especially to daily life activities and lead to refined behavior. When we know the purpose of eating we will eat what the body needs but not more. We will not chatter about unsuitable topics because we know the purpose of talking and the suitable circumstances for engaging in conversation.

3. *Introspective awareness of the domain* helps us to keep the mind on the meditation object and propels us back to it should distraction set in. It enables mindfulness and meditation to be continuous. During break times, it brings our minds to the meditation object or another virtuous object.

4. *Introspective awareness of nonignorance* is practiced during meditation on the four establishments of mindfulness and is applied during insight meditation. Regarding the body, feelings, mind, and phenomena, this type of introspective awareness leads to peeling away layers of afflictions that prevent seeing the body and so forth as they actually are. As the layers of afflictions recede, penetrative wisdom analyzes and knows the true nature of physical and mental phenomena, thus dispelling ignorance.

Asaṅga's *Śrāvaka Grounds* speaks of introspective awareness in two ways. The first is in a general context that applies to many activities in the course of the day. This explanation is similar to the first two meanings of introspective awareness in the Pāli tradition. The second is in the specific context of attaining serenity and insight, which includes the latter two meanings.

### *The General Meaning of Introspective Awareness*

Asaṅga describes the general meaning of introspective awareness as a mental factor that is aware of what we are doing and how we are doing it or should do it.

Here it is not a technical term and is used as an adverb, as in acting with awareness or abiding in awareness. A person acting with awareness is paying attention to her actions as well as to the surrounding environment and her relationship to it:<sup>105</sup>

What is abiding in awareness? Having trained in such a way in staying awake, he now abides with awareness while going and returning, while looking ahead and to the sides, while extending and bending his limbs, while wearing his robes and carrying his outer robes and bowl, while eating and drinking, chewing and tasting, while standing, walking, sitting or lying down (falling asleep), waking up (being awake), talking or being silent, and while removing drowsiness and sleepiness.

This passage is almost identical to one that appears often in the Pāli sūtras, such as *The Discourse to Gaṇaka-Moggallāna* (MN 107.7).<sup>106</sup> Both of these passages are very similar to a passage in *The Twenty-Five-Thousand-Verse Perfection of Wisdom Sūtra* (*Pañcaviṃśatisāhasrikā-prajñā-pāramitā Sūtra*) that describes the bodhisattva practices (PVS 204, in ISBP 151–52).

Furthermore, Subhūti, . . . [the bodhisattva mahāsattva] maintains awareness when he goes [from his residence] or returns; he maintains awareness when looking ahead or looking to the sides; he maintains awareness when bending or extending [his leg, foot, arm, or hand]; he maintains awareness when carrying his outer robe, robes, or alms bowl; he maintains awareness when eating, chewing, drinking, or tasting; he maintains awareness when sleeping or dispelling drowsiness; he maintains awareness when going, coming, standing, sitting, lying down, waking up, speaking, being silent, or retiring in order to practice meditation. O Subhūti, thus does the bodhisattva mahāsattva, one who practices the Perfection of Wisdom, dwell watching the body in relation to the inner body. Moreover, he does not form deliberative thoughts associated with the body, on account of his not apprehending [an inherently existent body]. He is ardent, introspectively aware, mindful, having removed longing and displeasure for the world.

The Buddha recommends that bodhisattvas practice awareness in the four physical positions and during all activities, be they mundane such as dressing, conversing, or eating, or specific Dharma activities such as teaching the Dharma or meditating.

Asaṅga explains the meaning of abiding in awareness while going out and returning, activities found in all three passages above:

Concerning abiding in awareness, while going, he fully knows: “I am going,” while returning, he fully knows: “I am returning.” He fully knows: “Here I should go, here I should not go.” He fully knows: “Now I should go; now I should not go . . .” This is what is called “awareness.”

If he possesses such awareness, while going, he fully knows, “I am going,” he only goes where he should go, he only goes when he should go, and he only goes as he should go, in the right manner. This is what is called “abiding in awareness regarding going and returning.”

In short, the general meaning of introspective awareness is to know what we are doing when we are doing it and to know how to do it in an appropriate way. When driving a car, we clearly know what we are doing and are not preoccupied with thoughts and worries or with texting. We know where it is suitable for us to go, when to go there, and how to go there. Before turning the car key, we clearly know our destination and the direction to get there. We know if our destination is an appropriate place for us to go. For example, if someone is trying to be sober, it is not wise to meet friends at the bar or visit friends who like to take drugs. We are aware of the appropriate time to do things. When our friend is busy or when we have many tasks to do, it is wise to have a long conversation with that friend later. We are aware of how we are doing something: What is the tone of our voice? What vocabulary are we using? Are we interrupting the other person? Are we listening with attention and empathy to what they are saying? Being aware of what, where, when, how, and why we are acting in our daily life will facilitate our interactions with others, improve our relationships, and prevent us from acting or speaking in ways that we will later regret.

In another passage Asaṅga discusses lying down, presumably to sleep.

How does one lie in bed with awareness? When the mind of the person lying down with mindfulness is disturbed by one affliction or another, he knows this disturbance fully, he does not indulge in it, he abandons it, he penetrates it, and he turns away from this thought. Therefore it is called “lying in bed while abiding in awareness.”

Here introspective awareness monitors the mind for afflictions, and should one arise, it detects the affliction and prevents it from overwhelming the mind. Introspective awareness propels the application of an antidote — such as viewing the affliction as false and empty — to counteract it. Should anger arise, introspective awareness knows this and without allowing the mind to get lost in vicious thoughts, it turns the mind to meditation on love. This is similar to how introspective awareness functions when developing concentration. In short, Asaṅga says, “How can one be restrained in one’s body and speech? By possessing introspective awareness.”

Śāntideva agrees (BCA 5:108):

In brief, this alone is the definition  
of introspective awareness:  
the repeated examination of the state  
and actions of our body and mind.

In *Engaging in the Bodhisattvas’ Deeds*, Śāntideva devotes an entire chapter to introspective awareness. It is a delight to read and I strongly encourage you to do so. In an emphatic way that confronts our denial and avoidance, Śāntideva describes the disadvantages of the afflictions and encourages us to act with introspective awareness at all times to prevent them from arising and to counteract them if they do. He also gives practical advice on how to move our body, speak to others, and watch over our mind, which is the source of verbal and physical actions. If we want to attain awakening and be of benefit to others, mindfulness and introspective awareness are essential.

Śāntideva also speaks of mindfulness and introspective awareness in the context of maintaining the bodhisattva precepts. Having cultivated conscientiousness, we must develop mindfulness and introspective awareness in order to maintain the bodhisattva precepts. Mindfulness remembers the essential

points of the bodhisattva ethical code, and introspective awareness monitors the body, speech, and mind to prevent their being controlled by afflictions and to ensure compassion is present. When introspective awareness is absent, afflictions arise, and when it is present, the practice of the six perfections increases.

### *Introspective Awareness when Training in Serenity*

Maitreya speaks of introspective awareness as one of the eight antidotes that counteract the five faults when cultivating serenity. Here “introspective awareness” is a technical term referring to a mental factor that is likened to a spy. It is a corner of the mind that monitors the whole mind and detects if restlessness or laxity has arisen and disturbed our concentration. When refined, introspective awareness is able to discern when restlessness or laxity are about to arise and to prevent that. Asaṅga speaks of introspective awareness in the context of the six powers that lead to single-pointedness:

Then, by the power of introspective awareness he does not allow [the mind] any room for wandering between signs (sense objects), thoughts, and afflictions, and in such a way he tames and pacifies [the mind].

Asaṅga describes the fifth, sixth, and seventh stages of sustained attention during which introspective awareness is prominent:

How does he tame? When his mind is distracted by these signs — such as signs of form, sound, smell, taste, touch, and signs of attachment, anger, ignorance, woman, and man — he reaches the recognition that these are disadvantageous from the very beginning. He focuses his mind on this [recognition] and does not give his mind any room to wander among these signs. Thus he tames.

How does he pacify? When his mind is restless due to these thoughts and auxiliary afflictions, such as the aspiration for the desire [realm] and so forth, he reaches the recognition that these are disadvantageous from the very beginning. He focuses his mind on this and does not give his mind any room to wander among these thoughts and auxiliary afflictions. Thus he pacifies.

How does he thoroughly calm? When these two appear due to forgetfulness, he does not tolerate these thoughts and auxiliary afflictions that keep rising again and again, and abandons them. Thus he thoroughly calms.

While mindfulness keeps our attention on the meditation object, introspective awareness recognizes, prevents, and remedies faults in our concentration. It prevents faults by knowing their disadvantages and not allowing the mind to follow after them.

Cultivating mindfulness is the chief cause to gain introspective awareness. When mindfulness is strong, the mind does not forget the object or become distracted easily. When it is distracted, introspective awareness can easily detect it. Śāntideva says (BCA 5:33):

When mindfulness stands guard  
at the gate of the mind,  
introspective awareness arrives,  
and once it has come, it does not depart again.

In brief, mindfulness functions to focus and stabilize the mind on the meditation object. Introspective awareness functions to not allow it to wander to other objects, or if it has fallen into restlessness or laxity, to remedy that fault.

## REFLECTION

---

1. What are the different types of introspective awareness?
  2. What is the role of introspective awareness in daily life? How does it help us live ethically?
  3. What is its role when training in serenity?
- 

*Mindfulness and Introspective Awareness Working in Tandem*

Mindfulness and introspective awareness are intricately related. Mindfulness and introspective awareness are present at the beginning of the practice when we train to become aware of our physical movements. For example, they are at play when new monastics are trained to move in a refined and dignified manner that is suitable for one who has gone forth. In the middle of our practice, they are present when we undertake formal meditation on the body, feelings, mind, and phenomena. At the end of the path, āryas employ mindfulness and introspective awareness in serenity and insight meditation and in the smooth functioning of their daily activities.

They are mentioned together when speaking of the higher training in ethical conduct because mindfulness focuses on what to practice and abandon and introspective awareness sees if our body, speech, and mind are following suit. As a form of intelligence, introspective awareness distinguishes virtuous from corrupted motivations, and mindfulness keeps the mind focused on virtuous intentions.

It is said that with strong mindfulness and introspective awareness, even if a monk sleeps near a woman he will not break his precepts. However, if these two mental factors are weak, even if a monastic goes to a solitary mountain hermitage, he will eventually transgress the precepts.

In the higher training in concentration, mindfulness stays on the meditation object and introspective awareness surveys the mind and detects hindrances to concentration. Mindfulness then corrects the situation by either returning to the meditation object or focusing on an antidote. Both mindfulness and introspective awareness are among the antidotes to faults that interfere with attaining serenity. Mindfulness counteracts forgetting the meditation object, while introspective awareness protects against and remedies restlessness and laxity.

By developing mindfulness, introspective awareness automatically follows. In *Explanation of “Distinguishing the Middle and the Extremes”* (*Madhyānta-vibhāga-ṭīkā*) Sthiramati says (LC 3:61):

The statement, “There is recognition of laxity and restlessness by introspective awareness if mindfulness does not lapse,” indicates that mindfulness, when fully present, is accompanied by introspective awareness.

When mindfulness is present in the mind, so is introspective awareness. Sometimes the order may be reversed: when mindfulness lapses, introspective awareness detects the presence of an affliction and then mindfulness steps in and focuses on the specific antidote to it.

Although mindfulness and introspective awareness are compatible and work together, each has its own function. In the context of serenity, introspective awareness notices when laxity and restlessness are on the verge of arising, while mindfulness prevents forgetting the meditation object in a flurry of distractions. It's important to distinguish these two.

The name we give a specific meditation practice often has to do with the specific mental factor whose development is emphasized in it. When the cultivation of mindfulness is chief, it is called mindfulness practice, as in the four establishments of mindfulness. When the development of single-pointedness is foremost, it is called serenity practice. When the cultivation of wisdom is emphasized, it is called the practice of insight. In fact, all three of these mental factors and more are present at the same time.

Taking intoxicants impedes the cultivation of mindfulness and introspective awareness, which in turn leads to accruing all sorts of negativities. Sometimes people are so unaware of what is going on that they wake up in a strange place and don't know how they got there!

Mindfulness and introspective awareness practiced together naturally leads to a calmer and more focused mind. In my own experience, mindfulness of my precepts, which restrains me from involvement with physical and verbal actions, increases mindfulness of my behavior in general. This spurs me to examine what is happening in my mind. As a result, distraction decreases and the mind is drawn inward toward a calm, one-pointed state even when I'm not actively engaged in cultivating serenity.

When anger arises in a well-trained mind, introspective awareness notes, anger has arisen. We become mindful of the sensations anger arouses in the body and the mood in the mind. When we experience anger, it sometimes seems as though our entire self has turned into the nature of anger. Observing the anger as it manifests in the mind — instead of fixating on the story that sparked it — immediately helps dissolve the anger.

Alternatively, introspective awareness identifies the anger and mindfulness remembers karma and its effects: we experience disturbing situations as a result of

the actions we have engaged in, so being angry at another person is misplaced. Or we are mindful of the instructions for the taking and giving meditation and focus on imagining taking on others' anger and its effects and giving them our body, wealth, and merit to bring them happiness.

When mindfulness and introspective awareness operate together, we become aware of how swept away we are by sensory objects, the feelings of pleasure and pain experienced upon contact with them, and the emotional whirlwind those feelings produce in our minds. This affects us not only as individuals but also as a culture. I often observe that the current education system is too materialistic and too focused on the pleasure derived from sense objects that are perceived by sense consciousnesses. Compassion, on the other hand, involves the mental consciousness and brings more peace. For this reason, we need to introduce a better understanding of how the mind works to educators, business people, and others.

It is important to distinguish between conceptual and sensory consciousnesses. When we are thinking seriously or when our mindfulness is strong in meditation, we don't pay attention to sense experience. Understanding these different levels of consciousness opens the door to a deeper understanding of the mind. The inability to distinguish between sensory and mental consciousnesses leads to confusion. This is why I suggest that compared with ancient Indian understanding of the workings of the mind, modern psychology is at a preliminary level.

## *Mindfulness in Modernity*

Some people use the word "mindfulness" to refer to nonjudgmental bare awareness of what is happening in the present moment. Being mindful of the present moment and what is arising in our field of sensual and mental experience helps us to differentiate nonconceptual and conceptual consciousnesses, the former directly perceiving their object, the latter cognizing their object by means of a conceptual appearance.<sup>107</sup> We begin to differentiate the bare experience of sense objects and our internal conceptualizations about them. The stories and opinions our conceptual mind fabricates about these objects not only cause

mental suffering here and now but also trigger anger, attachment, resentment, and other disturbing emotions.

Training the mind to have bare attention on what is occurring in the present moment stops the proliferation of mistaken conceptualizations and anxiety about what has happened or what will happen. It calms and focuses the mind. Nowadays, there are many and varied uses of some of the basic principles of mindfulness meditation in a variety of fields, including medicine, psychotherapy, education, sports, business, and corrections (prisons). Here the principles of mindfulness are employed for specific purposes, such as to reduce chronic pain or mental stress or to increase attention. It is wonderful to see Buddhist teachings benefit a wide range of people in this way.

When bare awareness of the present moment is taught in a secular context, I suggest prefacing the instructions by emphasizing that this is a meditation technique derived from Buddhism. In that way, people who practice mindfulness to reduce stress or chronic pain will neither feel pressured to become Buddhist nor think they are doing the full practice of mindfulness as taught by the Buddha. Similarly, people who are new to Buddhism will understand that mindfulness meditation as taught by the Buddha is done in the context of the four truths and the Buddhist worldview; it is practiced for the purpose of attaining liberation from cyclic existence. They will understand that the Buddha's teachings are expansive; there is much to learn and practice — mindfulness is not the simplified technique they do with an app.

## *The Thirty-Seven Harmonies with Awakening*

The thirty-seven harmonies with awakening are explained in detail in *Treasury of Knowledge* and in Maitreya's *Ornament of Clear Realizations, Ornament of Mahāyāna Sūtras* (*Mahāyāna-sūtrālamkāra*), and *Differentiation of the Middle and the Extremes* (*Madhyāntavibhāga*). Candrakīrti's *Supplement* speaks of them and Śāntideva's *Guide* discusses the four establishments of mindfulness in the chapter on wisdom. In the Pāli tradition, many sūtras are devoted to the thirty-seven harmonies.

The phrase for the thirty-seven harmonies with awakening in the Tibetan language is *byang chub kyi phyogs kyi chos*. *Byang* refers to purifying all our

afflictions so that once we attain awakening we have the security that they have ceased and will never arise again. Regarding this state of peace, there are three types of awakening: that of the śrāvakas, solitary realizers, and bodhisattvas, the latter being the unsurpassable, supreme awakening. These thirty-seven practices form the common path that creates the causes for actualizing all three states of awakening.

In the structure of the stages of the path, the thirty-seven harmonies with awakening are described under the path of the middle-level practitioner. However, they can also be done with the bodhicitta motivation, in which case they become the path of advanced practitioner and lead to full awakening. The thirty-seven harmonies are also referenced in the Vajrayāna, where, for example, they are symbolized by Yamāntaka's thirty-four arms and body, speech, and mind.

Mention of the thirty-seven harmonies is found throughout the Pāli canon, especially in the fifth part of the *Connected Discourses*, the *Great Book* (*Mahāvagga*). They are likewise spoken of in many sūtras in the Sanskrit canon, the chief source being the *Sūtra on the Ten Grounds*. Here they are spoken of in the context of the fourth bodhisattva ground, the Radiant. Candrakīrti says (MMA 4.2abc):

There, for the Sugata's children, generated from  
higher meditation on the harmonies with full awakening,  
arises an appearance [of wisdom] surpassing the [third ground's]  
copper light . . .

The copper light of the fire of perfect pristine wisdom that burns up the afflictions is cultivated based on meditating on the thirty-seven harmonies and on their emptiness of inherent existence.

The passages in the Pāli and Sanskrit canons describing the thirty-seven are remarkably similar. For example, the *Sūtra on the Ten Grounds* in the Sanskrit canon speaks of mindfulness of the body (MMAB 50):

O Children of the Conqueror [bodhisattvas], the bodhisattva abiding in this bodhisattva ground, the Radiant, having become ardent, introspectively aware, mindful, having removed longing and displeasure for the world, with regard to the inner body contemplates the body and abides. Having become ardent with

regard to the outer body, contemplates the body and abides . . . with regard to the inner and outer bodies, contemplates body and abides.

*The Twenty-Five-Thousand-Verse Perfection of Wisdom Sūtra* contains the same passage. In the Pāli canon, the *Establishments of Mindfulness Sutta* (*Satipaṭṭhāna Sutta*, MN 10.3.5) says:

Here a monastic abides contemplating the body as a body, ardent, introspectively aware, mindful, having removed longing and displeasure for the world . . . In this way, he abides contemplating the body as a body internally, or he abides contemplating the body as a body externally, or he abides contemplating the body as a body both internally and externally.

These are English translations, so most likely the originals in the two canons are exactly the same, the only difference being the Buddha's audience — bodhisattvas in the former, monastics in the latter. The main differences in how the thirty-seven harmonies are practiced in the Śrāvaka Vehicle and in the Mahāyāna is that bodhisattvas do them with the motivation of attaining awakening for the benefit of all sentient beings and apply them to all sentient beings. For example, when establishing mindfulness of the body, bodhisattvas meditate on the impermanence of both their own body and the bodies of others in order to increase their compassion for others. Although śrāvakas may also meditate on the impermanence of others' bodies, it is for the purpose of ending desire for them. From the Prāsaṅgika perspective, practitioners of all three vehicles meditate on the thirty-seven harmonies as being empty of inherent existence.

## REFLECTION

---

Investigate assumptions in your mind that may be so habitual you don't recognize them. Identify in your experience these four conceptual errors:

1. Conceiving your body to be the place where a real self resides: I am here, inside my body.
  2. Conceiving your feelings to be what a real self experiences: I feel happy. I feel miserable. I feel indifferent.
  3. Conceiving your mind to be a real self: I am what thinks and perceives.
  4. Conceiving phenomena — especially mental factors — as what make a real self afflictive or purified: I am good because I am compassionate. I am bad because I am spiteful.

## REFLECTION

---

1. Contemplate the relationship between mindfulness of the body, mindfulness of feelings, mindfulness of the mind, and mindfulness of phenomena and the four truths. Why is mindfulness of the body correlated with true duḥkha, mindfulness of feelings with true origins, mindfulness of the mind with true cessations, mindfulness of phenomena with true paths?
2. Why is mindfulness of all four objects important?

---

## THE OBJECTS OF MINDFULNESS, DISTORTED CONCEPTIONS, AND TRUTHS

OBJECT OF MINDFULNESS	MISCONCEPTION	UNDERSTANDING OF A SPECIFIC CHARACTERISTIC	ĀRYA TRUTH
Body	Holding the foul as clean	The body is foul in nature	Truth of duḥkha
Feelings	Holding what is unsatisfactory (duḥkha) in nature as pleasurable	Feelings are unsatisfactory in nature	Truth of the origins of duḥkha
Mind	Holding what is momentary as permanent	The mind arises and passes away each moment	Truth of cessation
Phenomena	Holding what lacks a self as having a self	Phenomena are not the self. Some phenomena are to be practiced and others abandoned.	Truth of the path

*Mindfulness of the Body (Kāyasmṛti, Kāyagatāsati)*

# 13 | The Four Establishments of Mindfulness: Phenomena

## *Mindfulness of Phenomena*

THE *Sūtra on the Ten Grounds* advises bodhisattvas who have mindfulness and introspective awareness, and who have eliminated longing and displeasure for the world, to contemplate phenomena (*dharma*) with regard to the inner phenomena, outer phenomena, and both the inner and outer phenomena, and to abide without clinging.

In *Golden Rosary (Legs bshad gser phreng)*, Tsongkhapa states that the principal phenomena to be contemplated are the factors to adopt and to abandon on the path. Here *dharma* refers to both the pure class of phenomena — beneficial mental states to cultivate — and the impure class — afflictions to abandon. By reflecting on these mental factors, we enter the practice of the fourth truth, the true path.

Here too we apply mindfulness and identify the afflictive mental factors in our own mind — their causes, characteristics, and results. The afflictive mental factors disturb the mind, making it unclear and unmanageable, whereas the purified mental factors affect the main mind positively, making it clear, manageable, and tranquil. Observe this in your own experience both when you meditate and in daily life.

Also observe that the afflictive mental factors lack a valid basis and thus are easily uprooted by wisdom. Lacking anything true to support them, they rest entirely on misconception. The positive mental factors, however, have the force of reasoning as their backing, and therefore can uproot the afflictive factors. Moreover, positive emotions and correct views can be increased limitlessly.

Mindfulness of phenomena leads to practicing the true path, the essence of which is the realization of selflessness and emptiness. We have already seen that the self is not the body, feelings, or mind. Now examining all other phenomena

— especially the mental factors — we are still unable to pinpoint an inherently existent self and can with certainty conclude that the self is empty of inherent existence. But the self being empty does not mean it is nonexistent. Instead, because it lacks inherent or independent existence, it must exist dependently — dependent on its causes, parts, and on being merely designated by the mind. This merely designated, conventional I is the person that cycles in saṃsāra and attains nirvāṇa. In short, the I being empty of inherent existence and existing by the force of being designated in dependence on the aggregates are not contradictory. This realization is the ultimate true path that leads to true cessation.

The Pāli sūtra prescribes five sets of phenomena to examine in mindfulness of phenomena: the five hindrances, five aggregates, twelve sources, seven awakening factors, and four truths.<sup>117</sup> Contemplating them will lead us to the realization of the ultimate Dharma, true cessations. The practice of mindfulness of phenomena is not about contemplating categories of items. Rather, these schemas are used to elucidate and make our experience intelligible. They serve as maps and guidebooks that lead us through the complexities of our experiences to reach liberation.

The sequence of the five sets is itself a map. Mindfulness of the five hindrances comes first because they are the major impediment to development of the mind, specifically to cultivating serenity and insight. Overcoming them is an essential first step, which enables us to explore the field of our experience using the framework of the five aggregates and twelve sources. As insight develops, the seven awakening factors become prominent, and as they mature, penetrative understanding of the four truths becomes clear and strong. This results in understanding the ultimate truth of the Dharma.

Most of the practices in the four establishments of mindfulness are related to insight meditation, either as preparatory practices or as actual insight meditations. Although mindfulness of body, feelings, and mind can be used to generate insight, they are also helpful preliminaries for the mindfulness of phenomena because developing mindfulness and concentration on these three is easier and sets the stage for the analysis done during mindfulness of phenomena. The practice of insight becomes central in the mindfulness of phenomena.

The four establishments of mindfulness are not mutually exclusive practices. For example, if mindfulness of breathing is your primary practice, but a strong feeling arises during your meditation session, you can temporarily contemplate it

until it subsides and then return to contemplation of breathing. A similar diversion can be done to pacify a strong affliction that has arisen. Naturally as mindfulness of breathing continues, the five hindrances will arise and mindfulness of phenomena is used to deal with them skillfully. As the practice continues, the seven awakening factors and so forth will also be encountered.

We can begin practicing the four establishments of mindfulness without serenity. In fact, these practices can lead to access concentration, especially when the object of mindfulness is one that easily leads to concentration, such as mindfulness of breathing and mindfulness of the parts of the body. Concentration when meditating on mindfulness of feelings and mindfulness of mental states does not focus long enough on only one object to lead to access concentration. In these two practices we observe whatever feeling or mental state arises at the moment and do not focus on one constant object. However, mindfulness of feelings and of mind does lead to a kind of samādhi in which the mind is stabilized steadfastly although the object of mind constantly changes. Because the mind is stable and steady, the concentration is sufficient for insight knowledge to arise.

Some of the five sets of phenomena have been explained earlier in the *Library of Wisdom and Compassion* series. You may want to review them. The following explanation accords with the Pāli tradition in terms of the description of the path and when certain events occur. Other than that, the explanation accords with the Sanskrit tradition.

## *Mindfulness of the Five Hindrances*

The five hindrances — sensual desire, malice, lethargy and sleepiness, restlessness and regret, and doubt were explained in the higher training in concentration in chapter 7. Here they are considered as objects of the mindfulness of phenomena. The *Establishments of Mindfulness Sūtra* gives a four-step process to abide contemplating phenomena as phenomena in terms of the five hindrances. Using the example of *sensual desire*:<sup>118</sup>

1. *Understand when sensual desire is present in you and when it is absent.* When we do not know that a hindrance has arisen, we will be unaware of its effects on our thoughts, mood, speech, and actions. To counteract this, when a

hindrance interrupts meditation, note its presence, release it, and return your focus to the primary meditation object. If the hindrance persists, temporarily switch mindfulness from your meditation object to observe the hindrance, making it the meditation object. Observe how it affects the feelings in the body and mind. Watch it arise and subside; note if it is constant or if it fluctuates in intensity. Observing a hindrance in this way weakens its strength. After the hindrance ceases, observe the change in your feelings and mood.

2. *Understand the causes for sensual desire to arise.* Sensual desire arises as a result of contact with an attractive object — a person, place, possession, and so forth. From this arises distorted attention, which projects or exaggerates its desirable qualities. This triggers sensual desire, and attachment for it arises.

Attachment also arises from not guarding our senses — gazing at attractive people, looking in store windows, reading advertisements. Socializing with people who talk about desirable objects and people also triggers desire.

3. *Understand how to temporarily suppress manifest sensual desire.* If sensual desire — in particular sexual desire — persists, contemplate its antidote, the thirty-two parts of the body and so forth. For attachment to possessions, think of their impermanence and the problems that arise from protecting possessions; consider the disappointment you experience when they break or become outdated. Contemplate the disadvantages of attachment itself. Desire is like a debt collector who follows us around saying, “Give me this, give me that.” We can’t freely move because the debt collector trails us everywhere, breathing down our neck and not letting us rest peacefully.

4. *Understand how to eliminate sensual desire completely.* Sensual desire is abandoned upon becoming a nonreturner. The commentary to the Pāli sūtra says it is totally eliminated at arhatship. This is because the commentary has a broader definition of sensual desire, seeing it as any craving whatsoever, not just attachment to sensual objects. According to the Sanskrit tradition, all hindrances are completely eradicated at arhatship.

Since mindfulness is applied to all five hindrances using these four steps, the remaining four hindrances will be touched on only briefly.

*Malice* arises when distorted attention projects or exaggerates the unattractive qualities of a person or object. As with the other hindrances, noting it, letting it go, and returning to the meditation object is the first antidote to apply. If it persists, make it the object of mindfulness, observing how it affects the mind.

Malice and resentment come from within us; others are only the canvas on which we paint our disparaging projections.

The direct antidote to malice is loving-kindness. Daily meditation on loving-kindness is an effective way to gradually chip away at the judgmental, angry mind. When our irritation is directed toward an inanimate thing — for example, a device that malfunctions — reflect that the object is simply a combination of elements that arose due to causes and conditions.

Good friends, suitable conversations, and guarding the sense doors help to prevent malice, which is likened to a person with a severe illness: everything that person is given is pushed away and he finds nothing agreeable anywhere. Malice is abandoned upon becoming a nonreturner, according to the Pāli tradition, and at arhatship, according to the Sanskrit tradition.

As our mindfulness increases, we become aware of subtler levels of the hindrances. Sometimes dormant levels that have not been recognized get stirred up. Someone who is usually easygoing may find layers of anger and resentment he didn't know he had. Someone who is generally active and alert may find herself dull and sleepy. Doubts that we thought we had resolved — or didn't know we had — suddenly plague us. Making these hindrances the object of mindfulness is a skillful way to defuse them as well as to learn about ourselves and the workings of the mind.

*Lethargy and sleepiness* make the mind heavy and unserviceable. Lethargy is a rigidity of mind, while sleepiness is not the natural sleepiness that comes when the body is tired, but is a way of inhibiting the mind from progressing on the path by making it doze. Lethargy and sleepiness arise from distorted attention on discontent. Being bored and dissatisfied, the mind gets sluggish and is unable to function in an alert manner.

The antidote is to give appropriate attention to energy — the initial energy that gets us going, energy in the middle period that maintains and enhances the momentum, and vigorous energy to complete the Dharma task at hand. Exercise and moderation in eating are used to counteract lethargy and sleepiness. Rapid walking meditation energizes the body and mind, as do looking long distances, going outdoors, and breathing fresh air. Good friends and suitable conversations encourage us to practice and increase our energy for practice.

Meditation on light is also very effective. Here temporarily leave aside the primary meditation object and visualize very bright light. Imagine brilliant

sunlight fills your body and the environment around you.

Lethargy and sleepiness are likened to being in a prison cell where the space is narrow and restricted and we cannot move. They are eliminated completely at arhatship.

*Restlessness and regret.* Restlessness and regret are counted as one because both cause uneasiness. Restlessness brings agitation; regret weighs on us by thinking we did not do what we should have done or did do what we should not have done.

Distorted attention to the unsettledness in the mind is the cause. That is, when there is an underlying sense of unease and we do not deal with it in a beneficial way, it becomes worry, fear, restlessness, regret, and anxiety.

Appropriate attention to the peace of the mind is an antidote. For example, mindfulness of breathing releases anxiety, worry, and mental flurry. Restlessness and regret are likened to being enslaved. Wherever a slave tries to go, someone prevents his freedom. Similarly, when guilt, shame, anxiety, and restlessness impose on the mind, we feel there is nowhere safe to turn.

According to the Pāli tradition, regret is abandoned at the nonreturner level and restlessness at arhatship. According to the Sanskrit tradition, both are completely abandoned at arhatship.

*Deluded doubt* is inclined to the wrong conclusion. It is not the inquisitive doubt that encourages us to learn, question, and seek clarification, but a restive and uncooperative mental state that arises by distorted attention to a topic, such as the existence of the Three Jewels. One antidote that counteracts doubt is contemplating the difference between virtue and nonvirtue, between what is beneficial and what is not beneficial. By cultivating appropriate attention to such topics, we will gain the clarity that knows confusion, attachment, and anger are nonvirtuous, and generosity, ethical conduct, and fortitude are virtuous. Dharma study helps to resolve doubts, and mindfulness of breathing eases the tormenting type of doubt. Making a firm resolve to not let ourselves be submerged by doubts and to continue on the path despite having some doubts helps direct the mind in a constructive direction. Patience is also useful, for we realize that not all of our doubts need to be resolved immediately for us to practice and benefit from the Buddha's teachings.

Deluded doubt is compared to traveling across a barren desert where nothing grows. It is also likened to being at a crossroads in the wilderness with no one

around to ask for directions. Deluded doubt has been eradicated by stream-enterers. Although they may still have questions about how to practice, their experience of reality has vanquished doubt about the path and the Three Jewels.

## *Mindfulness of the Five Aggregates*

To make the mind fit to investigate phenomena deeply, concentration is essential, and that necessitates overcoming the five hindrances. For this reason, the five hindrances are the first set in mindfulness of phenomena. Once they have been tamed, the mind can, with clarity and precision, contemplate the nature of mental and physical phenomena by employing the schema of the five aggregates. Cultivating mindfulness of the aggregates involves comprehending the nature, function, causes, and conditions of each aggregate.

All five aggregates exist simultaneously in each moment of our human experience, no matter what we are doing. Sometimes one or another aggregate may be prominent: when we say, “I feel good today,” the pleasant feeling is more noticeable; when we’re looking for our friend in a crowd, discrimination is chief; when we have to carry out a plan, intention, which is a miscellaneous factor, is prominent. Beings in the formless realm lack a body and have four aggregates.

The five aggregates are called “the five aggregates subject to clinging”<sup>119</sup> because these five are the basis in dependence on which we cling to I, mine, and my self. We take the aggregates to be identical with ourselves, making them I. We look at them as things we use that belong to us and will bring us pleasure — that is, as mine. In response to the notions of I and mine, we create doctrines and views about the self. Considering the body as I, some people believe that when the body dies, the self becomes nonexistent. This is the view of nihilism. Thinking the self is unchanging, monolithic, and autonomous, other people assert it as an eternal personal identity — a Self, ātman, or soul; this is the absolutist view. They then speculate on whether the Self, ātman, or soul is universal or individual, finite or infinite, with or without form. In this way, so many doctrines and views about the self have arisen throughout human history.

Mindfulness of the five aggregates examines these five bases for grasping I, mine, and my self and knows them for what they are. In the sūtra, the Buddha directs us to contemplate phenomena as phenomena in terms of the five

aggregates affected by clinging by understanding each aggregate individually in three phases: its characteristics, its origin, and its cessation (MN 10.38).

The aggregates are listed in the following order to illustrate their increasing subtlety. Forms are coarse and easy to discern. Feelings are internal and subtler. Discriminations are less apparent, miscellaneous factors are difficult to differentiate, and consciousness is even harder to know and understand. Let's first look at the *characteristics* of each aggregate.

1. *Form* in general refers to material objects made of the four great elements — earth, water, fire, and air — and their derivatives, the five sense faculties (the eye faculty and so on), their objects (color and so on), and so forth. When referring to the five aggregates of a sentient being, form is the body.

In *A Ball of Foam Sutta* (SN 22.95) the Buddha gave a simile for each aggregate. Form is likened to a ball of foam. A ball of foam appears solid, but when examined closely it is found to be insubstantial, hollow, empty, and void. So, too, is the body.

2. *Feeling* is the quality of experience — pleasant, unpleasant, or neutral. Feelings are classified in several ways, one being according to contact through the six faculties — eye, ear, nose, tongue, body, and mind. Each of these six faculties may experience any of the three feelings.

Feelings are compared to a water bubble. When raindrops hit a puddle of water, bubbles arise and immediately burst. Similarly, when examined with deep mindfulness, only a continuum of moments of feeling is present. Each moment of feeling arises and ceases extremely quickly; it does not last until the next moment. Feelings, too, are void, hollow, and insubstantial.

3. *Discrimination* is a mental factor that selects, discerns, and identifies features of an object. Discerning an object's characteristics and qualities, simple discrimination can lead to the more complex discrimination involved in conceptually categorizing and classifying objects. It is involved in recognizing the object later on. There are six types of discrimination, which are classified according to their object — form, sound, smell, taste, tactile sensation, and mental.

Discriminations are compared to a shimmering mirage seen by tired and thirsty travelers. Water appears, but when examined, no water is to be found. Discriminations deceive us into thinking that there is some lasting pleasure or pain in things. Whether these discriminations are of the past, present, or future,

internal or external, coarse or subtle, inferior or superior, far or near, they are in fact void, hollow, and insubstantial.

4. *Miscellaneous factors* shape, construct, alter, and modify the other aggregates.<sup>120</sup> They range from the mental factor of intention to the mental factors of conscientiousness, wrong views, faith, and arrogance. The wide variety of mental factors included in miscellaneous factors influences our feelings, moods, and actions. By coloring the intentions that motivate our actions, miscellaneous factors influence the karma we create and thus the results we experience.

Miscellaneous factors are likened to a plantain tree. Someone may need heartwood, but nowhere is it to be found in a plantain tree, whose core is hollow. Similarly, although a self-existing person appears to be behind each emotion, view, or intention, when examined, no personal identity or self is to be found in any of the miscellaneous factors.

5. *Consciousness* performs the function of cognizing or illuminating the general aspects of phenomena. There are six primary consciousnesses, classified according to the sense faculty through which it arises: visual, auditory, olfactory, gustatory, tactile, and mental primary consciousnesses.

Consciousness is compared to a magical show. In ancient India, by reciting mantras or using a special salve, magicians could cause pebbles and sticks to appear as elephants and horses. But someone with clear senses unaffected by these causes of deception will not be fooled. Likewise, in dependence on polluted consciousnesses, we concoct distorted ideas — this is I, this is mine, I like this and not that — that lead to duḥkha.

Of the six consciousnesses, only the mental consciousness is involved in the rebirth process. The active mental consciousness that thinks, evaluates, imagines, remembers, and plans is not present at the moments of death and rebirth; only a subtle continuum of moments of mental consciousness that carries the karmic seeds is. This consciousness is not an everlasting soul or self. When a monk said, “The same consciousness runs and wanders through the round of rebirths” and “it is that which speaks and feels and experiences here and there the result of good and bad actions,” the Buddha emphatically corrected him, saying that consciousness arises dependently; it is not I, mine, or a self.

After understanding the characteristics of each aggregate, we investigate its *origin and disappearance*. There are two ways to do this: (1) we know and

understand the conditions through which each aggregate arises, and (2) we know and understand the impermanent nature of the aggregate.

*Knowing and understanding the conditions through which each aggregate arises.* The five aggregates have common conditions that produce them, and each aggregate has its own specific conditions that cause it to arise. Nutriment (edible food) is the condition that supports the existence of the body. After eating, meditators with strong mindfulness are able to be aware of the food being transformed into energy and nourishing the body. When food is absent, the body withers and dies.

Contact is the specific condition for feeling, discrimination, and miscellaneous factors. Contact is the mental factor that is the coming together of the sense faculty, object, and preceding moment of consciousness. It is the meeting of the consciousness with the object via the sense faculty. For example, the visual consciousness comes into contact with a new car via the eye faculty. This contact leads to the experience of feeling, in this case a pleasant one. Contact leads to the discrimination identifying the object as a car, and to other miscellaneous factors responding to the object, such as attachment. Chief among the miscellaneous factors is the mental factor of intention, which is karma.

The specific conditions for consciousness are name and form as explained in the twelve links of dependent origination.<sup>121</sup>

Conditions common to all five aggregates are ignorance, craving, and karma. The teaching on dependent arising explains that due to ignorance in previous lives, karma was created. Craving instigated the ripening of karmic seeds, bringing forth the five aggregates of a new rebirth. Virtuous karma leads to the five aggregates of a human being or a celestial being (deva); nonvirtuous karma leads to the five aggregates of an animal, hungry ghost, or hell being.

When any of the conditions specific for each aggregate cease, so does that moment of that aggregate. When the contact of seeing the car ceases, the feeling, discrimination, and miscellaneous factors associated with that moment of perception of the car also cease. That is, the pleasurable feeling from seeing the car, the discernment that it is a car, and the intention to drive it all cease. When the common conditions of ignorance, craving, and karma have ceased through wisdom, the five polluted aggregates are eventually extinguished. This is the first way of understanding the arising and disappearance of the aggregates.

*Knowing and understanding the impermanent nature of the aggregates.* This is done by mindfulness of the constantly changing nature of each aggregate — the fact that it arises and passes away in each micro moment. Here we don't contemplate arising and ceasing occurring due to conditions, but focus on the impermanent nature of the aggregates. Being transient by nature, the cells in the body continuously arise and cease, feelings are in constant flux, discriminations change, miscellaneous factors are unstable, and moments of consciousness arise and cease without interruption. As mindfulness deepens, it becomes capable of seeing the arising and ceasing of each aggregate at subtler and subtler levels, until their subtle impermanence is directly seen.

At this point, meditators dwell contemplating phenomena internally, externally, and both internally and externally, as described above. As a result, they abide peacefully, without clinging to anything in the world.

## *Mindfulness of the Six Sources*

Regarding mindfulness of the six sources, the sūtra says (MN 10.40):

How does a monastic abide contemplating phenomena as phenomena in terms of the six internal and six external sources? Here a monastic understands the eye, he understands forms, and he understands the fetter that arises dependent on both. He also understands how there comes to be the arising of the unarisen fetter, and how there comes to be the abandoning of the arisen fetter, and how there comes to be the future nonarising of the abandoned fetter.

The sūtra continues in terms of ears and sounds, the nose and odors, the tongue and tastes, the body and tangibles, the mental faculty (which includes all six consciousnesses) and mental objects. In all these cases, the faculty is the internal source and the object is the external source.

Then with mindfulness, we observe how the six internal and six external sources start a chain of events that leads to duḥkha. In the *Six Sets of Six Sutta* (MN 148) the Buddha explained that dependent on the eye and forms, visual

consciousness arises; the meeting of the three is contact. Contact serves as a condition for feeling — pleasant, painful, or neutral — to arise. Delighting in and craving pleasant feelings indicates the underlying tendency to attachment is present. Reacting adversely and being repulsed by a painful feeling shows the underlying tendency to anger is present. Experiencing a neutral feeling, but not understanding it as it actually is, indicates the underlying tendency to ignorant confusion is present. In this way, the three poisons arise in response when the three feelings are experienced without mindfulness or appropriate attention.

Then the Buddha taught how to abandon the fetters once they have arisen.<sup>122</sup> This begins with restraining the sense sources, especially at the beginning of practice when our mental control is weak. With strong mindfulness, the functioning of the six pairs of sources can be clearly observed. Such mindfulness brings forth strong concentration, which can then examine them with wisdom at a subtle level. When a meditator gains insight into the process of the six objects and six faculties leading to contact, which stimulates feelings that cause fetters to arise, he is able to abandon craving for all the factors in this process by knowing them as impermanent, *duḥkha* by nature, and selfless. The misery of his body and mind is terminated and his mind rests peacefully.

The understanding of how there comes to be the future nonarising of the abandoned fetter comes by deepening insight into the three characteristics and abandoning the various fetters by progressing through the stages of stream-enterer, once-returner, nonreturner, and arhat.

### *Mindfulness of the Seven Awakening Factors*

The Buddha often spoke about what to abandon and what to practice, and this is a theme in the mindfulness of phenomena. As the main obstacles to serenity, the five hindrances are to be eliminated. As important factors leading to the liberation of mind and deep *samādhi*, the seven awakening factors are to be cultivated. These seven are the awakening factors of mindfulness, discrimination of phenomena, effort, joy, pliancy, concentration, and equanimity.

Mindfulness of phenomena is also concerned with the development of insight that knows things as they are, and the objects to investigate and

understand are the five aggregates, the six internal sources and six external ones, and the four truths.

A mind with serenity can easily be directed toward investigating all the elements of experience with insight, knowing them for what they are — impermanent, in the nature of *duḥkha*, and selfless.

To review the sequence of topics to be contemplated in the mindfulness of phenomena, a meditator's first task at this point in her practice is to subdue the five hindrances. Doing this makes the mind suitable to understand the five aggregates and six sources. As she progresses, the seven awakening factors, which previously were present but not well developed, now become prominent. Thus the Buddha says (MN 10.42):

How does a monastic abide contemplating phenomena as phenomena in terms of the seven awakening factors? Here, there being the mindfulness awakening factor in him, a monastic understands, "There is the mindfulness awakening factor in me" or there being no mindfulness awakening factor in him, he understands, "There is no mindfulness awakening factor in me." He also understands how there comes to be the arising of the unarisen mindfulness awakening factor and how the arisen mindfulness awakening factor comes to fulfillment by development.

The *sūtra* continues in like manner regarding the discrimination of phenomena, effort, joy, pliancy, concentration, and equanimity awakening factors. Mindfulness of each awakening factor has three parts: (1) understanding when it is present in our mind and when it is absent, (2) understanding the causes that make it arise in our mind, and (3) understanding how it is brought to fulfillment once it has arisen. These are explained below.

1. *Mindfulness awakening factor.* The Buddha gave the word "mindfulness" a special meaning that includes not only memory — for example, remembering the teachings we have heard — but also mindfulness of things that are occurring in the present. Both of these meanings pertain to the mindfulness awakening factor.

Mindfulness has been cultivated beginning with the four establishments of mindfulness. After being repeatedly rejuvenated when it was weak, it is now strong enough to become an awakening factor. We are aware of when it is manifest and functioning well and when it is absent or slacking.

The principal condition causing mindfulness to arise is appropriate attention to the body, feelings, mind, and phenomena, which are the basis for the mindfulness awakening factor. Among other conditions are having mindfulness and introspective awareness, especially during daily life activities, and associating with people who are mindful and want to cultivate mindfulness.

2. *Discrimination of phenomena awakening factor.* As meditation continues, the mindfulness awakening factor is brought to fulfillment by diligent practice. We are able to distinguish subtle mental states, knowing them clearly and precisely. Now, with wisdom, we discern those to cultivate and those to abandon. Appropriate attention to virtuous and nonvirtuous mental states is the condition that brings about discrimination of phenomena. Gradually this ability to discriminate will develop further and can be used to understand the specific characteristics of phenomena and their shared characteristics of impermanence, *duḥkha*, and selflessness.

Other conditions that cause discrimination of phenomena are investigating the aggregates, personal cleanliness to facilitate the mind functioning clearly, cultivating the five faculties — faith, effort, mindfulness, concentration, and wisdom — in a healthy balance, deep reflection and asking questions, associating with wise people, and having the inclination and resolve to cultivate such wise discrimination.

3. *Effort awakening factor.* With practice, discrimination of virtuous and nonvirtuous mental states becomes refined and it is possible to strengthen the former and restrain the latter. As the mind becomes purer and less energy is diverted to nonvirtuous activities, effort to practice comes easily. The conditions for this are appropriate attention to the three phases of energy: arousing effort, continuing with effort, and unstoppable effort that makes it possible to meditate a long time and without needing much sleep. Other conditions are reflecting on the disadvantages and dangers of *saṃsāra*, the benefits of effort, and the great qualities of the Dharma. Avoiding people who are lazy and associating with those who put energy into Dharma practice also help.

4. *Joy awakening factor.* As effort flows with greater ease, the mind becomes focused and experiences a great sense of purity and joy. The conditions are appropriate attention to the basis for the joy awakening factor — especially the effort that has arisen through mindfulness and discrimination of phenomena. Other conditions are recollecting the Three Jewels and the benefits of ethical

conduct, avoiding confused people, and associating with those who have good values.

5. *Pliancy awakening factor.* Joy can be too enticing and there is a danger of becoming attached to it. To counteract this, observing joy and its subtle agitating effects on the mind are important. By releasing attachment to joy and bringing the mind back to the meditation object, joy settles down and bliss arises. Calm and peaceful, bliss enables the mind to settle deeply on the meditation object. At this time, physical and mental pliancy arise.

Balancing the five faculties, being skilled in meditation, avoiding people who are restless, and associating with those who are tranquil are also conditions for pliancy.

6. *Concentration awakening factor.* Pliancy naturally leads to deep concentration. The conditions are appropriate attention on the nimitta — the subtle inner object of meditation that arises when the mind becomes concentrated. This could be a light that is seen only in meditation by the mental consciousness, not by the eye. Although the sign has arisen and has been developed previously, now it is to be protected and strengthened. The concentration awakening factor arises and the mind becomes completely absorbed in the nimitta.

Other conditions are balancing the five faculties and skill in meditation that knows how to calm or exert the mind when needed. Avoiding people who are restless and associating with those who are concentrated also facilitate concentration.

7. *Equanimity awakening factor.* As concentration deepens, equanimity, which has been present, now becomes prominent. This mental factor observes the meditation object without fluctuating. The mind ceases to go up and down, becoming too restless or too dull. Equanimity arises from appropriate attention to overcoming faults and cultivating all conditions for serenity. Abandoning attachment, not associating with self-centered people, and befriending those who are impartial and open are also conditions.

While the seven awakening factors follow subduing the five hindrances in the sequence outlined in this sūtra, the five hindrances can still arise again if the meditator is not careful. For example, joy is related to sensuality at a very subtle level, so if the meditator's mindfulness slackens while experiencing joy, sensual desire may sneak in. If someone has strong effort but their mindfulness weakens,

their effort can become a type of restlessness. Thus a practitioner should not become complacent, thinking that the five hindrances cannot arise during serenity and insight meditation. Continual diligence is necessary to stabilize and deepen spiritual attainments.

The above explanation is from the viewpoint of cultivating serenity, but mindfulness of phenomena is also aimed at developing wisdom, and the seven awakening factors are cultivated during insight practice as well. At that time, with steady concentration — even if it is not at the level of *dhyāna* — mindfulness focuses on the five aggregates and six sources in terms of their being impermanent, the nature of *duḥkha*, and selfless. Mindfulness stirs investigation, which invokes great energy. The energy brings joy, and when joy subsides, it gives way to pliancy. While cultivating insight, the meditation object changes because we observe each phenomenon individually, in each moment, as it arises in the mind. Although this is not concentration on one object, it is steady concentration that observes the five aggregates and six sources as they arise and pass away in each moment. This observing mind is equanimous, neither being attached to nor repulsed by impermanence.

### *Mindfulness of the Four Truths*

Observing the three characteristics with insight endowed with the seven awakening factors is the beginning of contemplation on the four truths. This brings mindfulness of phenomena to its true purpose, as we are able to clearly see the dharmas of our experience and thus penetrate the Dharma that is the truth of the Buddha's teachings. Contemplating phenomena as phenomena in terms of the four truths is understanding *duḥkha*, its origin, its cessation, and the path to that cessation as they actually are.

Observing the three characteristics in the five aggregates and six sources is knowing *duḥkha* and the objects that are unsatisfactory in nature as they are. Knowing through direct experience that when craving arises, *duḥkha* follows is understanding the truth of origin. Knowing that when craving subsides so does *duḥkha* brings understanding of the truth of cessation. Knowing that the path we are practicing will end *duḥkha* is understanding the truth of the path. Insight into

the four truths is increasing, although full penetration and understanding of them has not yet occurred.

When all necessary conditions come together, a disciple with mature faculties knows the three characteristics as they come together as one. This is the point where she can go from the conditioned world to the unconditioned — the point where the mind momentarily breaks through the conditioned world and has a glimpse of nirvāṇa. The mind sees and understands, this is the cessation of duḥkha. At this point the mind cannot hold the realization for long and falls back again to the conditioned world. But now when the person sees the five aggregates, six sources, eighteen constituents, and twelve links of dependent origination, she knows with certainty, this is duḥkha. Seeing that saṃsāra evolves as a result of ignorance and craving, she knows, this is the origin of duḥkha. With her own experience she now knows the āryas' eightfold path is the path leading to the cessation of duḥkha. This first breakthrough experience during which she has direct and full knowledge of the unconditioned establishes her as a stream-enterer. This is the culmination of the four establishments of mindfulness. After insight is developed repeatedly, she will attain the full realization of nirvāṇa and become an arhat.

When teaching the establishment of mindfulness on phenomena, the Buddha presented many different schemas of phenomena to contemplate. Why is this? These schemas present similar factors from different perspectives, providing us with multiple ways to investigate our experience and thus increase our wisdom. The five aggregates are examined primarily because they are the basis on which wrong views of self arise, and the self or person is the one who cycles in saṃsāra, practices the path, and attains nirvāṇa. The six sources emphasize how craving arises from the six faculties and their objects. How craving is abandoned is explained in the twelve links of dependent origination.<sup>123</sup> The seven awakening factors are significant elements in eradicating craving and the five hindrances, and the four truths encompass the entirety of saṃsāra and nirvāṇa that the self has experienced or will experience.

To conclude the sūtra the Buddha asserts that the four establishments of mindfulness is the direct path that purifies beings and leads to the abolition of duḥkha and the attainment of nirvāṇa.

Just before the Buddha's parinirvāṇa, Ānanda asked the Buddha to "make a statement about the order of monks," hoping he would appoint a successor to

lead them. The Buddha replied (DN 16:2.26):

You should live as islands unto yourselves, being your own refuge, with no one else as your refuge, with the Dhamma as an island, with the Dhamma as your refuge, with no other refuge. And how does a monastic live as an island unto himself . . . with no other refuge? Here, Ānanda, a monastic abides contemplating the body as body, earnestly, introspectively aware, mindful and having put away all hankering and fretting for the world, and likewise with regard to feelings, mind, and phenomena.

Hearing only the first part of the Buddha's statement, some people interpret being an island unto ourselves as license to do as they see fit. But when we hear the entire passage, it is clear that the Buddha wants people to hold wisdom as their refuge, and that involves holding the Dharma — the true path and true cessation — as our final refuge. To do that, we must have realizations of the path, and those are gained by means of practicing the four establishments of mindfulness.

### *Mindfulness in Vajrayāna*

Mindfulness has a role in tantric practice as well. While doing the meditation of taking death as the path to dharmakāya, at the time of meditating on the clear light, one practices four mindfulnesses: (1) the appearance is clear light, emptiness; (2) we understand this is the emptiness of inherent existence, the actual nature of all phenomena; (3) the experience is bliss; and (4) we hold the divine identity of the resultant dharmakāya, and on this valid base, designate the I.

Another way mindfulness is spoken of in Vajrayāna as expressed in “A Song of the Four Mindfulnesses as a Guide to the View of the Middle Way” by H. H. Kelsang Gyatso, the Seventh Dalai Lama. Here he spoke of mindfulness of the spiritual mentor, mindfulness of compassion, mindfulness of your body as the deity's body, and mindfulness of the view of emptiness.

## *Bodhisattvas' Practice of the Four Establishments of Mindfulness*

The practice of the four establishments of mindfulness becomes a Mahāyāna practice when done with the motivation of bodhicitta, aspiring for full awakening in order to benefit all sentient beings most effectively. These four practices advance bodhisattvas' own practice and also enable them to guide śrāvakas, who make the thirty-seven harmonies their principal practice.

To develop the wisdom that will liberate themselves from saṃsāra, bodhisattvas meditate on the coarse and subtle aspects of the thirty-seven harmonies. They engage with the subtle thirty-seven harmonies with the awareness of their emptiness of inherent existence and their illusion-like nature, and engage with the coarse thirty-seven harmonies with the awareness of their impermanence or lack of self-sufficient substantial existence.

In the context of the four establishments of mindfulness, coarse mindfulness of the body contemplates the body qualified by the emptiness of a self-sufficient substantially existent person, and subtle mindfulness of the body takes as its object the body qualified by the emptiness of inherent existence. This is in line with the Prāsaṅgikas' delineation of coarse and subtle afflictions. Similarly, bodhisattvas cultivate coarse and subtle wisdoms that realize the absence of a self-sufficient substantially existent person and the absence of inherent existence, respectively. The same differentiation of coarse and subtle aspects is made in mindfulness of feelings, mind, and phenomena, contemplating them as lacking a self-sufficient substantially existent person and being empty of inherent existence, respectively.

Bodhisattvas seek to realize the emptiness of inherent existence of the body, feelings, mind, phenomena, and the person designated in dependence on them, as well as to establish their conventional existence in that they exist by being merely designated by mind. As conventionally existent objects, the body is like an illusion, feelings are like a dream, the mind is like space, and phenomena are like fleeting clouds. In this way, bodhisattvas do both space-like and illusion-like meditation on emptiness.

To cultivate compassion, bodhisattvas meditate on the impure aspects of others' bodies not only to subdue their own sexual desire but also to understand sentient beings' suffering in cyclic existence. Seeing sentient beings bound to foul

and fragile bodies as the result of self-grasping ignorance, bodhisattvas generate great compassion and bodhicitta. They practice the six perfections to become fully awakened buddhas so they can more effectively benefit sentient beings in saṃsāra and lead them to awakening as well.

## *The Selflessness of Phenomena and the Four Establishments of Mindfulness*

In your practice of the four establishments of mindfulness, first cultivate a general understanding of the four meditation objects and how to practice mindfulness of them. Then gradually delve into subtler levels. For example, first understand the characteristics of the body that you can easily perceive. By deepening your mindfulness, subtler levels of the nature of the body become apparent. These levels are not fabricated; they are discovered through meditation and can be examined. Then apply meditation instructions found in texts such as Maitreya's *Ornament of Clear Realizations*, Candrakīrti's *Supplement*, and Śāntideva's *Engaging in the Bodhisattvas' Deeds* to the body, feelings, mind, and phenomena. Below is Śāntideva's elucidation of the selflessness of phenomena in terms of the four establishments of mindfulness. The selflessness of phenomena will be explained in more depth in future volumes, but the presentation here will give you a sense of the way bodhisattvas meditate on the four objects in order to realize the ultimate nature of reality.

Ultimate analysis inquires into phenomena's actual mode of existence to determine if phenomena exist inherently, from their own side, and with their own independent essence as they appear to exist. When we search to identify how the body exists, can we find its essence? Do feelings arise independent of other factors? Is the mind the I?

If something has an independent or inherent essence, we should be able to pinpoint it when investigating what that object actually is. If it cannot be found, the only conclusion to draw is that the object does not possess such an essence. Ultimate analysis refutes the object's inherent existence, not its conventional existence. The object is not totally nonexistent. Conventional existence is not within the purview of ultimate analysis.

Ultimate analysis examines the relationships between cause and effect, a whole and its parts, a phenomenon and its basis of designation, and agent, object, and action. This analysis is not mere intellectual amusement, because the ignorance grasping inherent existence is the root of saṃsāra, the source of our misery and confusion. Proving that ignorance is erroneous because the inherent existence it apprehends does not exist is crucial to our own and others' well-being and awakening.

### *Selflessness of Phenomena in Relation to Mindfulness of the Body*

If the body were truly existent, it should be findable when searched for with ultimate analysis. A truly existent body would exist independent of all other factors — its causes and conditions, its parts, and the mind that conceives and designates it. Śāntideva examines the body in relation to its parts, trying to find the body in its parts, searching for a part or collection of parts that *is* the body. He begins (BCA 9:78):

A body is neither the feet nor the calves.  
Nor is a body the thighs or the hips.  
Neither the belly nor the back is the body.  
Nor is a body the chest or the arms.

The sides of the torso and the hands are not a body.  
Nor is a body the armpits or the shoulders.  
The visceral organs also are not it.  
And neither is a body the head nor the neck.  
So what then is a body?

The body appears to have its own objective existence and we assent to that appearance, believing it to be true. Is it? If the body had objective or inherent existence, it would be findable as either one and the same with its parts or as completely unrelated to them. When we mentally divide the body into its parts, are any of the parts the body? The hands are parts of the body, but they are not a body. Similarly, the feet, torso, internal organs, and head are parts of the body, but they are not a body.

The collection of all these parts is also not a body. Since each part individually is not a body, a collection of non-bodies could not be a body. For example, an apple is not a grapefruit, so a collection of apples cannot be a grapefruit. Furthermore, if the parts of the body were mentally spread out on a mat, we wouldn't see a body. There would be only the collection of the individual parts. The body comes about by our conceptually combining different components into a whole and giving it the name "body." But within that collection a body cannot be found.

We might think of the body as a single unit and ask, "Does a portion of the body exist in each part or does a whole body exist in each part?" But if a portion of the body were located in each part, that would still leave us searching for the whole body. And if a whole body existed in each part, there would be as many bodies as there are parts. For example, when looking at Tashi's body, we would see many bodies because each hand, foot, tooth, and so on would be a body. This is certainly not the case. For these reasons, the body and its parts are not one and the same.

Could a body exist separate from its parts? If a body and its parts were inherently separate, all the parts could be removed and the body itself would remain. But without a head, torso, limbs, and internal organs, a body cannot be found. If the body is neither the same as its parts nor different from them, what is the body? Where can our body be found? In Chan (Zen) this is called the "Great Doubt." If you persist in questioning, there may be a breakthrough when you realize that the body you feel is so real does not exist.

The *Dharmasaṅgīti Sūtra* says (§§ 2):

One establishes mindfulness with the question, "What is called *the body*?" "This body is like space" . . . This body has not come from the past. It does not proceed to the future. It is not present in the past or the future. Other than being something that has arisen from unreal afflictions, it is devoid of an agent or one who experiences, it has no beginning, end, or middle, no fundamental location, no master, no owner, and no possessor. It is designated by the transient labels "assemblage," "body" . . . This body has no essence. It arose from the semen and ovum of one's father and mother, is by nature

impure, putrid, and foul-smelling. It is troubled by the thieves of attachment, animosity, and confusion and by fear and despair.

## REFLECTION

---

---

Śāntideva compares our confusion about how the body exists to our thinking an effigy or a scarecrow is a person (BCA 9:83–84):

Thus, a body is not [truly] existent.  
But because of ignorance,  
the mind perceiving a [truly existent] body in hands, and so forth,  
arises,  
like the mind perceiving a person in an effigy,  
because the [effigy] is shaped in the form [of a person].

For as long as the conditions persist,  
the body [of the effigy] is seen as a person.  
Likewise, for as long as there is [grasping at true existence] of the  
hands and so on,  
they are seen as the body.

Although a truly existent body does not exist at all, because of ignorance our mind perceives a truly existent body mixed in with the hands and other parts of

the body. For example, if we see a scarecrow in a field and mistakenly think it is a person, we'll want to stop and chat with him. The scarecrow may be shaped like a person, but it is not a person, even though our confused mind thinks it is. Similarly, even though the ignorant mind apprehends the body as truly existent, it does not exist that way.

Our mind imputes “person” to the scarecrow due to the arrangement of parts — the pole, straw, clothes, hat, and so forth. The mind also imputes “body” to a collection of parts, such as the skin and so forth. Both the person and the body are mere imputations. However, there is a difference between them. The basis in dependence on which the confused mind imputes “person” — straw and cloth — cannot function as a person. However, the body that exists by being merely imputed in dependence on the collection of bodily parts is capable of functioning as a body.

A nominally existent body is present; it is imputed in dependence on the parts, even though it is neither identical with nor completely separate from its parts. The body is mere name, a mere designation. Saying it is “mere name” doesn't mean that the body is just a name and does not exist. Rather, “mere” excludes its existing from its own side. It means the body exists by being merely designated in dependence on its basis of designation: the collection of its parts.

As long as the conditions to mistake a scarecrow for a person are present — such as dim light and distance — we apprehend it as a person. Once they are removed by our approaching it, this wrong perception ceases. Similarly, as long as the ignorance grasping true existence resides in our mental continuum, we will misapprehend the collection of parts to be a truly existent body. However, when the wisdom realizing reality dawns in our minds, the wrong perception of a truly existent body ceases. This is the realization of its emptiness.

This concludes showing that the whole or “part possessor” — the body — lacks true existence. In the same way, each part of the body lacks true existence. Looking at one part of the body, such as the hand as a whole, we see that it too is composed of parts. It is not identical to any of the fingers, the palm, or their collection, nor is it totally unrelated to them. Neither a portion of the hand nor the whole hand is found in each finger. The hand is also not found separate from the fingers and palm. Thus, like the body, a truly existent hand cannot be found. A hand exists by being merely designated in dependence on the collection of its

parts — the fingers and the palm. Likewise, a finger cannot be found in any of the individual joints, or as a collection of the joints, or separate from the joints.

Continuing to mentally dissect phenomena into smaller and smaller parts, we are unable to find a smallest part that cannot be further subdivided. Although atoms and even subatomic particles may seem to lack parts, if we look closer we see that this is not the case. They are in constant flux, moving here and there. In order to move and to contact other particles, they must have directional parts — a north, east, south, and west side, a top and a bottom. All composite things depend on their parts. Anything that is dependent cannot be independent. Since “independent of all other factors” is the meaning of true existence, no phenomenon exists truly. Śāntideva then asks (BCA 9.87):

Who with discernment would be attached  
to a body that is like a dream?  
Since a body does not (truly) exist,  
then what is a male and what is a female?

Our identity as male or female is very strong. When our mother gave birth, the first question people asked was, “Is it a girl or a boy?” However, seeing that our biological sex is merely designated in dependence on the shape of a collection of molecules, we can release grasping at truly existent males and females. Women and men come about only through the process of imputation; they do not exist truly, from their own side.

A person with discernment is one who uses probing awareness to examine how things exist. Seeing that all things lack any findable or inherent essence, a wise person dwells in space-like meditative equipoise on emptiness — the absence of inherent existence.

Although all things are empty of true existence, they are not nonexistent. How do they exist? Like dreams, in that they do not exist in the way they appear. When dreaming, we believe the objects and people in our dreams are real. So, too, when we are in the sleep of ignorance, we believe the people and environment around us have independent, findable essences. When we realize that they do not, we awake from the sleep of ignorance and understand that what we formerly believed to be absolutely real was like a dream in that it does not exist the way it appears. Although people and phenomena are empty, they appear. Although they appear, they are empty.

## *Selflessness of Phenomena in Relation to Mindfulness of Feelings*

Feelings are very important to us. All day long, we try to arrange our environment so that we experience only happy feelings and avoid painful feelings. Attachment to feelings is a prime motivator for our actions. When we feel pleasure, we crave for it to continue and do everything possible to make that happen. Faced with suffering, we crave to be free of it and act on that impulse, often neglecting to consider the effects of our actions on ourselves or on others.

What is the actual mode of existence of these feelings that constantly preoccupy us? If they had an inherent nature, perhaps being attached to pleasant feelings and averse to unpleasant ones would be justified. But if they do not have an inherent nature and resemble dreams or illusions, such craving is unsuitable and can be released.

Nāgārjuna inquires into the nature of our mental world of experience (LS 6):

Since without the felt there is no feeling;  
feeling itself is devoid of self.  
So you uphold that what is felt too  
is devoid of inherent existence.

Feeling is a complex process involving an object of experience (the felt), the subjective experience (the feeling), and the act of experiencing it. Feeling itself is dependent on two factors: the object of the experience and the act of experiencing it. An object that is felt depends on the agent that is feeling it and the action of feeling. The action of experiencing a feeling depends on the agent experiencing it and the feeling that is being experienced. The agent, object, and action are mutually defined; one of them cannot be teased out and identified independent of the other two. In the first two lines, Nāgārjuna says that without the object of experience, there is no subjective feeling. Being dependent, the feeling cannot be independent and lacks inherent existence. In the last two lines, he says that the object is dependent on the feeling that is experienced, so it too is empty of inherent existence.

This investigation of the agent, object, and action is a standard line of reasoning that Nāgārjuna uses repeatedly in the *Treatise on the Middle Way*, where he analyzes concepts such as “coming,” “going,” “arising,” “ceasing,” and so forth in terms of these three factors: (1) the agent — who or by which (T. *gang*

*gis*), (2) the object — what (T. *gang*), and (3) the action or process — how (T. *jitar*). In the case of investigating feeling, “what” is the felt experience — pleasant, unpleasant, or neutral. “Who or by which” has two dimensions. One is the person, the agent who experiences the feeling. The second is the subjective mental state itself. It is also the agent in that it is the medium or instrument through which the feeling is experienced. “How” is the action of feeling. These three exist in dependence on each other. Because they exist dependently, they do not exist inherently.

Bodhisattva āryas, who have directly realized the lack of inherent existence, do not usually grasp feelings to exist inherently. Due to their wisdom, they do not experience painful mental feelings. Due to their merit, they do not experience painful physical feelings, although śrāvaka āryas may.

According to Mādhyamikas, anything that exists inherently cannot depend on causes and conditions and thus is permanent. In that case, a suffering feeling would never cease. But we know through personal experience that suffering ceases. Conversely, if happiness existed truly, it would always arise when a desirable object was present. However, this is not the case. Delicious food normally produces feelings of pleasure, but when someone is overwhelmed by grief, it does not. If feelings truly existed, this fluctuation could not occur because feelings would not be affected by causes and conditions.

Pain and pleasure do not abide in the objects we contact. If they did, we would always have the same experience when seeing a particular person and everyone else would also have the same feeling arise upon seeing them. If cake were truly pleasurable, eating it when we are full would produce pleasure. Furthermore, everyone would like the same foods. Believing that feelings exist inherently contradicts our daily life experiences.

*Seven Point Thought Training* speaks of three objects (attractive, unattractive, and neutral), three feelings (pleasure, pain, neutral), and three poisons (attachment, animosity, and confusion). When meeting an attractive object, ordinary beings experience pleasure, and immediately attachment arises for both the object and the feeling. When they encounter an unattractive object, pain or displeasure is experienced and they become upset. When contacting neutral objects, they experience neutral feelings and respond with confusion. Here the unsatisfactory nature of saṃsāra and its lack of lasting peace are vividly apparent. Since we cannot avoid objects that trigger feelings, we need to see that we have a

choice regarding our emotional reactions to them and then train our minds in more beneficial and realistic responses to feelings. One method is to recall with compassion that all sentient beings experience these three feelings and the disturbing emotions they provoke. Then imagine taking these feelings and disturbing emotions from sentient beings so that they can experience peace. Follow this by imagining that you give them your happiness. This practice of “taking and giving” functions to increase our love and compassion and reduce our three poisons.

When skilled practitioners experience pleasure and happiness, they recognize that these feelings are not truly existent and are like dreams. They do not crave for happiness to continue and do not become anxious when suffering arises. They feel compassion for others who are unaware of the actual nature of feelings and respond to feeling with craving that leads to the creation of afflictive karma.

Śāntideva employs many reasonings to refute the inherent existence of the body, feelings, mind, and phenomena because he is addressing practitioners with sharp faculties. While one reasoning is sufficient to establish phenomena’s emptiness of inherent existence, understanding emptiness through many reasonings swiftly consumes the obscurations to liberation and awakening and enables bodhisattvas to teach others about emptiness in a skillful manner.

In this light, Śāntideva now refutes the true existence of feelings by refuting the true existence of their cause, contact. He begins by questioning assertions that sense faculties and their objects are made of partless particles.

In order for a consciousness with its accompanying feeling to arise, three conditions are necessary: the object, the sense faculty, and an immediately preceding moment of consciousness. The combination of these three gives rise to contact, which allows the characteristics of the object to be known. Contact then gives rise to feeling. If these three factors existed truly, they would give rise to truly existent contact followed by truly existent feeling.

The sense faculties for the five physical senses are subtle forms, and their objects are also form. According to Vaibhāṣikas and Sautrāntikas, forms are composed of partless particles — subtle particles that have no sides or parts. Śāntideva asks: if a gap or space existed between the sense faculty and its object so that they did not touch, how could contact occur? Without the two touching, the sense faculty could not contact the object and feeling could not arise. On the other hand, if the partless particles of the sense faculty touched the partless

particles of the object, the two would collapse into one. This is because particles that lack directional parts cannot have one side that touches another particle and another side that does not. Without the particles of both the sense faculty and the object having sides (directional parts), they could not contact each other.

If they do meet, each one should have a side that touches the other and another side that doesn't. If each one lacks two sides, the two particles would merge together. However, being partless particles they cannot merge because there is no space within them and they are the same size.

Some scientists seek the smallest particle that cannot be subdivided and is the ultimate building block of the universe. Years ago, it was thought that atoms were that indivisible unit, but then it was found that atoms were composed of other particles and could be subdivided. Since then, a variety of subatomic particles have been discovered, but none of them has been shown to be ultimately the smallest.

Furthermore, contact between the immediately preceding consciousness and its object isn't possible. Since the consciousness is immaterial, it cannot physically contact a sense faculty that is material. In the context of things being truly existent, such an aggregation of the three — consciousness, sense faculty, and object — cannot occur. This aggregation, which is contact, is composed of parts and is dependent on its parts, meaning contact is a mere designation in the same way that the body is a mere designation dependent on the collection of its parts and the mind that designates it.

Since truly existent contact does not exist, it cannot give rise to truly existent feelings. Since feelings arise dependently, why should we tire ourselves out craving pleasurable feelings?

Feelings also do not exist truly as they appear to; they are like dreams. Since pleasurable feelings have no essence, why go through so much effort to have them?

Before refuting the selflessness of phenomena in *Engaging in the Bodhisattvas' Deeds*, Śāntideva established the selflessness of persons. There is no sense in craving happiness and fearfully rejecting suffering when neither the person experiencing those feelings nor the feelings themselves truly exist. Since both the persons who experience feelings and the feelings are not ultimately findable entities, the craving that arises based on grasping at their true existence can be

eliminated. By familiarizing ourselves with the view of emptiness, ignorance and craving are worn away until they are finally eradicated, leading to liberation.

The person experiencing feelings and the feelings exist conventionally. Arhats and buddhas have feelings, but having destroyed self-grasping ignorance, they do not grasp them as truly existent. Nevertheless, happiness and suffering exist dependently, so mindfulness of the actions that produce them is important. One of the principal ways in which karma ripens is the production of feelings: constructive karma produces happiness, whereas destructive karma leads to suffering.

Each consciousness has a feeling component that arises simultaneous with it. If that feeling existed from its own side, it could not be experienced by that mind. This is because the feeling would exist independent of everything else and would have no relationship with the consciousness that it accompanies.

In the context of true existence, a mind could not experience a feeling that arises before or after it. Feelings that arose before that moment of mind have already ceased when that mind arises, and cannot be experienced by that mind. Feelings arising after that moment of mind have not yet arisen, and that moment of mind cannot experience them. If feelings existed truly, it would be impossible for any mind — before, simultaneous, or after a feeling — to experience it. In this case there would be no experiencer (the mind) and nothing that is experienced (the feeling).

If the mind cannot experience feeling, then nothing else can either. Feeling cannot experience itself because then the experiencer and the experienced would be the same, and that is not tenable. Asserting truly existent feelings is a conundrum!

### *Selflessness of Phenomena in Relation to the Mindfulness of the Mind*

The presence of the mind demarcates the difference between a corpse and a living being. The mind cognizes, experiences, perceives, and feels. Both saṃsāra and nirvāṇa depend on the mind, and it is the mind that is transformed by practicing the path. Most people have never asked themselves what their mind is or how it exists. Does it exist as a self-enclosed, independent entity? Is it independent and findable when searched for with ultimate analysis? Or does it exist like a dream, appearing truly existent even though it is not?

Where could a truly existent mind exist? It is not in the sense faculties — the eyes, ears, and so forth — nor is it in the objects that the mind cognizes — forms, sounds, and so forth. It cannot be found between the object and sense faculty. It is not the body and cannot be found either inside the body or completely separate from it. The notion of a truly existent mind is fabricated by distorted conception and ignorance. The *Ratnacūḍa Sūtra* says (ŚS 7–8):

Kāśyapa, even though one looks for the mind everywhere, it is not found. Whatever is unfindable is unobservable. Whatever is unobservable does not arise in the past, or in the future, or in the present. Whatever does not arise in the past, or in the future, or in the present really transcends the three times. Whatever transcends the three times is neither [inherently] existent nor [totally] nonexistent.

When we search for exactly what the mind is using ultimate analysis, there is nothing we can identify as the mind. Rather, the mind is what exists by being merely designated in dependence on a continuum of moments of mental states.

Because no truly existent mind exists, sentient beings have natural nirvāṇa (*prakṛti-nirvṛta*), meaning that their minds are, by their very nature, free from true existence. This natural emptiness of the mind is one aspect of buddha nature; it makes possible the elimination of obscurations and the attainment of liberation and awakening.<sup>124</sup> When we realize that the mind does not exist from its own side, the grasping at such a mind subsides. By familiarizing ourselves with this realization we will be able to cleanse all obscurations from our minds.

Saying that a truly existent mind cannot be found in any of the various types of mind or separate from them does not mean that the mind is totally nonexistent. The mind exists nominally, as do all phenomena: it functions, it arises and ceases. Since each moment of mind is dependent on causes and conditions, the mind can be transformed. There are many types of mind, including primary consciousness, mental factors, and virtuous and nonvirtuous states of mind. All of these perform their own function although they lack any inherent essence.

If we search for a truly existent mind that perceives yellow, can we find it? If the mind existed before yellow, yellow could not be perceived because it wouldn't

exist yet. If the cognizing mind and the object existed simultaneously, yellow would not be the cause for the perception because causes must always precede their effects. If a truly existent perceiver existed after the yellow, it could not perceive yellow because yellow would have already ceased. While conventionally the object of a perceiver exists just prior to that perceiving consciousness, if things existed truly this could not be the case. A truly existent perceiver is independent of all other factors and would not depend on an object or a sense faculty to arise. Similarly, a truly existent object cannot produce a perceiver of that object because it would exist independent of any mind.

### *Selflessness of Phenomena in Relation to the Establishment of Mindfulness of Phenomena*

The *Ārya Lalitavistara Sūtra* states (ŚS 13):

Composite phenomena are impermanent and unstable. They are subject to destruction, like an unbaked pot. They are like a borrowed article. Like a sandcastle, they do not last long. These composite phenomena are destructible . . . They are fragile, for they depend on cooperative conditions. Composite phenomena are like the diminishing flame of a lamp, for their nature is to quickly arise and pass away. Like the wind, they do not remain long. Like a bubble, they are fragile and devoid of an essence. Composite phenomena are unmoving and empty. When investigated, they are seen to be like a mound of plantain trees. Like an illusion, they delude the mind . . . All changes in composite phenomena are brought about by causes and conditions, with one acting as the cause for another, which arises in dependence on it.

By contemplating the selflessness of composites — conditioned things such as the body, feelings, and mind — we ascertain that the truly existent arising of any thing is impossible. In the *Treatise on the Middle Way*, Nāgārjuna asks: If there are no truly existent composites, how can there be truly existent uncompounded phenomena? If conditioned phenomena do not truly exist, neither can unconditioned phenomena, because the latter are posited in dependence on the former. For example, true cessation, an unconditioned

phenomena, is posited on the basis of a mind that is freed from all defilements. True cessation is a quality of this mind, and this mind is conditioned.

As a Mādhyamika, Śāntideva wishes to demonstrate emptiness as an attribute of all phenomena, so this section on the mindfulness of phenomena is a short summation of the previous arguments; it is not a presentation of the emptiness of mental objects. However, arguments similar to the ones that refute the inherent existence of the body, feelings, and mind can be applied to mental objects as well. Seeing that all phenomena exist only by name, we meditate on their emptiness.

### *The Benefits of the Four Establishments of Mindfulness*

The four establishments of mindfulness follow a particular sequence. Establishing mindfulness on the body is first because we ordinary beings think the body is the place where an independent I is located. Mindfulness of feelings follows because we ignorantly think feelings are what an independent self enjoys. Mindfulness of the mind is next because we erroneously believe the self is the mind that thinks and perceives. Or, put another way, we adhere to the false belief that the mind is an independent self. All the tenet systems below Prāsaṅgika Madhyamaka identify the mind, the continuity of mind, or one type of mind as the ultimate illustration of the self. Prāsaṅgikas, however, say the mere I — the person that is merely designated in dependence on the aggregates — is the illustration of the person. Mindfulness of phenomena follows because ordinary beings mistakenly believe our emotions and attitudes are what makes an independent self afflictive or worthwhile. In brief, on the basis of the body, feelings, mind, and phenomena, ignorance generates abundant misconceptions that keep us bound in saṃsāra.

In short, seeing the body as impure, we investigate its origins and see that it came from karma created by afflictions. Afflictions arose due to afflictive feelings. Tracing the origin of feelings leads us to investigate the nature of mind, and through this we see that the mind is neutral and its nature is pure. Having the wish for happiness, we seek a method to free the mind from the afflictions, which arise from feelings, which in turn keep us bound to this impure body. Investigating the method to attain happiness, we discern what to cultivate and what to abandon on the path. Through mindfulness and probing wisdom, we see that although the body, feelings, mind, and mental factors are the basis of

designation of the person, they are not the person. There is no independent person that is findable by analysis seeking the person's ultimate mode of existence. The I is empty of inherent existence. Continuous meditation on this cuts the ignorance that is the root of saṃsāra.

When meditating on the body, feelings, mind, and phenomena, it is important to observe your own experiences. Don't think about these topics intellectually or abstractly, but examine your body and see its impurity. Observe your feelings and experience for yourself their suffering nature. Focusing on your mind, recognize its momentariness and determine that the mind is not you.

The four establishments of mindfulness help us to understand our daily life experiences. For example, when people fall ill or suffer from aging, many of them are caught by surprise and think these experiences should not happen. Their mind rejects these events, thinking that they happen only to other people. Through mindfulness of the body, we discover that the body is unclean, impermanent, and duḥkha by nature. We also understand that the mind arises and changes dependent on causes and conditions. Being dependent on these factors, the mind lacks independent existence. Understanding this enables us to accept the reality of illness, aging, and death because they are simply the nature of the body.

The purpose of meditating on the four establishments of mindfulness is to discern what to practice and what to abandon and then to train our body, speech, and mind accordingly so that we can free ourselves from saṃsāra. By countering the four distorted conceptions, the four establishments of mindfulness deepen our understanding of the four truths. In addition, these meditations make the aspiration for liberation arise within us, show us the way to liberation, and generate within us the wisdom that leads to that goal.

Mindfulness of the body examines the nature of this body and sees that it is composed of tissue, organs, and bone, none of which are attractive. This body produces foul substances while alive and becomes an ugly corpse when it dies. Seeing this, we overcome the distorted conception of the body as clean and pure and gain a clear insight into the first truth, the truth of duḥkha, because we become well aware of the unsatisfactory nature of our body.

Through mindfulness of feelings, we observe the physical and mental feelings that we experience throughout the day. When the mind becomes involved in these feelings — craving pleasurable ones, desiring to be free from unpleasant ones, not wanting neutral feeling to change into suffering — we veer off balance.

Mindfulness of feelings overcomes the distorted conception that what is unsatisfactory in nature is pleasurable and brings awareness of the second truth, the truth of the origin of duḥkha, because we see clearly how ignorance and craving bring duḥkha.

When we try to point to where this I or self is, we usually identify our mind. Although the self does not exist in the mind, and the mind is not the self, from habit and misconception we identify the mind as the self. But when we carefully reflect on the nature of the mind, we understand that the mind is composed of many parts — the mind of the past, the mind of the future, and the mind of the present — and thus is not a unitary whole. By examining the present mind, we see its momentary nature: it continually changes in each nanosecond and depends on many factors, such as its causes. This leads to understanding that there is no permanent, unitary, and independent self based on this mind and eliminates the grasping at such a self. Thus mindfulness of the mind is associated with overcoming the distorted conception holding the impermanent as permanent. And by making evident the lack of a permanent, unitary, and independent self, mindfulness of the mind leads us to see the possibility of eradicating self-grasping ignorance and attaining the third truth, the truth of the cessation of duḥkha and its causes.

The practice of mindfulness of phenomena involves contemplating the fifty-three phenomena of the afflictive class associated with cyclic existence and the fifty-five phenomena of the pure class associated with the path to nirvāṇa. Reflecting on the specific and general characteristics of these two kinds of phenomena brings knowledge of how to traverse the stages of the path and understanding of the fourth truth, the true path. The essence of the true path is the realization of selflessness; thus mindfulness of phenomena destroys the distorted conception that what lacks a self has one and brings understanding that all phenomena are empty of true existence.

Since the four establishments of mindfulness eliminate the four distorted conceptions and bring understanding of the four truths, it is a comprehensive and profound practice. By practicing as explained above, our positive qualities will grow, and correct understanding will increase in power, so that liberation and awakening will become not only an aspiration but a reality. In *Differentiation of the Middle and the Extremes* (*Madhyāntavibhāga* 4:1), Maitreya concludes:

Because [the body] is unmanageable,  
because [feelings] are the cause of craving,  
because [the mind] is the ground,  
and because [the path] is not ignorant,  
one is led to realize the four truths [of āryas].  
Therefore, meditate on the establishments of mindfulness.

In short, mindfulness is a mental factor that is active in many types of meditation. Practices that rely heavily on mindfulness, such as the four establishments of mindfulness, are embedded in the structure of the Buddhist path to liberation as a branch of the thirty-seven harmonies with awakening. For their true purpose to be accomplished and maximum benefit derived, these mindfulness practices are done with refuge in the Three Jewels and the aspiration to attain liberation or full awakening.

## 14 | The Thirty-Seven Harmonies with Awakening

IN THE *Greater Discourse to Sakuludāyin* (MN 77), the ascetic Sakuludāyin stated that the Buddha’s disciples revere the Buddha because he lives in seclusion, eats little, is satisfied with whatever alms food he receives, is content with any robe he has, and with whatever place he sleeps — even in a cemetery. The Buddha replied that if this were the criteria for his disciples’ respect, then they would venerate those who are more ascetic than he. Rather, they respect him because he teaches the four establishments of mindfulness, four supreme strivings, four bases of spiritual power, five faculties, five powers, seven awakening factors, and the āryas’ eightfold path — that is, the thirty-seven harmonies.

In the sūtra *What Do You Think about Me?* (MN 103), the Buddha’s disciples proclaim that they treasure him not because he teaches the Dharma for the sake of receiving offerings, but because he seeks their welfare and teaches the Dharma with compassion. What is that Dharma? The four establishments of mindfulness, four supreme strivings, four bases of spiritual power, five faculties, five powers, seven awakening factors, and the eightfold path — that is, the thirty-seven harmonies.

In the *Connected Discourses on the Unconditioned* (SN 43.5–11), the Buddha asked, “What is the path leading to the unconditioned — to nibbāna?” Here, too, he listed each of the thirty-seven harmonies individually. Clearly these are the essence of his teaching that he wishes his followers to study, reflect on, and meditate on so that they will attain the lasting peace of nirvāṇa.

The thirty-seven harmonies are called “harmonies with awakening” because they are requisites for the attainment of awakening and are conducive to awakening. In the Pāli tradition “awakening” in this context refers to the four supramundane paths and the fruits of stream-enterers and so forth. In the Sanskrit tradition, it refers to the final goal of any of the three vehicles — arhatship or buddhahood. In both traditions, some of the thirty-seven are supramundane paths, others are not.

We covered the four establishments of mindfulness in the preceding chapter and will now continue with the other six sets. The English translations of the Sanskrit and Pāli sūtra passages listing these sets are very similar, so sometimes we will reference the Pāli passage and at other times the Sanskrit passage. When the explanations in the two traditions are similar, they are interwoven; when there are differences they are explained separately. None of the differences contradict meanings found in the other tradition.

## *The Four Supreme Strivings*

Meditation on the fourth establishment of mindfulness — the mindfulness of phenomena — inspires us to develop positive qualities and remove disturbing emotions. The four supreme strivings (*samyak pradhāna, sammāpadhāna*) are the way to do this.<sup>125</sup> The *Sūtra on the Ten Grounds* says (STG 54.62):

The four supreme strivings are like this: (1) To prevent the arising of nonvirtues that have not yet arisen, he generates aspiration, makes effort, arouses energy, holds the mind firmly, and steadfastly places the mind. (2) To abandon the nonvirtues that have arisen he generates aspiration . . . (3) To generate virtues that have not yet arisen, he generates aspiration . . . (4) To maintain and enhance virtues that have arisen, he generates aspiration, makes effort, arouses energy, holds the mind firmly, and steadfastly places the mind.

The first two supreme strivings are practiced with respect to afflictions and destructive actions — to eliminate those already manifest and avoid generating new ones in the future. The latter two are practiced in relation to positive qualities — strengthening and expanding those already cultivated and cultivating new ones that have yet to be cultivated. These four supreme strivings are called “forms of effort”; they are “supreme” because, combined with the bodhicitta motivation, they will lead to full awakening.

The sutra instructs us to practice by generating aspiration, making effort, arousing energy, holding the mind firmly, and steadfastly placing the mind. That

particular sequence is because the four supreme strivings are meditation practices to enhance serenity and insight.

With *aspiration*, we engage in the meditative practices of the four supreme strivings. *Making effort* is the remedy to the imbalance of serenity and insight. This is accomplished by means of the three: serenity, holding the mind firmly, and equanimity. During meditation, if insight is more powerful than serenity, the mind is not in balance and is compared to a lamp in the wind. When the lamp of serenity isn't stable, suchness cannot be firmly held in mind. Strengthening serenity is the remedy. But at other times serenity is strong while insight is weak; although the mind is stable, ultimate reality cannot be discerned clearly. *Holding the mind firmly* remedies this. When serenity and insight are in balance, the mind remains in equanimity.

*Arousing energy* means to eliminate laxity and restlessness, two faults impeding serenity. *Holding the mind firmly* remedies laxity. When laxity arises in the mind, the mind is drawn inside and the intensity of the clarity is lacking. Applying antidotes to uplift the mind — such as visualizing light or reflecting on precious human life — counteracts laxity. *Steadfastly placing the mind* is the remedy to restlessness. To settle the mind, apply antidotes that make the mind more sober, such as contemplating death and impermanence.

### *The Four Supreme Strivings in the Pāli Tradition*

The four supreme strivings are spoken of in the *Connected Discourses on the Supreme Strivings* (SN 49). In practicing each of the four, after generating the aspiration, a practitioner makes effort, arouses energy, applies his mind, and strives, all of which describe different ways to apply effort.

1. A practitioner arouses the aspiration and applies effort to *prevent or restrain afflictions and nonvirtuous mental states from arising*. To do this, we must restrain the senses and the mind. For example, restraining our eyes from looking at all the ads on our digital devices will prevent greed and attachment from arising. Restraining our mind from mulling over others' faults impedes malice from consuming the mind.

2. A practitioner arouses the aspiration and makes effort to *abandon or overcome nonvirtuous states that have already arisen*. If we experience jealousy, for instance, instead of tolerating it, we overcome it by rejoicing in others' virtues.

3. A practitioner generates the aspiration and makes effort to *bring into being virtuous states that haven't yet arisen*. Here we make effort to cultivate any and all virtuous practices of studying, thinking, and meditating, and specifically to cultivate the four establishments of mindfulness and the seven awakening factors. When our mind lacks familiarity with these qualities, we make effort to practice them.

4. A practitioner generates the aspiration and arouses effort to *maintain virtuous states that have arisen — to strengthen and enhance them and to prevent them from degenerating*. Doing this enables us to protect virtuous mental states and bring them to full maturity. Specifically, it refers to sustaining favorable meditation objects so that full samādhi can be attained.

With these four supreme strivings, a practitioner is said to “slant, slope, and incline toward nibbāna.” The aspiration mentioned above is a virtuous desire or wish. Striving is synonymous with effort (*vīrya, viriya*), and with it the mind is able to abandon nonvirtuous states such as attachment, anger, and confusion, whether they have already arisen or have the potential to arise. Supreme striving leads to the cultivation of the virtuous mental states of nonattachment, nonanger, and nonconfusion.

Striving is the mental factor that leads to the abandonment of the floods,<sup>126</sup> the underlying tendencies, the various types of craving, and the higher fetters of attachment to the form and formless states, conceit, restlessness, and ignorance. In its fully developed form, striving is the path factor of effort in the supramundane path.<sup>127</sup>

## REFLECTION

---

1. Consider that a nonvirtuous thought or action that hasn't yet arisen could arise in your mind. Imagine how generating aspiration, making effort, arousing energy, holding your mind firmly, and steadfastly placing the mind could prevent this.
2. Make an example of a nonvirtue that has arisen and generate aspiration, make effort, arouse energy, hold your mind firmly, and steadfastly place the mind to subdue that thought.
3. Think of a virtuous quality you would like to have and apply the above steps to generate it.
4. Think of a virtuous quality you already have and apply the above steps to enhance it.

5. Feel that you now have new tools to apply to help you become the kind of person you would like to be.
- 

## *The Four Bases of Spiritual Power*

The Sanskrit *ṛddhipāda* and the Pāli *iddhipāda* can be translated as “bases of spiritual power” or “legs of magical feats.” *Ṛddhi* (*iddhi*) refers to supernormal powers that are gained through mental development, specifically deep concentration. The worldly supernormal powers include making manifestations of one’s body, flying in the air, walking on water, passing through walls or mountains, going under the earth, becoming invisible and then visible again, and so forth. The Buddha said the highest supernormal power is unpolluted liberation of the mind, *nirvāṇa*.

The *Ornament of Sūtras* (*Mahāyāna Sūtrālamkāra*) discusses the four bases of spiritual power in detail, saying that their purpose is to generate numerous emanations by which the meditator can travel to various buddha fields. *Pāda* literally means foot, thus the common Tibetan translation for *ṛddhipāda* is legs of magical emanations. Just as our legs take us places, with the four concentrations we can emanate many bodies and go to many buddha lands to hear teachings from and make offerings to a multitude of buddhas.

By extension, *pāda* can mean basis or foundation. Just as the body rests on the feet, spiritual powers — both miraculous feats and the ultimate spiritual power of liberation — rest on these four.

The *Sūtra on the Ten Grounds* says (MMAB 51):

The four bases of spiritual power are like this: (1) The basis of spiritual power of *aspiration* combined with concentration, and the application [of antidotes] that abandon [faults], abides in isolation, abides in detachment, abides in cessation, and is meditation directed toward thorough complete abandonment. (2) Similarly, the basis of spiritual power of *effort* . . . (3) Similarly, the basis of spiritual power of *intention* . . . (4) Similarly, the basis of spiritual power of *investigation* combined with concentration [and] zeal,

abiding in isolation, abiding in detachment, abiding in cessation,  
and directed toward thorough complete abandonment.

*The application [of antidotes] that abandon [faults]* refers to overcoming the five hindrances and five faults that interfere with serenity. *Abides in isolation* can refer to the physical isolation of living in a remote place distant from worldly distractions, or to the mental isolation of being separated from conceptual chatter. *Abides in detachment* is being content with little and having few needs and wants. *Abides in cessation* means ceasing distractions as well as ceasing the three poisons.

The four establishments of mindfulness are the mental factor of mindfulness with the presence of wisdom, the four supreme strivings are the mental factor of effort, and the four bases of spiritual power are concentrations. With the four supreme strivings, practitioners make effort to reduce and eliminate afflictions and destructive actions and to strengthen positive qualities. By refining their serenity they attain a concentration in which the mind is serviceable. The four bases of spiritual power are exalted knowers of someone who has entered the path and are concentrations attained by applying zeal so that the eight antidotes overcome the five faults, as in the explanation of attaining serenity. The five faults, eight antidotes, and nine stages of sustained attention are usually taught at this point.

The four bases of spiritual power are concentrations (*samādhi*) — the concentrations of aspiration, effort, intention, and investigation. They are not the mental factors of aspiration, and so forth, but are concentrations concomitant with them. Aspiration, effort, intention, and investigation are the means to refine concentration in order to develop spiritual powers, such as the first five superknowledges. Practitioners who train in these four concentrations develop special powers to emanate and transform themselves and other objects; they can make their bodies very large, emanate several bodies, transform an ugly place into a beautiful one, and so on.

The four are practiced sequentially when training to make manifestations. First one has the aspiration to make a manifestation. This arouses the effort to do so. This leads to the intention that draws the mind to the object, and then to investigation of the instructions. All four of these powerful concentrations are present when a manifestation is being made.

1. The base of spiritual power of *aspiration* (*chanda*) is those qualities primarily associated with concentration that are achieved through intense aspiration to cultivate virtue and the effort of rigorous application.

2. The base of spiritual power of *effort* (*vīrya*, *virīya*) is those qualities primarily associated with concentration that are achieved through the effort of consistent application. This application is smooth, peaceful, and continuous, not aggressive, laborious, or tiring.

In general, virtuous antidotes may be applied in two ways. With rigorous application, we practice energetically but not consistently. With consistent application, we practice steadily but lack rigor and intensity. For our meditation to bear the best results, both rigorous and consistent effort to apply antidotes and cultivate virtuous qualities are needed.

3. The base of spiritual power of *intention* (*citta*) is those qualities primarily associated with concentration that are achieved through familiarization and having previously practiced concentration. Someone may have miraculous powers although she has not engaged in extensive cultivation of concentration in this life. These powers are the ripening of latencies on her mindstream from having previously developed concentration in previous lives.

4. The base of spiritual power of *investigation* (*mīmāṃsā*, *vīmaṃsā*) is those qualities primarily associated with concentration that are achieved through discriminating investigation shared by others. That is, someone teaches a practitioner how to do a meditation practice. She examines these instructions, practices them, and gains single-pointed concentration.

Two factors contribute to each spiritual power. One is the factor unique to each — aspiration, effort, intention, or investigation. The other is the concentration and zeal necessary to develop the concentration that becomes a basis for spiritual power.

One way of speaking about the four bases of spiritual power is in terms of eliminating the five faults that impede serenity. Through aspiration, we develop confidence and devotion to the practice, which counteracts the first fault, laziness. Effort enables us to retain the instructions and remember the object of meditation, eliminating the fault of forgetting the object and the instructions. Intention opposes the faults of restlessness and laxity by promoting the application of their antidotes and dispelling the fault of neglecting to apply them.

Investigation is alert and dispels the fault of applying an antidote when one isn't needed.

### *The Four Bases of Spiritual Power: Pāli Tradition*

These are explained in the *Connected Discourses on the Bases for Spiritual Power* (SN 51):

Monastics, these four bases for spiritual power, when developed and cultivated, lead to going beyond from the near shore to the far shore. What four? Here monastics, a monastic develops the basis for spiritual power that possesses concentration due to (1) *aspiration* and the volitional formations of striving, thinking, “Thus my aspiration will be neither too slack nor too tense; and it will be neither constricted internally nor distracted externally.” And he dwells perceiving after and before: “As before, so after; as after, so before; as below, so above; as above, so below; as by day, so at night; as at night, so by day.” Thus with a mind that is open and unenveloped, he develops the mind imbued with luminosity. He develops the basis for spiritual power that possesses concentration due to (2) *effort* . . . , (3) *mind* or *intention* . . . , and (4) *investigation* . . .

The four bases for spiritual power are explained:

1. *Aspiration* or desire is a deep desire or wish to attain spiritual powers. It fuels a practitioner's efforts to attain samādhi.
2. Through emphasizing *effort*, a practitioner cultivates the concentration that leads to spiritual powers.
3. Another practitioner may emphasize calming his *mind*, making it tranquil, pure, and radiant. This gentle but firm approach brings clarity of mind, and through this one gains the concentration that is a basis for spiritual attainments.
4. *Investigation* examines the mind and what factors promote and hinder its development. Alternatively, fueled by a wish to analyze and realize the nature of reality, a practitioner strives to attain concentration.

Using the example of the first base for spiritual power, in the sūtra passage above, “aspiration that is too slack” is aspiration associated with lassitude and “aspiration that is too tense” is aspiration associated with restlessness. “Aspiration that is constricted internally” is aspiration accompanied by lethargy and sleepiness, and “aspiration that is distracted externally” is repeatedly disturbed by sensual desire. “Perceiving after and before” has several meanings, one of them being the ability to focus continuously on the meditation object during the entire meditation session. “Perceiving below and above” refers to reviewing all the parts of the body from the soles of the feet to the tips of the hair on the head and back down again. “Dwelling by day and night” means that the practitioner develops the aspiration base of spiritual power by striving in a similar way in both the daytime and the night. “Developing the mind imbued with luminosity” means that when the practitioner sits on a terrace and pays attention to the perception of light alternating between eyes open and eyes closed, the light appears to be the same.

Having cultivated the four bases of spiritual power, a practitioner attains the five superknowledges. Once concentration is attained by means of aspiration, effort, mind, or investigation together with the volitional formations of striving, it can be combined with wisdom and used to attain the sixth superknowledge, the destruction of pollutants. Then the practitioner can abide in the liberation of mind and liberation by wisdom.

Aspiration, effort, a receptive and clear mind, and investigation are useful traits in our daily life as well. They facilitate our ability to attain the goals we seek. When these goals are spiritual, the four support the concentration that has the power to plummet the depth of the truth and bring liberation.

### *The Five Faculties and Five Powers*

These five qualities — faith, effort, mindfulness, concentration, and wisdom — are essential to gain all Mahāyāna virtuous qualities. The five faculties (*indriya*) have strong influence to oppose their opposites — indecision, laziness, forgetfulness, distraction, and ignorance. The five powers (*bala*) are the same mental factors that cannot be shaken by their opposites and are empowered with respect to their object, the four truths. They are paths that have great power to

produce their effects, the ārya paths. All five may simultaneously accompany a single primary consciousness.

Regarding the five faculties, the *Sūtra on the Ten Grounds* says (MMAB 51):

The five faculties are like this: (1) The faculty of faith abides in isolation, abides in detachment, abides in cessation, and is meditation that is meditation directed toward thorough complete abandonment. (2) Similarly, the faculty of joyous effort . . . (3) Similarly, the faculty of mindfulness . . . (4) Similarly, the faculty of concentration . . . (5) Similarly, the faculty of wisdom faith abides in isolation, abides in detachment, abides in cessation, and is meditation directed toward thorough complete abandonment.

1. Here *faith* refers to convictional faith, which has confidence and trust in the path of practice and the resultant liberation or full awakening. This faith arises from investigation, so it is naturally combined with wisdom and has conviction in the four truths. It also includes faith based on accepting scriptural quotations describing very obscure phenomena. This is not blind acceptance but is based on analyzing the reliability of a scripture's content.<sup>128</sup> Faith is a basis for all virtuous qualities. With it the mind is joyful, inspired, and enthusiastic.

According to their mental capacity, people generate faith by different means. Those of sharp faculties generate faith in the four truths, for example, through reasoning, investigation, and analysis. Those of modest capacities have faith in them because the Buddha or someone whom they respect explained them. A person may start out accepting a teaching due to her respect for the Buddha; but after hearing more teachings and being encouraged to investigate their meaning, she will develop confidence based on examination and understanding.

2. *Effort* enables us to quickly realize the four truths and takes delight in overcoming true duḥkha and true origins and in actualizing true cessation and true paths. Effort may also be enthusiasm to practice the six perfections. Like faith, effort is essential for the cultivation of virtuous qualities.

3. *Mindfulness* ensures that we do not forget the objects and aspects of the four truths. For Mahāyāna practitioners, it is conjoined with bodhicitta that seeks others' welfare.

4. On the basis of mindfulness, single-pointed *concentration* focused on the four truths is attained. In particular, this concentration focuses on the emptiness of true existence of all phenomena.

5. The faculty of *wisdom* is a single-pointed mind that realizes the four truths. From concentration comes the penetrative wisdom that individually discriminates the features and qualities of the four truths as well as their ultimate mode of existence. Bodhisattvas cultivate the wisdom that realizes all aspects of all phenomena — both their conventional and ultimate modes of existence.

The *Sūtra on the Ten Grounds* says (MMAB 51):

The five powers are like this: (1) The power of faith abides in isolation, abides in detachment, abides in cessation, and is meditation directed toward thorough complete abandonment. (2) Similarly, the power of joyous effort . . . (3) Similarly, the power of mindfulness . . . (4) Similarly, the power of concentration . . . (5) Similarly, the faculty of wisdom faith abides in isolation, abides in detachment, abides in cessation, and is meditation directed toward thorough complete abandonment.

The five faculties and the five powers have the same names and the same objects — the four truths — but the five powers are the stronger and fuller development of the five faculties. With the five faculties practitioners are unable to stop the discordant factors — nonfaith, laziness, forgetfulness, distraction, and ignorance or faulty wisdom — that may occasionally arise. However, with the five powers they have gained mastery over these five so that they can no longer manifest. The five powers are able to override, though not yet fully abandon, any opposing factors. The power of faith has conquered the lack of faith in the four truths, the power of effort has overcome the three types of laziness that interrupt meditation on them, the power of mindfulness has counteracted forgetfulness of the aspects and objects of the four truths, the power of concentration has eliminated the five hindrances to concentration on the four truths, and wisdom has destroyed all misunderstandings and wrong conceptions about them.

According to the *Compendium of Knowledge*, the five faculties and five powers are also distinguished by the path in which they are foremost. The five faculties are emphasized during the first two stages of the path of preparation — heat and peak. Here the five discordant factors — nonfaith and so forth — do

not arise during meditative equipoise but may manifest during subsequent attainment. The five powers are developed primarily in the third and fourth stages of the path of preparation — fortitude and supreme dharma. Here the five discordant factors also cannot arise during subsequent attainment.

Nāgārjuna encourages us to practice the five faculties and five powers:<sup>129</sup>

With faith, effort, and mindfulness,  
concentration and wisdom — five in all,  
you must strive hard to reach the highest state:  
as powers, these faculties take you to the peak.

### *The Five Faculties and Five Powers: Pāli Tradition*

The five faculties are explained in the *Connected Discourses on the Faculties* (SN 48) and the five powers in the *Connected Discourses on the Powers* (SN 50). The five faculties may be present in both ordinary beings and in those on a supramundane path. The wisdom faculty comprises both insight knowledge that knows the arising and passing away of things and path knowledge that directly experiences nirvāṇa. The knowledge of phenomena as impermanent, duḥkha in nature, and without a self is preliminary to the supramundane path. Path knowledge is the supramundane path. The five faculties and five powers reach fulfillment in nirvāṇa. Their explanations are similar to those in the Sanskrit tradition. In brief:

1. Faith has trust in the Three Jewels. The faculty of faith directs us to the path and keeps us on it even when we go through bouts of questioning, doubts, or strong afflictions.

2. Effort is an energetic mind. The faculty of effort combats and overpowers its opposites — laziness, heedlessness, unconscientiousness — and enables us to practice the four supreme strivings.

3. Mindfulness keeps us aware. As a faculty, in daily life it keeps us cognizant of what we are doing and remembers what to practice and abandon. In meditation, it remembers and focuses the mind on the object of meditation. In both situations, it prevents the mind from drifting away from what it should be paying attention to. It combats and overcomes forgetfulness, oblivion, and mental drifting.

4. Concentration keeps the mind focused one-pointedly on its chosen object and prevents distraction. As a faculty in serenity meditation, it keeps the mind one-pointedly on the meditation object; in insight meditation, it enables the mind to remain focused on whatever momentary phenomena in the body-mind complex it is examining without straying to other objects.

Mindfulness and concentration function in tandem yet can be differentiated. Mindfulness keeps the mind on what we are doing in daily life or on the meditation object by recollecting it. Concentration sustains the attention and unifies the mind so that it is one-pointed. Mindfulness counteracts forgetfulness, while concentration prevents distraction.

5. Wisdom correctly understands its object. As a faculty, it knows the three characteristics, correctly understands the four truths, and penetrates the unconditioned, nirvāṇa. It combats ignorance, confusion, and wrong views, and it examines, investigates, and analyzes conditioned phenomena to know their nature.

Although the five faculties are spoken of individually, in practice they function harmoniously together. They complement each other and cooperate to eliminate hindrances and obstacles, make the breakthrough<sup>130</sup> to the unconditioned, and attain nirvāṇa.

Since the five faculties influence one another, balancing them is important. Without balance, faith may become blind faith or devotion without understanding. Wisdom may slide into intellectual skill that has memorized texts and can debate well but lacks real feeling and receptivity toward the Buddha's message. When in balance, faith and wisdom bring realizations.

If effort and concentration are not balanced, effort may result in pushing ourselves, which makes the mind tense and stressed, whereas pseudoconcentration makes the mind too passive. We sit quietly and empty the mind, believing this is meditation when in fact we are not focused properly on a meditation object.

With mindfulness we can keep these two pairs properly balanced. Although the examples of imbalance above are coarse, imbalance may occur on more subtle levels as well.

These same five mental qualities become known as "powers" when they reach a degree of strength or power such that they cannot be dislodged by their opposites.

1. The power of faith cannot be overcome by doubt, skepticism, or disbelief.
2. The power of effort is not affected by laziness, procrastination, or discouragement.
3. The power of mindfulness cannot be harmed by forgetfulness.
4. The power of concentration is resistant to distraction and scattering.
5. The power of wisdom cannot be harmed by ignorance.

The five powers are developed in order to directly know and then abandon the five higher fetters — desire for existence in the form realm, desire for existence in the formless realm, conceit, restlessness, and ignorance. They also overlap with others of the thirty-seven harmonies with awakening (AN 5.15):

Where, monastics, can the power of faith be seen? In the four factors of stream-entry (unshakable faith in Buddha, Dharma, and Saṅgha, and perfect ethical conduct).

Where can the power of effort be seen? In the four right efforts.

Where can the power of mindfulness be seen? In the four establishments of mindfulness.

Where can the power of concentration be seen? In the four jhānas (dhyānas).

Where can the power of wisdom be seen? In the four truths.

The five faculties and five powers are wonderful companions along the path.

## REFLECTION

---

1. Review the functions of each of the five faculties and powers.
  2. How can you generate and enhance them in your life?
  3. What will help you to overcome their opposites — doubt, laziness, forgetfulness, distraction, and ignorance?
-

## *The Seven Awakening Factors*

Regarding the seven awakening factors (*bodhyaṅga, bojjhaṅga*), the *Sūtra on the Ten Grounds* says (MMAB 51):

The seven awakening factors are like this: (1) Correct mindfulness abides in isolation, abides in detachment, abides in cessation, and is meditation directed toward thorough complete abandonment. (2) Similarly, correct discrimination of phenomena . . . (3) Similarly, correct effort . . . (4) Similarly, correct joy . . . (5) Similarly, correct pliancy (tranquility) . . . (6) Similarly, correct concentration . . . (7) Similarly, correct equanimity abides in isolation, abides in detachment, abides in cessation, and is meditation directed toward thorough complete abandonment.

The adjective “correct” indicates that these seven qualities are no longer qualities of an ordinary being but have been transformed into ārya paths. “Factors” indicates that they are causes of awakening.

Many qualities, such as mindfulness, effort, concentration, and wisdom, are included in several of the seven sets comprising the thirty-seven harmonies. For example, mindfulness is an establishment of mindfulness, a faculty, a power, an awakening factor, and a path factor. These are the same mindfulness, but at different stages of development, capacity, and potency.

1. The *mindfulness* (*smṛti, sati*) awakening factor enables us to control the afflictions. With it the mind is thoroughly familiar with the four truths and can remain focused on them without being distracted by other objects.

2. The awakening factor of *discrimination of phenomena* (*dharmapracaya, dhamma vicaya*) directly realizes selflessness and thus destroys obscurations. It also clearly knows what to practice and what to abandon.

3. The *effort* (*vīrya, viriya*) awakening factor stabilizes renunciation, enabling us to attain awakening quickly.

4. The *joy* (*prīti, pīti*) awakening factor makes the mind continually happy, thus benefiting the body and mind.

5. The *pliancy* (*praśabdhi, passaddhi*) awakening factor removes all mental and physical discomfort and unserviceability and makes the body and mind

flexible, blissful, and capable of engaging in virtue. As an ārya's path, it is without affliction.

6. The *concentration* (*samādhi*) awakening factor abides single-pointedly on a chosen object of meditation, enabling us to fulfill all our wishes by developing awakened qualities. In an ārya's continuum, it is without affliction, and when combined with wisdom, it abandons afflictions.

7. The *equanimity* (*upekṣā, upekkhā*) awakening factor enables us to adopt what is to be practiced and avoid what is to be abandoned. It is the mental factor, not the feeling, of equanimity. As the opposite of the unbalanced mind of afflictions, it enables the mind to be free from restlessness, laxity, and over- and underapplication of the antidotes.

### *The Seven Awakening Factors: Pāli Tradition*

To give an example of how the seven awakening factors function as described in the *Mindfulness of Breathing Sutta* (MN 118): After describing the establishment of mindfulness on breathing, the Buddha shows that, when developed and cultivated, it fulfills the four establishments of mindfulness. He goes on to explain how the four establishments of mindfulness, when developed and cultivated, fulfill the seven awakening factors, and then how the seven awakening factors, when developed and cultivated, fulfill true knowledge and liberation.

The Buddha explains mindfulness of breathing in terms of sixteen aspects, which are organized into four groups of four. The four groups correspond to the four establishments of mindfulness.

Mindfulness of the body includes (1) breathing in and out long, (2) breathing in and out short, (3) experiencing the whole body, and (4) calming the body.

Mindfulness of feelings includes (1) joy, (2) bliss, (3) mental formations (feeling and discrimination), and (4) calming the mental formations.

Mindfulness of the mind includes (1) experiencing the mind, (2) gladdening the mind, (3) concentrating the mind, and (4) temporarily liberating the mind from hindrances.

Mindfulness of phenomena include (1) contemplating impermanence, (2) fading away, (3) cessation, and (4) relinquishment of the five hindrances by the seven awakening factors.

The first three groups apply mostly to the practice of concentration and serenity; the last group is the practice of insight. In this way, meditation on the sixteen aspects of breathing fulfills the four establishments of mindfulness.

In the *Four Establishments of Mindfulness Sutta* (DN 22), the Buddha spoke of mindfulness of breathing as only the first tetrad, making it one form of mindfulness of the body. In the *Mindfulness of Breathing Sutta*, he extended mindfulness of breathing to include all four establishments of mindfulness.

How can we be mindful of the breath and of the four aspects of feelings, mind, and phenomena at the same time? In practicing the latter three tetrads, the primary object of meditation is the feelings, mind, and phenomena, respectively. While contemplating the four aspects of each of these, the meditator maintains mindfulness of the breath in the background to stabilize the mind and make it tranquil and focused.

How does the cultivation of the four establishments of mindfulness fulfill the seven awakening factors? The Buddha explains:

1. When someone contemplates the body as a body, he arouses strong mindfulness, develops it, and brings it to fulfillment. This is the awakening factor of *mindfulness*.

2. Based on this, he investigates and examines bodily phenomena — such as the parts of his body — by means of the *discrimination of phenomena*, which is wisdom. For example, he discerns the various bodily phenomena and observes their impermanence. Through continuous practice, he develops and fulfills the awakening factor of the discrimination of phenomena.

3. Probing with discrimination boosts his *effort* because the discrimination brings understanding that inspires deeper practice. In this way, the awakening factor of *effort* becomes strong and is fulfilled.

4. Effort leads to the experience of *joy*, which floods the body from head to toe. This joy is exhilarating but needs to be channeled properly so that he doesn't become attached to it or become arrogant, thinking he is special because of experiencing joy. Because the ecstasy of joy can be agitating, it must be refined and brought to fulfillment.

5. This leads to *pliancy* or tranquility of body and mind, the fifth awakening factor.

6. As pliancy is developed and brought to fulfillment, bliss increases. Together bliss and pliancy enable the mind to settle on the object with more

stillness, deepening the awakening factor of *concentration*.

7. Now that concentration is firm, the meditator does not need strong effort to meditate and rests the mind in *equanimity*, the last awakening factor.

Up to this point, the invigorating factors of discrimination of phenomena, effort, and joy, which oppose lethargy and laxity, needed to be balanced with the calming factors of pliancy and concentration, which oppose restlessness. Mindfulness helps to balance these so the mind can remain in equanimity.

The meditator then practices mindfulness of the four aspects of feeling, mind, and phenomena while breathing. Progressing through the development and fulfillment of the seven awakening factors, he culminates each establishment of mindfulness by resting in equanimity in deep concentration.

How does he then employ the seven awakening factors to attain true knowledge (*vidyā, vijjā*) — clear and complete knowledge of the four truths — and liberation? The Buddha explains how these are attained (MN 118.42–43):

A monastic develops the mindfulness awakening factor, which is supported by seclusion, dispassion, and cessation, and ripens in relinquishment. He develops the discrimination of phenomena awakening factor . . . the effort awakening factor . . . the joy awakening factor . . . the pliancy awakening factor . . . the concentration awakening factor, and the equanimity awakening factor, which is supported by seclusion, dispassion, and cessation, and ripens in relinquishment. This is how the seven awakening factors, developed and cultivated, fulfill true knowledge and liberation.

Now each awakening factor is cultivated and supported by seclusion, dispassion, and cessation, and ripens in relinquishment. Seclusion (*viveka*) is a simple lifestyle and a peaceful mind free from the five hindrances. Dispassion (*virāga*) is the fading away of sensual desire. Cessation (*nirodha*) is the eradication of defilements, and relinquishment (*vossagga*) is the abandonment of pollutants and entrance into nirvāṇa. The seven awakening factors are supported by these qualities in that on the early stages of the path the meditator's goal is to attain nirvāṇa by practicing them, and on the supramundane paths nirvāṇa is the object of meditation.

The awakening factors have now been developed to the point where they will culminate in full, profound knowledge of the four truths and liberation of the mind from all defilements. Within equanimity, the meditator strengthens her discrimination of phenomena so that it becomes wisdom supported by single-pointed concentration. By investigating the nature of phenomena, especially the three characteristics, the meditator breaks through and perceives nirvāṇa.

Although the awakening factors reach prominence sequentially, they are present to some extent from the beginning of the practice. As each new awakening factor reaches prominence, the preceding ones are not necessarily relinquished. For example, mindfulness remains strong while all the other awakening factors are cultivated. In short, when the four establishments of mindfulness are practiced fully in the context of mindfulness of breathing, it leads to the development of the other six awakening factors. When all seven awakening factors have been properly cultivated and have completely matured, they culminate in the direct knowledge that brings liberation.

The seven awakening factors are so called because they lead to awakening, not because they constitute awakening or are present only in awakened beings (SN 46.5):

They lead to awakening, therefore they are called factors of awakening. Here, one develops the awakening factor of mindfulness [discrimination of phenomena, effort, joy, pliancy, concentration, equanimity] that is based upon seclusion, dispassion, and cessation, maturing in release.

When the seven are consummated and found together, one is awakened due to having penetrated the four truths.

## *The Āryas' Eightfold Path*

The āryas' eightfold path (*āryāṣṭāṅga mārga*, *ariya aṭṭhaṅgika magga*) consists of eight path factors. *The Sūtra on the Ten Grounds* says (MMAB 52):

The eightfold path is like this: (1) right view abides in isolation, abides in detachment, abides in cessation, and is meditation

directed toward thorough complete abandonment; (2) right intention . . . ; (3) right speech . . . ; (4) right action . . . ; (5) right livelihood . . . ; (6) right effort . . . ; (7) right mindfulness . . . ; (8) right concentration abides in isolation, abides in detachment, abides in cessation, and is meditation directed toward thorough complete abandonment.

Speaking of the eightfold path of āryas, Maitreya's *Differentiation of the Middle and the Extremes* says:

One that thoroughly realizes,  
one that makes you understand,  
the three factors [that] make others develop trust,  
as antidotes to those on the opposite side —  
these are the eight factors of the path.

This verse shows the eight path factors classified into four branches as they pertain to bodhisattvas.

1. *One that thoroughly realizes* refers to right view, which realizes in postmeditation time the correct understanding of the four truths that was realized in meditative equipoise. Right view is the *branch of affirmation* because it affirms the realization of emptiness that occurred during meditative equipoise.

2. *One that makes you understand* is right intention, the intention that wishes to correctly explain to others the view of selflessness we have realized in meditation. Right intention is the *branch of promoting understanding in others*.

3. *The three factors [that] make others develop trust* are right speech, action, and livelihood. *Right speech* is the speech that explains to others the right view we have realized. *Right action* refers to refraining from harmful physical deeds such as killing, stealing, and unwise and unkind sexual behavior. Right actions in these areas are pure and do not harm others or ourselves. *Right livelihood* is ways of procuring our requisites — food, shelter, clothing, and medicine — that are free from the five wrong livelihoods — hinting, flattery, bribery, coercion, and hypocrisy. These three are the *branch that develops trust and respect* in others' minds because others know our speech is truthful and kind, our actions are ethical, and our physical needs are modest.

4. *Antidotes to those on the opposite side* are right effort, mindfulness, and concentration. *Right effort* is making effort to develop the antidotes that eliminate the objects to be abandoned on the path of meditation. It overcomes unfavorable conditions, such as the innate afflictions, in order to advance to higher levels of the path. *Right mindfulness* does not forget the object of meditation and thus prevents and eliminates hindrances to single-pointedness, such as restlessness and laxity. *Right concentration* is the antidote to the obscuration to mental absorption — the unserviceability of the mind that hinders the development of concentration. By means of right concentration, we are able to cultivate the superknowledges and to focus on the meaning of the four truths single-pointedly. These three form the *branch of antidotes to the discordant class* because they overcome and purify obstructions.

As practices developed on the path of meditation, all eight path factors are exalted knowers (*jñāna*, T. *mkhyen pa*), which are mental qualities or paths. Although we sometimes say, “follow the path to awakening” as if “path” meant a series of steps, paths are realizing consciousnesses in the continuum of a practitioner. Because Prāsaṅgikas say physical and verbal actions can be form, they assert that right speech, action, and livelihood can be forms. For example, prātimokṣa precepts are ethical conduct and they are imperceptible forms.<sup>131</sup> According to those who do not accept prātimokṣa ethical restraints as imperceptible form, these three refer to knowers — mental states that intend to keep pure ethical conduct of speech, actions, and livelihood — not to the actual physical actions, speech, or means of procuring our livelihood themselves.

### *Integrating the Eightfold Path with Our Lives*

While the eightfold path is usually spoken of as a supramundane path, I appreciate the perspective of the Pāli tradition in which we begin to practice it now, as ordinary beings. In doing so, it will guide our lives until we actually enter the path.

1. A healthy and well-lived life is based on *right view*; we understand that our actions affect others and have an ethical dimension that influences what we ourselves will experience. Understanding virtuous and nonvirtuous actions and being able to discern the difference between them is essential. As practitioners, we avoid the extremes of indulgence in materialism and in asceticism. Holding the

Middle Way view, we keep our body healthy by eating and sleeping an appropriate amount of time but not more than is needed. Since our body is useful for Dharma practice, we must care for it wisely without pampering it.

2. *Right intention* is one of renunciation — a balanced mind free from attachment — love (benevolence), and compassion (nonharmfulness). Those on the bodhisattva path cultivate bodhicitta.

3. *Right livelihood* entails receiving the requisites for life in an ethical way, unpolluted by corruption. Considering the number of scandals reported in the news and the damage that people in the financial, manufacturing, and business sectors can inflict on many lives, the benefit of earning a living in an ethical manner cannot be understated.

For monastics who are dependent on others for their food, clothing, shelter, and medicine, practicing right livelihood is essential. This entails abandoning the five wrong livelihoods: (1) Hinting is not asking directly for something we need but dropping hints. “You gave me a warm jacket last year. It has been very useful, but now it is worn out.” (2) Flattery involves saying pleasant and sweet words to others with the intention of getting them to give us something. “You are an intelligent and generous disciple. Other teachers would like their students to be like you.” (3) Bribery is giving someone a small gift so that they will feel obliged to give us a big one. “Please enjoy this Dharma book that I’m giving you.” (4) Coercion is putting someone in a position where they cannot say no, or using our power to influence them to give us something. “All the other sponsors gave \$100. How much would you like to give?” (5) Hypocrisy is pretending to have qualities that we do not have. Usually we sleep late and lounge around, but when our benefactor comes to visit, we awake early and do pujas.

When we receive donations from people with faith in the Dharma, we must use them appropriately, not to go to the movies, purchase articles we do not need, or buy luxury items. The *Heap of Ethical Conduct Sūtra* (*Śīlaskandhikā*) says:

Monastics who have enjoyed donations out of faith, if [they use those donations for idle pleasures such as] watching elephant fights and so forth, it is wrong livelihood.

While elephant fighting is not the entertainment of choice nowadays, the point is valid: when we accept offerings given by those with faith, we have an obligation

to use them in a way that accords with their faith — for example, to sustain our lives and increase our wholesome qualities.

For lay practitioners, right livelihood means earning our living honestly, without deceiving or lying to clients, customers, or the public and without cheating others by overcharging, embezzling, exploitation, and so on. Doing work that contributes to killing or harming others is discouraged — for example, making weapons and insecticides, publishing or selling pornography, selling alcoholic beverages or recreational drugs, or writing unnecessary prescriptions for addictive drugs. Carelessly throwing pollutants into the environment and not maintaining proper safety standards for employees, while not specifically wrong livelihood, should be abandoned. Although wrong livelihood is not different from unwholesome physical and mental actions, the Buddha listed it separately to emphasize its importance.

4–5. On the basis of right livelihood, we then practice *right speech* and *right action*. This includes abandoning the seven unwholesome actions of body and speech and practicing the seven virtuous ones.

6. With *right effort*, we enthusiastically establish a daily meditation practice and study the Dharma.

7–8. Employing *right mindfulness* and *right concentration*, we develop our practice, contemplating and meditating on whatever Dharma topics we are studying. As time goes on, we will engage in critical analysis on the ultimate mode of existence — emptiness — using proper thought and reasoning. This brings us around once more to cultivating *right view* free from the extremes of absolutism and nihilism.

### *The Eightfold Path: Pāli Tradition*

In *The Great Forty Sutta* (MN 117), the Buddha discusses each of the eight path factors by first differentiating the wrong understanding of it to abandon from the right understanding of it to practice. Knowing this puts us on secure ground before even beginning to practice the eight.

Knowing the right path factor, we can then see its mundane (*loka*) and supramundane (*transcendental, lokottara, lokuttara*) aspects. The *mundane* aspect is together with the pollutants and exists in the mindstreams of those who have not attained any of the eight paths and fruits of stream-enterer, once-returner,

nonreturner, and arhat. The mundane aspect is meritorious and leads to fortunate rebirths, but not to liberation. These are the path factors that we ordinary beings practice in our daily lives.

The *supramundane* path factors exist in the mindstreams of the eight ārya Saṅgha. These are free from the pollutants and lead to liberation. Because the path is a gradual one, we first cultivate the mundane path factors. When they are mature and serenity and insight are strong, then the eight supramundane path factors all manifest together in an instant during a state of samādhi on the unconditioned, nirvāṇa.

### **Wrong View**

Wrong views are of many sorts: for example, believing that our actions have no ethical value, that our actions do not bring results, that there is no continuity of being and everything ends at the time of death, that other realms of rebirth do not exist, or that attaining liberation or full awakening are impossible because defilements inhere in the mind. Wrong view in this context is the same as the wrong views of the ten nonvirtues.

Many more wrong views exist; they are too numerous to list here. In fact, in our confusion, we human beings invent new ones in every generation. Nowadays, some people believe that killing their enemies brings a fortunate rebirth; that racial, ethnic, religious, and gender prejudices are based on correct cognizers; that ethical principles and societal laws do not apply to them; that human beings are inherently selfish so trying to become more compassionate is useless; and so on. When people use these views to validate their actions, great suffering ensues.

### **Right View**

What is right view? Knowledge of dukkha, knowledge of the origin of dukkha, knowledge of the cessation of dukkha, knowledge of the way leading to the cessation of dukkha.<sup>132</sup>

Right views are of two types: mundane and supramundane right views. *Mundane right views* are the opposite of the wrong views mentioned above. We believe that our actions have an ethical dimension and bring results, that there is a continuity of being after death, that caring for others has spiritual benefit, that holy beings

who have actualized the path exist, and so on. Mundane right view understands the functioning of the law of karma and its effects.

Mundane right views also understand what each of the other path factors are and are not. Without being able to differentiate right intention from wrong intention, right speech from wrong speech, and so on, we will not know what to practice and what to abandon, and our Dharma practice will be a mass of confusion. Hearing teachings, studying, and discussions with wise Dharma friends will help us arrive at the right view that is so essential to begin and continue on the Buddha's path. Although mundane right views are in the mindstreams of those affected by the pollutants, they lead to fortunate rebirths.

Mundane right views are also views concordant with the supramundane right view. These are the conceptual or intellectual right views of the four truths by someone who has not yet penetrated the four truths or had an experience of nirvāṇa. Conceptual understanding is important; it is what gets us going on the path. When cultivated diligently, it will lead to direct realization. However, being conceptual and lacking the deep experience of āryas, conceptual understanding is not stable. Because our wisdom is not fine-tuned, there is the chance that we will be swayed by another teacher or teaching. Thus it's important to continually reinforce our understanding of the right view of the four truths through study, discussion with serious Dharma students, and meditation.

*Supramundane right views* are the right views in the mind of one who has eliminated any or all of the pollutants and fetters. The supramundane right views are the direct penetration of the four truths as well as direct knowledge of nirvāṇa. They comprise the faculty of wisdom, the power of wisdom, the discrimination of phenomena awakening factor, and the path factor of right view in the mindstreams of āryas.

Supramundane paths penetrate the four truths and have nirvāṇa as their object.<sup>133</sup> Although stream-enterers have pollutants and fetters, they also possess supramundane consciousnesses when they experience the breakthrough that directly perceives nirvāṇa. The supramundane path factors are those present in a mind moment that is supramundane, a mind moment that perceives nirvāṇa. It is at that time that right view and the other seven become actual path factors. In short, supramundane consciousnesses are the path and the fruit consciousnesses of the four āryas, but not all the consciousnesses in their mindstreams are supramundane.

At the time of breakthrough to nirvāṇa — which occurs whenever āryas directly realize nirvāṇa, which is the object of their meditation — all eight path factors are present simultaneously in the mind. These are the supramundane eightfold path. At this time, right view is the wisdom seeing nirvāṇa. Right intention fixes the mind on nirvāṇa, directing the mind to and absorbing it in nirvāṇa. Right speech, right action, and right livelihood are the desisting from their opposites that occurs when the mind apprehends nirvāṇa. They are also the mental factors of nonattachment and so on that are now fully developed in the mind that experiences breakthrough to the truth. Right effort is the effort that penetrates the truth of the Dharma, right mindfulness attends to and is mindful of this truth, and right concentration is the unification of the mind in that experience. It is by the gradual strengthening of the eight factors of the mundane eightfold path that the supramundane eightfold path comes about in a momentary breakthrough to nirvāṇa that eradicates a portion of the afflictions.

Each of the eight mundane factors is meritorious and leads to a fortunate rebirth as well as good circumstances while we are born in saṃsāra. They lead to the end of duḥkha, but not directly because they lack the power to eradicate the defilements from their root. They lead to nirvāṇa by eventually becoming strong enough to give rise to the supramundane path factors.

### **Wrong Intention**

Wrong intentions are those of sensual desire, malice, and cruelty.

### **Right Intention**

What is right intention? Intention of renunciation, intention of nonmalice, intention of harmlessness.

*Mundane right intentions* are affected by attachment but nevertheless create merit. They include the intentions of renunciation, nonmalice, and compassion (noncruelty, *ahimsa*). Renunciation in this context is a balanced mind free from attachment to sense objects. Noncruelty is compassion and nonviolence, the principle that Mahatma Gandhi and Martin Luther King used as the foundation of their actions and the social movements that sprung from them. I have great respect for all those people who compassionately work to improve the world

through nonviolent actions. With right intention, we live our daily lives and share our knowledge and realizations with others. Right intention also spurs us to have right speech, action, and livelihood.

*Supramundane right intention* is the “thinking, thought, intention, mental absorption, mental fixity, directing of mind, verbal formation in an ariya’s mind” (MN 117:14). “Thinking” and “thought” refer to investigation (*vitarka, vitakka*), which contributes to attaining meditative absorption by directing and fixing the mind on the meditation object.<sup>134</sup>

## Wrong Speech

Wrong speech is the four nonvirtues of speech: lying, divisive speech, harsh speech, and idle talk.

## Right Speech

What is right speech? Abstinence from false speech, abstinence from divisive speech, abstinence from harsh speech, abstinence from idle talk.

*Mundane right speech* is speech that is meritorious and abstains from the four types of wrong speech. This is the right speech of the ten virtues — speech that is truthful, harmonious, gentle, wise, kind, and appropriate. It is clear so that others understand our meaning, and it prevents discord, creates harmony, and is in accord with the Dharma. Right speech, action, and livelihood pertain to the higher training in ethical conduct.

Our speech is a powerful instrument with which we can create peace and harmony or conflict and pain. The Buddha mentions five points to be mindful of when we speak (MN 21:11):

1. Speak at the right time, when others are not occupied in another activity and have time to converse. For example, if we want to speak with a friend about their inappropriate behavior, we should speak privately, not in front of others where they will be embarrassed.
2. Speak what is true; do not spread rumors when you cannot verify the information. For example, when we have not asked someone what his

- motivation was for an action he did, we should not impute an intention that may be false.
3. Speak gently, choosing suitable words that express your intention. If we simply blurt out what we think or feel, accusing others of being the source of our unhappiness, hurt feelings and an argument are almost assured.
  4. Speak with a beneficial underlying purpose, not with the wish to cause harm.
  5. Speak with loving-kindness. Take a few moments — or a few minutes — to observe and calm your mind and generate a kind motivation before speaking.

Although we can improve how we speak to others, we cannot control how they speak to us. The Buddha advises us (MN 21:11):

There are these five courses of speech that others may use when they address you: their speech may be timely or untimely, true or untrue, gentle or harsh, connected with good or with harm, spoken with a mind of loving-kindness or with inner hate . . . you should train thus: “Our minds will remain unaffected, and we shall utter no nasty words; we shall abide with compassion for their welfare, with a mind of loving-kindness, without inner hate.”

Having restrained our minds from proliferating with hateful thoughts, we then generate loving-kindness for the person who spoke to us. We then spread our loving-kindness to all beings throughout the universe. Although it may not be easy, if we train our minds in this way day by day, our anger will subside and our responses will follow suit. In this way, we contribute to world peace, and over time we will notice that all of our relationships have improved.

In the midst of a difficult situation, figuring out what is right speech can be challenging, especially when there are many factors to consider. What we say may be true or false, beneficial or unbeneficial, and agreeable or disagreeable. With which combinations of these six qualities is it suitable to speak? The Buddha gives us some wise pointers by describing when the Tathāgata speaks (MN 58):

1. If the speech is false, not beneficial, and disagreeable, he does not utter it. What counts against this speech is that it is false and not beneficial.
2. If the speech is true, not beneficial, and disagreeable, he does not say it. Even though the words are true, because the speech has no benefit there is no reason to say it.
3. If the speech is true, beneficial, and disagreeable, the Buddha will say it at the appropriate time. The important factors are that it is true and beneficial. Sometimes to correct people who are stubborn or unruly, the Buddha had to speak to them sternly. For example, there was a group of six monks who were very naughty, and the Buddha had to say words that were unpleasant to their ears to help them. This is done for their long-term benefit and to protect the Dharma and Vinaya so that they will last a long time.
4. If the speech is false, not beneficial, and agreeable, it also should not be said. Flattery and nice stories may please someone's ego, but they have no value because they are false and lack benefit.
5. If the speech is true, not beneficial, and agreeable, it should not be spoken.
6. If the speech is true, beneficial, and agreeable, the Buddha will say it at the proper time.

In short, compassion and benefit are the yardstick by which to measure the value of our speech and all other actions as well. While our intention should always be benevolent, the words we use to express ourselves should be according to the listener's aptitude, personality, and culture.

Mundane right speech, action, and right livelihood are not unique to Buddhism. They are taught by all great spiritual leaders and all those who promote ethical behavior. Mundane right speech and right action are the seven virtuous actions of body and speech that are the opposite of the seven nonvirtuous ones.

*Supramundane right speech* is restraint from the four kinds of wrong speech in an ārya's mind.

## **Wrong Action**

Wrong action centers on killing sentient beings, stealing, and unwise or unkind sexual behavior.

## **Right Action**

What is right action? Abstinence from the destruction of life, abstinence from taking what is not given, and abstinence from unwise sexual behavior.

*Mundane right action* involves abandoning the three destructive physical actions — killing, stealing, and unwise sexual behavior and using our physical energy to preserve life, protect others' possessions, and preserve marital harmony. For lay practitioners, it entails using sexuality wisely and kindly; for monastics it involves celibacy.

*Supramundane right action* is the restraining and abandoning of the three wrong actions done by an ārya.

## **Wrong Livelihood**

Wrong livelihood for monastics includes scheming, flattering, hinting, belittling, and giving someone a small gift in the hope of receiving a larger one. For lay practitioners, it includes harmful ways of earning a living, such as manufacturing weapons or poisons; working in the armaments industry; killing livestock; operating a casino; or making, selling, or serving intoxicating substances. Wrong livelihood also includes lying to and cheating customers and clients, denying that your business practices adversely affect the environment, putting other people's investments at risk, false advertising, and so forth.

## **Right Livelihood**

What is right livelihood? Here an ariya disciple, having abandoned a wrong mode of livelihood, earns his living by a right livelihood.

*Mundane right livelihood* is avoiding all forms of wrong livelihood and earning our livelihood in nonharmful and honest ways. Lay practitioners should engage

in work that does not damage others and, if possible, seek work that contributes to the healthy functioning of society and the welfare of others.

Right livelihood is having a lifestyle free from the two extremes of asceticism and luxury. Of course, we can enjoy the basic necessities of life, but it is important not to have or use more than what we actually need. A sense of contentment is essential.

*Supramundane right livelihood* is the abandonment of all wrong livelihood by āryas.

An example of right speech, action, and livelihood functioning together is a teacher who instructs her students in a gentle way with the intention to benefit them. She sets a good example for them through her own nonharmful actions and truthful, kind speech. As a monastic, she is content and lives a simple lifestyle and speaks of others' good qualities, not advertising their faults.

Abandoning intoxicants is not included in the three ethical factors of right speech, action, and livelihood. However, if we are to cultivate these three mundane virtues, let alone their supramundane forms, abandoning intoxicants is essential. Why? Mindfulness is difficult to cultivate even when the mind is clear; how much more so when the mind is intoxicated and our ethical restraints are lax.

## **Right Effort**

What is right effort? Here a monastic generates desire for the nonarising of unarisen nonvirtuous states; he makes an effort, arouses energy, applies his mind, and strives. He generates desire for the abandoning of arisen nonvirtuous states . . . He generates desire for the arising of unarisen virtuous states . . . He generates desire for the maintenance of arisen virtuous states, for their nondecay, increase, expansion, and fulfillment by development; he makes an effort, arouses energy, applies his mind, and strives.

*Mundane right effort* is the four supreme strivings: effort to prevent the arising of nonvirtues, to abandon nonvirtues that have arisen, to cultivate new virtues, and to maintain and enhance virtues that are already present. With right effort we direct our energy away from harmful mental, verbal, and physical actions to the

development of beneficial thoughts, words, and deeds, and make every effort to live a nonviolent and compassionate life. Right effort enables us to abandon the five hindrances and attain all realizations. Through right effort, right mindfulness, and right concentration, the higher training in concentration is accomplished.

*Supramundane right effort* is the effort present with the other path factors at the time of realizing nirvāṇa.

## **Right Mindfulness**

What is right mindfulness? Here a monastic dwells contemplating the body in the body, ardent, introspectively aware, mindful, having removed longing and displeasure for the world. She dwells contemplating feelings in feelings . . . She dwells contemplating mind in mind . . . She dwells contemplating phenomena in phenomena, ardent, introspectively aware, mindful, having removed longing and displeasure for the world.

*Mundane right mindfulness* is the four establishments of mindfulness. In daily life right mindfulness remembers our precepts and ethical values. In meditation right mindfulness attends to phenomena, enabling us to discern their distinct characteristics, relationships, and qualities. In a highly concentrated mind right mindfulness leads to insight and wisdom.

*Supramundane right mindfulness* is the mindfulness present with the other path factors at the time of realizing nirvāṇa.

## **Right Concentration**

What is right concentration? Herein, secluded from sense pleasures, secluded from nonvirtuous states, a monastic enters and dwells in the first jhāna, which is accompanied by investigation and analysis and filled with joy and bliss born of seclusion. Then with the subsiding of investigation and analysis, by gaining inner confidence and mental unification, he enters and dwells in the second jhāna, which is free from investigation and analysis but is filled with joy

and bliss born of concentration. With the fading of joy, he dwells in equanimity, mindful and clearly comprehending, and experiencing bliss with the body he enters and dwells in the third jhāna, of which the ariyas declare: “He is equanimous, mindful, one who dwells happily.” With the abandoning of pleasure and pain and with the previous disappearance of joy and displeasure, he enters and dwells in the fourth jhāna, which has neither-pleasure-nor-pain and purity of mindfulness due to equanimity.

*Mundane right concentration* is the four dhyānas. Concentration directed toward liberation investigates the nature of phenomena with mindfulness. For beginners on the path, right concentration involves gradually developing meditative abilities in our daily meditation practice.

*Supramundane right concentration* is the four dhyānas that are conjoined with wisdom and the other path factors at the time of perceiving nirvāṇa. The supramundane path is a right concentration. In it, all eight path factors are present simultaneously, each performing its own function. Right concentration leads to right knowledge and right liberation. Right knowledge is reviewing knowledge that reviews the experience of liberation. It is knowledge that the mind is fully liberated from the pollutants.

After explaining each of the eight factors, the Buddha describes how right view, right effort, and right mindfulness circle around each factor. Right view of each factor is necessary to ensure we understand it correctly, right effort invigorates and develops our practice of each factor, and right mindfulness practices each factor by focusing on it in a proper way. For example, for right speech, actions, and livelihood to be aspects of the mundane eightfold path, they must be accompanied by right view, undertaken with right effort, and sustained by right mindfulness.

## REFLECTION

---

1. Review the wrong aspect of each path factor that is to be abandoned. Reflect if it is present in your mind and behavior. Make examples from your life.
2. Think of antidotes to help you release that attitude or behavior. Imagine practicing them in situations that you are likely to encounter.

3. Review the right mundane aspect of each path factor. Rejoice at times when that has arisen in you. Contemplate how to increase it in your life.
  4. Review the right supramundane aspect of each path factor. Imagine what it would be like to have that in your mindstream, as the way you naturally think and act. Aspire to cultivate the path factors and perfect them in this way.
- 

## *Relationships among the Thirty-Seven Harmonies with Awakening*

The seven sets that comprise the thirty-seven harmonies are intertwined. They are not separate qualities or practices that are to be cultivated on different occasions. Among the seven sets, the eightfold path is broader than the others because it specifically discusses ethical conduct while the other sets pertain more to cultivating concentration and wisdom.

The path factors of right view and right intention are associated with wisdom. At the beginning of our practice they help us to develop the Buddhist worldview by means of learning and thinking about the Dharma. This conceptual right view sets the stage for all the practices that follow. Right intention follows upon that, indicating that to practice properly an attitude of benevolence, renunciation, and nonharming is necessary as we live within the Buddhist worldview. At this early stage, right view and right intention are not at the level to be considered either the faculty or the power of wisdom.

The eightfold path is undertaken with faith and confidence. Gaining the right view increases our confidence in the Three Jewels. With the faculty of faith, we cultivate right intention and undertake the practices of right speech, right action, and right livelihood. The faculty of faith also inspires us to begin training our mind in earnest.

At this point the path factors of right effort and right mindfulness come in as effort is needed to practice mindfulness. This brings in the faculty of effort and the faculty of mindfulness. The faculty of effort involves the four supreme strivings, which influence how we practice all eight path factors. The faculty of effort links to the power of effort and the base of spiritual power that is concentration brought about through effort. Right mindfulness is the four

establishments of mindfulness, which link with the faculty of mindfulness, the power of mindfulness, and the mindfulness awakening factor.

This deep practice of effort and mindfulness leads to the awakening factors of joy and concentration, which are also the path factor of right concentration and the essence of the four bases for spiritual power. To the extent that effort, mindfulness, and concentration are unshakable by their opposites, they become the powers of effort, mindfulness, and concentration.

Once right concentration is stable, it is used to examine the nature of phenomena, the twelve links of dependent origination, the four truths, the five aggregates, the six sources, and so on. Here the awakening factor of discrimination of phenomena comes in as meditation is undertaken in order to see the three characteristics of impermanence, unsatisfactory nature, and no-self. The effort awakening factor and the power of effort enable wisdom to deepen. This leads to penetration of the four truths, which is the path factor of higher right view and the faculty of wisdom and the power of wisdom, which are supported by the other faculties and powers. Please contemplate the thirty-seven harmonies yourself and see other ways in which they are interrelated and complement one another. This will enable you to practice them in a seamless, appropriate, and noncontradictory way.

Many of the same mental factors appear repeatedly in the thirty-seven harmonies, emphasizing the vital role they play in the path to liberation. The fact that they are found in different contexts and sets illustrates not only the various situations in which they are needed but also how they progress and develop as a practitioner advances.

## **OCCURRENCES OF MENTAL FACTORS IN THE SEVEN SETS OF HARMONIES WITH AWAKENING**

MENTAL FACTOR	ESTABLISHMENTS OF MINDFULNESS	SUPREME STRIVINGS	BASES OF SPIRITUAL POWER	FACULTIES	POWERS	AWAKENING FACTORS	EIGHTFOLD PATH	TOTAL
Mindfulness	4			1	1	1	1	8
Effort		4	1	1	1	1	1	9

### *The Thirty-Seven Harmonies and the Five Paths*

In general, a path is a consciousness that is conjoined with uncontrived renunciation of saṃsāra. When speaking of the Mahāyāna or bodhisattva path, it is a consciousness conjoined with both renunciation and bodhicitta. In other contexts we may speak of “practicing the path,” where “path” connotes a spiritual journey. But here, a path is a pristine wisdom, a consciousness with Dharma realizations.

The mantra in the *Heart Sūtra* — *tayata gate gate paragate parasamgate bodhi svaha* — outlines the five paths that lead to awakening. In terms of the Mahāyāna,

the first *gate* refers to the path of accumulation. This bodhisattva path begins when practitioners have stable, unfabricated bodhicitta. The second *gate* indicates the path of preparation. Bodhisattvas enter this path when they attain the union of serenity and insight on the emptiness of inherent existence. *Paragate* indicates the path of seeing, which commences when bodhisattvas first realize emptiness directly and nonconceptually. Here they abandon all acquired afflictions. *Parasamgate* refers to the path of meditation, on which bodhisattvas progressively eradicate innate afflictions as well as cognitive obscurations. *Bodhi* refers to the path of no-more-learning — that is, full awakening or buddhahood — when all obscurations whatsoever have been eradicated and all excellent qualities developed to their utmost. Excluding the path of no-more-learning, the first four learning paths can be correlated with the thirty-seven harmonies, the practice that results in the path of no-more-learning.

The *Treasury of Knowledge* by Vasubandhu and the *Compendium of Knowledge* by his brother Asaṅga present different ways of correlating the thirty-seven harmonies with the five paths. Before describing that, I would like to share with you a story about these two remarkable brothers, both of whom made great contributions to the Nālandā tradition.

Asaṅga was the elder brother. A follower of the Mahāyāna, he wrote many texts according to the Cittamātra viewpoint, although it was said that he himself actually held Madhyamaka tenets. His younger brother Vasubandhu was an advocate of the Vaibhāṣika tenets and was very critical of his brother following the Mahāyāna. Asaṅga spent twelve years meditating in the wilderness. Through developing incredible fortitude and compassion, he had a vision of Maitreya, who took him to the Tusita pure land and taught him five Mahāyāna treatises, which Asaṅga then brought to Earth. Commenting on his brother's retreat, Vasubandhu sarcastically said, "My brother Asaṅga was unsuccessful in accomplishing any spiritual realization during his twelve years of retreat. Instead, he left the cave with a huge stack of commentaries that even an elephant couldn't carry!"

Later on Vasubandhu read one of Asaṅga's texts, where he first learned about great compassion, bodhicitta, and the six perfections. This caused him to think, "Great compassion and bodhicitta are excellent, and the Mahāyāna is quite rich in Dharma." Previously he had thought there was little difference between buddhahood and arhatship, but in a later part of Asaṅga's text, he learned of the ten powers of the Buddha as well as the eighteen distinctive qualities of buddhas

from the Mahāyāna perspective. This made him reflect, “Not only are the causes — bodhicitta and the perfections — explained in the Mahāyāna so noble, but the result is wonderful as well. Buddhas have many more excellent qualities than arhats.” He then felt deep regret for the criticism he had heaped on his brother and on the Mahāyāna teachings. In despair, he thought to cut out his tongue with which he had uttered such calumny. But then a sign came that said, “Don’t do that. Cutting out your tongue is silly. You can use that same tongue to propagate the Mahāyāna teachings.” Inspired, Vasubandhu wrote many commentaries to Mahāyāna sūtras, such as *Twenty Stanzas (Viṃśatikā)* and *Thirty Stanzas (Trimśikā)*, both from the Cittamātrin viewpoint.

The following chart illustrates the ways Vasubandhu and Asaṅga correlated the thirty-seven harmonies with the five paths. It applies to practitioners of all three vehicles.

#### **CORRELATION OF THE THIRTY-SEVEN HARMONIES WITH THE FIVE PATHS.**

<b>PRACTICE</b>	<b>PATH ACCORDING TO VASUBANDHU'S TREASURY OF KNOWLEDGE</b>	<b>PATH ACCORDING TO ASAṄGA'S COMPENDIUM OF KNOWLEDGE</b>
Four establishments of mindfulness	Path of accumulation	Small stage of the path of accumulation
Four supreme strivings	Heat stage of the path of preparation	Medium stage of the path of accumulation
Four bases of spiritual power	Peak stage of the path of preparation	Great stage of the path of accumulation
Five faculties	Fortitude stage of the path of preparation	Heat and peak stages of the path of preparation
Five powers	Supreme dharma stage of the path of preparation	Fortitude and supreme dharma stages of the path of preparation
Seven awakening factors	Path of meditation	Path of seeing
Eightfold path	Path of seeing	Path of meditation

By cultivating the four establishments of mindfulness and reflecting on their specific and common characteristics, we will understand the four seals: (1) all conditioned phenomena are impermanent, (2) all polluted phenomena are in the nature of duḥkha, (3) all phenomena are empty and selfless, and (4) nirvāṇa is true peace.<sup>135</sup> Having understood these, especially that nirvāṇa is peace, we will want to engage in the practice to attain nirvāṇa. This leads to practicing the four supreme strivings, which are the nature of joyous effort. Through putting forth effort, we will develop concentration, which is the essence of the four bases of spiritual power. If we have not attained serenity prior to entering the path of accumulation, we do so at this point.

Then, on the path of preparation, we put special attention on the five faculties and five powers in order to overcome all unfavorable conditions and to continue our meditation with the union of serenity and insight on selflessness. Concentration and insight may be either mundane or supramundane. In Buddhism, they are done for a special purpose — to attain nirvāṇa. The seven awakening factors and the eightfold path are then cultivated to bring this about.

Here, these seven sets are spoken of as qualities cultivated by practitioners on the four paths of accumulation, preparation, seeing, and meditation, not with regard to someone who has yet to enter a path. Some sūtras explain the thirty-seven harmonies for those who have yet to enter a path, such as us ordinary beings. The eightfold path is especially effective for us because the eight path factors are subsumed in the essential practice of the three higher trainings: right view and right intention are included in the higher training in wisdom; right action, speech, and livelihood are related to the higher training in ethical conduct; and right mindfulness, concentration, and effort pertain to the higher training of concentration. This way of speaking of the eight gives us ordinary beings clear and easy-to-understand directions about how to practice the Dharma in daily life.

Correlating the seven sets with specific paths does not mean that practitioners on previous or future stages of the path do not practice them. For example, the four establishments of mindfulness are practiced before we enter a path and throughout the five paths. They become prominent and reach a certain stage of mastery on the path of accumulation, and for that reason are correlated with that path. The thirty-seven harmonies are correlated with the fourth bodhisattva ground, where bodhisattvas gain extraordinary expertise in the

wisdom of the coarse and subtle thirty-seven harmonies. However, these thirty-seven are also practiced on earlier and later stages of the path. In short, avoid understanding correlations as solid relationships. It is helpful to remember that categories are flexible and are designated by our conceptual minds.

## *Conventional and Ultimate Thirty-Seven Harmonies*

The thirty-seven harmonies with awakening must be understood and meditated on in terms of their conventional nature and ultimate nature. The conventional nature is as explained above; for example, in terms of the four establishments of mindfulness, we understand the body is unclean, feelings are unsatisfactory in nature, the mind is impermanent, and particular phenomena are to be practiced or abandoned on the path. Through examining their conventional nature, we understand the relationships among the thirty-seven factors, their functions in bringing about liberation, and their causes and results. Such investigation gives us an expansive understanding of their role on the path.

Meditating on their ultimate nature is seeing that they lack inherent existence. Maitreya in the first chapter of his *Ornament of Clear Realizations* speaks of this. Here the thirty-seven harmonies are seen as meditation objects, not as practices to cultivate, and with wisdom analyzing the ultimate nature, we investigate their deeper mode of being. Although they appear to have an inherent nature, when searched for, a fixed, independent nature cannot be found. They appear one way but exist in another. Reflecting on the emptiness of inherent existence of the meditations, realizations, and qualities we cultivate is extremely powerful because it prevents us from reifying the very paths that liberate us. In addition to meditating that the thirty-seven harmonies are empty of inherent existence, we reflect that likewise the I — the person cultivating them — and the awakening to which they lead lack inherent existence.

## *The Thirty-Seven Harmonies for Fundamental Vehicle and Mahāyāna Practitioners*

The terms “Fundamental Vehicle” and “Mahāyāna” can be used with respect to one’s tenet system or one’s spiritual goal. According to tenet system, Vaibhāṣika and Sautrāntika are Fundamental Vehicle systems and Cittamātra and Madhyamaka are Mahāyāna systems. According to spiritual aim, practitioners who seek liberation from saṃsāra and want to become arhats are Fundamental Vehicle practitioners — śrāvakas and solitary realizers. Practitioners seeking full awakening in order to benefit all beings are Mahāyāna and follow the bodhisattva path.

A Fundamental Vehicle practitioner may be a proponent of either a Fundamental Vehicle or Mahāyāna tenet system. Similarly, a Mahāyāna practitioner may be a proponent of either a Fundamental Vehicle or a Mahāyāna tenet system. For example, Joe aspires for full awakening and therefore is a Mahāyāna practitioner. But since he follows the Vaibhāṣika tenet system, he is Fundamental Vehicle by tenet. Mary aspires to become an arhat, but is Madhyamaka by tenet. The thirty-seven harmonies are practices common to Fundamental Vehicle practitioners — śrāvakas and solitary realizers — and to Mahāyāna practitioners — bodhisattvas. They are explained in both the Pāli and Sanskrit sūtras and commentaries. Although most Buddhist practitioners meditate on the thirty-seven harmonies, individuals may differ in terms of their motivation — whether they seek arhatship or buddhahood — and in terms of the tenet system and view of selflessness that they hold.

The thirty-seven harmonies easily blend into the lamrim, or stages of the path. The purpose of practicing the thirty-seven harmonies in the Pāli tradition is to realize with correct wisdom the three characteristics: impermanence, duḥkha, and no-self (selflessness). The lamrim teachings are geared toward generating these same three understandings, in addition to bodhicitta.

Dharmakīrti said, “From impermanence, duḥkha. From duḥkha, selflessness.” That is, first we understand impermanence — the constantly changing nature of our mind and body and of our self. We are transitory by nature because we are governed by a multiplicity of causes and conditions that will change. We know that even if we feel strong and vibrant now, later we’ll lose our strength. While many of the changes we undergo result from causes and conditions in the external environment, many more occur under the influence of our afflictions and karma. This state of being under the influence of these polluted conditions without a moment’s respite is duḥkha — unsatisfactory.

Investigating further, we find that our body and mind being both impermanent and the nature of duḥkha is due to their dependence on other factors. As saṃsāric beings, we are under the power of other factors. Since that is so, we cannot be independent beings that exist under our own power. This leads us to understand selflessness, the lack of inherent existence. We depend on causes and conditions, we depend on the parts that compose us, and we depend on being designated by terms and concepts. We are empty of any existence from our own side and are not self-enclosed independent entities.

By meditating on the mindfulness of the body, we understand what it means to be an embodied being, one who is involuntarily trapped within a body that is impermanent, unsatisfactory in nature, and composed of thirty-two substances that are disgusting when seen for what they are. In mindfulness of feelings, we see how reactive, and thus unfree, we are with respect to our feelings and experiences. These and other insights arising from the practices of the four establishments of mindfulness lead us to generate renunciation — the aspiration to be free from saṃsāra and attain liberation. By meditating on the four establishments of mindfulness regarding others, we understand that they are similarly trapped by afflictions and karma and, with a compassionate attitude, we want them to be free and are willing to act in order to bring this about. This great compassion is an indispensable cause of bodhicitta.

Meditation on the third characteristic, selflessness, in the context of the Prāsaṅgika Madhyamaka view of emptiness, involves seeing all phenomena — the thirty-seven harmonies, the four truths, all sentient beings, and so forth — as empty of existing from their own side and thus existing by mere designation. When combined with great compassion, this view of emptiness leads to the “compassion observing the unapprehendable” that Candrakīrti mentions in the homage in his *Supplement*. This compassion is so called because it is informed by an understanding of emptiness — here unapprehendable means emptiness. It demonstrates that we have compassion for sentient beings that are empty yet exist dependently.

The four supreme strivings relate to the practice of karma and its results as described in the lamrim texts. We can also practice these in terms of abiding in bodhisattva and tantric ethical codes as well. The four bases of spiritual power relate to the development of serenity and the dhyānas. These states of concentration can then be applied to gaining the superknowledges that Atiśa

praises in *Lamp of the Path* as essential for completing the collections of merit and wisdom and for compassionately working for the benefit of sentient beings.

The qualities mentioned in the five faculties, five powers, seven awakening factors, and eightfold path are applicable to all practitioners, whether they follow the Fundamental Vehicle, the general Mahāyāna, or the Tantrayāna.

The *Sūtra on the Ten Grounds* explains the ten aims of bodhisattvas' practice of the thirty-seven harmonies with awakening: to refrain from forsaking all beings; to be sustained by their original unshakable resolve; to make great compassion foremost; to perfect the great kindness; to reflect on and bear in mind the cognition of all-knowledge; to completely accomplish the adornment of buddha lands; to completely realize the Tathāgata's powers, fearlessnesses, unique qualities, signs, marks, and speech; to further their quest, to acquire the most special supreme path; to accord with what they have learned regarding the extremely profound liberation of the Buddha; and to reflect on greatly wise and good skillful means.<sup>136</sup> Contemplating the expansive and beneficial results of completing these thirty-seven practices inspires us to engage in them.

## *The Thirty-Seven Harmonies in Tibetan Buddhism*

The thirty-seven harmonies form the foundation practice for Buddhist practitioners of the three vehicles. Why, then, aren't they described in the lamrim texts on which Tibetan Buddhists base their practice? I (Chodron) asked His Holiness this, and his response clarified the role of lamrim studies, the philosophical studies done in the large monasteries, and Tantra: While the thirty-seven harmonies are not explicitly found in the lamrim texts, they are taught extensively in the *Pharchin* texts — the commentaries on Perfection of Wisdom sūtras — such as Maitreya's *Ornament of Clear Realizations*. Students also study them when learning Candrakīrti's *Supplement to the Middle Way* and Tsongkhapa's commentary on it, *Illuminating the Thought*.

The way one traverses the ten bodhisattva grounds in Tantra is slightly different than in Sūtra. One reason has to do with speed: due to Tantra's special way of combining wisdom and method, tantric practitioners can accumulate merit very rapidly once they enter the first of the five paths, making their progress through the ten bodhisattva grounds quicker. Another is that the paths, the main

practices done on them, and the demarcation lines between the paths differ in Sūtrayāna and Tantrayāna. This could be one reason why the practice of the thirty-seven harmonies, which is essential for a bodhisattva following Sūtrayāna, is not explained in depth for someone practicing lamrim as preparation for tantric practice.

However, this does not mean that a lamrim practitioner does not need to practice the thirty-seven harmonies. Tsongkhapa's presentations of lamrim, especially his *Great Treatise on the Stages of the Path* and his *Middling Lamrim*, seem to be directed especially at people who have already studied the Perfections and the Middle Way. These lamrim texts synthesize what those practitioners have already learned, which includes the thirty-seven harmonies. Tsongkhapa's direct disciples were great scholars and geshe, so it seems that he took it for granted that they already knew how to practice the thirty-seven harmonies. Since lamrim was given as a summary before entering Tantrayāna practice, such practitioners would already have cultivated the thirty-seven harmonies.

Such a qualified tantric practitioner must know the thirty-seven harmonies. In the visualization practice of the deity and the maṇḍala, specific correlations are made with the thirty-seven harmonies. For example, when speaking of the symbolism of Yamāntaka's body, the nine faces represent the nine scriptural categories, which set forth the teachings. The two horns symbolize the two truths — the illusion-like veiled truth and the space-like ultimate truth — which are to be understood and realized. The thirty-four arms plus the body, speech, and mind represent the thirty-seven harmonies with awakening, which are the path for comprehending the two truths. The four doors of Yamāntaka's maṇḍala represent the purification of the four establishments of mindfulness, the purification of the four supreme strivings, the purification of the four basis of spiritual power, and the purification of the five powers.

Furthermore, the primordial wisdom of great bliss is explained in relation to the thirty-seven harmonies, but with different designations. Its functions are similar to those of the thirty-seven harmonies. Therefore a tantric practitioner must have complete understanding of the thirty-seven harmonies in order to have the proper basis to visualize these aspects of the deity and the maṇḍala.

Another reason why we do not hear of many monastics in large Tibetan monastic universities meditating on the thirty-seven harmonies may be because, as explained above, the Perfection of Wisdom and Abhidharma texts present the

thirty-seven harmonies as practices accomplished on the five bodhisattva paths. The students may therefore think that these are advanced practices undertaken by practitioners on one of the paths and not by persons like themselves who have not yet entered a path.<sup>137</sup> I noticed in the Pāli texts that the thirty-seven harmonies are often taught for people who are yet to enter a path. This is very good. I think it is very helpful to practice the four establishments of mindfulness before entering a path and before entering the Tantrayāna.

Unfortunately, in the Tibetan community there is widespread belief that geshees consider lamrim as a “small” teaching because there is very little philosophy in it and therefore very little to debate. People also have the incorrect notion that only those geshees and lamas who are not so scholarly teach lamrim, and that when they do teach it, since it is a simple teaching, there is no need to incorporate material from the major Indian philosophical treatises.

This is a sign of degeneration. When Tsongkhapa gave oral transmission or teachings on lamrim, it is likely that he incorporated teachings clarifying intricacies of the great philosophical treatises. I received a copy of a lamrim text composed by one of the teachers of the Thirteenth Dalai Lama, a lama from Amdo named Shamar Gendun Tenzin (1852–1912).<sup>138</sup> After reading a note in the Thirteenth’s copy of the book, I concluded that if a teacher is scholarly and highly learned, when he teaches lamrim he will definitely incorporate subtleties of topics from all the major treatises and commentaries. On the other hand, some lamrim texts, such as that by Pabongka Rinpoche, are straightforward, with no complexities or sophistications. I think that neglecting to include material from the great treatises when one teaches lamrim is not a positive sign but an indicator of degeneration that reflects the teacher’s level of scholarship and learning.

Tsongkhapa spoke about Buddhists who are rich in study of the great texts yet impoverished regarding practice. Although he said this centuries ago, he is speaking to us today. This poor state of affairs occurs when we are unable to understand that what we study is actually practical meditation instruction. In the *Great Treatise*, Tsongkhapa even admitted that the number of people who really integrate what he has taught in that text into their practice will be very few. To benefit those who are unable to do that, he composed another, small text, the *Lines of Experience* (*Lam rim bsdus don*), which summarizes the important points so that people could easily apply them to their lives in a practical manner.

In the Tibetan community many people think of meditation or practice as doing tantric sādhanas. This, too, indicates serious degeneration. There are two types of monasteries: those where the monastics study the major Indian treatises and those called “tantric monasteries” where the monastics memorize and perform sādhanas and rituals. For example, the monks in Namgyal Monastery, which is traditionally considered a tantric monastery, memorize one thousand pages, but they do not necessarily understand the meaning. An old monk from Namgyal Monastery once told me, “We are meant to simply recite the texts, not to receive explanations on them.” It is very sad that he believed this. I have heard that some Chinese and Japanese Buddhists think similarly — that chanting without understanding or meditating on the meaning is sufficient to carry on the Buddhist tradition. They leave it to the academic scholars to study and understand the meaning. This is very unfortunate. In the last twenty or thirty years, we have made effort in the Tibetan community to improve this situation. Now the monks at Namgyal Monastery also study philosophy. The nuns’ education has also greatly improved, and they now study philosophy and dialectics. In December 2016 twenty Tibetan nuns received their geshe degree and many more will follow. Some lay followers are also studying the treatises and engage in debate.

Many people incorrectly believe that the Indian treatises and commentaries are for study, not meditation. For meditation they read short meditation manuals and base their practice on those. In fact, everything we study is material to be examined and practiced in our meditation sessions. If we only needed a few brief teachings for meditation, why did our Teacher, the Buddha, teach for forty-five years and give 84,000 teachings?

In the past, many Tibetans — both laypeople and monastics — developed certain bad habits due to lack of knowledge. This is unfortunate. We cannot consider these habits and views as part of the Tibetan Buddhist tradition or as something to preserve. We must change these things. That is why I emphasize to the Tibetans, Chinese, Japanese, and Koreans who attend my teachings that we are now in the twenty-first century, so we must be twenty-first century Buddhists who don’t depend on faith alone but have a reasoned understanding of the Buddhadharma. We must then put what we have learned into practice.

In brief, the traditional style of teaching lamrim has been to teach a lamrim text without incorporating information and practices described in the great

Indian treatises. Although some people think this is good, in fact it is a sign of degeneration and needs to be changed. We must bring what is taught in the 108 volumes of the Kangyur and the 225 volumes of the Tengyur into our daily practice. In this way, the thirty-seven harmonies explained in these scriptures will become part of our practice and not just something we study or think about meditating on once we are on the five paths.

For example, in the study of the Perfection of Wisdom sūtras, we learn the 173 aspects of the three knowers. Although these are qualities of the three awakened states — those of śrāvaka and solitary-realizer arhats and buddhas — and are beyond our comprehension, we can still imagine these qualities and train to develop them. Although they are qualities of awakened states, the 173 aspects of the three knowers must be applied and practiced in our daily life. This is very important.

Many years ago I was giving the oral transmission of the *Eight-Thousand-Line Perfection of Wisdom Sūtra* and the *Ornament of Clear Realizations* in South India. The ex-abbot Pema Gyaltzen attended, and I asked him some questions about the 173 aspects of the three knowers. This great scholar described how all of them could be incorporated into the practices of the twenty applications. I was struck by his precise, wonderful explanation, which I had not seen clearly in the treatises. Perhaps he had written it in his own commentaries on Madhyamaka or logic (*pramāṇa*). In any case, he gave me a different way to think about and practice these 173 in my life. My point is that we should explore whatever we study from numerous viewpoints, relate it to other aspects of the path, and apply it in our daily life.

We now conclude volume 4, which discussed taking refuge in the Three Jewels and, having done so, engaging in the three higher trainings, which are the primary practices leading to nirvāṇa. Although the three higher trainings are expressed in the order of ethical conduct, concentration, and wisdom, such that they sequentially build on one another, in fact they are interrelated. For example, living with ethical conduct is a natural expression of wisdom; someone with wisdom of the ultimate nature automatically respects the law of karma and its effects and the prātimokṣa ethical restraints, as the Buddha illustrated in the example of his life.

Teachings on the thirty-seven harmonies with awakening encapsulate and elaborate on the higher trainings. Ethical conduct, concentration, and wisdom

permeate the stages of the path and will appear many times as we study the stages of the path, as we will see in future volumes of the *Library of Wisdom and Compassion*.

## Notes

1. This is similar to the uninterrupted path and liberated path spoken of in the Sanskrit tradition.
2. Another reference to the dhammakāya is found in the *Sutta on the Knowledge of Beginnings* (*Agganna Sutta*, DN 27:9). The monk Vāseṭṭha from the brahmin caste was reviled by other brahmins for having deserted his caste and mixing with those of lower castes when he ordained. Brahmins consider themselves to be the superior caste because according to their beliefs, the brahmin caste was born from Brahmā's mouth. Here the Buddha told his disciples how to describe themselves should brahmins ask:

He . . . can truly say: "I am a true offspring of the Blessed Lord, born of his mouth, born of Dhamma, created by Dhamma, an heir to Dhamma." Why is that? Because, Vāseṭṭha, this designates the Tathāgata: "The Dhamma body," that is the "body of Brahmā," or "Become Dhamma," that is, "Become Brahmā."

Here "Brahmā" means "the highest," indicating the Dhamma is the highest truth and the highest attainment.

3. The topic of the Twenty Saṅghas in the *Ornament of Clear Realizations* in the Sanskrit tradition lays out the various stages the eight āryas may pass through en route to arhatship.
4. This version is according to Pabongka Rinpoche.
5. Specifically, the cognitive obscuration spoken of here is āryas' unpolluted actions, which are the subtle motivation to engage in activities that benefit others. This unpolluted karma enables bodhisattvas to take rebirth according to their intention.
6. A buddha's pristine wisdom knowing the diversity and variety of conventionalities also directly knows emptiness, but within the division of a buddha's two pristine wisdoms — one of the ultimate nature, the other of the diversity of phenomena — it is said to be only the latter. A buddha's pristine wisdom knowing the ultimate nature of phenomena — their emptiness — also directly knows all conventionalities although it is called the pristine wisdom knowing the ultimate nature. In short, although both pristine wisdoms are omniscient and know all phenomena and their ultimate nature, they are posited in relation to their chief knowable object.
7. Individual self-knowledge is an ārya's experiential wisdom that directly knows its object — ultimate truth, subtle impermanence, or subtle conventionalities — by itself.
8. In other contexts, the word "deceptive" describes something appearing to be truly existent although it is not. This is not the meaning here.
9. There are many ways to speak of the Three Jewels. This is one way.
10. "Actual jewel" means it fits the definition of that particular jewel.
11. For more about the clear light mind, see chapters 12–14 in *Saṃsāra, Nirvāṇa, and Buddha Nature*, vol. 3 in the *Library of Wisdom and Compassion*.
12. For more about how to select qualified spiritual mentors and how to relate to our spiritual mentors, see chapters 4 and 5 of *The Foundation of Buddhist Practice*, vol. 2 in the *Library of Wisdom and Compassion*.
13. These are, for example, the female counterparts to the four Dhyāni Buddhas.
14. "Wheel of Brahmā" refers to the excellent speech of the Buddha's doctrine.
15. Sometimes the realm of the demi-gods (*asuras*) is mentioned as a sixth class of sentient being.

16. These are the six sensory faculties (five sense and one mental), two regenerative faculties (the disposition to masculinity and femininity that is responsible for the features, demeanor, behavior, and so forth of a male or female), life force, five feeling faculties (mental happiness and unhappiness, physical pleasure and displeasure, neutral feelings), five faculties to separate from the mundane (faith, effort, mindfulness, concentration, and wisdom), and three unpolluted faculties (path of seeing, path of meditation, path of no more learning). In general, the first fourteen are involved with cyclic existence (although arhats and buddhas also have the six sensory faculties) and the last eight are causes of liberation and awakening.
17. See chapter 8 for more on the eight liberations and the nine serial absorptions.
18. Geshe Jampa Gyatso, *Commentary to Candrakīrti's Supplement to the "Middle Way,"* unpublished transcript, vol. 7, 1228.
19. These two sūtra citations are from Candrakīrti's *Autocommentary on the Supplement*. See Geshe Jampa Gyatso, *Commentary to Candrakīrti's Supplement to the "Middle Way,"* vol. 7, 1358–59.
20. Commentators have different versions of the syllogisms. The ones presented here are drawn from Longdol Rinpoche Ngawang Lozang.
21. Of the six topics of recollections, the Three Jewels serve as the basis of the path; ethical conduct represents abandoning nonvirtue, generosity represents practicing virtue, and the buddhas and other divine beings are included among the deities. By recollecting the deities, we feel that we are in their presence and that they are witnessing our Dharma practice. In this way, we are inspired and our conscientiousness increases.
22. English translations of this sūtra can be found at <http://www.lotsawahouse.org/words-of-the-buddha/sutra-recalling-three-jewels> and [https://fpmt.org/wp-content/uploads/education/teachings/sutras/sutra\\_remembering\\_the\\_three\\_jewels\\_c5.pdf](https://fpmt.org/wp-content/uploads/education/teachings/sutras/sutra_remembering_the_three_jewels_c5.pdf).
23. “Son of the gods” refers to a celestial being from the desire realm who shoots arrows of the five afflictions to bedevil sentient beings. In other cases it refers to conceit.
24. See note 714, MN 1273.
25. This perspective is more general and differs slightly from that of the *Sublime Continuum*, which is from the viewpoint of ārya bodhisattvas.
26. See chapters 4 and 5 in *The Foundation of Buddhist Practice*.
27. Killing, stealing, unwise or unkind sexual behavior, lying, divisive speech, harsh words, idle talk, covetousness, malice, and wrong views.
28. Lay followers can take the eight one-day precepts included in the Prātimokṣa ordinations (discussed in the section below on the Prātimokṣa ethical code). Both monastic and lay followers can take the Eight Mahāyāna Precepts for one day.
29. According to [http://www.fpmt.org/golden\\_light\\_sutra/pdf/questions.pdf](http://www.fpmt.org/golden_light_sutra/pdf/questions.pdf), question 57, “How should I treat or dispose of images of buddhas and bodhisattvas,” recite *om ah hum* before burning Dharma papers. Visualize the text dissolving into the syllable *ah*, which represents the Buddha’s speech and also represents the ultimate nature, emptiness. Then visualize the *ah* dissolving into you and your mind being unified with its meaning. You may also recite this verse: Om, You that act for the benefit of sentient beings, / you that bestow similar siddhis (attainments), / although you depart for the land of the buddhas, / please return again.
30. See Thubten Chodron, *The Compassionate Kitchen: Buddhist Practices for Eating with Mindfulness and Gratitude* (Boulder, CO: Shambhala Publications, 2018).
31. For more statements on this issue, see <https://www.dalailama.com/messages/dolgyal-shugden>.
32. Please see The Dalai Lama and Thubten Chodron, *Buddhism: One Teacher, Many Traditions* (Somerville, MA: Wisdom Publications, 2014), 66–70, for more information about the precepts and the contents of the Vinaya in each of the three extant traditions.

33. See the *Greater Discourse on the Destruction of Craving* (MN 38) for the example of Sāti, who held wrong views. Unfortunately, he did not recognize his error and did not repent. Nor did Ariṭṭha, the holder of wrong views in the *Simile of the Saw* (MN 22). In both cases, the Buddha rebuked them and explained the errors in their thinking and the consequences of adhering to wrong views. In both cases, although dejected after being rebuked by the Buddha, neither of the monks apologized or publicly relinquished their wrong views. On the other hand, in the *Exposition of the Elements* (MN 140), Pukkusāti apologized profusely after addressing the Buddha as a friend because he did not recognize that the person before him was the Tathāgata.
34. Khensur Jampa Tegchok, *Practical Ethics and Profound Emptiness* (Somerville, MA: Wisdom Publications, 2017).
35. Traditionally “Saṅgha” refers to the monastic community, not to a group of lay practitioners.
36. *A Summary of the Means for Accomplishing the Mahāyāna Path* (*Mahāyāna-patha-sādhana-varna-samgraha*), in Doboom Tulku and Glenn Mullin, *Atisha and Buddhism in Tibet* (New Delhi: Tibet House, 1983), 48–50.
37. Jan Nattier, *A Few Good Men: The Bodhisattva Path according to The Inquiry of Ugra* (*Ugraparipṛcchā*) (Honolulu: University of Hawai‘i Press, 2003), 263–64.
38. This is according to the Dharmaguptaka Vinaya. The Mūlasarvāstivāda requires twelve bhikṣuṇīs, or six in an outlying area. The Mūlasarvāstivāda calls this an “ordination”; however, no new precepts are received.
39. This refers to the bhikṣu Saṅgha; since Tibetan nuns do not have full ordination, they can provide information to the bhikṣu Saṅgha but cannot take part in the decision-making process.
40. For more information on introducing the bhikṣuṇī ordination into Tibetan Buddhism, see <http://www.bhiksuniordination.org/>. The booklet *Revival of the Bhikṣuṇī Vow* can be downloaded at <http://www.bhiksuniordination.org/pdfs/2016-CBO-booklet.pdf>.
41. Sravasti Abbey in the United States is the first training monastery for Western nuns who practice in the Tibetan tradition and have Dharmaguptaka bhikṣuṇī ordination.
42. *Dharmaguptaka Vinaya: Pravrajyā and Śikṣamāṇā Ordination Rites* (Newport WA: Sravasti Abbey, 2017), 12, 16, 38.
43. The colophon for this poem reads: Written in 1973 in the Tegchen Choling, Dharamsala, India, 2517 years after the passing into parinirvāṇa of the Lord Buddha according to the *śrāvaka* tradition, in the water-ox year, 2100 years since the coming of Tibet’s revered King Nyatri.
44. Psychic powers may be gained by single-pointed concentration or by mantra recitation. Practitioners with single-pointed concentration will not use their psychic powers to harm others because their gross afflictions have been temporarily suppressed. However, someone with the aspiration to harm others may cultivate psychic powers through mantra recitation and use those powers to harm others. Such was the case with Milarepa, who used his magical powers to kill over thirty people before he encountered the Buddha’s teachings and purified his mind. He became a great yogi who attained awakening in that very life.
45. The superknowledges are supernormal powers, clairaudience, knowledge of others’ minds, recollection of past lives, and clairvoyance (divine eye).
46. It is said that serenity may be attained in six months in proper retreat circumstances. Of course, this depends on the practitioner’s ability, prior preparation, retreat conditions, and so forth.
47. Zhiyi, whose writings are rooted in the classic Indian texts, composed some of the clearest and most important texts on meditation, practiced by meditators in all Chinese traditions. His four major texts on this subject are *The Great Serenity and Insight, An Explanation of the Dharma Gateway of the Perfection of Dhyāna, Essentials for Practicing Serenity, Insight, and Dhyāna*, and *Six Gates to the Sublime*. These four are found in T46.1911 and 1915–17.

48. The object condition (*ālabhāna-pratyaya*) is the cognized object. The dominant condition (*adhipati-pratyaya*) for a consciousness is the sense or mental faculty that directly produces the consciousness. The immediately preceding condition (*samanantara-pratyaya*) is the consciousness of the immediately preceding moment. For a visual consciousness perceiving blue, for example, these would be the color blue, the eye faculty, and the moment of consciousness immediately preceding the arising of the visual consciousness perceiving blue. In terms of a mental consciousness, any of the six consciousnesses may serve as the dominant condition.
49. Qi (also chi or ki) is the circulating life force whose existence and properties are the basis of Chinese philosophy and medicine.
50. Zhiyi often quoted Nāgārjuna's lengthy *Commentary to the Great Perfection of Wisdom*, which is not found in the Tibetan canon.
51. Alternatively, after your skeleton expands with bones filling all of space and then contracts to a normal size, imagine the flesh reappearing. First the flesh goes halfway up the legs, then covers the torso, and so on, until only the upper part of the skull is exposed. Inspect the flesh as it reappears. In the second level, the yoga of thorough training, conclude by concentrating on the top half of the skull that is exposed. In the third level, the yoga of complete attention, after the flesh reappears, contemplate the tiny fragment of bone at the midbrow.
52. These are the ten corruptions of insight meditation. See *Vism* 10.105–28.
53. His Holiness the Dalai Lama and Jeffrey Hopkins, *How to See Yourself as You Really Are* (New York: Simon and Schuster, 2007), 107.
54. *Phro wa* is sometimes translated as “excitement” or “agitation.”
55. Some scholars say that coarse restlessness is no longer present on the fourth stage.
56. The terminology in the Sanskrit tradition in this chapter may differ from that in the Pāli tradition. For example, what is called “mundane insight” here is seen as a reflective contemplation in the Pāli tradition. In the Pāli tradition, insight knows impermanence, *duḥkha*, and selflessness (non-self).
57. See chapter 2 of *Saṃsāra, Nirvāṇa, and Buddha Nature* for a description of the three realms of cyclic existence.
58. There are many types of equanimity, such as the feeling of equanimity and the equanimity of the four immeasurables, and so forth. The equanimity present in the second dhyāna is the virtuous mental factor of even-minded equanimity that balances the mind and its accompanying mental factors.
59. This is mentioned the fourth chapter of Asaṅga's *Śrāvaka Grounds*, which explains the mundane and supramundane path.
60. It seems that there are cases where śrāvakas meditate on grossness and peacefulness, but this is generally done to increase their meditative dexterity.
61. See chapter 1 of *Saṃsāra, Nirvāṇa, and Buddha Nature* for an explanation of the sixteen attributes of the four truths.
62. For more details on the Twenty Saṅghas, see James B. Apple, *Stairway to Nirvana: A Study of the Twenty Saṅghas Based on the Works of Tsong Kha pa* (New York: State University of New York Press, 2008).
63. In the previous list of mental contemplations, the one of delight was fourth and the one of analysis was fifth.
64. Also see Napper, *Traversing the Spiritual Path*.
65. *Anāgamya* may also be translated as the “not-unable preparation.”
66. See chapter 2 in *Saṃsāra, Nirvāṇa, and Buddha Nature* for more on the realms of saṃsāra in general and the five pure abodes in particular.
67. To attain an actual dhyāna, Buddhist meditators must have suppressed the nine grades of afflictions of the desire realm, something these stream-enterers and once-returners have not done. Thus alternating

dhyāna meditation is done only by nonreturners or arhats who have suppressed all afflictions of the desire realm.

68. Absorptions cultivated to attain the excellent qualities of concentration include those practiced in common with śrāvakas, such as the eight liberations and the ten concentrations that see the entire universe as water, fire, and so on. They also include concentrations unique to bodhisattvas that are cultivated limitlessly and have unimaginable diversity, such as concentrations included in the category of the ten powers and concentrations “that śrāvakas and solitary realizers don’t even have the name for, let alone absorb in.”
69. There are eleven such concentrations that correspond to the eleven groups of sentient beings whom bodhisattvas especially take care to benefit, as mentioned in the bodhisattva’s ethical conduct of benefiting others.
70. According to the *Treasury of Knowledge*, whose explanation of the bodhisattva path differs from the Mahāyāna explanation, the concentration of the stream of Dharma is attained by a bodhisattva on the path of accumulation who employs this concentration to pass through the remaining four bodhisattva paths in a single meditation session to attain buddhahood. This is how this text explains the path the Buddha traversed in his lifetime.
71. Tantric practitioners may initially meditate according to the Cittamātra view. When they have gained stability on the generation stage and have reached a stage called “the slight falling of wisdom,” to progress further they must adopt the Madhyamaka view.
72. The first two texts are found only in Chinese, but in recent decades efforts have been made to translate the *Mahāvibhāṣā* into Tibetan. For more about the eight liberations and nine serial absorptions, see *The Explanation Ornament of the Essence along with (i) the Root Text of the Treatise of Quintessential Instructions of the Perfection of Wisdom: Ornament for Clear Realization and (ii) the Commentary Clear Meaning*, trans. Toh Sze Gee (Pomaia, Italy: FPMT Masters Program, 2015), 345–47.
73. In the Pāli sutras, liberations 4–7 are called “abiding peacefully in the present life.” The four dhyānas are called “happy” or “pleasant abidings.”
74. It seems like these bodhisattvas have already traversed the śrāvaka path and possess actual dhyānas.
75. Also see Anālayo, *From Craving to Liberation*, 141–48.
76. These signs are explained in the following chapter. See also “learning sign” and “counterpart sign” in the glossary.
77. For more on śrāvakas’ leap-over absorption see *Vasubandhu, “Treasury of Manifest Knowledge” [and] First Dalai Lama Gedun Drup, “Clarifying the Path to Liberation,”* review by Geshe Jampa Gyatso (Pomaia, Italy: FPMT Masters Program, 2008–2013), 283–84.
78. For more on the bodhisattvas’ leap-over absorption, see Jeffrey Hopkins and Jongbok Li, *Ngag-wang-pal-dan’s Explanation of the Treatise “Ornament for the Clear Realizations” from the Approach of the Meaning of the Words: The Sacred Word of Maitreyañātha* (Dyke, VA: UMA Institute for Tibetan Studies, n.d.), 411–15. See also Tsongkhapa’s *Golden Garland (Gser gyi phreng)*.
79. Unless otherwise mentioned, “access concentration” refers to the preparatory stages of the first dhyāna.
80. The *Discourse on the Fruits of the Homeless Life* (Sāmaññaphala, DN 2.83) describes knowledge and vision (ñānadassana) as follows: The meditator who has attained the fourth dhyāna “directs and inclines his mind toward knowledge and vision. He knows, “This my body is material, made up of the four great elements, born of mother and father, fed on rice and gruel, impermanent, liable to be injured and abraded, broken and destroyed; and this is my consciousness, which is bound to it and dependent on it.” The mind-made body is described in the next section.
81. This is according to Vism and Pāli commentaries.
82. The *Ornament of Clear Realizations*, which extensively discusses the superknowledges, is written from the Svātantrika Madhyamaka viewpoint, which asserts that the afflictive obscurations and cognitive obscurations are abandoned simultaneously at buddhahood. For that reason, the Svātantrikas say this

superknowledge is present in the mindstreams of śrāvaka arhats who have an actual dhyāna. Bodhisattvas who are definite in the Mahāyāna lineage — that is, they enter the Mahāyāna directly without becoming śrāvaka arhats — attain this superknowledge at buddhahood.

83. The Aṅguttara Nikāya Commentary (II 119) says, “One-pointedness of mind is called serenity.” According to the Majjhima Nikāya Commentary (II 346), serenity is “the eight attainments (the eight meditative absorptions) that are the basis for insight.” The Udāna Commentary says (233): “The eight attainments together with access [concentration], which serve as the basis for insight, are called mundane samādhi.” Since I don’t think the commentaries would drive a wedge between samādhi and samatha, they would certainly say that samatha includes access concentration. Bhikkhu Bodhi, personal correspondence, July 4, 2018.
84. Not all of these meditation objects are unique to Buddhism; meditators of other sects at the Buddha’s time used the kasiṇas and the four formless states.
85. *Kaṣiṇa* means “totality” or “entirety.”
86. It seems that the access concentration spoken of in the Pāli tradition and the preparatory stages (*sāmantaka*) spoken of in the Sanskrit tradition refer to the same thing. Each of the four dhyānas has preparatory stages or access concentration that precedes it.
87. Some teachers instruct students to focus on the rise and fall of the abdomen while breathing, but this does not lead to serenity. According to Bhikkhu Bodhi: “Observation of the rise and fall of the abdomen has, to my knowledge, never been taught as a samatha practice. The observation of the abdomen arose in a lineage of Burmese meditation masters (though it might go back even to Indian teachers in an oral lineage) as a way to move quickly and directly into vipassanā meditation. If one were to observe the rise and fall of the abdomen, I doubt that one could obtain the proper nimitta of the object, because the focus of observation is too large and is always in motion. It is, however, possible that for certain meditators, as they observe the rise and fall of the abdomen, the mind settles down and reaches a preliminary stage of concentration. If they have practiced samatha meditation successfully in a past existence — that is, [have attained] access concentration or dhyāna — the mind might cast up a nimitta, arising from the depths of the subconscious, and the meditator might then turn away from the rise and fall of the abdomen and focus on the nimitta.” Personal correspondence, December 29, 2008.
88. How to do this will be discussed in a future volume. See the Dalai Lama’s *Healing Anger: The Power of Patience from a Buddhist Perspective*, trans. Thupten Jinpa (Ithaca, NY: Snow Lion Publications, 1997) and Thubten Chodron’s *Working with Anger* (Ithaca, NY: Snow Lion Publications, 2001). See also chapter 9 in *Vism* (Bhikkhu Ñāṇamoli’s translation of Buddhaghosa in *The Path of Purification*).
89. Bhikkhu Bodhi said, “It seems that when using this meditation, the counterpart sign as described in relation to kasiṇa meditation and ānāpānasati (mindfulness of breathing) does not appear. Some meditators who use *mettā-bhāvanā* (meditation on love) have told me that they do perceive the colored nimitta, but it seems to me that if one switches from love to the colored nimitta one is no longer practicing *mettā-bhāvanā*, but kasiṇa meditation, using a mentally perceived form as the object.” Private correspondence, January 1, 2008.
90. Although Buddhaghosa encourages developing the four divine abodes toward all sentient beings, the first dhyāna can be attained without all beings in all directions being the object. “The object of any of the four divine abodes is a single living being or many living beings, as a mental object consisting in a concept.” (*Vism* 314)
91. See chapter 2 of *Saṃsāra, Nirvāṇa, and Buddha Nature*.
92. This is the sequence according to the commentaries. Some individual meditators have reported that they go into access concentration, enter the first dhyāna, and from there attain the second dhyāna.
93. In personal correspondence (August 31, 2008), I asked Bhikkhu Bodhi for his thoughts on why this is and he responded: “This reflects the commentarial understanding of the way the four establishments of mindfulness are to be practiced, perhaps related to the commentarial understanding of jhāna (dhyāna)

as a state in which self-reflection on one's own experience cannot occur while one is in the state itself. In this interpretation, jhāna is a state of utter absorption in the object and thus precludes reflection on and introspective knowledge of one's own experience. I'm not sure that this is entailed by the canonical presentations on jhāna and the four *satipaṭṭhānas*. It seems that, according to the Nikāyas, in the jhānas one *can* reflect on (not "think of," but look back at) one's immediate experience. Thus the second and third satipaṭṭhānas partly involve an evaluation of experience, in terms of one's feelings and states of mind, as one moves from ordinary consciousness toward, and then *into*, jhāna.

"But in the Vism view, since feelings and mind-states are things that are constantly arising and passing away, to objectify them in meditation means that one has a changing object of awareness, and this cannot be the object of jhāna, which must be an unchanging object, the nimitta. Therefore, according to Buddhaghosa, they have to be objects of contemplation leading to vipassanā (insight) or paññā (wisdom), but not jhāna. This is the way I would understand the reason behind the statement at Vism 9.113."

94. The Sanskrit traditions agrees with what Bhikkhu Bodhi said, that those on the śrāvaka path can develop insight and attain arhatship on the basis of access concentration without gaining dhyāna.
95. See Vism 21.111–12.
96. Since the breath is constantly changing, it cannot be the meditation object of serenity. However, focusing on the breath generates a sign, which does not change, and this is the actual observed object when cultivating serenity.
97. See Vism 21.112ff.
98. The Chinese word "Chan" and Japanese word "Zen" are translations of the Sanskrit "dhyāna" and the Pāli "jhāna."
99. This is opposite in the Tibetan tradition.
100. A crore is 10 million.
101. Tibetan meditators attribute these symptoms to *loong*, an imbalance of the internal energy winds in the body. This disorder can cause uncomfortable physical sensations, mental distress, and moodiness.
102. Chu-hung and Tsung-pen, *Pure Mind, Pure Land*, trans. J. C. Cleary (New York: Sūtra Translation Committee of the United States and Canada, 1994), 135.
103. The two *Knowledges* are Vasubandhu's *Treasury of Knowledge* and Asaṅga's *Compendium of Knowledge*.
104. English translations for the term *samprajanya* vary: alertness, clear knowing, vigilance, clear comprehension, and so forth.
105. The following citations are from this text. This and other quotations below from Asaṅga in the *Śrāvakabhūmi* and *Compendium of Knowledge* were translated by Boaz Amichay (private correspondence).
106. The major difference between this and Asaṅga's passage is that the later says "removing fatigue and sleepiness," whereas the Pāli sūtra says "defecating and urinating."
107. See chapter 3 in *The Foundation of Buddhist Practice* to learn about conceptual and nonconceptual minds.
108. Although phenomena include all existents, in the four establishments mindfulness of mental factors is predominant. Thus their being continuums of moments of consciousness is emphasized.
109. See *Approaching the Buddhist Path*, 205–7, for the explanation of these four principles.
110. According to the Pāli commentary to MN, in the context of mindfulness of breathing, "internally" refers to the breathing in one's own body, "externally" to the breathing in the body of another person, and "both internally and externally" means contemplating the two alternately. In terms of the other body contemplations, the explanation of inner, outer, and both differs according to the object contemplated.
111. See chapter 1 of *The Foundation of Buddhist Practice* for more on the four seals.

112. See chapter 1 of *Samsāra, Nirvāṇa, and Buddha Nature* for more on the four distorted conceptions and the four truths.
113. Interestingly, in the *Establishment of Mindfulness Sutta* in the *Middle Length Discourses* in the Chinese canon, mindfulness of the body in the four postures comes before mindfulness of breathing. Perhaps the emphasis there is to be mindful of the body first while the body is in gross and active positions, and then progress to mindfulness of the body in formal meditation posture. Bhikkhu Anālayo has done a careful comparison of different versions of the sūtra in his books *Perspectives on Satipaṭṭhāna* (Cambridge, UK: Windhorse Publications, 2014) and *Satipaṭṭhāna: The Direct Path to Realization* (Birmingham, UK: Windhorse Publications, 2003).
114. This is a liquid found mostly on the palms and soles of the feet.
115. Other sūtras that relate to mindfulness of the body are MN 28, MN 62, MN 119, MN 140, and DN 22.
116. For more on the twelve links of dependent origination, see chapters 7 and 8 of *Samsāra, Nirvāṇa, and Buddha Nature*.
117. It seems that the earliest descriptions of the mindfulness of phenomena contained only two categories: the five hindrances and seven awakening factors. As an example, some scholars point out that only these two are found in the explanation of mindfulness of phenomena in the Pāli *Vibhaṅga*, the second Abhidharma text. Others say that this section evolved and expanded over time. The *Great Sutta on the Establishments of Mindfulness* (DN 22) contains a more expansive explanation of the mindfulness of phenomena, defining many of the terms that are commonly found in descriptions of the four truths and the eightfold path.
118. This refers to the desire found in the desire realm.
119. Tibetan translators often translate *upādāna* (T. *len pa*) in this context as “appropriated,” as in “the five appropriated aggregates.” Regardless of the translation, the meaning is the same in both traditions.
120. *Samskāra* (P. *saṅkhāra*) is also translated as “compositional factors” or “volitional formations.”
121. See chapter 7 of *Samsāra, Nirvāṇa, and Buddha Nature*.
122. For more about the fetters, see chapter 3 of *Samsāra, Nirvāṇa, and Buddha Nature*.
123. See chapters 7 and 8 of *Samsāra, Nirvāṇa, and Buddha Nature* for an explanation of the twelve links of dependent origination.
124. See chapters 13 and 14 in *Samsāra, Nirvāṇa, and Buddha Nature*.
125. The Sanskrit term is *samyak pradhāna* or *samyak prabhāna*. The Pāli term is *sammāpadhāna*. All of these terms may be translated into English as “supreme (or right) striving” or “supreme exertion.” *Pradhāna* was translated into Tibetan as *spong ba* — in English, “abandonment.” Tibetans call these the four supreme abandonments, saying that this is a case of the name of one point — the second one, “abandoning nonvirtues already generated” — being given to the entire set. They describe the first one as abandoning letting nonvirtues arise in the future and the last two as abandoning not enhancing virtues that have been generated, and abandoning not generating new virtues in the future. To do this, nonaspiration, noneffort, nonintention, and nonwisdom must be abandoned. However, it is clear from the meaning of these four factors, as well as from the Pāli and Chinese translation of the term and fact that the path factor of joyous effort is described as these four supreme strivings (see MN 141), that *pradhāna* (P. *padhāna*) is the correct reading and “striving” or “exertion” is the correct translation of the set.
126. The four floods are (1) *desire*, which includes the afflictions of the desire realm except for ignorance; (2) *existence*, which includes the afflictions of the form and formless realms except ignorance. Existence also refers to interest in being born in the form and formless realms and the tenth of the twelve links that leads to rebirth there; (3) *ignorance*, and (4) *wrong views*.
127. When used in the technical Abhidharmic sense, as we’re using it here, supramundane (*lokottara*, *lokuttara*) refers only to nine phenomena: the four supramundane paths, their four respective fruits,

and nirvāṇa. Sometimes teachers may use it in a general sense as that which is conducive to or tends toward liberation, in contrast to that which brings a good rebirth and happiness in saṃsāra.

128. See the section “Reliable Cognizers Based on Authoritative Testimony” in chapter 2 of *The Foundation of Buddhist Practice*.
129. Padmakara Translation Group, *Nagarjuna’s “Letter to a Friend”* (Ithaca, NY: Snow Lion Publications, 2005), 45.
130. The Sanskrit and Pāli word for “breakthrough” is *abhisamaya*, which is often translated as “clear realization.”
131. Imperceptible forms are discussed in chapter 12 of *The Foundation of Buddhist Practice*.
132. All of the following offset quotations defining the eight path factors are from SN 45.8.
133. Nirvāṇa is both the state of cessation in which true duḥkha and true origins of duḥkha have been eliminated, and reality, the object of meditation of an ārya’s meditative equipoise. Here nirvāṇa is the latter. See *Saṃsāra, Nirvāṇa, and Buddha Nature*, chapter 11.
134. In MN 44:15 investigation and analysis are considered verbal formations because they are a type of thought, and a person first thinks about what to say and then speaks.
135. See chapter 1 of *The Foundation of Buddhist Practice* for more on the four seals.
136. See Bhikshu Dharmamitra’s “The Ten Bodhisattva Grounds,” 71.
137. To enter the śrāvaka or solitary-realizer path, one must have stable renunciation that day and night seeks liberation. To enter the bodhisattva path requires uncontrived renunciation and bodhicitta.
138. The Fourth Amdo Shamar, Gendun Tenzin Gyatso, *Stages of the Path (Zhwa dmar lam rim)*.

## Glossary

*absolutism* (*eternalism* or *permanence*, *śāśvatānta*). The belief that phenomena inherently exist.

*absorption of cessation* (*nirodha-samāpatti*). An abstract composite in an ārya's continuum in which coarse feelings and discriminations associated with the subtle mental primary consciousness have ceased.

*abstract composites* (*viprayukta-samskāra*). Impermanent phenomena that are neither forms nor consciousnesses.

*access*. See preparatory stages for a dhyāna.

*access concentration* (P. *upacāra samādhi*). A level of concentration that prepares the mind to enter the next actual dhyāna.

*actual dhyāna* (T. *bsam gten gyi dngos gzha*). A more refined dhyānic concentration attained upon completing its preparatory stages.

*afflictions* (*kleśa*). Mental factors that disturb the tranquility of the mind. These include disturbing emotions and wrong views.

*afflictive obscurations* (*kleśāvaraṇa*). Obscurations that mainly prevent liberation; afflictions and their seeds.

*aggregates* (*skandha*). The four or five components that make up a living being: form (except for beings born in the formless realm), feelings, discriminations, miscellaneous factors, and consciousnesses.

*analytical meditation* (*vicārabhāvanā*, T. *dpyad sgom*). Meditation done to understand an object.

*arhat*. Someone who has eliminated all afflictive obscurations and attained liberation.

*ārya* (P. *ariya*). Someone who has directly and nonconceptually realized the emptiness of inherent existence; someone who is on the path of seeing, meditation, or no-more-learning.

*ārya buddha*. A person who is fully awakened, such as an enjoyment body or emanation body.

*ārya learner*. A person who has realized emptiness directly but is not a buddha.

*bardo* (*antarābhava*). The intermediate state between one life and the next.

*basis of designation*. The collection of parts or factors in dependence on which an object is designated.

*bodhicitta*. A main mental consciousness induced by an aspiration to bring about others' welfare and accompanied by an aspiration to attain full awakening oneself. It marks entry into the Mahāyāna.

*bodhisattva*. Someone who has genuine bodhicitta.

*bodhisattva ground*. A consciousness in the continuum of an ārya bodhisattva characterized by wisdom and compassion. It is the basis for the development of good qualities and the basis for the eradication of ignorance and mistaken appearances.

*buddha*. All aspects of a buddha. It includes the four buddha bodies.

*capable preparation* (*not-unable, anāgāmya, T. nyer bsdogs mi lcog med*). A preparation of the first dhyāna that is so called because it is able to serve as the mental basis for supramundane paths.

*causal meditative absorption*. The meditative absorption attained as a human being that causes rebirth in the form or formless realms.

*causally concordant result*. The karmic result that corresponds to its cause. It is of two types: the result similar to the cause in terms of our experience and the result similar to the cause in terms of our habitual behavior.

*cognitive faculty (indriya)*. The subtle material in the gross sense organ that enables perception of sense objects; for the mental consciousness, it is a previous moment of any of the six consciousnesses.

*cognitive obscurations (jñeyāvaraṇa)*. Obscurations that mainly prevent full awakening; the latencies of ignorance and the subtle dualistic view that they give rise to.

*collection of merit (punyasambhāra)*. A bodhisattva's practice of the method aspect of the path that accumulates merit.

*concentration (samādhi)*. A mental factor that dwells single-pointedly for a sustained period of time on one object; a state of deep meditative absorption; single-pointed concentration that is free from discursive thought.

*conceptual appearance (artha-sāmānya, T. don spyi)*. A mental image of an object that appears to a conceptual consciousness.

*conceptual consciousness (kalpanā)*. A consciousness knowing its object by means of a conceptual appearance.

*concomitant (T. mtshungs ldan)*. Accompanying or occurring together in the same mental state.

*consciousness (jñāna)*. That which is clear and cognizant.

*conventional existence (samvṛtisat)*. Existence.

*conventional truths (samvṛtisatya)*. That which is true only from the perspective of grasping true existence. It includes all phenomena except ultimate truths. Syn. veiled truth.

*counterpart sign* (P. *paṭbhāga-nimitta*). The meditation object of a dhyāna consciousness; a conceptual object that arises on the basis of a visible object.

*cyclic existence* (*saṃsāra*). The cycle of rebirth that occurs under the control of afflictions and karma.

*death* (*maraṇabhava*). The last moment of a lifetime when the subtlest clear-light mind manifests.

*defilement* (*mala*, T. *dri ma*). Either an afflictive obscuration or a cognitive obscuration.

*deity* (*iṣṭadevatā*, T. *yi dam*). A manifestation of the awakened mind that is meditated on in Tantra.

*dependent arising* (*pratītyasamutpāda*). This is of three types: (1) causal dependence — things arising due to causes and conditions, (2) mutual dependence — phenomena existing in relation to other phenomena, and (3) dependent designation — phenomena existing by being merely designated by terms and concepts.

*desire realm* (*kāmadhātu*). One of the three realms of cyclic existence; the realm where sentient beings are overwhelmed by attraction to and desire for sense objects.

*deva*. A being born as a heavenly being in the desire realm or a being born in the form or formless realm.

*dhyāna* (P. *jhāna*). A meditative absorption of the form realm.

*dry-insight arhats*. Those who have attained arhatship on the basis of momentary concentration or access concentration, without having actualized the dhyānas.

*dualistic appearance*. The appearance of subject and object as separate or the appearance of inherent existence.

*duḥkha* (P. *dukkha*). Unsatisfactory experiences of cyclic existence.

*Dzogchen*. A tantric practice emphasizing meditation on the nature of mind, practiced primarily in the Nyingma tradition.

*eight worldly concerns* (*aṣṭalokadharmā*). Attachment or aversion regarding material gain and loss, fame and disrepute, praise and blame, pleasure and pain.

*emanation body* (*nirmāṇakāya*). The buddha body that appears as an ordinary sentient being to benefit others.

*emptiness* (*śūnyatā*). The lack of inherent existence, lack of independent existence.

*enjoyment body* (*sambhogakāya*). The buddha body that appears in the pure lands to teach ārya bodhisattvas.

*establishments of mindfulness* (*smṛtyupasthāna, satipaṭṭhāna, T. dran pa nyer bzhag*). One of the seven sets of practices comprising the thirty-seven harmonies with awakening. It focuses mindfulness on the body, feelings, mind, and phenomena.

*exalted knower* (*jñāna, T. mkhyen pa*). A realization of someone who has entered a path. It exists from the path of accumulation to the buddha ground. Exalted knower, path, ground, pristine wisdom, and clear realization are mutually inclusive.

*existent* (*sat*). That which is perceivable by mind.

*fetters* (*saṃyojana*). Factors that keep us bound to cyclic existence and impede the attainment of liberation. The five lower fetters — view of a personal identity, deluded doubt, view of rules and practices, sensual desire, and malice — bind us to rebirth in the desire realm. The five higher fetters — desire for existence in the form realm, desire for existence in the formless realm, arrogance, restlessness, and ignorance — prevent a nonreturner from becoming an arhat.

*five dhyānic factors.* Investigation (*vitarka, vitakka*), analysis (*vicāra, vicāra*), joy (*prīti, pīti*), bliss (*sukha*), and one-pointedness of mind (*ekāgratā, ekaggatā*).

*five heinous crimes (ānantārya).* Killing one's mother, father, or an arhat, wounding a buddha, and causing schism in the Saṅgha.

*five hindrances (āvaraṇa, T. sgrib pa).* Hindrances that interfere with attaining serenity: sensual desire (*kāmacchanda*), malice (*vyāpāda, byāpāda*), lethargy and sleepiness (*styāna-middha, thīna-middha*), restlessness and regret (*auddhatya-kaukr̥tya, uddhacca-kukkucca*), and deluded doubt (*vicikitsā, vicikicchā*).

*form body (rūpakāya).* The buddha body in which a buddha appears to sentient beings; it includes the emanation and enjoyment bodies.

*form realm (rūpadhātu).* A realm in saṃsāra in which the beings have subtle bodies; they are born there by having attained various states of concentration.

*formless realm (ārūpyadhātu).* The realm in saṃsāra in which sentient beings do not have a material body and abide in deep states of concentration.

*four seals (caturmudrā).* Four views that make a philosophy Buddhist: all conditioned phenomena are transient, all polluted phenomena are duḥkha, all phenomena are empty and selfless, nirvāṇa alone is true peace.

*four truths of the āryas (catvāry āryasatyāni).* The truth of duḥkha, its origin, its cessation, and the path to that cessation.

*full awakening (sam्यaksambodhi).* Buddhahood; the state where all obscurations have been abandoned and all good qualities developed limitlessly.

*fundamental innate mind of clear light (T. gnyug ma lhan cig skyes pa'i 'od gsal gyi sems).* The subtlest level of mind.

*Fundamental Vehicle.* The vehicle leading to the liberation of śrāvakas and solitary realizers.

*god (deva)*. A being born as a heavenly being in the desire realm or in the form or formless realms.

*grasping inherent existence (svabhāvagraha)*. Grasping persons and phenomena to exist truly or inherently; syn. grasping true existence.

*grasping true existence (true-grasping, satyagrāha)*. Grasping persons and phenomena to exist truly or inherently.

*harmonies with awakening (bodhipāṅśya-dharma, bodhipakkhiya-dhamma)*. Thirty-seven practices condensed into seven sets that lead to liberation and awakening.

*hell being (nāraka)*. A being born in an unfortunate realm of intense physical pain due to strong destructive karma.

*hungry ghost (preta)*. A being born in one of the unfortunate realms who suffers from intense hunger and thirst.

*ignorance (avidyā)*. A mental factor that is obscured and grasps the opposite of what exists. There are two types: ignorance regarding ultimate truth and ignorance regarding karma and its effects.

*impermanent (anitya, anicca)*. Momentary; not remaining in the next moment.

*inferential cognizer (anumāna)*. A mind that ascertains its object by means of a correct syllogism.

*inherent existence (svabhāva)*. Existence without depending on any other factors; independent existence.

*insight (vipāśyanā, vipassanā, T. lhag mthong)*. A wisdom of thorough discrimination of phenomena conjoined with special pliancy induced by the power of analysis.

*insight knowledge (P. vipassanā-ñāṇa)*. Knowledge of the three characteristics gained through insight.

*introspective awareness* (*samprajanya, sampajañña*). An intelligence that causes one to engage in activities of body, speech, or mind heedfully.

*karma*. Intentional (volitional) action; it includes intention karma (mental action) and intended karma (physical and verbal actions motivated by intention).

*karmic seeds*. The potencies from previously created actions that will bring their results.

*knowable* (*jñeya*). That which is suitable to serve as an object of an awareness.

*latencies* (*vāsanā*). Predispositions, imprints, or tendencies.

*leapover meditative absorption* (*vyukrāntaka-samāpatti, T. thod rgyal gyi snyoms 'jug*). A meditative absorption in which the eight serial absorptions are alternated with the absorption or cessation and with a desire-realm mind.

*learning sign* (P. *uggaha-nimitta*). A subtler object that replaces the preliminary sign when the meditator sees the mental image of something — a kasīṇa, for example — as clearly with closed eyes as with open eyes looking at it.

*liberated path*. A wisdom directly realizing emptiness that has completely eradicated a portion of defilements; a path that has temporarily suppressed a portion of the manifest afflictions.

*liberation* (*mokṣa, T. thar pa*). A true cessation that is the abandonment of afflictive obscurations; nirvāṇa, the state of freedom from cyclic existence.

*liberation* (*vimokṣa, vimokkha, T. rnam thar*). The eight liberations, which are the mind's temporary release from defilements that is brought about by mastering certain meditative skills.

*liberation* (*vimukti, vimutti, T. rnam grol*). Sanskrit tradition: Complete freedom from saṃsāra; Pāli tradition: a conditioned event that brings nirvāṇa.

*Mahāmudrā*. A type of meditation that focuses on the conventional and ultimate natures of the mind.

*Māra*. Four corrupting forces: (1) the afflictions, (2) five aggregates, twelve sense sources, and eighteen constituents, (3) death, and (4) a god in the desire realm who interferes with our creation of virtue.

*meditative equipoise on emptiness*. An ārya's mind focused single-pointedly on the emptiness of inherent existence.

*mental consciousness (mano-vijñāna)*. A primary consciousness that knows mental phenomena in contradistinction to sense primary consciousnesses that know physical objects.

*mental contemplation (manaskāra, T. yid la byed pa)*. A mind that meditates on either grossness and subtleness or on the four truths in order to attain either the dhyānas or the union of serenity and insight on emptiness.

*mental factor (caitta)*. An aspect of mind that accompanies a primary consciousness and fills out the cognition, apprehending particular attributes of the object or performing a specific function.

*mind (citta)*. That which is clear and aware; the part of living beings that cognizes, experiences, thinks, feels, and so on. In some contexts it is equivalent to primary consciousness.

*mind-made body (P. manomaya-kāya)*. A physical body, created with a mind of dhyāna, that is an exact replica of the meditator's own body.

*mindfulness (smṛti, sati)*. A mental factor that brings to mind a phenomenon of previous acquaintance without forgetting it and prevents distraction to other objects.

*mindstream (cittasaṃtāna)*. The continuity of mind.

*momentary (kṣaṇika)*. Not enduring to the next moment.

*momentary concentration* (P. *khanika-samādhi*). Concentration developed by directing mindfulness to the changing states of mind and body, noting any phenomenon that appears. While not at the depth of an actual dhyāna, śrāvakas may use it to attain arhatship.

*monastic*. Someone who has received monastic ordination; a monk or nun.

*nature truth body* (*svabhāvika dharmakāya*). The buddha body that is the emptiness of a buddha's mind and that buddha's true cessations.

*nihilism* (*ucchedānta*). The belief that our actions have no ethical dimension; the belief that nothing exists.

*nimitta*. The sign or mental image that is the object for cultivating serenity. It is of three types: the preliminary, learning, and counterpart nimittas.

*nine stages of sustained attention* (*navākārā cittasthiti*, T. *sems gnas dgu*). Stages of concentration on the way to attaining serenity.

*nirvāṇa*. The state of liberation of an arhat; the purified aspect of a mind that is free from afflictions.

*nirvāṇa without remainder* (*anupadhiṣeṣa-nirvāṇa*, *anupādisesa-nibbāna*). (1) The state of liberation when an arhat has passed away and no longer has the remainder of the polluted aggregates; (2) an ārya's meditative equipoise on emptiness when there is no appearance of true existence.

*nonaffirming negative* (*prasajyapratishedha*, T. *med dgag*). The mere absence of the object of negation. A negative phenomenon in which, upon the explicit elimination of the object of negation by an awareness, another phenomenon is not suggested or established.

*nonconceptual consciousness*. A consciousness that knows its object directly, not by means of a conceptual appearance.

*nondeceptive* (*avisamvādi*). Incontrovertible, correct.

*nonexistent (asat)*. That which is not perceivable by mind.

*object (viṣaya, T. yul)*. That which is known by an awareness.

*object of negation (pratiṣedhya)*. What is negated or refuted.

*observed object (ālambana, T. dmigs pa)*. The basic object that the mind refers to or focuses on while apprehending certain aspects of that object.

*one final vehicle*. The belief that all beings — even śrāvakas who have become arhats — will eventually enter the Mahāyāna and become buddhas.

*ordinary being (pṛthagjana, T. so so skye bo)*. Someone who is not an ārya.

*path (mārga, T. lam)*. An exalted knower that is conjoined with uncontrived renunciation.

*path of accumulation (sambhāramārga, T. tshogs lam)*. First of the five paths. It begins when one aspires for liberation day and night for a śrāvaka path or when one has spontaneous bodhicitta for the Mahāyāna path.

*path of meditation (bhāvanāmārga, T. sgom lam)*. The fourth of the five paths. This begins when a meditator begins to eradicate innate afflictions from the root.

*path of no-more-learning (asaikṣamārga, T. mi slob lam)*. The last of the five paths; arhatship or buddhahood.

*path of preparation (prayogamārga, T. sbyor lam)*. The second of the five paths. It begins when a meditator attains the union of serenity and insight on emptiness.

*path of seeing (darśanamārga, T. mthong lam)*. Third of the five paths. It begins when a meditator first has direct, nonconceptual realization of the emptiness of inherent existence.

*permanent (nitya)*. Unchanging, static. It does not mean eternal.

*permanent, unitary, independent self.* A soul or self (*ātman*) asserted by non-Buddhists.

*person (pudgala).* A living being designated in dependence on the four or five aggregates.

*pliancy (tranquility, praśrabdhi, passaddhi).* A mental factor that enables the mind to apply itself to a constructive object in whatever manner it wishes and dissipates mental or physical rigidity.

*polluted (āsrava, āsava).* Under the influence of ignorance or its latencies.

*Prāsaṅgika.* The Buddhist philosophical tenet system that asserts that all phenomena lack inherent existence both conventionally and ultimately.

*prātimokṣa.* The different sets of ethical precepts for monastics and lay followers that assist in attaining liberation.

*preliminary sign (P. parikkamma-nimitta).* The initial conceptual appearance of a physical object — for example, a kaṣiṇa — to the mental consciousness.

*preparatory stages for a dhyāna (access, preparations, sāmantaka, T. bsam gtan po'i nyer bsdogs).* Stages of meditation that prepare the mind to enter the actual dhyāna.

*primary consciousness (vijñāna).* A consciousness that apprehends the presence or basic entity of an object. There are six types of primary consciousness: visual, auditory, olfactory, gustatory, tactile, and mental.

*probing awareness (reasoning consciousness, yuktijñāna, T. rigs shes).* A consciousness using or having used reasoning to analyze the ultimate nature of an object. It can be either conceptual or nonconceptual.

*proliferations (prapañca, papañca, T. spros pa).* Mental fabrications ranging from anxious thoughts to grasping true existence.

*pure lands.* Places created by the unshakable resolve and merit of buddhas where all external conditions are conducive for Dharma practice.

*resultant-birth absorption.* The mental and/or physical aggregates of a being born in the form or formless realm due to having attained the comparable level of absorption in a previous life.

*ripening result of karma.* The karmic result that is rebirth in one of the three realms; the five aggregates a being takes when reborn.

*sādhana.* The means of achievement expressed in a tantric text or manual that details the steps of visualization and meditation in the practice of a deity.

*samādhi.* See concentration.

*Sautrāntika.* A Buddhist tenet system that espouses Fundamental Vehicle tenets.

*self (ātman).* (1) A person; (2) inherent existence.

*self-grasping (ātmagrāha).* Grasping inherent existence.

*self-sufficient substantially existent person* (T. *gang zag rang rkya thub pa'i rdzas yod*). A self that can be identified independent of the aggregates. Such a self does not exist.

*sentient being (sattva).* Any being that has a mind and is not a buddha.

*serenity (śamatha, samatha).* Sanskrit tradition: concentration arisen from meditation that is accompanied by the bliss of mental and physical pliancy in which the mind abides effortlessly without fluctuation for as long as we wish on whatever virtuous object it has been placed. Pāli tradition: one-pointedness of mind, the eight attainments (meditative absorptions) that are the basis for insight.

*six perfections (ṣaḍpāramitā).* The practices of generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom that are motivated

by bodhicitta and sealed with the wisdom seeing them as both empty and dependent.

*solitary realizer* (*pratyekabuddha*). A person following the Fundamental Vehicle who seeks liberation and emphasizes understanding the twelve links of dependent arising.

*śrāvaka* (*hearer*, P. *sāvaka*). Someone practicing the Fundamental Vehicle path leading to arhatship who emphasizes meditation on the four truths.

*stabilizing meditation* (*sthāpyabhāvanā*, T. *'jog sgom*). Meditation to focus and concentrate the mind on an object.

*substantial cause* (*upādāna-kāraṇa*). The cause that becomes the result, as opposed to cooperative causes that aid the substantial cause in becoming the result.

*superknowledge* (*abhijñā*, *abhiññā*, T. *mngon shes*). Direct, experiential knowledge, of six types: (1) supernormal powers, (2) divine ear, (3) knowledge of others' minds, (4) recollection of past lives, (5) divine eye (includes knowledge of the passing away and rearing of beings and knowledge of the future), and (6) the destruction of the pollutants. The sixth is attained only by liberated beings.

*supernormal powers* (*ṛddhi*, *iddhi*). The first of the six superknowledges, gained in deep samādhi: to replicate one's body, appear and disappear, pass through solid objects, go under the earth, walk on water, fly, touch the sun and moon with one's hand, go to the Brahmā world, and so forth.

*supramundane* (*transcendental*, *lokottara*, P. *lokuttara*). Pertaining to the elimination of fetters and afflictions; pertaining to āryas.

*taking and giving* (T. *gtong len*). A meditation practice for cultivating love and compassion that involves visualizing taking others' suffering, using it to destroy our self-centered attitude, and giving our body, possessions, and merit to others.

*tathāgata*. A buddha.

*tenets (siddhānta)*. A philosophical principle or belief.

*thought (kalpanā)*. Conceptual consciousness.

*three characteristics*. Impermanence, duḥkha, and no-self.

*three higher knowledges (trividyā, P. tevijjā, T. rig gsum)*. The last three superknowledges: recollection of past lives, divine eye, and destruction of the pollutants.

*three realms (tridhātuka, tedhātuka)*. Desire, form, and formless realms.

*true cessation (nirodhasatya)*. The cessation of a portion of afflictions or a portion of cognitive obscurations.

*true existence (satyasat)*. Existence having its own mode of being; existence having its own reality.

*true knowledge (vidyā, vijjā)*. Clear and complete knowledge of the four truths.

*truth body (dharmakāya)*. The buddha body that includes the nature truth body and the wisdom truth body. Sometimes it refers only to a buddha's omniscient mind.

*twelve links of dependent origination (dvādaśāṅga-pratītyasamutpāda)*. A system of twelve factors that explains how we take rebirth in saṃsāra and how we can be liberated from it.

*two truths (satyadvaya)*. Ultimate truths and veiled (conventional) truths.

*ultimate nature*. The ultimate or deepest mode of existence of persons and phenomena.

*ultimate truth (paramārthasatya)*. The ultimate mode of existence of all persons and phenomena; emptiness.

*unfortunate realms (apāya)*. Unfortunate states of rebirth as a hell being, hungry ghost, or animal.

*uninterrupted path.* A wisdom directly realizing emptiness that is in the process of eliminating some portion of defilements; a path that is in the process of temporarily suppressing some portion of manifest afflictions.

*union of serenity and insight.* Absorption in which the bliss of mental and physical pliancy has been induced by analysis.

*unpolluted (anāsrava).* Not under the influence of ignorance.

*veiled truths (samvṛtisatya).* Objects that appear true to ignorance, which is a veiling consciousness; objects that appear to exist inherently to their main cognizer although they do not; syn. conventional truths.

*very obscure phenomena (atyantaparokṣa).* Phenomena that can be known only by relying on the testimony of a reliable person or a valid scripture.

*view of a personal identity (view of the transitory collection, satkāyadrṣṭi, sakkāyaditṭhi).* Grasping an inherently existent I or mine (according to the Prāsaṅgika system).

*Vinaya.* Monastic discipline; a body of texts about monastic life, discipline, and conduct.

*wind (prāṇa, T. rlung).* One of the four elements; energy in the body that influences bodily functions; subtle energy on which levels of consciousness ride.

*wisdom truth body (jñāna dharmakāya).* The buddha body that is a buddha's omniscient mind.

## About the Authors

THE DALAI LAMA is the spiritual leader of the Tibetan people, a Nobel Peace Prize recipient, and an advocate for compassion and peace throughout the world. He promotes harmony among the world's religions and engages in dialogue with leading scientists. Ordained as a Buddhist monk when he was a child, he completed the traditional monastic studies and earned his geshe degree (equivalent to a PhD). Renowned for his erudite and open-minded scholarship, his meditative attainments, and his humility, Bhikṣu Tenzin Gyatso says, "I am a simple Buddhist monk."

Peter Aronson

BHIKṢUṆĪ THUBTEN CHODRON has been a Buddhist nun since 1977. Growing up in Los Angeles, she graduated with honors in history from the University of California at Los Angeles and did graduate work in education at the University of Southern California. After years studying and teaching Buddhism in Asia, Europe, and the United States, she became the founder and abbess of Sravasti Abbey in Washington State. A popular speaker for her practical explanations of how to apply Buddhist teachings in daily life, she is the author of several books on Buddhism, including *Buddhism for Beginners*. She is the editor of Khensur

Jampa Tegchok's *Insight into Emptiness*. For more information, visit [sravastiabbey.org](http://sravastiabbey.org) and <https://thubtenchodron.org/books/>.

THE LIBRARY OF WISDOM AND COMPASSION : VOLUME 5

IN PRAISE OF  
GREAT COMPASSION

.....  
The Dalai Lama and Thubten Chodron

THE LIBRARY OF WISDOM AND COMPASSION : VOLUME 5

## Advance Praise for IN PRAISE OF GREAT COMPASSION

“Another insightful volume in an important series, *In Praise of Great Compassion* is a deep and wonderful book that offers crucial lessons for our time — and for all time.”

— Daniel Gilbert, Edgar Pierce Professor of Psychology, Harvard University

“*In Praise of Great Compassion* is a welcome arrival that illuminates the interface between two Buddhist traditions, Mahāyāna and Theravāda, through the common ground of compassion. These valuable teachings are a gift and a powerful message to the world.”

— Ajahn Sundara, Amaravati Monastery

“His Holiness the Dalai Lama, together with Bhikṣuṇī Thubten Chodron, lucidly present the Buddha’s teachings to a wider readership. The inclusion of different Buddhist traditions’ practices on the important topic of great compassion is especially welcome, and I am delighted to see a chapter on Chinese Buddhism and its introduction to the Seven Round Compassion Contemplation, as well as the Four Great Vows. These are powerful practices not only to develop compassion but also to eliminate one’s own karmic obstacles. May all beings benefit from this latest volume of the valuable Dharma series, the *Library of Wisdom and Compassion*.”

— Bhikṣu Jian Hu, abbot of Sunnyvale Zen Center

## THE LIBRARY OF WISDOM AND COMPASSION

*The Library of Wisdom and Compassion* is a special multivolume series in which His Holiness the Dalai Lama shares the Buddha's teachings on the complete path to full awakening that he himself has practiced his entire life. The topics are arranged especially for people not born in Buddhist cultures and are peppered with the Dalai Lama's unique outlook. Assisted by his long-term disciple, the American nun Thubten Chodron, the Dalai Lama sets the context for practicing the Buddha's teachings in modern times and then unveils the path of wisdom and compassion that leads to a meaningful life, a sense of personal fulfillment, and full awakening. This series is an important bridge from introductory to profound topics for those seeking an in-depth explanation from a contemporary perspective.

### *Volumes:*

# IN PRAISE OF GREAT COMPASSION

---

Bhikṣu Tenzin Gyatso,  
the Fourteenth Dalai Lama

*and*

Bhikṣuṇī Thubten Chodron

“The Buddha’s journey to full awakening could have ended with liberation, but his infinite compassion in the face of the suffering of all beings led him to continue his journey by sharing what he had learned with others. In this fifth volume of the *Library of Wisdom and Compassion*, the Dalai Lama explores in depth just how central compassion and empathy are to the path to awakening. It’s a comprehensive look at the teachings on compassion in every Buddhist tradition and is wonderfully complemented by the reflections and meditation suggestions of his co-author, Thubten Chodron.”

— SHARON SALZBERG,  
author of *Lovingkindness* and *Real Change*

---

**I**N *PRAISE OF GREAT COMPASSION*, the fifth volume of the *Library of Wisdom and Compassion*, continues the Dalai Lama’s teachings on the path to awakening. While previous volumes focused on our present situation and taking responsibility for creating the causes of happiness, this volume concerns opening our hearts and generating the intention to make our lives meaningful by benefiting others.

We are embedded in a universe with other living beings, all of whom have been kind to us in one way or another. More than any other time in human history, we depend on one another to stay alive and flourish. When we look closely, it becomes apparent that we have been the recipient of great kindness. Wanting to repay others’ kindness, we cultivate a positive attitude by contemplating the four immeasurables of love, compassion, empathic joy, and equanimity, and the altruistic intention of bodhicitta. We learn to challenge the self-centered attitude that leads to misery and replace it with a more realistic perspective enabling us to remain emotionally balanced in good and bad times. In this way, all circumstances become favorable to the path to awakening.

*Publisher's Acknowledgment*

The publisher gratefully acknowledges the generous help of the Hershey Foundation in sponsoring the production of this book.

About the Authors

## Preface

**T**HE LIBRARY OF WISDOM AND COMPASSION, of which this volume is the fifth in the series, will be, when completed, His Holiness the Dalai Lama's major English-language text on the path to awakening. Before delving into this volume, a review of previously covered topics is helpful; you may want to read previous volumes for more on ideas and concepts mentioned in this volume or to provide background so that you will know where topics explained in this volume fit in the overall scheme of the path. The first volume, *Approaching the Buddhist Path*, explores the Buddhist view of life, mind, and emotions. It provides historical background, introduces us to a systematic approach to the spiritual path, and discusses how to apply Buddhist ideas to contemporary issues.

The second volume, *The Foundation of Buddhist Practice*, discusses gaining nondeceptive knowledge, the nature of mind, and the rebirth process. Chapters on how to be a sincere Dharma student, how to create a healthy relationship with spiritual mentors, and how to structure a meditation session follow. We then consider the essence of a meaningful life and the law of karma and its effects, which has to do with the ethical dimension of our actions. If we use our lives wisely and make wise ethical decisions, our deaths will be free from regret and fear. Having fortunate rebirths in the future, we will have conducive circumstances to continue our spiritual practice.

Volume 3, *Samsāra, Nirvāṇa, and Buddha Nature*, explores the four truths that constitute the Buddha's first teaching and encompass a study of, first, our present situation within cyclic existence (*samsāra*), the cycle of constantly recurring difficulties (*duḥkha*) under the influence of ignorance, mental afflictions, and polluted karma; second, the origins of this unsatisfactory situation, the afflictions that exist in our mind; third, the

possibility of release — the cessations of saṃsāra and its cause, the peaceful state of nirvāṇa; and fourth, the path of practice and transformation leading to that state. Liberation and full awakening are possible because each of us has the potential to become a fully awakened buddha. Although this buddha nature may temporarily be covered by defilements, it never disappears and the obscurations covering it are adventitious and can be removed.

Volume 4, *Following in the Buddha's Footsteps*, begins with a discussion of taking refuge, the process of entrusting our spiritual guidance to the Three Jewels — the Buddha, Dharma, and Saṅgha. This follows naturally from volume 3, because the last two truths — true cessation and true paths — are the Dharma Jewel, which when actualized in our own mindstream protects us from all misery. The true path encompasses the methods to practice in order to overcome these defilements: the three higher trainings of ethical conduct, concentration, and wisdom. This includes practical instructions on how to live ethically, how to develop meditative concentration, and how to generate wisdom through the practice of the four establishments of mindfulness — mindfulness of the body, feelings, mind, and phenomena — and the thirty-seven harmonies with awakening.

This leads us to the present volume, *In Praise of Great Compassion*.

### *Overview of In Praise of Great Compassion*

In volumes 3 and 4, we delved into the four truths; the first two truths concern saṃsāra and its causes, the last two liberation and the path that brings it about. The emphasis was on our situation as an individual and taking responsibility for it: our mind is the creator of both duḥkha and peace, of saṃsāra and nirvāṇa, so rather than blame others or adopt a victim mentality, we are encouraged to be conscientious regarding our actions, tame our afflictions, and cultivate ethical conduct, concentration, and wisdom to free ourselves from saṃsāra.

This does not mean that we are isolated individuals in a cold universe. Rather, the buddhas and bodhisattvas, who have accomplished what we aim to achieve, are always ready to teach and guide us. In addition, we are embedded in a universe with other sentient beings, all of whom have been

kind to us in one way or another and in one rebirth or another. It is only suiting that we repay their kindness, and the best way to do this is to subdue our afflictions and cultivate our good qualities so that we can increase our ability to benefit them temporarily while we're in saṃsāra, and ultimately, by leading them to supreme awakening. *In Praise of Great Compassion* is about opening our hearts to others and generating and strengthening our determination to benefit sentient beings.

To do this, we begin with cultivating a positive attitude toward others by contemplating the four immeasurables — immeasurable love, immeasurable compassion, immeasurable empathic joy, and immeasurable equanimity — as taught and practiced in both the Pāli and Sanskrit traditions. The method to do this is the topic of the first chapter. Bodhicitta, the aspiration to attain full awakening in order to benefit all sentient beings most effectively, is based on the four immeasurables and on knowledge that attaining liberation and awakening is possible; this is explained in chapter 2. The Sanskrit tradition has two ways of developing the altruistic intention of bodhicitta — the seven cause-and-effect instructions and equalizing and exchanging self and others — which are described in chapters 3 and 4.

Chapter 5 discusses the difference between the self-centered attitude and self-grasping ignorance as well as other topics that pertain to cultivating bodhicitta and becoming a bodhisattva, and chapter 6 explains Candrakīrti's famous homage to great compassion at the beginning of his *Supplement to the "Middle Way"* (*Madhyamakāvātāra*). With all this as background, in chapter 7 we are ready to generate aspiring and engaging bodhicitta. Aspiring bodhicitta wishes to attain full awakening for the benefit of all beings, and engaging bodhicitta commits to practice the path that leads to supreme awakening by adopting the bodhisattva ethical code.

Love, compassion, bodhicitta, and the bodhisattva ethical codes in Chinese Buddhism are explained in chapter 8, showing how bodhicitta is emphasized in East Asian Buddhist traditions. Many people do not know that the Pāli tradition also presents bodhicitta, its cultivation, and the perfections; these are discussed in chapter 9. Chapter 10 describes the very practical techniques of mind training that help us to generate bodhicitta and maintain an attitude of kindness and compassion no matter what comes our way. Each chapter contains reflections that you are encouraged to

contemplate. The reflections not only review some of the major points but also give you a chance to put these teachings into practice and transform your mind.

A glossary, section on recommended reading, and index can be found at the end of the book. The next volume in the series will continue by setting forth the ten perfections as practiced in both the Pāli and Sanskrit traditions.

## *How This Book Came About*

The prefaces of the preceding volumes of the *Library of Wisdom and Compassion* told the story of the conception and development of this series, so here I will mention only a few things that pertain to this volume in particular.

You will notice that the volume contains many citations from Śāntideva's *Engaging in the Bodhisattvas' Deeds (Bodhicaryāvatāra)*. His Holiness has often stated that this is one of his favorite texts, which explains why he has frequently taught it during public teachings in India. The experience of sitting in a crowd of thousands of people who have gathered together to learn about great compassion and bodhicitta from a teacher such as His Holiness is indescribable, especially considering that most large events in our world are sports events, political rallies, concerts, and conferences where people's motivations range widely.

His Holiness also frequently teaches mind-training texts such as “The Thirty-Seven Practices of Bodhisattvas” and “The Eight Verses of Mind Training” — short texts that emphasize bodhicitta — in non-Buddhist countries and in India and Asia as preludes to Buddhist tantric empowerments. Another of his favorite texts to teach is Kamalaśīla's *Middle Stages of Meditation (Bhāvanākrama II)*, which discusses the seven cause-and-effect instructions, and various texts on the stages of the path (*lam rim*) that emphasize bodhicitta. It happens not infrequently that His Holiness is moved to tears when teaching one of these texts or when giving the ceremonies for aspiring and engaging bodhicitta.<sup>1</sup>

## *Please Note*

Although this series is coauthored, the vast majority of the material is His Holiness's teachings. I researched and wrote the parts about the Pāli tradition, wrote some other passages, and composed the reflections. For ease of reading, most honorifics have been omitted, but that does not diminish the great respect we have for the most excellent sages, practitioners, and learned adepts. Foreign terms are given in italics

parenthetically at their first usage. Unless otherwise noted with “P” or “T,” indicating Pāli or Tibetan, respectively, italicized terms are Sanskrit or the term is the same in Sanskrit and Pāli. When two italicized terms are listed, the first is Sanskrit, the second Pāli. For consistency, Sanskrit spelling is used for Sanskrit and Pāli terms in common usage (nirvāṇa, Dharma, arhat, and so forth), except in citations from Pāli scriptures. The term *śrāvaka* encompasses solitary realizers, unless there is reason to specifically differentiate them, as is done, for example, in chapter 5. To maintain the flow of a passage, it is not always possible to gloss all new terms on their first usage, so a glossary is provided at the end of the book. “Sūtra” often refers to Sūtrayāna and “Tantra” to Tantrayāna — the Sūtra Vehicle and Tantra Vehicle, respectively. When these two words are not capitalized, they refer to two types of scriptures: sūtras and tantras. Mahāyāna here refers principally to the bodhisattva path as explained in the Sanskrit tradition. In general, the meaning of all philosophical terms accords with the presentation of the Prāsaṅgika Madhyamaka tenet system. Unless otherwise noted, the personal pronoun “I” refers to His Holiness.

### *Appreciation*

My deepest respect goes to Śākyamuni Buddha and all the buddhas, bodhisattvas, and arhats who embody the Dharma and with compassion teach us unawakened beings. I also bow to all the realized lineage masters of all Buddhist traditions through whose kindness the Dharma still exists in our world.

This series appears in many volumes, so I will express appreciation to those involved in each individual volume. This volume, the fifth in the *Library of Wisdom and Compassion*, has depended on the abilities and efforts of His Holiness’s translators — Geshe Lhakdor, Geshe Dorji Damdul, and Mr. Tenzin Tsepak. I am grateful to Geshe Dorji Damdul, Geshe Dadul Namgyal, and Bhikṣuṇī Sangye Khadro for checking the manuscript, and to Samdhong Rinpoche for clarifying important points. I also thank Bhikkhu Bodhi for his clear teachings on the Pāli tradition and for generously answering my many questions. He also kindly looked over the sections of the book on the Pāli tradition before publication. The staff at

the Private Office of His Holiness kindly facilitated the interviews, and Sravasti Abbey supported me while I worked on this volume. Mary Petruszewicz skillfully edited this book. I thank everyone at Wisdom Publications who contributed to the successful production of this series. All errors are my own.

## Introduction

**K**INDNESS IS our first experience in life; our mother and those around her immediately extended affection, care, and a warm heart toward us. As we grow up, we continually experience the kindness of others — our teachers, friends, even the people we don't know personally who provide the food, shelter, clothes, and medicine we need to stay alive. The kind hearts of others benefit us, but developing a kind heart ourselves really enriches our life by connecting us to others and enabling us to experience the joy of caring for and loving other sentient beings. In short, a kind heart is essential for our own and others' welfare. For this reason I say, "My religion is kindness." Everyone — even animals and insects — understands kindness and thrives by giving and receiving kindness.

Why should we be kind to others? First, kindness isn't something foreign. Even ants and bees cooperate and take care of one another. They know that to survive they must work together. Animals look after their own kind. Rather than survival of the fittest, survival of the most cooperative enables life to continue. Charles Darwin said in the *Descent of Man*:<sup>2</sup>

As man advances in civilisation, and small tribes are united into larger communities, the simplest reason would tell each individual that he ought to extend his social instincts and sympathies to all the members of the same nation, though personally unknown to him. This point being once reached, there is only an artificial barrier to prevent his sympathies extending to the men of all nations and races . . . Sympathy beyond the confines of man, that is, humanity to lower animals, seems to be one of the latest moral acquisitions . . . This virtue, one of the noblest with which man is endowed,

seems to arise incidentally from our sympathies becoming more tender and more widely diffused, until they are extended to all sentient beings.

And Albert Einstein tells us:<sup>3</sup>

A human being is part of the whole, called by us “Universe,” a part limited in time and space. He experiences himself, his thoughts and feelings as something separate from the rest — a kind of optical delusion of consciousness. The striving to free oneself from this delusion is the one issue of true religion. Not to nourish it but to try to overcome it is the way to reach the attainable measure of peace of mind.

Our happiness and well-being are interrelated with those of others. We depend on one another to have the necessities and enjoyments of life; so if others suffer, we too will be affected. Since we depend on others so much, they deserve to be treated well; repaying their kindness only makes sense. Extending ourselves to others with a warm heart, even in small ways, brings so much goodness in our world.

Love and compassion are not foreign to us. Those mental factors are an inextricable part of our minds. Through Buddhist practice, we consciously cultivate and extend our instinctual affinity for kindness and our innate ability to empathize and share with others. As sentient beings’ love and compassion increase, so does forgiveness. We become able to communicate better with others, listening to their stories and paying attention to their feelings and needs as well as to our own. This has a ripple effect in society, spreading a feeling of well-being within each person as well as among people, groups, and nations.

Generating love and compassion takes effort; first we must learn how to cultivate these qualities and use them effectively with wisdom. Reading the teachings in this book will give you the tools to go in that direction. Practicing under the guidance of a Buddhist teacher who can model the teachings in his or her own behavior is of great help and inspiration as well.

# 1 | The Four Immeasurables

FOLLOWERS OF the Pāli tradition cultivate the four brahmavihāras (divine abidings, immeasurables) — immeasurable equanimity, love, compassion, and empathic joy — toward others. In the Mahāyāna these four are expanded and built upon to become the altruistic intention of bodhicitta that seeks to attain buddhahood in order to benefit all sentient beings. Practitioners engage in the practices of the Perfection and Vajra Vehicles motivated by this altruistic intention.

We'll begin by exploring the four immeasurables as explained in the Pāli text *The Path of Purification (Visuddhimagga)*, by the fifth-century Indian sage Buddhaghosa. His explanation not only accords with Mahāyāna teachings but also gives practitioners of the Mahāyāna some new angles to approach love (*maitrī, mettā*), compassion (*karuṇā*), empathic joy (*muditā*), and equanimity (*upekṣā, upekkhā*). This will be followed by an explanation of the four immeasurables in the Perfection Vehicle (*Pāramitāyāna*) and in the Vajra Vehicle (*Vajrayāna*). All of these explanations are instructions for meditation.

## *The Four Immeasurables in the Pāli Tradition*

Buddhaghosa devotes an entire chapter of *The Path of Purification* to the development of the four immeasurables, which are widely taught and practiced in both the Pāli and Sanskrit traditions. They are called “immeasurable” or “boundless” (*apramāṇa, appamañña*) for several reasons. First, they are directed with a mind free of prejudice or partiality toward an immeasurable number of sentient beings. In addition, they are ideally to be practiced in states of *dhyāna* in which the limited intentions of desire-realm minds have been superseded. Although meditators may have

been born in the desire realm, their minds become form-sphere consciousnesses when entering a dhyāna with one of these four as its object. A form-realm consciousness is not limited by the five hindrances (āvaraṇa) that interfere with the cultivation of concentration: sensual desire (*kāmacchanda*), malice (*vyāpāda*, *byāpāda*), lethargy and sleepiness (*styāna-middha*, *thīna-middha*), restlessness and regret (*auddhatya-kaukr̥tya*, *uddhacca-kukkucca*), and deluded doubt (*vicikitsā*, *vicikicchā*). Dhyānic states also are imbued with the five dhyānic factors: investigation (*vitarka*, *vitakka*), analysis (*vicāra*), joy (*prīti*, *pīti*), bliss (*sukha*), and one-pointedness (*ekāgratā*, *ekaggatā*) that render them boundless.<sup>4</sup>

The four immeasurables are also called “brahmavihāras” or “divine abodes,” after Brahmā, the deity who is the ruler of one of the dhyānic realms where beings’ minds are pure, smooth, and gentle. In the term “brahmavihāra,” “brahma” implies pure because these four are free from attachment, anger, and apathy. They are also the best — another implication of the term “brahma” — because they are beneficial attitudes to have toward sentient beings. The four are called “abodes” or “ways of living” because they are peaceful resting places for the mind, in that they are virtuous mental states that help us to live in constructive ways that help ourselves and others.

Practiced in daily life, love, compassion, empathic joy, and equanimity will make our minds and relationships with others warmer and more peaceful. Practiced in meditation, these four can be used to cultivate concentration and attain the dhyānas (meditative stabilizations). Of course the best effects come if we do both, because maintaining a peaceful mind by practicing the four immeasurables between formal meditation sessions increases their power during meditation sessions. Similarly, after abiding single-pointedly in one of the four immeasurables during meditation, a person’s mind tends to be permeated with it after the meditation session.

### *The Three Higher Trainings and the Four Immeasurables*

The three higher trainings are encapsulated in the four immeasurables, as illustrated by the *Mettā Sutta*. At the outset of this sūtra, the Buddha spoke of the type of person who practices love. This practice involves the higher

training in ethical conduct, because to develop love for others we must first refrain from harming them. The second part of the sūtra details all the beings to extend love toward and explains how to meditate on love so that it leads to states of meditative absorption, which pertains to the higher training in concentration. The end of the sūtra speaks of how this practice can lead to the cultivation of insight and thus to nirvāṇa, which necessitates the higher training in wisdom.

When practiced by someone who has not cultivated wisdom, meditation on the four immeasurables has the potential to lead to rebirth in any of the divine realms of the Brahmā world that correspond to the dhyānas.<sup>5</sup> However, the ultimate aim of meditation on the four brahmavihāras is to attain a pliable, concentrated mind that can penetrate the three characteristics — that is, the impermanence, unsatisfactoriness, and selflessness of things — and serve as a basis for insight.

In many sūtras, the Buddha spoke of practitioners abiding with their hearts imbued with love that extends in all directions. Such practitioners have attained a meditative absorption that is called the “liberation of mind with love” (P. *mettā-cetovimutti*). This mind, which genuinely wishes all beings to have happiness, has temporarily abandoned the five hindrances, especially anger and malice, through the force of single-pointed concentration. The Buddha praises this samādhi because of its ability to prevent anger from arising and banish anger that has arisen. When practitioners have attained the ārya eightfold path and apply this mind of dhyāna to it, they progress through the stages and attain arhatship.<sup>6</sup>

Teachers may present the four immeasurables in slightly different ways — for instance, as a practice to improve our relationships with others, as a practice to heal destructive emotions, or as a practice through which to cultivate serenity.

One way to practice them in our relationships with others in daily life is as follows: Love has the aspect of friendliness toward sentient beings and wishes them to have happiness and its causes. This should be our basic attitude toward any living being we encounter. When we see the suffering of sentient beings, we respond with compassion, abandoning any fear or disgust, and do what we can to be of assistance. When we witness their happiness, success, virtue, and good qualities, our response is empathic joy

— the opposite of the jealousy that so often plagues us. After that, we remain balanced and equanimous because our aims for sentient beings have been accomplished. However, sometimes we see others' duḥkha and try to help, but they are not open to removing the causes of their misery. At that time, rather than giving in to frustration or despair, practicing equanimity is best. In that way, the door remains open so that we can help them if an opportunity arises at a later date.

### *Introduction to the Four Divine Abodes*

*The Path of Purification* says **love** “has the aspect of friendliness as its characteristic. Its function is to promote friendliness. It is manifested as the disappearance of malice and annoyance. Its proximate cause is seeing others as lovable. When it succeeds, it eliminates malice. When it fails, it degenerates into selfish affectionate desire.”

Love views one, many, or all beings as lovable and wishes them well. We may begin with one or just a few people. By gradually increasing our ability to love, we will be able to extend love to more and more living beings until it spreads to all beings without exception. It will spread to both those who treat us well and those who disparage or harm us, to those who have good values and those who do not, to those we approve of and those we don't, to those who are well-liked by all and those who are despised. This love does not seek anything for ourselves; the pleasure is in loving. Such love is strong, not fickle according to either our mood or how others treat us. It is ready to help, but does not have an agenda or coerce others to fulfill our expectations.

Many movies, novels, and other art forms deal with romantic and sensual “love.” From a Buddhist viewpoint, this emotion should more accurately be called “attachment,” as it is generally based on exaggerating someone's good qualities or projecting excellent qualities that aren't present. Attachment also gives way to emotional neediness and possessiveness that lead to making demands or having high expectations of the other. Immeasurable love is free from such complications.

Combining the understanding of selflessness with love demolishes any sense of possession. Love infused with a sense of selflessness knows that

ultimately there is no possessor or person to possess. There is no independent soul or essence in a person to love or to be loved. The highest love wishes beings to have the highest happiness and will show others the path to the end of suffering, the path realized and taught by the Buddha.

In *The Path of Purification* Buddhaghosa says **compassion** “has the aspect of allaying suffering for its characteristic. Its function is to find others’ suffering unbearable. It manifests as noncruelty and nonviolence. Its proximate cause is seeing helplessness in those overwhelmed by suffering. When it succeeds, it reduces cruelty. When it fails, it produces personal distress.” Compassion enables us to look at suffering in all its tortuous varieties without succumbing to despair. From the annoyance of the smallest inconvenience, to extreme physical pain, to unfathomable emotional misery, all beings caught in saṃsāra are susceptible to duḥkha. Instead of reacting by medicating the distress we experience when seeing our own or others’ suffering, compassion opens our heart to this universal experience and reaches out either directly or indirectly to others. This compassion isn’t limited to those who are evidently suffering, but extends to those who seem happy at this moment yet still live under the control of ignorance, afflictions, and polluted karma.

Immeasurable compassion, like immeasurable love, does not favor some and exclude others. It does not blame others for their own suffering, but realizes that it was caused by a mind overwhelmed by ignorance. In addition, compassion does not blame one person for another person’s suffering, but understands that both beings are controlled by karma and thus both are worthy of compassion, whether they are the perpetrator or victim of harm.

**Empathic joy** delights at the happiness and good fortune of others. Buddhaghosa says empathic joy “is characterized by bringing joy. Its function is to oppose envy, and it manifests as the abandonment of jealousy and boredom. Its proximate cause is seeing others’ success. When it succeeds, it reduces jealousy and boredom. When it fails, it produces overexcitement.” In contrast to the misery of jealousy — thinking that we, not they, should be happy and have good opportunities — empathic joy is gladness in our own hearts that rejoices at others’ well-being. When we consciously cultivate empathic joy, we see so much goodness in the world.

Instead of the world seeming bleak and filled with narrow-minded people and corrupt governments, our view will expand to see the goodness in others and the many ways in which people help each other on a daily basis. At present the source of our empathic joy may be limited to our own personal gain and the gain of those we cherish. As our empathic joy expands, we will rejoice in the virtue and success of others.

Buddhaghosa describes **equanimity** as “characterized by promoting the aspect of balance toward beings. Its function is to see equality in beings. It manifests as the subduing of anger and attachment. Its proximate cause is seeing the ownership of karma thus: ‘Beings are owners of their karma. Whose (if not theirs) is the choice by which they will become happy, or will be free from suffering, or will not lose the success they have attained?’ When it succeeds, equanimity makes anger and attachment subside. When it fails, it produces an unknowing equanimity, which is [worldly indifference and apathy] based on the householder life.”

Our lives consist of so many extremes — wealth and poverty, loneliness and belonging, high and low status, praise and blame — and our emotions likewise vacillate with each new object, person, or situation we encounter. Equanimity is steadiness of mind, tranquility in the midst of whatever environment we find ourselves in and whatever treatment we receive. It is not uninterested, apathetic indifference in which we build a wall to protect ourselves from emotional pain. Rather, equanimity is relaxed, receptive, free of fear and clinging. It allows our spiritual practice to stay on track without being buffeted around here and there by exciting new ideas or intense emotions. Without clinging to anything, equanimity gives space to appreciate everything.

Understanding karma fosters equanimity. People meet with results of causes they created. For example, when we encounter misfortune, there’s no reason for depression. The situation is a result of actions we ourselves did, and as with everything, it too will pass. When success comes our way, there’s no reason for elation, because it is a passing result of our actions. Rather than blame other people, we accept the results of our actions, knowing that if we want a different future, we must act now to create the causes for it.

Practicing equanimity is helpful when dealing with people who insult us or people who are not receptive to our help. In the former case, we remain equanimous in the face of others' insults, knowing that we don't need to take their words personally and that what they say is more a reflection of their unhappiness than it is of anything we did. In the latter case, someone may have responded to our intention to help by telling us to mind our own business. Rather than feeling frustrated or becoming angry, we can choose to remain equanimous and let the other person be, knowing that we can control neither him nor the situation. As related in the *Upakkilesa Sutta* (MN 128), the monks at Kosambī were engaged in vicious disputes that sometimes spilled over into brawls. The Buddha gave them advice, but the monks refused to listen and responded that it was their quarrel. Seeing that these disciples' minds were overwhelmed with anger, resentment, and belligerence, the Buddha went alone to another village where his disciples were more receptive.

Insight into the nature of reality is helpful for the cultivation of equanimity. Suffering ensues from grasping at I and mine. We think, "I was criticized," "My new car was dented," "His lies destroyed my reputation." Grasping at I and mine clearly disturbs the mind, sending it away from equanimity and into flurries of clinging, animosity, and resentment. Understanding that there is no I or mine releases craving and other afflictions, allowing equanimity to arise.

The commentary *The Illuminator of the Supreme Meaning* (*Paramatthajotikā*), attributed to Buddhaghosa, succinctly defines the four immeasurables (2.128):

Love is the state of desiring to offer happiness and welfare, with the thought "May all beings be happy," and so forth. Compassion is the state of desiring to remove suffering and misfortune, with the thought "May they be liberated from these sufferings," and so forth. Empathic joy is the state of desiring the continuity of [others'] happiness and welfare, with the thought "You beings are rejoicing; it is good that you are rejoicing; it is very good," and so forth. Equanimity is the state of observing [another's] suffering or happiness

and thinking, “These appear because of that individual’s own past activities.”

The four brahmavihāras are generated in the above order. Each successive one does not override its predecessor; all four permeate and complement one another. Compassion prevents love and empathic joy from forgetting the misery of the world or becoming wrapped up in the pleasant feelings that they bring. Love prevents compassion from becoming partial and keeps it focused on all beings, not just those with manifest gross suffering. Empathic joy prevents compassion from sliding into despair because empathic joy remembers goodness and happiness. Equanimity keeps love, compassion, and empathic joy focused on the ultimate aim of nirvāṇa. It makes them stable so they don’t deteriorate into uncontrolled or sentimental emotionalism.

Here we see that the path is not about cultivating isolated virtuous emotions and attitudes. When cultivated together, these virtuous mental states complement, balance, and enhance one another. It is clear that the path to nirvāṇa does not entail doing one practice only, but developing all aspects of our human character.

## REFLECTION

---

Contemplate the gist of each of the brahmavihāras. How do these short explanations expand the usual way you think of love, compassion, empathic joy, and equanimity? Do these summaries pique your interest in having a deeper understanding of the four?

1. **Love** has the aspect of friendliness and its function is to promote friendliness. It makes malice and annoyance disappear. Its proximate cause is seeing others as endearing. When it succeeds, it eliminates malice. When it fails, it degenerates into selfish affectionate desire.
2. **Compassion** has the aspect of allaying suffering. It functions to find others’ suffering unbearable and manifests as noncruelty and nonviolence. Its proximate cause is seeing those overwhelmed by

suffering as needing help. When it succeeds, it reduces cruelty. When it fails, it produces personal distress.

3. **Empathic joy** delights at the happiness and good fortune of others. It brings joy and functions to oppose envy; it causes jealousy and boredom to subside. Its proximate cause is seeing other beings' success. When it succeeds, it reduces jealousy and boredom. When it fails, it produces giddy excitement.
  4. **Equanimity** promotes balance toward beings and functions to see equality in beings. It subdues anger and attachment. Its proximate cause is seeing that each being is the owner of their karma. When it succeeds, equanimity reduces anger and attachment. When it fails, it produces indifference and apathy.
- 

### *Meditation on Love*

The *Sutta on Love* (*Karaṇīya Mettā Sutta*, Sn 1.8) speaks of immeasurable love in particular and is one of the most well-liked and oft-recited sūtras. Since animosity is the opposite of love and prevents its development, it is essential to reduce anger and ill will. We begin this process by reflecting on the disadvantages of animosity and the benefits of patience and fortitude. This step occurs at the outset, because we “cannot abandon unseen dangers and attain unknown advantages” (Vism 9.2).

Anger and hatred destroy trust and tear apart valued relationships; they destroy the merit created with great effort; they compel us to act in ways we later regret, bringing on guilt and remorse. Fortitude, on the other hand, is like a soothing balm on a wound and a beautiful piece of jewelry that attracts others to us. It protects our virtue and all that is valuable to us in this and future lives.

Initially it is important to cultivate love toward specific people in a definite order. It is recommended not to begin the cultivation of any of the four immeasurables toward someone to whom you are or could be sexually attracted. There is the amusing but unfortunate story of a man who was

meditating on love for his wife and, confusing love with sexual attraction, tried to leave his meditation room to get to his wife. However, so blinded was he by lust, he couldn't see the door and so spent all night fighting with the wall! Also, the people we initially cultivate love toward should be alive. Since the deceased are no longer in the form in which we knew them, cultivating love for them is difficult. However, out of concern for our deceased relatives and friends, we can make offerings to the Three Jewels on their behalf and imagine that they rejoice in the merit dedicated for them.

First cultivate love toward yourself. Contemplate repeatedly, "May I be happy and free from suffering. May I be free from animosity, affliction, and anxiety, and live happily." Add whatever other good wishes you would like, such as, "May I be generous and kind," and "May I be free from internal and external obstacles on the path." Focusing on yourself first is important to develop the feeling of what it is like to wish someone well. In the process of doing this, you will realize that being happy and peaceful and avoiding pain are everyone's fundamental wishes.

Some people may wonder if generating love toward themselves is selfish or self-indulgent. Cultivating love toward yourself is not selfish because the goal is to generate love toward all beings, which includes yourself. You are no more or less important than others; you are also worthy of love and kindness. Since many people suffer from self-hatred, this meditation is an excellent counteracting method. While cultivating love for yourself alone does not bring meditative absorption, it does get you going in the right direction. Conversely, following selfishness and self-indulgence is unkind to yourself and causes misery. Self-centeredness, which makes you greedy, easily offended, and vindictive, does not bring you happiness, whereas developing mental tranquility that is free from afflictions does.

Having generated love for yourself, extend love to others by contemplating, "Just as I want to be happy and never experience suffering, so too do other beings." The next person to send love to should be someone you respect and for whom you have positive feelings. It is recommended to consider the qualities of your spiritual mentor, preceptor, or another teacher and recall the help you have received from them. With awareness of his or her kindness, cultivate love by contemplating, "May he be happy and free

from suffering. May he be free from animosity, affliction, and anxiety and live happily.” By recalling the inspiring example of this person’s virtuous conduct and learning, it is possible to attain meditative absorption on love with respect to him.

Continue to extend love more broadly. Doing this involves breaking down the barrier in your mind that puts people into narrow categories and believes stereotypes. Now cultivate love toward a very dear friend, thinking in the same way as above. Generating love for a dear friend is done after generating it for a respected person because focusing on a dear person can easily make attachment arise under the guise of love, whereas this doesn’t happen toward a person you respect and appreciate.

When the mind is malleable, turn your attention to a neutral person and, seeing her as a dear friend, generate love. When your mind is compliant with this, go on to develop love for a hostile person, seeing him as neutral. A hostile person is not someone who is hostile toward you — although he may feel that way — but someone for whom you have hostile feelings. Those fortunate few who do not see others as harmful or threatening and who do not get upset with uncooperative people can skip generating love toward hostile people.

## REFLECTION

---

1. Cultivate love for yourself by reflecting again and again, “May I be happy and free from suffering. May I be free from animosity, anxiety, and live happily.” Add whatever other good wishes you would like, such as “May I be generous and kind” and “May I be free from internal and external obstacles on the path.” Do this slowly so you feel the change in your attitude for yourself.
2. Contemplate in the same way, wishing the same good circumstances for someone you respect.
3. Contemplate in the same way, wishing the same good circumstances for a friend.

4. Contemplate in the same way, wishing the same good circumstances for a neutral person — for example, a stranger you see at the store.
  5. Contemplate in the same way, wishing the same good circumstances for someone you usually feel hostile toward. Imagine that person being happy and because of that their actions and speech change.
  6. Rest your mind in the feeling of wishing everyone happiness and imagining them as being happy.
- 

### *Counteracting Animosity and Anger*

Many of us find it difficult to wish happiness and well-being to those who have harmed us, because our mind is chained by resentment and grudge-holding. We may wish to retaliate for the harm we received or hope the government does it for us, through imprisonment, capital punishment, or military strikes. If we see ourselves as civilized, we may simply wish that those who harmed us encounter misfortune that will teach them a lesson or give them a taste of their own medicine. If you cannot get past these negative feelings, return to generating love toward one of the previous persons, and when the mind is drenched in that feeling, then return to the difficult person.

If animosity persists, apply an antidote, such as the ones offered below. If one doesn't release the anger, try another. Practice these antidotes repeatedly over time; don't expect that simply changing your thought once will change it forever.

Reflecting on the disadvantages of anger is a worthy antidote. The Buddha said (MN 128.6.):

“He abused me, he struck me,  
he defeated me, he robbed me” —  
In those who harbor thoughts like these  
hatred will never be allayed.

For in this world hatred is never  
allayed by further acts of hate.  
It is allayed by nonhatred (compassion) —  
That is the fixed and ageless law.

Bhikkhu Anuruddha explains how he lives in harmony with other bhikkhus (MN 128.12):

I think thus: “It is a gain for me, it is a great gain for me that I am living with such companions in the holy life.” I maintain physical acts of love toward these venerable ones both openly and privately. I maintain verbal acts of love toward them both openly and privately. I maintain mental acts of love toward them both openly and privately. I consider: “Why should I not set aside what I wish to do and do what these venerable ones wish to do?” Then I set aside what I wish to do and do what these venerable ones wish to do. We are different in body, but one in mind.

Imagine practicing like Anuruddha does with your family, colleagues, and community members.

The Buddha detailed seven disadvantages of anger in *Sutta on the Wretchedness of Anger* (AN 7.64) by describing what someone wishes for his enemy and showing that anger accomplishes his enemy’s wishes. For example, an enemy may wish us to be ugly, to have an unfortunate rebirth, to experience pain, or to lack prosperity, wealth, a good reputation, and harmonious relationships. We accomplish all these things for him, through our own anger, without him harming us at all.

1. Even if we have bathed in fragrant water, wear stylish clothes, and are adorned with luxurious jewelry, we become ugly when angry.
2. Even if we are lying on a comfortable bed snuggled in luxurious blankets, we are in pain when we’re angry.
3. We may have prosperity, but when we ruminate with angry thoughts, we make bad decisions that destroy our prosperity.

4. We may have wealth, but a mind bound by anger cannot enjoy it. Although we may work hard to procure wealth, it is dissipated in fines due to unwise actions motivated by anger.
5. We may have a good reputation, but lose it by falling prey to anger.
6. We may want friends and good family relations, but dreading our temper, others stay away from us.
7. Although we wish for a peaceful death and a fortunate rebirth, anger fuels destructive physical, verbal, and mental actions, creating the causes for the opposite.

## REFLECTION

---

Contemplate the seven disadvantages of anger one by one. For each:

1. Imagine relaxing with a peaceful mind untainted by anger.
2. Then think of a person and situation you are upset and angry about and watch your comfort instantly evaporate.
3. Recognize that it is your attitude that brings the pain. The unpleasant situation is not happening to you now, but because the mind clings to an image of the past, you are miserable in the present.

---

Contemplating these helps us realize that letting our mind dwell in anger and malice is self-sabotaging. External enemies do not make us miserable; our anger already does an excellent job of that.

Hearing others' disturbing speech often triggers anger to arise in the mind. If we remember the above seven disadvantages of anger and apply the following advice the Buddha gave, we'll be able to release animosity and replace it with love (MN 21.11).

There are these five courses of speech that others may use when they address you: their speech may be timely or

untimely, true or untrue, gentle or harsh, connected with good or with harm, spoken with a mind of love or with inner hate . . . Herein, monastics, you should train thus: “Our minds will remain unaffected, and we shall utter no evil words; we shall abide compassionate for their welfare, with a mind of love, without inner hate. We shall abide pervading that person with a mind imbued with love, and starting with him, we shall abide pervading the all-encompassing world with a mind imbued with love, abundant, exalted, immeasurable, without animosity and without malice.” That is how you should train.

The love the Buddha speaks of here is love at the state of dhyāna. Such love will carry over when the person leaves the dhyāna state and returns to an everyday state of mind. Even if we have not attained dhyāna yet, training our mind to approach all beings with such a loving attitude will overwhelm any discomfort, suspicion, and malice that our mind harbors and imbue it with a sense of ease and affection toward all.

Contemplating the simile of the saw can free the mind from malice (MN 21.20):

Monastics, even if bandits were to sever you savagely limb by limb with a two-handled saw, he who gave rise to a mind of hate toward them would not be carrying out my teaching.

Rather than responding with hate, the Buddha recommended responding as in the previous quotation. For those who have strong faith and confidence in the Buddha’s teachings and want to adhere to and embody them, thinking as above is effective in releasing enmity.

Reflecting on the person’s good qualities is also helpful to bring the mind back to a more balanced perspective. For example, the person who spoke harshly is not physically violent and often helps others to meet a deadline at work. Another person may be ill mannered when driving, but refined when greeting strangers. Recalling the person’s good qualities when he is in a congenial situation enables us to dispel our rigid and critical

attitude of him. It is best to do this type of reflection often, especially in times when we are not upset. By familiarizing ourselves with this more comprehensive understanding of the other person, we strengthen our mindfulness and will be able to call it to mind more quickly when a difficult situation arises.

If we have difficulty seeing any good qualities in the person, then we should generate compassion for her, thinking of the karma she is creating and the kind of results she will experience due to it. Considering that she will likely have an unfortunate rebirth, or if born human, will encounter numerous obstacles and sufferings, there is no use wishing her harm. It is similar to seeing someone who is ill: the person is already suffering, so compassion, not malice, is appropriate. To overcome resentment toward someone whose behavior is vulgar and harmful, Śāriputra advises us to contemplate the following (AN 5.162):

May this respectable individual abandon improper physical actions and cultivate proper ones. May he abandon improper verbal actions and cultivate proper ones. May he abandon improper mental actions and cultivate proper ones. Why? So that this respectable individual will not be reborn in a state of loss, in an unfortunate realm, in ruin, or in hell after the dissolution of the body and death.

Another method to dispel animosity is to reflect on the karmic result of holding on to it. Here we reflect that we are the owner of our deeds and are the heir of our actions. We ask ourselves: “Is my way of thinking going to lead to awakening? Will it create the cause for a fortunate rebirth so I can continue practicing the Dharma? Or will this anger cause me to be separated from the Dharma, from companions in the holy life, and from an excellent spiritual mentor?”

Thinking of the Buddha’s responses when he faced the aggression of others in his previous lives as a bodhisattva can inspire us to forgive others their faults and relax our mind. The *Jātaka* tells many stories of the bodhisattva’s previous lives as human beings or as animals, in which others harmed him, were ungrateful, or betrayed his trust. In all of these, he

responded with compassion, never retaliating or holding a grudge. His ability to forgive and love those who harmed him were important factors in his attaining full awakening. The bodhisattva's behavior is an inspiring role model and emulating it will release the pain of our anger.

Another technique to free our mind from anger is to reflect that all sentient beings have been our mother, father, siblings, and children. As our mother, they carried us in their womb, gave birth to us, fed us, cleaned us, played with us, and taught us. As our mother or father, they worked hard to earn an income to feed and support us. As our siblings, they helped us and played with us. As our children, we loved them unconditionally and they brought us great joy by trusting and loving us. Earnestly reflecting in this way, we come to see that we have received outstanding benefit from all sentient beings in the past. It is unfitting that we now harbor enmity for them. In this way, our feelings of affection and gratitude overpower any resentment or grudge we may hold against others (Vism 9.36).

Bringing in analytical wisdom is also useful. Ask yourself, "What am I angry at? Is it the hair on his head? His teeth? Nails? The water element in the body? The earth element?" Or we examine, "Among the five aggregates in dependence on which this person is called so-and-so, what aggregate am I angry with? His body? His mind? A primary mind or a mental factor?" Searching for the real person who is the source of our anger becomes like painting in space (Vism 9.38).

Another idea is to give the person a gift. Others' animosity toward us and ours toward them subside when a gift is given and received earnestly (Vism 9.39).

When anger has subsided by employing one of these methods, we experience the satisfaction of having transformed our mind into either a neutral or wholesome state. We experience happiness or equanimity and increase our ability to prevent and abandon anger in the future. Both our body and mind are tranquil.

## REFLECTION

---

1. Think of a person whom you are angry with. Think, “This person is a complex human being with good qualities and faults.” Focus on their admirable qualities.
  2. Contemplate the karma this person is creating by doing the action that you find objectionable: what a sad situation it is that they want to be happy but are creating the causes for suffering. Try to feel how much they want happiness, yet through their harmful actions they are preventing their own happiness. In addition, they will have to experience the suffering results of their actions. Generate compassion for the person.
  3. Reflect that you’re in a similar situation — wanting happiness, not suffering, yet by holding on to anger and resentment you too are creating the cause for suffering. Have compassion for both the other person and yourself and release the anger.
- 

### *Continuing the Meditation on Love*

Once anger and resentment have dissipated, cultivate love toward the hostile person, just as you did toward the others.

Reciting the formula “May they be happy and free from suffering; may they be free from animosity, affliction, and anxiety, and live happily” is a tool. Cultivating love is not about reciting the formula; it is about generating the state of mind that corresponds to the words that you are saying. If the recitation becomes mechanical and monotonous, change the formula by expressing it in your own words; contemplate in more detail the types of happiness and good fortune you would like someone to experience. Imagine that person in their ordinary state with confusion and suffering. Then imagine how he would feel and act if he were free from specific miseries and had specific types of opportunities, good qualities, and conducive conditions. Imagine him having these. Making the meditation detailed and personal opens your heart to the experience of love. When the

feeling of love arises, it will gain momentum, and after a while the meditation will carry on by itself without your having to use the formula.

Follow this by breaking down the barriers: see the five individuals — ourselves, the respected person, the friend, the neutral person, and the hostile person — as equal and generate love equally for each of them. Buddhaghosa describes the sign of having succeeded in breaking down the barriers: Let's say five people are being held hostage and one has to give up his or her life. If you feel no difference among the five when the hostage-taker selects one, you have succeeded in breaking down the barriers. In other words, you lack any animosity that hopes the hostile person is chosen, no self-disparagement in wanting yourself to be sacrificed, no attachment in not wanting the dear one or respected person to be selected, and no apathy in not caring if the neutral person is chosen.<sup>7</sup>

According to Buddhaghosa, when barriers of extending love to the five individuals have been broken down and a meditator is able to radiate love equally to all five, simultaneously the counterpart sign (P. *paṭibhāganimitta*) appears, and access concentration (P. *upacāra samādhi*) is attained. Continuing to meditate, she attains the full concentration (P. *appanā samādhi*) of the first dhyāna by developing and repeatedly practicing the counterpart sign. In the first dhyāna, the five hindrances have been suppressed and the five factors — investigation, analysis, joy, bliss, and one-pointedness — are present. She also attains the liberation of mind with love. As meditation continues, the second and third dhyānas will be gained.

Only when a meditator has attained one of the dhyānas does she have the ability to train her mind in extending love so that she (MN 43.31)

dwells pervading one direction with a mind (heart) imbued with love, likewise the second direction, the third direction, and the fourth direction. Thus above, below, across, and everywhere, and to all as to herself, she dwells pervading the entire world with a mind imbued with loving-kindness, vast, exalted, measureless, without animosity, without malice.

Meditators begin by extending love to one direction — the east — so that it pervades all sentient beings there. When doing this, it is recommended to

begin small, thinking of one dwelling and extending love to everyone there. When the mind is malleable, then expand it to two dwellings, radiating love there. Gradually extend the radius of love to the town, state, and the entire eastern sector. When that meditation is firm, add on the other directions — the remaining three cardinal directions, the four intermediate directions, up, and down — sending love to each place, one by one.

Then radiate love everywhere without specifying a particular direction. Love is extended equally to all beings regardless of their realm of existence, social status, race, ethnicity, religion, and so forth. Love is shared with everyone, be they friend, enemy, or stranger, irrespective of how they feel about us or treat us. This love is measureless or boundless in that love for each being is unlimited, it extends to immeasurable sentient beings, and meditators are totally familiar with it. Without any pollution by bad feelings, grief, or suffering, this love is pure, impartial, and unconditional.

To practice love as a divine abode, meditators contemplate it at all times when they are awake and in all postures — sitting, standing, lying down, and walking. This leads to the liberation of mind with love — that is, love at the level of the full concentration of a dhyāna. It is called “liberation of mind with love” because while in that absorption, the mind is liberated from anger and animosity. Any manifest anger will disappear and anger that hasn’t arisen will not arise. The suppleness of such love is available only to those whose minds have reached absorption.

Together with extending the range of their love, meditators also intensify the experience of love. This is done by seeing all sentient beings as their children. The *Mettā Sutta* says (Sn 1.8):

As a mother would, with all her life, protect her only child,  
so one should develop a boundless heart toward all beings.

A mother loves her only child with all her being and does not lament relinquishing her own happiness — even her life — to protect her child. In a similar way, meditators view other sentient beings with intense affection, care, and concern. Remembering that in our beginningless infinite rebirths we have all been one another’s mothers helps us eliminate feelings of

separateness and self-concern and open our hearts to unconditionally love all beings just as a mother loves her only child.

To cultivate love we must contemplate many points: why our anger is unreasonable, others' kindness, the wide variety of living beings, and so forth. Given that so much thinking and visualization are involved, we may wonder, how can we attain the single-pointedness of dhyāna?

In the early stages of cultivating love, thought and imagination are necessary. But once love is aroused and becomes strong and stable, these are no longer needed. Instead, we abide in the experience of love and radiate that to others. Radiating love does not depend on verbalization or conception. When the mind is well trained and very familiar with love, mentally reciting “extend love to the east, to the west . . .” is not necessary. Rather, the mind becomes absorbed in the experience of love, and radiating love assumes a momentum of its own. Cultivating love in meditation leads to a level of samādhi that corresponds to dhyāna. Interestingly, the four brahmavihāras were not explained as states of dhyāna in the early sūtras, but Pāli commentaries say that practitioners can develop them to the level of dhyāna.

The liberation of mind with love is practiced with unspecified pervasion by thinking, “May all beings be happy and free from suffering. May they be free from anger, affliction, and anxiety, and live happily.” Then “all breathing things,” “all creatures,” “all persons,” and “all those with a personality” are substituted, one by one, for “all beings,” and love radiated to them. Although these five terms are synonymous with “all beings,” meditating on each of them one by one gives us different perspectives on the object of our love.

The liberation of mind with love can also be practiced in seven ways with specified pervasion by thinking in this order: “May all women be happy and free from suffering. May they be free from animosity, affliction, and anxiety, and live happily.” Then “men,” “āryas,” “ordinary beings,” “devas,” “human beings,” and “those born in unfortunate realms” are substituted for “women” and love spread to them.

The liberation of mind with love is cultivated to pervade the ten directions in ten ways, by thinking as above first toward all beings in the east, then the west, north, south, northeast, southeast, southwest, northwest,

above, and below. Then each of the twelve types of beings<sup>8</sup> can be thought of in each of the directions: “May all beings in the east . . .” up to “May all those in unfortunate realms in the downward direction be free from animosity, affliction, and anxiety, and live happily.” In addition, each of the phrases for well-being — “be free from animosity,” “be free from affliction,” “be free from anxiety,” and “live happily” — is one meditative absorption, so when put together there are quite a number of absorptions. Developing any of the liberations of mind with love with any of these absorptions will bring the eleven benefits mentioned below.

## REFLECTION

---

1. Imagine the person who you are upset with in their ordinary state afflicted with confusion and suffering.
2. Then imagine how they would feel, act, and speak if they were free from specific miseries and had specific types of opportunities, good qualities, and conducive conditions. Imagine them having these.
3. Seeing the person in a different light, let love wishing them to have happiness arise.
4. Do the above reflection for other beings until you get to the point where it is easy to extend the wish for them to be happy to all sentient beings.

---

### *Cultivating Love Benefits Self and Others*

The Buddha speaks of eleven benefits accruing to those who practice the liberation of mind with love regularly (AN 11.15):<sup>9</sup>

1. They sleep well, free from restless sleep and apnea.
2. They awake well, without groaning, yawning, and rolling over to go back to sleep.

3. They do not experience nightmares but have auspicious dreams, such as paying respects at a stūpa or offering homage to the Three Jewels.
4. They are dear to humans, who appreciate and respect them.
5. They are dear to nonhumans, who are grateful for their serenity that brings peace among them.
6. Deities protect them.
7. Fire, poison, and weapons do not affect them. Here a story is told of a hunter who threw a spear at a cow who was nursing her calf. The spear bounced off her due to the power of her love that wished for the well-being of her calf.
8. Their minds are easily concentrated, not subject to sluggishness.
9. The expression on their face is serene.
10. They die without confusion, as if they were simply falling asleep.
11. If they do not attain a supramundane realization, after death they will be born in the Brahmā world in the form realm. Meditators who have attained any of the four immeasurables — that is, a mind of dhyāna with any of these four as its object — during their life will have the intention associated with this immeasurable arise as they die. This is an invariable karma that will ripen by the person being reborn in the corresponding level of the Brahmā world.<sup>10</sup>

The cultivation of love benefits our own mind as well as the society around us. At the time of the Buddha, a murderous bandit named Aṅgulimāla terrorized the land. Having killed 999 people and made a necklace of their finger bones, he was seeking his next victim when the Buddha intervened. The power of the Buddha's peace and love subdued Aṅgulimāla, who became one of his monastic disciples. Then one day when King Prasenajit went to visit the Buddha, the Buddha introduced him to Aṅgulimāla. The king reacted with terror and dread, but the Buddha assured him that there was nothing to fear. Conversing with Aṅgulimāla, the king was astounded by the change and relieved that his subjects could now live without fearing this serial murderer. Addressing the Buddha, King Prasenajit said (MN 86.13):

It is wonderful, venerable sir, it is marvelous how the Blessed One tames the untamed, brings peace to the unpeaceful, and leads to nibbāna those who have not attained nibbāna. Venerable sir, we ourselves could not tame him with force and weapons, yet the Blessed One has tamed him without force or weapons.

Love is also effective at stilling disturbance by spirits, negative energy, and threats from human beings. The Buddha taught the famous *Sutta on Love* because his disciples' meditation was being disturbed by antagonistic spirits. By the monastics cultivating profound love for all beings, the spirits were subdued and their interference ceased. When Devadatta released a wild elephant with the hopes it would trample the Buddha, the Buddha's meditation on love soothed the elephant, who bowed to him instead. The laywoman Sāmāvati was protected from the actions of her jealous husband by meditating on love. The Buddha also instructed monastics to contemplate love for snakes, scorpions, centipedes, spiders, lizards, and rodents, and to speak of the excellent qualities of the Three Jewels to protect themselves from being bitten by these creatures.

Cultivating love in a dangerous situation cannot be done out of fear or anger, for such emotions are the antithesis of love. Rather, understanding the suffering of these beings and wishing them well, cultivate love and compassion for them. Love, particularly in a mind of dhyāna, protects you from external and internal disturbances. Furthermore, the liberation of mind with love energizes practitioners to reach out and directly help others whenever the possibility arises. In the process of helping others, it is important not to transgress whatever precepts we have taken.

Meditating on love reduces interferences and increases conducive circumstances so that meditation on other topics will proceed smoothly. Here a practitioner generates love for members of the Dharma community where she lives; this results in their living harmoniously together. Then she meditates on love for the deities in the area, who respond by protecting her. She continues by cultivating love for her benefactor, who, feeling her genuine concern, wishes to provide her with the requisites to continue her Dharma practice. She expands her love to include all the sentient beings in

the area, which is conducive to having good relations with them such that they do not feel malice toward her and do not cause problems or interfere with her Dharma practice. In modern-day Thailand, some disciples cite the power of their spiritual mentor's love as creating peaceful and conducive circumstances to meditate in that monastery.

The cultivation of love aids in the three types of abandonment of defilements: temporary abandonment, abandonment by suppression, and abandonment that eradicates. Developing love toward others can be used as an antidote to anger, resentment, spite, and other hostile emotions, and leads to *temporary abandonment* or abandonment by substitution of the opposite. For example, when we become angry because someone criticizes us or when resentment surges when remembering a harsh event from years ago, we can cultivate a loving feeling that replaces the disturbing emotion. This temporarily removes the affliction.

By attaining the full concentration of dhyāna on love, the five hindrances are suppressed by the power of concentration and cannot manifest.<sup>11</sup> This is *abandonment by suppression*, and it lasts as long as the meditator remains in dhyāna or until the strength of the dhyāna has diminished to such a point that gross afflictions arise again.

By using the liberation of mind with love as the basis for developing insight, a meditator can attain arhatship, a state of *abandonment that eradicates the defilements* so that they can never return. This is done by meditating in a dhyāna, then leaving the dhyānic state and analyzing its components. Through this method, the meditator sees that even the blissful state of concentration is impermanent, unsatisfactory in nature, and selfless. This understanding of the three characteristics in turn leads to the realization of nirvāṇa, in which the fetters are forever eradicated.

Cultivating love benefits ourselves and others. The Buddha explains (SN 47.19):

“I will protect myself.” Monastics, thus should the establishments of mindfulness be practiced. “I will protect others.” Monastics, thus should the establishments of mindfulness be practiced. Protecting oneself, one protects others. Protecting others, one protects oneself.

And how is it that by protecting oneself one protects others? By the pursuit, development, and cultivation [of the four establishments of mindfulness] . . . And how is it that by protecting others one protects oneself? By fortitude, harmlessness, love, and empathic joy.

The commentary to this nikāya explains “protecting oneself, one protects others” as follows: Practicing the four establishments of mindfulness well by abandoning worldly pursuits, a meditator protects himself from duḥkha by attaining arhatship. Others who see his serene conduct develop the virtuous minds of confidence and inspiration. This will lead others to have a heavenly rebirth and to practice the path to liberation themselves. In this way, by protecting himself, a meditator protects others.

It further explains “protecting others, one protects oneself”: By cultivating fortitude, compassion (nonharm), love, and empathic joy, a meditator develops the dhyānas by taking the four immeasurables as the object. In this way, she protects others. By then employing the dhyānas as the basis for cultivating insight into the three characteristics and realizing nirvāṇa, she becomes an arhat, and in this way protects herself.

Some readers may wish that the Buddha had used the meditation on love to stimulate his disciples to become social activists and directly benefit suffering sentient beings. Here, however, the Buddha is focusing on meditation and its relationship with liberation. In other contexts, he explains how to apply fortitude, compassion, love, and empathic joy to improve living standards and educational opportunities and to promote social equality, justice, and environmental protection. For example, in *The Kindred Sayings* the Buddha recommends that lay followers plant trees, dig wells, construct dams, and provide shelter for the homeless, and in another sūtra he advises monarchs to share their wealth with their subjects in order to create a harmonious society that is easy to govern. In *Precious Garland (Ratnāvalī)*, Nāgārjuna spends considerable time advising the king on social policy and how to benefit the denizens of his kingdom as well as travelers and refugees staying there.

*Meditation on Compassion*

Similar to the meditation on love, begin the cultivation of compassion by contemplating the disadvantages of lacking compassion and the benefits of having it. Choose someone who is suffering greatly as the first person who is the object of your compassion. This person may or may not be someone you know personally; the media provides us with more than enough images of people who live in miserable conditions. Still, the compassion will be stronger if you have direct contact with the person.

If you don't encounter an appropriate person, cultivate compassion for someone who is creating horrendous destructive karma, even if that person appears to be happy at the moment. This person is like someone who is given delicious food just before he is executed. He may look happy at the moment, dining on sumptuous food, but that happiness is false. Similarly, someone who legally or illegally orders the death of many people, steals their wealth, or creates massive disharmony through lying and dissimulation may appear to enjoy good circumstances now. However, due to lack of constructive karma, horrible suffering in unfortunate rebirths awaits him.

After generating compassion for a miserable person, do so for a dear person, followed by a neutral person, and finally a hostile person. Should anger or fear arise toward a hostile person, counteract it by employing the methods described above. Even if these hostile people are not experiencing extreme suffering at the moment, they are still under the control of afflictions and polluted karma and therefore are not free from the pervasive *duḥkha* of conditioning in *samsāric* existence. For this reason alone, they are worthy of compassion. Even if some of them have created constructive karma yet are experiencing troubles with their health, family relations, job, and so forth, they are deserving of compassion.

Then break down the barriers between the four kinds of people — ourselves, dear ones, neutral people, and hostile people — until the counterpart sign appears and access concentration is attained. By repeatedly meditating on the counterpart sign, attain the first three *dhyānas*. With that concentration, develop malleability and versatility by generating compassion for all the various beings in all directions as described in the meditation on love. The eleven advantages as detailed above also accrue.

When viewing others' suffering and cultivating compassion, if your mind becomes overwhelmed by feelings of despair or helplessness, you have missed the mark. Distress about others' suffering, anger at societal forces that cause suffering, and frustration with others for carelessly getting themselves into predicaments may be natural emotions for ordinary beings, but they are far from the Buddhist understanding of compassion. Compassion is the wish for others to be free from all *duḥkha*, and to cultivate it we must remain focused on responding with tender concern and the wish to help.

## REFLECTION

---

1. Think of someone undergoing great suffering and imagine what it would feel like to be in their situation. Think of that person's buddha nature and good qualities — their potential to contribute to the world and their potential for good.
  2. Let the wish for them to be free from suffering arise in your mind. That is compassion.
  3. Then go through the above steps thinking of friends, neutral people, hostile people, and finally generalize to all sentient beings of the six realms in *samsāra*. Let compassion arise in each case.
- 

### *Meditation on Empathic Joy*

Empathic joy is feeling joy at others' success, merit, good qualities, and happiness. Here the first person to cultivate empathic joy toward is a dear person who is good-natured and happy and whose happiness and success is worthy of rejoicing over. Sincerely rejoicing at others' good fortune fills our mind with delight and is an excellent antidote to dispel jealousy and envy. Empathic joy is extended not only for the person's present good fortune but also for their past successes and future virtuous actions. Having generated empathic joy toward this dear person, proceed to cultivate

empathic joy for the success and happiness of a neutral person and then a hostile one. Proceed to subdue anger for the hostile person, break down the barriers, and cultivate and repeatedly practice the counterpart sign to increase the absorption up to the third dhyāna in accord with the explanation above. Similarly, cultivate versatility and then reap the benefits of generating empathic joy as explained before.

### *Meditation on Equanimity*

To develop equanimity fully entails previous attainment of the third dhyāna on the basis of cultivating immeasurable love, compassion, and empathic joy. Having become familiar with the third dhyāna, the meditator emerges from it and contemplates the risks of the previous three divine abodes and the benefits of equanimity. The first three divine abodes are risky because attachment and anger are not far away. For example, when developing love and wishing for others to be happy, attachment may arise instead. Also, the first three immeasurables are associated with happiness, which lessens the depth of concentration. For these reasons, the meditator now seeks equanimity, which is a constancy or steadiness of mind when seeing the happiness and suffering of others. The mind is free from longing and repugnance regarding others. Seeing that their happiness and suffering are results of their own karmic actions, the mind of equanimity remains balanced when seeing sentient beings' felicity and misery.

The chief benefit of equanimity is its peacefulness, and peace comes when the mind is balanced. This equanimity is not indifference or apathy, for meditators have already gained dhyāna on love, compassion, and empathic joy. These three imbue equanimity with calm affection for sentient beings and balanced involvement with them, while equanimity remains peaceful and receptive.

Having contemplated the first three immeasurables, meditators now focus on a neutral person and cultivate equanimity. When this is stable, they then develop equanimity toward a dear one, and then toward a hostile person.

Breaking down the barriers between the neutral person, the dear one, the hostile one, and themselves is the same as in the meditation on love,

compassion, and empathic joy. So too is cultivating and repeatedly practicing the counterpart sign. Through this they enter the fourth dhyāna. Meditators can gain the fourth dhyāna only on the basis of having attained the third dhyāna by means of meditation on one of the other immeasurables. In other words, only after attaining the first, second, and third dhyāna on love, compassion, and empathic joy can meditators attain the fourth dhyāna on equanimity. In addition, they cannot attain the fourth dhyāna on equanimity on the basis of having attained the third dhyāna with another meditation object, such as the earth kasiṇa, because that object differs considerably from equanimity. Developing versatility and receiving the advantages are similar to the other immeasurables. In the fourth dhyāna, the dhyānic factor of bliss has ceased and the predominant feeling is equanimity. However, as explained below, the divine abode of equanimity and the feeling of equanimity are not the same.

The sequential cultivation of the four immeasurables is compared with the evolving attitude parents have toward their children. When the baby is in the womb, the parents think with a *loving* mind, “May our child be healthy.” After he is born, when the adorable baby lies on his back and cries because he is hungry or has been bitten by insects or has had a bad dream, the parents feel *compassion*. When the child grows up and the parents see him playing, being inquisitive about the world, and learning, they feel *empathic joy* and rejoice at their child’s happiness. When the child is grown and becomes a successful person in his own right, the parents have *equanimity*, knowing that he can take care of himself.

This analogy shows the usefulness of each attitude in a specific situation. However, do not take this analogy too far. It does not mean that equanimity is the superior attitude to have toward all sentient beings. Nor does it mean that equanimity is to be favored more than the other immeasurables or that it is higher or more desirable. Skill in all four is helpful because depending on the situation, love, compassion, or empathic joy may be more appropriate than equanimity. As we see by the parents’ response to their child at different times, love is called for at one time, compassion at another, empathic joy in one circumstance, and equanimity in another. Versatility in the dhyānas and in the range of positive emotions

meditators experience expands their practice. It also affects their ability to reach out and benefit others in their daily life.

Even after his awakening, when he had nothing further to cultivate or attain, the Buddha continued to meditate on all four immeasurables. Most likely this was because of the benefit they bestow on others and to encourage his direct disciples and future generations of practitioners to cultivate them. Certainly the four immeasurables were satisfying and pleasant abodes for the Buddha himself. As we see from the example of his life, the Buddha was a loving, compassionate, and joyful individual whose evenness of mind enabled him to be effective in all situations and with all people.

### *Types of Equanimity*

“Equanimity” has a variety of meanings, depending on the context. Buddhaghosa differentiates ten types of equanimity (Vism 4.156–66). The prominent six are as follows:

1. The *feeling of equanimity* is a neutral feeling, one that is neither pain nor pleasure. It can arise in virtuous, nonvirtuous, and neutral states of mind.
2. *Even-minded equanimity* maintains an even attitude, balances the mind and its accompanying mental factors, and makes our responses even and balanced. It is present in virtuous minds but absent in nonvirtuous minds. The next four are types of even-minded equanimity that are differentiated according to the circumstance in which they arise.
3. The *equanimity of purity* is the equanimity of the fourth dhyāna. In the first three dhyānas, even-minded equanimity maintains the balance of investigation, analysis, joy, and bliss, but in a sense it is overshadowed by them. In the fourth dhyāna, these four dhyānic factors are absent and the feeling of equanimity is present, which enables even-minded equanimity to shine forth purely.
4. The *divine abode of equanimity* is the fourth immeasurable. It is a blend of equanimity toward dear ones, strangers, and enemies with

the evenness of the mind and its accompanying mental factors. Being very peaceful, divine-abode equanimity differs from the equanimity of purity only in terms of its object. Equanimity of purity arises in relation to the counterpart sign, while divine-abode equanimity arises toward sentient beings.

5. The *awakening factor of equanimity* is the balance among the various factors of the mind that realizes nirvāṇa. It is one of the thirty-seven harmonies with awakening.<sup>12</sup>
6. *Six-limbed equanimity* keeps the mind balanced when it contacts attractive or unattractive sense objects and when it experiences pleasure or pain. Only arhats have perfected this type of equanimity, which may be accompanied by pleasant, painful, or neutral feelings. It is the equanimity spoken of when describing an arhat: “(When) he sees form with his eye, he becomes neither mentally pleased, nor mentally displeased, but remains equanimous, mindful, and discriminating (and so on for all six senses).”<sup>13</sup>

Dhammapāla speaks of unknowing equanimity, which is ignorance combined with the feeling of equanimity. This is the dull apathy that is a defilement.

Of the four immeasurables, immeasurable equanimity is the most potent in helping a meditator develop the awakening factor of equanimity that is needed to realize nirvāṇa.

### *The Four Divine Abodes and Insight*

Meditation on the four divine abodes can be done for several purposes: for protection when suffering or in danger, as a path to rebirth in the Brahmā world, and as a basis for insight. When perfected, these four immeasurables become “immeasurable liberations of mind,”<sup>14</sup> which are states of dhyāna that are liberated from attachment to sensual objects and free from the five hindrances. Although these immeasurable liberations of mind alone cannot bring liberation from cyclic existence, when these minds of deep concentration are used to meditate on the three characteristics and nirvāṇa,

the resulting insight will lead to the ultimate goal of liberation from saṃsāra.

For example, meditators who develop the first dhyāna based on love enter into that dhyāna through love. After stabilizing their concentration in the dhyāna on love, they emerge from the dhyāna and, looking back at it, they examine it. The experience in dhyāna is so blissful that if they did not examine it, attachment for it would easily arise and they might forgo liberation in favor of the bliss of samādhi.

But when analyzing the dhyāna they see the dhyāna of love as a composite phenomena consisting of the five aggregates. There is a pleasant or equanimous feeling, some discrimination, and other miscellaneous factors such as love, attention, contact, intention, and concentration, as well as the mental primary consciousness. In short, the four mental aggregates and the physical body were present when they were in dhyāna. They see each of the dhyānic factors as a distinct mental factor, instead of their usual experience of seeing them as a seamless whole. With insight, these meditators see the dhyāna is impermanent because it is produced by causes and conditions and it ceases with the cessation of its causes and conditions. Because it is impermanent — unceasingly arising and perishing in every moment — it does not bring ultimate satisfaction; thus it is in the nature of duḥkha. Because it is impermanent and duḥkha in nature, it is not worthwhile clinging to — it is not I, mine, or my self. There is no substantially real person findable within or separate from the ever-changing combination of physical and mental aggregates.

Continuing to investigate their experience of the dhyāna more deeply by seeing it in light of the three characteristics, meditators increase their wisdom until there is a breakthrough to seeing or vision. With this insight perceiving the unconditioned, nirvāṇa, comes the abandonment of the first three fetters — view of a personal identity, doubt, and view of rules and practices. Having used the dhyāna on love to develop insight and realize nirvāṇa, these meditators have now become stream-enterers.

As they continue cultivating wisdom, stream-enterers reduce their malice and their attachment to sense pleasure sufficiently so that they become once-returners. When these two are abandoned completely, they

become nonreturners, and if they don't attain arhatship in that life, they will be reborn in the pure lands where they will attain it.

Some meditators cultivate the four immeasurables after becoming āryas, but before attaining arhatship. In this case, they will be reborn in the Brahmā worlds in the form realm after death, continue to practice insight there, and become arhats. This is very different from worldlings who, rather than seeking liberation, cultivate the four immeasurables for the purpose of being born in the Brahmā world. While attainment of the four immeasurables will bring rebirth in the Brahmā world, because these practitioners lack insight and wisdom as well as the interest in developing them, they may be reborn in an unfortunate realm after the karma for rebirth in the Brahmā world has been exhausted.

## REFLECTION

---

1. Meditate on one of the four divine abodes as taught above until you experience it.
2. Step back from the experience and see it is simply a mental state.
3. Note the feeling, discrimination, and any other mental factor such as mindfulness, intention, or concentration that are present. Note that the mental primary consciousness is present and that your body is there too.
4. Dissecting the experience of the divine abode into the five psychophysical aggregates in this way, see that it is a state composed of many changing factors.
5. Note that the mental state is impermanent because it's produced by causes and conditions. Because it is impermanent, it does not bring ultimate satisfaction and is thus in the nature of duḥkha. Because it is impermanent and duḥkha in nature, it is not worthwhile clinging to — it is not I, mine, or my self. There is no substantially real person findable within or separate from the aggregates.

---

## *Near and Far Enemies of the Four Immeasurables*

Each of the four immeasurables has a “near enemy” and a “far enemy.” The near enemy is an affliction that is similar in some way to that virtuous immeasurable; the far enemy is an affliction that is the opposite of the emotion we are trying to cultivate.

The near enemy of love is attachment because both love and attachment see the good qualities in the other person. However, attachment clings to others with unrealistic expectations; it wants something from others, and thus the affection we feel is polluted with possessiveness and neediness. Malice is the far enemy of love. We must ensure that our love is free of both these dangers.

Compassion’s near enemy is personal distress or grief based on worldly life. This grief is the sadness and distress felt when we or those we care about cannot get what we want. It may be sorrow over past frustrations or present disappointments. The grief is similar to compassion in that both have an element of sorrow due to others’ misery. Compassion’s far enemies are cruelty and violence.

The near enemy of empathic joy is joy based on worldly life — that is, delight at receiving sense pleasures in the past or present. Here our mind becomes giddy with excitement; we become too involved and attached to someone else’s happiness. Empathic joy’s far enemies are jealousy and boredom, which interfere with our experiencing empathic joy at others’ successes and happiness. Jealousy resents the other person’s successes and happiness, and boredom doesn’t care about them.

Equanimity’s near enemy is the equanimity of unknowing based on worldly life; this is the indifference and apathy that people often experience. Indifference and apathy are similar to equanimity in that none of them notices the faults or good qualities of others. Equanimity’s far enemies are anger and attachment, which push some beings away and hold others near and dear.

IMMEASURABLE	CHARACTERISTIC	NEAR ENEMY	FAR ENEMY
Love	Sincere wish for the welfare and happiness of beings	Personal attachment, worldly affection, clinging or possessive love	Malice, hatred
Compassion	Wanting to dispel the suffering of others	Worldly grief, personal distress	Cruelty (the wish to inflict suffering on others), violence
Empathic joy	Joy produced by seeing the success and good fortune of others	Worldly happiness, giddiness, and excitement that is too involved with others' success	Jealousy, boredom
Equanimity	Impartiality toward living beings	Indifference, cold uncaring apathy	Attachment and anger, partiality

It's good for us to keep the near and far enemies of each immeasurable in mind so that when we cultivate each of the four, our meditation will be on target. The near enemies are much harder to detect, so special vigilance regarding them is needed. How disappointing it would be to think we were cultivating love when actually we were building up attachment toward someone! And how deleterious it would be to try to generate compassion but get stuck in personal distress. By precisely understanding the qualities of each immeasurable and monitoring our mind closely, our meditation will have a transformative effect.

Meditation on love is recommended for people whose anger and malice are strong; it will help them overcome those obstacles. Meditation on compassion is advised for people who tend toward cruelty, because with compassion they will cease wanting to inflict suffering on others and instead will want sentient beings to be free of suffering and its causes. Meditation on empathic joy is especially helpful for people with strong jealousy and boredom, as it will enable them to rejoice and take delight in others' happiness instead of resent or disregard it. Meditation on equanimity

is suitable for those who suffer from much attachment, anger, prejudice, and partiality, because it helps them to accept all others and have an equal and balanced attitude toward them.

Buddhaghosa says we should practice the four immeasurables like a mother with four children — a young child, a sickly child, one in the flush of youth, and one who is busy with her own life. A mother wants to nurture the young child so he will grow up and become a happy and ethical adult; she wants her sickly child to recover and regain his health. She hopes the one in the flush of youth will enjoy the benefits of good health and many opportunities for as long as possible, and she does not intrude or worry about the one who is handling her own affairs, but peacefully lets her be.

Joyous effort is crucial when beginning to practice the four divine abodes. Taming the hindrances by applying their antidotes is important in the middle as practice continues. Meditative absorption is essential at the conclusion. The object of any of the four divine abodes is a single living being or as many living beings as we think of.

As noted above, immeasurable equanimity and the feeling of equanimity differ. Immeasurable equanimity is impartiality with respect to all sentient beings; it is a mental factor in the aggregate of miscellaneous factors. The feeling of equanimity is a neutral feeling that is neither pain nor pleasure; it belongs to the feeling aggregate.

## REFLECTION

---

1. Contemplate the near and far enemies of each of the four immeasurables.
  2. Are there particular ones that you tend to fall into?
  3. What ideas do you have to remedy that, so that you can experience genuine love, compassion, empathic joy, and equanimity?
- 

*The Four Immeasurables in the Mahāyāna*

The four immeasurables are an important practice in the Mahāyāna as well. As in the Pāli tradition, they are objects for cultivating the dhyānas, and practicing them culminates in attaining the dhyānas. However, they also play a strong role in creating the causes to attain bodhicitta and in strengthening bodhicitta when it has been generated.

Chapter 5 of the *Bodhisattvapiṭaka Sūtra*, which is part of the *Sūtra of the Heap of Jewels*, has an extensive explanation of the four immeasurables.<sup>15</sup> In general, the four are contemplated at the beginning of a meditation session in order to stabilize and increase bodhicitta. The short version of the four immeasurables is as follows:

May all sentient beings have happiness and its causes. (love)

May all sentient beings be free of suffering and its causes.  
(compassion)

May all sentient beings not be separated from sorrowless bliss.  
(empathic joy)

May all sentient beings abide in equanimity, free of bias,  
attachment, and anger. (equanimity)

The long version:

How wonderful it would be if all sentient beings were to abide in equanimity, free of bias, attachment, and anger. May they abide in this way. I shall cause them to abide in this way. Guru Buddha, please inspire me to be able to do so.

How wonderful it would be if all sentient beings had happiness and its causes. May they have these. I shall cause them to have these. Guru Buddha, please inspire me to be able to do so.

How wonderful it would be if all sentient beings were free from suffering and its causes. May they be free. I shall cause them to be free. Guru Buddha, please inspire me to be able to do so.

How wonderful it would be if all sentient beings were never parted from fortunate rebirths and liberation's

excellent bliss. May they never be parted. I shall cause them never to be parted. Guru Buddha, please inspire me to be able to do so.

In the long version of the four immeasurables, each verse has four parts, which gradually serve to intensify the emotion: (1) a wish (How wonderful it would be . . . ), (2) an aspiration (May they . . . ), (3) a resolution (I shall cause them . . . ), and (4) a request for inspiration (Guru Buddha, please inspire me to be able to do so).

Using love as an example, first we have the wish that sentient beings have happiness and its causes. Focusing our attention on this wish, the wish intensifies and becomes an aspiration that they have happiness and its causes. After that aspiration takes root in our mind, it grows into a resolution to get involved, and we take responsibility to make our aspiration a reality. Because we may feel inadequate to fulfill this grand resolution, we seek inspiration from the Buddha and our spiritual mentor. In this way, we feel supported by the buddhas who have perfected their ability to fulfill this resolution. Our love becomes stronger and more stable, as does our confidence to engage in whatever is necessary so that sentient beings will have happiness and its causes.

In the short version of the four immeasurables, equanimity comes at the end, while in the long version it comes at the beginning. Placing equanimity at the end emphasizes our wish that others enjoy the peace of being free from attachment to friends, anger toward enemies, and apathy toward strangers.

By putting equanimity first, the long version becomes a synopsis of the method of generating bodhicitta called the “seven cause-and-effect instructions,” which will be described in chapter 3. Cultivating equanimity at the beginning pacifies the attachment, animosity, and apathy that all too often constitute our reactions to others. Such partiality renders generating equal compassion for all beings impossible, and such compassion is a prerequisite for generating bodhicitta, the mind aspiring to attain full awakening in order to benefit all sentient beings more effectively. Equanimity — a state free from attachment and aversion toward all beings — is preliminary to the seven instructions.

With a mind of equanimity, we then generate love for all beings. Love is the fourth of the seven instructions and the result of the first three — seeing all sentient beings as our mother, recognizing their kindness, and wishing to repay it. The third immeasurable, compassion, is the fifth instruction. This leads to the great resolve and bodhicitta, the sixth and seventh instructions. With bodhicitta, we work for the welfare of all sentient beings, which includes their temporal happiness in saṃsāra, such as taking fortunate rebirths, and their ultimate happiness — liberation and full awakening. This is the meaning of empathic joy that wishes sentient beings to never be separated from fortunate rebirths or liberation’s excellent bliss. Empathic joy rejoices at their well-being and wants it to arise and continue.

## REFLECTION

---

1. Meditate on the four immeasurables in the short way, with equanimity as the fourth point.
  2. Meditate on them with equanimity as the first point.
  3. What difference do you experience?
  4. Meditate on the four immeasurables in the long way with all four phrases.
  5. Both methods are effective; it’s good to develop familiarity with both.
- 

When meditating on the four immeasurables, we aim to generate these four thoughts or emotions in our mind. Unlike meditation on impermanence or emptiness when we try to apprehend an object not previously realized, in these meditations we want to transform our mind into that mental attitude. Using love as an example, we do not meditate on love as an object of contemplation — that is, we do not focus on love and its definition, reciting them over and over again — but we try to imbue our mind with love.

In both the Pāli and Sanskrit traditions, we are instructed to develop the four immeasurables first toward specific individuals — ourselves, a friend, a stranger, and an enemy — and then gradually extend them to include all others, including sentient beings in other realms of existence.<sup>16</sup> A Pāli sūtra, the *Simile of the Cloth*, says (MN 7.13):

He abides pervading one quarter with a mind imbued with love (compassion, empathic joy, equanimity), likewise the second, likewise the third, likewise the fourth; so above, below, around, and everywhere, and to all as to himself, he abides pervading the all-encompassing world with a mind imbued with love (compassion, empathic joy, equanimity), abundant, exalted, immeasurable, without hostility and without malice.

If we immediately jumped to cultivating the four immeasurables toward all sentient beings as an amorphous group, our love, compassion, empathic joy, and equanimity will be only intellectual. It is comparatively easy to think of a vague group of beings who are far away and wish them well. But to feel love, compassion, empathic joy, and equanimity toward specific individuals with whom we come in contact daily is another matter. Therefore, while knowing our aim is to extend these emotions toward all beings, we must begin by cultivating them toward specific individuals and extend them in stages so they become immeasurable and heartfelt toward all sentient beings.

Empathic joy is expressed as wishing all beings to attain liberation — the state of undeclining peace that is free from sorrow — as well as rejoicing in their virtuous actions that create the causes of happiness. It also rejoices in others' temporal happiness and wishes them never to be separated from whatever worldly happiness they have.

The great Nyingma master Longchenpa (1308–1363) makes empathic joy more immediate by emphasizing its relationship to sentient beings' buddha nature. Because we want them to experience the joy of awakening, we rejoice that they already have the blissful, pure nature of mind that enables that awakening to be possible.

In the Mahāyāna, equanimity is expressed as a mental state in which we wish all sentient beings' minds to be free from gross attachment, anger, and apathy. In the *Compendium of Knowledge*, Asaṅga (fourth century) explains that immeasurable equanimity thinks, “May all sentient beings receive benefit.” This can be interpreted in two ways, the first wishing that they all receive equal benefit, without some receiving more and others less, the second wishing that sentient beings free their own minds from bias, attachment, and anger and thus benefit by developing equanimity themselves. Tsongkhapa explains in the *Great Treatise* that equanimity may refer to the meditator feeling equanimity toward others, and to all sentient beings having equanimity whereby their minds are free from bias, attachment, and anger. Either way, equanimity is a calming attitude that helps us live harmoniously both inside our own hearts and together with others.

Similar to the explanation in the Pāli tradition, Maitreya says in the *Ornament of Clear Realizations* (*Abhisamayālamkāra*) that equanimity, love, compassion, and empathic joy are not immeasurables unless they are accompanied by an actual dhyāna. Here we see that the four immeasurables may be meditated upon in the Mahāyāna not only to increase our bodhicitta but also as an object of meditation for cultivating serenity.

It is also important to combine wisdom with equanimity, love, compassion, and empathic joy by viewing their agents, objects, and actions — also known as the “circle of three” — as empty of true existence. Taking love as an example, we contemplate the emptiness of inherent existence of the meditator who is generating love for sentient beings (the agent), the sentient beings who are the object of her love (the object), and the action of wishing them to have happiness and its causes (the action). These three factors exist dependent on one another. Having such “objectless” wisdom — that is, the wisdom that does not grasp an inherently existent object because it has realized its emptiness of inherent existence — combined with love, compassion, empathic joy, and equanimity, will lead to liberation. Without this wisdom, abiding in the four immeasurables will lead only to rebirth in the Brahmā realm within cyclic existence.

Some masters, such as Atiśa, say that the four immeasurables are preliminary to generating bodhicitta. Other masters, such as Maitreya and

Asaṅga, emphasize their development as practices of bodhisattvas. This doesn't mean that the four are developed only after generating bodhicitta and becoming a bodhisattva. Rather, the four immeasurables act to strengthen the bodhicitta that was generated previously.

The *Vimalakīrtinirdeśa Sūtra* (chapter 7) speaks of the immeasurable love of bodhisattvas:

Mañjuśrī then asked further, “Noble sir, if a bodhisattva considers all living beings in this way, how does he generate the great love toward them?”

Vimalakīrti replied, “Mañjuśrī, when a bodhisattva considers all living beings in this way, he thinks: ‘Just as I have realized the Dharma, so should I teach it to living beings.’ Thereby, he generates the love that is truly a refuge for all living beings,

the love that is peaceful because it is free of grasping,  
the love that is not burning because it is free of afflictions,  
the love that accords with reality because it is equanimous in  
all three times (past, present, and future),  
the love that is without conflict because it is free of the  
violence of the afflictions,  
the love that is nondual because it is involved neither with  
the external nor with the internal,  
the love that is imperturbable because it carries through to  
the end.

“Thereby he generates the love that is firm, its high  
resolve unbreakable, like a diamond,

the love that is pure, purified in its nature,  
the love that is even, its aspirations being equal,  
the ārya's love that has eliminated its enemy [anger],

the bodhisattva's love that continuously develops living beings,  
the Tathāgata's love that understands reality,  
the Buddha's love that causes living beings to awaken from their sleep,  
the love that is spontaneous because it is fully awakened spontaneously,  
the love that is awakening because it is unity of experience,  
the love that has no presumption because it has eliminated attachment and aversion,  
the love that is great compassion because it infuses the Mahāyāna with radiance,  
the love that is never exhausted because it knows that all [persons and phenomena] is empty and selfless,  
the love that is giving because it bestows the gift of Dharma free of the tight fist of a bad teacher,  
the love that is ethical because it improves unethical living beings,  
the love that is fortitude because it protects both self and others,  
the love that is joyous effort because it takes responsibility for all living beings,  
the love that is meditative stability because it refrains from indulgence in tastes,  
the love that is wisdom because it causes attainment at the proper time,  
the love that is skillful means because it has manifestation suited for every occasion,  
the love that hides nothing because it is pure in motivation,  
the love that is without deviation because it acts from decisive motivation,  
the love that is high resolve because it is without afflictions,  
the love that is without deceit because it is not artificial,

the love that is happiness because it introduces living beings to the happiness of the Buddha.

“Such, Mañjuśrī, is the great love of a bodhisattva.”

Mañjuśrī: “What is the great compassion of a bodhisattva?”

Vimalakīrti: “It is the giving of all accumulated roots of virtue to all living beings.”

Mañjuśrī: “What is the great joy of the bodhisattva?”

Vimalakīrti: “It is to be joyful and without regret in giving.”

Mañjuśrī: “What is the equanimity of the bodhisattva?”

Vimalakīrti: “It is what benefits both self and others.”

### *The Four Immeasurables in the Vajrayāna*

The four immeasurables are found in many tantric sādhanas (meditation texts) as well. One example is in the sādhana of the meditational deity Cakrasaṃvara:

May all sentient beings come to hold the special sublime bliss.

May all sentient beings be freed from duḥkha and its causes.

May all sentient beings never be separated from the bliss of liberation.

May all sentient beings be free from afflictions and their associated defilements.

The first line is love, but here the happiness we wish for all beings is the special sublime bliss that arises in tantric practice and is used to realize emptiness. Tantra specializes in the development of blissful wisdom, so it is natural here to wish that all sentient beings will be able to generate this special bliss that leads to the penetrating wisdom that eradicates all defilements and brings full awakening. The tantric meaning of empathic joy is similar to the meaning in the general Mahāyāna — that is, it is not simply

rejoicing at others' worldly well-being, but wishing them to have the bliss of liberation, which here means full awakening. For that to come about, their being free from afflictions is essential — thus equanimity is wanting them to be free from afflictions and their associated defilements through the generation of bodhicitta and the realization of emptiness.

In the Yamāntaka sādhana, the four immeasurables are expressed like so:

May all sentient beings be endowed with bliss.

May all sentient beings be parted from duḥkha.

May all sentient beings never be parted from bliss.

May all sentient beings be placed in a state of equanimity unperturbed by preconceptions of apprehender and apprehended or by the eight worldly concerns.

Here, too, love wishes that all sentient beings have the great bliss that leads to realizations in tantric practice. How does the experience of great bliss do this? Through melting the subtle drops of the subtle body, great bliss is produced, and this is used to make manifest the fundamental innate mind of clear light. When this mind realizes emptiness, even subtle defilements can be eradicated quickly.

Equanimity here includes two wishes. The first, that sentient beings be unperturbed by preconceptions of apprehender and apprehended, is the wish that they realize emptiness directly. When the absence of inherent existence is known nonconceptually, there is no appearance whatsoever of an apprehending mind and an apprehended object. That is, emptiness is perceived nondually, without any feeling at all of “I am perceiving emptiness.” It is said the subject (the mind realizing emptiness) and the object (the emptiness of inherent existence that is apprehended) are experienced inseparably, like water poured into water. Since Yamāntaka is the wrathful form of Mañjuśrī, the Buddha of Wisdom, immeasurable equanimity wants all sentient beings to attain that liberating wisdom.

The second wish associated with equanimity is that all sentient beings be free from the eight worldly concerns — attachment or aversion regarding material gain and loss, fame and disrepute, praise and blame, pleasure and

pain.<sup>17</sup> While these eight worldly concerns and methods to subdue them are taught early in the stages of the path, they are difficult to counteract while our body and mind are in the desire realm. While meditative absorption suppresses them, it cannot eradicate them completely from the mind. Only the wisdom directly realizing emptiness can do this. Thus, wishing that sentient beings be free from delight regarding money and possessions, praise and approval, reputation and image, and pleasant sense objects, and free from dejection when confronting poverty, blame and disapproval, notoriety and a bad reputation, and unpleasant sense experiences, is wishing that they have this supreme wisdom.

### *An Intimate Feeling with All Beings*

The four immeasurables are important for all of us, be we spiritual practitioners or not. A mind imbued with these four thoughts is tranquil and spreads peace to those around us. For this reason, many Theravāda masters encourage their disciples to meditate on the four immeasurables at the beginning of meditation sessions on mindfulness or insight, and Mahāyāna masters encourage their disciples to contemplate them early in every meditation session.

The use of the mother-child analogy in cultivating love and bodhicitta is found in both the Pāli and Sanskrit traditions. While imperfect, this analogy is the best one found in our world because this connection between parent and child is precious — it is the closest example we have to illustrate unconditional love and gratitude. The Pāli tradition recommends seeing sentient beings as our children and cultivating unconditional love for them, wanting to protect them from harm and misery as a parent does his or her child. The Sanskrit tradition encourages contemplating sentient beings as our mother and feeling gratitude and the wish to repay their kindness through attaining buddhahood.

Personally speaking, I (Chodron) find contemplating others' kindness very helpful to do before meditating on the four immeasurables. Doing this changes how I feel about others and myself and opens my heart, because I realize a fact that I am often blind to — that I have been, am, and will continue to be the recipient of incredible kindness from others. Dear ones,

neutral people, hostile people, friends, strangers, and enemies — all have been kind to me not only because they have been my parents in previous lives but because I receive the benefits of the labors and various jobs they undertake in this life as well. With this awareness, turning my mind to being concerned about their well-being and wishing them to have happiness and be free from suffering comes much easier, almost automatically.

## 2 | The Altruistic Intention of Bodhicitta

### *The Fundamental Vehicle and Mahāyāna*

IN THIS VOLUME, bodhicitta — the altruistic intention to become a buddha in order to benefit others most effectively — will be front and center. Bodhisattvas are those who have cultivated spontaneous bodhicitta that arises with respect to every sentient being. Because of being motivated by bodhicitta, bodhisattvas fulfill the two collections of merit and wisdom and attain the resultant full awakening of a buddha with the four buddha bodies. Bodhisattvas follow the Bodhisattva Vehicle, also called the Mahāyāna or Universal Vehicle.

Śrāvakas and solitary realizers, on the other hand, are motivated by the aspiration for liberation. Although they realize the same emptiness as the bodhisattvas do, they do not gather the same amount of merit; the awakenings they attain from practicing their vehicles are the awakenings of śrāvakas and solitary realizers. They attain liberation and become arhats.

There is some difference between the way arhatship is described in the Pāli and Sanskrit traditions. Although both agree that Śākyamuni Buddha was an arhat, the Sanskrit tradition distinguishes arhatship and buddhahood. Arhatship is the abandonment of all afflictive obscurations, whereas buddhahood involves the abandonment of both afflictive obscurations and cognitive obscurations.

The choice of vehicle depends on the disposition of the individual. The practitioners of all three vehicles are to be respected for their spiritual attainments. We must admit, however, that some Mahāyāna sūtras may appear to denigrate those who seek arhatship rather than buddhahood. This was done to encourage practitioners inclined toward the Bodhisattva Vehicle to see the value of bodhicitta and put energy into generating it.

Unfortunately this has been misunderstood and has become the source of sectarianism. This and other misconceptions that Buddhist traditions have about one another have been passed down historically. Remedying them was one reason why we wrote *Buddhism: One Teacher, Many Traditions*, which explains the doctrines of the Pāli and Sanskrit traditions. Here we see that both traditions contain teachings on the Śrāvaka, Solitary Realizer, and Bodhisattva Vehicles, and that many teachings practiced by bodhisattvas are built on the foundation of the practices of śrāvakas and solitary realizers. For example, we can easily see that the teachings on bodhicitta are founded on the teachings of the four immeasurables, which are contained in both traditions. That is, the teachings on immeasurable love, compassion, empathic joy, and equanimity are available to all Buddhist practitioners. The teachings on bodhicitta are not separate from those on the four immeasurables; they simply take these four wonderful thoughts a step further.

In extolling the magnificent qualities of bodhicitta and bodhisattvas, there is the danger that ordinary people who aspire to enter the Mahāyāna may look down on the Fundamental Vehicle. That is wrong. The greatness of any approach must be explained contextually. In the Mahāyāna, the primary motivation that inspires practitioners is seeking the awakening of all sentient beings. From this point of view, striving for our own personal awakening is limited. However, from the viewpoint of people drowning in saṃsāra, the Fundamental Vehicle that leads to nirvāṇa is magnificent.

By examining the practice and the results of these two vehicles, we see one is more expansive, while the other is more modest. Those following the Fundamental Vehicle seek their own liberation and practice the three higher trainings as the method to attain arhatship. Those following the Mahāyāna must do all the practices taught in the Fundamental Vehicle, including generating renunciation of saṃsāra and practicing the three higher trainings. However, they renounce not only their own saṃsāra but also that of all sentient beings, and for this reason they aspire for full awakening. Practitioners of the Fundamental Vehicle and the Mahāyāna share the ethical conduct of restraining from the ten paths of nonvirtue and abiding in the prātimokṣa ethical code. Mahāyāna practitioners additionally train in the ethical conduct of restraining from actions motivated by self-interest alone

and practice the ethical conducts of accumulating virtue and benefiting sentient beings.

Fundamental Vehicle practitioners aspire to attain nirvāṇa without remainder, in which they abide in the personal peace of nirvāṇa. Mahāyāna practitioners seek to attain the enjoyment body of a buddha because through it they will be able to fulfill the purpose of others: leading all sentient beings out of saṃsāra and to full awakening.

These differences do not mean that the Fundamental Vehicle teachings or its practitioners should be denigrated. The sixth root bodhisattva precept is to not abandon the holy Dharma by saying that texts that teach the three vehicles are not the Buddha's word. Mahāyāna practitioners must not denigrate the scriptures of the Fundamental Vehicle by saying they are faulty and therefore were not spoken by the Buddha. The thirteenth root bodhisattva precept is to abandon causing others to forsake their prātimokṣa precepts and embrace the Mahāyāna. Mahāyāna practitioners must not disparage maintaining prātimokṣa precepts in an attempt to bring Fundamental Vehicle practitioners into the Mahāyāna fold. The fourteenth root bodhisattva precept is to abandon causing others to hold the view that the Fundamental Vehicle does not abandon attachment and other afflictions. Such a view is untrue and could adversely affect Fundamental Vehicle practitioners by making them lose faith in the Śrāvaka and Solitary Realizer Vehicles, which do lead to liberation.

Nevertheless, the Fundamental Vehicle and the Mahāyāna bring different results. Nāgārjuna says in *Commentary on Bodhicitta (Bodhicittavivarāṇa, 83–85)*:

Because of their detachment,  
did not the śrāvakas attain less awakening?  
By never abandoning sentient beings  
the fully awakened buddhas attained [full] awakening.

Thus when one considers the occurrence of  
the fruits of beneficial and nonbeneficial deeds,  
how can anyone remain even for an instant

attached [only] to one's own welfare?

Rooted firmly because of compassion,  
and arising from the shoot of bodhicitta,  
[full] awakening that is the sole fruit of altruism —  
this is what the bodhisattvas cultivate.

Based on the firm foundation of the practices of the Fundamental Vehicle, bodhisattvas go beyond the aspiration for their own liberation; seeing that others are trapped in cyclic existence, they seek full awakening.

## REFLECTION

---

1. The Buddha taught three vehicles to correspond to the different dispositions and interests of sentient beings. Practitioners follow the vehicle that corresponds to their disposition and way of thinking.
2. The more we learn about the three vehicles, the more we see what a skillful teacher the Buddha was.
3. The teachings in each vehicle originate from the Buddha and thus are worthy of our respect, appreciation, and honor. Likewise, all practitioners are to be respected.

---

### *The Ultimate Purpose of Dharma Practice*

From a Mahāyāna perspective, the ultimate purpose for practicing the Dharma is to attain buddhahood, a state that is completely free of all defilements and is fully endowed with all positive qualities. Buddhas have attained their own ultimate peace as well as made themselves fully able to benefit all others. They have accomplished their own purpose in that they have attained a buddha's omniscient mind, the truth body, in which they know all phenomena that exist as clearly as we can see an apple in our hand. They have accomplished the purpose of others in that they have

attained a buddha's form bodies — the enjoyment body and the emanation body — with which they can work to benefit sentient beings and lead them to awakening.

All other Dharma practices are either preliminaries to bodhicitta or subsequent practices through which bodhisattvas express their bodhicitta and fulfill their altruistic intention. Preliminaries include the meditations in common with the initial- and middle-capacity practitioners, as well as all the meditations done to generate bodhicitta, such as the seven cause-and-effect instructions and equalizing and exchanging self and others. Subsequent practices include the six perfections and the four ways of assembling disciples (*saṃgrahavastu*, *saṅgahavatthu*). Vajrayāna's specialty lies in enhancing the perfections of meditative stability and wisdom, and possessing bodhicitta is one of the chief criteria to enter the Vajrayāna. Due to the importance of bodhicitta, the Kadampa masters of eleventh- and twelfth-century Tibet advised us to apply whatever abilities we have to only one purpose — the cultivation of bodhicitta if we have not yet generated it, and to sustain and enhance it once we have.

The principle cause of the wonderful state of buddhahood is bodhicitta. Without it, buddhahood is impossible. Why? Because bodhicitta is the mind aspiring to attain full awakening in order to benefit all sentient beings most effectively, and without this intention, someone will not engage in the practices to attain full awakening. To become a buddha we must first generate bodhicitta and then engage in the actual practice of an advanced practitioner: the six perfections — generosity, ethical conduct, fortitude, joyous effort, meditative stability, and wisdom.

Deep and continuous meditation on the defects of cyclic existence imprints on our mindstream the understanding that the happiness found in saṃsāra is transient and unsatisfactory in nature. Pursuing saṃsāra's limited happiness is not worthwhile when we can attain liberation from saṃsāra, which offers actual peace and joy. When this is clear in our mind, we have no reluctance in relinquishing saṃsāra and attaining liberation. This is compassion for ourselves.

But the question still remains: What about everyone else? We are surrounded by sentient beings, all of whom are like us in wanting happiness and not wanting suffering. In addition, any happiness we have had, are

having, and will experience in cyclic existence is dependent on them. Would we feel right to seek only our own liberation? Āryasūra questions us (LC 2:14):

When people see that joy and unhappiness are like a dream  
and that beings degenerate due to the faults of ignorance,  
why would they strive for their own welfare,  
forsaking delight in the excellent deeds of altruism?

When we can enact so much good in this and other worlds, why not aspire for full buddhahood, a state of body and mind in which exists full wisdom, compassion, and skillful means for benefiting all beings? To do this we must first generate bodhicitta. The *Array of Stalks Sūtra* (*Gaṇḍavyūha Sūtra*) says (LC 2:17):

O child of good lineage (bodhisattva), bodhicitta is like the  
seed of all buddha qualities.

Each and every awakened quality depends on bodhicitta. Regarding this precious mind, Śāntideva reflects (BCA 1.8, 1.26):

Those who long to overcome the abundant miseries of mundane  
existence,  
those who wish to dispel the adversities of sentient beings,  
and those who yearn to experience a myriad of joys  
should never forsake the altruistic intention [of bodhicitta].

How can one measure the merit of the jewel of the mind,  
which is the seed of the world's joy  
and is the remedy  
for the world's suffering?

*What Is Bodhicitta?*

The word “bodhicitta” has two syllables, *bodhi* and *citta*. *Bodhi* means awakened or enlightened, and *citta* means mind. What type of mind? There are two types of mind: primary consciousnesses and mental factors. Primary consciousnesses know the general nature of an object, be it an object of sight, sound, smell, taste, or touch, or a mental object. Auxiliary mental factors know the specifics of the object. As a primary consciousness, bodhicitta focuses on the general nature of its object, which in this case is bodhi. “Bodhi” implies both purification and realization. To show this, Tibetan translators translated “bodhi” or “awakening” as *byang chub* (pronounced *jang chup*) in Tibetan. *Byang* indicates purification; we can understand that through purification of all mental obscurations it’s possible for the mind to directly know all phenomena. *Chub* indicates enhancing our good qualities so we can attain that state. In this way *byang chub* connotes that the awakening that comes about by completing the purification process is omniscience — buddhahood with the four buddha bodies.

Similarly, Tibetan translators rendered the word “buddha” as *sangs rgyas* (pronounced *sang gyey*). *Sangs* means to eliminate, and refers to the eradicating of all faults and obscurations, and *rgyas* means to expand, in the sense of knowing all phenomena and actualizing all excellent qualities. Someone who has done this is *sangs rgyas*, or buddha.

Looking at the words *byang chub* and *sangs rgyas*, we see that they have similar meanings: both *byang* and *sangs* portray the purification of all obscurations, while both *chub* and *rgyas* indicate the expansion of good qualities and the development of all realizations, especially the direct realization of emptiness. This realization of emptiness is common to āryas of all three vehicles — the Śrāvaka, Solitary Realizer, and Bodhisattva Vehicles, each of which has its own awakening. Due to how śrāvakas, solitary realizers, and bodhisattvas practice before attaining their respective awakenings, there are differences in these three types of awakening. In the present case, “bodhi” refers to Mahāyāna bodhi or great awakening, so *byang* indicates the purification of both afflictive obscurations and cognitive obscurations, and *chub* is a buddha’s realization of ultimate reality in which meditative equipoise and post-meditative realization cannot be differentiated. A buddha’s awakening has the ability to simultaneously remain in the union of meditative equipoise and post-meditative realization

until the end of space; unlike sentient beings, buddhas are omniscient and can directly perceive all veiled truths and ultimate truths simultaneously.

Bodhicitta is a primary mental consciousness.<sup>18</sup> As such, it is accompanied by (is concomitant with) various mental factors, a principal one being the aspiration to attain full awakening. How does this aspiration arise? Contemplation of the kindness of sentient beings and their duḥkha in saṃsāra causes great compassion, which is a mental factor wishing sentient beings to be free from suffering. The observed object of compassion is sentient beings. Strong meditation on great compassion causes the aspiration to benefit sentient beings. This aspiration leads us to examine how best to benefit sentient beings, and we conclude that it is through attaining the qualities of a buddha. Thus the aspiration for full awakening is born. This aspiration accompanies the primary mind of bodhicitta. The observed object of bodhicitta is bodhi — our own full awakening. Bodhicitta is directed toward full awakening because we want to work for the welfare of all sentient beings by attaining full awakening. Wisdom is the force that will purify our mind and transform it into the fully awakened mind of a buddha. The observed object of this wisdom is emptiness.

To have the aspiration for full awakening, we have to understand what we are aspiring toward, and to do this we first need to be convinced of the possibility of attaining true cessations, nirvāṇa. This returns us to the topic of the mind's nature being pure and the afflictions being adventitious, which was discussed in an earlier volume.<sup>19</sup> This, in turn, leads us to investigate the ultimate nature of the mind, through which we come to understand and then have an inferential realization of emptiness. Sharp-faculty practitioners generate bodhicitta on the basis of an inferential realization of emptiness that confirms the possibility of attaining full awakening. Their bodhicitta is especially firm and cannot degenerate because it is based on reasoning. Modest-faculty practitioners, inspired by their teachers, past practitioners, and the scriptures, assume that awakening is possible. With this vague understanding of awakening, they generate bodhicitta. Because their bodhicitta is based on faith, it is not firm and is vulnerable to degeneration.

In the *Ornament of Clear Realizations* Maitreya describes twenty-two types of bodhicitta that will be explained in a later chapter. Practitioners on the initial level of the path of accumulation have earth-like bodhicitta,

which may degenerate so that the practitioner loses his bodhicitta and relapses to the state of a non-bodhisattva. However, gold-like bodhicitta, attained on the middle level of the path of accumulation, is stable and cannot degenerate. Bodhicitta divorced from the wisdom realizing emptiness cannot develop beyond the initial level of the path of accumulation; thus it is important to further our understanding of emptiness while we also create the causes to generate bodhicitta.

This wisdom mind that focuses on bodhi is completely developed at buddhahood. To arrive at the state of mental enrichment indicated by *chub*, we must understand the observed object of bodhicitta — full awakening. The potential to attain full awakening is not something that must be newly generated; it is an innate quality of our mind present from beginningless time. The Buddha said (AN 1.51):

This mind, O monastics, is luminous, but it is defiled by adventitious defilements.

And Maitreya said in the *Sublime Continuum* (RGV 1.50):

The pollutants are adventitious; the good qualities exist innately.

Dharmakīrti makes a similar statement (PV 2.208ab):

The nature of the mind is clear light;  
the defilements are adventitious.

Both of these masters emphasize two reasons why pollutants can be eliminated from the mind. First, there exist strong counterforces capable of destroying the pollutants. Second, the nature of the mind is clear light — that is, the pollutants do not abide in the nature of the mind. The ability to cognize and understand objects is the innate nature of mind. When the obscurations are overcome and this ability is perfected and focused on worthwhile objects, the mind is purified and all obscurations removed. At that time, our mind will become the omniscient mind of a buddha.

If the ability to realize something is in the nature of the mind, why doesn't our present mind realize all existents? Because it is polluted by obscurations. While *chub* indicates enriching the mind with realizations, to arrive at the state of perfect enrichment or realization, total purification is necessary. That is, purification must happen for enrichment to come about. Thus *byang* comes first, followed by *chub* in the word *byang chub* — the Tibetan word for awakening — because without purification there is no possibility of knowing all objects.

However, saying that the ability to cognize and understand that an object — even an object such as the emptiness of inherent existence — is an innate quality of the mind does not mean that we can sit back and relax and awakening will come to us without effort. Bringing to fruition the two aspirations associated with bodhicitta involves effort and diligence because serenity and insight must be cultivated and unified in order to nonconceptually realize ultimate bodhicitta — the wisdom directly realizing emptiness. Only that wisdom has the capacity to remove all obscurations from the mind in such a way that they can never reappear.

## REFLECTION

---

Contemplate the meaning of bodhicitta in order to orient and motivate yourself to cultivate it.

1. Bodhicitta is a primary mental consciousness with two aspirations.
2. The causal aspiration is rooted in great compassion and seeks to benefit all sentient beings by freeing them from saṃsāra and leading them to full awakening.
3. The second aspiration is to attain one's own full awakening in order to be able to benefit all beings in these ways.
4. It is possible to attain full awakening because all mental defilements can be eradicated from the mindstream.

5. All defilements can be eradicated because strong counterforces that can eliminate the defilements exist and the nature of the mind is clear light.
- 

### *The Causes of Bodhicitta*

Like all other conditioned phenomena, bodhicitta does not arise without causes, nor does it arise from discordant causes — that is, factors that do not have the ability to produce it. Some causes of bodhicitta are internal, others are external. The internal causes lie in our own mind. We have the mental factors of love and compassion within us now. Love is the virtuous mental factor of nonhatred. It overcomes and prevents anger and hatred and is the basis for increasing patience and fortitude. Compassion is the virtuous mental factor of nonharmfulness that lacks any intention to cause harm and wishes all sentient beings to be free of duḥkha. The inability to bear the duḥkha of others is the basis of the desire to benefit sentient beings and to not disrespect them by harming them. Compassion is said to be the essence of the Buddha's teachings.

Although the mental factors of love and compassion already exist in our mindstreams, they must be nourished and expanded through habituating ourselves with these emotions. Releasing hindrances by purifying destructive karma and making our mind receptive by accumulating merit are also necessary causes of bodhicitta. In addition, we must listen to teachings and study texts that describe the method to generate bodhicitta and the conduct of bodhisattvas and then contemplate and meditate on what we learn. Remembering the qualities of the Buddha inspires us to generate bodhicitta, as do understanding the advantages of bodhicitta and wishing that the Mahāyāna teachings last forever.

External causes of bodhicitta include being guided by a Mahāyāna spiritual mentor, who compassionately teaches us the method to develop bodhicitta, and living near others who aspire for and practice bodhicitta. In addition, our generating bodhicitta depends on sentient beings. Kind sentient beings provide the requisites for living so we are free to practice bodhicitta; they also give us the opportunities for practice by being the objects of our generosity, ethical conduct, and fortitude. Their suffering and

their kindness are the prime motivating forces leading us to generate bodhicitta. If we admire bodhicitta and seek the benefits of generating it but dislike sentient beings, then we've failed to understand that without caring for sentient beings it's impossible to generate bodhicitta.

Practice and training are necessary to learn any skill, be it car mechanics or compassion. As with gaining any ability, first coarse hindrances must be eliminated and then subtle ones. Therefore, at the start of your practice, removing or reducing obsession with the happiness of only this life is a must, as that is the coarsest hindrance to Dharma practice. With an attitude concerned for only our own happiness in this life, we try to procure what we think will bring us happiness and destroy what seems to bring us misery, without caring about the effects of our actions on others. Blinded by ignorance, we engage in a plentitude of destructive actions to gain or protect name and fame, material possession and wealth, approval and praise, and sense pleasures. Doing this puts us in conflict with people and creates greater problems. Thus the eight worldly concerns and the destructive actions of body, speech, and mind that result from them are the first and principle factors to subdue at the beginning of the path.

Subduing our attachment and anger regarding the eight worldly concerns does not come about from simply telling ourselves that attachment and animosity are hindrances. Rather, we must reflect deeply on their disadvantages so that we gather the inner strength to oppose them. By examining our own life, we see how worldly concerns and obsession with the happiness of only this life make us unhappy now and create the causes for unhappiness in future lives. We observe how they prevent us from practicing and realizing the path. Our efforts in virtue can be reinvigorated also by contemplating the advantages of a precious human life so that we will be energized to abandon harmful actions and engage in constructive ones in order to receive another precious human life in the future. This is the practice in common with the initial-level practitioner.

Having done this, we then reflect that although a precious human life with many excellent conditions is advantageous, our very existence is still under the control of afflictions and polluted karma, and thus we have no lasting freedom or security. This will motivate us to renounce the *duḥkha* of cyclic existence and its causes and generate a strong aspiration for

liberation. In this way, our enchantment with the pleasures of future lives comes to an end. This is the practice in common with the middle-level practitioner. Both the initial and the middle levels constitute preparatory practices for the generation of bodhicitta. On this basis, we now turn our mind to the cultivation of bodhicitta, that most noble of all aspirations.

The cultivation of bodhicitta depends on many causes. Among these, one is to learn about the qualities of buddhas and bodhisattvas from a reliable spiritual mentor or from scriptures. By admiring the magnificent abilities of these beings, faith arises in our mind and we aspire to attain these qualities. This aspiring faith is essential for overcoming the complacency thinking that attaining nirvāṇa alone is sufficient to fulfill our own spiritual purpose.

How do we gain conviction that full awakening is necessary to fulfill our own purposes so that we turn away from seeking only our own liberation? By knowing that (1) śrāvakas have not abandoned all defilements or actualized all realizations, (2) śrāvakas are liberated from cyclic existence but not from the drawbacks of the personal peace that is an arhat's nirvāṇa, and (3) a buddha's truth body is the fulfillment of our own purpose because it's the complete abandonment of all obscurations and the full realization of all excellent qualities. A buddha's form bodies fulfill the purpose or aim of others by manifesting in diverse forms in order to teach and guide sentient beings to awareness. By knowing and admiring the qualities of the buddhas, we aspire to attain them in order to accomplish our own *and* others' purposes.<sup>20</sup> Fulfilling others' purpose is not sufficient, nor is fulfilling only our own purpose. Buddhahood enables us to do both. This is important to prevent us from backsliding and seeking personal liberation alone.

Another cause of bodhicitta is understanding that the existence of the bodhisattvas' teachings is not stable in our degenerate world; they will disappear. Finding this unbearable and wanting these precious teachings to remain a long time so that sentient beings' suffering can be eliminated, we aspire to gain a buddha's pristine wisdom.

Yet another cause is seeing that it is difficult enough in this age to generate a śrāvaka's aspiration for liberation; generating bodhicitta is even more difficult. Knowing the rarity of this opportunity and knowing the

preservation of the bodhisattvas' teachings for future generations depends on people actualizing them now, we aspire to attain buddhahood.

While compassion and bodhicitta are cultivated separately from the wisdom realizing emptiness, the realization of emptiness in the mindstream of someone who already admires and appreciates bodhicitta and who aspires to generate it will help their compassion grow. Deep realization of emptiness by those inclined toward the Mahāyāna gives rise to understanding that ignorance is the fundamental cause of their own duḥkha. These practitioners will more thoroughly understand the relationship between ignorance, afflictions, and their karmic actions. Furthermore, the realization of emptiness will undermine their ignorant view of the world, giving them stronger conviction in the possibility of attaining liberation. When they extend this understanding to other sentient beings, it leads to feeling strong compassion for others, which, in turn, gives rise to bodhicitta.

## REFLECTION

---

Contemplate the conditions of bodhicitta to enable yourself to cultivate it.

1. Bodhicitta is a conditioned phenomenon that arises as a result of causes and conditions.
2. External causes of bodhicitta include being guided by a Mahāyāna spiritual mentor, who compassionately teaches us the method to develop bodhicitta, and living near others who aspire for and practice bodhicitta. It also depends on sentient beings, the object of our great compassion.
3. Internal causes include the seeds of love and compassion we have right now, recognizing the defects of saṃsāra, knowing the qualities of the buddhas and bodhisattvas and wanting to attain them, recognizing the disadvantages of the self-centered attitude, and being endowed with great compassion.

4. Knowing the rarity of our present situation with its excellent conditions to practice the Dharma and wanting the precious teachings to remain in our world are also causes to generate bodhicitta.
- 

### *The Benefits of Bodhicitta*

Bodhicitta, the essence of the path of the advanced practitioner, brings inconceivable and inexpressible benefits to self and others in this and future lives. Having even a general awareness of these benefits will stimulate us to enthusiastically cultivate bodhicitta. In this life, personal happiness and peace come from practicing bodhicitta. Why? When we sincerely wish to benefit others, we forgo judgmental and critical attitudes toward them. Without these negative thoughts churning around in our mind, we automatically feel better. When our mind is filled with kind thoughts, our physical health improves, as do our relationships with family and friends. If we practice bodhicitta during illness or injury, our mind will be calm, and we will be able to take our physical situation and its treatment in stride. Having the altruistic intention at the time of death brings peace to our minds; we die with no regrets because our life was worthwhile.

Generally, when an ordinary person encounters difficulties she becomes frustrated, angry, and resentful. At that time she may believe that anger is her friend, supporting her and enabling her to have the courage to face the problem. Gaining inner strength through the force of anger is not simply foolish, it is dangerous. We do not think clearly or express ourselves well when we are angry, and actions done in a rage generally worsen the problem.

Some analogies illustrate the benefits of bodhicitta:

- It is like supreme nectar that prevents death and replaces our unclean body with the form body of a buddha.
- It resembles an inexhaustible treasure because it nourishes and sustains us spiritually.
- It is a supreme medicine because it cures the illness of the afflictions.

- It resembles a resting tree in that it gives us protection of the exhaustion of saṃsāra.
- It is like a boat that keeps us safe while we're still in the ocean of saṃsāra with its dangerous sea monsters of afflictions and karma.
- Bodhicitta is like soothing moonlight that calms our entire body and mind.
- It is like water from a pond that cools the fire of afflictions.
- Bodhicitta resembles bright sunlight in that it sheds light on dark corners and broadens our perspective so we can see possibilities we couldn't see before.
- It resembles perennial flowers that continue to bring the beautiful blossoms of virtue.

Compassion and bodhicitta bring genuine self-confidence and self-esteem. The courage and conviction that come from them have a strong foundation in reason. These qualities enable us to face problems and suffering without being overwhelmed by confusion, depression, or low self-esteem. We will be able to deal with what life brings with determination and confidence. Why? Because with bodhicitta we are aware that suffering arises from causes and conditions such as afflictions and karma, and we know that these causes and conditions can be overcome. In this way, bodhicitta brings optimism and hope.

Bodhicitta is the best way to deal with an enemy. If we get angry, the enemy has been successful in harming us, but if we maintain a peaceful mind, the enemy has failed to bring us trouble. Of course, sometimes we still have to run away to protect ourselves from harm — for example, if a mad dog is nearby — but in many cases, when we practice compassion and altruism, someone who was previously an enemy will become our friend. This is evident in international relations. The Allies helped to rebuild Germany and Japan after World War II, and now those countries are friendly.

People ask what enables me to remain optimistic, considering all that has happened in my homeland, Tibet, and to me personally due to the tragedy there. Bodhicitta gives me a sense of hope, for I see the basic good

in human beings and know that their mistaken actions occur not because they are evil people but because their afflictions overwhelm them. For that reason, I do not harbor grudges or wish for revenge and thus can work with optimism to help improve the situation.

We may think that when we practice compassion, the primary beneficiaries are other sentient beings. But in fact we benefit even more than others do from our practice of compassion. When I practice compassion, I receive 100 percent benefit — my mind is upbeat — but the extent to which others benefit from my compassion is uncertain. Some people may even become suspicious when I act with compassion! Love and compassion make our mind joyful; bodhisattvas on the first ground are called the Very Joyful because their happiness is much greater than that of an arhat, even though they haven't abandoned all afflictions as arhats have done. The great joy of these bodhisattvas derives from their mind that cherishes others and enables them to manage problems and difficulties with ease. After hearing bad news, they swiftly regain their sense of well-being and optimism. Compassion is like nectar that immediately calms their mind. Someone who has peace of mind and inner calm as a result of practicing compassion and understanding emptiness is not easily dispirited.

Bodhicitta motivates us to act in ways that bring peace in the larger society. I often tell people half-jokingly that if they are going to be selfish, they should be wisely selfish. And the best way to do that is to help others because when the people around us are happy, we naturally are too! However, when our self-centered behavior damages others, we live surrounded by miserable people who make their pain known to us.

With bodhicitta, we care for the environment because we care about other species as well as the future generations of human beings who will inherit this planet. These benefits of a kind heart and bodhicitta are obvious. There is no controversy about them, and no special logic is needed to understand them.

Meditating on bodhicitta enriches our practices of the initial and middle levels of the path. At the initial level, the goal is to pacify our coarse destructive actions and prepare for a good rebirth. A mind wishing to benefit others abstains from harming them and thus stops engaging in destructive actions that destroy their happiness. Bodhicitta also inspires us

to purify previously accumulated destructive karma and to act in beneficial ways. As a result of this, a fortunate rebirth will naturally follow.

As a middle-level practitioner, the aim of our practice is to abolish the afflictions that cause cyclic existence. Many of these afflictions are disturbing emotions, such as resentment, jealousy, or belligerence toward living beings. When we generate bodhicitta, we see others as loveable and dear, so afflictions directed toward them are dramatically curtailed.

Those who exclusively practice the initial and middle levels of the path aspire for liberation from cyclic existence but not for the full awakening of buddhahood. Following the Fundamental Vehicle, they meditate to gain the direct realization of emptiness that will cut the continuity of their afflictions forever. Although they realize the same emptiness that bodhisattvas do, their wisdom eliminates only the afflictive obscurations preventing liberation. It does not become the antidote to the cognitive obscurations preventing omniscience. Those practicing the advanced level of the path develop bodhicitta, which gives their wisdom extra force, enabling it to cut through the subtle obscurations and attain buddhahood. Dza Patrul Rinpoche cautions:

Even if you have the generation and completion stages [of Tantra]  
and single-pointed concentration,  
if they are not linked to authentic bodhicitta,  
they're just the seeds of rebirth in the deceptive appearances of  
saṃsāra  
and are no help in attaining the state of omniscience.<sup>21</sup>

Without bodhicitta and the direct realization of emptiness, the merit created by reciting tantric sādhanas and mantras and by doing vase breathing and so forth becomes the cause of rebirth in saṃsāra, not of a buddha's omniscient mind.

Bodhicitta is a vast mind because it wants to benefit all beings and seeks to attain the highest awakening in order to do so. All actions motivated by bodhicitta accumulate merit corresponding to the vastness of this intention. This enables a practitioner to accumulate quickly the great collection of merit needed to attain full awakening. Bodhicitta also enables the wisdom

realizing emptiness to become powerful enough to remove from the mindstream subtle latencies and the dualistic appearances they create. For this reason, it leads to buddhahood. Without this altruistic intention, attaining the ultimate bliss and magnificent qualities of buddhahood is not possible. In sum, everything positive and admirable in cyclic existence and nirvāṇa can be accomplished with bodhicitta. As Nāgārjuna says (BV 105–7):

This bodhicitta is stated  
to be the highest [ideal] in the great vehicle,  
so with an absorbed [determined] effort  
generate this altruistic intention.

To accomplish the welfare of yourself and others  
no other methods exist in the world;  
apart from the bodhicitta,  
to date the buddhas saw no other means.

The merit that is obtained  
from mere generation of bodhicitta,  
if it were to assume form  
it would fill more than the expanse of space.

Not understanding the value of bodhicitta, some people say that generating it is too difficult and put it aside. Giving in to ignorant arrogance, others say bodhicitta is a preliminary practice that is not so important and they're engaged in more profound tantric practices. Such thoughts impede our spiritual growth. Someone who has cultivated bodhicitta will attain awakening whereas someone meditating on any profound tantric practice without this altruistic intention will not attain awakening.

## REFLECTION

---

Contemplate the benefits of bodhicitta to energize yourself to cultivate it.

1. It increases our self-confidence, inner strength, and optimism by giving us a long-term inspiring goal to work toward.
2. Bodhicitta motivates us to act in ways that bring peace in society at large.
3. It enriches our practices of the initial and middle levels of the path.
4. The merit created by even simple actions done with bodhicitta is limitless because we're working for the benefit of limitless sentient beings.
5. Buddhas and bodhisattvas are role models that inspire us to transform our actions of body, speech, and mind into virtue. In this way, we become the kind of person we would like to be.
6. Spiritual realizations will come quicker due to the power of working for the benefit of all beings.

---

### *Bodhisattvas as Inspiring Role Models*

The examples of bodhisattvas' lives and their marvelous activities inspire us to want to become like them. Personally speaking, thinking about the bodhisattvas encourages me to practice more than does thinking about the buddhas. If I thought just of the buddhas' qualities without being attentive to the qualities of bodhisattvas on the training paths, I could become disheartened, thinking that the buddhas are too high and I can never catch up to them. For example, when I view Tsongkhapa as an emanation of Mañjuśrī, I think he had all those marvelous qualities because he was the emanation of a buddha. But when I regard him as an ordinary person who sincerely took on serious spiritual practice and gained high realizations in his lifetime, I am encouraged. Since both of us began as ordinary beings, if I practice just as he did, I will become like him.

It is similar to being in a race. If someone is a kilometer in front of us, we feel we can never catch up and quit trying. But if someone is only a few steps in front of us, we do not lose courage. We try harder because we know that if we make effort, we can draw near to them. This could be called a positive kind of competition that results from comparing ourselves to others in a way that is not completely egocentric. I encourage you to read about the great deeds of bodhisattvas and the biographies of past great practitioners. Let your mind feel joyous and inspired knowing that people like this exist in the world and that you can become like them by developing bodhicitta.

In the Pāli tradition and also in the *Ornament of Clear Realizations* by Maitreya, six recollections are taught: recollections of the Buddha, Dharma, Saṅgha, generosity, ethical conduct, and deities. The recollection on deities can refer to mundane gods (*devas*) or to transcendental divine beings who are ārya bodhisattvas. In the Fundamental Vehicle, recollection of the deities focuses on being mindful of the qualities that caused beings to be born in these celestial states, thus inspiring us to emulate them in our practice of generosity, ethical conduct, and meditation. In the Mahāyāna, recollection of the deities is done so that they will serve as witness to our proper cultivation of the path. Recollection of the compassionate qualities of the bodhisattvas also gladdens and inspires our mind. This deepens our refuge in the bodhisattva saṅgha and inspires us to practice bodhicitta in order to work for the benefit of all beings, as they do.

The Perfection of Wisdom sūtras and the Mahāyāna sūtras in general contain stories of many bodhisattvas. Eight of these — Mañjuśrī, Avalokiteśvara, Vajrapāṇi, Kṣitigarbha, Ākāśagarbha, Sarvanivāraṇa-*viṣkambhin*, Samantabhadra, and Maitreya — are especially close spiritual heirs of Śākyamuni Buddha. Of these bodhisattvas, Avalokiteśvara is seen as the manifestation of compassion, and so meditating on and making supplications to Avalokiteśvara is extremely helpful when practicing compassion and bodhicitta.<sup>22</sup>

If we doubt our ability to generate bodhicitta and become bodhisattvas, it is helpful to reflect on Dharmakīrti's teachings in chapter 2 of *Commentary on the "Compendium of Reliable Cognition"* (*Pramāṇavārttika*). Using reasoning, he first establishes the existence of

past and future lives to demonstrate that since it takes time to familiarize ourselves with great compassion for all sentient beings, we can cultivate it gradually over many lifetimes. He continues by comparing physical and mental development. The physical abilities of an athlete have limitations due to the limitations of the body. In addition, to improve, an athlete, such as a high jumper, must cover the area they previously jumped plus some. Mental development is different; the mental factors of love and compassion already exist in our minds. The mind is a stable basis for the cultivation of these emotions, and the love and compassion we generate today can build on what we generated yesterday, so that these qualities continually increase.

Two factors are necessary to train the mind in developing compassion: consistency and intensity. Consistency involves training our mind in compassion every day through having a stable meditation practice, and intensity involves doing our practice with sincerity and concentration without letting the mind be distracted. Together they enable us to familiarize ourselves with great compassion repeatedly so that it becomes a natural part of our mind and arises easily. Overcoming adverse conditions, such as anger, resentment, and jealousy, is also an important element. It is possible to do this because these mental factors that are contrary to love and compassion are based on ignorance and have antidotes.

If we doubt that we can develop great compassion at all, Dharmakīrti reminds us that we have all been one another's parents and children in previous lives. Parents and children have natural bonds of affection, love, and compassion for one another. Since we have the imprints from such close relationships with all others in previous lives, it is possible to cultivate great compassion for everyone now. Although effort is needed at the beginning of our practice, by increased familiarization with love and compassion, they will arise more easily in our lives.

### *Two Types of Mahāyāna Disciples*

Some Mahāyāna disciples have sharp faculties, whereas others have more modest faculties. Here "faculties" refers in particular to wisdom, but more broadly to the five faculties of faith, effort, mindfulness, concentration, and wisdom. The disciples with sharp faculties first seek the correct view of

emptiness. Through using reasoning, they understand that ignorance apprehends phenomena to exist inherently, whereas phenomena exist dependently. Seeing that the wisdom that realizes emptiness can eradicate this ignorance that is the root of saṃsāra and can thus cease saṃsāra completely, they are convinced that attaining awakening is possible through gaining insight into emptiness. They then develop compassion and generate bodhicitta. In this way, sharp-faculty disciples aspire for full awakening, enter the bodhisattva path, overcome the self-grasping ignorance, practice the six perfections, and attain awakening.

The disciples of modest faculties admire bodhicitta due to the strong faith they have in the teachers who speak about bodhicitta, and their aspiration to attain awakening derives from their faith in the Three Jewels. They cultivate heartfelt compassion for others' duḥkha and build up altruism on that basis. These disciples have not yet gained the wisdom to deeply appreciate selflessness and its essential role in attaining awakening. They generate uncontrived bodhicitta, enter the bodhisattva path, and then make effort to gain an inferential understanding of emptiness.

Bodhisattvas with sharp faculties are not content to believe that liberation and full awakening are possible because their spiritual mentors stated that or because it is written in sūtras. They want to know, What is the root of all afflictions? Can afflictions be removed? What is the realization that can eradicate them? What is the object perceived by the wisdom that eradicates afflictions? With strong compassion and altruism, these disciples examine whether sentient beings' duḥkha can be totally eliminated and whether a path to liberation exists. This leads them to understand emptiness at least on an intellectual level, because the wisdom realizing emptiness is what will destroy the afflictions and directly bring about awakening. Based on understanding emptiness, these disciples generate the conviction that a way to eradicate the origins of duḥkha exists, liberation is possible, and there is a path leading to it.

In short, modest-faculty bodhisattvas first cultivate compassion and bodhicitta and then turn their mind to understand emptiness; sharp-faculty bodhisattvas first emphasize the cultivation of wisdom and then, on the basis of understanding that liberation is possible, generate great compassion and bodhicitta.

In the Autocommentary to the *Ornament of the Middle Way* (*Madhyamakālaṃkāra-vṛtti*) Śāntarakṣita explains the sequence of meditation for the two types of Mahāyāna disciples:<sup>23</sup>

First searching to know reality,  
they ascertain well the ultimate [truth]  
and then generate compassion  
for the world obscured by bad views.

Emboldened to undertake migrants' welfare  
and skilled in the vast mind of awakening,  
they practice the Subduer's discipline (the bodhisattva deeds)  
adorned with wisdom and compassion.

Followers of pure faith (modest-faculty disciples) generate  
the mind of perfect awakening (bodhicitta),  
and then assume the discipline of the Subduer,  
and strive for knowledge of reality.

Cultivating compassion and wisdom in tandem is very beneficial. As one's understanding of emptiness increases, so will one's compassion for sentient beings who are under the influence of ignorance. Furthermore, generating wisdom is difficult when the mind is tormented by coarse afflictions. Decreasing the intensity and frequency of the coarse afflictions through practicing compassion makes meditation easier and opens the mind to be more receptive to realize emptiness.

The compassion that is not complemented by the wisdom realizing emptiness differs from the compassion that is. While the former compassion may be so powerful that bodhisattvas continuously think of others and work for their welfare, those bodhisattvas do not yet know how to accomplish their own or others' liberation. In contrast, compassion complemented by the wisdom realizing emptiness knows that self-grasping ignorance binds sentient beings to cyclic existence and that the wisdom directly realizing emptiness can free them. Bodhisattvas who generate bodhicitta with wisdom have great enthusiasm and courage because they know a path to

liberation exists. This is the way of generating bodhicitta taught by Śāntideva (eighth century) — equalizing and exchanging self and others.

To explain the path for sharp-faculty bodhisattvas in more detail: Having gained a general idea of the path to awakening, these disciples focus on gaining ultimate bodhicitta — the wisdom realizing emptiness — by cultivating the wisdom of suchness in terms of dependent arising.<sup>24</sup> That is, they meditate on dependent arising as the reason that proves all persons and phenomena lack inherent existence. When they have developed a conceptual understanding of the ultimate truth, they recognize that the root of our duḥkha is the ignorance that misapprehends the ultimate truth. This ignorance is the first link of the twelve links of dependent origination,<sup>25</sup> and sharp-faculty bodhisattvas know that it is erroneous.

Through this, these sharp-faculty bodhisattvas come to understand buddha nature — the clear light nature of the mind — and know that the pollutants that defile the mind are adventitious and can be separated from the mind, as the quotations from the Buddha, Maitreya, and Dharmakīrti earlier in this chapter state. In this way, they generate a deep, stable, genuine aspiration to seek liberation from suffering. This is truly well-grounded renunciation.

Having such genuine renunciation, these sharp-faculty bodhisattvas then direct their thoughts to other sentient beings and know that just as their own suffering is not endless, it is possible for other sentient beings' duḥkha to come to an end. They know that other sentient beings also have the buddha nature. This certainty stimulates such strong compassion to arise that whenever they perceive any sentient being whatsoever, their instinctive response is, “How terrible it is that they suffer! Their suffering can and must be ended!” This is a genuine wish that others be free from duḥkha and is called “compassion in the form of a wish.” Such compassion can also arise in śrāvakas, but when this compassion is cultivated further, it culminates in a profound level of compassion called “compassion that wants to liberate sentient beings.” Here the element of wanting to act to bring about others' freedom from suffering is much stronger, and these bodhisattvas are committed to help eliminate sentient beings' duḥkha. This is the great compassion that culminates in the altruistic resolve and bodhicitta.

From the perspective of this sequence of mental development, Nāgārjuna says that with regard to bodhisattvas with sharp faculties, insight into suchness in terms of dependent arising will lead to the arising of compassion (BV 73):

In a yogi in whom the realization  
of emptiness has arisen,  
there is no doubt that  
compassion for all beings will arise.

Before these sharp-faculty disciples investigate the ultimate nature of phenomena, they already have a strong tendency toward compassion, bodhicitta, and the Mahāyāna. When they cultivate an understanding of emptiness, this aids them in generating bodhicitta. However, it is not the case that the realization of emptiness alone will enable them to generate great compassion and bodhicitta. In that case, arhats would have realized these. Rather, practitioners must also learn, contemplate, and meditate on the methods for generating great compassion and bodhicitta.

### 3 | How to Cultivate Bodhicitta: The Seven Cause-and-Effect Instructions

**T**RAINING THE MIND in bodhicitta can be done by two methods. The first is the seven cause-and-effect instructions and the second is equalizing and exchanging self and others. Tsongkhapa received the lineages of both methods to generate bodhicitta and combined them.

In both of these methods, the principal cause of bodhicitta is great compassion, and seeing others as pleasing and lovable is the key to cultivating compassion. Without seeing sentient beings in a positive light, wishing them to be free from suffering is difficult. Thus the strength of our compassion depends on the degree to which we see others as lovable and feel close to them as well as the depth of our understanding of their suffering. If either one of these is missing or weak, our compassion will be either flat or fake.

The seven cause-and-effect instructions sets forth three steps to see sentient beings as pleasing and lovable: recognizing that all sentient beings have been our parents (especially our mother) in previous lives, contemplating the kindness of our parents, and wishing to repay their kindness. Since all sentient beings have been our parents and have been kind to us at that time, a natural feeling of wanting to reciprocate that kindness arises in our hearts. These three steps produce in us feelings of affection and heart-warming love for all beings, which leads to having love and compassion for them.

Equalizing and exchanging self and others depends more on reasoning to generate compassion for others. Here, we see that all beings — not only friends and relatives but also strangers and enemies — have been kind because we have been, are, and will continue to be dependent on the

kindness of others to stay alive. In addition, each and every sentient being wants happiness and freedom from suffering as intensely as we do; there is no difference among us on that account. In fact, differentiating ourselves from others is only a matter of perspective. We say “I” in reference to our body and mind, but others say “I” in reference to their bodies and minds. Furthermore, limitless benefits come from cherishing others, while self-centeredness leads only to misery. Seeing this, a wise person generates love and compassion for all beings.

### *The Seven Cause-and-Effect Instructions*

The seven cause-and-effect instructions is a popular method for generating bodhicitta practiced in the Sanskrit tradition. Its origins are traced to Maitreya’s *Ornament of Clear Realizations* — especially the chapter on mind generation (bodhicitta) — and the teaching of his disciple Asaṅga. Candragomin, Śāntarakṣita, and Kamalaśīla generated bodhicitta through this method, which was also popular among the early Kadampa masters. Kamalaśīla writes about this method of developing bodhicitta in his middle *Stages of Meditation (Bhāvanākrama)*, and Candrakīrti speaks of it in his commentary on Āryadeva’s *Four Hundred*.

To practice the seven cause-and-effect instructions we begin by understanding the order of the stages, how compassion is the root of the Mahāyāna, and that six of the instructions are either the causes or the effects of compassion. We then begin training the mind to be intent on others’ well-being, which is followed by developing the attitude that is intent on others’ welfare.

The seven points that are meditated on in sequence are (1) seeing all sentient beings as having been our mother, (2) recalling their kindness to us when they were our parent or caregiver, (3) wanting to repay that kindness, (4) love, (5) compassion, (6) the great resolve, and (7) bodhicitta.

Of these seven, compassion is the root of the Mahāyāna. At the beginning of our practice compassion motivates us to cultivate bodhicitta and to engage in the bodhisattva deeds. In the middle, compassion enables us to look beyond our own happiness and suffering and to take others’ joy and misery to heart. In this way, it keeps us involved and encourages us to

continue accumulating the collection of merit and the collection of wisdom, two essential requisites to attain supreme awakening. At the completion of the path, compassion enables bodhisattvas to attain nonabiding nirvāṇa in which they dwell neither in the extreme of saṃsāra nor the extreme of personal liberation. Compassion motivates buddhas to manifest in innumerable forms until saṃsāra ends in order to guide sentient beings to full awakening.

The seven points center around compassion, with the first four being the causes of compassion, and the last two being the effects of compassion. For this reason, some masters consider the cause-and-effect instructions to refer to the causes and effects of compassion. Other masters say that the first six points are the causes for the seventh point, bodhicitta.

To cultivate compassion two elements are needed: we need to be aware of the three types of duḥkha of sentient beings and to see them as endearing so that the compassion — the wish that they be free from duḥkha — arises easily in our mind. The awareness of their duḥkha comes from first contemplating our own duḥkha in saṃsāra and cultivating the wish to be free from it and then seeing that all other sentient beings are in the same position. To see sentient beings as endearing we must first free ourselves from attachment to friends and dear ones and animosity for enemies — enemies here being anyone who disturbs our well-being. We do this in the equanimity meditation, which is a forerunner to the seven points.

To cultivate affection and a sense of endearment toward others, we contemplate that they have all been our parents in previous lives and will be our parents in the future as well. As our parents — especially as our mother who carried us in her womb and in general was the chief caregiver when we were little — they were extremely kind to us. In response to their kindness, we develop a wish to repay their kindness. In this way, the first three points result in heart-warming love that cares for sentient beings as a mother cares for her only child. Heartwarming love is the fourth point and is the cause of the compassion that is the fifth point.

There is another kind of love too — the love that wishes others to have happiness and its causes. This love does not have a cause and effect relationship with compassion. Whether we then develop love and compassion depends on whether we first consider sentient beings as bereft

of happiness and want them to have happiness and its causes (love), or whether we consider sentient beings' duḥkha and want them to be free of it and its causes (compassion). The first four points are the cause for both of these.

The great resolve and bodhicitta are the effects of compassion. Fundamental Vehicle practitioners may have developed immeasurable love and compassion, but they do not have the resolve to act on these and bring about others' happiness and the alleviation of their duḥkha. With great resolve, Mahāyāna practitioners make a commitment and assume the responsibility to do so.

Once we have made this commitment, we must consider how to fulfill it. In our ordinary condition, we are incapable of doing this. As an arhat, we will be able to lead some sentient beings to liberation but not to the omniscient state of a buddha. Because only a fully awakened buddha has the compassion, wisdom, and capacity to do this most effectively, we generate bodhicitta, resolving to attain buddhahood.

### *Training the Mind to Be Intent on Others' Well-Being*

To train our mind to be intent on others' well-being, as noted above, we must develop a sense of impartiality that is free of attachment and animosity toward others and then cultivate a sense of affection and endearment toward them. The first is done by cultivating equanimity, the second by meditation on the first four of the seven points.

Genuine compassion for all sentient beings is based on having evened out any tendency toward bias that we may have, bias meaning seeing some beings as close and worthwhile and seeing others with animosity as distant. As long as our mind has strong attachment or animosity toward others, our compassion will extend only to those to whom we are attracted and attached. Such compassion isn't stable; if those people later harm us, our compassion for them vanishes.

### *Equanimity*

In general, the Sanskrit tradition speaks of three types of equanimity:

(1) The *feeling of equanimity* is a feeling toward all phenomena that is free from pleasure or pain and is part of the feeling aggregate. It is also the feeling that is dominant in the fourth dhyāna.

(2) The *virtuous mental factor of equanimity* prevents restlessness and laxity when cultivating serenity and does not let the mind be affected by them. It does not unnecessarily apply antidotes when the mind is concentrated and the faults impeding serenity are not present. This mental factor is developed during the nine sustained attentions leading to serenity.

(3) *Immeasurable equanimity* is one of the four immeasurables. It is an evenness of mind that enables us to be impartial without being indifferent toward sentient beings. It has two types: one wishes all sentient beings to be free from bias, attachment, and antipathy toward others; the second is cultivating equanimity ourselves so that we are free from attachment and animosity. The second type of immeasurable equanimity is the precursor to love, compassion, and bodhicitta. It ensures that we spread these good qualities to all beings.

In cultivating equanimity, we do not seek to abandon the notions of friend and enemy but to abandon the biased emotions of attachment and antipathy that we feel toward them. In his second *Stages of Meditation*, Kamalaśīla suggests two ways to do this.

The first is to contemplate that from the perspective of others, each and every living being is equal in wanting happiness and freedom from suffering. Therefore it isn't reasonable for us to favor some with a mind of attachment and to dismiss others with an attitude of animosity. Being even-minded toward all is more suitable.

Think about this deeply. This contemplation is good to do when you are in a public place such as a store or a traffic jam. Look around and reflect that each person there is just trying to be happy and avoid suffering. That thought motivates every one of their actions. For us to hold either attachment or antipathy toward these beings who have the same fundamental human wish is not at all appropriate.

The second way to generate equanimity is to reflect that from our own perspective, in our beginningless previous lives, we have been in every kind of relationship possible with every sentient being. None of these relationships are fixed, and a slight change of circumstance can turn

attachment to antipathy and vice versa. For example, someone gives us a gift today; we consider her a friend and become partial toward her. But if tomorrow she criticizes us, our fondness evaporates and we are angry. Meanwhile, another person talks about us behind our back today, triggering our animosity, but tomorrow he praises us and we think he's great. We see similar changes in the shifting alliances of international politics. The *Tantra Requested by Subāhu (Subāhupariṣcchātantra)* advises (LC 1:282):

Within a short space of time an enemy can become a friend,  
and a friend can become an enemy.

Likewise, either one may become indifferent,  
while those who were indifferent may become enemies or intimate  
friends.

Knowing this, the wise never form attachments.

They give up the thought of delighting in friends  
and are content to focus on virtue.

When we take the vacillations of rebirth into consideration, the instability of relationships becomes even more pronounced. These roles change from one life to the next, depending on the vagaries of karma. During our beginningless lives in cyclic existence, we have been friends, enemies, and strangers to one another countless times. Considering the changeable nature of our relationships, feeling close and attached to friends and relatives and distant and angry toward enemies is not suitable. A sense of equanimity and impartiality toward all is more realistic.

## REFLECTION

---

1. Because it is easier to generate equanimity toward people for whom we have neutral feelings, begin by focusing on strangers. Release any attachment or aversion you may have toward them.
2. Focus on a friend or relative and recall that, given the instability of relationships, it is unsuitable to be attached to him. Release the

attachment and cultivate equanimity.

3. Consider someone for whom you have hostile feelings and similarly see that she has not always been and will not continually be your enemy. People change and relationships change. It doesn't make any sense to develop a rigid image of someone and think that is the whole of that person's life when it is merely fabricated conceptualization on your part.
4. Maintain mindfulness on the understanding that no one is a friend, enemy, or stranger forever. If you meet them in a different situation or if their behavior changes, your feeling close to or distant from them will change too. Therefore feeling attachment or animosity toward them doesn't make sense. Be aware of the calm that equanimity brings to your mind and the way in which it makes your behavior more thoughtful and considerate.

---

Although equanimity ceases bias and partiality in our mind, we do not necessarily treat or trust everyone equally. Conventional roles and relationships still exist. We don't treat colleagues whom we don't know well like family members whom we do. We don't confide in the cashier at the grocery store; we discuss private matters with people who are interested and who will understand. We give people the trust they deserve in different areas. For example, we may love a child, but we don't trust him with matches, whereas we trust an adult who is a stranger to fly the plane we're on because that person is a trained pilot. We trust our dog to warn us of danger, but we don't expect our aged grandparents with health problems to do this.

It requires skill to reflect on what areas to trust what people in, and if we slow down and do this wisely, many difficulties are prevented. However, despite interacting with living beings in different ways, we respect them equally and care about their well-being equally. From our side, the attachment and antipathy that foster prejudice, emotional swings, and rash actions are gone. We trust old friends more than we do strangers, even though we want both equally to be happy and free from suffering. We deal

with difficulties that arise through the words and actions of those who are hostile toward us but without anger or resentment. Although I want all beings to be happy, in my position as the Dalai Lama I must still point out that Tibetans suffer under the policies of the Communist Chinese government and advocate for their rights.

Here is another way to meditate on equanimity that includes strangers and freeing ourselves from feeling apathy toward them. This method includes the mind-training teaching in which we practice seeing that individuals can vacillate from one category to another depending on whatever distorted judgments and emotions we may have at that moment. The categories of friends, enemies, and strangers are fabricated by our mind, and when we practice mind training, we come to see all sentient beings as teachers.

## REFLECTION

---

1. Imagine three people in front of you: a dear one to whom you are very attached and from whom you don't want to be separated; an enemy toward whom you feel anger, resentment, and fear; and a stranger toward whom you are apathetic. Think of specific individuals.
2. Focus on the dear one and ask yourself, "Why am I so attached to this person?" There are no right or wrong answers, and the answer isn't an intellectual one. Just listen to what your mind replies.
3. Now focus on the enemy and inquire, "Why do I have so much anger, resentment, or even belligerence toward this person? Again, without judging your thoughts, observe the reasons you give for holding animosity toward this enemy.
4. Focus on the stranger and ask yourself, "Why do I feel apathetic and indifferent toward this person?" Once more, listen to what your mind replies.

5. In observing your responses to the above three points, what word did you hear repeatedly?

---

That word was “I,” wasn’t it? We classify people as friends worthy of attachment, enemies deserving of our anger, and strangers whom we usually ignore based on how they relate to *Me*. We believe our opinions about people are true — that people are inherently good, bad, or indifferent — but when we stop and question why we think that, we see that it depends on how they relate to *Me*. If someone is kind to us, they are a friend, but if someone is kind to our enemy, we are upset. Their trait of kindness is the same, but who they show the kindness toward makes the difference between whether I like them or hate them. If someone ruins my reputation, they are evil, but if they ruin the reputation of a person I don’t like, then they are good and I applaud their action. Our views of people are very subjective, very biased; they invariably depend on how they treat *Me*, as if we were the most important person alive.

When we’re able to see this clearly, we relax our opinionatedness and self-righteousness. We release the rigid categories of friend, enemy, and stranger, together with our fixed beliefs and emotions toward them. This brings space in our mind for another perspective, one that cares equally about the welfare of all beings.

Reflecting on the faults of attachment, animosity, and apathy helps us to release those unrealistic and unbeneficial emotions and cultivate a state of equanimity that is open and receptive toward all beings. Although anger is difficult to release, understanding its harm opens our mind to forgiveness. Releasing resentment and grudges, no matter how “right” our anger may seem, is essential not only to cultivate equanimity but also to be happy in this life. An angry, bitter person who cannot forgive events that happened years ago is miserable.

Śāntideva wrote a marvelous chapter on fortitude, the antidote to anger, in his book *Engaging in the Bodhisattvas’ Deeds*. Some of his methods for working with our anger will be discussed in the next volume, where the six perfections are explained. If we understand fortitude as Śāntideva explained it, our mind and heart will be deeply affected. Of course it takes time and

effort to transform habitual negative reactions and to release judgments about people, but the more we generate equanimity, the more peaceful we will be.

Meditation on equanimity complements sociological, psychological, and neuropsychological research on prejudicial attitudes people bear toward others. Most people have spontaneous compassion for a hungry, impoverished child in another part of the world, but if that child lived down the street from us, how would we feel? If that child were of a different race or nationality, would our empathy be the same? What if a group of those hungry children roamed our neighborhood searching for food, emptying the garage bins and scattering the rubbish around? Researchers have found that context plays an important role in how we feel about others.

We are easily influenced by the attitudes of those around us and of those in authority. Stanley Milgram's famous research in 1963 showed that average people would administer what they believed to be strong electric shocks to others when a person they saw as an authority figure ordered them to do so. Similarly, in 1971 the Stanford University professor Philip Zimbardo wanted to observe the effects of perceived power and studied the interactions of college students who volunteered to be "prisoners" and "guards" in a simulated prison. Both of these research projects were halted before completion because of the violence inflicted by normal people when given power. In our meditation, we should examine how power and authority affect our prejudices, empathy, and equanimity.

Emile Bruneau, a cognitive neuroscientist at MIT, has found that the strength of our identity with a group affects our empathy and thus our equanimity. The more we identify with a particular group — be it racial, ethnic, religious, political, and so on — the less we can empathize with the situation and feelings of those from another group, even if our group is not in conflict with that group.<sup>26</sup>

When we have strong prejudice against a particular group of people, it is difficult to accept new information about that group. Should we befriend a person from that group, we view them as not a real member of that group, whereas when we met someone who fits our stereotype, we use that to justify and strengthen our prejudice. Similarly, when we are biased toward a particular group, if a person from that group abrogates social norms, we see

them as an exception — perhaps someone who has mental problems — instead of allowing that our favored group also contains individuals with antisocial behavior.

In short, to develop true equanimity entails deep exploration of our own prejudices and fears. Without identifying and addressing these aspects of ourselves, our equanimity will be superficial and unstable.

### ***Seeing All Sentient Beings as Having Been Your Mother***

Having leveled the field by dampening attachment and animosity toward others, we now turn to cultivating a sense of affection and endearment toward sentient beings. This is done by means of the first four points, beginning with seeing all sentient beings as having been our mother, remembering their kindness, wishing to repay it, and generating heartwarming love. When our heart is opened by heartwarming love, compassion for them will easily arise.

In ancient India at the time of the Buddha and in many present-day cultures too, people assume the existence of past and future lives; it was not necessary to prove it to them. However, in Western cultures, this idea is foreign and people do not automatically assume there are past and future lives. If accepting the idea of multiple lives is difficult for you, try provisionally accepting it and see if considering that all beings could have been your mother helps you to cultivate a feeling of closeness with them. You may also want to review explanations of rebirth in previous volumes. See chapter 2 of *Approaching the Buddhist Path* and chapter 7 of *The Foundation of Buddhist Practice*. There are also reliable accounts of people who remember their previous lives.<sup>27</sup>

If you accept the idea of past and future lives, then it seems reasonable that in your beginningless previous lives each and every sentient being has been your mother at one time or another. Contemplating that all sentient beings have been our parents helps us to overcome feelings of alienation and isolation. We see that in previous times we and others have been very close, and that others have cared for us with the unconditional love parents have toward their infants. This feeling of closeness helps us to trust others more readily and to give them the benefit of the doubt instead of instantly believing habitual suspicious thoughts that may arise.

The Indian sage Dharmakīrti uses reasoning to prove the existence of rebirth in *Commentary on the “Compendium of Reliable Cognition” (Pramāṇavārttika)*. There are also many sūtra passages that affirm past and future lives (LC 2:38):

I have difficulty seeing a place wherein you have not been born, gone to, or died in the distant past. I have difficulty seeing any person in the distant past who has not been your father, mother, uncle, aunt, sister, master, abbot, guru, or someone like a guru.

In short, in infinite previous lifetimes we have been born in all realms in saṃsāra, done everything (except practice the Dharma leading to direct realization of emptiness), and been in intimate relationships with all sentient beings. No one is a stranger; no one has not helped us in the past. The *Mother Sutta* in the Pāli canon says (SN 15.14):

This saṃsāra is without discoverable beginning . . . It is not easy to find a being who in this long course has not previously been your mother . . . your father . . . your brother . . . your sister . . . your son . . . your daughter. For what reason? Because, monastics, this saṃsāra is without discoverable beginning.

Reflect on this repeatedly. Remember that we haven’t always been who we are now, and neither have others. Even in this life, as infants we are very different from the adults we became and the senior citizens we will become. Similarly others are not the same from one rebirth to the next and our relationships with them can vary a lot. When we have a sense of multiple lives, then recalling the kindness of others during them is surely reasonable.

### ***Recalling the Kindness of Sentient Beings When They Were Your Mothers***

To cultivate a feeling of closeness and endearment toward sentient beings, we choose someone who has been very kind to us as an example and then

generalize that to all other sentient beings. Generally speaking, most human beings and animals regard their mother as someone extremely dear and close. Of course, exceptions exist, so if you have a closer feeling toward your father, grandparent, sibling, another relative, or a friend, focus on seeing the kindness of that person. Every one of us has had caregivers when we were infants, toddlers, and children. The proof is that we are alive today. We lacked the ability to do simple tasks to care for ourselves and needed the care of others. Although I refer to the mother, please apply it to whomever took care of you when you were little.

Our mother carried us in her womb for over nine months and gave birth to us. She then took care of us or, if she was unable to do so, she made sure that someone else did. She fed us, changed our diapers, protected us from danger, comforted us when we cried, covered us when we were cold. She held us gently, looking upon us with love. We may not remember this nurturing from infancy, but we can get an idea by observing how mothers around us care for their young children. We can see this loving devotion in the animal world too. At a monastery where I (Chodron) lived in Nepal, there was an old, crippled dog named Sasha, who dragged herself around on her front paws because her back legs had been injured. Even though it was so difficult for her to take care of herself, after she gave birth to a litter of puppies, she nursed and protected her pups with amazing love. Watching her painfully drag herself here and there to find food so she could nurse her pups would bring tears to my eyes.

Similarly, when we were toddlers, our parents and caregivers protected us from harm, rescuing us when we were about to tumble down a flight of stairs or stick a paper clip into an electric outlet. They taught us to speak, to tie our shoelaces, and to walk. In their efforts to teach us the disadvantages of self-centeredness and to make us more considerate of others so that we could get along with people, they taught us manners and disciplined us when we misbehaved. They also had to endure our childish bad behavior, teenage rebelliousness, and the way in which we took them for granted. So many abilities that we take for granted as adults we learned from our parents when we were young. Without their kindness to us then, where would we be now?

My mother was my first teacher of compassion. There was no school in our village and she was illiterate, but she was naturally kind and I experienced her compassion from the day I was born. My father had a temper, so I avoided him when possible. One time I yanked his moustache and was hit hard in return, but my mother was kind to everyone. She gave birth to sixteen children; seven survived. When I was a young boy, I had no toys to play with, but instead rode on her shoulders, hanging on to her long, braided hair as she went about her work in the fields or with our animals. We, her children, never saw an angry expression on her face. She was kind to us, kind to our neighbors, and when victims of famine came to the door, she always found something for them to eat. It's because of her that I am the happy, smiling person I am today. The way she lived showed me the value of kindness and compassion. All of her children, children-in-law, and grandchildren loved her in return. Tibetans called her Gyalmo Chenmo, the Great Mother.

In general, there are some differences between how people who grow up in traditional Asian cultures and in contemporary Western cultures view their families and parents. Over the last hundred years or so in Western society some people have begun to speak publicly about the ill treatment they experienced from their parents when they were children. As mentioned above, if emotions resulting from childhood abuse make contemplating the kindness of your parents difficult, contemplate the kindness of whomever cared for you as an infant and young child, and in this way, develop awareness of others having cared for you with kindness. Later, after the turbulent emotions from childhood abuse have lessened or been resolved completely, turn your mind to consider the kindness of your parents.

Your parents did the best they could given their emotional, social, and financial situation. As a result of karma, they experienced physical and mental problems, but they still cared for you in the best way they knew how and to the best of their abilities given the constraints they faced from their own upbringing. Developing an attitude of acceptance, appreciation, and forgiveness of others' foibles will prevent you from being encumbered by bitterness and hatred. Instead of dwelling on what was lacking in your upbringing, focusing on the care and compassion you received as a young child is psychologically and spiritually therapeutic.

Opening your heart to experience gratitude in response to whatever kindness you have received is an important element in being a healthy adult and good parent to your own children. By contemplating the kindness of your parents or other caregivers, recognize that you have been the recipient of tremendous kindness during your life. Instead of holding on to feelings of resentment, relax the mind and allow gratitude to arise — gratitude is a natural human response to kindness. There is no sense in denying yourself the opportunity to experience that wonderful emotion.

Having seen the kindness of your mother or caregiver, consider that your friends and relatives have all been your mother in previous lives and have been as kind to you as your present mother. Let yourself feel grateful and close to them. Then recognize that strangers have also been kind to you in that same way when they were your mother in previous lives, and allow the same positive emotions to arise. Continue by seeing that your present enemies were kind to you in the past when they were your parents. Finally, extend that awareness of kindness to all sentient beings, all of whom have been your mother in beginningless saṃsāra, all of whom will continue to be your kind mother in future lives until you are free from saṃsāra. Just as you feel great gratitude and love toward your present mother, open your heart and feel that toward all sentient beings.

### ***Wishing to Repay Their Kindness***

Seeing the kindness we have experienced from all sentient beings when they were our parents throughout our beginningless previous rebirths, how can we turn our backs on them and seek our own liberation? Thinking that because we don't recognize them as our parents in this life there is no connection between us and that therefore there is no reason to repay their kindness is a poor excuse. Let's say you were separated from your kind mother when you were a young child. Fifty years later you meet an elderly impoverished woman sitting on the corner begging for food. You begin to talk with her; one thing leads to another and you discover that she is your long-lost mother. An intense feeling of love for her arises. Would you just give her a dollar and leave her there, or would you do everything in your power to help her?

Recognizing all beings as having been your mother and as having been kind to you in countless previous lives, consider that most of your mothers are completely ignorant about their existence in saṃsāra. Thinking that the self-centered attitude is their friend, they follow its demands, thereby creating so many causes for suffering. They don't even know "ignorance is the root of cyclic existence" and, unaware, they don't try to overcome it. Attachment, animosity, and confusion arise easily in their minds, implanting them deeper in the wheel of life held in the hands of the lord of death. Isn't this reason enough to benefit them, especially considering the kindness they have shown you as your mother in infinite previous lives? Even people who are foolish or deceitful, or who have poor ethical conduct, have affection for people who were kind to them and want them to be safe.

For many years I (Chodron) have worked with incarcerated people — some who have inflicted horrible suffering on others — and have witnessed the deep love and affection they and their mothers have for each other. Many inmates tell me that they were extremely inconsiderate of their mother's feelings and well-being when they were young. Seeking only their own pleasure, they were blind not only to the effects of their actions on others but also to the affection and support their mother continually offered and the hardships she endured for their sake. Once imprisoned, they reflected on their lives and, much to their own surprise, realized this about their mothers. This realization led many of them to connect with their mother and appreciate her in ways they never would have imagined before. They say how much it pains them that their mother is old now and they are not able to take care of her. It is truly moving to see big burly men who put on a tough face in prison to protect themselves soften and get teary-eyed when speaking of their mother and their wish to repay her kindness.

This wish to repay the kindness of sentient beings — all of whom have been our parents countless times — is not simply the wish for them to live comfortably and enjoy the pleasures of saṃsāra. Having contemplated the disadvantages of saṃsāra, we see that such comfort is without essence. Our mothers, blinded by ignorance and wounded by karma, wander near the precipice of unfortunate rebirths, aimlessly searching for happiness in a land of deceptive illusions. As their child who has been the recipient of their tremendous kindness since beginningless time, we cannot turn our

backs on them. When we were young and immature, we may have mistreated them or left them to their own devices, but now our gratitude for them is too strong to do this. We must help them to be free from saṃsāra. In *Heart of the Middle Way (Madhyamakahr̥daya)* Bhāvaviveka says (LC 2:40):

Furthermore, like applying salt  
to the wounds of those who have been possessed  
by the madness of their afflictions,  
I created suffering for those sick with suffering.

Now, what else is there other than nirvāṇa  
to repay the help of those  
who in other lives  
helped me with love and service?

## REFLECTION

---

1. Reflect that the mind is a continuum. The clarity and awareness that constitute the mind do not cease at death and the mindstream continues to another rebirth.
2. In most rebirths we have had parents. Since there is no beginning to our previous lives, every sentient being at one time or another has been our parent.
3. Think of the kindness of your mother or of whoever took care of you when you were little. Remember how she fed and cleaned you and protected you from danger when you were an infant. She loved and encouraged you; she rejoiced in your successes, and taught you skills to deal with difficulties. She taught you to speak and how to cooperate and get along with others. She made sure you received an education and helped you to grow into a responsible adult. And much more.

4. All other sentient beings, who have been your mother in previous lives, were similarly kind and loving toward you.
  5. Seeing sentient beings as endearing, let the wish to repay their kindness arise in your heart and feel heartwarming love toward all beings.
- 

The above meditations — equanimity, recognizing all sentient beings as having been our mother, remembering the kindness of our mother or other caregiver and wishing to repay it — are the basis for developing the attitude intent on others' welfare. Through these meditations we come to cherish sentient beings and feel a sense of affection and endearment toward them. Such feelings of closeness and endearment are likened to the love a parent has for their child. This affectionate love is the fourth point, heartwarming love. It arises naturally as a result of the first three points; a separate meditation is not necessary to cultivate it.

### *Developing the Attitude That Is Intent on Others' Welfare*

There are different types of love. Heartwarming love that sees all sentient beings as endearing is the fourth point, which is the sum of the first three points — seeing that all sentient beings have been your mother, remembering their kindness, and wishing to repay it. This love is a necessary cause for the fifth point, compassion. One is not the cause or effect of the other. Love that wishes sentient beings to have happiness and its causes and compassion do not have a fixed order. Generating love or compassion depends on whether we first think of sentient beings as lacking happiness or as being overwhelmed by *duḥkha*. In the former case, we generate love; in the latter, compassion.

The next meditations — love, compassion, and the great resolve — bring about the attitude intent on others' welfare. Bodhicitta, the firm aspiration to work for others' welfare and the aspiration to attain buddhahood in order to do so, is the result of the previous six meditations.

### *Love*

The seed of love is in the mind of each of us. The seed doesn't need to be newly generated, but we do need to learn the method to enhance it; both love and compassion need to be consciously cultivated. The observed object (*ālambana*, *ārammaṇa*) of love is sentient beings who are bereft of happiness and its subjective aspect is the wish for them to have happiness and its causes.

Love wishes others to have happiness and its causes as in “How wonderful it would be if they had happiness and its causes. May they have these.” Because love is preceded by equanimity toward friends, strangers, and enemies, we seek to cultivate love toward all beings, excluding none. This kind of love is immense. Its field is vast: it extends to each and every sentient being, no matter how they treat us. Its goal is vast: it wishes them to have every happiness, from the smallest pleasure up to the happiness of having eliminated all obscurations and being able to easily work for the benefit of all sentient beings. Its time is vast: to work to benefit sentient beings for as long as space exists. We also relinquish a vast amount: we willingly give up our own enjoyments and even our own life for the benefit of sentient beings.

We use words to describe this kind of love, but actually it is difficult to understand and experience. To cultivate it from the depth of our heart, understanding its benefits is a necessary first step. By understanding the advantages of cultivating great love and the disadvantages of not doing so, our interest and enthusiasm to cultivate great love and compassion will increase, giving us the inner strength to actualize these qualities no matter what comes our way in the process of doing so.

Here and now we can experience for ourselves the benefits of an unbiased, kind, and loving heart. In my own case, I meet many different people and regard all of them as my friends. This loving attitude brings me much inner peace, regardless of how others respond to my friendliness. Nevertheless, people usually respond with a friendly and kind demeanor. Meditators who cultivate serenity and the dhyānas on love are well-loved in this life. Their presence influences the people and environment around them in a positive way, making them more peaceful. In future lives, these practitioners are reborn in the peaceful celestial realm of Brahmā if that is

their wish. Bodhisattvas' love goes beyond that and leads to bodhicitta and full awakening. Nāgārjuna speaks of eight benefits of love (RA 283–84):<sup>28</sup>

Even offering three hundred cooking pots of food three times a day does not match a portion of the merit in one instant of love.

Although [through love] you are not liberated,  
you will attain the eight good qualities of love —

- (1) gods and (2) humans will be friendly, and
- (3) even [nonhumans] will protect you.
- (4) You will have mental pleasures and
- (5) many [physical] pleasures.
- (6) Poison and weapons will not harm you,
- (7) effortlessly you will attain your aims and
- (8) be reborn in the world of Brahmā.

In short, having love and compassion for others is the source of all temporal happiness in saṃsāra and the ultimate happiness of liberation and full awakening. Having a precious human life and not cultivating love and compassion is a great loss and waste of our potential.

## REFLECTION

---

Contemplate these benefits of love and compassion one by one and make examples of them in your life.

1. You will have less anger, jealousy, arrogance, and resentment, so your mind will be more peaceful.
2. You will refrain from nonvirtuous actions, so your relationships with others will improve.
3. People and animals will feel comfortable around you, and you will be able to influence them to take a positive direction in life.

4. You will abstain from the ten nonvirtues and practice the ten virtues, creating a wealth of causes for fortunate rebirths.
5. You will die peacefully without regret or guilt and feel satisfied that you had a life well-lived.
6. You will easily develop bodhicitta, enter the Mahāyāna path, and attain full awakening.
7. From now until full awakening you will be able to benefit countless sentient beings and lead them on the path.
8. You will become an ārya bodhisattva and be able to create a pure land where you will attain full awakening and teach ārya bodhisattvas. You can also establish a pure land where ordinary sentient beings can be born and thrive in the Dharma.
9. By having single-pointed concentration on love and compassion, you will be able to travel to many pure lands and receive teachings from many buddhas. You will also attain the six super-knowledges.

Feel joyful at your opportunity to cultivate love and compassion and be enthusiastic to use this opportunity.

---

In *Tale of a Wish-Fulfilling Dream (Svapna-cintāmaṇi-parikathā)*, Nāgārjuna spoke of five reasons why it is necessary to generate love for all sentient beings. The first reason is that we and all sentient beings are equal in wanting happiness and not suffering (SCP 2):

I and all sentient beings are equal [with regard to] happiness and suffering.

Being equal [with regard to] happiness and suffering, we are family.

It is not right to completely abandon these [beings],  
yet enter nirvāṇa.

Our equality in seeking peace and avoiding pain was discussed in the meditation on equanimity above. Reflect that in the same way you have problems, so do all sentient beings. In the same way you don't want pain, neither do they. Just as you want freedom from suffering, so do others; just as you want happiness, they do too. Just as family members go through good and bad together, you and all sentient beings are like family in these ways. In addition, you and all others are equal in having the same enemy, the afflictions.

Think about others' difficulties and what it would be like to have them: to be a refugee, to be poverty stricken or terminally ill, to have a disability or chronic pain, to face the death of your child, to be oppressed or to constantly face racism or gender discrimination, and so on. Imagine being left on your own to face these problems and contemplate how strong your wish to receive help, or at least understanding and empathy, would be. Remember times when you have faced trying experiences and how relieved you were when someone stepped up to help you. Think that that's how others would feel if you reached out to them.

Just as you are joyful when you're able to accomplish your goals, so are others. Just as you feel supported when others show appreciation for your talents and contributions, so do others. Since beginningless time in saṃsāra, we've been desperately searching for lasting happiness and for meaning in our lives, but haven't been successful. We already know this, but we forget it. As we repeatedly familiarize ourselves with these points, they will arise more frequently in our mind. Then when we encounter situations that require our help, we won't hesitate to give it.

Seeing that there are no significant differences between ourselves and others in our deepest longings, and considering that we are close like family, it is not suitable to abandon others. Especially if someone has understood the four truths and knows the disadvantages of saṃsāra and the possibility of attaining nirvāṇa, it would be completely unacceptable to seek one's own liberation and abandon others. For example, someone has great wealth and lives in a mansion that overlooks a slum, yet he doesn't think at all about the suffering of his neighbors and at times even ridicules them. We would consider that person to be cold-hearted and his actions despicable.

This is similar to attaining our own nirvāṇa and leaving others — especially our kind parents — drowning in saṃsāra.

We have heard of people who have jumped onto the train tracks to protect a complete stranger who has fallen there from an oncoming train. When asked afterward why they did that, the rescuer inevitably says that it was only the right thing to do; they couldn't have done otherwise. Similarly, if we understand the horror of saṃsāra, how can we not help others escape from it?

The second reason: It is important and possible to love other sentient beings because we have gone through the same experiences in saṃsāra repeatedly. This common experience brings us close to each other. Nāgārjuna says (SCP 3):

Together with these beings I experienced  
the sufferings of the unfortunate realms and  
all sorts of happiness of the higher realms.  
Since we dwelt as one, I am fond of them.

We've had countless rebirths in saṃsāra — experiencing intense pain in unfortunate realms and incredible bliss in celestial realms. In all these rebirths we've been with other sentient beings, experiencing joy and misery together; for a long time we have dwelt as one, confronting problems and enjoying pleasures together. The feeling of familiarity opens the door to feeling fondness for them. They helped me when I needed caring companions or even strangers to reach out and give me a hand. Now that my situation is better, I have the responsibility to help them. It wouldn't be right for me to abandon them and enter nirvāṇa myself.

The third reason is that in limitless previous lives we've been one another's parents and children. Nāgārjuna observes (SCP 4):

Not just once did I reside in every womb,  
nor is there a single sentient being  
who did not reside in my womb.  
Therefore, we are all family.

This and the previous verse rely on the notion of rebirth. If you have accepted the notion of rebirth or are at least open to it, it is not difficult to think that we have all been one another's relatives in previous lives and will be family in future lives as well. If rebirth is still difficult to imagine, it's fine to set it aside for the time being and come back to it later. You may also want to review the explanation of the nature of mind and its continuum from one life to the next, as discussed above, and look into the resources mentioned in note 27.

For those who accept rebirth, think that all sentient beings have been your parents and children numerous times. Since you change bodies in each birth, you don't recognize each other, but the connection is still there. If you were to remember your previous relatives — and in the future when you develop the superknowledges, you will — the feeling of closeness and affection you had for them will arise again. Given our long and deep connections, it is only fitting that I wish all these beings to have happiness and its causes.

The self-grasping ignorance spawns the feeling of being an isolated, independent individual when in fact we are dependent on and interrelated with everyone else. If there is a person you find despicable now, remember that they haven't always been that person. They are conditioned beings, and as the external and internal conditioning changes, so do their personalities, beliefs, and actions. Remember that we are in the nature of impermanence, so you have loved people you may not be fond of now, but you will be close to and fond of them again in the future.

Someone could say: If all sentient beings have been my parents, then I've also been their parents, so shouldn't they appreciate me for my kindness? Someone may also say: If others have been kind to me in countless previous lives, they've also harmed me countless times too, so why should I try to benefit them now? Although there may be some truth to these statements, thinking like this benefits neither ourselves nor others. It only stimulates thoughts of revenge and resentment that create more turbulence and unhappiness in our mind and motivate destructive actions. On the other hand, reflecting on our close and endearing relationships with others stimulates thoughts of kindness and love and leads to harmony and virtuous actions. When we adopt a positive perspective on others, we have

many opportunities to be happy; when we hold a critical, judgmental view, unhappiness follows us wherever we go.

The fourth reason supporting the importance and possibility of loving others takes a different approach. Here we reflect on the Buddha's relations with all these living beings: The Buddha purified his mind and accumulated merit for a long time because he cherished all sentient beings, and he sought full awakening so he could benefit them most effectively. Since I have respect and devotion for the Buddha and he sees sentient beings as being so precious, I should too (SCP 5):

Further, I am fond of the Buddha.  
As he worked hard for the sake  
of these [sentient beings] for a very long time,  
that too makes me fond of sentient beings.

Parents love their children dearly, so if we help their children, the parents are delighted. In fact, they're happier than if we helped them! Because of anger and partiality, we don't see sentient beings accurately and undervalue the kindness and help we receive from them. Ārya bodhisattvas and buddhas know their past relationships with sentient beings and cherish sentient beings more than themselves. Because we admire and respect these highly realized holy beings, it makes sense for us to cherish sentient beings who are so dear to their hearts. It would seem rather strange if we said to the Buddha, "You've got it all wrong. Sentient beings are not trustworthy; they're conniving and two-faced. I don't cherish them, and neither should you!" Are we wiser than the Buddha?

The fifth reason is that just as benefiting and harming our spiritual mentors brings happiness or suffering, respectively, so does helping and harming sentient beings (SCP 6):

In this way, since benefiting and harming  
are the [respective] causes of immeasurable  
happiness and suffering,  
sentient beings are also my gurus.

We create virtuous and nonvirtuous karma in dependence on the recipients of our actions. Our spiritual mentors are powerful fields of merit for us because of their spiritual qualities and because of their kindness in leading us on the path. For that reason, we create enormous merit by offering material possessions and service to them. Similarly, if we get angry with our spiritual mentors, if we criticize, insult, or beat them, we create great nonvirtuous karma. The situation is similar with respect to ordinary sentient beings. Sentient beings have been our parents, friends, and dear companions in previous lives, and even as strangers doing their jobs in society, they have benefited us greatly. When we benefit them they are happy, and in addition we reap the result of temporal and ultimate happiness. When we harm sentient beings physically, verbally, or mentally, they are pained and we create great destructive karma that will ripen in our own misery. In this way sentient beings are like our spiritual mentors.

When we contemplate the kindness we have received from sentient beings in this life and from beginningless lives, it is clear that our ability to stay alive depends on them, and a feeling for the endearing qualities of sentient beings arises in our heart. In this way, they are precious and endearing.

Sentient beings are also precious and endearing in that our creation of virtue depends on them. Our being able to practice the six perfections and progress through the ten bodhisattva grounds to attain buddhahood depends on sentient beings (SCP 14–18):

If those sentient beings did not exist,  
with whom could one be generous?

If living beings did not exist, on what basis  
could one achieve the ethical discipline of the Vinaya?

We don't practice generosity by making offering to a chair, nor do we practice ethical conduct by abandoning harming a rock. We need impoverished beings in order to practice generosity; and we need sentient beings in order to practice the ethical conduct of abandoning harm.

For whose sake does a hero meditate

on patience with those who commit a fault?  
For the sake of whom does he diligently work  
to achieve his deeply desired object of attainment?

We can't practice fortitude with holy beings because they don't harm us. Fortitude can only be cultivated with harmful and quarrelsome sentient beings. Our practice of joyous effort likewise depends on sentient beings. To accomplish our own purpose and the purpose of others — which is to attain the truth body and form body of a buddha — we need sentient beings. Otherwise there would be no use in generating joyous effort to accomplish the path.

If living beings did not exist,  
how would one — by correctly depending on  
love, compassion, joy, and equanimity —  
attain the bliss of meditative absorption?

Among the meditation objects for cultivating the dhyānas are the four immeasurables. We can't cultivate love, compassion, empathic joy, and equanimity for empty space. Sentient beings are the necessary objects of these meditations.

Knowing the functioning and nonfunctioning bliss of liberation,  
presenting dispositions, attitudes, and tendencies,  
the thoroughly afflicted or completely pure,  
if [sentient beings] did not exist how could those be known?

“Functioning and nonfunctioning” refers to the two truths. “The thoroughly afflicted or completely pure” are factors pertaining to saṃsāra and nirvāṇa, respectively. Saṃsāra and nirvāṇa exist because of sentient beings; we cannot develop the wisdoms realizing the two truths without sentient beings.

Since all these sentient beings are  
the cause of the factors of awakening,

therefore, all who wish for complete awakening should regard sentient beings as gurus.

All of the above practices would be impossible without the existence of sentient beings. They are indeed precious and are as essential for our spiritual progress and buddhahood as our spiritual mentors are. For this reason, how can we not value, respect, and have love and compassion for sentient beings? Śāntideva exclaims (BCA 8.129):

Whatever joy there is in this world  
all comes from desiring others to be happy;  
and whatever suffering there is in this world  
all comes from desiring myself to be happy.

All these points that show the value and necessity of benefiting sentient beings are based on the reasoning of dependent arising. Sentient beings have benefited us and will continue to do so. In addition, both we and sentient beings benefit when we cherish them, extend love and compassion to them, and work for their benefit. The more we ponder these points, the clearer it becomes that benefiting sentient beings is the wellspring of all joy — now and in the future — and harming them is the source of all misery. As your heart and mind evolve on this point, you'll find yourself being less angry and upset and more content and peaceful. The pain and problems brought on by the critical, judgmental, self-centered mind fade away.

## REFLECTION

---

1. Think of all the practices the Buddha did and the hardships he endured to become a fully awakened one. He did all this because he cherished sentient beings even more than himself. Feel respect, gratitude, and devotion for the Buddha.
2. Reflecting that the Buddha's magnificent qualities — the superknowledges, the fulfillment of the ten perfections, the ten powers<sup>29</sup> and four fearlessnesses<sup>30</sup> of a buddha, and so on — are all

dependent on his cherishing sentient beings, open your heart to cherish those whom the Buddha cherishes.

3. Contemplate that sentient beings, just like your spiritual mentors, are precious because it is in dependence on them that you create virtue.
4. Seeing them as precious and endearing, generate love, wishing them to have happiness and its causes, and compassion, wishing them to be free from suffering and its causes.

---

To generate love, contemplate that sentient beings want only happiness and its causes but lack these. Focusing first on friends, then strangers, and finally on enemies, wish them to have happiness and its causes and imagine them happy as well as happily creating the causes for well-being. Meditating earnestly in this way will heal many of your own unresolved disturbing emotions left over from previous experiences.

From a Buddhist perspective, several types of happiness exist, and it is good to wish that sentient beings have all of them. The first is the happiness derived from having the basic requisites for life — food, shelter, clothing, and medicine — as well as other factors that bring happiness in this life — good health, harmonious relations with relatives and friends, safety, money, possessions, social standing (even animals seek that!), and worldly success. This is what most people think of as happiness, even though it is unstable, transient, and difficult to control. While having good external conditions brings a certain type of happiness, it does not guarantee well-being. Worldly pleasures bring an assortment of difficulties — the fear of losing what we have, the anxiety of not getting what we desire, and jealousy of those who have more and better.

Another type of happiness is emotional peace — acceptance of who we are, the lessening of anger, releasing grudges. The causes of this type of happiness are internal reflection and the deliberate cultivation of wholesome mental states. Psychotherapy can help with this, as can nonviolent communication,<sup>31</sup> secular mindfulness practices, and other skills.

In general, working hard is the social ethic and norm across cultures, and society identifies one's chosen work as the cause of happiness and well-being. Some people recognize that a society's social, economic, and political systems can either bring about or interfere with the type of happiness that is dependent on work. But looking deeper, we see that the cause of temporal happiness depends on merit — virtuous actions (good karma) created through generosity and benefiting others, ethical conduct, and fortitude.

Still greater than the happiness of emotional well-being is the joy, bliss, and equanimity derived from states of meditative absorption. This peace is experienced by those who have suppressed manifest afflictions by attaining the deep states of concentration of the four dhyānas and the four formless absorptions. While this bliss is more stable than the happiness that depends on external circumstances, such as the people and environments we live in, it does not last forever. The causes of well-being derived from meditative states involve practicing the steps to gain serenity — eliminating the five hindrances, overcoming the five faults by the eight antidotes, traversing the nine stages of sustained attention, accomplishing the seven mental contemplations, and so forth.<sup>32</sup>

An even higher level of happiness is the fulfillment of our ultimate spiritual aims — nirvāṇa and full awakening. This necessitates subduing and then completely overcoming afflictions such as craving, ignorance, animosity, jealousy, and arrogance. Imagine the kind of peace, fulfillment, and bliss we and others would feel if our minds were free of these! The bliss and joy experienced in these states does not decline or disappear. In nirvāṇa, the mind is totally free from the vagaries of afflictions and polluted karma and dwells peacefully in the realization of emptiness. With full awakening, the mind is free from afflictive and cognitive obscurations and all beneficial internal qualities have been limitlessly developed. This is ultimate security, satisfaction, and fulfillment that enables us to benefit and bring meaning not only to ourselves but also to others.

Our wish for sentient beings to have spiritual happiness entails wishing that they have all the conducive circumstances needed to meet, learn, and practice the Dharma, beginning with having a fortunate rebirth, meeting qualified spiritual mentors, and having supportive Dharma friends and

environments. We also wish them to be imbued with interest in spiritual matters and to question how persons and phenomena exist — that is, to seek the truth. The causes for this are observing karma and its effects as well as studying, reflecting, and meditating on the Buddha’s teachings to the best of our ability in the present life.

The cause of nirvāṇa is the mind of renunciation and the practice of the three higher trainings, especially wisdom. The causes of full awakening are — in addition to those for nirvāṇa — bodhicitta, the six perfections, and the generation and completion stages of Tantra. We wish that all sentient beings create these causes that come about from a qualified disciple meeting a qualified spiritual mentor and then practicing diligently with joyous effort.

When meditating on love, wish that sentient beings have all these levels of happiness and peace as well as their causes. When done in depth, this meditation is quite extensive and expansive. Please continue to contemplate in this way, looking ever deeper.

Like self-respect, loving ourselves in a realistic and practical way is important. Self-love must be distinguished from self-indulgence. Self-indulgence is fraught with selfish attachment and leads to anxiety and guilt, whereas loving ourselves involves caring for ourselves with an acceptance and kindness that are free from unrealistic expectations. Like all sentient beings, we seek happiness. Self-indulgence involves thinking we must fulfill all our worldly wishes; self-centeredness is believing that our happiness is more important than anyone else’s. Genuine self-love enables us to love others, while self-centeredness uses others for our own pleasure. Self-love cares for self and others in an expansive way and enables us to live harmoniously with others. At its most exalted levels, genuine love and compassion for ourselves wish us to be free from cyclic existence and to attain full awakening. Working toward these spiritual goals is true kindness to ourselves, and it brings about the joy of others as well.

## REFLECTION

---

What is happiness? Reflect on the various types of happiness there are and then wish sentient beings to have it and its causes.

1. The happiness of having the basic requisites for life — food, shelter, clothing, and medicine — as well as good health, harmonious relations, safety, money, and possessions.
  2. The happiness of emotional peace — acceptance of who we are, the lessening of anger, releasing grudges.
  3. The calm of elevated states of consciousness that is the joy, bliss, and equanimity derived from states of meditative absorption.
  4. The happiness of the fulfillment of our ultimate spiritual aims — nirvāṇa and full awakening.
  5. Contemplate the causes of each type of happiness and wish sentient beings to have these too.
- 

### ***Compassion***

As we said, love and compassion do not occur in a fixed order. Which one is generated depends whether we first see sentient beings as lacking happiness and want them to have happiness and its causes, or if we first see them as being burdened by duḥkha and want them to be free from it.

Our first experiences after birth were of kindness and compassion. Love and compassion are not unfamiliar to us. Not only have we received love and compassion from others, but also each of us has the seed of love and compassion in our mindstream. By learning and practicing the methods to generate great love and great compassion, we can nurture those seeds that are already in our mindstream, enabling them to grow into the beautiful, life-sustaining love and compassion of a bodhisattva.

Although based on ordinary love and compassion, the great love and great compassion cultivated in the Mahāyāna differ from them in several important ways. First, great love and great compassion are impartial and unbiased. Usually affection arises easily toward close friends and relatives; concern about their welfare arises naturally. However, those feelings are mixed with attachment. They depend on the other person's attitude and

actions toward us. When the other person's speech and behavior are pleasing, we feel affection for them. But when their attitude or behavior do not meet our expectations, wants, or needs, our love and compassion evaporate; we may even become enraged with this person. Genuine love and compassion, on the other hand, arise irrespective of others' attitudes and actions toward us. Rather, our perspective is "Others are just like me; they want happiness and don't want duḥkha as much as I do. They also have the right to overcome suffering." We feel such unbiased love and compassion even toward enemies and those whom we dislike because they, too, are sentient beings who have the wish and the right to overcome suffering.

Furthermore, unlike ordinary love and compassion, which are felt only toward a limited number of beings, great love and great compassion are extended toward all sentient beings — including ourselves, people we like, those we dislike, and those we don't know.

Ordinary love and compassion are usually dependent on our personal preferences and prejudices and arise automatically in us ordinary beings whose minds are under the influence of afflictions. Great love and great compassion, on the other hand, are consciously cultivated with a clear purpose. Reasoning is used to overcome the bias and favoritism that color our self-centered emotions toward others. Wisdom helps our love and compassion become more stable and less influenced by the vagaries of others' behavior. This enables ordinary love and compassion to expand to include all sentient beings and to wish them to be free from all types of duḥkha and have all types of happiness, transforming them into great love and great compassion.

The focal object of compassion is sentient beings who are suffering. Its subjective aspect is the wish for them to be free from suffering. Compassion depends on two principal attitudes: a sense of closeness with others and concern for their suffering. Seeing sentient beings as endearing through remembering their kindness creates a sense of intimacy and affection toward others in our heart. Meditating on the fact that sentient beings undergo all the diverse kinds of duḥkha just as we do brings concern for their suffering. Bringing these two together arouses genuine compassion for living beings.

As with cultivating love, we begin cultivating compassion with ourselves, our dear ones, then toward those for whom we have neutral feelings, followed by enemies, and finally all sentient beings. To develop compassion for others, we must be in touch with how we ourselves are oppressed by duḥkha and wish to be free of it. For this reason, meditating on the four truths — especially true duḥkha and true origins — and the twelve links of dependent origination is essential. Without the support of these meditations, our compassion for others will lack energy and risks becoming pity instead.

It is important to cultivate compassion beginning with specific individuals because this brings a personal quality to our compassion. This is very different from feeling sorry for a large amorphous group of beings we don't know. We are generating the wish for individuals whom we feel close to and care about to be free from duḥkha and its causes. Meditating on individuals also brings to light the resentment, prejudice, and fear that interferes with having compassion. When we have successfully dealt with these hindrances, then it is suitable to extend the range of our compassion to more and more sentient beings.

Just as when generating love there are many kinds of happiness to wish sentient beings to have, when cultivating compassion there are diverse forms of duḥkha that we wish them to be free from. Here it is helpful to contemplate the three kinds of duḥkha, the six disadvantages of cyclic existence, and the eight unsatisfactory conditions one by one.<sup>33</sup> The more we have contemplated these faults of saṃsāra in terms of our own lives and generated the aspiration to attain liberation, the easier it will be to consider that others suffer from them as well and to generate compassion for them. The same is true when we contemplate afflictions and karma as the causes of saṃsāric suffering and wish sentient beings to be free from them.<sup>34</sup>

You can also begin your meditation on compassion by thinking of someone whose suffering is such that you cannot bear it. Recall that he is similar to you in wanting happiness and not wanting suffering, and by reflecting on this, in time you will feel very strong concern for him and compassion will arise. Then extend your meditation to close friends and relatives; think of them one by one and cultivate compassion for each person. Then focus on strangers — road workers, secretaries, citizens of

other countries, refugees — and recall their suffering. Recall that they are just like you in wanting and deserving to be free from duḥkha and to have happiness. Finally bring to mind people for whom you have negative emotions: people who have harmed you, whom you fear, and who hold views and opinions that you find totally unacceptable. Think of them one by one, remembering that they are just like you in wanting happiness and not suffering and in having the right to be free from duḥkha. Do this until you feel that their suffering is intolerable. In this way, develop the same strength of concern toward them that you have toward those who are dear to you. Finally, extend compassion to all sentient beings in all the realms of saṃsāra. Remember that planet Earth is not the only place with living beings; there are countless sentient beings, each having their own experience of duḥkha at this moment. Enlarge your heart to include them all.

Another way to meditate on compassion is to visualize an animal — it could be a pet, an animal raised for its meat or fur, or any other animal. Contemplate the difficulties it faces in an animal rebirth — being under others' control, its vulnerability to being killed, and so forth. Unable to understand the Dharma, animals face huge obstacles to creating virtuous karma and to gaining a better rebirth. When compassion arises for this being who has the buddha nature but is trapped in a body that brings physical suffering and limits its ability to learn, change your focus to hungry ghosts and think of the suffering they experience — the strong desires that are never met; the hunger and thirst that cannot be satisfied. From there, contemplate the suffering of hell beings — their fear and terror and physical suffering. Think also of human beings: although they have less physical suffering than beings in the unfortunate realms, their mental suffering can be formidable. In addition, they are often distracted from creating virtue, as are desire-realm gods. The form- and formless-realm gods experience great pleasure, but when the karma for these rebirths is consumed, they helplessly fall to rebirths with more duḥkha. In this way, cultivate a strong wish that all of these beings be free from their duḥkha.

One especially poignant thought to contemplate when cultivating compassion is that although sentient beings long only for happiness and freedom from suffering, because they are overwhelmed by ignorance and

other afflictions, they continuously create more karma that will ripen in their suffering. Śāntideva said (BCA 1.28):

Although wishing to be rid of misery,  
they run toward misery itself.  
Although wishing to have happiness,  
like an enemy, they ignorantly destroy it.

Think about this in terms of the people you care for. They want only happiness but due to their mental afflictions they constantly self-sabotage, abandoning the causes of happiness as if they were a horrible disease. Because they are confused regarding the causes of misery, they embrace them as if they were the path to happiness. Not only are our friends in this sorrowful state but so too are all other sentient beings, including ourselves. What a sorrowful state sentient beings are in! Feeling that their experience of even the subtle pervasive *duḥkha* of conditioning is intolerable, allow compassion to arise in your mind.

When meditating on compassion, do not fall prey to personal distress. Keep your focus on others' experiences, not on the pain you feel from observing their *duḥkha*. Have deep concern for the plight of yourself and all sentient beings, but remember that the causes for all *duḥkha* can be eliminated, so maintain an optimistic yet grounded attitude. Love, compassion, and *bodhicitta* are not uncontrolled emotions that render us incapable of action. To the contrary, they make us strong and courageous. But we must work hard to generate them. Tsongkhapa cautions (LC 2:45):

Therefore, if you are satisfied with just a little personal instruction and neglect to familiarize yourself with the explanations of the classical texts, your compassion and love will be very weak . . . You must then analyze these explanations with discerning wisdom and elicit the experience produced after sustaining them in meditation. You will not achieve anything with the unclear experiences that come when you make a short, concentrated effort without precisely clarifying the topic with your

understanding. Know that this is true for other kinds of practice as well.

There are many types of compassion that are possessed by different people. Ordinary people who may or may not follow a particular religion or spiritual tradition have compassion when they see the evident suffering of the people and animals they care about. They may extend this compassion to more living beings, but because they usually aren't aware of the *duḥkha* of change and the pervasive *duḥkha* of conditioning, their compassion is generally confined to wishing beings to have health, wealth, job fulfillment, and happy families in this life.

Some *śrāvakas* and solitary realizers have immeasurable compassion (synonymous with limitless compassion). This compassion is at the level of a *dhyāna*, and although it is spread to immeasurable sentient beings, it is not strong enough to inspire them to shoulder the responsibility to liberate all sentient beings. Nevertheless, the immeasurable love and compassion of *śrāvakas* and solitary realizers are to be lauded and these practitioners are to be respected for their attainments. There is no reason for us bodhisattva-aspirants to be proud, for our present love and compassion are weak, biased, and of short duration. In all cases, it is fitting to respect those who are more spiritually accomplished than we are and to endeavor to generate the excellent qualities they possess.

In his first *Stages of Meditation*, Kamalaśīla delineates the measure for having generated great compassion (LC 2:45):

When you spontaneously feel compassion that has the subjective wish to completely eliminate the *duḥkha* of all living beings — just like a mother's desire to remove her dear child's unhappiness — then your compassion is complete and is therefore called great compassion.

Here Kamalaśīla uses an example that is familiar to us — the compassion of a mother for her child — to give us a sense of something extraordinary that we have not yet experienced — the spontaneous, heartfelt desire to completely eliminate the *duḥkha* of all sentient beings. As with all

analogies, however, not all aspects of the example apply to the object to understand. In this case, a mother's compassion for her child is tinged with attachment and partiality, whereas a bodhisattva's compassion is free from these. The measure of having generated great love can be inferred from the above passage.

Great compassion observes all sentient beings and its healing effect extends to all of them. Great compassion wants not only to liberate all sentient beings from the duḥkha of pain and the duḥkha of change but also to free them from the pervasive duḥkha of conditioning that afflicts all beings wandering in saṃsāra.<sup>35</sup> This great compassion is a prerequisite for bodhicitta and therefore must be present in order to enter the first bodhisattva path, the path of accumulation.

Knowing the characteristics of the realizations of love, compassion, and bodhicitta enables us to assess our spiritual progress. This prevents false conceit, thinking we have actualized something that we have not. For example, it is not too challenging to think, "I will attain awakening for the benefit of all sentient beings." But feeling this sincerely and spontaneously as our immediate response when seeing any sentient being is quite difficult.

Bodhisattvas' great compassion is strong, stable, and resilient. They do not succumb to despondency and feelings of hopelessness even though they may feel unsettled when observing sentient beings suffer. Deep inside their minds courage, inner strength, and optimism abound. Bodhisattvas express their compassion in creative and appropriate ways. They neither succumb to personal distress upon seeing others' suffering nor take it upon themselves to "fix" those sentient beings' predicaments by interfering in unwanted ways.

Śāntideva uttered a phrase that leads us to imagine a world where great compassion abounds: "May people think of benefiting one another." May each of us become one of those people.

### ***The Great Resolve***

By practicing the steps of mental trainings over time, our love and compassion will increase to the point where they become the great resolve, which assumes the responsibility to bring sentient beings happiness and to eliminate their suffering. This is much stronger than the wish to repay the

kindness of sentient beings. It is also stronger than the love and compassion that think how wonderful it would be if sentient beings had happiness and its causes and were free of duḥkha and its causes. The great resolve has energy behind it: it is the heartfelt commitment to act in order to give happiness to each and every sentient being and to protect them from all three types of duḥkha. It thinks, “I will give happiness to all sentient beings and free them from duḥkha.” It is very helpful to think like this frequently during the day so that this intention supports our physical and verbal actions. Try thinking like this during your workday and see how it transforms your attitude and relationships and increases the sense of meaning in your life.

Śrāvakas and solitary realizers may have immeasurable love and immeasurable compassion that wish sentient beings to have happiness and be free of duḥkha. This love and compassion, however, are not strong enough to induce their commitment to act to bring this about. Great compassion is so called because it goes beyond the compassion of śrāvakas and solitary realizers. When our compassion can no longer endure sentient beings’ suffering, it induces the great resolve, a type of great compassion that is willing to bear the responsibility of liberating sentient beings from all duḥkha whatsoever. With the great resolve that is induced by compassion and love, practitioners have the confidence and determination to work for the benefit of all sentient beings, are willing to do it without any regret, and act to fulfill their aim.

The great resolve has overcome gross self-centeredness and is ready to act on the aspiration to benefit and protect sentient beings. The *Questions of Sāgaramati Sūtra* gives the example of a family that has only one child, who was charming and loved by his parents. One day the child was playing and fell into a pit filled with sewage and filth. His aunts and uncles screamed and lamented as they stood by the side of the pit. When his parents came along and saw the situation, their only thought was to save the child, and without hesitation or revulsion they jumped into the sewage pit and pulled the child out.

The sewage and filth are the three realms of saṃsāra; the treasured child is all sentient beings; the other relatives are the śrāvakas and solitary realizers; the parents are bodhisattvas. While the compassion of śrāvakas

and solitary realizers is like that of the aunts and uncles for their beloved nephew caught in a pit of filth, it isn't moved to action. For this reason bodhisattva aspirants must generate the great resolve that is firmly committed to liberating all sentient beings oneself.

The deeper our understanding of duḥkha, the stronger our compassion will be. When our compassion reaches the point where we feel that sentient beings' duḥkha in saṃsāra is unbearable and we want them to be free from it as well as from the afflicted obscurations and cognitive obscurations, the great resolve to work for their welfare arises. We commit to work for the temporal well-being of sentient beings as well as to lead them to the highest good — liberation and full awakening.

### *Bodhicitta*

It's important to understand precisely what bodhicitta is so that our efforts to generate it will bear fruit. In *Illumination of the Thought*, Tsongkhapa defines bodhicitta as “the wish to attain highest awakening — the object of attainment — for the sake of all sentient beings — the objects of intent.”<sup>36</sup> This is the noble mind that we should do everything in our power to generate in our own mental continuum. Considering this definition, we see that this precious altruistic intention isn't only wishing others to be free of suffering, wishing them to become buddhas, or wanting to become a buddha ourselves. Bodhicitta isn't just being kind and cooperative, nor is it only praying to take on others' suffering. Kamalaśīla says the measure of having generated genuine bodhicitta is (LC 2:45) as follows:

When you have committed yourself to being a guide for all living beings by conditioning yourself to great compassion, you effortlessly generate the bodhicitta that has the nature of aspiring to unexcelled perfect awakening.

Generating actual bodhicitta requires first cultivating several other attitudes. In addition to having stable experience in the paths in common with the initial- and middle-level practitioners, Śāntideva leads us through several other steps in *Engaging in the Bodhisattvas' Deeds*: contemplating

the benefits of bodhicitta; practicing the seven limbs, which includes confessing innumerable nonvirtues by means of the four opponent powers,<sup>37</sup> taking refuge in the Three Jewels; and understanding the bodhisattva trainings.

Through contemplating the previous six steps, we generate the primary mind held by two aspirations, one seeking to benefit all sentient beings, the other aspiring to attain full awakening in order to do so. This mind is the bodhicitta. It is the seventh point, which is the effect of the six preceding causes.

A naïve assumption that awakening is easy to attain and half-hearted effort is sufficient does not bring the strong resolve necessary to generate bodhicitta. How, then, does the great resolve induce bodhicitta? It comes from reflecting, “At present, I can’t even save myself from the duḥkha of saṃsāra, let alone lead others to freedom. Who is most capable of doing that?” Investigating, we see that no saṃsāric being is fully equipped to guide sentient beings to awakening. Arhats, although they have compassion for others, lack the great compassion and great resolve to do this. Although they are free from the afflictive obscurations, their minds are still affected by cognitive obscurations, so they are able to lead a few beings to liberation but not to buddhahood. Ārya bodhisattvas have bodhicitta, but their minds aren’t free from the cognitive obscurations. The only ones fully equipped to benefit sentient beings most effectively are the buddhas, who have eradicated all obscurations and perfected all excellent qualities. Therefore, we must become a fully awakened buddha with stainless wisdom, unwavering compassion, and full capacity.

Buddhas cannot liberate sentient beings by themselves; if they could, they would have already done so. Sentient beings must learn and practice the Dharma themselves. To teach and guide sentient beings on the path, buddhas must have personal experience of all the practices and the paths to awakening. They must know others’ individual spiritual dispositions, interests, and tendencies as well as the effective ways to practice that would help them actualize their spiritual goals. For the sake of helping others, we must fully prepare ourselves.

When we understand that the wisdom realizing the ultimate nature can remove afflictions and their seeds and lead to liberation, we can also see

that eliminating the cognitive obscurations — the latencies that produce the appearance of inherent existence and cause us to see the two truths as different natures — is also possible. For this reason, we seek to eliminate all obscurations from our mindstreams and realize all excellent qualities. In short, we need to attain full awakening — the nonabiding nirvāṇa of a buddha — in which we abide neither in cyclic existence nor in the complacency and personal peace of our own liberation.

The Perfection Vehicle presents the path to full awakening, and the explanation in highest yoga tantra sharpens this understanding by revealing the extremely subtle wind-mind, the fundamental innate mind of clear light, as well as the tantric path. In this context, the possibility of attaining the four buddha bodies becomes much clearer. Once we have an accurate and stable understanding of what awakening is and how attaining it is possible, we will be able to develop genuine bodhicitta aspiring for buddhahood.

The method for developing bodhicitta is not difficult to understand. However, to gain firm love, compassion, and altruism involves training our mind and eliminating the extremely strong tendency toward considering our own happiness as more important than others. If self-centeredness were not so deeply rooted, the śrāvakas and solitary realizers — who are great and wise practitioners with high attainments — would have abandoned it. Eliminating it takes great courage and strength of mind because making the commitment to work for others' welfare for eternity and to attain buddhahood in order to do so is a radical reversal of our usual way of thinking and relating to the world.

Sometimes during meditation sessions we may feel an intense great resolve to better sentient beings' condition. But after our meditation session, our resolve falters, our love and compassion recede into the background, and self-centeredness reemerges. To remedy this requires continued vigilance and application in all aspects and activities of our life. We can't take a holiday from love and compassion in order to "enjoy the pleasures" of self-centeredness. For this reason, in the first *Stages of Meditation*, Kamalaśīla encourages us (LC 2:47):

Cultivate this compassion toward all beings at all times,  
whether you are in meditative concentration or in the course

of any other activity.

Tsongkhapa advises (LC 2:48):

The mindstream which has been infused since beginningless time with the bitter afflictions will not change at all from just a short cultivation of the good qualities of love, compassion, and so forth. Therefore you must sustain your meditation continuously.

Cultivating spontaneous bodhicitta once is a wonderful start. Then you must make it stable through repeated meditation. To do this, continue meditating on the duḥkha of saṃsāra, the kindness of sentient beings, love, compassion, and the great resolve. In addition, contemplate the physical, verbal, and mental qualities of the buddhas and their awakening activities to keep your spiritual goal in mind. Meditate on the emptiness of inherent existence to abandon the obscurations on your mindstream, and continue to support all these practices by purifying and accumulating merit. In short, make your bodhicitta strong so that you won't give it up when difficulties arise.

May we follow their excellent advice and complete the entire path in good time.

## REFLECTION

---

1. Cultivate compassion first toward one person and then gradually expand it to all sentient beings according to the instructions here and in chapter 1.
2. Generate the great resolve to actively engage in increasing others' happiness and diminishing their suffering.

Who can do this? As ordinary beings we lack the wisdom and skill. As śrāvakas we lack the compassion. Only buddhas have the ability to benefit

others most effectively. Therefore, we must follow the path to buddhahood and attain full awakening.

---

## 4 | Equalizing and Exchanging Self and Others

I AM OVER EIGHTY years old now. For almost seventy years, I have contemplated bodhicitta and emptiness daily. I'm not saying I have attained the bodhisattva paths and grounds, but I am getting closer. If we create the cause, the result will come. This daily contemplation has brought peace in my mind as well as the confidence that my life has been meaningful. I encourage all of you to dedicate your lives to contemplating and approaching these two bodhicittas: the conventional bodhicitta (the altruistic intention) and the ultimate bodhicitta (the wisdom realizing emptiness).

In the preceding chapter we discussed the seven cause-and-effect instructions for generating bodhicitta. The second method to cultivate bodhicitta is equalizing and exchanging self and others. This method is traced to Nāgārjuna's *Commentary on Bodhicitta (Bodhicittavivaraṇa)* and his *Precious Garland of Advice for the King (Rājaparīkathāratnāvalī)*. Later Śāntideva explained this method in detail in *Engaging in the Bodhisattvas' Deeds*, and it was passed down privately among the early Kadampa masters in Tibet.

The method of equalizing and exchanging self and others as well as the practice of taking and giving included in it were practiced secretly, not because practitioners wanted to deprive others of knowledge about it but because thinking according to this approach shakes us up. Although we know intellectually that we aren't the most important person in the world, in our heart the self-grasping ignorance and self-centered attitude refuse to accept this. This method hits right at the heart of our self-centered attitude and makes us question the view of self-grasping ignorance as well. The self-honesty and directness of this approach are what make it so profound.

Let's start at the beginning and gradually transform the mind that anxiously clings to I and mine into a relaxed, joyful mind that cherishes others more than self. The method to do this consists of the following steps: (1) equalizing self and others, (2) becoming convinced of the disadvantages of self-centeredness, (3) understanding the great benefits of cherishing others, (4) exchanging self and others, (5) taking others' duḥkha with compassion and giving them our happiness with love, and (6) bodhicitta.

### *Equalizing Self and Others*

The first step is to equalize ourselves and others by recognizing that all sentient beings — ourselves and others — are equally important and worthy of being happy and peaceful and free from pain and misery. This counteracts the ingrained notion that we deserve to have every happiness and to be free of all sufferings, but others deserve these less. The hazards of this self-centered view are clear: we seek the means to eliminate only our problems and procure our happiness, while ignoring the well-being of others.

The meditation to equalize self and others differs from the equanimity meditation explained in the previous chapter. The equanimity meditation overcomes the emotional reactions of attachment and animosity with respect to friends and enemies. It steers us toward unbiased openness for these two groups of people. The meditation on equalizing self and others overcomes something deeper: our tendency to consider ourselves more valuable and important than other sentient beings. This meditation brings a deep conviction that we and others are fundamentally equal in wanting happiness and freedom from suffering. Whereas equanimity levels the playing ground of friends, enemies, and strangers, equalizing self and others levels it between us and others.

When we question our innate assumption of self-importance, we find that it is false, that we and others are equal in wanting happiness and wishing to be free from suffering. We and others have the same right to be happy and free of suffering because all of us equally have buddha nature. Try as we may, we cannot come up with a valid reason why our happiness is more important than others and why our suffering hurts more than theirs.

If our happiness and misery were unrelated to those of others, it would be reasonable to say that we do not need to bother about their joy and pain. But this is not the case. Our happiness and suffering do not arise in isolation. They are interwoven with those of others. Because we are interconnected in this way, caring more about others' happiness, helping them attain it, and eliminating their suffering are crucial, even for our own well-being. The problem with caring only about the safety and well-being of ourselves and our dear ones is that we will live in a society where the vast majority of people are miserable. They will make their suffering and unfair treatment known to us, so that all of us will live in a tumultuous society. Caring for others as we care for ourselves will easily remedy this.

To equalize self and others, on your left imagine your usual self, and on your right visualize all other sentient beings. Both have the reasonable wishes to be safe and free from suffering. Then be the judge and determine whose well-being is more important. On one side is one sentient being, on the other side are all sentient beings minus one. Better yet, hold a vote on whose welfare is more important. Wouldn't the side of all sentient beings minus one win by a landslide? Surely it is more important to bring about the happiness and remove the suffering of other sentient beings than of just ourselves.

If our self-centeredness refuses to admit defeat, we must protest against it because it is a tyrannical despot that refuses to turn over power to the rightful victor of the vote. We should plan protest marches and write editorials in the newspaper against this unjust ruler, the self-centered attitude. When an autocrat ignores the welfare of the citizens, the world condemns him as greedy, arrogant, and power hungry. Similarly, isn't our self-centered attitude a ruthless dictator that ignores the welfare of other living beings and arrogantly uses them for his own enjoyment? In the past, oppressive monarchs were overthrown by the populace, and as a result government policies and cultural customs changed. Likewise, our customs and actions will change as we overthrow the tyranny of self-preoccupation and institute the reign of cherishing others.

My junior tutor Trijang Rinpoche taught a nine-point meditation on equalizing self and others when he gave teachings on the "Guru Pūjā." This meditation has three major points, each of which has three subpoints. Two

of those major points are based on conventional truths, one on ultimate truth.

1. Self and others are equal from the perspective of conventional truths. These reasons do not delve into the mode of existence of self and others, but work on the level of appearances.

A. The three reasons from the viewpoint of others primarily examine others and consider whether there is any difference between them and ourselves.

1. Everyone equally wants happiness and freedom from suffering. Not only do all six classes of sentient beings equally want this but also ourselves and others are equal in having this desire. Seeing that deep within everyone's heart, each and every being has the same wish, discriminating among them is unsuitable.
2. Favoring some beggars over others is not suitable because each of them has needs, although their specific needs may differ. Similarly, we and others equally have needs and desires, although their specifics may differ. Therefore it is not right to be partial to our friends over enemies or to favor ourselves over others. Instead, we should aim to benefit everyone equally.
3. Curing the suffering of some patients and not others is not proper. Although each one suffers from a different illness or injury, they all equally want to be free from pain. Therefore we should try to remove suffering from everyone equally without helping ourselves and neglecting others.

B. The three reasons from the viewpoint of self focus on our attitudes toward others.

1. All sentient beings have been kind to us in the past, are kind to us in the present, and will be kind to us in the future. Everything that is used to sustain our lives

— food, clothing, shelter, and medicine — and all our enjoyments were produced and given to us by others. Everything we use in our life was made by others. Even our body came from others. All our knowledge and skills came because others taught and encouraged us. Seeing the immeasurable kindness we have received from all sentient beings since beginningless time, we should help them equally in return, without abandoning any of them.

2. “But sentient beings have also harmed us,” harps the self-centered attitude. If we were to weigh the help and the harm we have received, the help we have received from others greatly outweighs the harm. In fact, the harm is miniscule. In addition, when we were harmed, many sentient beings came to our aid. Our self-centered mind keeps tabs on and seldom forgets even the slightest harm we have received, while it takes for granted every benefit we have received and expects more. If we take stock of our lives, we’ll see how true this is.
3. If we still cling to old hurts and indulge our resentment, let’s recall that we and others are impermanent beings who are subject to death. In that light, there is no sense in discriminating against anyone, holding grudges, or seeking revenge. Such attitudes only make us miserable and create the cause for suffering in future lives. Furthermore, the beings we seek to harm in return are caught in cyclic existence; given that they are going to die in any case, what use is harming them?

2. Self and others are equal from the viewpoint of ultimate truth. These reasons examine if there is an inherently existent self and others. If not, there is no sense in being attached to these labels and distinguishing self as more worthy of happiness than others.

- A. If friends, enemies, and strangers existed from their own side inherently, rather than being mere imputations, the Buddha would see this. But the Buddha makes no distinction between a person massaging him on one side and someone cutting him on the other. They are equally objects of his love and compassion.
- B. If friends, enemies, and strangers were truly existent, each sentient being would always remain in whatever category he or she is presently found. However, our experience is that relationships change. The friend of one year is the enemy of the next, and vice versa. Both can become strangers, and someone who is currently a stranger can easily become a friend or enemy. Making these differentiations is a function of our mind; they are not inherent in those sentient beings.
- C. Self and others are dependent designations. They depend on each other just as this side of the valley and that side are posited in mutual dependence on the other. Depending where we stand, one side is labeled “this” or “that”; these labels change depending on our viewpoint. Similarly, calling one set of aggregates “I” or “other” is dependent. The aggregates I currently call “I” other people call “other.” If they were inherently mine, then everyone would see them as mine; but most people see them as other, and therefore not so important.

The above nine points are powerful tools to cut away at our ingrained feeling of entitlement. Meditating on them produces a definite change in the mind. Self-centered attitude sees myself and others as unrelated and deems others’ suffering and happiness as less important than my own. But there is no logical reason to support this belief. We all equally want happiness and not suffering. In addition, others have been kind to me and everything I have or know comes from them. Seeing this, holding myself as more worthy is unconscionable. Furthermore, myself and others are not inherently existent entities. Why is “I” to be labeled only in dependence on this set of aggregates and not on others? From the viewpoint of others, “I” is designated in dependence on other aggregates and “other” is imputed in

dependence on mine. Śāntideva asks himself very pointed questions about why we care for ourselves and neglect others (BCA 9:92–96):

Although my suffering does not  
cause pain in other bodies,  
nevertheless that suffering is mine and is difficult to bear  
because of my attachment to myself.

Likewise, although I myself do not feel  
the suffering of another person,  
that suffering belongs to that person and is difficult [for her] to bear  
because of her attachment to herself.

I should eliminate the suffering of others  
because it is suffering, just like my own suffering.  
I should take care of others because they are sentient beings,  
just as I am a sentient being.

When happiness is equally dear  
to others and myself,  
what is so special about me  
that I strive after happiness for myself alone?

When fear and suffering are equally abhorrent  
to others and myself,  
what is so special about me  
that I protect myself but not others?

Śāntideva's questions deserve some thought. He also asks us to be humble when helping others and to care for them in the same way we do for ourselves, without expecting anything in return (BCA 8.116–17):

When I work in this way for the sake of others,  
I should not let conceit or the feeling that I am wonderful arise.

It is just like feeding myself —  
I hope for nothing in return.

Therefore, just as I protect myself  
from unpleasant things, however slight,  
in the same way, I should habituate myself  
to have a compassionate and caring mind toward others.

## REFLECTION

---

This reflection is on equalizing self and others. Since nine points to contemplate are easily seen in the explanation above, please refer to them there.

1. Consider each of the points establishing why you and others are equal from the perspective of conventional truths.
  2. Consider each of the points regarding why you and others are equal from the perspective of ultimate truth.
  3. How will this reflection influence how you think of yourself? How will it influence how you think about and act toward others?
- 

### *The Disadvantages of Self-Centeredness*

Self-centeredness has several different aspects. *Coarse self-centeredness* considers ourselves more important than others and seeks primarily our own happiness in this life. This self-centeredness leads us not only to be apathetic toward others' welfare but to also create a great deal of destructive karma. A less coarse form of self-centeredness seeks our own fortunate rebirth in saṃsāra. It is a virtuous attitude, even though it cares more for ourselves than others. *Subtle self-centeredness* is the mind that seeks liberation for ourselves alone. In general, subtle self-centeredness seeking our own nirvāṇa — also called “attending to our own goal” — is

not an object of abandonment; it is a valid mind that enables śrāvakas and solitary realizers to abandon harming others and to attain liberation. People inclined toward the śrāvaka path hear about or see arhats and think, “I want to attain liberation like they have,” and by attending to that goal they practice well, eradicate the afflictive obscurations, and attain nirvāṇa. These arhats are worthy of our respect. However, from the perspective of bodhisattvas who seek to become fully awakened buddhas, subtle self-centeredness is to be abandoned because it leads one to forfeit the opportunity to attain buddhahood with its ability to vastly benefit sentient beings, in favor of gaining the personal peace of arhatship.

In the following sections, we will predominantly speak about the disadvantages of the coarse self-centeredness. In contemplating its faults, it is important to distinguish it from seeking the well-being of the conventional self — the self that exists. The conventional self has the capacity to practice the path and will one day attain the bliss of awakening; seeking the ultimate happiness of the mere I is a productive endeavor. The self-centered attitude, on the other hand, is an adventitious, ingrained thought on our mindstream. A limited attitude that pretends to look out for our welfare but in fact constricts our open-heartedness and potential, it can be overcome. Pointing out the disadvantages of self-centeredness is not a criticism of the legitimate wish for the conventional I to be happy and free of pain, so do not get confused and blame yourself for being selfish. Rather, recognize the self-centered attitude as the troublemaker that makes you create destructive karma and causes you misery in this and future lives. Aspire to free yourself from it so that you and all other sentient beings will not be adversely affected by it in the future.

Recalling that others and ourselves are equal in wanting to be happy and avoid suffering, consider the faults of being self-centered. All the problems we experience in cyclic existence are tied to our self-preoccupation. These problems and turmoil are the results of our own destructive actions, which are supported by self-centeredness. For example, wrongdoings such as the ten nonvirtues are supported by a self-centered motivation. Lying is done to protect ourselves and get what we want; talking behind others’ backs to create disharmony is done with the thought to benefit ourselves, and so forth.

All of our emotional and physical pain is a result of the self-centeredness that motivated the karmic actions that resulted in this pain. In addition, self-centeredness adds to that pain by feeling sorry for ourselves, blaming others for our problems, and complaining about the unfairness of life.

Self-centeredness is the root of guilt, anxiety, and fear. These painful emotions swirl around a twisted sense of importance: I am hopeless, I am unworthy, I am unloved, I am mistreated. By ruminating on our own difficulties, our perspective becomes very narrow and turned in on itself. Brooding over thoughts of shame, low self-esteem, and self-hatred, our pain and distress increase.

Moreover, doing one's spiritual practice with principally one's own welfare in mind is responsible for resting complacently in nirvāṇa and relinquishing the commitment to lead others to full awakening.

In the path of the middle practitioner, we identified the faults of the afflictions and became convinced that they were the source of suffering and lack any good qualities whatsoever. Similarly, here meditate in the same way with regard to the self-centered attitude. See that it has absolutely no benefit and only harms yourself and others. Just as you previously made a firm determination to be free from afflictions and aspired to develop the wisdom realizing emptiness to overcome them, now develop the same strong determination to rid yourself of self-preoccupation and to practice cherishing others from your heart. Only through this can the joy and benefit of buddhahood be attained. When instructing us how to meditate on this topic, Tsongkhapa summarizes the defects of the self-centered attitude (LC 2:55):

Out of attachment to self, my self-centered attitude has produced all sorts of undesirable things throughout the beginningless time of cyclic existence up to now. Although I wanted to make things perfect for myself, I emphasized my own welfare and engaged in improper methods. I have spent countless eons at this, but have not at all accomplished my own or others' aims. Not only have I not achieved these, I have been tormented only by suffering. If I had replaced

concern for my own welfare with concern for others' welfare, I would certainly have already become a buddha long ago and would have completely and perfectly accomplished my own aims as well as those of others. As I did not do this, I have spent my time uselessly and laboriously.

Śāntideva warns (BCA 8.134):

Since all the injury,  
fear, and pain in this world  
arise from the self-centered attitude,  
what use is that great demon to me?

The self-centered attitude interferes with our spiritual practice and our attainment of awakening; it creates havoc in our world. Once when I was speaking with a Muslim friend, Dr. A. P. J. Abdul Kalam, a scientist and the eleventh president of India, he mentioned that many problems of this world are due to our having overly strong clinging to concepts of “I” and “me.” This is true, isn't it? If we thought more in terms of “we” than of “me versus them,” we would be able to work together in a way that would benefit all of us.

A teenager once asked me (Chodron), “Do Buddhists believe in the devil?” I replied that there is not an external devil and there is no one who is thoroughly evil because each sentient being has buddha nature. Rather, the most fearsome devil is the self-centered attitude because it causes us to neglect others and seek only our own happiness.

Cherishing others from the heart is not easy, for self-centeredness sneaks in to cause many problems. For example, we might do what someone wants so that she will like us, not because we genuinely care about her. We may be kind so that others will approve of us, praise us, or speak well of us so that we have an excellent reputation. In these instances, our care for others is not genuine, for self-centeredness has polluted it by seeking some worldly gain for itself. Constant introspective awareness is necessary to flush out the many and varied deceptive intrigues of the self-

centered thought and to transform the energy that was restricted in self-absorption into an open heart that cares impartially for all others.

In developing antipathy toward our self-preoccupation, do not mistakenly think that if you experience any happiness you are self-centered and that the only way to sincerely care for others is to suffer yourself. This is not correct at all. Practicing the path should be joyful, although it requires effort and there are bumps on the road. Even in terms of our relationship to sense objects, happiness and pleasure themselves are not the problem — don't feel guilty for experiencing them. They are just feelings arising as a result of karma. Self-centered attachment to them is the culprit. Thus let's strive to diminish and eventually banish self-preoccupation so we and others will be genuinely happy.

Some people may think they have to neglect themselves in order to cherish others. This too is a mistaken notion. Although we want to cease letting self-preoccupation run our lives and make our decisions, this doesn't mean that we should neglect our own situation entirely. The kind of selfishness that leads us to exploit others must be reduced, but disparaging ourselves is not helpful on the path and it is to be abandoned. Our aim is to cherish all sentient beings, including ourselves. If we neglect ourselves, then instead of being able to work for others, they will have to take care of us! Rather, we need to respect ourselves and our buddha potential and, on that basis, discern the appropriate way of caring for ourselves that will support our practice of bodhicitta.

## REFLECTION

---

Contemplate the disadvantages of following the self-centered attitude and think of more disadvantages that haven't been listed below. Remember you are not your self-centeredness, so don't criticize yourself for being self-centered. Remember the self-centered attitude is your enemy.

1. It motivates the destructive karmic actions that bring unfortunate rebirths and many problems in future lives.
2. It is the source of all our interpersonal problems and disputes.

3. It prevents us from understanding the Dharma and especially from realizing bodhicitta.
  4. It makes us extremely sensitive to anything concerning ourselves and interprets whatever others do in terms of how it affects us.
  5. It causes us to think others wish to harm us when they have no such thought.
  6. It is the root of guilt, anxiety, low self-esteem, self-hatred, fear, and so forth. All those disturbing emotions arise due to focusing on ourselves in an unhealthy and unrealistic way.
  7. Make examples of each of the above from your own experience.
  8. Make a strong determination to catch the self-centered attitude when it arises and to abandon it.
- 

### *Benefits of Cherishing Others*

All good comes from benefiting others. That's why I tell people: even if you want to selfishly care about yourself, the best way to achieve your own happiness is to take care of others. This applies even to people who are not interested in liberation or awakening. Cherishing others will bring them happiness and peace in this life.

We live in a society where we are completely interdependent. This is especially true now that people's careers and knowledge are narrowed to specialized fields and we must depend on one another to complete our own projects. If we look out only for our own welfare, how will we be happy in an interdependent world? If we don't care about the environment we share, we will create many difficulties and problems that future generations will experience. We see that countries that care only for their own citizens exploit other nations, thereby evoking their ire. Similarly, groups that work only for their own benefit soon find themselves abandoned by others. If one

member of a family is self-centered, the other members lose their wish to help him.

If we take whatever is good for ourselves and ignore others' plight, we soon find ourselves living amidst a group of unhappy people. Their unhappiness will surely affect us; they will complain, they will resent our success, they might even try to steal our things. On the other hand, if we work for the benefit of society as a whole, there is a better chance that those around us will be content and kind, and this will certainly make our life more pleasant!

On a personal level, if we are self-centered, we will lack genuine friends and will be lonely. When we have problems, others will not extend a helping hand. However, when we are kind and fair, others reciprocate and, as a result, we feel cared for and respected.

Thinking beyond this life, cherishing others brings great benefits. We create so much constructive karma, will die without fear or regret, and will secure a good rebirth. Realizations of the path will come easily because our mind has been made fertile with merit. Bodhicitta will arise in our mind and with that we will progress through the bodhisattva's paths and grounds, attaining full awakening.

In short, our accumulation of virtue depends on cherishing sentient beings. Practicing the perfections of generosity, ethical conduct, and fortitude are dependent on sentient beings. Seeing that sentient beings are necessary for our accumulating merit and generating realizations, feel grateful to them and cherish them. In fact, our happiness and awakening depend on each and every sentient being. If one sentient being is omitted from our love and compassion, we cannot generate bodhicitta, and thus awakening will be beyond our reach. Only by depending on each insect and animal, each hungry ghost, each hell being, each human being, and each deva can we generate bodhicitta. By creating the causes to attain a buddha's truth body, cherishing others fulfills our own purpose. By creating causes for a buddha's form bodies, we are enabled to fulfill others' purpose. In short, in the long term only benefit and never harm results from cherishing other sentient beings.

From beginningless time until now, our sworn enemy — the self-centered attitude that is responsible for all our problems — has been

residing comfortably inside us as if it were our best friend. It keeps whispering in our ear, “If I don’t take care of you, no one will,” and in our confusion we believe it. On the other hand, our true friend — the mind cherishing others, which is the source of all happiness — has been kept at a distance with suspicion. Now that we clearly see the disadvantages of self-preoccupation and the benefits of caring for others, let’s rectify this injustice and cherish others as much as possible in our daily life.

Maintaining and enhancing bodhicitta depends on continuously cherishing sentient beings, and that depends on understanding with valid reasons the importance of doing so. If we cherish others because they praise us, give us gifts, agree with our ideas, and act in other ways that gratify our self-centered attitude, we will not be able to sustain that affection for a long time, and our bodhicitta will suffer as a result. As soon as others blame us, lie to us, disagree with our opinions, or act in ways that we don’t like, our affection will dry up and be replaced by anger. However, if our reasons for cherishing others are sound, we will withstand the vacillations in sentient beings’ moods, behavior, and feelings toward us. For this reason, we must frequently remember the kindness of sentient beings and the benefit we receive from cherishing them. In addition, it’s good to recall that the buddhas cherish sentient beings more than themselves. Since we take refuge in the buddhas, we should cherish whom they cherish — sentient beings. If we give up cherishing sentient beings, we neglect what is most valuable to the buddhas. After all, each buddha practiced the Dharma for eons in order to attain awakening so they could be of the greatest benefit to sentient beings. How can we neglect, or worse yet, harm those the buddhas cherish more than themselves? Therefore, remembering the sound reasons why sentient beings are worthy of our love, compassion, and care, let’s continuously maintain a positive attitude toward them.

## REFLECTION

---

Contemplating the benefits of cherishing others will inspire you to do so. Then, when you actively cherish others, you’ll experience the benefits yourself.

1. It is the source of all happiness in this and future lives.
  2. Others are happy and your life becomes meaningful.
  3. By being kind to others, they will be drawn to you and you will have harmonious relationships.
  4. Others will respect you and will take your words to heart.
  5. You will create great virtuous karma that will bring a fortunate rebirth and happiness in future lives.
  6. This virtue will also fertilize your mind so that the teachings will enter at a deeper level.
  7. You will die free of regrets.
  8. Generating love, compassion, and bodhicitta will come easily.
  9. Whenever you look at any sentient being you'll have a feeling of warmth.
  10. Make more examples from your experience.
- 

### *Exchanging Self and Others*

Seeing that self-preoccupation is the path to suffering and cherishing others is the path to bliss, we now exchange the object of our cherishing, replacing self with all sentient beings. Exchanging self and others does not mean that I become you and you become me. Nor does it mean your possessions are mine and mine are yours. Rather, we exchange the attitude with which we hold each one important. We consider others as we would ourselves — we cherish them, want them to be happy and free from pain, seek their success in temporal and spiritual endeavors. Whereas previously we held ourselves as most important, now we hold others as supreme. Whereas previously we

thought others' misery was of secondary importance, now we consider our own problems as minor.

We may have some doubts: Is it possible to exchange ourselves with others? Is there benefit in doing so? If it were useful but not possible, or possible but not useful, then meditating to exchange ourselves with others would just be a waste of time. However, on examination, we find that it's both possible and useful.

But aren't living beings biologically programmed to look out for their own benefit first? Could exchanging ourselves and others bring about the demise of the human species because we would be totally defenseless in the face of others' aggression?

In fact, holding ourselves as foremost is a matter of habit. For example, we may dislike someone and even fear him at one point in our life, but later we meet him in different circumstances and discover that he is very amicable. Developing a close friendship, we miss him when he is absent. This change in feeling is due to our adopting a different attitude about the person and becoming familiar with it.

"But," we may retort, "I don't feel the pain and pleasure that another person's body does, so how could I have the same attitude toward it as I do toward my own body?" Here, too, the answer is that our considering this mass of organic matter "my body" is a matter of familiarity. When we look closer, what about this body is ours? The sperm and egg and genetic material belong to our parents and ancestors. The rest is the result of the food we have eaten, which came from the earth and was given to us by others. It is simply by habit that we consider this body mine. By closely examining the parts of the body and the feelings of pain and pleasure in the body when practicing mindfulness of the body and of feelings, we will see that there is no I or mine in them. There are simply elements and feelings; the notions that there is an inherently existent person and that the body is inherently mine are our mental fabrications. Śāntideva tells us (BCA 8.101–2):

Such things as a continuum and a collection  
are false in the same way as a rosary and an army.  
There is no real owner of duḥkha;

therefore who has control over it?

There being no inherent owner of duḥkha,  
there can be no distinction at all between the duḥkha of myself and  
others.

Thus I shall dispel duḥkha because it hurts.

The basis for designating the I is the collection of the body and mind; the I is a continuum made up of many moments. There is no inherently existent I to be found in the continuum of I or in the collection of the body and mind. The I exists by being merely conceived and designated. Therefore we cannot make a hard and fast line between my duḥkha and others' duḥkha, saying that one hurts more than the other. Because suffering hurts no matter whose it is, we should work to eliminate it.

As for the concern that the human species would be obliterated if we were more concerned with others' well-being than with our own, I believe that in our case survival of the most cooperative overrides survival of the fittest. Unbounded self-concern and competition lead to destruction, whereas caring and cooperating with one another lead to the benefit of all. Ants and bees survive because they cooperate and care for one another; we human beings do as well. If each ant refused to trust and care for others, all of them would soon die. It is the same with us human beings sharing life on planet Earth. We flourish when we work for the common good; we destroy each other when we think only of our own benefit.

Two principal obstacles block our exchanging self and others. The first is thinking self and others are inherently separate; the second is believing that since others' happiness and suffering doesn't affect us, we don't need to care about it. Regarding the first obstacle, self and others depend on each other. "Self" is posited only when "others" is also posited, similar to one side of the valley being this side only when the other side is that side. Of course, which is this side and which is that side depend on our perspective — where we happen to be standing. They are not inherently this and that; when we go to the other side of the valley, it becomes this side.

The second obstacle is thinking that it's not necessary to dispel others' suffering because it doesn't harm us and it's not necessary to care for others

because that doesn't benefit us. This, too, is based on seeing self and others as unrelated and entirely separate, when in fact we living beings depend on one another. It would be similar to thinking, "There's no need to save money for my old age because that old person is a different person and her suffering doesn't harm me." It would also be similar to the hand refusing to pull a thorn out of the foot because they are unrelated and the foot's pain doesn't hurt the hand.

We might think that ourselves and the old person we will become are in the same continuum and that the hand and the foot are parts of the same body, so it is suitable for them to care for each other. But what we call "continuum" is simply a label imputed in dependence on a collection of moments and what we call "body" is similarly a name designated in dependence on a collection of parts. There is nothing inherently existent in either of these. The various moments of mind and the various parts of the body have no inherent relationship that binds them together. It is simply a matter of conception and designation. Śāntideva says (BCA 9.115–16):

Just as in this form, devoid of I,  
the thought of self arose through long habituation,  
why, in dependence on the aggregates of living beings,  
should not the thought I, through habit, be imputed?

Thus when I work for others' sake,  
there is no reason for boasting or amazement,  
for it is just as when I feed myself —  
I don't expect to be rewarded.

Contemplating this for some time will open our mind to seeing the possibility and benefit of exchanging self and others.

Wishing to exchange ourselves and others is a heartfelt desire that stems from having clearly seen the disadvantages of self-centeredness and the benefits of cherishing others through repeated meditation. Śāntideva recounts his own internal dialogue about this (BCA 8.125, 8.130–31):

"If I give this, what will be left for me?"

Concern for my own welfare is the attitude of demons.

“If I keep this, what will be left to give?”

Concern for others’ welfare is the approach of the divine beings.

All the joy the world contains

has come through wishing happiness for others.

All the misery the world contains

has come through wanting pleasure for myself.

Is there need for lengthy explanations?

Childish beings look out for themselves,

while buddhas work for the good of others:

see the difference that separates them!

When the mind is unripe, the thought of exchanging self and others by placing others foremost and ourselves last is frightening. Should fear arise, remember that it is the self-centered attitude that is anxious because it is losing its ascendancy and control. Develop a courageous attitude to weather that fear; it will not destroy you. Still, it is important to go at a pace that is suitable for us and be content to create the causes so that our meditation on this topic will be successful. Pushing ourselves is counterproductive. Thus if you don’t feel capable of exchanging self with others yet, focus on cultivating love and compassion and engage in practices of purification and collection of merit to strengthen your mind. It is also helpful to request your spiritual mentors and the buddhas for inspiration. When you feel more confident, return to the meditation of exchanging self and others.

Although we practice the meditation of exchanging self and others, on a practical level we still must take care of our body and mind. We’re the only one who can do that, and we need to preserve our precious human life for the sake of others. Looking out for our own well-being at the expense of others is selfish, yet caring for our health and safety as one person among many is a valid concern. Everyone has a natural sense of wanting happiness and freedom from suffering. In and of itself, this wish is not negative. When supported by wisdom, it induces us to discern the causes of happiness and the causes of suffering and to practice the former and abandon the latter. As

our compassion and wisdom grow, so will our ability to exchange self and others.

Deep understanding is necessary to effect such a dramatic change in attitude. Exchanging ourselves with others is not something we can intellectually force on ourselves, and simply telling ourselves we should feel it will not change our attitude. Firm conviction that self-centeredness is our enemy and that cherishing others is beneficial is needed. This conviction comes only through familiarization over time. There is no shortcut. While exchanging self and others may initially seem frightening, with familiarity and practice it will become joyful and easy.

### *Using Jealousy, Competition, and Arrogance in the Exchange*

To demolish our self-centered attitude and hit it at its vulnerable points, Śāntideva describes a meditation in which we exchange ourselves with others and then cultivate jealousy, rivalry, and arrogance toward our old self. This mimics and then inverts the emotions our self-centered attitude usually holds toward people we consider better, equal, or inferior to us. In the following verses, “I” refers to other sentient beings, those who are to be cherished, and “he” refers to our self-centered attitude that is the source of our misery. In other words, we adopt the perspective of others — now called “I” — and criticize our self-centered attitude — now called “he” or “others” (BCA 8.146):

Indifferent to the plight of living beings,  
who tread the brink of unfortunate rebirths,  
he makes an outward show of virtues,  
even sets himself among the perfect!

This verse shows contemptuous jealousy toward the self-centered attitude, looking at it the same way as other beings do. He (our self-centered attitude) does not care about others’ plight but sees himself as the most wonderful being, making a show of being virtuous when he is anything but that. Furthermore, he has high status; we are no one and are jealous of and resent him. Thinking in this way helps us to see how misplaced our self-

preoccupation is, generating within us the determination not to bow to its antics.

The following verses are the means to compete with our self-centered self (BCA, 8.148–49):

By every means I'll advertise  
my gifts to all the world,  
ensuring that his qualities  
remain unknown, ignored by everyone.

My faults I will conceal, dissimulate,  
for I, not he, will be the object of devotion;  
I, not he, will gain possessions and renown;  
I will be the center of attention.

Usually we compete with others, bragging of our own good qualities and ignoring theirs; we make ourselves the center of attention, the one who is famous and respected, and we either put others down or treat them as if they were nonentities. In the above verses, we identify with others and turn that same attitude toward our self-centered attitude, the source of all pain and misery. Truly, our self-centered attitude should be disparaged and neglected.

The following verse illustrates arrogance toward our self-centered attitude. The voice of others (now I) is being arrogant toward our self-centeredness (he) (BCA 8.153):

Granted, even if he does have something,  
I'm the one he is working for!  
He can keep enough just to survive,  
but with my strength I'll steal away the rest.

If the self-centered self possesses wealth, reputation, and so forth, since it is now the servant of others, it should work for their benefit. We (others, whose welfare is more important) will allow him (our self-centered attitude) to keep enough to stay alive, but even then that is just so that he has the energy to serve us.

This verse reminds us of a useful attitude to cultivate toward our possessions, good reputation, and so forth. With love we offer ourselves to all sentient beings as their servants to lead them to temporal and ultimate joy. Mentally we give them all our possessions. Having done so, we must now use these items only for their benefit, never with self-centered concern. Similarly, any good reputation we have is offered to others and used solely for their benefit; we are not arrogant with respect to our own accomplishments, bragging or showing off to others in a way that humiliates them. Gradually training ourselves to think in this way will free us from the tyranny of self-centeredness.

Initially we may encounter difficulties with the meditation cultivating jealousy, rivalry, and arrogance toward our self-centered attitude and our old self. One obstacle is that we are so habituated with self-identification, referencing everything to ourselves, that it's hard to understand the use of "I" and "he" in these verses. With repeated practice, this can be overcome.

Another obstacle is that emotions of resentment, competition, and conceit are so despicable that we wonder what the use of cultivating them is; in fact, it seems rather unbecoming or perhaps even damaging as Dharma practitioners to dredge up these feelings. This meditation does indeed play on the repulsiveness of these emotions, but this time their object is our self-centered attitude, not other sentient beings. In this way, they are used as tools to show us just how contemptible our self-centeredness is so that we will stop following its dictates.

### *How to View the Body*

After exchanging self with others and caring for others the way we care for ourselves, we need to adopt a suitable view toward our present body. In the four establishments of mindfulness, we contemplate the foul nature of this body produced by afflictions and polluted karma. That meditation spurs us to seek liberation from cyclic existence to free ourselves from taking problematic bodies that age, fall ill, and die. Śāntideva now builds on that meditation, encouraging us to cease pampering our bodies and instead use them to work for others' welfare and create the causes for buddhahood. Similar to the meditation on selflessness in mindfulness of the body,

Śāntideva encourages us to counteract the grasping that holds this body as I and mine and to release the obsessive, self-preoccupied worry and attachment we have toward the body. Doing that lessens the suffering caused by clinging to this body and enables us to dedicate our body to practice the path to awakening and to engage in activities that bring happiness to all sentient beings. In his usual forthright style, Śāntideva says (8.178–80, 8.184):

In the end my body will turn to dust;  
unable to move by itself, it will be propelled by other forces.  
Why do I grasp this unbearable  
and unclean form as I, my self?

Whether it lives or whether it dies,  
what use is this machine to me?  
How is it different from a clod of earth?  
O why do I not dispel this conceit of self?

Through lavishing attention on this body,  
such sorrow have I brought myself, so senselessly.  
What use is all my wanting, all my hating —  
for what indeed is like a log of wood?

Therefore, in order to benefit all beings  
I shall give up this body without any attachment.  
Although it may have many faults,  
I should look after it while experiencing the results of my previous  
karma.

Our body is simply a compilation of material elements. Why, then, do we think of it as I and mine? Since it is like an inanimate machine or a clod of dirt, it doesn't make sense for me to generate the conceit of "I am" toward it. Since beginningless time I've treasured and pampered whatever body I had as if it were a pleasure palace. I've craved sensory pleasures, hated

others who prevented me from getting them, and created great destructive karma by doing so. My past behavior was senseless because this body itself is like an inanimate log. Seeing my folly, I will now devote my physical energy to benefiting others. Even though this body has faults — it ages and dies — I will care for it properly and use it for a good purpose.

The *Akṣayamati Sūtra* instructs bodhisattvas how to think about the body:<sup>38</sup>

“I should throw this body into the needs of all sentient beings” . . . Regarding the body as dedicated to this goal, [a bodhisattva] looks at physical pain and is not distressed, but takes care of sentient beings.

Bodhisattvas who cherish others from the depth of their hearts and have practiced exchanging self and others can practice this sincerely, without fear for what will become of themselves. Thinking in this way gives them great joy — joy that is greater than any self-centered happiness we may ever experience.

Such bodhisattvas imbue habitual daily actions with love and compassion and transform what ordinary beings consider unpleasant into an opportunity to benefit others. For example, the *Heap of Jewels Sūtra* (*Ratnakūṭa Sūtra*) counsels bodhisattva monastics who enter a village on alms round but do not receive any food to think:<sup>39</sup>

“These Brahmins, leading merchants, and religious wanderers are so busy, they certainly [have no time] to give to me. It is a wonder that they notice me at all! How much more unusual it would be if they gave me alms.” Not discouraged in this way, he should go for alms.

And as for those sentient beings who come into his field of vision, women, men, boys, and girls, even including animals, he should arouse thoughts of lovingkindness and compassion towards them all . . .

Whether the alms-food he receives is of good quality or of poor quality, he should look around to all four directions,

thinking, “In this village, town, or city, who is a poor person with whom I can share this alms-food?” If he sees a poor person, he shares his alms-food with that person. If he does not see any poor people, he should think, “There are unseen sentient beings who do not come into my field of vision. I give them the best share of this alms-food. May they accept it and eat it!”

For people who have equalized and exchanged self and others, such thoughts and practices as these arise spontaneously in their minds. Those of us in training should try to remember to think like this. Although initially such thoughts are fabricated and our self-centered attitude may rebel, with repeated meditation on exchanging self and others and continuous practice in daily life situations, our minds will come to cherish others as much as, if not more than, we currently cherish ourselves.

### *Taking and Giving*

The taking-and-giving meditation has its source in the *Precious Garland*, where Nāgārjuna says (RA 484cd):<sup>40</sup>

May their ill deeds ripen on me  
and all my virtues ripen on them.

This meditation is also championed by Śāntideva. Because it is so powerful, in the past it was practiced privately and taught only to advanced disciples who were spiritually prepared. Even the thought of experiencing our own suffering, let alone taking on others’ suffering, is anathema to most people. Similarly, to consider offering our body, hard-earned wealth, and merit to others is antithetical to our ingrained self-centeredness.

It wasn’t until the twelfth century that the spiritual mentor Kadampa Geshe Chekawa (1102–76) dared to publicly teach this meditation. He taught the practice to a group of lepers, who cured themselves of leprosy by doing it. Wanting these teachings to be available to others, he composed the now-classic text *The Seven-Point Mind Training*. In our time the practice is taught more openly and people find it very helpful.<sup>41</sup>

The taking-and-giving practice helps to further increase our love and compassion and our capacity to exchange self and others. *Taking* entails generating the compassionate wish “I will take all problems, sufferings, and confusion of other sentient beings on myself so that others may be free from them.” *Giving* is motivated by love: “I will give my body, possessions, and virtuous qualities and their causes to others so that they may be peaceful and happy.” Through this we generate a very courageous and resolute mind that will make our bodhicitta effective.

### ***Taking***

To practice taking, imagine a specific person or group of people in front of you and contemplate the duḥkha they experience. As compassion arises, think, “I will take on their duḥkha so that they will be free of it.” Imagine their duḥkha leaving them in the form of dark clouds, smoke, or pollution and entering you as you inhale. Think how wonderful these beings feel now that their duḥkha has left them.

Now use what sentient beings don’t want — their suffering and afflictions — and use it to destroy what you don’t want — your self-centered attitude and self-grasping ignorance. At your heart is a dark lump, the embodiment of your own self-centered attitude and self-grasping ignorance. As the clouds, smoke, or pollution enters you, it transforms into lightning that strikes this lump, shattering it so that it no longer exists. Feel the freedom and great spaciousness at your heart now that these two have been forever destroyed.

If it is initially difficult to think of taking on others’ suffering, begin by taking on the suffering you will experience later on in this life as you age, fall ill, or have interpersonal problems. Take on this suffering of your future self voluntarily, and imagine that doing so eliminates your present self-centeredness. Then imagine transforming your present body, possessions, and merit into everything you will need in the future, and give it to your future self, who receives it happily. After you become familiar with this practice, contemplate taking on others’ suffering and its causes and giving them your happiness in the form of whatever will bring them temporal and ultimate bliss.

When you are ready to develop this meditation further, imagine taking the duḥkha of the sentient beings of the three realms. Then take the obstacles to the long life and successful deeds of the spiritual masters, buddhas, and bodhisattvas, as well as the hindrances to the existence and flourishing of the Buddha's teachings in the world.

After taking these, think that all beings are liberated from their suffering and its causes because you have taken them and think that your self-centeredness and grasping an inherently existent I are destroyed. In other words, you have taken what others don't want — their duḥkha — and used it to destroy what you don't want — your self-centered attitude. Meditate on emptiness for a while, feel the spaciousness, the absence of self-grasping and self-centeredness. Then, thinking that everything is dependently arising and is like an illusion, train in generosity.

### ***Giving***

In that clear, open space at your heart (the heart cakra at the center of your chest) appears a beautiful light, the embodiment of your love. With that sentiment, give to others all they need to find temporal happiness while they are in saṃsāra and, more important, all the conditions to attain the ultimate bliss of buddhahood. Here, visualize giving first your body, which transforms into a wish-fulfilling body that gives others everything they desire, principally a precious human life so they can practice the Dharma. Your wish-fulfilling body purifies sentient beings' environments so they have the necessities of life, including a good education, understanding friends, and community members who think of benefiting one another. Imagine they have all the necessary circumstances for practice, especially interest from their own side as well as spiritual mentors, teachings, and Dharma friends nearby. Think that they practice and then realize the entire path to awakening. Second, visualize giving your possessions, which transform into what others need. These give others perfect conditions so they have temporal happiness and conducive circumstances to learn and practice the Dharma. Third, visualize giving your merit, which gives others the good karma you have accumulated so they can progress on the path.

When you give to āryas and arhats, think that their last remaining obstacles to liberation and omniscience are purified and that they become

buddhas. When giving to buddhas, imagine that your body, possessions, and merit transform into magnificent offering objects that please them, giving rise to great bliss in them.

Do the visualization of giving as you exhale; imagine offering to sentient beings whatever they need on light rays radiating from your heart. Feel great contentment and joy that you are able to benefit sentient beings in this way.

### ***How to Progress in This Practice***

At the beginning, it may be helpful to imagine taking on your own future suffering of tonight, tomorrow, and the rest of this life and giving happiness to your future self. Then expand to take the suffering of dear ones and to give them happiness. Expand it further to take and give to strangers, then enemies, then all beings.

Having taken on sentient beings' duḥkha, don't neglect to transform it into lightning (or whatever cleansing agent appeals to you) and destroy your self-centered attitude and self-grasping ignorance. Stop and feel the effect of that within yourself. Imagine what it would be like to be free from the constant attachment, fear, and worry about the self. Imagine feeling the openness of genuine love and compassion that can welcome anyone into its space.

Take your time doing these visualizations and allow yourself to feel love and compassion as well as relief and delight at being instrumental in dispelling others' burden of duḥkha and bringing them both ordinary and long-term satisfaction and bliss. Taking and giving can be done elaborately, taking on each suffering, cause, and obstacle of each realm individually and giving each object to beings in each realm separately. The practice can also be done in a condensed way, according to the time available.

This practice is very effective when you're sick or depressed, when you have obstacles in your practice, or when someone you are close to is sick. Do it to remove hindrances in the world around you, such as political turmoil, climate change, corruption, and so forth. Instead of rejecting this duḥkha, take it on yourself so that others are free from it and you are liberated from the self-centered attitude and self-grasping.

After the riots in Tibet in the spring of 2008 during which many people — Tibetans and Chinese alike — were killed or injured, I did the taking-and-giving meditation with respect to the Chinese leaders and policymakers. Cultivating compassion toward them, I imagined taking on their suffering, anger, and negativities and giving them my happiness and virtues. Although my meditation did not remove their animosity or change their policies toward Tibet, it did give me a greater sense of stability and calm as well as courage and compassion in the face of the tragic situation in my country.

When you are familiar with this practice, it can be incorporated with your breathing, taking on others' sufferings and their causes during each inhalation and giving them your body, possessions, and merit during each exhalation. If you wish, when taking imagine that others' *duḥkha* leaves them from their right nostril and enters into your left nostril. When giving, imagine that your gifts leave through your right nostril in the form of white light and enter others through their left nostril.

Practicing taking and giving for someone who is ill or experiencing difficulties and then dedicating the merit from that practice to them can benefit them by nourishing the conditions for their own good karma to ripen. Although we cannot in fact take the sufferings of others and give them our happiness, imagining that it is possible strengthens our courage, love, and compassion. It also eliminates any hesitation or reluctance to help others when we have the opportunity and propels us toward full awakening where we will have all the faculties necessary to be of the greatest service.

When doing the meditation seriously, anxiety may arise, fearing that perhaps this is not just a visualization but we may actually experience the suffering of others. At this time, use the fear to identify the object of negation in the meditation on emptiness, because at that time the ignorance grasping an inherently existent I is clearly manifest. Then using Madhyamaka analysis, refute the existence of such an I.

## REFLECTION

---

1. With compassion take on the problems and confusion of others by inhaling it in the form of black smoke.
  2. This turns into a thunderbolt of lightning that completely obliterates the black lump of selfishness and ignorance at your heart.
  3. Feel the open space, the lack of wrong conception about self and others, the absence of self-preoccupation.
  4. In this space, imagine a white light that radiates to all beings and think that you are increasing and transforming your body, possessions, and merit into whatever others need and giving it to them.
  5. Imagine them being satisfied and happy and rejoice that you've been able to bring this about.
- 

### *True Practitioners*

One of my students told me about research he had done into the invasion of Nalanda Monastery in the thirteenth century. At that time, large numbers of monks were slaughtered. It seems that many monks were not afraid when they were being stabbed. We can't say that they didn't feel pain, because without pain they could not have practiced fortitude. They felt pain but, as a result of their great compassion, did not respond with anger or fear.

I heard a moving story of a monk who was the tutor of Jamyang Shepa's tulku.<sup>42</sup> I met him in 1955. He was a good monk and great learned adept who practiced the taking-and-giving meditation. In 1958 there was an uprising against the Communist Chinese in Amdo, the eastern area of Tibet. About two hundred monks from Labrang Tashikhyil Monastery were arrested, and about fifteen or twenty monks were executed. Among the latter was this monk. When he was brought to the execution place, he asked if he could pray before they shot him and recited the taking-and-giving verse from the "Guru Pūjā" (95):

Thus, venerable compassionate gurus, inspire me so all negativities, obscurations, and sufferings of mother beings ripen on me right now and I give my happiness and virtue to others, securing all wanderers in bliss.

This shows that he was a true practitioner. Ordinary beings would have had far too much fear and anger to even think of exchanging their happiness and virtue for the pain of others. Before beginning the taking-and-giving meditation, you may find it helpful to recite this verse.

### *Comparing and Combining the Two Methods*

The equalizing and exchanging self and others method for generating bodhicitta is more suitable for sharp-faculty disciples because it employs reasoning to establish others' equality. In the seven cause-and-effect instructions our fondness and compassion for sentient beings arises based on our family relationships and how family members have acted toward us personally — the kindness they have shown to us as our relatives. Equalizing and exchanging self and others does not require seeing ourselves as having been the recipient of kindness in a privileged relationship with sentient beings in the past. Rather we connect with them on a more fundamental level — each of us wants happiness and not suffering. Thus this method enables us to see the kindness of enemies without first transforming their appearance into someone pleasing, such as a relative.

The reasoning used by equalizing and exchanging self and others also brings in an understanding of the ultimate truth, emptiness. What we designate “I” and cherish and what we call “other” and neglect is not based on some inherent nature that I and others have. I and others are dependent on each other; they are also seen as mere designations, which loosens our grasping at self. For these reasons, equalizing and exchanging self and others is seen as a more profound method that is directed toward disciples with sharp faculties.

The two methods of cultivating bodhicitta may also be combined. This method is more effective for some people. Here the order for contemplating the topics is (1) equanimity regarding friends, enemies, and strangers, (2)

recognize all sentient beings have been your mother, (3) remember the love and kindness of others both when they have been your mother and when they have not, (4) wish to repay that kindness, (5) equalize self and others, (6) examine the disadvantages of self-centeredness and (7) the benefits of cherishing others, (8) exchange self and others, (9) take others' suffering with special emphasis on compassion, (10) give away your own happiness with special emphasis on love, (11) make the great resolve, and (12) generate bodhicitta.

To close this chapter, I'd like to quote a passage by Tsongkhapa that encapsulates the essential instructions. I found it very moving because bodhicitta is dear to my heart (LC 2.59):

Whether you plant the roots of the Mahāyāna or not, or whether you have genuinely entered the Mahāyāna or not, is all founded upon this [bodhicitta]. Therefore always consider what you should do to develop this. It is excellent if you do develop this; if you have not, do not let it remain that way. Always rely on a teacher who gives this kind of teaching. Always associate with friends who are training their minds in this way. Constantly look at the scriptures and commentaries that describe this. Amass the [two] collections [of merit and wisdom] as causes for this. Clear away the obstructions that prevent this. Moreover, if you train your mind in this way, you will definitely acquire all the seeds for developing this, so this work is not insignificant; take joy in it.

What better way is there to live than to generate bodhicitta? We live in challenging times where some ideologies of hate and prejudice are prevalent. Do not let yourself fall under their sway, but nourish the seeds of love, compassion, and altruism in yourself and then share the fruit of doing so with all living beings.

## 5 | Becoming a Bodhisattva

### *The Self-Centered Attitude and Self-Grasping Ignorance*

**S**ELF-CENTEREDNESS (T. *rang gces 'dzin*) and self-grasping (*ahamkāra*, T. *bdag 'dzin*) are not the same, although both hinder our progress on the bodhisattva path and are obstacles to buddhahood. Self-centeredness holds our own happiness as more important than that of others; self-grasping apprehends the self as inherently existent.

The self-centered attitude is neither an afflictive nor a cognitive obscuration. It is not a pollutant (*āsrava*, *āsava*) or a defilement (*mala*), nor is it the root of cyclic existence. It is often called an “inferior obscuration” that those following the bodhisattva path must prevent because it impedes their attainment of the nonabiding nirvāṇa of a buddha — the nirvāṇa that abides neither in the extreme of cyclic existence nor in the extreme of personal liberation. Although the self-centered attitude is called an “obscuration,” it is not an actual obscuration because it is not the object of abandonment of a path, as are the afflictive and cognitive obscurations. However, it is a hindrance for bodhisattvas to abandon.

Self-grasping ignorance is the root of saṃsāra; it grasps persons and other phenomena to exist inherently. It is an afflictive obscuration that has been eliminated by arhats and eighth-ground bodhisattvas.

Self-centeredness and self-grasping do not have a causal relationship — one does not cause the other. They are also not the same nature: if one exists in a person’s mindstream, the other is not necessarily present. Arhats have abandoned self-grasping but have subtle self-centeredness. Bodhisattvas below the eighth ground who freshly enter the Mahāyāna path (that is, they are not arhats who later enter the bodhisattva path) have self-grasping but do not have coarse self-centeredness. Coarse self-centeredness

is abandoned upon generating spontaneous bodhicitta and entering the bodhisattva path; subtle self-centeredness and its latencies are overcome upon attaining the eighth bodhisattva ground, although some sharp-faculty bodhisattvas eliminate them before that. Subtle self-centeredness does not manifest once sharp-faculty bodhisattvas reach the path of preparation and when middle-faculty bodhisattvas attain the path of seeing.

The self-centered attitude and self-grasping ignorance also have different counterforces. Bodhicitta is the opposite of subtle self-centeredness; the wisdom realizing emptiness is the antidote eradicating self-grasping ignorance. Bodhicitta is easier to understand than emptiness, but it is more difficult to realize and fully integrate in our mind. While emptiness is harder to understand, once understood properly it is easier to realize than bodhicitta. Śrāvakas lack the fortitude, effort, and courage to cultivate bodhicitta, although they understand and admire it.

Arhats have abandoned self-grasping; when they eat or put on clothes, they do so without any self-grasping or craving. But their motivation for doing these everyday actions is not concerned with benefiting all sentient beings; it is neutral, neither virtuous nor nonvirtuous. Bodhisattvas — even those who have not realized emptiness directly — do all activities, including everyday ones such as eating, dressing, breathing, or walking, with the virtuous motivation of bodhicitta. Although they are attending to their own needs, their motivation is to dedicate their lives to benefiting sentient beings. With great love and great compassion, they constantly direct their minds to what is most beneficial in the long term for all sentient beings. Here we see that it's not so much what we do, but the motivation with which we do it that determines whether or not an action is altruistic.

In Mahāyāna teachings, the disadvantages of self-centeredness are discussed at great length because it is an obstacle to generating bodhicitta and an impediment to attaining full awakening and to benefiting all sentient beings. A verse in the “Guru Pūjā” says, “This chronic disease of self-centeredness is the cause giving rise to unwanted suffering.” This does not mean that self-centeredness is the root of saṃsāric duḥkha. It is not; self-grasping ignorance is. Self-centeredness is the major impediment for entering the Bodhisattva Vehicle, and in this context it is considered worse than ignorance.

All people recognize coarse self-centeredness as harmful. It believes that our happiness and suffering are more important than that of others, that what we want to happen should happen, and that our opinions are right and our ideas are the best. This is the self-preoccupation that we see in children and that as adults we learn to hide under the pretense of gentility, although it is still present. Coarse self-centered attitude lies behind the creation of all destructive karma. It is involved with low self-esteem, guilt, rage, jealousy, greed, anxiety, and unhealthy fear. Self-centeredness chases others away and then we feel sorry for ourselves because we lack friends. Coarse self-centeredness supports afflictive minds and actions, and it harms living beings, whether or not they are spiritual practitioners. For that reason, the practice of loving-kindness and compassion in daily life is essential for combating it.

## REFLECTION

---

1. The self-centered attitude is neither an afflictive nor a cognitive obscuration. It is called an “inferior obscuration” that those following the bodhisattva path must prevent because it impedes attaining buddhahood.
2. Coarse self-centeredness considers ourselves more important than others. It is abandoned on generating spontaneous bodhicitta and entering the bodhisattva path.
3. Subtle self-centeredness is the mind that seeks liberation for ourselves alone. It and its latencies are abandoned upon attaining the eighth ground, although some bodhisattvas abandon it earlier. Bodhicitta is its antidote.
4. Self-grasping ignorance grasps persons and other phenomena to exist inherently. It is an afflictive obscuration that has been eliminated by arhats and eighth-ground bodhisattvas. The wisdom realizing emptiness is its antidote.

5. As you practice more, you'll be able to identify these in your mind and overcome them.
- 

### *Self-Interest and Self-Confidence*

When we hear about bodhisattvas and their ability to cherish others more than themselves, doubts may arise: If we abandon all self-interest and only cherish others, does that mean we neglect ourselves? If so, won't our own suffering increase?

Cherishing others does not mean that we ignore our own needs and care only for others. If we did that, we would fall into a deplorable state in which we could neither benefit others nor practice the Dharma. In that case, instead of our helping others, they would need to take care of us!

Not all self-interest is negative. While one type of self-interest is selfish and looks out only for ourselves, another is wise self-interest that understands that benefiting ourselves and helping others are not necessarily contradictory. The Buddha had both self-interest and care for others. As mentioned in the teachings on refuge, the Buddha's truth body is the fulfillment of his own interest or purpose in that he has purified his mind completely and possesses direct knowledge of all existents. His form bodies are the fulfillment of others' interest or purpose in that they enable him to manifest in various forms in order to be of benefit to all the sentient beings who are receptive. A practitioner attains the truth body and form bodies simultaneously, achieving her own purpose at the same time as achieving the purpose of others.

Similarly, while one sense of self (T. *nga'o snyam pa'i blo*, literally "the mind experiencing I am"), is a troublemaker, the sense of a conventional self is useful. The former is the self-grasping that is the root of saṃsāra. The latter is the sense of the conventional self that exists; it allows for us to have stable and realistic self-confidence. This self-confident sense of self must be stronger in bodhisattvas than in ordinary people because bodhisattvas are ready to forgo their own happiness in order to benefit others. Although many Westerners believe that healthy self-esteem is demonstrated by being a unique individual, for bodhisattvas self-esteem is

connected with extraordinary generosity and joyful relinquishment of self-centeredness.

Śrāvakas also have firm self-confidence and a strong, positive sense of self. They think, “I will restrain from destructive actions and cultivate the three higher trainings. I will attain liberation no matter what it takes.” Such self-confidence is not egotistical or arrogant; it aspires for what is virtuous without clinging to it. Wisdom is required to differentiate self-confidence and arrogance.

Self-confidence is essential to begin, continue, and complete the path to awakening. Without self-confidence at the beginning, we won’t even think to start on the path; without self-confidence in the middle, we’ll get discouraged and quit before attaining any enduring qualities; and without self-confidence at the end, we won’t share the results of awakening with others or work for their welfare.

Buddha nature is a valid basis on which to generate such self-confidence. Our buddha nature is stable and cannot be destroyed. Reflecting on emptiness helps us to recognize this buddha potential, for we see that the defilements are adventitious and can be removed. Compassion for others also builds self-confidence, as does remembering our precious human life, its meaning and purpose, and its rarity. It’s important that, as aspiring bodhisattvas, we cultivate such strong and resilient self-confidence.

## REFLECTION

---

1. There are two types of self-interest. One is selfish and looks out only for ourselves; another is wise self-interest that understands that benefiting ourselves and helping others can go together.
  2. There are two senses of self. One is the self-grasping that is the root of saṃsāra, which is the source of our duḥkha. The other is the sense of the conventional self that exists, which allows for stable and realistic self-confidence. Bodhisattvas must have strong self-confidence to complete the path and attain buddhahood.

## *Integrating the View with Bodhicitta*

Integrating the view of emptiness according to the Yogācāra or Prāsaṅgika Madhyamaka perspective aids our cultivation of bodhicitta by loosening rigid clinging to friend, enemy, and stranger, and to self and others. It also deepens our compassion for sentient beings under the control of afflictions and karma.

According to the Yogācāras, the seemingly external objects that appear to our sense consciousnesses have in fact arisen as a result of seeds on our foundation consciousness. These objects do not exist as separate entities from our mind, although they appear that way because the mind is obscured by ignorance. Regarding phenomena, they are like illusions in that they arise due to the same seed as the consciousness perceiving them. Some of the seeds on our foundational consciousness are karmic seeds that color our perspective according to the realm we are born in. For example, the appearance of fluid being pure nectar in the deva realm, water in the human realm, and pus and blood in the hungry ghost realm is a result of karmic seeds placed on our foundational consciousness by previous actions.

Seeing whatever appears to us as a karmic appearance loosens the solidity with which we ordinarily view sentient beings and the environment. From this perspective, friends, enemies, and strangers are simply karmic appearances, and thus having attachment, anger, and apathy toward them is misplaced. Similarly, attractive and unattractive objects, praise and blame, reputation and notoriety, and wealth and poverty are simply appearances to the mind due to the activation of karmic seeds. They lack any real external existence that is separate from the mind to which they appear.

Everything we encounter or experience that seems to be external and “out there” is created by the seeds on our foundational consciousness. Becoming angry when others criticize us or steal our possessions is inappropriate because these events occur due to the ripening of the seeds of our own previous actions that were nourished by self-centeredness. If we seek happiness, we need to subdue the self-centered attitude so that it does not provoke the creation of destructive karma. Ignoring others’ welfare only plants seeds of destructive karma on our mindstream, and these lead to our own suffering. On the other hand, if we habituate ourselves with cherishing

others and work to benefit them, our actions will be constructive. As a result, these seeds of constructive karma will ripen so that we will encounter pleasant situations and have all conducive circumstances for continuing Dharma practice. According to the Yogācāras, in addition to increasing our compassion and bodhicitta, meditating on the nonduality of subject and object is crucial. This meditation brings the understanding that the subject and object of our perceptions are produced from the same substantial cause — the seed in our foundational consciousness — in order to eradicate the ignorance that propels cyclic existence.

According to the Prāsaṅgika view, to integrate the view with bodhicitta we train ourselves to see that sentient beings as well as their suffering and happiness do not exist inherently. They are not solid things existing independent of all other factors, and their appearance to us as self-enclosed objects that exist from their own side is false. In this view, the chief culprit is self-grasping ignorance. The last three of the nine points of the meditation on Equalizing Self and Others show the falsity of seeing self and others as existing from their own side. In other words, what we call “self” does not exist in its own right; it exists by being merely designated in dependence on many factors, one of them being our perspective. From the perspective of all sentient beings except one (ourselves), what we call “self” is labeled “other.” As that is the case, what is so special about me? From the viewpoint of the vast majority of sentient beings our suffering and happiness are considered the experiences of another person, which makes them much less significant. When we understand that exchanging self and others is possible, then others’ happiness and suffering become our own, so how can we possibly dismiss them? Contemplating these questions enables us to greatly reduce our self-centered attitude and to increase our care for and engagement with the welfare of others.

Sometimes when we consider engaging the deeds of the great bodhisattvas, our mind is overcome with trepidation. What will happen to *me* if I help others selflessly? At these times, meditating on the lack of an inherently existent self is helpful to dispel this fear and clinging attachment to the self. In addition, contemplating that pain and pleasure, suffering and happiness, all exist as mutually dependent and thus are empty of having

their own inherent essence lessens our fear of suffering. In this way, our mind will be more courageous in extending ourselves to others.

Cultivating the compassion observing phenomena and the compassion observing the unapprehendable, which will be explained in chapter 6, changes our perspective. Briefly explained, with compassion observing phenomena we view sentient beings as impermanent and lacking a self-sufficient substantially existent self. Seeking happiness, ordinary beings turn to impermanent phenomena such as their aggregates, as well as people and things in the external environment, in the hopes of finding it. Because these phenomena lack the ability to give them lasting happiness, they remain continually disappointed, disillusioned, and frustrated. Seeing them suffer in this way due to the erroneous self-grasping in their minds increases our compassion for them.

Compassion observing the unapprehendable views sentient beings as empty of true existence. Because they grasp their own self, the selves of others, and all other things as truly existent, ordinary beings believe that such things can give them genuine happiness and are again left disappointed and befuddled. Configuring the world around a truly existent I, they divide others into friends, enemies, and strangers and think that they truly exist in that way. Grasping true existence, sentient beings continuously generate afflictions, which create karma, which in turn leads to *duḥkha*. Seeing sentient beings in this predicament increases our compassion for them.

### *Who Can Generate Bodhicitta?*

The precious bodhicitta can be newly generated by sentient beings with the physical support (body) of any of the six classes of migrating beings who have faith and regard for the Mahāyāna teachings and for awakening. There is some discussion about hell beings who newly generate bodhicitta, however. There is a story about Śākyamuni Buddha, who, before he became a buddha, was born in a hell realm in a previous life. Some say he generated bodhicitta then, although others assert that he generated the cause of bodhicitta — compassion — at that time, and generated bodhicitta in a later rebirth. Clearly, doing the meditations to cultivate bodhicitta and actually generating it are easier when we have a precious human life.

Regarding the mental support for newly generating bodhicitta, some say it must be either a preparation of the first dhyāna or an actual dhyāna. Others say that serenity is not necessary, although certainly a good degree of concentration is necessary to familiarize the mind with the steps to develop bodhicitta and to change the ingrained habit of self-centeredness to the mind that cherishes others more than self.

In Asaṅga's *Bodhisattva Grounds* and Atiśa's *Lamp of the Path*, it is said that the support of engaging bodhicitta must be one of the Pratimokṣa ethical codes. However, this is considered a special support that is more advantageous but not necessary.

Do buddhas have bodhicitta? In the *Ornament of Clear Realizations*, Maitreya described twenty-two kinds of bodhicitta by way of similes. There he said that the last two are possessed only by buddhas. Seeking the awakening of others, their bodhicitta enables their two form bodies to lead sentient beings to full awakening. Some learned adepts say that buddhas possess bodhicitta by way of fulfillment. That is, although they have attained full awakening, their aspiration for bodhi has not been relinquished; it has been fulfilled. Nevertheless, there are some learned adepts who say buddhas don't have bodhicitta because they have already attained full awakening.

### *Definite and Indefinite Lineage*

There are three lineages or types of beings: those of śrāvaka, solitary realizer, and bodhisattva (Mahāyāna) lineages.<sup>43</sup> Some people are definite in one of the lineages — that is, they will definitely enter a particular vehicle. Other people are indefinite; various conditions will influence which vehicle they enter. An ordinary being who is definite in the Mahāyāna lineage will directly enter the Mahāyāna regardless of the teacher they meet, while an ordinary person who is indefinite in the Mahāyāna lineage may first enter the Śrāvaka Vehicle if they meet a teacher following the Śrāvaka Vehicle, or they may directly enter the Mahāyāna if they meet a Mahāyāna teacher. In other words, there is no certainty which path the person who is indefinite in lineage will initially follow. It depends a great deal on the teacher they decide to follow. However, someone may be definite in the śrāvaka lineage,

progress through the five śrāvaka paths to become an arhat, and later enter the Mahāyāna, progress through the bodhisattva paths and grounds, and become a buddha.

Why are some people definite in lineage while others are not? The main factor is what they have come to value and appreciate over many lifetimes. For example, some people may hold compassion and altruism as primary virtues and seek a path that details a step-by-step method to develop them. They may have a very courageous and strong mind that can endure assuming the responsibility to lead all sentient beings to awakening. Such people will probably be attracted to the Mahāyāna. Other people may be more cautious, thinking that there are too many sentient beings to lead them all to awakening, that the Mahāyāna path takes too long or is too difficult, or that the result of the Mahāyāna, full awakening, is too high or is impossible to attain. The mind of such people is not strong at the present moment, and as a result they will think that attaining their own liberation is best.

However, a person's karmic latencies from previous lives and the dedication prayers they made in previous lives may also play a powerful role regarding which vehicle they enter in this life. For example, someone may have followed the Mahāyāna in previous lives and have made strong dedication prayers at that time to meet, learn, and practice the Mahāyāna in all future lives. They may have made strong aspirations to meet fully qualified Mahāyāna teachers and to follow their instructions in future lives. Due to these strong latencies from previous lives, these people will meet Mahāyāna teachers and will naturally want to follow that path. Other people may have followed the Śrāvaka Vehicle in previous lives and, having felt comfortable practicing the Dharma in the way it teaches, dedicated to meet Śrāvaka Vehicle spiritual mentors and practice that vehicle in future lives. They will naturally be attracted to the Śrāvaka Vehicle and enter that.

### *Can Bodhicitta Degenerate?*

Once generated, bodhicitta may degenerate. Although bodhisattvas who are definite in the Mahāyāna lineage will not lose their bodhicitta and fall from the Mahāyāna path, bodhisattvas who are indefinite in the Mahāyāna

lineage can. This occurs on the initial level of the path of accumulation before they reach the middle level of that path. It is especially important to guard against anger and frustration, as these are the main causes of abandoning bodhicitta. For example, someone we help may return our kindness by betraying our trust, criticizing us, or blaming us when things go wrong. It is very easy in such situations to get fed up and exasperated, thinking that sentient beings — or even just this one person — are too corrupt, selfish, or unappreciative for our goodwill to affect them in a positive way. Under the sway of anger, we either strike this person from our compassion or abandon the wish to benefit all sentient beings and relinquish the aspiration to attain buddhahood for their sake. Because bodhicitta aspires to benefit *all* sentient beings, omitting even one sentient being from the scope of our bodhicitta constitutes abandoning bodhicitta.

### *Signs of Irreversibility*

On the path to buddhahood, there are forty-four signs of irreversibility that illustrate that bodhisattvas will not turn back from seeking full awakening but will proceed directly to it. A bodhisattva who has attained any of these forty-four signs, such as having turned away from manifest grasping to forms and so forth as truly existent, is a bodhisattva with signs of irreversibility. According to the *Ornament of Clear Realizations*, such bodhisattvas range from the heat level (the first of four levels) of the path of preparation through to the end of the continuum of a sentient being (the moment just before attaining buddhahood). Bodhisattvas on the path of accumulation have stopped interest in their own liberation from manifesting, but they haven't eliminated all propensities to seek only their own liberation and they haven't received a sign of irreversibility.

Attaining irreversibility is supported by attaining fortitude of the nonarising of phenomena (*anutpattika-dharma-kṣānti*), which is a realization of emptiness. This conviction in emptiness buoys bodhisattvas as they continue to work for the welfare of sentient beings; all fear of the path being difficult is banished, for they are fully confident in emptiness. Knowing that there are no inherently existent sentient beings to be liberated

from saṃsāra and no inherently existent holy beings to lead them to awakening, bodhisattvas are irreversibly headed to full awakening.

We can often, but not always, tell if a person has excellent qualities by observing how they speak and act. However, some people who have ill intentions act nicely and some people who have kind intentions don't express themselves well. Because we are limited beings who see other people through the veil of our ignorance and afflictions, we cannot clearly distinguish people's qualities and cannot see the signs of irreversibility in others. As our minds become clearer, we'll be able to discern others' excellent qualities.

Bodhisattvas may attain signs of irreversibility at three points of the path. Sharp-faculty bodhisattvas attain them at the earliest on the heat level of the path of preparation, middling-faculty bodhisattvas on the path of seeing, and modest-faculty bodhisattvas on the eighth ground.<sup>44</sup> The irreversible bodhisattvas of the eighth ground and above are a refuge for all beings because their pristine wisdom is close to the tathāgatas' pristine wisdom that knows things just as they are and the tathāgatas' pristine wisdom that knows the varieties of phenomena.

The stains of the self-centered attitude may exist up to the eighth ground, but not after that. By the eighth ground, bodhisattvas have completely overcome any propensity for the individual liberation of an arhat and have also eradicated the seeds of this propensity.

### *Classifications of Bodhicitta*

The *Ornament of Clear Realizations* speaks of several ways to classify bodhicitta: according to its name, its nature, its aim, and similes and accompanying features. The *Ornament of Mahāyāna Sūtras* explains bodhicitta according to its levels. Thinking of bodhicitta from these different viewpoints gives us a broader perspective on this precious mind and how it functions to propel us on the path to awakening and to bring about the happiness of sentient beings.

#### *According to Its Name*

Here bodhicitta may be classified as conventional and ultimate:

*Conventional bodhicitta* is the altruistic intention that is a primary mind held by two aspirations: the aspiration to benefit sentient beings and the aspiration to attain full awakening in order to do so most effectively. This is what is commonly called “bodhicitta” or the “altruistic intention,” and most of the following classifications are ways to speak about conventional bodhicitta.

*Ultimate bodhicitta* is the pristine wisdom in the continuum of an ārya bodhisattva or a buddha that directly perceives the emptiness of inherent existence. In other words, ultimate bodhicitta is the direct perception of the nature of complete awakening that is informed by conventional bodhicitta. While śrāvakas have realized emptiness directly, their realization is not informed or supported by conventional bodhicitta, and so they do not possess ultimate bodhicitta. The ten bodhisattva grounds (*bhūmi*) are divisions of the ultimate bodhicitta.

Ultimate bodhicitta can be understood in two ways. The first is in common with Sūtra as explained above. The second is unique to Tantra: in highest yoga tantra, the fundamental innate clear-light mind that is focused on emptiness is ultimate bodhicitta. The object is the subtlest object — the emptiness of inherent existence — and the mind realizing it is the subtlest subject — the fundamental innate clear-light mind.

Categorizing bodhicitta according to the name given indicates that the division into conventional and ultimate bodhicitta is a terminological division. That is, although given the name “bodhicitta,” not all of the subdivisions are actual bodhicitta. In this case, conventional bodhicitta is actual bodhicitta, but ultimate bodhicitta is not, even though it is given the name “bodhicitta.” Conventional bodhicitta is so called because it is involved with conventional truths, such as sentient beings, whereas the object of ultimate bodhicitta is ultimate truths.

Conventional bodhicitta exists from the Mahāyāna path of accumulation through the buddha ground (i.e., in the mental continuum of a buddha). Ultimate bodhicitta is a Mahāyāna ārya’s primary consciousness that directly realizes the emptiness of inherent existence of full awakening. It exists from the first bodhisattva ground through the buddha ground. Together conventional and ultimate bodhicitta represent the method and wisdom sides of the path.

These two bodhicittas are the essence of the Mahāyāna path and are very precious and amazing. Nāgārjuna praises bodhisattvas (BV 87–88):

This is indeed amazing, praiseworthy it is;  
this is the excellent way of the sublime;  
that they give away their own flesh  
and wealth is not surprising at all.

Those who understand this emptiness of phenomena  
Yet [also] conform to the law of karma and its effects,  
that is more amazing than amazing!  
that is more wondrous than wondrous!

The first verse speaks of the magnificent qualities of conventional bodhicitta in terms of equalizing and exchanging self and others. That bodhisattvas cherish others to such an extent that they can give away their body — not to mention their possessions — is an amazing quality to be honored. In terms of the method aspect of the path, there is nothing more magnificent than bodhicitta.

The second verse praises ultimate bodhicitta. A bodhisattva with the correct view avoids the two extremes of absolutism and nihilism and is able to live according to the law of karma and its effects while at the same time understand that all phenomena are empty of true existence. In terms of the wisdom aspect of the path, there is nothing more marvelous than ultimate bodhicitta.

### *According to Its Nature*

According to its nature, bodhicitta may be classified as aspiring or engaging:

*Aspiring bodhicitta* is the wish to attain full awakening for the benefit of all sentient beings.

*Engaging bodhicitta* is that wish when it is strong enough to motivate us to engage in the bodhisattva deeds and assume the bodhisattva ethical code.

Both aspiring and engaging bodhicitta are actual bodhicitta. They will be explained in more depth in chapter 7.

### ***According to the Aim***

People may generate bodhicitta in different ways according to how they see themselves leading sentient beings to awakening. Each of these ways requires great self-confidence.

With *monarch-like bodhicitta*, bodhisattvas aspire to become fully awakened buddhas and, like leaders with great capabilities and power, to then work for the welfare of the general population. They think, “Just as a monarch leads others, I will attain awakening first and lead others there.”

With *boatman-like bodhicitta*, bodhisattvas progress to awakening together with other sentient beings, just as a boatman rows others across a river and arrives at the other shore at the same time as the passengers. These bodhisattvas think, “Sentient beings and I are in the same boat in the ocean of cyclic existence. I will row them across, and we will reach the other shore of nirvāṇa together.”

With *shepherd-like bodhicitta*, bodhisattvas intend to attain awakening after leading others to awakening, similar to a shepherd driving the flock in front of him to the destination. These bodhisattvas think, “I will guide sentient beings to awakening, like a shepherd guides his flock. After they have attained awakening and are safe, I will attain awakening.”

Bodhisattvas may meditate on each of these three types of bodhicitta because each one brings out a particular quality in their bodhicitta. Nevertheless, they know that in order to benefit others most effectively, they must attain awakening first and then lead others. Guiding all sentient beings to awakening and later attain awakening or attaining awakening at the same time as all others is not the most effective way to serve sentient beings.

### ***According to Similes and Accompanying Features***

By comparing the bodhicitta found on the successive levels of the path to various pure or lovely things around us, we can see how bodhicitta spreads joy to sentient beings and acts as the source of all of a buddha’s realizations. Contemplating these poetic similes of twenty-two types of bodhicitta from

the *Ornament of Clear Realizations* gives us a vision of the qualities we can develop and realizations we can gain by generating bodhicitta in our hearts and minds and living our lives according to it. Each type of bodhicitta is correlated with a level of the bodhisattva path and has an accompanying feature that enhances it. All twenty-two types of bodhicitta have the same object — sentient beings — and aspect — the wish to protect them from all samsāric duḥkha.

1. Found on the small path of accumulation, *earth-like bodhicitta* is accompanied by aspiration. Just as the earth is the basis for planting and growing crops, the aspiration of this bodhicitta makes it the basis for all the virtuous causes of buddhahood and is the source from which all attainments of the bodhisattva paths and grounds arise.
2. Found on the middle path of accumulation, *gold-like bodhicitta* is accompanied by intention. Just as gold is pure and never loses its nature of being pure gold no matter how it is examined, the bodhicitta accompanied by an intention is stable and never loses its character of benefiting others until we attain awakening.
3. Found on the great path of accumulation, *bodhicitta like the waxing moon* is accompanied by a special resolve. Just as the moon gradually becomes brighter and eliminates darkness, the special resolve of this bodhicitta grows in strength and helps to continuously increase the collections of merit and wisdom as well as virtuous qualities and knowledge, such as the thirty-seven harmonies with awakening.
4. Found on the path of preparation, *fire-like bodhicitta* is accompanied by application to meditate on the similitudes of the three exalted knowers. Just as fire consumes its fuel, with application to meditate on the similitudes of the three exalted knowers this bodhicitta enables bodhisattvas to meditate on emptiness with the union of serenity and insight and to burn all manifest obstructions to the direct realization of emptiness. It eliminates obstructions to knowing the three unborn natures (emptinesses) that are the objects of the three exalted knowers, as

follows: (1) The exalted knower of the basis, which is the wisdom of śrāvakas āryas. It realizes the unborn nature (emptiness) of the four truths. (2) The exalted knower of the path, which is the wisdom of ārya bodhisattvas. It realizes the unborn nature of the five paths. (3) The exalted knower of all, which is the omniscient wisdom of buddhas. It realizes the unborn nature of the aspects of all phenomena.

Each of the following ten bodhicittas, from the fifth through the fourteenth, are associated with one of the ten perfections and one of the ten bodhisattva grounds.

5. Found on the first ground, the Very Joyful, *treasure-like bodhicitta* is accompanied by generosity. Someone with a great treasure never suffers from need and is able to fulfill her own and others' wishes. Similarly, this bodhicitta imbued with generosity is able to satisfy the needs of countless sentient beings. In even a single moment of generosity, bodhisattvas' virtue of generosity excels that of śrāvakas. As a result, the Very Joyful bodhisattvas never suffer from a lack of material possessions and bountifully share them with others. With this bodhicitta, bodhisattvas can convince the miserly to be generous.
6. Found on the second ground, the Stainless, *bodhicitta like a jewel mine* is accompanied by ethical conduct. A mine of jewels is filled with pure gems of various colors and sizes. Similarly, bodhisattvas with this bodhicitta engage in the surpassing practice of ethical conduct, which is the support of all jewel-like qualities, such as the powers of the Buddha.
7. Found on the third ground, the Luminous, *ocean-like bodhicitta* is accompanied by fortitude. Like a perfectly still, great ocean, this bodhisattva, who has a surpassing practice of fortitude, is never disturbed and remains calm no matter how much he suffers or is harmed by fire, weapons, and so forth.
8. Found on the fourth ground, the Radiant, *vajra-like bodhicitta* is accompanied by joyous effort. Just as a vajra is immovable and

unshakable, this bodhisattva, who has a surpassing practice of joyous effort, is never discouraged or shaken from her goal due to her firm conviction in unsurpassable awakening.

9. Found on the fifth ground, the Extremely Difficult to Overcome, *mountain-like bodhicitta* is accompanied by meditative stability. Just as a mountain is stable and does not move no matter what external forces are present, owing to her surpassing practice of meditative stability this bodhisattva can easily remain in firm concentration undistracted by the appearance of true existence.
10. Found on the sixth ground, the Approaching, *medicine-like bodhicitta* is accompanied by wisdom. Just as medicine cures all diseases, this bodhicitta, which is imbued with a surpassing practice of wisdom, cures all afflictive obscurations, such as attachment, and all cognitive obscurations as well.
11. Found on the seventh ground, the Gone Afar, *bodhicitta like a virtuous guide* is accompanied by skillful means. A virtuous guide or spiritual master is skilled in working for the benefit of disciples and subduing their afflictions. Similarly, a bodhisattva with this bodhicitta has the surpassing practice of skillful means, such that she never relinquishes the welfare of sentient beings and skillfully dedicates even a single moment of virtue so that it becomes infinitely great.
12. Found on the eighth ground, the Immovable, *bodhicitta like a wish-fulfilling gem* is accompanied by unshakable resolve. Someone who possesses this gem is able to fulfill all wishes by praying to it. Similarly, a bodhisattva with the surpassing practice of unshakable resolve can fulfill all his own and others' aims.
13. Found on the ninth ground, Excellent Intelligence, *sun-like bodhicitta* is accompanied by power. Just as the sun ripens plants, this bodhisattva, who has a surpassing practice of power, ripens the virtues of sentient beings by the four ways of maturing disciples.
14. Found on the tenth ground, the Cloud of Dharma, *bodhicitta like a melodious voice* is accompanied by pristine wisdom. Just as someone with a melodious voice draws others to himself and pleases them with his voice, a bodhisattva with this bodhicitta has

the surpassing practice of pristine wisdom that she uses to attract and please sentient beings with her interesting and pleasing teachings on ultimate and conventional reality.

15. Found on the three pure grounds, *monarch-like bodhicitta* is accompanied by the first five superknowledges. Just as a monarch who fulfills his or her duties properly has power and is able to benefit the populations of the land, this bodhisattva is skilled in the first five superknowledges and thus is strong, unshakable, and can manifest in many forms or display supernormal powers in order to benefit sentient beings according to their various dispositions and needs. Just as a monarch's decisions are clear and definitive, bodhisattvas with this bodhicitta clearly and correctly know what to abandon and what to practice and do not let realizations already attained go to waste.
16. Found on the three pure grounds, *treasury-like bodhicitta* is accompanied by the collections of merit and wisdom. Just as the royals' valuables are found in their treasury, one with this bodhicitta acquires the valuable collections of merit and wisdom that lead to the form body and truth body of a buddha in order to fulfill the needs of sentient beings. In the same way that the royal treasure is not easily exhausted, this bodhisattva's virtue — which is sustained by the accumulations of merit and wisdom — cannot be devastated by wrong views and so forth.
17. Found on the three pure grounds, *bodhicitta like a great path* is accompanied by the thirty-seven harmonies with awakening. Just as all travelers of the past, present, and future who are going to a magnificent land follow a great path, all ārya bodhisattvas of the three times go to buddhahood by means of practicing the thirty-seven harmonies with awakening.
18. Found on the three pure grounds, *bodhicitta like a conveyance* is accompanied by compassion and insight. Just as someone driving an excellent carriage is able to reach her destination easily and without danger, a bodhisattva with this bodhicitta excels in great compassion and insight into emptiness. He will reach the destination of awakening easily and without the danger of falling to

the two extremes of saṃsāra and the personal peace of an arhat's nirvāṇa.

19. Found on the three pure grounds, *fountain-like bodhicitta* is accompanied by retention and confidence. Coming from a constant source, fountain water is inexhaustible. Similarly, those with this bodhicitta have concentration that has the capacity to retain whatever they have learned, are learning, and will learn about what the Buddha has taught, is teaching, and will teach in the ten directions. Confidence causes them never to be exhausted.
20. Found on the tenth ground, *bodhicitta like a lovely voice* is accompanied by the celebration of the four seals. Just as one with a lovely voice pleases all who hear, a buddha pleases all those seeking liberation by giving inspiring teachings on the four seals.
21. Possessed only by a buddha and found in the continuum of the enjoyment body, *stream-like bodhicitta* is accompanied by the universal path. A stream flows naturally and without interruption; it does not discriminate who drinks from it, and it tastes the same to and refreshes all who drink its water. Similarly, by the power of compassion and wisdom, one with this bodhicitta realizes the nonduality of subject and object and spontaneously engages in diverse activities to benefit sentient beings. Buddhas dedicate their body, speech, and mind equally to all sentient beings without partiality. Their aid is available to all who wish to receive it.
22. Possessed only by buddhas and found in the continuum of the emanation body, *cloud-like bodhicitta* is accompanied by the truth body. Just as in space a cloud appears and showers rain that makes plants grow, in the space-like mind of a buddha, the cloud of bodhicitta forms and, by performing the twelve deeds of a buddha and giving teachings, realizations grow in the minds of sentient beings.

### ***According to Its Levels***

Maitreya's *Ornament of Mahāyāna Sūtras* (5.2) speaks of the bodhicitta present on various levels of the path:

Bodhicitta on the various levels is held  
To be accompanied by aspiration,  
pure special resolve, full maturity  
and the elimination of all obscurations.

The *bodhicitta of aspiration or belief* is found on the paths of accumulation and preparation. Of the twenty-two types of bodhicitta mentioned above, the first four are considered the bodhicitta of belief or faith. Of these, the first three are from the path of accumulation and the fourth is from the path of preparation. Generated by having faith and receiving teachings, this bodhicitta is called the “bodhicitta of belief” because bodhisattvas on the first two paths believe and think that all phenomena are empty of true existence, but they do not yet have direct realization of emptiness.

The *bodhicitta of pure special resolve* is found in the bodhisattvas from the first through the seventh grounds and includes seven of the twenty-two types of bodhicitta — the fifth through the eleventh. This bodhicitta is so-called because the bodhisattvas who possess it have direct realization of emptiness.

The *fully ripening bodhicitta*, which includes nine of the twenty-two types of bodhicitta (the twelfth through the twentieth) is found in bodhisattvas of the three pure grounds (eighth, ninth, and tenth). These three grounds are called “pure” because these bodhisattvas have purified all afflictive obscurations. The fully ripening bodhicitta is so-called because all aspirational prayers and dedication are ripening, and these bodhisattvas are about to attain the fully ripened result of full awakening.

The *bodhicitta free from obscurations* is found only in buddhas who are free from both the afflictive and the cognitive obscurations. These are the twenty-first and twenty-second types of bodhicitta. Nevertheless, the last three bodhicittas are subsumed under the category “the Buddha’s bodhicitta,” as the preparation, actual, and final bodhicitta of a buddha. *Bodhicitta like a lovely voice* is the preparation because the tenth ground is a preparation for full awakening. *Stream-like bodhicitta* and *cloud-like bodhicitta* are the actual and final bodhicittas of a buddha.

## REFLECTION

---

Reflecting on bodhicitta according to the twenty-two analogies and according to its four levels will give us a good sense of how bodhicitta grows and deepens as bodhisattvas progress through the paths and grounds.

1. What type of bodhicitta is present with each path and ground and what is the activity of each bodhicitta?
  2. How does each successive type of bodhicitta differ from the previous one? What does each type of bodhicitta do for the bodhisattva or buddha who possesses it?
  3. How does each type of bodhicitta, which is the method aspect of the path, relate to the wisdom realizing emptiness, which is the wisdom aspect of the path?
  4. Sit quietly and let your mind be inspired by knowing that there are beings who have generated such bodhicitta and that you can also generate it in the future.
-

## 6 | Homage to Great Compassion

**W**HETHER WE FOLLOW a religion or not, everyone appreciates compassion. Compassion is one of our first experiences as newborn infants, when our parents, doctors, and nurses welcomed us into this world with compassion. Others compassionately protected and cared for us and kept us alive when we were children. Compassion is a basic emotion, found even in animals. It arises naturally in us when beings we see as dear are suffering.

While this commonly shared compassion exists in all of us, it differs from the great compassion that Mahāyāna practitioners cultivate. Ordinary people extend compassion toward friends, family, and others who care about and help them. This compassion is usually biased and conditioned. It depends on how others treat us and is reserved for those we have cordoned off from the mass of sentient life and consider “dear ones.”

At present our compassion is limited in several ways: We feel compassion only when we see someone whom we care for suffer. We have a lesser degree of compassion when we hear of strangers suffering, and for people we don’t like, we may even rejoice, thinking that they are now getting a taste of their own medicine.

Our compassion is also limited in that it arises for those experiencing the *duḥkha* of pain — what all sentient beings consider as undesirable — but not for those who are young, healthy, rich, successful, talented, powerful, artistic, athletic, or attractive. Thinking that they are not suffering, we don’t feel compassion for them. We forget that they are imprisoned in *saṃsāra* owing to afflictions and polluted karma, and we neglect to consider that they’re experiencing the *duḥkha* of change and the pervasive *duḥkha* of conditioning.

Bodhisattvas, however, have compassion for these people, for they know that all sentient beings are submerged in the three kinds of duḥkha. Although people who are considered successful in worldly terms may not be experiencing gross suffering — the duḥkha of pain — at this moment, due to their ignorance and afflictions they are creating the causes to have such suffering in the future. Recognizing this, we cease to glorify or envy the wealthy, the powerful, and the famous. Not only do they often have great mental suffering, but through attachment, anger, and confusion, they create the causes for future duḥkha. Bodhisattvas see beyond the superficial appearances of this life and see sentient beings' actual situation in saṃsāra, which is truly terrifying. Their compassion arises naturally and impartially for all these people.

While we ordinary beings may have compassion for the poor and sick who live in other places, when we are in the same room with them, our disgust with their physical appearance or our fear of their illness or poverty squelches any compassion that may arise. We must remember that all these sentient beings, no matter their appearance during this life, want to be happy and free from pain, just like us. Furthermore, all of them have been kind to us in this or previous lives and will be kind to us in future lives.

The great compassion of bodhisattvas does not depend on whether others act kindly toward them or behave in ways that they approve of and appreciate. Great compassion extends to all beings equally and unconditionally. Spiritual practitioners who aspire to be bodhisattvas must consciously cultivate this compassion. It doesn't arise by praying to the Buddha or by sitting in a machine that alters our brain waves.

### *Compassion Is the Root of All Goodness*

In his homage at the beginning of the *Supplement*, Candrakīrti says (MMA 1–4c):

Śrāvakas and solitary realizers arise from the excellent sages  
(buddhas);  
the excellent sages are born from bodhisattvas;  
the mind of compassion, nondual awareness,

and bodhicitta — these are the causes of bodhisattvas.

Compassion alone is seen as the seed  
of a Conqueror’s rich harvest, as water that nourishes it,  
and as the ripened fruit that is the source of long enjoyment;  
therefore, at the start I praise this compassion.

Like a bucket in a well, migrators have no autonomy;  
first, with the thought “I,” they cling to a self;  
then, with the thought “mine,” they become attached to things;  
I bow to this compassion that cares for migrators.

[Homage to that compassion for] migrators  
seen as evanescent (fluctuating) and empty of inherent existence  
like the reflection of the moon in rippling water.

In this homage, Candrakīrti does not praise the buddhas and bodhisattvas, as we might expect, but instead praises great compassion, the attitude that wants to completely protect all the sentient beings wandering in saṃsāra under the control of afflictions and karma, and to lead them to liberation and buddhahood. There is great meaning to unpack in these inspiring verses. The first two verses praise great compassion without differentiating different types of compassion; the last two verses praise compassion by means of pointing out three types of great compassion.

The first lines of the homage say:

Śrāvakas and solitary realizers are born from the excellent sages  
(buddhas);  
the excellent sages are born from bodhisattvas . . .

Śrāvakas and solitary realizers are born from buddhas in that they hear teachings on the four truths and the twelve links of dependent origination from the buddhas. By contemplating and meditating on these teachings, they fulfill their spiritual aims and attain arhatship. “Śrāvaka” is translated as “listen and hear,” and these practitioners are so called because they listen

to correct teachings from others and later cause others to hear that they attained arhatship by saying (MN 27:26), “Birth is destroyed, the holy life has been lived, what had to be done has been done, there is no more coming to any state of being.” “Śrāvaka” can also mean “hearer and proclaimer” because they hear about supreme awakening and the path leading to it from the buddhas and then proclaim these teachings to those seeking the Mahāyāna path. We might think that bodhisattvas could then also be considered śrāvakas because they hear and proclaim the Mahāyāna path. However, there is a great difference between them: śrāvakas only hear and proclaim these teachings, whereas bodhisattvas practice and actualize them.

Unlike śrāvakas who can practice the path and become arhats in three lifetimes, solitary realizers amass merit and wisdom for a hundred eons before attaining arhatship. However, unlike bodhisattvas, they lack great compassion, and because of that their collections of merit and wisdom are considered secondary collections and not the fully qualified collections of bodhisattvas that lead to full awakening. Nevertheless, their secondary collections of merit and wisdom that are beyond those of śrāvakas allow solitary realizers to attain arhatship in their last saṃsāric life in the desire realm without depending on the teaching of another master. For this reason, they are called “solitary” realizers. Śrāvakas, solitary realizers, and bodhisattvas all realize the emptiness of inherent existence and meditate with that wisdom to attain the fruits of their respective paths. Śrāvakas and solitary realizers may have immeasurable compassion, but they lack the great compassion that shoulders the responsibility to liberate all sentient beings from saṃsāra.

Buddhas are born from bodhisattvas in the sense that through practicing the path of method and wisdom of the Mahāyāna, an individual bodhisattva will abandon all obscurations, perfect all realizations and excellent qualities, and become a fully awakened buddha. That buddha is in the same substantial continuum of that bodhisattva and thus is born from him or her.

The meaning of “born” in these two cases is different. In the case of śrāvakas and solitary realizers being born from buddhas, the buddhas are the cooperative condition supporting the śrāvakas and solitary realizers so they can achieve their respective awakenings. Although the buddhas themselves do not become śrāvakas and solitary realizers, they enable

others to do so by giving them Dharma instructions. In the case of buddhas being born from bodhisattvas, an individual bodhisattva is the substantial cause of the buddha he or she will become upon completing the Mahāyāna. That bodhisattva and that buddha belong to the same continuum.

Another way that a buddha can be born from a bodhisattva is the case of one bodhisattva being a cooperative condition for another bodhisattva to stabilize his bodhicitta. For instance, a senior bodhisattva encourages and instructs a beginning bodhisattva on how to secure and enhance his bodhicitta. When the younger bodhisattva later becomes a buddha, it can be said that the senior bodhisattva was a cause of that buddha because she helped his bodhicitta to expand and flourish.

Of course bodhisattvas are born from buddhas in the same way as śrāvakas and solitary realizers are — by hearing teachings given by buddhas. Candrakīrti specifically mentioned the buddhas teaching the śrāvaka and solitary realizer learners to demonstrate the crucial, indirect role that bodhicitta plays in their attaining arhatship. Even though the śrāvakas and solitary realizers don't generate bodhicitta themselves, their attainments ultimately derive from compassion because the buddhas who taught them the path attained supreme awakening in dependence on bodhicitta, which in turn is derived from great compassion.

## REFLECTION

---

1. In dependence on a buddha's great compassion, those inclined to the Śrāvaka and Solitary Realizer Vehicles receive the teachings that will lead them to liberation from cyclic existence.
2. Because of generating great compassion, those with Mahāyāna inclination will become bodhisattvas.
3. Through practicing the path of great compassion, those bodhisattvas will become buddhas who work for the welfare of all beings.

4. Let your mind rest in reverence for great compassion as the source for all goodness. Generate the aspiration to cultivate such compassion yourself.
- 

### *The Three Principal Causes of Bodhisattvas*

Candrakīrti continues:

The mind of compassion, nondual awareness,  
and bodhicitta — these are the causes of bodhisattvas.

His understanding is based on a passage by Nāgārjuna in *Precious Garland* (RA 174cd–175):

If you and the world wish to attain  
unparalleled awakening,  
its roots are the altruistic aspiration to awakening  
firm like the monarch of mountains,  
compassion reaching to all quarters,  
and wisdom not relying on duality.

Here three main causes of bodhisattvas are set out: compassion for each and every sentient being throughout space, nondual understanding that is free from the two extremes of absolutism and nihilism, and conventional bodhicitta, the primary mind that seeks to work for the benefit of all sentient beings and aspires to attain full awakening in order to do so most effectively. These three are said to be causes for a new bodhisattva, one who is now generating bodhicitta and entering the Mahāyāna path of accumulation.

### *The Mind of Compassion*

Many Mahāyāna authors say “compassion” when they mean “great compassion.” This may be done to keep the meter of verses they are writing, or just for convenience. When Candrakīrti cites compassion as the

cause of bodhisattvas in the above verse, he is referring to the great compassion that finds sentient beings' suffering unbearable and wants to alleviate it and lead them to nirvāṇa. This great compassion, which is possessed only by bodhisattvas, is a cause of bodhicitta.<sup>45</sup> Kamalaśīla tells us (LC 2.45):

When you have committed yourself to being a guide for all living beings by conditioning yourself to great compassion, you effortlessly generate bodhicitta, which has the nature of aspiring to unexcelled perfect awakening.

We will come back to the role of compassion in giving rise to bodhisattvas later.

### ***Nondual Understanding***

A question arises: First someone generates bodhicitta and becomes a bodhisattva. Then she trains in the six perfections. Only when she practices the perfection of wisdom does she gain the wisdom free from the two extremes. So how can nondual understanding be a cause for a bodhisattva when it is developed after one has already become a bodhisattva?

The nondual understanding that Candrakīrti refers to here is not an ārya's wisdom directly realizing suchness, where the appearance of subject and object and the appearance of true existence have totally vanished. Rather, it is a conceptual realization of emptiness, an understanding of nonduality cultivated by a practitioner with sharp faculties prior to becoming a bodhisattva. This wisdom is nondual in the sense of being free from the two extremes of absolutism and nihilism. It is an inferential realization of emptiness that has the appearance of subject and object and is not nondual in that sense.

Previously we discussed Mahāyāna practitioners with sharp faculties and those with modest faculties. To review, sharp-faculty bodhisattva-aspirants first establish the correct view of emptiness and then generate bodhicitta. Establishing the correct view of emptiness removes doubt and convinces them that attaining buddhahood is possible. How does this happen? By understanding that all persons and phenomena lack inherent

existence, they understand that ignorance is an erroneous consciousness. It can be eradicated by the wisdom realizing emptiness that perceives the opposite of what ignorance perceives. When ignorance is overcome, the afflictions that depend on it cease, as does the creation of polluted karma by the afflictions. In this way saṃsāra comes to an end and nirvāṇa is attained.

With the confidence that arises from knowing that liberation is possible, sharp-faculty bodhisattvas now generate bodhicitta, become a bodhisattva, and commit to follow the bodhisattva path to buddhahood. Before being certain that full awakening is possible, they do not want to make this promise.<sup>46</sup> Candrakīrti spoke of nondual awareness as the second of the three causes of bodhisattva and bodhicitta as the third because he was speaking primarily of sharp-faculty disciples.

A further question comes: Śrāvakas and solitary realizers also generate nondual wisdom, so why is it explicitly mentioned as a cause of bodhisattvas?

Although śrāvakas and solitary realizers cultivate the same wisdom as bodhisattvas, their spiritual aspiration is different: they seek the personal peace of nirvāṇa and, with strong renunciation of saṃsāra and aspiration to attain liberation, enter the Śrāvaka or Solitary Realizer Vehicles. By progressing through their vehicle's five paths, they attain arhatship. Some arhats have compassion and the mind wishing to benefit others, and some also have immeasurable compassion. However, they have strong yearning for their own nirvāṇa, which inhibits their wish to benefit others from being robust and resilient.

In the case of bodhisattvas, their realizations of emptiness and great compassion complement and assist each other. By realizing emptiness, they gain the direct antidote to the afflictions that cause saṃsāra. When they see sentient beings under the sway of afflictions that create the causes of suffering, bodhisattvas' compassion increases dramatically. That stimulates them to meditate on emptiness because the wisdom realizing emptiness is the only antidote that shatters cyclic existence completely. Understanding emptiness not only overcomes afflictions, it also reinforces the positive aspects of the mind, which, in turn, motivate bodhisattvas to deepen their realization of emptiness.

## ***Bodhicitta***

Another question arises concerning bodhicitta being a cause of a bodhisattva: Someone becomes a bodhisattva the moment he or she generates stable, uncontrived bodhicitta. How, then, can bodhicitta be a cause of a bodhisattva when it is simultaneous with becoming one? A cause must occur before its result.

Here, the bodhicitta that is said to be the cause of a bodhisattva is not full-fledged bodhicitta; it is the contrived bodhicitta we initially cultivate after meditating on the seven cause-and-effect instructions or equalizing and exchanging self and others. Both contrived bodhicitta and actual, uncontrived bodhicitta have the same observed object — full awakening — and both have the same aspect — they aspire to attain it. The difference between them is compared to the difference between tasting sugarcane bark and actual sugarcane. Sugarcane bark has a sweet flavor, but it's not the full taste of sugarcane. In the same way, contrived bodhicitta wishes to attain awakening to benefit all sentient beings but lacks the actual experience; it is a rudimentary bodhicitta. Bodhicitta like sugarcane bark is going in the right direction and is a necessary step that leads to the full experience of uncontrived bodhicitta, whereas uncontrived bodhicitta is firmly committed to attaining awakening for the sake of sentient beings.

Compassion is the chief cause of bodhicitta like sugarcane bark, which itself is a cause of actual bodhicitta and of bodhisattvas, so Candrakīrti could have mentioned just two causes of a bodhisattva: bodhicitta like sugarcane bark and nondual wisdom. However, he designated compassion as a cause of bodhisattvas to emphasize its importance at the beginning, middle, and end of our practice.

## ***Compassion as the Root Cause***

The buddhas teach the Dharma to sentient beings of all three vehicles, and by practicing these teachings, sentient beings are freed from duḥkha and attain their spiritual aims. Seeing great compassion as the root of this goodness and excellence, Candrakīrti praises it.

Compassion alone is seen as the seed  
of a conqueror's rich harvest, as water that nourishes it,

and as the ripened fruit that is the source of long enjoyment.  
Therefore, at the start I praise compassion.

Here, Candrakīrti points to great compassion as the root of the other two causes of bodhisattvas and explains why compassion is important at the beginning, middle, and end of the path to full awakening. To reap an abundant harvest there must be the seed at the beginning, water in the middle, and the ripening of the crop at the end. Similarly, great compassion is likened in importance to a seed, water, and the ripened fruit that together produce the harvest of a buddha's magnificent qualities.

At the beginning, before we have entered the bodhisattva path of accumulation, compassion is like a seed that will grow into all the magnificent qualities of a buddha. Without compassion, bodhicitta cannot arise, but when we view the duḥkha of ourselves and others with compassion, the strong aspiration to protect all sentient beings from the misery of saṃsāra and lead them to full awakening will arise. Based on this, we make the strong, vibrant determination to attain the highest awakening — to become a buddha — in order to lead others to that state. This is bodhicitta. Seeing that to actualize this aspiration we need to amass the two collections and engage in the six perfections — the chief of which is wisdom — we immerse ourselves in these practices and cultivate nondual wisdom. In this way, compassion is the root of the other two causes of a bodhisattva and is the seed that bears the fruit of buddhahood. As Nāgārjuna reminds (RA 378):

The universal vehicle says  
that all activities should be motivated by compassion,  
and that wisdom will make them pure —  
what sensible person would deride this?

As mentioned above, this order of cultivation — compassion leading to bodhicitta and then to nondual wisdom — is followed by those of modest faculties. Those with sharp faculties first generate compassion, then nondual understanding, followed by bodhicitta. In either case, compassion

is the chief motivating force for the development of the other two realizations.

In the middle of our practice, great compassion is likened to water, for once a seed sprouts, it must be carefully nurtured in order to survive and grow. If our bodhicitta is not nourished by compassion, it will degenerate, which would be a great loss for all sentient beings as well as for ourselves. Thinking of the numberless sentient beings who are drowning in saṃsāra and the great length of time that is required to amass the collections of merit and wisdom, we may become discouraged and even relinquish bodhicitta. However, repeatedly generating great compassion nourishes our heart, giving us courage and strength to engage in the bodhisattva deeds and to meditate on emptiness. In this way, great compassion ensures that we will fulfill the two collections of merit and wisdom and complete the path to buddhahood. Compassion keeps our heart connected to the practice so we will not waver in developing all of the vast causes needed to attain full awakening.

At the conclusion of the path, after bodhisattvas have overcome the last vestiges of defilement, great compassion resembles ripe fruit. It spurs the buddhas to continually benefit sentient beings through their awakening activities for as long as saṃsāra remains. With great compassion, buddhas do not remain in their own peaceful nirvāṇa, but turn the Dharma wheel according to the disposition of each and every sentient being so as to enact their welfare. In that way, buddhas become a source of enjoyment and benefit for all beings.

To illustrate the importance and value of great compassion, the *Compendium of the Teachings Sūtra (Dharmasaṃgīti Sūtra)* says (LC 3.30):

Bhagavan, bodhisattvas should not learn many teachings. Bhagavan, if bodhisattvas grasp and know one teaching, they will have all of the Buddha's teachings in the palm of their hand. What is this one teaching? It is great compassion . . . once great compassion exists, all the other bodhisattvas' qualities will appear.

Spend some time contemplating these verses and become convinced of the importance of familiarizing your mind with compassion, bodhicitta, and the nondual understanding of emptiness. Tsongkhapa recommends that we train our mind so the thought automatically arises, “If I wish to become a bodhisattva, my mind must first come under the influence of great compassion. Then in dependence on this, I must generate from the depths of my heart fully qualified bodhicitta. Once I have done this, I must engage in the general practices of bodhisattvas and in particular the profound view, and I will continue these until reaching full awakening.” With such intention and determination, our efforts will go in the right direction and will bear the fruit of being able to benefit all beings.

## REFLECTION

---

1. What is the role of compassion in generating bodhicitta?
  2. Why does bodhicitta energize us to contemplate emptiness?
  3. How can understanding emptiness increase our compassion and bodhicitta?
- 

### *Compassion Observing Sentient Beings*

In the next two verses, Candrakīrti again pays homage to great compassion. I find this section especially powerful for generating great compassion and often meditate on it (MMA 3–4ab).

Like a bucket in a well, migrators have no autonomy;  
first, with the thought “I,” they cling to a self;  
then, with the thought “mine,” they become attached to things;  
I bow to this compassion that cares for migrators.

[Homage to that compassion for] migrators

seen as evanescent and empty of inherent existence  
like the reflection of the moon in rippling water.

In these two verses, Candrakīrti honors and pays respect to three types of compassion: the compassion observing sentient beings, the compassion observing phenomena, and the compassion observing the unapprehendable. All three minds of compassion have both an observed object (*ālambana*) and a subjective aspect (*ākāra*). The observed object is the basic object that the mind focuses on, whereas the subjective aspect is the way the mind relates to that object. All three types of compassion observe sentient beings, and all three have the subjective aspect of wanting to protect them from saṃsāric duḥkha. That is, while observing sentient beings (who are the observed object), the mind of great compassion has a wholehearted determination to protect them from saṃsāric suffering (this is the aspect).

The first compassion observes just sentient beings who are afflicted by one form of duḥkha after another; it does not observe them as qualified by either impermanence or by emptiness. The last two types of compassion focus on sentient beings qualified by specific attributes. Here the wisdom side of the path that involves the realizations of impermanence, selflessness, and emptiness accompanies the method side of the path, adding depth to our compassion.

The observed object of the compassion observing phenomena is sentient beings qualified by momentary impermanence or qualified by lacking a self-sufficient substantially existent I. The observed object of the compassion observing the unapprehendable is sentient beings qualified by being empty of true existence.

“Qualified by” means that a quality appears to that mind through the force of previously having brought that attribute to mind. Before the second compassion can arise in the mind, we must first ascertain that sentient beings are momentarily impermanent; for the third compassion to arise, we must first ascertain that sentient beings lack inherent existence. It is not necessary that these two compassions themselves apprehend sentient beings as impermanent or as lacking inherent existence; the appearance of these attributes to the compassionate mind due to these attributes being previously ascertained is sufficient. This is because one mind cannot have

two discordant aspects — one being the wish for sentient beings to be free from duḥkha and the other being either subtle impermanence or emptiness.

*Compassion observing sentient beings* is a contraction for “compassion observing just sentient beings.” Contractions are made for ease of speaking, and “just” in the original term indicates that this compassion observes only sentient beings, not sentient beings qualified by being either impermanent or empty like the other two types of compassion. Compassion observing sentient beings focuses on sentient beings who migrate from one saṃsāric realm to another under the control of ignorance, afflictions, and karma. The process of how we migrate again and again is extensively described in *Saṃsāra, Nirvāṇa, and Buddha Nature*, which explains the four truths and the twelve links of dependent origination. Afflictions are delineated and described in the same book, and karma is explained in depth in *The Foundation of Buddhist Practice*. We ordinary beings live in this unsatisfactory situation; saṃsāra is our daily life although we seldom recognize it for what it is. Understanding it well is the basis for generating compassion.

How does saṃsāra come about? With the thought “I,” we cling to the self as an inherently existent person. Whereas the mere I or person exists by being merely designated in dependence on the aggregates, a mental factor called the “view of a personal identity” (*satkāyadr̥ṣṭi, sakkāya-diṭṭhi*) grasps it to exist inherently, with its own essence that is independent of all other factors.

Viewing the aggregates as under the control of an inherently existent person who regards things as “mine,” the view of a personal identity then grasps mine as inherently existent. From this, attachment to what makes *me* happy and anger at what disrupts *my* happiness or causes *me* pain, as well as all other afflictions, arise. We discriminate every person and object we encounter in terms of its ability to bring us happiness or pain; this makes our view very narrow and our actions self-centered. When conjoined with the mental factor of intention, which is karma, afflictions such as craving, hatred, jealousy, pride, deluded doubt, and heedlessness create the paths of action that leave karmic seeds on our mindstream. When these seeds ripen, they influence our future rebirths, what we experience in those lives, our habitual actions, and the type of places where we are born.<sup>47</sup> Seeing how

sentient beings are trapped in this cycle of constantly recurring problems inspires us to generate the compassion that cares for migrators.

Six analogies that compare the experience of migrators — sentient beings born in one life after another in different situations in saṃsāra — to a bucket in a well explain how sentient beings suffer in saṃsāra and help to generate great compassion in our minds.<sup>48</sup>

(1) Just as a bucket in a well is tied by a strong rope, sentient beings are tightly bound to cyclic existence by afflictions and karma. While we seek happiness, we are unable to move freely and lack the autonomy to choose what we encounter in life. Although we wish for happiness and freedom from suffering, afflictions such as greed, anger, and confusion overwhelm our minds and we act counter to our own best interests. In addition, governed by our previously created actions, we find ourselves facing many problems and difficulties — personal, social, political, economic, and so forth.

(2) Just as the operator of a pulley moves the bucket in the well, the afflictive mind propels sentient beings into various rebirths where again and again we find ourselves in situations of conflict and pain. Although we see ourselves and others as independent beings who are in control of our lives, in fact afflictions and karma are our overlords and determine our experiences.

(3) Just as the bucket continuously goes up and down in the deep well, sentient beings wander without end in cyclic existence, from the highest formless realm to the lowest hellish realm. We have been born and will continue to be reborn as every type of life form in saṃsāra countless times until we develop the compassion and wisdom that will liberate us.

(4) The bucket descends easily, but great exertion is needed to pull it up again. Similarly, sentient beings easily fall to lower, unfortunate rebirths, but must exert great energy to create the causes and conditions for a fortunate rebirth. We can see this in our lives: harsh words, harmful actions, and disturbing thoughts that embroil us in conflicts and cause unfortunate rebirth come easily. Greed and attachment readily involve us in sticky situations that we cannot free ourselves from no matter how much we dislike them. Fortitude and great effort are needed to restrain ourselves from acting out of anger or greed and to consciously change our unproductive

emotional responses into ones that lead to good communication. The difficulty in reversing the ease with which sentient beings fall to unfortunate rebirths is reflected in the *Bases of Discipline (Vinayavastu)*, which says that unfortunate rebirths are as numerous as atoms of the Earth and upper rebirths are as few as the particles of dust under a fingernail.

(5) Just as the bucket goes round and round without a discernable beginning or end, sentient beings cycle through the three sets of thoroughly afflictive links where the end of one and the beginning of another are difficult to distinguish. These three sets refer to the twelve links of dependent origination. They are the paths of afflictions — ignorance, craving, and grasping; the paths of karma — formative actions and renewed existence; and the paths of duḥkha — consciousness, name and form, six sources, contact, feeling, birth, and aging and death. By the power of neutral obscurations, such as ignorance, and meritorious karma, we temporarily wander in fortunate realms. By the power of demeritorious karma, we wander in unfortunate realms for a long time. One set of twelve links is so intertwined with many other sets that it is difficult to distinguish them. This is our experience.

(6) The bucket is constantly battered as it forcefully knocks into the side of the well. It is dented, punctured, and worn down. Likewise, sentient beings are battered by the three kinds of duḥkha — the duḥkha of pain, the duḥkha of change, and the pervasive duḥkha of conditioning. This unbearable duḥkha is our close companion and accompanies all sentient beings — our dear ones, refugees, pets, politicians, movie stars, insects, and so on — wherever we go. The duḥkha of pain is painful physical and mental feelings; the duḥkha of change is the fleeting nature of our pleasure and the ease with which a happy situation transforms into an uncomfortable one. The pervasive duḥkha of conditioning is having a body and mind under the control of afflictions and karma, such that pain can come suddenly without any warning.

Buddhas and bodhisattvas teach us the Dharma, showing us the way to free not only ourselves but all others as well. Being the recipients of their extraordinary kindness and compassion, it's only suitable that we extend compassion and benevolence to others, especially since buddhas cherish sentient beings more than themselves.

To get a deep experience of this meditation, it is necessary to think first that we ourselves are like a bucket, endlessly going up and down, getting knocked around in all the realms of saṃsāric life. If we cannot see the duḥkha in our own lives in saṃsāra, we will not be able to see that of others. Without facing this unsatisfactory experience, it will be difficult to generate stable compassion that is courageous in practicing the path and benefiting sentient beings.

The arising of great compassion depends not only on contemplating that all sentient beings are tormented in saṃsāra but also on seeing all sentient beings as endearing. To do that, freeing ourselves from attachment to friends and animosity to enemies is essential. In addition, we must contemplate sentient beings' kindness to us in this and previous lives. Without training our mind in these perspectives, we risk succumbing to our habitual tendency to be indifferent to the misery of other beings. Bodhicitta will not arise in our minds, and without bodhicitta awakening is not possible. If we lack compassion, both our own and others' well-being face obstacles.

For this reason, repeatedly training ourselves in the seven cause-and-effect instructions and equalizing self and others is essential. Neglecting to meditate on these, yet receiving many tantric empowerments and boasting of meditating on deity yoga, inner heat, and the channels, winds, and drops, fulfills neither our own spiritual aspirations nor the well-being of others.

After meditating on how sentient beings are tormented by duḥkha, and on their kindness so that we can see them as endearing, we then generate the three subjective aspects of compassion that are found in the long meditation on the four immeasurables:

(1) *How wonderful it would be if all sentient beings were free from duḥkha and its causes.* Thinking like this from our heart — not just from our mouth — opens us to imagine all beings — friends, enemies, and strangers — as free from the three types of duḥkha: the duḥkha of pain, duḥkha of change, and the pervasive duḥkha of conditioning. Spend some time imagining all beings as free from all fear, pain, and anxiety. They abide with satisfaction, fulfillment, peace, and prosperity.

(2) *May they be free from duḥkha and its causes.* With this thought, our compassion increases in intensity. We're not simply thinking it would be

wonderful if sentient beings were free of duḥkha and its causes; now we are wishing and aspiring that this will come about. Nevertheless, in terms of our engagement, we are still on the sidelines. Although mentally we want sentient beings to be free of duḥkha and its causes, we're not actively participating in bringing that about.

(3) *I shall cause them to be free from duḥkha and its causes.* With this thought, our compassion becomes fearless and unmarred by self-preoccupation. We are determined to become involved, and now our actions will correspond to our aspirations.

With each of the three types of compassion — the compassion observing suffering sentient beings, the compassion observing phenomena, and the compassion observing the unapprehendable — we progressively generate the above three thoughts or subjective aspects. The third thought is the great compassion that Candrakīrti refers to in his homage. From there, generating bodhicitta flows naturally, for in order to free sentient beings from all duḥkha and all of its causes, we must first free ourselves, and that entails realizing emptiness and using that realization to cleanse our mind from all defilements so that we can attain supreme awakening.

## REFLECTION

---

1. Visualize a bucket in a deep well — the rope that binds it, the pulley that moves it, its quick descent, and the enormous effort needed to lift it up again. Imagine it going round and round without any discernable end, being battered as it strikes rocks and debris.
2. Think of sentient beings — yourself and others — as being similar to this bucket. We are bound to saṃsāra by afflictions and karma, afflictions being the root cause of our dire situation. In cyclic existence we go up and down from the highest pleasure to the deepest pain. We easily create the causes to fall to unfortunate rebirths, but it requires great effort to reverse our habits and create the causes for happiness. We go up and down in saṃsāra without discernable beginning or end,

and are battered by the circumstance we meet in each rebirth. Contemplate the confining and confusing situation in cyclic existence.

3. Let compassion for yourself and other sentient beings arise in your mind, and stay one-pointedly on that.
4. Gradually generate the three subjective aspects of compassion: How wonderful it would be if all sentient beings were free of duḥkha and its causes. May they be free . . . I shall cause them to be free . . . Feel each one in your heart.
5. Contemplate that an escape from saṃsāra exists: by cutting through the ignorance that lies at the root of our afflictions and karma, we can stop this cycle and attain peace. Generate bodhicitta — the aspiration to attain the highest awakening in order to help all sentient beings overcome their saṃsāra.

---

This meditation can be very powerful for developing renunciation and compassion. When we think of ourselves in this situation, the determination to be free arises. This is the meaning of compassion for ourselves. When we think of others experiencing the same thing, compassion for them comes to the fore. This meditation also inspires us to take deep refuge in the Three Jewels: the Dharma is the cessation of duḥkha and the true paths leading to it; how kind the Buddha is to teach us the way to liberation and how kind the Saṅgha is in supporting us on the path.

### *Compassion Observing Phenomena*

The lines “[Homage to that compassion for] migrators seen as evanescent (fluctuating) and empty of inherent existence like the reflection of the moon in rippling water” speak of the second and third forms of compassion: compassion observing phenomena and compassion observing the unapprehendable. Reading those lines as “I pay homage to the compassion that views beings as subject to moment-by-moment disintegration, as fluctuating as the reflection of the moon in water that is being stirred by

wind” is paying homage to the compassion observing phenomena. Reading the lines as “Homage to the compassion that views beings who, although appearing to exist inherently, are like the reflection of the moon in water, devoid of inherent existence” is paying homage to compassion of the unapprehendable.

In a clear pool of water shimmering with ripples caused by a breeze, the reflection of the moon appears. The excellent ones who understand its nature understand the impermanence of the reflection and also know that it is empty of being a real moon. Similarly, bodhisattvas under the sway of compassion observe sentient beings suffering in the ocean of the view of a personal identity, which is continuously filled by the vast river of ignorance. The water is stirred by the wind of distorted conceptions, and the reflections of sentient beings’ virtuous and nonvirtuous karma are like the moon in the sky that is reflected in front of them. In this way, wise bodhisattvas, observing sentient beings as disintegrating in each moment and as empty of inherent existence, generate compassion for them.

Although the view of a personal identity is a form of ignorance, here Candrakīrti speaks of ignorance as nourishing this view to point out that the ignorance that induces the view of a personal identity is the self-grasping ignorance of phenomena. In other words, based on grasping our aggregates of body and mind as having their own, independent, inherent nature, we then grasp the person, the I, as being a self-enclosed entity with its own inherent nature.

*Compassion observing phenomena* is a contraction for “compassion observing sentient beings who are designated on just phenomena, such as the aggregates and the like.”<sup>49</sup> The collection of aggregates is the referent of the term “phenomena” in “compassion observing phenomena.” But the observed object of this compassion is not sentient beings’ aggregates; it is sentient beings qualified by impermanence, sentient beings qualified by lacking a permanent, unitary, and independent self, or sentient beings who lack a self-sufficient substantially existent self, depending on whether compassion is affected by an understanding of impermanence; the lack of a permanent, unitary, and independent self; or the absence of a self-sufficient substantially existent self.

What does it mean to say that great compassion observes sentient beings as qualified by subtle impermanence? Sentient beings have had the quality of subtle impermanence since beginningless time, so this quality is not being made up or projected on them. Sentient beings appear impermanent and the mind apprehends them as impermanent. That is, a wisdom that has previously apprehended the momentary impermanence of sentient beings accompanies great compassion. Here “accompanying” means that the wisdom apprehending the impermanence of sentient beings influences the present consciousness of great compassion that has the intense wish to protect sentient beings from all saṃsāric duḥkha. Some learned adepts say that the wisdom knowing impermanence and the mind of great compassion are explicitly conjoined — that is, both of these minds are manifest simultaneously in a bodhisattva’s continuum. A bodhisattva now apprehends sentient beings with a compassion that intensely wishes to deliver them from all saṃsāric duḥkha and a wisdom that knows them to be impermanent. Other learned adepts have a different view: they say that the mind of great compassion is manifest, but the wisdom understanding impermanence is a subliminal mind (*T. lkog gyur gyi blo*). Still, these two mental consciousnesses are simultaneous.

Bodhisattvas observe sentient beings as momentarily impermanent, “evanescent . . . like the reflection of the moon in rippling water.” The rippling of the water indicates both the gross impermanence of death that all of us are subject to and the subtle impermanence of disintegrating in each moment. The water’s nature is to change; it can never remain static. Similarly, sentient beings’ bodies, minds, environments, companions, and enjoyments arise and cease in each moment. To get a strong sense of sentient beings’ impermanence, imagine a reflection of the moon shimmering in rippling water as the breeze constantly blows. Then think that constant, rippling change is like the unstoppable momentary change of our body and mind in saṃsāra.

Blind to this transitory nature, we cling to the notion that we and everything around us is reliable and unchanging. When a loved one is injured or we receive a terminal diagnosis, when we lose our job or our country is torn apart by war, or when things don’t turn out as we wish, we sentient beings suffer. Holding what is impermanent to be permanent makes

the mind inflexible; we refuse to accept the reality of a situation that doesn't agree with our expectations. Observing that sentient beings suffer by holding what is impermanent as permanent, bodhisattvas experience compassion for sentient beings.

When we realize that sentient beings change moment by moment, we implicitly know that they do not have a permanent, unitary, and independent self or soul, as asserted by non-Buddhists. If sentient beings are not independent, they must be dependent. In this case, they depend on their aggregates — the body and mind. This dependent self is not a different entity from the aggregates that compose it. Sentient beings are designated just on the collection of their impermanent aggregates. In this context being designated just on the collection of aggregates eliminates sentient beings being separate entities from their aggregates. Sentient beings do not exist apart from their body and mind; they are not self-sufficient substantially existent selves. This is the common selflessness of persons; it is called “common” because it is shared by all Buddhist tenet systems. For Prāsaṅgikas, this is not the final or deepest selflessness.

Saying that the person is designated on just the collection of aggregates means that in order to cognize the person, we have to cognize one of their aggregates. To know that Joe is here, we must either see his body or hear his voice. The meaning of being designated here is not the same as Prāsaṅgikas saying that the person is merely designated in dependence on the aggregates, where “merely designated” indicates that aside from only being imputed by name and concept, the person has no objective existence.

Considering the fact that sentient beings change moment by moment, like the reflection of a moon in water rippling in a breeze, wakes us up to a reality about our lives: there is no lasting or fixed security in saṃsāra. Our bodies and minds — and therefore our identities and our selves — are like the reflection of the moon in rippling water, changing in each moment. Observing that sentient beings grasp impermanent things as permanent and knowing that they suffer intensely because of this will stimulate compassion in our hearts.

When sentient beings appear to our mind as momentarily impermanent or as lacking self-sufficient substantial existence, the quality of our compassion for them deepens. On the one hand, we understand more clearly

how and why they suffer by grasping themselves as permanent or as self-sufficient substantially existent persons. On the other hand, we know that they can change and develop their good qualities because they are not fixed, static beings with a substantial self. Seeing their potential increases our compassion for them.

## REFLECTION

---

1. Contemplate that phenomena — the body and mind as well as the sentient beings that depend on them — are in a constant state of flux, arising and ceasing in each moment without respite.
2. Consider how much sentient beings suffer by grasping themselves and everything in saṃsāra as static, secure, and predictable. Make examples from your life and the lives of beings around you.
3. Focus on sentient beings as qualified by momentary impermanence. Generate great compassion aspiring to release these sentient beings, who arise and cease in each moment, from all duḥkha and its causes.

---

### *Compassion Observing the Unapprehendable*

The phrase *compassion observing the unapprehendable* is a contraction for “compassion observing sentient beings qualified by lacking true existence, which is unapprehendable although it is the conceived object of grasping true existence.” In other words, true existence is unapprehendable because it doesn’t exist; nevertheless it is the conceived object of the erroneous mind grasping true existence.

Compassion observing the unapprehendable arises after a practitioner meditates on emptiness, when that mind understanding the emptiness of sentient beings informs the compassion wishing to protect all sentient beings from all saṃsāric duḥkha. At that time, the observed object of the mind of compassion is sentient beings qualified by the lack of true existence. Here too compassion does not apprehend emptiness, although

emptiness appears to it because the person has previously ascertained sentient beings as empty of true existence.

As with the compassion observing phenomena, some learned adepts say that both the mind of compassion and the mind knowing emptiness are manifest simultaneously, while other learned adepts assert that the mind of great compassion is manifest and the wisdom understanding emptiness is subliminal. Both agree that these two mental consciousnesses are simultaneous and that the aspect of emptiness appears in dependence on the practitioner who possesses compassion having first ascertained sentient beings as empty of true existence.

In this way, preceded and supported by an inferential realization of the emptiness of true existence of sentient beings, compassion observing the unapprehendable views sentient beings qualified by their emptiness of true existence, like the reflection of the moon in water. Previously, to illustrate the compassion observing phenomena, the analogy of the moon's reflection in water emphasized the transient nature of sentient beings: just as the reflection of the moon in rippling water is constantly changing, so too are sentient beings. Now, in the context of the compassion observing the unapprehendable, the analogy emphasizes the illusory nature of sentient beings: just as the moon reflected in water falsely appears to be a real moon, although it isn't, sentient beings falsely appear to be truly existent, although they are not. If we reach over and try to touch the moon in the pond, we will be disappointed because a real moon is not there. If a space mission sends an astronaut to walk on the moon in the pond, the mission will fail because there is only the false appearance of the moon. Similarly, although all persons appear to be "real," having their own essential nature that makes them who they are, they are actually reflections of their previously created karma. We are continually baffled, depressed, and upset when illusion-like people and things do not fulfill our expectations that they should be predictable and reliable.

Recall the analogy: the water corresponds to the ocean of the view of a personal identity that grasps I and mine as truly existent. This ocean is fed by the powerful river of ignorance grasping the five aggregates to exist truly. While sentient beings struggle to stay afloat, the powerful winds of distorted conceptions agitate the water where sentient beings appear as

reflections of their virtuous and nonvirtuous karma. They lack true existence, yet unaware of this fact, they continue to grasp themselves and all other phenomena as truly existent and generate afflictions that bind them in saṃsāra. Seeing sentient beings as qualified by being empty of true existence, and knowing that they suffer due to grasping themselves and everyone and everything around them as truly existent entities, bodhisattvas generate strong compassion wanting sentient beings to be free from ignorance, afflictions, and polluted karma, and all the duḥkha that these cause.

Although there is no moon in the water of a still pond, the reflection exists as a dependent arising, the product of the water, moon, and light coming together in a certain arrangement. Just as there is no truly existent person in either the body or mind or in the collection of the two, a person still exists. The I is a dependently arising product of conceiving and designating the person in dependence on the collection of physical and mental aggregates.

Compassion observing the unapprehendable is not content to wish sentient beings to be free from duḥkha; it actively engages in ways to reduce and eventually eradicate their duḥkha and its causes. Taking the meaning of compassion to heart increases our respect and admiration for great compassion and for the bodhisattvas who possess it. It also stimulates us to see sentient beings as bodhisattvas do and to respond with the same love and compassion. Because the buddhas cultivated such great compassion as well as the wisdom realizing emptiness, they attained buddhahood and continue to turn the wheel of Dharma to benefit us sentient beings. As such, Buddhapālita admires them:<sup>50</sup>

Though seeing transmigrators as empty,  
because you wish to remove their suffering  
you have toiled for a long time.  
This is most amazing!

The great bodhisattvas and the magnificent buddhas do not see us transmigrating sentient beings as truly existent, “concrete” personalities, yet

they are concerned with our welfare and work for our benefit. Let's emulate these great beings!

Compassion observing the unapprehendable enables bodhisattvas to know that realizing emptiness is not antithetical to having compassion for sentient beings. That is, emptiness does not mean that sentient beings are nonexistent; it means they lack inherent existence, a false type of existence. That the wisdom realizing emptiness and great compassion are not only compatible but necessary for bodhisattvas is apparent in Nāgārjuna's *Praise to the Supramundane* (*Lokātīstava*, LS 2):

That apart from the mere aggregates  
no sentient being exists, you uphold.  
Yet, great sage, you continue to remain  
perfectly immersed in the welfare of beings.

The first two lines affirm that sentient beings do not exist separate from their physical and mental aggregates. Rather, the person is understood on the basis of and in dependence on the collection of the physical and mental aggregates. Similarly, all phenomena are understood only on the basis of the coming together of the parts that constitute them.

Buddhapālita expresses the same meaning in another way. In his commentary on chapter 22 of Nāgārjuna's *Treatise on the Middle Way*, he makes this challenge: If phenomena exist inherently, in their own right, what need is there to characterize them as being dependent on other factors? If they possess an inherent reality, when we ask, "What is the true referent of a term?" we should be able to point to one thing and say, "This is it." However, this is not the case. We are able to understand things only in the context of their dependence on other things.

Does that mean there are no suffering sentient beings who are worthy of compassion because no sentient being can be found when searched for among the aggregates or separate from them? In the third and fourth lines, Nāgārjuna praises the Buddha for being completely immersed in working for the well-being of sentient beings despite the fact that sentient beings are not findable under ultimate analysis. Sentient beings exist dependently. Similarly, *duḥkha* is empty of inherent existence yet exists dependently.

Thus sentient beings exist and are worthy of our compassion, and we must strive to relieve their duḥkha. The Buddha instructs Śāriputra in a Perfection of Wisdom sūtra:

When bodhisattvas mahāsattvas cultivate the perfection of wisdom, there are no sentient beings. However, a continuum of empty [mind] is designated “sentient being.” O Śāriputra! Bodhisattvas mahāsattvas rely on the two truths — conventional truth and ultimate truth — in order to teach sentient beings. O Śāriputra! Although sentient beings are intangible in either truth, bodhisattvas mahāsattvas practice the perfection of wisdom and use the power of skillful means to teach sentient beings.

Although sentient beings lack inherent existence, they exist by being merely designated in dependence on their aggregates, especially the continuum of their mental consciousness. Their emptiness is an ultimate truth; their nominal, dependent existence is a veiled or conventional truth. They are empty yet exist dependently. These two attributes are compatible, not contradictory. The two truths are perceived by different types of minds — ultimate truth is known by the probing awareness realizing emptiness, veiled truths are known by a conventional reliable cognizer. When ārya bodhisattvas abide in meditative equipoise on emptiness, they do not perceive any conventional objects, including sentient beings; they perceive only emptiness. However, that does not negate the conventional existence of sentient beings, whom ārya bodhisattvas perceive as illusion-like in the postmeditation time. They have great compassion and work for the benefit of these illusion-like sentient beings; the realization of emptiness nourishes the bodhisattvas’ compassion. Nāgārjuna says in *Commentary on Bodhicitta* (BV 63, 73):

In brief, the Buddha taught that agents,  
actions, and consequences  
are, in conventional terms,  
empty things generated from empty things . . .

In this way, when yogis practice  
meditating on that emptiness,  
without a doubt, they grow attached  
to the well-being of others.

Here “attached to the well-being of others” means bodhisattvas care deeply for the welfare of sentient beings.

Sentient beings are burdened by saṃsāric suffering because they grasp themselves and all phenomena as truly existent. This grasping can be eliminated and their duḥkha ceased. Thus the duḥkha they currently experience is unnecessary. It is not predetermined or unavoidable; it exists only because its root cause — self-grasping ignorance — exists, but this cause can be eradicated so that it never returns. Viewing sentient beings this way arouses intense compassion that seeks to liberate them from unnecessary misery and its causes. This strengthens the resolve to attain buddhahood to be fully capable of guiding them to awakening.

Seeing sentient beings as empty of existing from their own side protects compassion and altruism by preventing afflictions from arising when we seek to benefit them. If we see sentient beings as truly existent, our relationships with them could easily become complicated. We may expect them to follow our advice and to appreciate our guidance, or we may be attached to the outcome of our efforts. By remembering that no inherently existent person is there, our mind is freer to meet situations freshly, as the Buddha prescribed in the *Diamond Sūtra (Vajracchedikā Prajñāpāramitā Sūtra)*:

Subhūti, what do you think? You should not maintain that the Tathāgata has this thought, “I shall take living beings across.” Subhūti, do not have that thought. And why? There are actually no living beings taken across by the Tathāgata. If there were living beings taken across by the Tathāgata, then the Tathāgata would hold the existence of a self, of others, of living beings, and of a life. Subhūti, the existence of a self spoken of by the Tathāgata is no existence of a self, but common people take it as the existence of a self.

Inherently existent living beings do not exist, even conventionally, even though common people believe they do. However, living beings who arise dependently do exist; it is these living beings that the Tathāgata takes across to freedom.

Compassion in the continuum of someone who has not realized impermanence or emptiness does not necessarily focus on permanent, unitary, and independent sentient beings. It often focuses just on sentient beings — that is, sentient beings who are not qualified by either momentariness or emptiness. Even in the mindstreams of those who have realized impermanence and emptiness, their compassion frequently focuses on mere sentient beings, not on sentient beings qualified by either of those characteristics. For example, someone who has realized emptiness may have compassion for the unapprehendable when her mind of compassion is explicitly conjoined with wisdom apprehending emptiness, but at another time her compassion may observe mere sentient beings.

All three types of compassion have the aspect of wanting to protect all sentient beings from all duḥkha, and the great bodhisattvas possess all three. Such great compassion differs from the compassion of śrāvakas and solitary realizers. Bodhisattvas' compassion does not just wish sentient beings to be free from duḥkha and its causes, it also wants to be actively involved in making this happen, and thus it leads to the generation of bodhicitta.

While the third compassion depends on a deep understanding of emptiness, in general compassion and emptiness are cultivated separately. The former involves transforming the mind into the entity of compassion; the latter entails realizing an object not previously known: emptiness, the nature of reality. These require different types of meditation. Compassion will not automatically arise in our minds from realizing there is no inherently existent self to be attached to. We must also contemplate sentient beings' duḥkha as well as their kindness and see them as endearing by following one of the methods to generate bodhicitta.

Nevertheless, an understanding of emptiness deepens our compassion and vice versa. For example, when I sit down to teach I notice that everyone in the audience appears to me to exist from their own side, not through the power of thought. They appear to be “out there,” each person on their own seat. I remind myself that this is a false appearance, that none of them are

either inherently one with or separate from their body-mind. Looking out at everyone, I see that each person is thinking, “I, I, I,” as if they had their own inherent essence and that is who they really are. This mistaken view brings forth their afflictions, which create polluted karma that leads them to experience difficulties in this life and in future rebirths in saṃsāra. Seeing that, I cultivate compassion.

Candrakīrti’s homage to great compassion is most precious and profound. I hope you feel joyful in learning about it and will keep it in your heart as an invaluable treasure.

## REFLECTION

---

1. Investigate how sentient beings exist: Are they one and the same as their aggregates? Are they completely different from their aggregates? Conclude that they cannot be found in either way when searched for with ultimate analysis.
2. Contemplate how much these sentient beings suffer because they grasp inherent existence and generate afflictions based on this ignorance. All this suffering is unnecessary because phenomena do not exist with an inherent nature, from their own side.
3. Focus on sentient beings who do not exist inherently. These sentient beings are like illusions — appearing to exist inherently but actually existing dependently. Let the great compassion arise that wants to release them from all duḥkha and its causes.

---

### *Combining Wisdom and Compassion*

Compassion observing the unapprehendable is a powerful example of one way that bodhisattvas combine wisdom and compassion in their practice. Sharp-faculty Mahāyāna disciples first gain an inferential cognizer of the emptiness of inherent existence. This gives them the confidence that defilements can be removed from the mind and awakening attained. On this

basis, they meditate on one of the two methods to generate great compassion and bodhicitta. Mahāyāna practitioners with modest faculties first develop faith in the Buddha, Dharma, and Saṅgha through reading the scriptures and accepting the teachings because the Buddha explained them. On that basis, they generate compassion and bodhicitta. For them, the realization of emptiness comes later, and compassion observing the unapprehendable only thereafter.

Try to become a sharp-faculty disciple whose faith is based on reasoning, not just thinking that the teachings are true and awakening is possible because the Buddha said so. Apply reasoning to understand emptiness and then gain deeper understanding of the ultimate nature without remaining content to simply understand it intellectually. Some old and infirm people may have little choice but to follow the path on the basis of faith because physical liabilities now prevent them from engaging in deeper studies. But when you are healthy and have the ability to do so, study well and follow the path without hesitation, just as sharp-faculty practitioners do. Disparaging yourself by thinking you lack intelligence or potential is ignorant and self-sabotaging. So is thinking that you cannot cultivate sharp faculties in this life but must be born with them. Without falling prey to fallacious or discouraging thoughts, make yourself into a sharp-faculty disciple and cultivate your potential to become a buddha.

When we examine our situation, it is clear that all our destructive emotions arise based on false appearances. Things appear to exist objectively, and we assent to that appearance and grasp them to exist in that way. Even scientists are changing their ideas about external objects. Quantum physicists now believe that external objects don't exist objectively but depend on the observer. It seems that they are approaching the Yogācāra view, which asserts that although blue and the mind perceiving blue appear to be substantially different and unrelated, they do not exist in that way. The appearance of duality between the subject and object of a perception is false. In fact, the blue does not exist as an external object but is a reflection of the latency to perceive blue. This latency exists on the foundation consciousness and gives rise to both the subject — the visual consciousness perceiving blue — and the blue color that is the object of this perception.

Prāsaṅgikas explain the ignorance that underlies these false appearances differently but agree that things appear to exist objectively, “out there,” independent of the mind. We ignorantly grasp them to exist in this way. This leads to distorted conceptions and inappropriate ruminations that exaggerate the desirable or undesirable qualities of objects or project qualities that aren’t there. This, in turn, gives rise to attachment, anger, and other afflictions. Nāgārjuna explained this process clearly.

The American scientist Aaron Beck, who was instrumental in the development of cognitive therapy, has worked for decades with clients whose minds are very disturbed by anger. He once told me that the object we get angry at — usually another person — appears to us to be completely negative. But 90 percent of this negativity is actually mental projection. This accords with what Nāgārjuna stated in chapters 18, 22, and 24 of the *Treatise on the Middle Way*. That some scientists are coming to some of the same conclusions as Buddhist sages is intriguing.

Although Yogācārins assert that external things do not exist objectively, they say that our internal feelings and consciousnesses are truly existent. Madhyamaka philosophy disagrees; Nāgārjuna and Candrakīrti both say that the apprehending subject and the apprehended object of a cognition do not exist independently.

Within the Madhyamaka system, there is debate whether the object of negation, what we seek to prove does not exist — in this case, true or objective existence — appears to our sense consciousnesses or not. Those who assert that the object of negation does not appear to sense perception — the Svātantrika Mādhyamikas — accept that on the conventional level things exist by their own characteristics — that is, conventionally, things inherently exist. According to them, phenomena lack inherent existence ultimately but not conventionally. For Svātantrikas, the object of negation is true existence, which they say exists neither ultimately nor conventionally. They define true existence as existence without being posited by the force of appearing to a nondefective awareness. A nondefective awareness is a mind free from superficial causes of error, such as having bad eyesight or being under the influence of hallucinogens. They say that two criteria are necessary for things to exist: they must appear to a nondefective consciousness and be designated by mind. Grasping true existence is

apprehending things as existing by appearing to a nondefective awareness without their also being designated by mind.

Prāsaṅgika Mādhyamikas, on the other hand, assert that even conventionally there's no objective existence — neither external objects nor our internal experiences of pain and pleasure have their own, independent essence. It's clear from our experience that things appear to have some objective existence, but Prāsaṅgikas say that appearance is false. Candrakīrti makes the point in his *Supplement* that if you assert that phenomena exist by their own characteristics, then ultimate analysis should establish veiled (conventional) truths. In other words, when you analyze the entity of phenomena with reasoning, you should find some essential nature. However, when we search with reasoning for such an inherent essence in phenomena, nothing can be found.

Through our own experience, we know that external objects as well as internal feelings and mental states affect us; they benefit or harm us. But if we actually search within their parts or their bases of designation, we discover that the way they exist is not the way they appear to exist. They don't exist from their own side, objectively, independent of all other factors. External objects and internal experiences exist, but if we search for their identity, we cannot find anything that we can point to as being them. The more we search for the objects in our environment or for our subjective, internal experiences, the clearer it becomes that they do not have any objective existence from their own side, even though they appear to.

How, then, do they exist? Only by convention. They exist nominally, merely in name. When we don't search for them they appear, but when we analyze to seek their essence, there is nothing to be found except the emptiness of any inherent essence.

Although the quantum physicists agree that nothing exists objectively, when it comes to the observer, they don't know what to say. If Yogācāras say that external things don't exist objectively, they should also say that internal experiences don't exist objectively. How can there be a difference in the mode of existence between the two? Prāsaṅgikas, on the other hand, negate the true existence of both the perceiving subject and perceived object. They say there's no other way that external and internal phenomena can exist except nominally, by convention, by being merely designated.

That alone is the way phenomena exist. Seeing that things exist by being merely designated is very powerful. The more you think about it, the more you'll understand its significance.

The understanding that things exist by being merely designated tallies with reality. It is an awareness of reality. Afflictions, on the other hand, arise due to distorted conceptions, which, in turn, are rooted in grasping true existence. Nāgārjuna says (MMK 18.5):

Through ceasing karma and afflictions there is nirvāṇa.

Karma and afflictions come from conceptualizations.

These come from elaborations.

Elaborations cease by (or in) emptiness.

Karma comes from afflictions, which depend on distorted conceptions. Distorted conception is the aspect of our mind that exaggerates the positive or negative qualities of an object or person, or projects good or bad qualities that the object or person lack. These conceptualizations are rooted in the ignorance that grasps true existence, a mental factor that grasps phenomena to exist objectively, inherently, from their own side.

Grasping at true or inherent existence apprehends inherently existent objects that don't exist, whereas the wisdom realizing emptiness apprehends the opposite: the emptiness of inherent existence. This is the way that phenomena actually exist. That is, grasping inherent existence is a mental state that is discordant with reality, whereas the realization of emptiness accords with how phenomena exist.

In short, phenomena appear to us to exist objectively. Even though that appearance is false, self-grasping ignorance holds phenomena as having some objective existence. But when we search for the inherently existent object that ignorance grasps, we can't point to anything that is it. Instead we find their emptiness. Since phenomena do exist, there is only one way they can exist — as mere name, mere designation, nominally. There is nothing existing from the side of the object; things exist in dependence on the mind conceiving and designating them.

When we understand that grasping true existence is not in accord with reality, whereas the awareness that phenomena exist nominally is in accord

with reality, we see the possibility to overcome afflictions and attain true cessation. That is done by applying the antidotes that can eradicate the self-grasping ignorance that is the root of the afflictions. The principal antidote is the wisdom realizing emptiness. This wisdom will overcome not only ignorance and afflictions but also cognitive obscurations, which are the latencies of ignorance and the mistaken appearances it produces.

In his commentary on the *Ornament of Clear Realizations*, Haribhadra spoke of two powerful characteristics of bodhisattvas: With wisdom they focus on awakening, and with compassion they focus on sentient beings. But even before we become bodhisattvas, if we are sharp-faculty disciples our wisdom can understand emptiness and know that it is possible to eliminate the afflictions as well as all other obscurations.

When we understand this, we can also clearly see that the ignorance grasping true existence and its latencies bind sentient beings in saṃsāra and impede their becoming buddhas. Although sentient beings have the possibility of overcoming these defilements, they are ignorant of their potential and thus continue to create polluted karma under the influence of afflictions. In this way their saṃsāra, with all its attendant duḥkha, continues without any end in sight. Although sentient beings do not want suffering, they are unaware that afflictions dominate their minds and that on a daily basis afflictions instigate them to create the causes for duḥkha. As a result, sentient beings sink deeper into saṃsāra. Seeing this desperate situation, how can compassion for sentient beings not arise?

If their duḥkha were innate and unavoidable, we could not do anything about it. But that is not the case. Śāntarakṣita says (MA 96):

Therefore, the intelligent who follow the system of [the Tathāgata]  
will generate intense compassion  
for those believing in tenets  
that are based on mistaken [views].

Unless we have full conviction in the possibility that all afflictions and obscurations can be eradicated and that the counterforce to do this is the wisdom realizing emptiness, our bodhicitta will be weak: we won't feel completely confident that it's possible to attain full awakening, let alone to

lead other sentient beings to that state. If we don't gain certainty in this through the path of reasoning, we're left with saying, "This is so because the Buddha said so," or "This is so because my spiritual mentor said so," and there's not much weight in this. If you follow like those with modest faculties, your conviction and understanding will not be stable. You may sometimes find contradictions in the scriptures or the teachings of your spiritual mentor and, not having developed astute wisdom through reasoning, you won't know how to make sense of these and will become confused and doubtful.

But if you are able to follow the Buddha's teachings as the sharp-faculty disciples who follow reasoning do, awakening will be yours and the Buddhadharma will remain for centuries. Even if someone criticizes the Dharma, as a sharp-faculty disciple, you will be able to respond by using reason, just as Nāgārjuna and his followers did. Try to develop the wisdom knowing reality, beginning with a correct assumption, progressing to an inferential reliable cognizer, and finally gaining a wisdom consciousness that knows emptiness directly. As Śāntarakṣita says in *Ornament of the Middle Way (Madhyamakālamkāra, MA 75)*:

[Those who realize emptiness are] those who know it inferentially  
with reasonings that make [the lack of a real nature] known  
and that cut superimpositions,  
as well as those powerful yogis who know it clearly by direct  
perception.

Śāntarakṣita was one of the seventeen Nalanda masters whose writings are the life force of the Buddhadharma in Tibet. If we follow and practice the teachings by using reasoning as they did, we will sustain the Dharma for a long time, as the great Indian and Tibetan masters have done. They studied all the texts of the Nalanda masters and wrote commentaries on them, using reasoning to explain the points. In *Destiny Fulfilled* (vol. 2), Tsongkhapa advised us not to be partial or superficial when studying the texts of the great masters:

Therefore, not content with a partial or superficial understanding

of the treatises of the Invincible Lord of Dharma  
and those of [the great sages] widely renowned in India  
as the six ornaments and two supreme ones,  
I studied them all in great detail.

The invincible Lord of Dharma is Maitreya, also known as Ajita. The Vinaya masters Guṇaprabha and Śākyaprabha are the two supreme ones. Nāgārjuna and Āryadeva are ornaments of the Madhyamaka; Asaṅga and Vasubandhu are ornaments of the Abhidharma; and Dignāga and Dharmakīrti are ornaments of epistemology. Tsongkhapa recommends we study their texts thoroughly and put what we learn into practice, just as he did. What excellent advice!

## 7 | Aspiring and Engaging Bodhicitta

THE PRECIOUS MIND of bodhicitta is spoken of in many different ways. In the *Ornament of Clear Realizations*, Maitreya calls bodhicitta “mind-generation” and defines it as “the desire to [attain] perfect, complete awakening for others’ welfare.” It is a mental consciousness that is associated with two aspirations: the first is the causal aspiration that seeks the welfare of others; the second is the assisting aspiration that seeks full awakening. The general understanding is that the causal aspiration occurs first, followed by the aspiration for wakening, at which time the actual bodhicitta is born.

### *Identifying Aspiring and Engaging Bodhicitta*

One way of speaking about bodhicitta is in terms of aspiring and engaging bodhicitta. *Aspiring bodhicitta* is the initial wish to become a buddha in order to benefit all sentient beings. This bodhicitta is generated before making the formal commitment to engage in the bodhisattva deeds by taking the bodhicitta vow. *Engaging bodhicitta* arises when someone follows up on the initial wish of aspiring bodhicitta by taking the bodhisattva vow and making the commitment to create the causes for buddhahood. Aspiring bodhicitta is analogous to wishing to go to Dharamsala; engaging bodhicitta is acting on that wish by buying the air ticket, packing the bags, getting on the plane, and so on.

These two types of bodhicitta are generated sequentially as part of a single substantial continuum of bodhicitta. That is, someone meditates on either the seven cause-and-effect instructions, equalizing and exchanging self and others, or their combined instruction, and when they generate bodhicitta, the continuum of that mind becomes aspiring bodhicitta. When

bodhisattvas, upon taking the bodhisattva vow, engage in acts of generosity, ethical conduct, or fortitude, and so forth, the continuity of their bodhicitta becomes engaging bodhicitta. Both bodhicitta and the active practice of the bodhisattva deeds must be manifest to be engaged bodhicitta.

There is some debate on whether bodhicitta is present when an ārya bodhisattva enters meditative equipoise directly perceiving emptiness. Some learned adepts say that during this profound meditation on the path of seeing or path of meditation, aspiring bodhicitta exists in an unmanifest state in the mindstream of the meditator and only emptiness appears to that mind. In short, the substantial continuum of bodhicitta is always present in that individual, and it becomes aspiring or engaging bodhicitta depending on what the bodhisattva is doing.

Other learned adepts say that to be present, a mind has to be manifest. In this case, it is impossible for bodhicitta to accompany a mind of meditative equipoise directly perceiving emptiness because it would be manifest and during meditative equipoise directly perceiving emptiness no conventional phenomenon appears to the mind; only emptiness appears. Therefore they say conventional bodhicitta is not present and does not exist in the bodhisattva's continuum at that time. However, the bodhisattva still possesses bodhicitta because their bodhicitta hasn't degenerated and will manifest in post-meditation time.

It is worthwhile to spend time developing a good understanding of the importance and meaning of bodhicitta with its objects and aspects. When we feel that the time has come to seriously undertake the cultivation of bodhicitta, we may generate contrived bodhicitta in the presence of our teacher. This is called *cultivating aspiring bodhicitta in a ceremony*. This helps stabilize our determination to cultivate bodhicitta.

Later, when we feel capable to train in the four causes for keeping our bodhicitta from deteriorating in this and future lives, we can do the ceremony again in the presence of our teacher and generate bodhicitta with the thought never to give it up. This is called *receiving aspiring bodhicitta with commitment in a ceremony*.

After training the mind in aspiring bodhicitta with commitment, we can take the bodhisattva vow. Our bodhicitta at this time is engaging bodhicitta. Even if we engage in the six perfections with a mind aspiring "May I

become a buddha,” or “I will become a buddha,” as long as we have not taken the bodhisattva vow, engaging bodhicitta is not yet present in our mindstream. Kamalaśīla says (LC 2:49):

The initial aspiration thinking “May I become a buddha in order to benefit all sentient beings” is aspiring bodhicitta. Once you have taken the vow and you engage in the collection [of merit and wisdom], the initial aspiration becomes engaging bodhicitta.

Both aspiring and engaging bodhicitta are the thought seeking to attain awakening for the benefit of all sentient beings. Their difference lies in that engaging bodhicitta is present when, conjoined with the bodhisattva vow, a practitioner is engaged in physical, verbal, or mental activities leading to awakening; aspiring bodhicitta is not conjoined with the bodhisattva vow.

Who can generate aspiring and engaging bodhicitta? All those attracted to the bodhisattva practice and of sound mind can generate aspiring and engaging bodhicitta. Optimally, they should have antipathy for cyclic existence, be mindful of impermanence and death, and have trained in wisdom and compassion. In short, they should have studied and practiced the earlier stages of the path in common with the initial- and middle-level practitioners and have some experience of compassion that deeply inspired them.

## REFLECTION

---

1. *Aspiring bodhicitta* is the wish to become a buddha in order to benefit all sentient beings. It is generated before making the formal commitment to engage in the bodhisattva conduct.
2. *Engaging bodhicitta* is the thought to become a buddha to benefit sentient beings that has formally committed to engage in the bodhisattva deeds and create the causes for buddhahood.

3. Reflect on the benefits of bodhicitta, the duḥkha of sentient beings, and their wish to be happy and not suffer. Aspire to become a buddha in order to benefit them.
  4. Sentient beings are overpowered by afflictions and karma and as a result they cycle in saṃsāra. They have been, are, and will be kind to us and are endearing. Reflecting deeply on these two points, generate the aspiration to become a buddha. Make a firm commitment to engage in the bodhisattva conduct in order to benefit sentient beings most effectively.
- 

### *The Ceremony for Generating Aspiring Bodhicitta*

We may have an intellectual understanding of bodhicitta, but to become a buddha the experiential feeling is essential. Once we have even an inkling of that feeling, we can develop it further and transform it into uncontrived bodhicitta. One way to generate the experience of bodhicitta is to undergo the ceremony of cultivating aspiring bodhicitta. The ceremony for receiving aspiring bodhicitta with commitment is the same; the difference is whether your intention is simply to generate aspiring bodhicitta or to make a commitment to not let it decline in this or future lives.

The spiritual mentor in whose presence you generate bodhicitta in a ceremony should have the bodhisattva vow and practice bodhicitta. He or she will guide you in the ceremony. Visualize in the space in front of you the Buddha, his body made of golden light. Think of him as a living being, not a statue or painting. He is surrounded by all the buddhas and bodhisattvas who look at you with delight because you're joining them in generating bodhicitta and dedicating yourself to awakening and to benefiting living beings. Also visualize the great Indian masters: Nāgārjuna, Āryadeva, Asaṅga, Vasubandhu, and others. Think they are holding their precious texts that you can still read and learn. If you follow another Buddhist tradition, imagine the lineage masters from that tradition too. If your own spiritual mentor is not living, imagine him or her as well.

If a spiritual mentor who can perform the aspiring bodhicitta ceremony is not available, you can generate and perform the ceremony alone by visualizing the Buddha and all the buddhas and bodhisattvas in front of you as explained above. Then proceed as follows.

Mentally offer your body, speech, and mind to your spiritual mentors and the Three Jewels. In the presence of all these esteemed beings, recite and contemplate the meaning of the seven-limb prayer. The following are the opening verses of “The King of Prayers: The Extraordinary Aspiration of the Practice of Samantabhadra” from the *Flower Ornament Sūtra* (*Avatamsaka Sūtra*) (POW 2:64–74). If you prefer, recite verses from *Engaging in the Bodhisattvas’ Deeds* (chapter 2 and the beginning of chapter 3).

I bow down to the youthful Ārya Mañjuśrī.  
You lions among humans,  
gone to freedom in the present, past, and future  
in the worlds of ten directions,  
to all of you, with body, speech, and sincere mind I bow down.

With the energy of aspiration for the bodhisattva way,  
with a sense of deep respect,  
and with as many bodies as atoms of the world,  
to all you Buddhas visualized before me, I bow down.

On every atom are Buddhas numberless as atoms,  
each amidst a host of bodhisattvas,  
and I am confident the sphere of all phenomena  
is entirely filled with Buddhas in this way.

With infinite oceans of praise for you,  
and oceans of sound from the aspects of my voice,  
I sing the breathtaking excellence of Buddhas,  
and celebrate all of you Gone to Bliss.

Beautiful flowers and regal garlands,  
sweet music, scented oils, and parasols,  
sparkling lights and sublime incense,  
I offer to you Victorious Ones.

Fine dress and fragrant perfumes,  
sandalwood powder heaped high as Mount Meru,  
all wondrous offerings in spectacular array,  
I offer to you Victorious Ones.

With transcendent offerings peerless and vast,  
with profound admiration for all the Buddhas,  
with strength of conviction in the bodhisattva way,  
I offer and bow down to all Victorious Ones.

Every harmful action I have done  
with my body, speech, and mind  
overwhelmed by attachment, anger, and confusion,  
all these I openly lay bare before you.

I lift up my heart and rejoice in all merit  
of the Buddhas and bodhisattvas in ten directions,  
of solitary realizers, śrāvakas still training, and those beyond,  
and of all ordinary beings.

You who are the bright lights of worlds in ten directions,  
who have attained a Buddha's omniscience through the stages of  
awakening,  
all you who are my guides,  
please turn the supreme wheel of Dharma.

With palms together I earnestly request:  
You who may actualize parinirvāṇa,

please stay with us for eons numberless as atoms of the world,  
for the happiness and well-being of all wanderers in saṃsāra.

Whatever slight merit I may have created,  
by paying homage, offering, and acknowledging my faults,  
rejoicing, and requesting that the Buddhas stay and teach,  
I now dedicate all this for full awakening.

Now review the steps for generating bodhicitta according to either the seven cause-and-effect instructions, equalizing and exchanging self and others, or the combined instructions. Arouse the bodhicitta in your heart just as the great masters visualized before you have done.

I often offer the aspiring bodhicitta rite using three of my favorite verses. The first verse is taking refuge, the second is generating aspiring bodhicitta, and the third is dedicating the merit. I will include these here for you to contemplate if you have not yet generated aspiring bodhicitta, and to use as part of your daily practice to renew your bodhicitta if you have (POW 2.73).

With the wish to free all sentient beings,  
I take refuge at all times  
in the Buddha, the Dharma, and the Saṅgha  
until the attainment of full awakening.

Today in the presence of the awakened ones,  
inspired by compassion, wisdom, and joyous effort,  
I generate the mind aspiring for full buddhahood  
for the well-being of all sentient beings.

For as long as space endures,  
and for as long as sentient beings remain,  
until then may I too abide  
to dispel the misery of the world.

## *Guidelines of Aspiring Bodhicitta*

Because the mind of bodhicitta cherishes others more than self, it runs counter to the well-entrenched self-centered attitude. As we ordinary beings cultivate bodhicitta, and even after we generate spontaneous bodhicitta and enter the bodhisattva path of accumulation, our bodhicitta is fragile and vulnerable to the power of self-preoccupation. Until we reach the middle level of the path of accumulation, our bodhicitta may degenerate and even be lost. To prevent this, after having received aspiring bodhicitta with commitment in a ceremony, follow the four guidelines that prevent bodhicitta from deteriorating in this lifetime. If you follow these, there is no doubt that your bodhicitta will grow.

1. To increase enthusiasm for generating bodhicitta, *repeatedly recollect the benefits of bodhicitta*. Reflect on the great merit you create by generating bodhicitta, the increased ability you will have to be a positive influence in the lives of people around you and in the world, and the delight of placing yourself firmly on the path to awakening.
2. To increase the intention to become awakened, *generate bodhicitta three times during the day and three times at night*. Dividing the day and the night into three periods each and generating bodhicitta during each of these periods is excellent. It's like regularly eating nourishing food. If this is not possible, at least once in the morning and once at night generate bodhicitta three times. Even if you don't recite the verse, reflecting on the object of intent — awakening — and the motivation for attaining it — to benefit all sentient beings — strengthens your bodhicitta.
3. *Do not give up or neglect the welfare of even one sentient being*. If you develop a negative attitude toward someone — for example, an insect that frightens you or a person who criticizes you — and exclude this person from the scope of your bodhicitta, you are no longer working for *all* sentient beings and your bodhicitta has degenerated.

4. As much as possible, try to *fulfill the two collections of merit and wisdom*. Fulfilling the collection of merit involves engaging in virtuous activities. Fulfilling the collection of wisdom necessitates generating the understanding of the uncommon Madhyamaka view. Because this is difficult, at least maintain the wish and put effort into understanding the Yogācāra system.

To prevent your bodhicitta from deteriorating in future lives, train in four wholesome actions and avoid four unwholesome ones. The unwholesome actions to abandon are the following:

1. *Lying to your abbot or spiritual mentor* makes it impossible for them to trust you or to guide you. Being open and honest with your abbot or abbess and your spiritual mentors enables you to receive and be receptive to their wise advice. Trying to make yourself appear to be someone you're not only muddles the relationship and plants the seeds of destructive karma on your mindstream.
2. *Causing others to regret their virtuous actions* runs counter to a bodhisattva's wish to lead sentient beings to full awakening. Regretting virtuous actions destroys the merit created from doing them.
3. *Criticizing or blaming a bodhisattva* creates impediments in your practice and interferes with that bodhisattva's virtuous actions to be of benefit to others. Bodhisattvas are your role models and criticizing them turns your mind away from their excellent example. Disparaging those who have compassion for all beings is a warning of how twisted your views have become.
4. *Acting with pretension or deceit* in order to receive offerings and service leads you down the malignant path of manipulation and fraud. Pretension is pretending to have good qualities you lack; deceit is covering up your bad qualities.

To prevent and counteract the above unwholesome actions and to preserve your bodhicitta in future lives, practice these virtuous actions:

1. *Abandon deliberately lying to any living being.* Being truthful creates trust, which is an essential quality for harmonious relationships. This remedies the first unwholesome action.
2. *Be honest, straightforward, and sincere with all living beings.* If you do so, they will act similarly toward you. This counteracts the fourth unwholesome action.
3. *Consider bodhisattvas as great teachers and treat them respectfully.* Since knowing who is a bodhisattva is difficult, it is best to treat everyone with respect. Does this mean that we don't point out anyone's harmful actions because they might be a bodhisattva? By differentiating the person and the action, we can say the action is harmful without denigrating the person who did it. This guideline remedies the third unwholesome action.
4. *Directly or indirectly encourage the people who rely on you to seek full awakening.* This is a wonderful way to aid sentient beings and counteracts the second unwholesome action.

We diligently protect our valuables by putting them in a safe at home, a safe-deposit box at a bank, or in other safe places. Bodhicitta is a treasure beyond any worldly money or jewels, so we must protect it assiduously. If we preserve our bodhicitta well in this life, just a small condition will trigger us to remember bodhicitta in future lives. Admiring bodhicitta and manifesting compassion from childhood will definitely be an advantage for our Dharma practice in future lives.

## REFLECTION

---

1. Contemplate each guideline of aspiring bodhicitta. In what way does each one keep your bodhicitta from degenerating in this life? In future lives?
  2. Would it help you in your Dharma practice to follow these guidelines? You can try to do so without formally taking them.
-

## *Engaging Bodhicitta*

During a ceremony in the presence of our spiritual mentors and the Three Jewels visualized in front of us, we may cultivate contrived bodhicitta. Although we may experience a special feeling when generating the aspiring bodhicitta at that time, for most of us this is not genuine bodhicitta, and we have not yet become actual bodhisattvas. The difference between contrived and actual bodhicitta is that the former arises with effort and will later fade, whereas the latter is deep, stable, and continuous. It arises spontaneously whenever a sentient being is brought to mind. The cultivation of uncontrived, genuine bodhicitta requires effort and persistence and may take many months, years, or lifetimes.

Do not become discouraged thinking that you're not making progress or that despite your effort, your bodhicitta is still contrived. Rather, remember the noble and extraordinary qualities of bodhicitta and be willing to familiarize yourselves with it over the course of many years because you know in your heart that this is of real value and meaning in your life.

As your bodhicitta becomes even stronger, you will naturally want to engage in the bodhisattva's deeds — generosity and the other perfections — that lead to awakening. When that wish arises and you start to engage in the bodhisattva deeds conjoined with the bodhisattva vow, engaging bodhicitta is present.

During the ceremony of taking the bodhisattva vow, you promise to observe the bodhisattva precepts from now until awakening. Unlike the various prātimokṣa ethical codes, the bodhisattva and tantric vows are not lost at the time of death but continue with our mental continuum into future lives. Does this mean that we might commit transgressions in a future life even if we are not aware at that time of having received the bodhisattva or tantric vow in a previous life? No, it does not, because we lack conscious awareness of having assumed that vow. However, having received and kept the bodhisattva or tantric vow in a previous life is very advantageous in that it plants the latencies for being able to meet these practices in a future life and receive the precepts again, thus reinforcing the ethical conduct practiced in the previous life.

Most people who take the bodhisattva vow in a ceremony are not yet full-fledged bodhisattvas with uncontrived bodhicitta. As long as you have the aspiration to become a bodhisattva and a buddha and the intention to keep the bodhisattva vow as best you can, taking it is beneficial. The bodhisattva vow in your mindstream is a similitude, not the actual bodhisattva vow, but doing your best to live in accord with the bodhisattva precepts will help you to develop bodhicitta and to conduct yourself like a bodhisattva. When transgressions occur, reciting the *Sūtra of the Three Heaps: The Bodhisattva's Confession of Ethical Downfalls*, together with prostrations to the thirty-five buddhas, is an excellent way to purify.<sup>51</sup> In time you will generate spontaneous bodhicitta and become an actual bodhisattva.

If you admire bodhicitta and want to practice it but are hesitant to take the bodhisattva vow, you can practice living according to the precepts of aspiring and/or engaging bodhicitta without taking them. Mindfulness of your motivations and actions will increase and you will create merit by doing this. Later, when you feel confident and more prepared, you can join an aspiring or engaging bodhisattva vow ceremony.

Becoming a bodhisattva is highly admirable. All the buddhas praise bodhisattvas. Candrakīrti comments that they do so for four reasons. First, being a bodhisattva is a cause of becoming a buddha and thus is precious and profound. In addition, by praising bodhisattvas as the causes of buddhas, we implicitly praise the buddhas as well. Furthermore, new bodhisattvas are like the sprout of a medicinal plant that will bear great fruit as it grows. Finally, others will be inspired to enter the Mahāyāna path to buddhahood by hearing the bodhisattvas being praised. If buddhas praise bodhisattvas, needless to say, we should too!

### *Taking the Bodhisattva Vow*

Regarding those who can generate engaging bodhicitta, Atiśa says in the *Lamp of the Path* (LP 21):

Those who maintain any of the seven kinds  
of the prātimokṣa ethical codes

have the ideal (prerequisite) for  
the bodhisattva vow, not others.

The seven kinds of prātimokṣa ethical codes taken for life are those of male and female lay followers, male and female novice monastics, nuns in training, and male and female fully ordained monastics. Maintaining one of these seven ethical codes is a “special support” for human beings who generate engaging bodhicitta. However, desire-realm gods, form-realm gods, and formless-realm gods also can generate engaging bodhicitta, even though they cannot take the prātimokṣa precepts because they are not human beings.

During large Dharma gatherings attended by people who are at various stages of spiritual practice, I often allow all those who see the value of aspiring bodhicitta to generate it during a ceremony. However, those taking the bodhisattva vow must have at least taken refuge in the Three Jewels. Although living in one of the seven types of prātimokṣa ethical codes is the ideal basis on which to receive the bodhisattva vow, it is not required. However, you should have a very strong determination to abandon the naturally negative actions such as killing, stealing, unwise sexual conduct, and lying. Without living in an ethically disciplined way that refrains from gross negativities, it will be difficult for your actions to accord with the bodhisattva vow or to benefit others. The precepts included in the bodhisattva vow are more difficult to keep than the prātimokṣa precepts because they regulate mental activities, not just physical and verbal behavior. For that reason, many people find training in one of the prātimokṣa ethical codes a good preparation before receiving the bodhisattva vow.

There are several ceremonies for taking the bodhisattva vow and a variety of verses that may be recited to do so. The spiritual mentor in whose presence you take the bodhisattva vow should be someone who herself has the bodhisattva vow and practices engaging bodhicitta. Atiśa recommends that this spiritual mentor have specific qualities (LP 23):

Understand that a good spiritual mentor  
is one skilled in the ordination ceremony,

who lives by the precepts, and  
has the confidence and compassion to bestow them.

In cases when it is not possible to receive the precepts the first time in the presence of a spiritual mentor, the ceremony may be done by visualizing the buddhas and bodhisattvas in front of you and reciting the verse of taking the bodhisattva vow. This procedure is unique to taking the bodhisattva vow; both the prātimokṣa ethical restraints and the tantric vow must be taken from a spiritual mentor, although a tantric practitioner, after doing the approximation retreat and concluding fire pūjā, can renew the tantric vow by doing the self-empowerment.

The place in which the bodhisattva vow will be given should be decorated in a joyous way befitting a celebration. Participants should bathe and put on fresh clothing and sit respectfully while the spiritual mentor delivers an encouraging talk. Purify and collect merit by reciting the verses of one of the seven-limb prayers mentioned above, and then crouch or kneel and recite after the spiritual mentor a verse to take the bodhisattva vow, such as this one from Śāntideva's *Engaging in the Bodhisattvas' Deeds* (BCA 3.23–24):

Spiritual masters, buddhas, and bodhisattvas, please listen to what I now say from the depths of my heart. Just as the sugatas of the past have developed bodhicitta and dwelt in the sequential trainings of the bodhisattva, so I too, to benefit migrating beings, will develop bodhicitta and practice the sequential trainings of the bodhisattvas.

As you recite each phrase after the spiritual mentors, think about what you are saying. Make this a living experience in which you generate your deepest aspiration in the presence of your spiritual mentor, the buddhas, and bodhisattvas.

The verse of taking the bodhisattva vow from the *Guhyasamāja Root Tantra*, quoted by Nāgārjuna at the beginning of his *Commentary on Bodhicitta*, is quite powerful:

All buddhas and bodhisattvas, please give me your attention.<sup>52</sup> Just as the blessed buddhas and the great bodhisattvas have generated bodhicitta, I, too, shall from now until I arrive at the heart of awakening generate bodhicitta in order that I may liberate those who are not liberated, free those who are not free, relieve those who are not relieved, and help to thoroughly transcend sorrow those who have not thoroughly transcended sorrow.

There are three ways of interpreting the phrases “liberate those who are not liberated, free those who are not free, relieve those who are not relieved, and help to thoroughly transcend sorrow those who have not thoroughly transcended sorrow.” Examining them reveals many ways of understanding this brief passage that can enrich our meditation on bodhicitta.

### *Version 1*

“Liberate those who are not liberated” refers to liberating sentient beings who have cognitive obscurations; these are śrāvaka arhats and ārya bodhisattvas. “Free those who are not free” indicates freeing sentient beings who have afflictive obscurations. “Relieve those who are not relieved” means to lead to higher rebirth those sentient beings who are inflicted with evident pain and misery, especially those in unfortunate realms. “Help to thoroughly transcend sorrow those who have not thoroughly transcended sorrow” summarizes benefiting the above three groups of sentient beings.

### *Version 2*

This version is in relation to the four truths. “Liberate those who are not liberated” refers to liberating sentient beings who are subject to true duḥkha. “Free those who are not free” means to free sentient beings who are not free from the bondage of the true origins of duḥkha. “Relieve those who are not relieved” is to relieve sentient beings who are not yet relieved from the grasping at true existence by teaching them how to generate true paths. “Help to thoroughly transcend sorrow those who have not thoroughly transcended sorrow” is to enable those who are not endowed with true cessations to have them.

### *Version 3*

This version is explained in relation to four vehicles as set forth in *Laṅkāvatāra Sūtra*. Because sentient beings have diverse inclinations and ways of thinking, different vehicles or paths exist in order to meet their needs.

(1) The vehicle of humans and devas (celestial beings) contains instruction on how to abandon harming others and to help them. Seeking the elimination of pain, it encourages us to have contentment, love, compassion, fortitude, generosity, and other qualities acknowledged as virtuous in the world. This vehicle seeks to eliminate the duḥkha of pain and enables people to attain a good rebirth and have good facilities in this life. Theistic religions fall into this category, as they generally emphasize attaining a pleasurable heavenly state after death by means of living an ethical life and being kind to others.

(2) The vehicle of Brahmā is followed by non-Buddhists who seek rebirth in the form and formless realms. It encompasses the teachings of many ancient Indian schools that emphasize the cultivation of samādhi, serenity, and worldly insight. Worldly insight is insight cultivated on the basis of seeing the coarseness of lower states of mind and the peacefulness of higher states. By seeing the faults of attachment to sense objects — for example, so many problems ensue from trying to procure and protect them — practitioners become disinterested and repulsed by sense objects. They are drawn to focus inwardly and gain mental peace through attaining various levels of samādhi. This vehicle leads practitioners to attain the meditative absorptions of the form and formless realms, which are delineated according to the depth of meditative concentration. For example, those who attain the fourth dhyāna as human beings are free from the duḥkha of pain and the duḥkha of change. They are born as devas in the fourth dhyāna, where they experience only neutral feelings. However, they are not yet free from the pervasive duḥkha of conditioning and continue to cycle in saṃsāra.

(3) The Śrāvaka and Solitary Realizer Vehicles have the goal of being free from all three types of duḥkha and attaining liberation. They seek to eliminate the self-grasping that acts as the basis for all other afflictions. Practitioners accomplish this by cultivating the wisdom realizing emptiness,

which counteracts the self-grasping ignorance. While there are some slight differences between the vehicles of śrāvakas and solitary realizers, broadly speaking they can be classified together because they both seek liberation from all three types of duḥkha, which is gained by eliminating the afflictive obscurations.

(4) The Bodhisattva Vehicle seeks to eliminate not only afflictive obscurations but also cognitive obscurations so that its practitioners attain nonabiding nirvāṇa — the nirvāṇa of a buddha that is free from the extreme of saṃsāra and the extreme of the personal peace of śrāvakas’ and solitary realizers’ nirvāṇa. These practitioners have the aim of freeing all sentient beings — themselves and others — from all obscurations both afflictive and cognitive.

With this as background, “liberate those who are not liberated” means to liberate those who are not free from the duḥkha of pain — human beings, desire-realm devas, and especially those born in unfortunate realms. This is done by guiding them so that they will abandon the ten nonvirtues and practice the ten virtues, and as a result will take rebirth in fortunate rebirths. This is how a bodhisattva liberates followers of the vehicle of humans and celestial beings.

“Free those who are not free” means to free the followers of the vehicle of Brahmā from the duḥkha of pain and the duḥkha of change. Although followers of the vehicle of Brahmā have renounced sensual pleasures, they are ensnared by craving for the calm of samādhi and for rebirth in the form and formless realms. To be free from this craving and the rebirths it brings, they need to learn and practice the Śrāvaka and Solitary Realizer Vehicles that eliminate all duḥkha completely by overcoming afflictive obscurations.

“Relieve those who are not relieved” refers to liberating those following the Śrāvaka and Solitary Realizer Vehicles from afflictive obscurations by giving them teachings on the four truths and twelve links of dependent origination. When these sentient beings engage in those practices, they will attain nirvāṇa.

“Help to thoroughly transcend sorrow those who have not thoroughly transcended sorrow” indicates leading bodhisattvas — especially those who have attained the ten grounds of the Perfection Vehicle — to the practice of highest yoga tantra. While the fundamental innate clear-light mind is

naturally free from coarser levels of mind, sentient beings must learn how to access it and then free it from both afflictive and cognitive obscurations by the practices of highest yoga tantra. In this way, they will attain the full awakening of buddhahood. Here we wish to lead sentient beings to make manifest through the power of meditation the fundamental innate clear-light mind that is freed from the coarser levels of mind, which are called “sorrow” here. By transcending these coarser levels of mind, they will access the innate clear-light mind and use it to realize emptiness directly. In this way, they will quickly become fully enlightened buddhas.

While reciting and contemplating this verse from the *Guhyasamāja Tantra*, recollect all sentient beings and pledge to attain awakening for their benefit. Dedicating all your lives for this purpose is truly worthwhile and rewarding.

### *The Bodhisattva Ethical Code in the Tibetan Tradition*

After receiving the bodhisattva vow, take it yourself each morning and evening by visualizing the buddhas and bodhisattvas in the space in front of you and reciting three times one of the verses for taking the bodhisattva vow, such those cited above.

The bodhisattva vow entails avoiding eighteen root downfalls and forty-six misdeeds. As explained in the Tibetan tradition, the Buddha taught the bodhisattva precepts at different times and they are dispersed among several Mahāyāna sūtras. Asaṅga collected many of these precepts and explained the four root downfalls and forty-six misdeeds in the “Chapter on Ethical Conduct” in his *Bodhisattva Grounds (Bodhisattvabhūmi)*. The lay practitioner Candragomin (seventh century) condensed this longer explanation and wrote *Twenty Verses on the Bodhisattva Ethical Code (Bodhisattva-saṃvara-viṃśaka)*. Śāntideva also searched the Mahāyāna sūtras and, drawing principally from the *Ākāśagarbha Sūtra*, he compiled a list of fourteen root precepts, which is found in his *Compendium of Training (Śikṣāsamuccaya)*. One of the fourteen is almost the same as the first one in Asaṅga’s list, so the duplication was removed and Śāntideva added the eighteenth root precept from the *Sūtra on Skillful Means (Upāyakauśalya Sūtra)*. In short, of the root precepts, numbers 1–4 were gathered by Asaṅga

and Candragomin, and numbers 5–18 by Śāntideva. All forty-six auxiliary precepts are from Asaṅga's and Candragomin's texts.

The ethical conduct of bodhisattvas consists of three aspects: refraining from destructive actions, gathering virtue, and benefiting sentient beings. The eighteen root downfalls pertain to the ethical conduct of refraining from destructive actions; the first thirty-four of the auxiliary precepts are included in the ethical conduct of gathering virtue, and the last twelve auxiliary precepts pertain to the ethical conduct of benefiting sentient beings. In this way, keeping all the bodhisattva precepts, both root and auxiliary, fulfills the three types of ethical conduct for bodhisattvas.

The precepts are described briefly below. I recommend studying them in depth; in that way, you will know all the factors involved in a complete downfall or misdeed so that you can avoid them. Asaṅga's *Bodhisattva Grounds* and Candragomin's *Twenty Verses* are good places to start.<sup>53</sup>

While only people who have taken the bodhisattva vow are capable of transgressing these precepts, you will benefit from training yourself to avoid these activities even if you haven't taken the vow. These precepts point out specific activities as well as states of mind to be aware of with mindfulness and introspective awareness. Reciting and studying the precepts helps us to identify which actions to practice and which to abandon. Contemplating the precepts informs us about how to direct our body, speech, and mind so that they are compassionate, wise, and peaceful, like those of a bodhisattva.

### ***The Eighteen Root Bodhisattva Precepts***

When a precept has more than one aspect, engaging just one aspect constitutes a transgression of the precept. Abandon these actions:

1. (a) Praising yourself or (b) belittling others out of jealousy for others' possessions, status, or good qualities or with attachment to receiving material offerings, praise, and respect.
2. (a) Not giving material aid or (b) not teaching the Dharma to those who are suffering and have no one else to turn to for help, because of miserliness. When we have the opportunity to help someone who is in deep suffering and is without friends or support by giving

material aid or explaining the Dharma to them, we should do it. This does not mean we have to give to every charity or every beggar.

3. (a) Not accepting someone's sincere apology, continuing to be angry at the person and verbally abusing them, or (b) angrily striking or injuring them. When someone genuinely wants to make amends, we should accept their apology and not continue to hold a grudge.
4. (a) Abandoning the Mahāyāna by saying that Mahāyāna texts are not the words of the Buddha or (b) teaching false doctrines that appear to be Mahāyāna teachings but are not. This involves thinking or saying that bodhicitta is impractical and bodhisattva practices are too vast and difficult to actually practice, and that therefore they could not have been taught by the Buddha, or propagating views that contradict the Dharma and encouraging others to practice false teachings. Doing either of these not only harms us but also has a deleterious effect on others' spiritual practice.
5. Taking things belonging to the (a) Buddha, (b) Dharma, or (c) Saṅgha. This entails taking back, robbing, or embezzling offerings given to any of the Three Jewels, using material given to either an ārya or the monastic community for your own purposes without permission, or borrowing and not returning things belonging to the Saṅgha.
6. Abandoning the holy Dharma by saying that texts that teach any of the three vehicles (the Śrāvaka, Solitary Realizer, or Bodhisattva Vehicles) are not the Buddha's word — for example, criticizing or declaring that any of the Fundamental Vehicle or Mahāyāna teachings are not the Buddha's word or despising the three baskets (Vinaya, Sūtra, and Abhidharma) of any of the three vehicles.
7. With anger, (a) taking the robes of a monastic, beating and imprisoning them, or (b) causing them to lose their ordination and return to lay life even if they have impure ethical conduct — for example, by saying that being ordained is useless.

8. Committing any of the five heinous actions: (a) killing your mother, (b) killing your father, (c) killing an arhat, (d) intentionally drawing blood from a buddha, or (e) causing a schism in the Saṅgha community by supporting and spreading sectarian views.
9. Holding wrong views that are contrary to the teachings of the Buddha, such as denying the existence of the Three Jewels, rebirth, or the law of cause and effect, and so forth. Holding such views makes having confidence in and practicing the Buddhadharma very difficult.
10. Destroying a (a) town, (b) village, (c) city, or (d) large area by means such as fire, bombs or other explosives, pollution, or black magic, with the intention to harm others. Today, this would be considered a hate crime.
11. Teaching emptiness to those whose minds are unprepared. If we teach emptiness to a person who is not well-trained in the fundamental teachings, especially in the law of karma and its effects, there is the danger that this person will misunderstand the meaning of emptiness and conclude that nothing exists. Teachers must check the mental capacity of students before instructing them.
12. Causing those who have entered the Mahāyāna to turn away from working for the full awakening of buddhahood and encouraging them to work merely for their own liberation from duḥkha. For example, discouraging someone who has interest in the Bodhisattva Vehicle by telling them that practicing the bodhisattva deeds for three countless great eons is too difficult or that there are too many sentient beings to lead them all to awakening. We recommend that they instead seek an arhat's liberation, and as a result of our words, they relinquish bodhicitta.
13. Causing others to abandon completely their prātimokṣa (monastic) precepts and embrace the Mahāyāna. Here we tell a monastic that there is not much benefit in keeping their monastic precepts and it would better if they disrobed and practiced the Mahāyāna. A transgression occurs if they follow this bad advice.
14. Holding and causing others to hold the view that the Fundamental Vehicle does not abandon attachment and other afflictions. For

- example, telling someone who follows the Fundamental Vehicle that they won't be able to eradicate all afflictions and attain liberation. This could cause the person to hold that erroneous view and give up their efforts to attain liberation.
15. Falsely saying that you have realized profound emptiness and that if others meditate as you have, they will realize emptiness and become as great and as highly realized as you. This hypocritical action involves lying and claiming to possess a realization of emptiness that we do not have.
  16. (a) Not giving offerings to the Three Jewels that others have given you to give to them, (b) fining a monastic and thereby obliging him or her to steal from the Three Jewels to pay the fine, or (c) accepting property stolen from the Three Jewels. These actions involve an abuse of power related to the Three Jewels.
  17. (a) Depriving those engaged in serenity meditation of their belongings or of offerings intended for them by giving them to those who are merely reciting texts, or (b) making harmful rules that interfere with monastics' Dharma practice.
  18. Abandoning aspiring bodhicitta by resolving to exclude even one sentient being from your bodhicitta. It is important to guard against deep anger and grudges toward any sentient being.

The eighteen root downfalls are closely related to our mental state. For sixteen of them, all four binding factors must be present to commit a defeat. For the other two root downfalls, numbers 9 and 18, only the action itself is required for a defeat to be committed. When a defeat is committed, the bodhisattva vow is lost. Unlike the prātimokṣa vow of a monastic, which cannot be retaken in this lifetime if a defeat has been committed, the bodhisattva vow may be restored in this lifetime by taking it again in the presence of a spiritual master or in the presence of the objects of refuge — the buddhas and bodhisattvas — visualized before you. However, just as it's better not to break our leg than to break it and have it reset, it is better not to commit any of the root downfalls or misdeeds than to engage in them and then purify.

The four binding factors are the following:

1. Not regarding our action as negative, or not caring that it is even though we recognize that the action is transgressing a precept.
2. Not wanting to abstain from the action in the future and wanting to do it again.
3. Being happy and rejoicing in the action.
4. Not having a sense of integrity or consideration during or after doing the action. Integrity is abandoning destructive actions because of respecting our principles and precepts. Consideration for others is abandoning harmful behavior because we don't want to adversely influence others or cause them to lose faith.
